**ARGHĪŪN**, name of a Mongol dynasty claiming descent from Hülagū. (Raverty, *Notes on Afghanistan*, 586, refuses to accept this claim). The Arghūns rose to prominence towards the end of the 15th century when Sultān Husayn Bāyqārā of Harāt appointed Dīlā 'Nān Beg Arghūn governor of Kandahār. He soon began to assume an independent attitude and resisted all attempts of the ruler of Harāt to coerce him. As early as 884/1479 he occupied the highlands of Pīshān, Shāl and Mustang which now form part of Baluchistan. In 890/1485 his two sons, Shāh Beg and Muḥammad Mukīm Khān, descended the Bolān Pass and temporarily wrested Sīst (Sibi) from Dīlā Nānda, the Sammā ruler of Sind. In 903/1497 he espoused the cause of Badī' al-Zamān, the rebel son of Husayn Bāyqārā, and gave him his daughter in marriage. He was killed at the battle of Marādak, in 913/1507, during the invasion of Khurāsān by Shaybānī Khān the Uzbek leader. He was succeeded by his eldest son, Shāh Beg, who was forced to acknowledge the overlordship of Shaybānī Khān in order to maintain his position at Kandahār. After the defeat and death of the redoubtable Uzbek leader at Marw, in 1510, he was threatened by Bābur who had established himself at Kābil and by Shāh Ismā'īl Safawī who had annexed Harāt. He was saved for a time by Shāh Ismā'īl's wars against the Ottomans and by Bābur's attempt to recover Samarkand. Realising that his expulsion from Kandahār was merely a matter of time, he sought to establish his power in the Baluch country and Sind. In Sind, Dīlā Nānda had been succeeded by his son Dīlām Firz who held over the country was weakened by faction fights. In 926/1520 Shāh Beg entered Sind, defeated Dīlām Firz's army and sacked Thatta, the capital of Southern Sind. A treaty was made by which upper Sind was surrendered to Shāh Beg while lower Sind was to remain under the Sammā. This agreement was almost immediately repudiated by the Sammā as a result of which they were once more defeated. Shāh Beg now dethroned Dīlām Firz and founded the Arghūn dynasty of Sind. After the complete loss of Kandahār to Bābur, in 928/1522, Shāh Beg died Bākhār on the Indus at his capital. He died in 936/1524 and was succeeded by his son, Shāh Husayn, who had the *khutba* read in Bābur's name, and immediately, probably by arrangement with Bābur, proceeded to attack the Langāh kingdom of

Multān. In 1528, after a long siege, Multān capitulated. Shāh Husayn, after appointing a governor, retired to Thatta. When, shortly afterwards, his governor was expelled, he made no attempt to retake the city. After a brief period of independence those in authority in Multān deemed it expedient to acknowledge the suzerainty of the Mughal emperor. Shāh Husayn was reigning in 1471/1540 when Humāyūn, after his defeat and expulsion from northern India by Shīr Shāh Sūr, sought refuge in Sind. Probably because he did not wish to be drawn into a war with Shīr Shāh, the Arghūn ruler refused to help Humāyūn. This was followed by Humāyūn's attempt to seize the strong fortresses of Balghar and Shīwān for which he lacked the necessary resources, energy and generalship. In 1530/1543, Humāyūn was granted an unannounced passage through Sind to Kandahār. Towards the end of his days Shāh Husayn's character degenerated. As a result his nobles deserted him and elected as their sovereign Mirzā Muhammad ʿIsā Tarḡhān, a member of the elder branch of the Arghūn clan. Shāh Husayn died childless in 1556 and with him ended the Arghūn dynasty.

The Arghūn Tarḡhān dynasty lasted from 1356 to 1591. Muhammad ʿIsā Tarḡhān was forced to come to terms with a rival claimant, Sulṭān Mahmūd Gokaldāgh. It was arranged that Muhammad ʿIsā Tarḡhān kept lower Sind with his capital at Thatta, and Sulṭān Mahmūd upper Sind with his capital at Balghar. In 1582/1573 upper Sind was annexed by Akbar. ʿIsā Khān died in 1567 and was succeeded by his son Muhammad Bāgh who committed suicide in 1585. During the reign of his successor, Dīlāz Beg, Akbar, in 1591, sent ʿAbd al-Rahīm Khān, Khān Khānān, to annex lower Sind. Dīlāz Beg was defeated and lower Sind incorporated in the Mughal empire. Dīlāz Beg died of delirium tremens in 1599.

ARGHŪN (see IL-BĀNDIS).

ARGYROCASSTRO (see ERBERG).

ʿARIB b. SAʿD AL-KĀTIB AL-KURTUBI, an Andalusian *mawālī* who held various official posts (he was in particular *ʿāmil* of the district of Osumā in 335/943), lived in the entourage of al-Muḥafī [g.c.] and Ibn Abī ʿĀmir (see AL-MANẒŪR) and was the secretary of the Umayyad caliph al-Hakam II (350-66/961-76); the date of his death is not known, but is put by Pons Boigues at about 370/980.

A man of wide learning, ʿArif distinguished himself as physician and poet, but is primarily known for his work as a historian. He was in fact the author of a résumé of the Annals of al-Tabarī, which he continued down to his own times; the section relating to the Orient has been published by M. J. De Goeje, *ʿArif, Tabarī continuatus*, Leiden 1897, while R. Dozy added to his edition of the *Bayān* of Ibn ʿUdhārī (Leiden 1848-51) the fragments

relating to Spain (from 291 to 320), which constitute the principal source for the reign of ʿAbd al-Rahmān III (cf. E. Lévi-Provençal, *Hist. Esp. Mus.*, iii, 506 and index). ʿArif probably also wrote a work on obitaries (*K. Khāl al-Dīnār wa Tabār al-Habīb* see ʿI-Mawālīd, a MS. of which has been preserved; see H. Denenbourg-H. P. J. Kenaan, *Mss. ar. de l'Égypte*, ii, Paris 1941, 41-2; No. 823) dedicated to al-Hakam II, and a *ʿUyūn al-Aḍwāʾ*. The *K. al-Aḍwāʾ*, of which he is certainly the author, has clearly been merged in the liturgical calendar of bishop Habbī b. Zayd (= Recemundo), in a composite text which R. Dozy published under the title of *Le Calendrier de Cordoue* (Ch. Pellat will appear shortly).

(C. PELLAT)  
AL-ʿĀRID, the central district of Najd. Originally applied to the long mountainous barrier Tuwayk [g.c.], the name al-ʿĀrid is still very commonly used in this sense. In a more restricted sense it refers to the central part of the barrier, the district between al-Kharāj to the south and al-Mahmal to the north. On the west al-ʿĀrid is bounded by the western escarpment of Tuwayk and the district of al-Baṭn below it, in which lie Dama, al-Ghatḡhat, etc. On the east Wādī ʿIṣṭayr, the escarpment of Dīl Hīt, and the land of al-ʿArāma separate al-ʿĀrid from al-Dahab.

The district is traversed from northwest to southeast by Wādī Hanifa [g.c.], formerly known as al-ʿIrā, the head of which lies below ʿAkabāt al-Hay-siyya (formerly Ṭhanyiyat al-Abḡā), whence it flows for c. 160 km. before emptying into al-Sabāʾ near the modern town of al-Yamāma in al-Baḡdī. The principal towns of al-ʿĀrid, all of which lie in or near Wādī Hanifa, are: (1) al-ʿUyayna [g.c.], the birthplace of Muhammad b. ʿAbd al-Wahhāb [g.c.]; (2) al-Dībāyia, near which the battle of ʿAkraḡāʾ between Musaylima and Khilād b. al-Walīd is supposed to have been fought; (3) al-Dīriyya [g.c.], the first capital of ʿAlī Suʿūd, the picturesque ruins of which still overlook the modern town in the valley; (4) al-Riyāḍ [g.c.], the present capital of ʿAlī Suʿūd; (5) Manfūja, which is presumed to lie on or near the site of the poet al-Aḡḡā's home; and (6) al-Hāʾir (also called Hāʾir Subayʾ or Hāʾir al-ʿAʿizza, the latter being the section of the tribe of Subayʾ dominant in the oasis). Hāʾir Subayʾ lies at the junction of the valleys Lubb [g.c.] and Ha as shown on most modern maps) and Buʿayyāḡ (the lower stretch of al-Awasat) with Wādī Hanifa.

The Bedouin tribes roaming through al-ʿĀrid are Subayʾ, al-Suhāil, and al-Kurayniyya. Many other tribesmen are drawn there by the presence of the capital. The townspeople are descended from Tamīm, ʿAnaza, al-Dawāsir, and many other sources.

Since the beginning of the reform movement preached by Muhammad b. ʿAbd al-Wahhāb [g.c.]

al-ʿĀrid has been the great stronghold of the faith. In the myriad campaigns conducted by ʿAlī Suʿūd the people of al-ʿĀrid, both townsmen and nomads, have almost invariably been in the front rank. One of the main reasons the reformation began in al-ʿĀrid in the 12th/18th century was that this district had preserved a tradition of Islamic learning, and since then al-ʿĀrid has contributed more than its share of highly honoured religious scholars.

(G. RENT)  
ʿARIF, "one who knows", a term applied to the holders of certain military or civil offices, based on competence in customary matters, ʿarif, as opposed to knowledge of the law, which characterises the *ʿālim*. There may have existed in some cases *de facto* ʿarāfī in Arabia already prior to and at the time of Muhammad (al-Shāfiʿi, *Umm*, iv, 81) who is said to have condemned them (Ibn Hanbal, iv, 133; Ibn al-Aḡḡār, *Nihāya*, iii, 86; al-Sarāḡhī, *Shāḥ al-Siyar al-Kabīr*, i, 98; al-Buḡḡārī, *al-Taʾrīkh al-Kabīr*, ii, 341). But such traditions are obviously influenced by later conditions.

During the periods of the caliphs of al-Madīna and of the Umayyads, the ʿarīf collected taxes from the tribes and handed them over to the *musaddīh* who was appointed by the caliph (al-Shāfiʿi, *Umm*, ii, 61, 72, 74; *Aḡḡānī*, ii, 62, xi, 248). No details are available concerning their appointment, except that they were chosen among the tribe concerned, though not among its chiefs.

From the time of ʿUmar I onwards there are frequent references to the office of ʿarif in connection with the military organisation of the empire and the *amṣār*. Sayf b. ʿUmar claims that the armies of Kūfa were divided after the battle of Kādisiyya into numerous units (*ʿarāfa*), with an ʿarif over each unit (al-Tabarī, i, 2496), but most of the details concerning the functions of the ʿarīf apply to the period of Muʿāwīya only. Each ʿarif was assigned to an ʿarāfa and was responsible for the distribution of the stipend (*ʿaṭā*) among its members, for which purpose he had to keep a register (*diwān*) of the payees and their families. He was furthermore responsible for security inside his own ʿarāfa, and probably also had other responsibilities, such as collecting blood-money and arbitrating in disputes among the members of the ʿarāfa.

The governor of the *misr* (or the *ṣāhib al-shurṭa*) was the sole authority with the power to appoint and dismiss ʿarāfī and it was not necessary for him to seek the approval of the caliph or of the clan; he was, however, probably obliged to choose influential persons (cf. the authorities quoted in Šāliḥ al-ʿĀlī, *al-Tamīmīyāt*, etc., 97-100).

The military office of ʿarif continued throughout the Middle Ages; the rather scanty evidence indicates that its scope varied. At the time of al-Raḡḡid, for instance, the ʿarif was responsible for ten to fifteen men (al-Balḡḡidī, *Futūḥ*, 196), while in Spain, at the time of al-Hakam, he is mentioned as a commander of a hundred horsemen (*Al-Bihar Majmūʿa*, 129-30). In the ʿIrāki and Syrian armies of the present day the ʿarif is in charge of ten men. We also hear of ʿarāfī of the ʿayyārīn [g.c.], when it was desired to organise these into official military units (al-Tabarī, ii, 179; al-Maʿūdī, *Murūḡ*, vi, 452).

Among the civil offices whose incumbents bore

the name of ʿarif we hear, in the first two centuries of the Hīǧra, of a special official responsible for the interests of orphans and illegitimate children. An ʿarif of *ghinnīs* is also occasionally mentioned. But the most frequent use of the title of ʿarif in the mediaeval Arabic-speaking Orient is to denote the head of a guild, although the term was used concurrently (or in varying hierarchical relationships) with others, such as *nāhib*, *raʾīs* or simply *ghayyāḡ*, tell into disuse during the Ottoman period, and in the west was usually replaced by *amīn* [g.c.]. We find instances of ʿarif in this sense, it seems, from Umayyad times, in direct relationship with the *hādī*, prior to the appearance of the office of *mukhtab* (according to *Wahīʾ Akḡḡār al-Kudāt*, ii, 347, referring to the time of the *hādī* Shurayḡ, who died about 80/700). But it is mainly from the 6th/12th century onwards that references to ʿarāfī, now in the rôle of assistants to the *mukhtab*, occur frequently in works designed for the use of the latter.

It is impossible to discuss the position of the head of a trade-guild in detail except in the general study of the organisation of the guilds which will appear in the article *Šūr*. The basic problem, in assessing the position of the ʿarif or the *amīn*, is to know to what extent this individual, situated midway between the administrator and the guild, was the representative of an autonomous corporation comparable to those of the mediaeval Christian west at the time of the communes, or the agent of authority supervising a guild governed from above, like the colleges of the late Empire and Byzantium. His actual position must have varied according to the relative strength of the forces concerned. In general the ʿarif or *amīn* figures mainly as an assistant of the *mukhtab* as regards the regulation, internal jurisdiction and financial obligations of the guild; he could not however discharge his duties unless he was regarded with a certain minimum of confidence by the leaders of the guild, from amongst whom he himself was chosen and who often, by acclamation, accepted or proposed him. In practice he also to a certain extent represented the guild in its dealings with authority. He organised the participation of his guild in certain festivals. He was often duplicated by a *khālifa*, and exercised his powers of arbitration and jurisdiction, in the large centres, assisted by a small customary tribunal subordinate to the *mukhtab*. It sometimes happened that there was also an *amīn al-samān*. The *amīn* kept a register of the members of the guild, and admitted new members, in accordance with various initiatory rites. His function was of an eminently temporary nature. This organisation has, of course, been undermined to-day by the progress of trade-unionism on the European pattern.

**Bibliography:** In addition to the references quoted in the article, see Dozy, *Suppl.*, s.v.; I. Goldziher, *Abhandlungen zur Arab. Philologie*, i, 21; Dī. Zaydān, *Taʾrīkh al-Tamadūd al-ʿIslāmī*, i, 148; P. Hitti, *History of the Arabs*, London 1946, 328; *JA*, s.v. (by M. F. Köprülü); Raḡḡid Barawī, *Ḥalāt Miṣr al-Ḥishādiyya*, Cairo 1948, 190-4; A. A. Duri, *Taʾrīkh al-ʿIrāq al-Ḥishāḡī*, Baghdad 1948, 82; Šāliḥ al-ʿĀlī, *al-Tamīm al-Iḡḡīmāʾiyya* wa ʿI-Hiḡḡiyya fi ʿI-Baṣra, Baghdad 1953, 97-100.

For matters relating more particularly to the ʿarif and *amīn* as technical terms of the guilds, the essential sources are the Syro-Egyptian works on *ḡibā* (Shayyārī, ed. ʿArīnī, 1946, analysed by Bernauer, who calls him Nabrawī, in *JA*, 1866,

61; Ibn al-Ukhuwa, ed. R. Levy, 1938; Ibn Bassam, extracts by Cheikh in *Magh.*, 1907 or the similar works of Spanish origin (Ibn 'Abdūn, ed. Lévi-Provençal, in *JA*, 1914, trans. in *Scille musulmane au XII<sup>e</sup> s.*), and especially, from our point of view, Sakāti of Malaga, ed. Colin and Lévi-Provençal, 1931; not to speak of other similar works, as yet unpublished, written in other countries. The material which they provide on the *arīf* has been utilised by E. Tyan, *Organisation judiciaire*, II, to be completed, regards the *arīf* of Spain and medieval Tunisia, by the remarks of Lévi-Provençal, *Hist. Esp. Mus.*, III, especially 300-2, and Brunschwig, *La Berbérie orientale sous les Hafsides*, II, 150, 203, etc. For the modern period, on North Africa, see the study of Massignon on the Moroccan guilds (*RMM*, 1924), to be completed as regards Fez before the Protectorate by the work of Le Tournaux on that town (with bibliography); for Tunisia, Payre, *Les amirautés en Tunisie*, 1940, should be consulted. No equivalent study exists for the Orient, where we are still dependent on the valuable, but restrained picture of the guilds at Damascus at the end of the 19th century, by Elyas Qudsi (*Travaux de la V<sup>e</sup> Session du Congrès international des Orientalistes*, Leiden 1884, 311), and for Egypt, on the information given in the *Description de l'Égypte*, xvii and xviii, and on certain special monographs such as G. Martin, *Les Bazaars du Caire*, 1910. For a comparison with central Asia see M. Gavrilov, *Les corps de métiers en Asie Centrale*, in *REI* 1928, 209 ff.; with Persia, the lecture by Ann K. S. Lambton, *Islamic Society in Persia*, School of Oriental and African Studies, London, 1924, with the Ottoman Empire, the description of the guilds at Constantinople in the 17th century by Ewliya Celedî (*Siyahat-nâme*, I, 473 ff.); Hammer's English translation I, 2, 90 ff.) and H. Thurning, *Beiträge zur Kenntnis des islamischen Vereinswesens auf Grund von Basit Madad et-Tawfiq*, (Türkische Bibliothek 76) Berlin 1913.

SALIM A. EL-AZI and C. CANES  
**'ARIF HIKMET BEY** (1201/1773?-1810) *shaykh al-islām* from 1262 to 1270/1845-54, and one of the last representatives of Turkish classical poetry. Descended from a family of high officials (his father, Ibrahim 'Ismet was *hâdî Vîsâkâr* under Selim III), he became *mudîr* of Jerusalem (1237/1816), then of Cairo (1236/1820) and Medina (1239-1823); later appointed *mudîr al-azhar* (1240/1830) and *hâdî Vîsâkâr* of Anatolia (1249/1833), then of Rumelî (1254/1838), he finally became *shaykh al-islām*, a post which he held for seven years. 'Arif Hikmet Bey maintained relations with the principal poets of his period, notably Es'ad Efendi, Ziver Pacha and Tâhir Selâm. He himself wrote poetry, and his *Divân*, which contains poems in Turkish, Arabic and Persian, is considered to be one of the last works of note of the old school of Turkish poetry; in it may be perceived the influence of Ne'î, Nâî and Nedîm (see M. F. Köprülü, *Türk divân edebiyatı antolojisi*, 18th and 19th centuries); this *Divân* was printed in İstanbul in 1283/1867. His other works are: *Tedhîr-i Şuh'arâ* (biographies of Turkish poets up to the year 1250/1834); *Madîna'at al-Tarâğîm*; *Üşâyî il-Kağîl al-Zunûn* (see Ibnulmin Mahmud Kemal, *Son adıb Türk şairleri*, IV, 162-68); *al-Makâm al-Ma'vîyya fi'l-'Arâğîl al-Amîriyya* (quoted in *Osmanî medîfîleri*); *Kûlûbiyat al-Mahallât fi Madîjîl al-Muhallamât* (MS. in İstanbul University Library, no. 3791; cf. Ibnulmin Mahmud Kemal, *ibid.*, 626). 'Arif

Hikmet Bey enjoyed great fame during his lifetime, and Nâsîk Kemal wrote that he was, with Tâhir Selâm, the most notable poet of the era of Mahmud II. *Bihiyography*: On the life of 'Arif Hikmet, there are numerous references in the historical and biographical works written in the second half of the 19th century; see in addition: Fâtma 'Aliyye, *Djendat Paşa ve zamanı*, İstanbul 1332, *passim*. On his poetry: the Introduction to his *Divân*, written by Mehmed Zevce (İstanbul 1285); Gibb, *Ottoman Poetry*, IV, 350 ff.; Ibnulmin Mahmud Kemal, *Son adıb Türk şairleri*, İstanbul 1917, IV, 620 ff., *IA*, s.v. (Article by Fevziye Abdullâh). (R. MANTRAN)  
 AL-'ARISH, or the 'Arish of Egypt', the Rhinokorra of the ancients, town on the Mediterranean coast situated in a fertile oasis surrounded by sand, on the frontier between Palestine and Egypt. The name is found as early as the first centuries of our era in the form of Laris. According to the ordinary view, which is presupposed also in the well-known anecdote about 'Amr b. al-'Âs's expedition to Egypt, the town belonged to Egypt. The inhabitants, according to al-Ya'qûbî, belonged to the Djûdhîm. Ibn Hawkal speaks of two principal mosques in the town and refers to its wealth of trade. It was at al-'Arish that King Baldwin I died in 1118. Yâkûtî states that the town contained a great market and many inns, and that merchants had their agents there. Al-'Arish was occupied by Napoleon in 1799; in the following year a treaty was concluded in the town, by which the French were forced to evacuate Egypt.

Maspero and G. Wiet, *Matériaux pour servir à la géographie de l'Égypte*, 225; Capitaine Bouchard, *La chute d'Érich*, ed. and ann. by G. Wiet, Cairo 1945; Makrid, *Bihiy*, IFAO ed., IV, 24-7. (F. BUEHL)

**ARISTOTELIS OR ARISTO<sup>1</sup>** LE, Aristotle, the 4th century B.C. Greek philosopher, the study of whose works became permanently established in the Greek philosophical schools from the first century B.C. onwards.

1. The commentators Nicolaus of Damascus (*saecl.* I B.C.), Alexander of Aphrodisias (± A.D. 200), Themistius (*saecl.* IV), John Philoponus and Simplicius (*saecl.* VI) show the way in which Aristotle was understood in such late Greek teaching. With very few exceptions (cf. below), most of the writings of Aristotle eventually became known to the Arabs in translation, and a great number of the commentaries (which are partly familiar to us in the Greek original, partly only preserved in Arabic versions or even in Hebrew versions from the Arabic) were also thoroughly studied by Arabic teachers of Aristotle and by Islamic philosophical writers. The oriental tradition of Aristotle reading follows his late Greek interpreters without a gap, and the medieval Western tradition depends as much on the Islamic study of Aristotle (particularly in the huge sections of Al-Fârîdî, Ibn Sînâ and Ibn Rushd made available to the Schoolmen) as on the late Greek and Byzantine expositions of his thought. A is without reservation considered by most Arabic philosophers as the outstanding and most important representative philosophy from al-Kindî (cf. *Ras'ûl* I, 102, 17 Abû Rîdâ) to Ibn Rushd's unqualified praise (*Comment. Magnam* in *Arist.* *De anima* III, 2, 433 Crawford): Aristotle is 'exemplar quod natura invenit ad demonstrandum

ultimam perfectionem humanam'. A is often referred to as 'the philosopher'. He is by implication 'the first teacher', al-Fârîdî being described as the second (*al-mu'allim al-thâni*). Since a full survey of Muslim Aristotelianism would virtually constitute a complete history of Islamic philosophical thought, it must be sufficient to point out the main facts and name the instruments of study at present available. In agreement with the Greek commentators Aristotle is understood as a dogmatic philosopher and as the author of a closed system. He is, moreover (again in a way not unknown to the Greek neo-Platonic teachers), supposed to agree with Plato in all the essential tenets of his thought or, at least, to be complementary to him. The Arabs could even go as far as to credit Aristotle himself with neo-Platonic metaphysical ideas, and it is hence not altogether surprising that extracts from a lost Greek paraphrase of Plotinus or a rearrangement of a number of chapters of Proclus's *Elements of Theology* could pass as Aristotle's *Theology* and Aristotle's *Book of the Pure Good* or *Liber De Causis* respectively.

The Arabs eventually became acquainted with almost all the more important lecture-courses of Aristotle, with the exception of the *Politics*, the *Eudemian Ethics* and *Metaphysics*. They had no translation of the *Dialogues*, which had become less popular in post-Hellenistic times. Their knowledge of Aristotle thus went far beyond the few logical writings known to the early Latin Middle Ages in Boethius's translation, and comprehended the whole late Greek syllabus (cf. also the interesting passage *Comm. in Arist.* *Græca* III, 1, xvi f.). Surveys of the treatises and the ancient commentaries known are to be found in Ibn al-Nadîm, *Fihrist*, 248-52, Flügel (147-52 in the Egyptian edition) and Ibn al-Kûfî, *Ta'rih al-Hakam*, 34-42 Lippert. It is odd that Ibn al-Kûfî op. cit., 42-8 (cf. Ibn Abî Usaybi'a, *Uyûn al-Anbâ' fi Tabâhi al-Ahbab* I 62 ff.) has preserved an otherwise lost but originally Greek list of Aristotle's writings ascribed to a Ptolemy, cf. A. Baumstark, *Syriac-Arabische Bibliographien des Aristoteles*, Leipzig 1900, 61 ff. and P. Moraux, *Les listes anciennes des ouvrages d'Aristote*, Louvain 1911, 289 ff.

Aristotle's lecture courses did not become known to the Arabs in their entirety at once, but in stages. The first texts translated of which we are informed are, in conformity with the syllabus followed in the Syrian monastic schools and by Greek patristic writers, limited to formal logic, i.e. Porphyry's *Isagoge*, *Categoriae*, *De Interpretatione* and part of the *Prior Analytics*. The first translator of Aristotle whose work is known (although still unedited) is Muhammad Ibn 'Abdallâh, the son of the famous Ibn al-Mukaffa' (cf. P. Kienast, *RSO* 1233). The *Topics* and the *Posterior Analytics* and *Rhetoric* and *Poetic* (which belong to the logical writings in late Greek tradition) were soon added but it was not before the foundation of the *bayt al-hikma* during the reign of al-Ma'mûn that non-logical writings by Aristotle were made accessible as well. Details about the history of the early translations are still scarce, but 'ancient' versions of the books *On the Heavens*, the *Meteorology*, the main zoological writings, the greater part of the *Metaphysics*, the *Sophistici Elenchi* and (most probably) the *Prior Analytics* have survived until the present day; whilst the so called *Theology of Aristotle* (cf. above) was also translated at this early stage. Al-Kindî's understanding of Aristotle is based on these translations

(cf. M. Guidi-R. Walzer, *Studi su al-Kindî I. Uno scritto introduttivo allo studio di Aristotele*, Rome 1940). Hunayn b. Ishâk and his son Ishâk and other associates of this renowned centre of translations of philosophical, medical and generally scientific Greek works produced a great number of partially improved and partially first translations of Aristotle. The translators sometimes worked from the Greek original, sometimes from older or recent intermediate Syriac translations. The better ones were eager to establish a Greek text before they started upon their task. We eventually find a well established tradition of Aristotle reading in the 10th century, in Baghdad, upheld by Christian Arabic philosophers such as Abû Bishr Mattâ and Yahyâ b. 'Adî and others who considered themselves, probably correctly, as late descendants of the Greek philosophical school of Alexandria. The syllabus which they followed was partly based on earlier translations and partly on translations of their own (made from older or recent Syriac translations), since most of the representatives of this school were no longer able to read Greek. Al-Fârîdî's acquaintance with Aristotle presupposes the achievement of this circle (his treatise *On Aristotle's Philosophy* will be published by Muhsin Mahdi), and all the subsequent Islamic philosophers usually base themselves on the same corpus of translations which had eventually emerged (after an activity of almost 200 years) in Baghdad and spread from there all over the Islamic world, from Persia to Spain. The work of these translators seems to have surpassed even Ibn Rushd in accuracy and knowledge of textual variants. These Arabic versions of Aristotle are certainly not without importance for the establishment of the original Greek text, and they deserve the same attention as a Greek papyrus or an early Greek MS. or the variants recorded in Greek commentaries. They help us moreover to get a more common sense view of the history of texts in general.

The Greek commentators became known to the Arabs together with the text of Aristotle. We meet their influence in different forms: Full texts comprising the lemmata of the Aristotelian groundwork, terse paraphrases by Themistius and his like, shorter surveys of the argument of individual treatises, and marginal notes in manuscripts which quote sentences and views taken from the larger works. Not many of the translations of these Greek commentaries have survived, since they were used by the Arab successors of the Greek Aristotelian scholars who wrote commentaries and monographs in their own name. Of these, again, not very many have come down to us in the original text. Not one of Al-Fârîdî's commentaries on Aristotelian treatises has yet been traced in any library. Ibn Badîd's elaborate summaries of works of Aristotle are still unedited. A certain number of Ibn Rushd's shorter and more elaborate commentaries are also known, whilst more survive only in Hebrew and Latin translations.

A list of the works of Aristotle (mentioning the more important spurious ones as well) which are at present available for study is following.

## 1

*Categoriae*. Al-Hasan b. Suwayr's edition of Ishâk b. Hunayn's translation was published, with all the marginal comments to be found in Paris Bibl. Nat. Ar. 2346, a French translation of the notes and an index of terms by Khalîl Geyr, *Les Catégories d'Aristote dans leurs versions Syro-Arabbes*, Beirut 1948 (cf. *Oriens* 6, 1953, 101 ff.). Other edition

(without the marginal notes) by A. Badawi, *Manṭiḥ Aristū*, 1-35, 307 f., 673 ff. Ibn Ruḡḡd's *Middle Commentary* is available (together with a critical text of the groundwork) in an edition by M. Bouyges, *Bibliotheca Arabica Scholasticorum*, tom. IV, Beirut 1932.

*The interpretation:* Best edition of Iṣḥāq b. Hunayn's translation by I. Pollack, Leipzig 1913. Other edition by A. Badawi, *op. cit.*, 57-99.

*Prior Analytics:* Al-Ḥasan b. Suwār's edition of Theodorus' (Abū Qurra's?) translation with copious marginal comments was published for the first time by A. Badawi, *op. cit.*, 103-306 (cf. *Oriens* 6, 1935, 108-28).

*Posterior Analytics:* First edition of Abū Bihr Maṭā's translation (based on Iṣḥāq b. Hunayn's Syriac version) and later scholars' marginal comments published by A. Badawi, *op. cit.*, 309-462 (cf. *Oriens* 6, 1935, 129 ff.).

*Topics:* First editions of Abū 'Uṭṭmān ad-Dīnashīrī and Thābit b. 'Abd Allāh's translations and later scholars' marginal comments published by A. Badawi, *op. cit.*, 467-733.

*Sophistic Elenchi:* First edition of three translations (Yahyā b. 'Adī, 'Isā b. Zur'ā and Ibn Nāṣim) by A. Badawi, *op. cit.*, 736-1018. C. Haddad, *Textes versions inédites des Réfutations Sophistiques*, Thèse, Paris 1952.

*Rhetoric:* No edition of cod. ar. 2346 Paris exists, cf. S. Margoliouth, *Semite Studies in memory of A. Kahal* (Berlin 1907), 376 ff. S. M. Stern, *Ibn al-Samḥ*, JRAS 1956, 41 ff. F. Lasiuni, *Il commento medio di Averro' alla Rhetorica di Aristotele* (Florence 1877—edition of part of book I). A. M. A. Sallam, *Averroes' commentary on the third book of Aristotle's Rhetoric*, Thesis (Oxford 1952), Typescript.

*Poetics:* Editions of Abū Bihr's translation by D. S. Margoliouth (1887, Latin translation 1911), J. Tratsch (*Die arabische Übersetzung der Poetik und die Grundlage der Kritik des griechischen Textes*, 2 vols., Vienna 1928-1932) and A. Badawi (*Aristū al-Fihri, Fann al-Shi'r*, Cairo 1955, 85-143). The texts of the *Poetics* by Al-Fārābī (fi Kawānīn Sīnā'at al-Shi'r) and, ed. Arberry, R.S.O. 16, 1938), Ibn Shīna (from the *Shifā*, ed. Margoliouth) and Ibn Ruḡḡd ('Middle Commentary', ed. Lasiuni) are reprinted in the same volume.

*Physica:* About the Leiden MS (no. 1443) of Iṣḥāq Ibn Hunayn's translation of S. M. Stern, *Ibn al-Samḥ*, in JRAS, 1956, 31 ff. A critical edition will be published in the *Bibliotheca Arabica Scholasticorum*. The Hebrew text of Theophrastus' otherwise lost commentary was edited (with a Latin translation) by S. Landauer, *Commentaria in Aristotelem Graeca* V 4, Berlin 1902. Ibn Ruḡḡd's 'Middle Commentary' is available in a Hyderabad edition of 1947: *Rasā'id I.R.*, fasc. 1.

*De caelo:* cod. Brit. Mus. Add. 7453 (Yahyā b. al-Bitrīq). A critical edition will be published in the *Bibliotheca Arabica Scholasticorum*. The Hebrew text of Theophrastus' otherwise lost commentary was edited (with a Latin translation) by S. Landauer, *Commentaria in Aristotelem Graeca* V 4, Berlin 1902. Ibn Ruḡḡd's 'Middle Commentary' is available in a Hyderabad edition of 1947: *Rasā'id I.R.*, fasc. 2.

*De gen. et corr.:* Cf. *Rasā'id Ibn Ruḡḡd*, fasc. 3. For a fragment of Alexander of Aphrodisias's lost commentary cf. MS. Chester-Beatty 3704, fol. 108.

*Meteorology:* Translation by Yahyā b. al-Bitrīq in cod. Yenī Cāmi 1179 and Vat. Heb. 378. *Rasā'id Ibn Ruḡḡd*, fasc. 4.

*De naturis animalium (= On the parts of animals, On the generation of animals, History of Animals):* Translation by Yahyā b. al-Bitrīq in cod. Brit. Mus. Add. 7531 and cod. Leyd. 166. *Geol. G. Furlani, R.S.O.* 9, 1922, 237.

*De plantis* (by Nicolaus of Damascus): Iṣḥāq b.

Hunayn's translation, as revised by Thābit b. Kurra, was edited (from cod. Yenī Cāmi 1179) by A. J. Arberry, Cairo 1933-4, and edited a second time by A. Badawi, *Islamica* 16, Cairo 1954, 243 ff. Cf. H. J. Drossart-Ludot, *Journal of Hellenic Studies* 77, 1957, 75 ff.

*De anima:* First edition of Iṣḥāq b. Hunayn's Arabic version by A. Badawi, *Islamica* 16, Cairo 1954, 1-88 (from cod. Aya Sofya 2450). Anonymous Paraphrase, ed. Ahmad Fūṣil al-Aḥwāl, Cairo 1950 (cf. *Oriens* 6, 1935, 126 ff. and JRAS 1956, 37 ff.). Arabic translation of sections of Theophrastus' paraphrase (Comm. in Arist. *Græca* V 3), cf. M. C. Lyons, *BSOAS* 17, 1955, 426 ff. *The Baghdad Paraphrase of Aristotle's De anima*, edition and English translation by M. S. Hasan, Thesis, Oxford 1952 (Typescript). *Rasā'id Ibn Ruḡḡd* fasc. 5 (other edition Cairo 1950). *Averrois Commentarium Magnum in Aristotelem De anima Libros*, rec. F. S. Crawford, Cambridge Mass. 1955 (critical ed. of the Latin translation). Cf. also Ibn Shīna, *Kitāb al-Insāf* 75-116 (ed. Badawi, *Aristū 'inda al-Arah*, Cairo 1947).

*De sensu et sensib. De longitudine et brevitate vitae:* Ibn Ruḡḡd's paraphrases were edited by A. Badawi, *Islamica* 16, Cairo 1954, 191 ff. *Averrois Compendia Librorum qui Pars Naturalis vocantur*, rec. A. L. Shields, Cambridge Mass. 1949 (Latin version).

*Metaphysica:* First edition of Arabic text (from MSS. Leiden or. 2074 and 2075) of books 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

*De mundo:* Translation from the Syriac (by 'Isā b. Ibrāhīm al-Nāfiṣ) in cod. Princetoniae RELS 308, ff. 293<sup>a</sup>-303<sup>a</sup>. Cf. W. L. Lotmer, *American Journal of Philology* 53, 1932, 157 ff.

## Fragments of lost works

*Eudemus* (?): R. Walzer, *Studi Italiani di Filologia Classica*, N.S. 14, 1937, 123 ff.; Sir David Ross, *The Works of Aristotle translated into English* XII, Oxford 1952, 23 (cf. Al-Kindī, *Rasā'id* I, 179; 281).

*Eudoxus* (?): R. Walzer, JRAS 1939, 407 ff.; Sir David Ross, *op. cit.*, 26.

*Protreptics* (?): S. Pines, *Archives d'Histoire doctrinale et littéraire du Moyen Âge*, 1957 (from Mishaway, *Tahḍīb al-Balāḥ*, ch. 3).

*De philosophia* (?): S. van den Bergh, *Averroes' Tahḍīb al-Tahḍīb*, London 1954, II 90.

## 3

Books attributed to Aristotle in Arabic tradition. *De pomis* (Kitāb al-Tuffḥah): J. Kraemer, *Das arabische Original des 'Liber de pomis'* (Kijijerka 1906), *Studi Orientali in onore di G. Levi della Vida*, Rome

1956, i, 484 ff. D. S. Margoliouth, *The Book of the Apple, ascribed to Aristotle*, ed. in Persian and English, JRAS 1892, 187 ff.

J. Ruska, *Das Steinbuch des Aristoteles*, Heidelberg 1915.

*Secrerum Secrerum* (Sīr al-Aṣrār): ed. A. Badawi, *Islamica* 15, Cairo 1954, 67-171.

Ḥiṣṣi Ḥiṣṣi, ed. J. Lippert, Dissert. Halle 1931.

Cf. I. Goldziher, *Der Islam* 6, 1916, 173 ff.

*Theology of Aristotle*, based on a probably Greek paraphrase of sections of Plotinus, ed. F. Dieterici, Leipzig 1882 (German translation, ibid. 1883); ed. by A. Badawi, *Islamica* 28, Cairo 1955. Ibn Shīna's comments are published by A. Badawi, *Aristū 'inda al-Arah*, 37 ff. and translated into French by G. Vajda, *Revue Thomiste* 1951, 346 ff. Cf. also S. Pines, *Revue des Études Islamiques* 1954, 7 ff. *'Liber de causis'*, based on Proclus' *Elements of Theology*, ed. O. Bardenheuer, Freiburg i. Br. 1882 (with German translation); new edition by A. Badawi, *Islamica* 19, Cairo 1955.

II. The Arabic 'Lives of Aristotle' add almost nothing to the information available in Greek texts. To be mentioned are the accounts of his life in the *Fihrist* of Ibn al-Nadīm (cf. above), in *Mubashshir b. Fāḡik's Muḥḍir al-Hiṣān* (cf. J. Lippert, *Studien auf dem Gebiet der griechisch-arabischen Übersetzungsliteratur* I, Berlin 1894, 1 ff. ff.), in *Ḥiṣṣi Ḥiṣṣi, Orientalia* 6, 1937, 21 ff.), *Sā'id al-Andalusī, Tahḍīb al-Ummān*, 24 ff., Ibn al-Kifī, *Ta'ḥīḡ al-Hukamā'*, 27 ff. Lippert, Ibn Juljul, *Tahḍīb al-Aṭibbā'* wa-*Hukamā'* (ed. Fu'ād Sayyid, 1955), 25 ff., Ibn Abī Usayb'a, *'Uyūn al-Anbā'* I 54 ff. Müller. Sections from these biographies were translated and compared by A. Baumstark, *op. cit.*, 39 ff., 127 ff., 128 ff. A very comprehensive list of all the works and commentaries translated into Arabic (cf. above), to be found in Ibn al-Nadīm and Ibn al-Kifī was discussed by A. Müller, *Die griechischen Philosophen in der arabischen Überlieferung*, Halle 1875 and M. Stein Schneider, *Die arabischen Übersetzungen aus dem Griechischen, Beiträge zum Centralblatt für Bibliothekswesen* V, 1893. The lost Greek catalogue by a still unidentified Ptolemy (cf. above) was published by A. Müller, *Morgenländische Forschungen, Festschrift Fleischer*, Leipzig 1875, 1 ff., by M. Stein Schneider in vol. 5 of the Berlin edition of Aristotle, 1870, 1460 ff. and in Aristotle, *Fragmenta*, ed. V. Rose, 18 ff., by A. Baumstark and P. Moraux (cf. above). A new and comprehensive treatment of the whole Arabic biographical tradition is to be found in I. Düring, *Aristotle in the Ancient Biographical Tradition*, Göteborg 1957.

(R. WALZER)

## ARITHMETIC [see ḤISĀB]

'ARĪYYA (a.) or 'ārīya, also 'āra, the loan of non-fungible objects (*prel'* à usage, commodatum). It is distinguished as a separate contract from the *ba'd* or loan of money or other fungible objects (*prel'* de consommation, mutuum). It is defined as putting some one temporarily and gratuitously in possession of the use of a thing, the substance of which is not consumed by its use. The intended use must be lawful. It is a charitable contract and therefore "recommended" (*mandūb*), and the beneficiary or borrower enjoys the privileged position of a trustee (*amīn*); he is not, in principle, responsible for damage or loss arising directly from the authorized use of the object. In working out the details, however, the several schools of law differ greatly, the doctrines of the Hanafis and of the Mālikīs being more favourable to the borrower than those of the Shāfi'is and of the Hanbalīs.

AL-ARKAM, an early companion of Muḥammad, commonly known as al-Arkam b. Abī 'Arkam, and having the kunya Abū 'Abd Allāh. His father's name was 'Abd Manāf, and he belonged to the influential clan of Maḥḥmūd at Mecca. His mother's name is variously given, but she is usually said to be of the tribe of Ḥuṣayfā. As al-Arkam's death is placed in 53/673 or 55/675 at the age of over eighty, he must have been born about 594; and he must have become a Muslim when very young, since he was one of the earliest converts, one source alleging that he was seventh, another twelfth. For reasons which are not stated he was in a position, perhaps round about the year 614, to offer to Muḥammad the use of his house on the hill of al-Safā, and this was the centre of the new community until after the conversion of 'Umar b. al-Khaṭṭāb. Ibn Sa'd frequently says that conversions and other events took place when Muḥammad was in the house of al-Arkam or before he entered it, but Ibn Hishām is silent on the subject. Al-Arkam migrated to Medina with Muḥammad and was at Badr and on the other chief expeditions, but was not prominent in any way. The house, which contained a place of worship (*masjid* or *hubbā*) remained in the family till the caliph al-Manṣūr purchased it. It passed into the hands of al-Khayzūrī, mother of Ḥārūn al-Raṣīd, and came to be known as "the house of al-Khayzūrī".

Wellhausen as *Muhammad in Medina*), Berlin 1882, 67; F. Wustenfeld, *Chroniken der Stadt Mekka*, Leipzig 1858-61, II, 212, 440; Cantani, *Annali*, I, 261 f., with further references.

(W. MONTGOMERY WATT)

ARKAN [see BURN]

ARKUN (Span. ARCON). There are at least twenty places in Spain which bear this name, which is also given to a large number of rivers, streams, ravines and river basins, either in the sing. Arco or the plur. Arcon; there is also a commune, Arcon (17 km.) from Valencia, which retains the Arab name Alarcon (al-Aḥwāl, the Arcon). As regards the history of Muslim Spain, the most important of these localities is Arcon de la Frontera, north-west of the province of Cádiz, on the last western spur of the sub-Betic chain and in the grape-growing region of the *campiña* of Seville. It numbers about 30,000 inhabitants, and its situation is extremely interesting both from the point of view of geography and of strategy, because it occupies the axis of a rock-mass which is lapped by a sharp bend of the Guadalete; throughout the Middle Ages, its important castle and its suburbs were at different times razed and repopulated. Numerous traces of the prehistoric era, concrete evidence and Roman paving-

stones prove its antiquity. Arcos declared for 'Abd al-Rahmān I when the latter undertook his campaign against Yūsuf al-Fihri; it was subsequently sacked by Shāykh b. 'Abd al-Wahid al-Miknāsī, leader of the most important and most dangerous Berber revolt against the first 'Umayyad *amir*. During the Arab-Muslim conflict at the end of the 3rd century in the region of Seville, the rebel castles of Arcos, Jerez and Medina Sidonia were assaulted by the troops of the *amir* 'Abd Allāh. Yūsuf b. Tāshufīn stopped at Arcos on his way to Zallāka. The Almoḥad caliph Ya'qūb al-Manṣūr, in his campaign of 596/1199 against Portugal, concentrated his troops at Arcos de la Frontera; from there he dispatched his cousin al-Sayyid Ya'qūb b. Abī Hafṣ against Silves, while he himself proceeded to lay siege to Torres Novas and Tomar. Ferdinand III took possession of Arcos in 648/1250, after having captured Granada; its Muslim inhabitants rose in revolt in 659/1261, and it was reduced to submission by Alfonso the Learned in 662/1264. In 739/1339, when the Marfat *amir* Abū 'l-Ḥasan undertook his Andalusian campaign, which resulted in his defeat at the battle of the Salado or Tarifa, the Andalusian Councils routed the troops of prince Abū Mālik a short distance from Arcos, and put him to death on the banks of the Barbate, which marked the frontier between the two countries. Up to 856/1452, the Moors of Granada encroached on the territory of Arcos, which for two centuries was a frontier town, kept constantly on a war footing and thus deserving its name of Arcos de la Frontera.

**ARMAN** [see ARMİNİYA].

**ARMİNİYA**, Armenia, a country of Hither Asia.

#### I. Geographical Outline.

Armenia is the central and most elevated part of Hither Asia. Encompassed between two mountain chains, the Pontic chain to the north and the chain of the Taurus to the south, it lies between Asia Minor to the west of the Euphrates, Adharbāydzān and the region south-west of the Caspian (on a level with the confluence of the Kurr [Kura] and the Araxes) to the east, the Pontic regions to the north-west, the Caucasus (from which the line of the Rion and the Kurr separates it) to the north, and the plain of Mesopotamia to the south (area of the Upper Tigris). To the south of Lake Van, Gordjākh (the ancient Gordyene, now Boblan) and the land of the Hakkari Kurds (the region of Džulamerk and Anadlye) form geographically a part of Armenia, although they have not always been subject to the Armenians. Armenia thus embraces almost the whole of the territory extending between long. 37° and 49° East and lat. 37.5° and 41.5° North. Its area can be estimated at about 300,000 sq. kms.

The geological framework of the land consists of mountains having an archaic core and covered with sedimentary strata and tertiary deposits, but vast volcanic masses and lava flows of more recent date have modified its structure. High plains extend between the mountain ranges and vary in altitude from 800 to 2,000 metres (Erzerüm: 1,880 m.; Kars: 1,800 m.; Māgh on the Murād Sū: 1,400 m.; Erzinğān: 1,300 m.; Erivān: 850 m.). The eruptions have produced a whole series of volcanic cones which are among the highest peaks in the land: Ararat (5,205 m.) to the south of the Araxes; the Spīn

dāgh (4,176 m.), already known to al-Balādhūri (ed. De Goeje, 198. Cf. *Zeitschr. für arm. Philol.*, II, 67, 162; Le Strange, 183); the Bingöl dāgh (3,680 m.) to the south of Erzerüm; the Khordigh (3,550 m.), the Ala-dāgh (3,420 m.), and the Alagheh (4,180 m.) which focus to the north an almost completely isolated massif.

Armenia is the cradle of great rivers; the Euphrates, the Tigris, the Araxes and the Kurr (Kura). The Euphrates is formed through the confluence of two branches, the northern branch or Kara Sū (Ar. Furāt) and the southern branch or Murād Sū (Ar. Arsames) which come from the Armenian plateau; the Tigris is born in the border range of the South called the Armenian Taurus. While the system of the Tigris and the Euphrates irrigates the lands inclined towards the Persian Gulf, the Araxes (Ar. al-Rass, [q.v.]) which comes from the Bingöl dāgh, waters the lands turned towards the Caspian Sea and, before flowing into it, joins the Kurr which, with its parallel prolongation, the river Rion, a tributary of the Black Sea, separates the Caucasus sharply from Armenia. The Euphrates and the Araxes cut deeply into the Armenian plateau and these breaches facilitate the drainage of water with the result that Armenia has but a small number of lakes, Lake Van (1,550 m.) called in Arabic the lake of Khūt and Arğīsh [q.v.] and the Gök Çay [q.v.] or Sevanga (1,000 m.) mentioned already in 1340 by al-Mustawfī, and several smaller lakes.

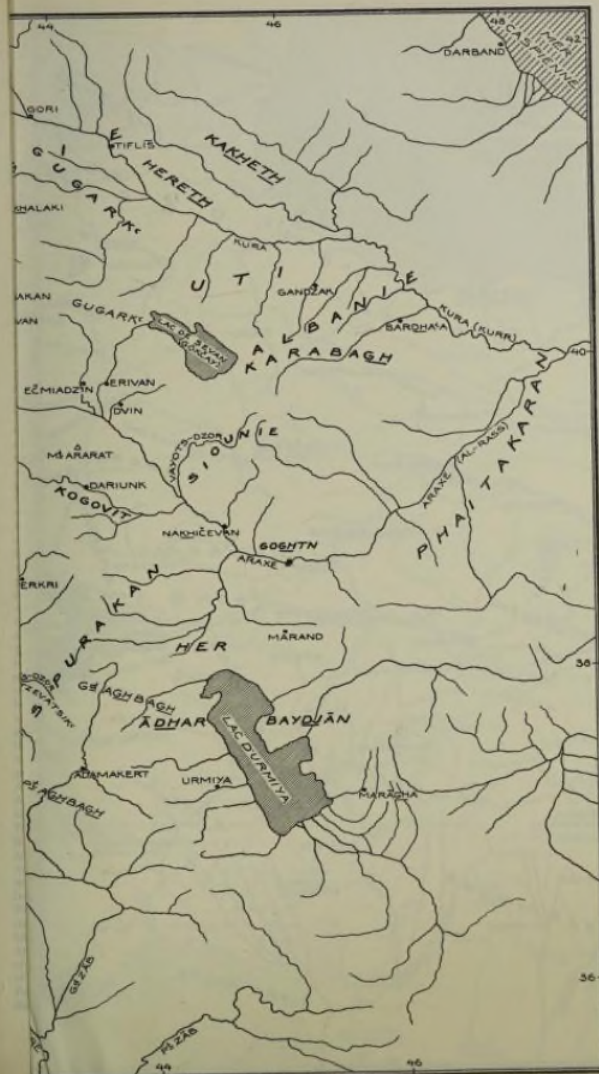

The orographical and hydrographical systems of Armenia are such that the land is divided into a number of basins separated the one from the other by high mountains, a fact that helps to bring about the feudal disunion in which the Armenians have always lived.

The climate of Armenia is very severe. The winter lasts regularly for eight months on the plateau, the short and very hot summer rarely exceeds two months; it is very dry and crops have need of artificial irrigation. The region of the plains along the Araxes enjoys, however, a more favourable climate. The snow-line in the mountains of the South lies at 3,300 m., but rises to 4,000 m. in eastern Armenia.

#### II. History.

##### 1. — Armenia before Islam.

Armenia is thought to have been inhabited towards the 17th century B.C. by an Asiatic people, the Hurrites, who were neither of Semite nor of Indo-European origin; this people was organised in the first half of the second millennium by a conquering Indo-European aristocracy and later became subject to the Hittite empire and thereafter to the Assyrians. In the 9th century B.C., a people closely related to the Hurrites, the Urartians, also called Khaldi, established there the powerful kingdom of Urartu (the biblical Ararat), of which Lake Van formed the core. This kingdom, which had to fight against the Assyrians, attained its apogee in the 8th century, but was destroyed towards the middle of the 7th century by the Cimmerian and Scythian wave that flowed over Hither Asia. During and after these changes an Indo-European people of the Thracio-Phrygian family, a branch, probably, of the Phrygians whose state had just been destroyed by the Cimmerians, came from the West and conquered Urartu. These new inhabitants were called Armenians by the Achaemenid Persians (Greek: Ἀρμένιοι), a name of

which the meaning and origin are still unexplained, and the region became known in the course of time as Armenia. The Armenians, however, call themselves Haik (from the name of the hero who led the Armenian people to the conquest) and refer to their land as Hayastan.

The Armenians, save in the time of Tigranes II (Tigranes the Great), have never played a dominant rôle in Hither Asia. The reasons for this were, to a large degree, the feudal régime favoured by the geographical nature of the country and itself a source of internal dissensions, and also the proximity of powerful empires. From the time of their settlement in Armenia the Armenians were vassals of the Medes and then of the Achaemenid Persians who placed the land under the control of satraps. These latter, taking advantage of the troubles caused by the death of Alexander the Great, became veritable kings who afterwards recognised the suzerainty of the Seleucids. When Antiochus III was defeated by the Romans at Magnesia (189 B.C.), the two "strates" who governed Armenia made themselves independent, took the title of king and formed two kingdoms, the one, Artaxias, in Great Armenia or Armenia proper and the other, Zariadris, in Little Armenia (Sophene-Arzanene). Great Armenia fell afterwards under the suzerainty of the Arsacids. In the first century B.C. a descendant of Artaxias, Tigranes the Great, threw off the Parthian yoke, dethroned the king of Sophene and united all Armenia under his sceptre; having achieved Armenian unity, he established at the expense of the Parthians and the Seleucids a vast Armenian empire and played an important political rôle. After him, however, Armenia was reduced more and more to the rôle of a buffer state between the two empires, the Arsacid Parthian and the Roman, each of which desired to impose a king of its choice, internal troubles furnishing a perpetual pretext for intervention and encroachments. In general, from the year 11 A.D. down to the fall of the Arsacids in 224, it was, for the greater part of the time, cadets of the Arsacid family who ruled in Armenia, now supporting their relatives in their wars against Rome, and now accepting the Roman protectorate. When the Arsacid Parthians were replaced by the Sāsānids, Armenia, continuing under the rule of Arsacid kings and embracing Christianity at the close of the 3rd century, became once more a new apple of discord between the two empires which in the end reached an agreement to share the weak vassal state. By a partition which took place about 350 Persia received the eastern portion, four-fifths of Armenia, over which Khosraw III reigned with Dwin (Ar. Dabül) as capital, while Rome kept the western part where Arshak III ruled at Erzinjân. After the death of Arshak the Romans (Byzantines) entrusted to a count (*comes*) the administration of the land. The Persian part of the country or Persarmenia retained its national princes until 428-9 and was thereafter administered by a Persian *marzbān* residing at Dwin. According to the Armenian historian Sebeos, the most important native source for the period extending from the 5th to the middle of the 7th century, the Persian domination never succeeded in implanting itself solidly in Armenia, all the more since the Sāsānids persecuted Armenian Christianity. The Armenian lords (the *nakhchārs*) availed themselves of every opportunity to shake off the detested yoke of the fire-worshippers and in their quarrels with the Persian *marzbāns* invoked frequently the aid of their co-religionists in Byzantine Armenia, a proce-

dure that led to frontier skirmishes and at times to real battles. A wide breach in the community of interests between Armenia and Byzantium was made, however, in 431 by the Council of Chalcedon, the decisions of which were condemned by the Armenians at the Council of Dwin in 506. This schism, which was definitive despite the efforts of the Greeks to restore union, facilitated political relations between the Armenians of Persarmenia and the court of Ctesiphon, now become more tolerant towards Christianity.

Under the emperor Maurice (582-602) the Byzantines, profiting by the troubles of the Persian empire, reconquered a part of Persarmenia. Armenia now enjoyed a period of peace, but Khosraw II Parwiz (590-628) resumed in 604 against the Byzantines a war which was to last until 629 and was marked by the celebrated campaigns of Heraclius (610-41) in Atropatene.

Throughout the Sāsānid period the intervention of the two great powers, the internal disorders between the great families which vied with each other for pre-eminence and the incursions of the *Khazars* on the north-eastern frontier maintained a complete anarchy in the land. Armenia, ravaged and torn, found itself at the moment of the Muslim invasion in a state of weakness that did not allow it to oppose a strong resistance to the Arab assault. Favoured by this anarchy, there now developed in the region of Lake Van the power of the Rāghūni family which had for its base the island of Aghtamar in Lake Van and whose chief Theodore played a great rôle at the time of the Arab invasions.

## 2. — Armenia under Arab domination.

The history of the conquest of Armenia by the Arabs still presents in its details many uncertainties and obscurities, for the information found in the Arab, Armenian, and Greek sources is often contradictory. The Armenian account by Bishop Sebeos, who speaks to us as an eye-witness of these memorable events, is by far the most important source for this period; to this account there must be added, as a valuable complement, the work of the priest Leontius which constitutes indeed for the years 662-770 the only notable testimony. Among the Arab authors the first place belongs to al-Balādhuri who made use to a unique degree of accounts drawn from the inhabitants of Armenia.

After the conquest of Syria and the defeat of Persia by the Arabs, the latter began to make repeated incursions into Armenia and to contend with the Byzantines for possession of the land. 'Uyād b. Ghünim, the conqueror of Mesopotamia, undertook between the close of the year 19 and the beginning of the year 20/639-40 a first campaign in south-western Armenia, where he penetrated as far as Bitlis. Al-Balādhuri (176), al-Tabari (i, 2566) and Yāqūt (i, 206) agree on the date of this campaign, but differ in regard to its details. A second Arab attack took place, according to the accounts of al-Tabari (i, 2666) and Ibn al-Athir (iii, 20-1), in the year 21/642. In four corps, two of which were under the command of Ḥabīb b. Maqlama and of Salmān b. Rabi'a, the Muslims advanced into the frontier regions of north-eastern Armenia, but, driven back on all sides, soon had to retire from the land. Nor did the brief *razzia* carried out in the year 24/645 by Salmān b. Rabi'a from Aḡbarbāyḡdūn into the Armenian border territory have any more enduring effect: see, on this raid, al-Ya'a'qūbī, 180; al-Balādhuri, 195; al-Tabari, i, 2806.

According to the evidence of the Arab historians and geographers (see especially al-Ya'qūbī, 194; al-Balādhūrī, 197-8; al-Tabarī, I, 2674-5, 2806-7; Ibn al-Athīr, II, 65-6), the greatest invasion of Armenia, the one which for the first time reduced the country to effective Arab control, occurred during the caliphate of 'Uthmān towards the end of 24/645-6. Mu'āwīya, the governor of Syria, charged the same general Ḥabīb b. Ma'sama, who had already distinguished himself in the battles of Syria and Mesopotamia, with the conquest of Armenia. The general marched first against Theodosiopolis (Armen. Karin, Ar. Kālikālā, now Erzerūn), the capital of Byzantine Armenia and took the town after a short siege. He inflicted a heavy defeat on a great Byzantine army which, reinforced by Khazar and Alan auxiliary troops, had moved forward to stop him on the Euphrates. He turned next towards the south-east in the direction of Lake Van and received the submission of the local princes of Aghlān (g.c.) and Moks. Arghlān on the north-eastern shore of Lake Van also yielded to the Arab troops. Ḥabīb then marched to besiege Dvin, the centre of Persarmenia, which likewise capitulated after a few days. He concluded a treaty of peace and guarantee with the town of Tiflis in return for the recognition of Arab suzerainty and the payment of a capitulation tax (ḡizya). At the same time, Salām b. Ka'b's army with his army of 'Irāqī troops, subjugated Arrān (Albania) and conquered its capital Bardha'a.

The Armenian tradition differs from the Arab tradition in the matter of dates as well as in various details. On one point alone, the direction given to the great Arab invasion, is there complete agreement in Sebeos and al-Balādhūrī, as a comparison of the routes indicated in each of these authors reveals. According to the Armenian historians, an army entered Armenia in 642, penetrated to the region of Airarat, conquered the capital Dvin and then left the country by the same route, carrying off 35,000 prisoners. In the next year the Muslims came, from Aghbarbāydlān, a new irruption into Armenia. They ravaged the region of Airarat and penetrated even into Georgia; a sharp defeat, which the prince Theodoros Ishkan inflicted on them compelled them, however, to retreat. Soon after this event the emperor recognised Theodoros as commander of the Armenian troops. Armenia, spared the Arab incursions for a number of years, then recognised anew the suzerainty of Byzantium. When the truce of three years concluded between the Arabs and Constans II, the successor of Heraclius, who had died in 641, came to an end in 652, a resumption of hostilities had to be expected in Armenia. In order to prevent a threatening invasion by the Arabs, Theodoros surrendered the land voluntarily to them and concluded with Mu'āwīya a treaty very favourable to the Armenians and which imposed on them only the recognition of Muslim suzerainty. In the same year, however, the emperor, with an army 200,000 strong, appeared in Armenia, where most of the local princes ranged themselves on his side. He brought all Armenia and Georgia once more under his authority without much trouble. Yet scarcely had Constans II left the country (654), having wintered at Dvin, than an Arab army entered the land in its turn and took possession of the districts on the northern shore of Lake Van. With the aid of these Arab forces Theodoros drove the Greeks from the country once more and was thereafter recognised by Mu'āwīya as prince of Armenia, Georgia and Albania. The attempts of the Greeks, with an army under the

orders of Maurianos, to reconquer the lost provinces failed completely. In 655 the Arabs extended their domination over the whole of Armenia and the Greco-Armenian capital Karin (Kālikālā) had also to open its gates to them. Two years later the Muslims saw themselves constrained, however, to renounce for the time being a possession that was ill assured. When, in the year 36/657, the first civil war between Mu'āwīya and 'Alī broke out, the former had need of his army of occupation established in Armenia and the country, empty of troops, fell back immediately under its old master, Byzantium.

It transpires from the account of Sebeos that all these events, merged by the Arab sources in the great campaign of Ḥabīb in 24-25/644-646, occurred only after the end of the three year truce; it is on this date, too, that the information in the *Chronography* of Theophanes is based. There is, in the Arab historians, no mention at all of the fact that Armenia, after the first Arab invasion which occurred in the reign of 'Umar, had been subjected anew to Byzantine domination, nor of the events which unfolded themselves in the land during the period before the accession of Mu'āwīya. That Theodoros Rghtuni submitted voluntarily to Mu'āwīya, a fact attested not only by Sebeos, but also by Theophanes, would be incomprehensible, if, ever since the first invasion of the Arabs, the country had been subjected to their full authority. According to Ghazarian, who, in the *Zeitschr. für arm. Philol.* (II, 173-4), has made a close analysis of the divergences between the Arab and the Armenian sources, the contemporary account of Sebeos deserves more trust than that tradition of the Arabs; it is in Ghazarian, that Müller relies (*Der Islam im Morgen- und Abendland*, I, 259-60); a different opinion is that of Theodorides (*Zeitschr. für arm. Philol.*, II, 70-1), according to whom there can be established in the Armenian and Arab historians a concordance of dates and facts relative to the first great Arab invasion. In the view of J. Laurent, *L'Arménie entre Byzance et l'Islam*, 90, 171, there were six Arab invasions between 640 and 651. H. Mamakian, *Irēen Études*, Erivan 1932 (trans. by H. Berberian in *Byzantion*, xviii, 1946-8) has submitted the traditional data to a close criticism and has arrived at the conclusion that until 650 there were only three Arab invasions: (i) in 640, a first invasion through the Taron region and the capture of Dvin on 6 October 640; (ii) in 642-3, a second invasion by way of Aghbarbāydlān into Persarmenia; (iii) in 650, a third invasion carried out from Aghbarbāydlān and marked by the taking of Artsakh in the Kogovit district to the north-east of Lake Van on 8 August 650.

The Arabs, who had carried off Theodoros Rghtuni in 655 to Damascus, where he died in 656, had set in his place at the head of Armenia Hamazasp Mamikonian, a member of a rival family, the fields of which extended from the Taron to Dvin. Mamikonian took, however, the side of Byzantium and was nominated by Constans II to the command of the country in 657-8. The Byzantine domination did not last long. Mu'āwīya, after he had come to power (41/661), wrote to the people of Armenia, inviting them to recognise anew the Arab sovereignty and to pay tribute, and all the Armenian princes dared not to pay tribute. According to the Armenian sources, members of the most notable families (the Mamikonians, the Bagratuni or Bagratids) assumed the government of the land under the first Umayyads down to 'Abd al-Malik. The Arab historians, on the other hand, describe Armenia as being under the

administration of Muslim governors since the conquest of Ḥabīb (see al-Ya'qūbī, al-Balādhūrī, al-Tabarī for the period extending from 'Uthmān to the 'Abbasid al-Mu'tasim, and the list of governors in Ghazarian, *op. cit.*, 177-82, Laurent, *op. cit.*, 336-47, R. Vasmier, *Chronology of the governors of Armenia under the first 'Abbasids*, in *Memoirs of the College of Orientalists*, Leningrad 1925, I, 381 ff. in Russian).

The first century of Arab domination in Armenia, despite the destructive wars, an era of national and literary efflorescence for the country. And yet Muslim rule, in the time of the Umayyads and still less in the time of the 'Abbasids, under whom the hand of the Arab governors weighed heavily on Armenia, was not able to implant itself solidly in the land. Disturbances and rebellions were therefore frequent. The greatest and most dangerous insurrection against the Arab yoke occurred in the reign of al-Mutawakkil. The Caliph sent his most skilful general, the Turk Bughā the Elder, with a strong army which, after sanguinary and desperate battles in the year 237-8/851-2, succeeded in overcoming the rebels. The entire nobility was then carried off into captivity. Al-Mutawakkil renounced his hostile policy only when he had need of his troops to fight the Byzantines and in order to prevent a new uprising fomented by the latter. He therefore freed the captive *nakhkar* and recognised (247/861-2) as the chief prince of Armenia the Bagratid Art (Ar. Aghōt) who had already rendered to the Arab cause most important services. During the twenty-five years of his rule as the prince of princes Aghōt won the affection of all his subjects as well as that of the local lords to such a degree that, on the request of these latter, the Caliph al-Mu'tamid conferred on him in 273/886-7 the title of king. He received the same distinction from the emperor, who concluded with him at the same time a treaty of alliance. The relations of Aghōt with the Caliph were never troubled; he paid his tribute regularly, but administered and governed his possessions in his own fashion; the native princes likewise acquired during his reign an almost independent status.

After the death of Aghōt (862-90) there reigned his eldest son, Smbat I (Ar. Smbatō), a man indeed of heroic character, but one who was in no way capable of withstanding his external foes, the Shaybānids of Diyar Bakr and the Sājidids of Aghbarbāydlān. He was unsuccessful in his conflict with the Shaybānids. Nevertheless, a little later in 286/899 the intervention of the Caliph al-Mu'taqid brought to an end the Shaybānid domination and delivered the Armenian provinces from these invaders. The Sājid Aghlūn, however, in his thrust towards the west and the north menaced Armenia unceasingly. The situation of Smbat became still more difficult in the time of the astute Yūsuf, the brother and successor of Aghlūn (d. 288/901). Yūsuf understood that above all else he must draw to his side the Ardznuni family which had become, since the reign of Aghōt I, the most powerful princely house next to that of the Bagratids. About 909 he even conferred the royal crown on the head of this family, Gagik, the lord of Vaspurakan, a distinction that the Caliph al-Mu'tasim renewed in 304/916 and 306/919.

Yūsuf, from the year 910, ravaged Armenia in the course of his expeditions and at length, in the fortress of Kapot, besieged Smbat, now abandoned by all the princes. In 915 (according to Adontz 271) the king of Armenia surrendered to his adversary, who, after having inflicted on him a year of imprisonment, had him put to death by cruel

tortures (914; according to Adontz 912). Anarchy ensued in Armenia after the fall of Smbat. His vigorous son, Aghōt II, the 'Iron King' (915-20), succeeded in recovering the throne with the support of Byzantine arms; he was at first thwarted by Yūsuf who raised against him one of his cousins, but Yūsuf, seeing that Aghōt was getting the better of his foes, granted him recognition and sent him a royal crown (about 917). After the capture of Yūsuf, who had risen in revolt, by the troops of the Caliph in 919, his successor Shuk (Shubuk) allied himself with Aghōt II in order to drive out the Caliph's forces and bestowed on him the title of Shāhshāh, a title which recognised as belonging to Aghōt suzerainty over the principalities of Vaspurakan, Iberia, Georgia and other regions. Aghōt II raised the Bagratid power to its apogee and ruled over the greatest part of central and northern Armenia where Smbat had already considerably enlarged the territory of this family. His reign ended in tranquillity after a reconciliation of the Armenian princes and the nominal recognition of his supremacy by his rivals, notably the Ardznuni Dvin, however, remained in the hands of Yūsuf's lieutenant.

In southern Armenia the Ardznuni (see above) ruled over a less extensive territory (Vaspurakan, with Van as the capital). Apart from these two great kingdoms there still existed a series of smaller principalities which for the most part recognised only nominally the suzerainty of the Bagratids. Moreover, in the south, in the region of the Apulunk and Lake Van, there were several Arab emirates, independent but isolated from the Caliphate. The history of Armenia is not therefore continuous with that of the Bagratids.

Throughout the entire reign of Aghōt II and for much of the reign of his successor Abas (920-53) the war between Byzantium and the Arabs continued without interruption and was at times fought out in Armenia. The Greeks operated in northern Armenia as well as in southern Armenia against the Armeno-Arab emirates of Lake Van which, according to the Byzantine sources, were compelled to submit to the emperor Romanus Lecapenus (919-44). The last Sājid ruler of Aghbarbāydlān retained hardly any influence in Armenia. The Hamdanids, who were the masters of Diyar Bakr, bordering on Armenia, and were in constant war against the Byzantines, succeeded for a time in exacting from all Armenia (according to the historians Ibn Zāfir and Ibn al-Azrak) a recognition of their sovereignty and established a more effective dominion over the Armeno-Arab emirates in the region of Lake Van. These emirates later recognised the suzerainty of Bāgh, the founder of the Marwānid dynasty (g.c.) of Diyar Bakr, and of his successors.

After the Hamdanids, it was the Musāfirids (g.c.) of Aghbarbāydlān who exacted from the princes of Aghbarbāydlān a recognition of their suzerainty, imposed tribute on them (see Ibn Hawkal<sup>1</sup>, 354, for the year 955-6) and became the masters of Dvin.

Aghōt III (952-77) transferred the official capital of the Bagratid kingdom to the little fortress of Ani (g.c.) which he and his successor Smbat II, by erecting there magnificent buildings, transformed into a pearl of the Orient. It is during his reign that the territory of Kars was raised to the rank of a kingdom for the benefit of a prince of the Bagratid house and that Byzantium, moreover, in 968 annexed the region of Taron, the field of another Bagratid.

Smbat II (977-89) and his brother Gagik I (990-1020) ruled with vigour and success but, in consequence of a ridiculous family policy, became involved in almost continual strife with the neighbouring Christian principalities; they were also in conflict with the neighbouring Muslim amirs who in turn took possession of Dwin, imposed tribute on the Armenians and were at times invited by the Armenians themselves to intervene in their quarrels. Thus the Bagratid of Kars called in a Muslim amir against Smbat. In 987-8 Smbat had to recognise the authority of the Rawadid prince of Aghar-baydján, the successor of the Musafids, and to pay him the tribute due in former years.

In the conflict against the Rawadid Mamlik concerning the other emirates of southern Armenia Gagik allied himself with Davit' of Taik' who was the master of a great part of Iberia (Georgia) and, about 993, had seized Malazgird from the Marwánid prince of Diyár Bakr. Mamlik was twice defeated, the second time decisively, in 998, at Tsumb near Ardžih, and to take refuge in that place.

The emperor Basil II (976-1026) aimed, however, at gaining possession of all the Armenian principalities. Having succeeded in obtaining from Davit' of Taik', in 990, the promise that he would cede to him his territories after his death, the emperor annexed Taik' and also Malazgird in 1001 after the death of Davit'. Following the death of Gagik I troubles arose in the Bagratid kingdom owing to the competition for the throne between his sons, Johannes-Smbat and Ashot IV, the younger brother, to the intervention of the king of Georgia and the king of Vaspurakan in this matter, and to the first Saldjukid incursions. Basil II took advantage of these events and succeeded, partly through annexation and partly through mediation between the princes, in extending his authority over Armenia. Senekeirin, the last Andranik, abandoned Vaspurakan to Byzantium in 1021 through fear of a threatening Turkish assault and received in exchange the region of Sebasteia (Sivas), to which were added other territories in Cappadocia (Caesarea, Tzamaandos). The Muslim amirates of Lake Van (Aghlät, Ardžih, Berkit) were annexed between 1023 and 1034. King Johannes of Ani, intimidated and seeing his kingdom encircled by Byzantium, proclaimed the emperor his heir, retaining temporary possession of Ani until his death. On the death of Ashot IV (1040), which was soon followed by that of Johannes (1041), with whom he shared possession of the Bagratid realm, the emperor Michael IV resolved at last to incorporate Armenia wholly within his empire, but his army was defeated and the son of Ashot IV, Gagik II, then only 17 years old, was proclaimed king by the Armenian nobles (1042). As soon, however, as Constantine Monomachos had ascended the throne, he decided to annex Ani and, in order to weaken Gagik, did not hesitate to launch against him the amir of Dwin, Abü'l-Aswár, of the dynasty of the Shaddadids of Gandja (see SHADDADID, BAKO). Between two fires, Gagik showed himself to be drawn to Constantinople and was obliged to cede Ani (1045). He received in recompense lands in Cappadocia in the themes of Charsianon and Lykandos. Thereafter the greater part of Armenia was governed directly by Byzantium and the discontent provoked by the centralising policy of the empire and the favours granted to the Chalcedonian clergy explain in part the success of the Saldjukids in Armenia.

The Bagratid kingdom of Kars was only annexed by Byzantium in 1064 after the Saldjukid invasion;

the last king Gagik-Abas surrendered it to the emperor Constantine X Ducas, who indemnified him with estates in Cappadocia.

Thus, following their kings, an important part of the Armenian people settled down in the territories of the Byzantine empire. Armenians, however, had long been found outside Armenia. It is well known that they furnished Byzantium with soldiers and a number of generals and even emperors. It was Armenians who, under the famous Melias (Arm. Mēh), colonised the regions of Lykandos, Tzamaandos, Larissa and Symposion, when, at the beginning of the 10th century, Byzantium decided to recapture these territories of Cappadocia which had been devastated by the Arab raids, and who assured the defence of these lands and at the same time won renown in the Arab-Byzantine wars. There were Armenians, too, in the Muslim territories, serving the Caliphs, but converted to Islam, like the celebrated amir 'Alī al-Armani who died in 863, not long after he had been named governor of Armenia and Agharbaydján. Armenians were also to be found in Egypt in the army of the Fātimids. It is above all in Byzantine territory, however, that the immigration was important and contributed, in the second part of the 10th century to the repopulation of the lands in Cilicia and northern Syria reconquered by Byzantium and evacuated by the Muslims and inhabitants. The geographer Mukaddas (*BGA* iii, 158) states that in his time the Amanas was peopled with Armenians. Asoghik tells us that under the pontificate of Šahkik I (972-92) there were Armenian bishops at Antioch and Tarsus. During the course of the 11th century the rôle of the Armenians in these regions (Cappadocia, Commagene, northern Syria and even Mesopotamia, e.g., at Edessa) was considerable; numerous Armenian officers acted as governors of towns for Byzantium and, profiting from the troubles caused by the first Saldjukid invasions, founded Armenian principalities (see ARMAN).

During the same period Armenians were to be found with the Fātimids of Egypt. Following the Armenian Badr al-Djamil [q.v.] who, after being a slave, had become commander of the Egyptian troops in Syria and then rose to the rank of wafr at Cairo (1075/94), there entered into Egypt, first, the Armenians with whom he had already surrounded himself, and later all those whom he summoned there and who took service in the army and even in the administration. These Armenians furnished to the Fātimid Caliphate a number of wafrs, of whom one, Bahrām [q.v.] named a Christian. The introduction into Egypt of an important Armenian population led to the creation of numerous Armenian monasteries and churches and also of an Armenian catholicate. The Armenians were regarded with favour by some of the Fātimid Caliphs. See on this subject M. Canard, *Un vizir chrétien à Fāṭima fatimide*, in *Afrique*, Algiers, xii (1954) and *Notes sur les Arméniens en Égypte à l'époque fatimide*, *ibid.*, xiii (1955). Cf. J. Laurent, *Byzance et les Turcs Seldjoukides dans l'Asie Occidentale jusqu'en 1081*, in *Annales de l'Est*, 28th year, fasc. 2, Paris, 1914 (1919). (M. CANARD).

## II(b). The Armenians under the Turks and the Mongols.

While these last events were taking place, the Turks, before long led by the Saldjukid dynasty, were conquering Muslim Iran as far as the Armeno-Byzantine borders. Although this thrust was probably not, as is sometimes alleged, the cause of

the first losses of Armenian territory to Byzantium (*J.A.*, 1054, 275-9 and 1056, 129-34) it nevertheless constituted a tragic threat to the Armenians in the middle of the 11th/12th century. After a period of Turkoman ravages, the battle of Manazgird (1071) [see MALAZGIRD] marked the end of Byzantine supremacy, and the Turkomans settled in Armenia, Cappadocia and throughout most of Asia Minor. The Armenian territories on the borders of Agharbaydján were incorporated in the Saldjukid empire, while those in the centre and west took shape as different principalities: that of Aghlät [q.v.], founded by a Saldjukid officer and vassal, Sukmān al-Kubā, who assumed the ambitious title of *Šahā-i Arman*; that of Ani [q.v.], assigned by the Saldjukids to a branch of the former Kurdish dynasty of Arrān, the Shaddadids (V. Minorsky, *Studies in Caucasian History*, 1923, 79-106); and finally the autonomous Turkoman states of the Saltukids at Erzerum and the Mangudjids at Erziğjan, while the Dänishmandids of Cappadocia and the Saldjukids of Anatolia and the Taurus contended for possession of Malatya, and Diyār Bakr was eventually absorbed by the Artukids. The position changed at the beginning of the 12th/13th century, when the greater part of Diyār Bakr and the principality of Aghlät were annexed by the Ayyubids of Egypt and Syria; later, following the temporary invasion of Armenia and Asia Minor by the Kh'arizmiens, the principalities of Erziğjan and Erzerum, together with that of Aghlät, were incorporated, as the Dänishmandid territories had been earlier, in the united and powerful Saldjukid state of Asia Minor. In the regions of Arrān and Ani however, the Armenians again became, if not independent, at least subjects of a Christian state (but of a different Church), as a result of Georgian expansion at the expense of the Atabeks of Agharbaydján and the Shaddadids.

Although some Armenians had made agreements with the invaders, and most in any case had tried to come to terms with them, the devastation caused in the early stages had accentuated and increased the emigration which had been set in motion by Byzantine policy, and which now took the direction of the Taurus Mountains and the Cilician plain. For a time, after Manazgird, all the territories from the Cilician Taurus to Malatya, including Edessa and Antioch, were reunited under the control of a former Armeno-Byzantine general, Philaretos, whose descendants still maintained their position in the Taurus at Edessa and Malatya, under Turkish suzerainty, at the time of the arrival of the Crusaders. The Armenian populations of the Syro-Euphrates borders were then incorporated in the free states of Antioch and Edessa, but, in Cilicia, a national dynasty, that of the Rupenians, gradually achieved freedom; its rise, sanctioned in 1198 by the recognition of the royal title of Leo the Great, attracted so many Armenians that the area could with justice be referred to as a "Little Armenia". We are not required here to follow its history, but only to draw attention to the fact that the struggle against his neighbours and hostile factions impelled Prince Mēh temporarily from 1170 to 1174 to become a Muslim in order to obtain the protection of Nūr al-Dīn [q.v.], and that for a longer period, in the 12th/13th century, under the new Hethumian dynasty, the kingdom had to wage hard battles against the Saldjukids of Asia Minor, to whom they were obliged to intervene to pay a vague allegiance (cf. a treatise by P. Bedoukian in course of publication for the Amer. Numismatic Society).

Nevertheless, once the initial devastation was over, and stable states had been organised, the lot of the Armenians under Muslim domination was no worse than it had been under earlier Muslim régimes. Quite apart from Malikshāh, whose generosity the Armenian historians are unanimous in praising, it is difficult to see major difficulties occurring in the principalities of Asia Minor, where there remained an ecclesiastical organisation, monasteries, some cultural activity (cf. for example S. Der Nersisyan, *Armenia and the Byzantine Empire*, Harvard, 1947, 131), and large Armenian towns, such as Erziğjan and Erzerum. The only dramatic events which occurred were due to special causes. There was first of all, about 1180, the massacre of the Armenians of Iğabal Sassūn, as a result of the disorders among the almost autonomous Turkomans and Kurds of that region, and especially, the massacre of part of the Christian population of Edessa, at the time of the recapture of the city from the Franks by Zangī in 1144 and Nūr al-Dīn in 1146.

Fundamentally, in fact, it was not for religious but political reasons that the Armenians at different times suffered at the hands of their Muslim masters. Despite some friction, the Armenians of the west generally acted as "accomplices" of the Franks. This was the reason, moreover, for the frequent disputes in the Armenian Church, especially between the Armenians of the Muslim States of Great Armenia, who were primarily concerned not to incur the ill-will of their masters, and those of Cilicia, who were drawn more towards the Latin world; and it similarly affected the attitude of the Armenians to the Mongol invasion which determined the reactions of the Muslim powers towards them.

The establishment of the Mongol empire heralded profound changes in the conditions of life in the different religious communities of the Near East. In the Muslim states conquered by them, the Mongols usually relied on the support of the religious minorities, Christians in particular. Favourably impressed by the news received from his eastern co-religionists, Hethum I acted as the precursor of the Mongols on the shores of the Mediterranean, against the Muslims of Syria and Asia Minor. But this action of the Armenians in itself provoked the wrath of the Muslims, with the result that, when the Mamluks of Egypt took the offensive against the Mongols, the Cilician kingdom was one of their principal targets. The break-up of the Mongol empire in the 8th/14th century left the Armenians defenceless, and the capital of the Cilician kingdom, Sis, succumbed in 1375. The seat of the Katholikos was moved back to Etchmiadzin, near the Araxes, in the 9th/15th century.

In Great Armenia, however, the situation was not favourable for long. About 1300, the Mongols became Muslims, and, although their toleration was not affected, all the same there was no longer any question of special protection. Moreover, Mongol rule had increased in Armenia the size of the nomad element, primarily Turkoman, which inflicted great injury on the peasants, for the most part Armenians. Later Great Armenia, in common with all its neighbours, experienced the savage assault of Timur, and the establishment in the 9th/15th century of a stable and well-organised principality under the Turkoman dynasty of the Ak-Koyunlu [q.v.] was not sufficient to restore the former strength of the Armenian community; again many Armenians emigrated, this time mainly to the regions north of the Black Sea. The wars between the Ottomans and the Safavids

were still to be fought on Armenian soil, and part of the Armenians of Aghlabaydjan were later deported as a military security measure to Isfahan and elsewhere. Semi-autonomous seigniories survived, with varying fortunes, in the mountains of Karabagh, to the north of Aghlabaydjan, but came to an end in the 18th century.

**Bibliography:** (in addition to the general works); the general sources, in all languages, for the history of the Near East from the 12th to the 15th century will not be enumerated here; a study of these will be found, with regard to the period of the Crusades, in *Syrie du Nord* mentioned below, 2-100; special attention will be drawn here to the not inconsiderable number of 12th and 13th century Armenian historians, especially Matthew of Edessa and the anonymous "Royal Historian" used in the works of Alishan mentioned below (an edition of the text has been prepared by Skinner), and to the historians of Great Armenia at the time of the Mongol conquest; in connection with the latter, the *History of the Nations of the Archers*, for long attributed to Malachi the Monk, has been restored by its editor-translator R. P. Blake and R. N. Frye (*Harvard Journal of Asiatic Studies*, xii, 1949) to its real author Gregory of Akane. For the last two centuries of the Middle Ages, only one noteworthy Armenian chronicle exists, that of Thomas of Medzop, part of which has been made accessible in French by F. Nève, *Exposé des guerres de Tamerlan* etc., Brussels 1860; for the Safawid period, Arakel of Tabriz, trans. by M. F. Brosset, *Collection d'Auteurs arméniens*, I, 1867.

Molén work: J. L. Gent, *Byzance et Turcs Séleucides*, 1920; Cl. Cahen, *La première Péninsule turque en Anatolie, Byzantisme 1948*; idem, *La Syrie du Nord à l'époque des Croisés*, 1940; the histories of the Crusades of de Grousset, Runciman, and the syndicated *History of the Crusades* of Philadelphia; L. Alishan, *Sisouan*, French trans. Venice 1899; the introduction by Dulacian to *Recueil des Historiens des Croisés*, *Historiens arméniens*, I. Among other special studies of recent date, O. Turan, *Les Séleucides et leurs sujets non-musulmans*, in *Studia Islamica*, 4, 1953.

(CL. CAHEN)

## II(c) Ottoman Armenia.

The Ottomans conquered western Armenia in the last decade of the 14th century, under Bayezid I, and eastern Armenia in the following two centuries, under Mehmed II and Selim I. They eventually became masters of the whole of Armenia, Great and Little (separated *proso modo* by the upper reaches of the Euphrates), except the Khanate of Erivan (or rather Erivan), in Persian and Turkish Revan, a region containing the patriarchal seat of Eǧmiazin (in Turkish *Ül Küste*) and relics of the ancient capitals of the Kings of Armenia. The region, situated in Transcaucasia to the middle Araxes, for long disputed by Turks and Persians, was ceded by the treaty of Turkmen-Chay (2 February 1828) to the Russians, who have since created from it the Soviet Federal Republic of Armenia. In the south of this region is situated Mt. Ararat (in Turkish Ağrı Dağı, in Armenian *Massis*), on which western expeditions periodically seek and claim to discover the wreckage of Noah's Ark. It is the point where the Turkish, Persian and Russian frontiers meet.

The province of Kars on the other hand, ceded to the Russians in 1878, was recovered by Turkey in 1918.

Ottoman administrative terminology—especially with respect to the programmes of reforms promised to the European Powers—adopted the term *wilāyat-i silt* "the six provinces (*silt*, populated by Armenians)": viz., Van, Bitlis (alternating with Mush), Erzerum, Harput, Sivas and Diyarbakir. No account was taken by this convention of the *sandjak* of Marash, forming part of the former *wilāyat* of Aleppo, or of the former *wilāyat* of Adana (Cilicia or Little Armenia in the strict sense of the term). Turkish domination did not result in the assimilation of the Armenians, who were preserved by the difference of religion. Many Armenians, especially among the men and the Catholics, adopted Turkish as their second, or even as their first language.

After the capture of Constantinople an important change occurred in the life of the Armenian community. Up to 1453 it had at its head three patriarchs or *katholikos* (katholikos): (1) the patriarch of Eǧmiazin, restored to this monastery since 1447; (2) the patriarch of Sis (now Kozan) in Cilicia, who had resided in this town since 1292 and did not recognise (1); (3) the patriarch of Aghtamar, (a small island in the Lake Van), since 1117. The Armenian bishop of Jerusalem also bore the title and ornaments of a patriarch.

After the conquest of Byzantium, Mehmed II, true to his political views, summoned to Istanbul the Armenian bishop of Brusa, Joachim, and made him a patriarch with the same prerogatives the patriarch of the Greek Orthodox Church. In this way the Armenian "nation" (Turkish  *millet*) was formed. A council of the clergy and a council of the laity assisted the patriarch, who was elected from the "prelates" superior to the ordinary bishops and called *mārkhassā*, properly "saint priest" (from the Syriac *mārkhassā*; the etymology through the Turkish *murakhshā* must be rejected). The residence of the patriarch of Constantinople is in the Kum Kapu quarter.

From then on a better footing, the Armenians succeeded in occupying an important position in Turkey, notably as bankers (*sarrāf*, properly "money-changers"). Ubicini (*Lettres sur la Turquie*, 1854, II, 311-14) gives interesting details about the position of genuine strength which they had achieved in their dealings with the provincial pashas and the Ottoman government in general. They were also merchants (often cloth merchants) and active caravan leaders who maintained connections between Istanbul, Moldavia, Poland (Lemberg, Lwów), Nuremberg, Bruges and Antwerp. As artisans they were architects, house-painters, manufacturers of silk stuffs and gunpowder, and printers (Armenian printing-press at Istanbul in 1679). Like the Jews they were exempt from military service until the revolution of the Young Turks.

The most important events in the history of Ottoman Armenia are:

- 1) The religious schism, which resulted in the formation of a (Uniate) Catholic Community and internal persecution (Protestant propaganda played a less important part);
- 2) The revolutionary activity;
- 3) The repression and massacres.

Roman propaganda has been spectacularly effective in Armenia since the 12th century. It was resumed by the oecumenical council of Florence (1438-45) and, in 1587, by the famous Pope Sixtus Quintus, among the Armenians of Syria, but found its greatest driving force in Mechtitar (born at Sivas in 1675, died Venice 1749). Converted to Catholicism by the Jesuits, he

succeeded in founding a remarkable order which bore his name. The Republic of Venice ceded in 1717 to the Mechtitarists the small island of Saint-Lazare, near Lido, where their monastery was installed in an old leper hospital. After the death of Mechtitar a schism occurred, and a certain number of clergy retired to Trieste and then to Vienna (1810). There was also a subsidiary branch of the order at Padua which, transferred to Paris, continued to exist there for twenty years. The Mechtitarists possessed rich libraries (numerous oriental MSS.), and printing-presses; from these they published historical and philological works which gave a place to Turkish as well as Armenian studies.

Even during the lifetime of Mechtitar the overwhelming of Catholic propaganda, which was gaining ground in the richest and most enlightened section of the Armenian community, provoked a lively reaction among the patriarchs of the Gregorian persuasion. The latter were supported by the Ottoman government, which regarded with disfavour these "Frankish plots".

There were martyrs among the Armenian Catholics who refused to abjure their faith, as in the case of Der Gomidas or Der Gomès and two of his followers (1707). He was the grandfather of Cosme Gomidas of Carbone, an interpreter at the Spanish embassy and author of a Turkish grammar in Italian (Rome, 1794). The Catholics suffered further persecutions in 1759, and even during the reign of the reforming Sultan Mahmūd II, in 1815 and 1828.

They found allies, on the other hand, in the French ambassadors and the Jesuits. Thus the imprudent M. de Ferrol secured from the Porte the banishment of the patriarch Avedis, who was hostile to the Catholics, after which the latter was abducted and incarcerated in the Bastille. He died in 1771 at Paris in the house of François Pétis de la Croix. The Jesuits at the same period secured the closure of the Armenian printing-press.

In 1830 General Guilleminot, who also was a French ambassador, secured for the Catholics a separate ecclesiastical organisation, and in 1866 Mgr. Hassun, already patriarchal vicar of Constantinople, assumed the title of Catholic-Armenian Patriarch of Cilicia for all the Ottoman empire.

To what cause are the Armenian revolts to be attributed? Certainly not to utilitarian considerations. "The Armenians", wrote the impartial Ubicini (*op. cit.* II, 347), "are of all the nations subject to the Porte, the one which has most interests in common with the Turks and is the most directly interested in preserving them". See also Victor Bérard, *La Politique du Sultan* (Abdullahid II), 1897, 149. In the official texts, and when compared with the Greeks and Macedonians, the Armenians were termed *millet-i sâhibe* "the loyal nation".

The causes of Armenian discontent were as follows:

- 1) The vexatious and troublesome behaviour of, and the acts of brigandage committed by, the Kurdish and Circassian immigrants.
- 2) The negligence, exactions and extortions of Ottoman officials.
- 3) Russian incitement, especially from 1912 onwards.

4) A keen love of independence in a generally courageous people which prides itself on being one of the most ancient known, and which still looks back nostalgically to the short periods during which it succeeded in maintaining its autonomy. Certain districts even succeeded in remaining virtually in-

dependent: for example the unconquerable mountaintops of Zeytun (now Süleymanlı), in the present *wilāyat* of Marash, Haçin (now Saimbeyli, in the present *wilāyat* of Seyhan) and Saun (Kahraman, in the present *wilāyat* of Sirt).

5) The activities of the revolutionary committees, sometimes particularly audacious, as in the case of the armed attack in broad daylight by 24 Armenians, and the siege of the Ottoman Bank at Galata (26 August 1896). The extremist or terrorist revolutionaries were called *Tağhaskutyan*. There existed a more moderate committee, the Hınçak, formed in 1867 at Paris by Avedis Nazarbek, an Armenian from the Caucasus.

All these factors served as reason or excuse for a violent campaign of repression which took the form of mass deportations or massacres. With the connivance or at the instance of the authorities there occurred, among a people who were by nature kindly and even chivalrous, a long and contagious outburst of religious fanaticism and racial hatred. The calvary of the Armenians in Turkey began with the Erzerum affair (25 February 1896), went through numerous crises, notably in 1895-6 and in 1909 (Adana), and reached its culmination during the First World War, in 1915, during the systematic suppression of the Armenians organised by the government of the Young Turks.

*Armeno-Turkish war of 1920.* — After the collapse in 1917 of the Bolshevik Russian front, which in Turkey passed to the west of Trebizond and Erzurum, it was in the main the Armenian corps formed by the government of Transcaucasia which had to contain the Turkish counter-thrust. It was defeated and driven from Turkish territory (Turkey concluded the treaty of Batum with the Armenian Republic on 4 June 1918). In 1920 Mustafa Kemal Paşa, in order to put an end to a state of undeclared war, appointed General Kizim Karabekir Paşa, commanding the 15th army corps, to the command of the north-west front. The troops of the "United Armenian Republic" of Tağhaskut Alexander, after being defeated, and the treaty of Alexandropolis (in Turkish Gümrü, now Leninakan) of 2 December 1920 confirmed the gains won by the Turks, the most important of which was the recovery of Kars.

**Bibliography:** As far as is known, no works specially devoted to Turkish Armenia exist in any western language (the works in Armenian are not accessible to me). Such information as exists, often bearing the imprint of a strongly partisan bias, is to be gleaned here and there in the general works on Turkey. The following should be mentioned: Amédée Jaubert, *Voy. en Arm. et en Pers.*, 1821; Comte de Clavel, *Arm., Kurdistan et Mésopotamie*, 1892; André Mandelstam, *La Soc. des Nations et les Puissances devant le problème arménien*, 1925; Aghasi, *Zekoun depar les orig. jusqu'à l'insurrection de 1895*, translation by Archag Tobobanian, preface by Victor Bérard, 1897.—There is a copious bibliography on the massacres. The following will be mentioned: *Le traitement des Arméniens dans l'Emp. Ott.* (1915-1916), extracts from the "Blue Book" with a preface by Viscount Bryce, 1916; René Poincaré, *La suppression des Arméniens*, 1916; *Les massacres d'Arménie; témoignages des victimes*, preface by G. Clemenceau, 1906; *Khâṭirât-i Sâde-i ehâṣ Kâmil paşa*, Istanbul 1320/1911, 2nd ed. 134 H.; *Sa'ûl paşanın Kâmil paşa Khâṭirâtına Cevâbları*, Istanbul 1327/1909, 78 H. (J. DREVY)

III. Division, Administration, Population, Commerce, Natural Products and Industry.

#### Division.

Since the size of Armenia, in its territorial delimitation, has varied much in the course of the centuries, the regions into which the lands designated under this name were divided have not always been the same. In ancient times the Armenians (see the *Geogr. of the Pseudo-Menes Xerxes*, 60) separated the land into two unequal sections: *Mer-Haik* (Armenia major) and *Pokr-Haik* (Armenia minor). Great Armenia, i.e., Armenia proper, extended from the Euphrates in the west to the neighbourhood of the Kur in the east and was divided into 15 provinces; Little Armenia ran from the Euphrates to the sources of the Haiks. The Arabs also were acquainted with this twofold division (see, e.g., Yāqūt, I, 229, 13). Yet, in contradistinction to the Armenians, the Romans and the Byzantines, they extended the name *Armīniya* to the whole of the land situated between the Kur and the Caspian, i.e., to *Erzurūn* (Georgia, Iberia, Arrān (Albania) and the mountainous regions of the Caucasus as far as the pass of Darband (Dāb al-Abwāb), the reason being that the history of this country, especially in the struggle against the Muslims, reveals itself as closely linked with that of Armenia. By *Armīniya al-Kubrā*, "Great Armenia", the Arabs (see Yāqūt, *ibid.*) understood particularly the districts which have *Khilāt* (Akhlat, [g.s.]) as their centre, whereas they applied the name *Armīniya al-Sughrā*, "Little Armenia", to the region of Tiflis (i.e., to Georgia). Ibn Hawkal (ed. De Goeje, 193) was acquainted with yet another division of Armenia proper (encompassing Albania and Iberia) into *Inner* (*Armīniya dākhila*) and *Outer* (*Armīniya khāridja*); to the former belonged the districts of Dabīl (Dvīn), Nakhawā (Nakhchawān) and Kālīkālā, latter Arrān al-Rūm (Karin) and to the latter the region of Lake Van (Berhā, Aghlūt, Ardjish, Westān, etc.).

Apart from this division there existed also another of ancient date which was adopted by the Byzantines (partition of Justinian in 530) and which, with the changes introduced by Maurice (591), remained in force until the Arab invasion. This system (*Armenia prima, secunda, tertia, quarta*) was also taken over by the Arabs; but, in the classification of the various districts among these four groups, the Arabs deviate so markedly from their predecessors that the explanation of this divergence can only be found by supposing a new distribution of districts to have occurred after the conquest. The data given by the Arab historians and geographers differ, moreover, greatly among themselves. Here, in essentials, is a table of the Arab division: (1) *Armenia I*: Arrān (Albania) with the capital Bardha'a and the land between the Kur and the Caspian (see below); *Armenia II*: Diyar-i-Gorjān; (3) *Armenia III*: comprising central Armenia proper with the districts of Dabīl (Dvīn), Basfurrajdān (Vasurakān), Baghravand, and Nakhawā (Nakhchawān); (4) *Armenia IV*: the south-western region with *Shimshāt* (Arsanotsān), Kālīkālā, Aghlūt and Ardjish.

Furthermore, when mention is made in the Arab authors (al-Sharīfī, II, 136 ff., and Ibn al-Fakīh, *Takwīm*, 487 = al-Yāqūt, *ibid.*, 364, 5, 12) of a twofold partition of Armenia reproducing very exactly the division that existed before Justinian, it transpires, from the enumeration of the districts included therein, that this division is obtained only by the complete exclusion of Armenia II.

See, on the pre-Islamic divisions of Armenia, H. Geiser, *Die Genesis der byzantinischen Themenverfassung*, Leipzig 1889, 66 and, by the same scholar, the edition of George of Cyprus (Lipsiae 1890), xlii ff. (ed. E. Honigsmann, Brussels 1939, with the *Synecdoche* of Hierocles, 49-70); and, for the Arab period, Ghazarian, *op. cit.*, 40, 53 and *arm. Fikāh*, II, 207-8; Thopchschian, *loc. cit.*, 13, 137; J. Laurent, *L'Arménie entre Byzance et l'Islam*, 1909 ff., and R. Grousset, *Histoire de l'Arménie*, 239.

#### Administration.

In regard to the internal situation in Armenia during the Arab period (see especially Ghazarian, *loc. cit.*, II, 103-208; Thopchschian, *loc. cit.*, II, 123-7; Laurent, *op. cit.*, *passim*) this land did not always constitute a separate province, but was frequently united with *Ađharbaydān* or with the *Djāzira* under a single government. The governor (*amīr* or *wālī*), usually appointed by the Caliph himself, resided to the south of Erivān, near the Araxes, at Dvīn, which had already been, before the Muslim conquest, the seat of a Persian *marzban*. The principal task of the governor consisted in protecting the country against its external and internal enemies; he had at his disposal for this purpose an army which was garrisoned, not in Armenia itself, but in *Ađharbaydān* (Marāgha and Ardabīl) were the general headquarters. The governor had above all to see to the punctual payment of taxes. For the rest, the Arabs did not concern themselves with the internal administration; this was left to a number of local lords (*arm. iškāhān*, and *nahharar*, Greek *arhōn*, *ar*, *batrik*, *patrikios*) who, after the Arab invasion, retained all their possessions and enjoyed within their domains a certain independence. Each of these lords, from 'Abbasid times onward, was also obliged, in case of war, to furnish a contingent of troops without receiving any indemnity.

Armenia was, among the provinces of the empire of the Caliphs, a land taxed only moderately. In place of the various kinds of taxes (*diyya*, *khāridj*, etc.: capitation tax, land tax, etc.) the system of *mubāla'a* was applied from the beginning of the 9th century, i.e., the Armenian princes had to pay a fixed sum. The list of contributions given by the *Khālidān*, which relates to the period of greatest prosperity for the Caliphate, notes for Armenia (taken in the broad sense of the Arabs) the sum of 13 million dirhems, i.e., more than 15½ million gold francs, as the revenue of the years 158-70/775-86; in addition to this there were also the revenues in kind (carpets, mules, etc.). Kudāma gives as the average figure for taxes during the years 204-27/819-32 no more than 9 million dirhems only. The treaties, in respect to taxation, were scrupulously observed by the Umayyads and the 'Abbasids and were violated only by Yūsuf b. Abī 'l-Sā'id. See, in regard to financial matters, A. von Kremer, *Kulturgesch. des Orients*, I, 343, 356, 368, 377; Ghazarian, *op. cit.*, 203 ff.; Thopchschian, *op. cit.* (1904), II, 130 ff. The Arab monetary system was also introduced into Armenia; under the Umayyads, coins were already being struck there (see Thopchschian, II, 127 ff.).

According to Yāqūt (II, 222, 12) there were in Armenia not less than 18,000 localities great and small, of which 1,000 were situated on the Araxes alone (according to Ibn al-Fakīh). In Arab medieval times the most important towns of Armenia proper were: Dabīl (Dvīn) which, as the residence of the

Muslim government, filled the rôle of a capital throughout the period of the Caliphs — while it had a large population at this time, it became, in the modern period, nothing more than an insignificant village; in addition, Kālīkālā, later called *Arzan al-Rūm* (Erzerūn), *Erzindjān* (Erzindjān), *Makhaddir* (Machkert, Mantzikert), *Badlis* (Bitlis), *Aghlūt* (Aghlūt), *Ardjish*, *Nakhawā* (arm. Nakhchawān), and *Kars* (see the separate articles).

The native Armenians formed, in the time of the Caliphs, the main part of the population; but there were strong Arab colonies at Dabīl, Kālīkālā, and likewise at Bardha'a in Arrān and Tiflis in *Jurzan*, which were the chief bases of Arab power. Outside these great towns there existed also more extensive settlements of Arab tribes, notably to the south-west in the region of Alzānīk (Arzan in the Arranense); the old district of *Badjunays* (Arm. *Apahūn*) with its capital *Makhaddir* was controlled by a branch of the famous tribe, the Kays, who also held a number of places on the northern shore of Lake Van. The growth of the Bagratid dominion was "like a thorn in the flesh" to these Muslim colonies, since it hindered the consolidation and extension of their own power (see especially, on these colonies, Thopchschian, *op. cit.*, 1904, II, 115 ff.; Marikvart, *Süderarmenien*, 501 ff.; and, on their situation in the 10th century, M. Canard, *Hist. de la dynastie des Hachmīd*, 471-47).

After the Russo-Persian and Russo-Turkish wars of the 19th century, Turkey, Russia and Persia shared possession of the Armenian territory and, until the war of 1914-18, there existed a Persian, a Russian and a Turkish Armenia.

(1) *Persian Armenia*: the smallest of the three sections, with an area of about 15,000 sq. km.; it embraces only a few districts and towns, as it was, an appendix to Russian Armenia; politically, it is joined to the province of *Ađharbaydān*. To the west it touches the Turkish *asdiyat* of Van, while to the north, facing Russia, the Araxes serves as the frontier over a distance of about 175 km. from the eastern foot of Ararat as far as *Urđābād* (*Urđābād*). The chief town is *Khilāt*. In addition, M. Canard and Marand should be mentioned. In general Persian Armenia corresponds to the eastern part of the old Armenian province of *Vasurakān* (Ar. *Basfurrajdān*). There exists, moreover, an Armenian population at *Isfahān*, resulting from the deportation of the inhabitants of *Djūfa* [g.s.] by Shāh 'Abbas I in 1605.

(2) *Russian Armenia*: before the war of 1914-18 it embraced the eastern and southern part of the province of *Transcaucasia* and covered an area of about 103,000 sq. km. It embraced the regions bordering on Persia and Turkey and, in particular, the whole of the governments of Erivān (27,777 sq. km.), *Kars* (18,749 sq. km.) and *Bitlīm* (6,976 sq. km.). The governments of *Elizavetpol* and *Tiflis* were Armenian only in their southern and eastern parts, and that of *Kutais* only on the right bank of the river Rion. The most notable towns of Russian Armenia were: *Batūm*, important strategically and commercially, and capital of the government of the same name; in the government of Tiflis, the two strongholds of *Aghlālkh* [g.s.] and *Aghlālghalaki*; in the government of *Kars*, the very strong fortress of the same name; *Erzerūn* as a commercial centre, and the old town of *Ardāshīr* set high on its hill, a citadel of the first order; in the government of Erivān, which once belonged in great part to Persia, Erivān itself, and 18 km. to the west the famous monastery of *Ecmladzin*, the religious

centre of the Armenians, *Nakhchawān* (Nakhawān, [g.s.]) which, like Erivān, has played a pre-eminent rôle in Armenian history, and *Alexandropol* (the ancient *Gumri*), an important frontier fortress until 1878 and thereafter a town given over to the silk industry; in the government of *Elizavetpol*, *Elizavetpol* (the ancient *Gandia*, [g.s.]), *Shūshā* situated in the region of *Kara-Bagh* and formerly the capital of a separate *khānate*, and the frontier town of *Urđābād* (*Urđābād*) on the Araxes.

(3) *Turkish Armenia*: the greater part of the Armenian territory, far superior in size to the Russian and Persian sections taken together, had been for 500 years in the hands of the Turks and included the *asdiyats* of *Bitlis*, *Erzerūn*, *Ma'mudret al-Kān* (now *Elazığ*, i.e., *Kharpūt*), *Van* and, although only in part, *Diyarbekir*, with a total area of about 186,500 sq. km. The most important towns were *Stāv*, *Erzerūn*, *Van*, *Erzindjān*, *Bitlis*, *Kharpūt*, *Mugh* and *Bāyazid* [g.s.].

Save in Persian Armenia, the war of 1914 brought about important changes in this situation. In 1917, after the retreat of the Russian troops from the Caucasian front, the regime which was then created in Armenia and itself formed part of the provisional government of *Transcaucasia* (Georgia, Armenia and *Azerbaïdjan*), undertook the task of defending the front against the Turks, but could not prevent the latter from regaining *Erzindjān* and *Erzerūn* (February-March 1918), and then *Kars* (25 April) after the peace of *Brest-Litovsk*, which granted to the Turks possession of Turkish Armenia, together with *Kars* and *Ardāshān*, previously in Russian hands since 1878. After the dissolution of the *Transcaucasia* government and the formation of an independent Armenian republic (28 May 1918), the republic itself was reduced, by the treaty of *Batūm* (4 June 1918) to Erivān and the region of *Lake Sevan*, the Turks and the *Azerbaïdjan* sharing between themselves the remainder of Russian Armenia. There now ensued the collapse of the Turks on other fronts and the armistice of *Mudros* (30 October 1918). At the beginning of 1919 Armenian forces reoccupied *Alexandropol* (Leninakan) and *Kars* and came into conflict with Georgia over the region of *Aghlālghalaki* and with *Azerbaïdjan* over the *Kara-Bagh*. The Armenian Republic, recognised *de facto* in January 1920 by the Allies, received *de jure* recognition by the treaty of *Sèvres* (10 August 1920). Nevertheless, the arbitration of President Wilson, which gave to this republic the regions of *Trebizond*, *Erzindjān*, *Mugh*, *Bitlis* and *Van*, remained a dead letter, the Turkish government of *Mustafa Kemāl* having resumed the war, while the Soviet government, on its part, reoccupied the Caucasus. After the Turks had entered *Kars* and then *Alexandropol*, the Armenian Republic was compelled, on a December 1920, to accept the Turkish peace conditions. Turkey returned *Kars* and *Ardāshān*, annexed the region of *Iğdır* to the south-west of Erivān and demanded that the district of *Nakhchawān* (*Nakhichevan*) be transformed into an autonomous Tatar state. On the same day, the Armenian Republic, within which there had been formed, some time earlier, a pro-Soviet revolutionary committee, changed its title into the Soviet Socialist Republic of Armenia. The Russo-Turkish treaties of 1921 ratified the cession of *Kars* and *Ardāshān*, but Turkey abandoned *Bitlīm* to Georgia.

The Soviet Socialist Republic of Armenia embraces the territories of Erivān and *Lake Sevan*, but the *Kara-Bagh* and *Nakhichevan* are attached to the

Soviet Socialist Republic of Azerbaijan under the designation of autonomous Region of Nagorno Karabakh (mountainous Kara-Bagh) and autonomous Soviet Socialist Republic of Naghitchevan, while the districts, formerly included in Russian Armenia, of Akhaldhalaki, Akhaldzhik (Akhaldzikh) and Batumi, this latter in the form of the autonomous Soviet Socialist Republic of Adjara, are part of the Soviet Socialist Republic of Georgia. The principal towns in the Republic of Armenia are Erivan, Leninakan (formerly Alexandropol), Kirovakan (the old Elizavetpol) and Alaverdy.

The former Turkish Armenia, which can no longer bear this name, since it is now empty of Armenians as a result of the deportations and massacres of 1915-18, has been increased by the addition of Karz, Ardahan and Igdir.

#### Population.

Owing to the invasion of Turkish and Tatars tribes on the one hand and, on the other, to the advance of the Kurds (in the south) the composition of the population had undergone, ever since the second half of the mediaeval period, a transformation so profound that the Armenians properly so called constituted, over the whole extent of their ancient homeland, more than a quarter of the total inhabitants. According to the statistics of L. Seleny and N. Seidlitz (*Petersburg's Geogr. Mit.*, 1896, 118), out of the 3,470,000 people to be found in the provinces of Transcaucasia enumerated about 597,000 (27%) were Armenians; in the purely Armenian districts, out of 2,000,000 inhabitants, the Armenians numbered 700,000 (more than a third). The government of Erivan, however, had a population of which 58% was Armenian. In the whole of Transcaucasia the towns were more strongly peopled by Armenians than the countryside (notably Tiflis: 48%); but, in regard to the total number of inhabitants (4,782,000), the Armenians (960,000) constituted only 20% of the population.

The five *vaydaks* of Turkish Armenia had 2,642,000 inhabitants, of whom 1,628,000 were Muslims, 631,000 were Armenians and 379,000 were Greeks; in the *sardak* of Mōsh, however, and also in that of Van the Armenians possessed the numerical superiority (almost twofold).

The total population of Russian and Turkish Armenia, according to the estimates given above, amounted to about 4,642,000, of whom 1,400,000 were Armenians. In Russian Armenia the Caucasian peoples were more numerous, while in Turkish Armenia it was the Kurds, Turks and other racial elements (Greeks, Jews, Gypsies, Circassians, Nestorian Christians) to the south-east of Lake Van, nomadic Tatar tribes) who had the majority.

In Persian Armenia there were, in 1891, 42,000 Armenians, only half of them to be found in Adharbaydjan (see above concerning Isfahan).

Such was the estimate of the Armenian population given by Streck for a period anterior to 1914. In the first edition of the *Encyclopaedia of Islam*. He noted that as a result of massacres and of emigration the number of Armenians on Turkish soil was constantly diminishing. The settlement of Armenians in foreign lands and their dissemination throughout the world had continued, although in varying degree (see above for the emigration into Byzantine territory, and then into Syria and Egypt). Cf. on this subject Ritter, *Erdbunde*, x, 594-511; R. Wagner, *Reise nach dem Ararat*, 239-50. The total number of

Armenians living in the Old World amounted to between 2 and 2½ millions.

According to the figures given by Padermadijan *Histoire de l'Arménie*, Paris 1949, 444, the total number of Armenians in the world in 1914 was approximately 4,000,000, of whom 2,100,000 lived in the Ottoman empire, 1,700,000 in the Russian empire, 100,000 in Persia and 200,000 in the rest of the world. In Russian Armenia proper they numbered 1,300,000 (including Karz, Naghitchevan, the Kara-Bagh and Akhaldhalaki) and, in Turkish Armenia (with Cilicia), 1,400,000. They represented in Russian Armenia the majority of the population, 1,300,000 out of 2,100,000.

Here, on the other hand, are the figures of the Armenian population in the world and in the Soviet Union for 1926 and 1939, according to W. Leinbach, *Die Sowjetunion, Natur, Volk und Wirtschaft*, Stuttgart 1950. In 1926 the total number of Armenians in the world amounted to 2,225,000 (the difference from the figure given for 1914 being explained to a certain degree by the losses due to the war, to the massacres and to the sufferings endured during the deportations); of these, two thirds were in the Soviet Union, while one third remained in the Near East (1,100,000 in Syria, 100,000 in Persia, approximately 100,000 in Turkey, Palestine, Egypt and Greece, with a further 100,000 in America). The Soviet Union held 1,508,000 Armenians, of whom 1,140,000 were in Transcaucasia and 162,000 in Caucasasia. Of these to be found in Transcaucasia 714,000 lived in the Soviet Socialist Republic of Armenia (29,900 sq. km.) and constituted there 85% of the total inhabitants (831,200), i.e., the half of the Armenian population of the Soviet Union and one third of the entire Armenian population in the world. 311,000 dwelt in Georgia, 112,000 in the autonomous Region of Nagorno Karabakh (89% of the total population there) and 173,000 in the rest of the Republic of Azerbaijan.

According to the census of 1939 the Armenians of the Soviet Union numbered 2,152,000; in the Republic of Armenia they were 1,100,000 out of a total population of 1,281,599; they constituted 90% of the total population in the autonomous Region of Nagorno Karabakh, but, in the remainder of the Republic of Azerbaijan, only 10% of the total population. In Georgia they numbered 450,000. The Armenian population of the Soviet Union, taken as a whole, had increased by 37% between 1926 and 1939.

In Syria and the Lebanon there were in 1914 about 5,000 Armenians; in 1939 they numbered approximately 80,000 in the Lebanon, and more than 200,000 in Syria. In 1939, after the reunion of the *sardak* of Alexandretta with Turkey, 25,000 Armenians left the country. When, in 1945, the Soviet government issued its appeal to the Armenians, inviting them to return to Soviet Armenia, this invitation concerned, in Syria, about 200,000 Armenians who lived especially at Aleppo and Beirut (Aleppo: 100,000 out of a total of 260,000; Beirut: 50,000 out of 160,000). In Persia, between 1926 and 1939, the Armenian population had risen from 30,000 to 130,000; approximately 95,000 expressed the wish to emigrate to Soviet Armenia and the Armenians of Persia formed a great part of the 60,000 to 100,000 Armenians who, from Syria, the Lebanon, Persia and Egypt, went to Soviet Armenia after this appeal. Of the 27,000 Armenians who dwelt in Greece, 16,000 emigrated to Soviet Armenia in the period from 1926 to 1947.

In 1945 (see H. Field, *Contribution to the anthropology of the Caucasus*, Cambridge, Mass. 1935, 8) the population of Soviet Armenia amounted to 1,300,000, with a figure of 200,000 for the capital, Erivan. Today (see P. Rendot, *Les Chrétiens d'Orient*, Paris 1955, 191 and 196) the Republic of Armenia approaches a total of 1,500,000 inhabitants and there are almost as many Armenians in the rest of the Soviet Union. Existing numbers, 300,000 inhabitants and has formulated plans for 450,000. 400,000 to 500,000 Armenians are to be found in the Near East, 100,000 in the countries where 'popular democracy' prevails, 200,000 to 300,000 in North America, 20,000 in France and important nuclei in South America, India, Palestine and Greece.

The Armenian question had been given a definite form. Various Armenian groups in the United States, etc. have presented to the U.N.O. demands which seek to bring about the restoration to the Armenians of the former Turkish Armenia with the frontiers fixed by President Wilson and the Armenian question continues to be an obstacle to the improvement of relations between the Soviet Union and Turkey.

#### Commerce.

As a land of transit between the Pontus and Mesopotamia and as a frontier territory between Persia and the Muslim empire, Armenia played an important economic role in the mediaeval period. The numerous merchants and the caravans that crossed it contributed to the development of a native industry which was favoured, like the flow of commerce, by the richness of the country in natural products. The commercial importance of Armenia arose also from the existence of numerous transit routes which cut across the land and of which the Arab geographers have described the most important. The Arabs attached to the support which these routes furnished to their military interests a greater weight than to their commercial usefulness. For this reason they linked together the principal routes at Dabul, the bulwark of the Arab domination. The maintenance and security of the routes was a duty which fell to the Muslim governor. Even today Erzerum, a point of junction for all the great routes, is a place of high strategic importance and, as it were, the key to Asia Minor.

Armenia communicated with Byzantium through Trebizond (Tarabazanda), the main entrepôt for Byzantine merchandise (above all, precious materials). The great fairs held there several times a year were visited by merchants from the entire Muslim world; the traffic ran ordinarily from Trebizond to Dabul and Kilikia (Erzerum). In Persia, Rayy was the most important market for the Armenian merchants (see Ibn al-Fakih, ed. De Goeje, 270); they were also in direct business relations with Baghdad (see al-Ya'qubi, *Buldan*, 237).

#### Natural Products and Industry.

Armenia was considered to be one of the most fertile provinces of the Caliphate. It produced so great a yield of cereals that some of it was exported abroad, e.g., to Baghdad (see al-Tabari, iii, 272, 275). The lakes and rivers, which were full of fish, also favoured the export trade; Lake Van provided enormous quantities of a certain kind of herring (*Ar. firid*) which, from mediaeval times, was sent out in salted form even to the Indies (according to al-Kazwini, ed. Wüstenfeld, ii, 352). This salted fish is encountered even today as a food much sought after

throughout the whole of Armenia, Adharbaydjan, the Caucasus and Asia Minor.

Armenia is rich, above all, in minerals: copper, silver, lead, iron, arsenic, alum, mercury and sulphur are especially to be found there; gold, too, is not lacking. Very little is known concerning the exploitation of these products by the Arabs; the only Arab author who has furnished us with information on the natural products of Armenia is Ibn al-Fakih. According to the Armenian writer Leonas, silver mines were discovered at the close of the fifth century A.D.; these mines correspond no doubt to the silver (and lead) mines which are exploited at Gümişkhané (now Gümişhane) = House of Silver, halfway between Trebizond and Erzerum (see, on this subject, Ritter, *Erdbunde*, x, 272 and Wagner, *Reise nach Persien*, i, 172 ff. and cf. also the article *Geogr.*, 221-22). There were important mines, too, at Bayburt and Arghana (q.v.). The great and ancient copper mine of Kedabeg with its offshoot at Kalakent (between Elizavetpol-Gandja and the lake of Gökçay) had been much developed before 1914 (see Lehmann-Haupt, *Armenien einst und jetzt*, i, 122 ff.). Today there are important copper foundries at Alaverdy, Zangezur and Erivan. It was, however, the salt mines which, in the past, were the richest in Armenia, their products being exported to Syria and Egypt. The salt beds mentioned by the mediaeval authors were probably to the north-east of Lake Van; there was also an extensive salt-bearing deposit at Kulp to the south of the Upper Araxes and east of Keghistan (see Ritter, *op. cit.*, x, 270 ff. and Radda, *Über die Erträge der Kaspischen Meerestiere*, 47). Erivan today is an industrial town with workshops for the building of machinery and factories for preserves, tobacco, synthetic rubber, etc.

The industries for which Armenia was most renowned during the mediaeval period were weaving, dyeing and embroidery. Dabul was the centre of this industrial activity; magnificent woolen cloths were made there, carpets and heavy materials of silk decorated with flowers and multi-coloured (*Ar. bayzin*) which were also sold abroad. The *birmez*, a kind of purple-bearing worn, was used for dyeing. Armenian carpets were long considered to be of the finest workmanship. Artadaght (Artaxata), some kilometres from Dabul, was so famous for its dyeworks that al-Baladhuri calls it "the town of the kermes" (*haryat al-birmez*) (ed. De Goeje, 200; cf. *Zeitschr. für arm. Philol.*, ii, 67 and 217). See in particular, on the commerce and industry of Armenia in the mediaeval period, Thophsidian in the *Mitt. des Sem. für orient. Sprachk.*, 1904, ii, 142-55. On the carpets, see Arsenius Sakilian, *Les tapis d'Asie et leur origine arménienne*, in Syria, ix (1928) and, by the same author, *Les tapis arméniens*, in *Revue des Et. arm.*, i/2 (1920). On Armenian textiles in general, see R. B. Serjant, *Material for a History of Islamic Textiles up to the Mongol Conquest*, in *Ans Islamica*, x (1945), 91 ff.

Marr, *Ami, Hist. de la ville d'après les sources et les fouilles*, Leningrad 1932 (in Russian); Padermajan, *Histoire de l'Arménie*, Paris 1940.

The old native Armenian sources have been utilised in the excellent *Deux. de la vieille Arménie* by Indjidjean, Venice 1832 (in Armenian). See also L. Alshian, *Topogr. von Gross-Arm.*, Venice 1855; Geogr. der Provinz Shirak (ibid. 1879); Sissian (ibid. 1885); Astarat (ibid. 1890) and Sissian (ibid. 1893), all in Armenian; H. Kiepert, *Die Landschaftsgeschichte des süd. Armeniens nach einheim. Quellen*, in *Monatsschr. der Berl. Ak. d. Wiss.*, 1873; Thopodschian, *Die inneren Zustände Armeniens unter Ascht I*, in *Mittell. d. Seminars für orient. Sprachen* in Berlin, 1904, Pt. II, 104-55; by the same author, *Polit. und Kirchengesch. Armeniens unter Ascht I und Smbat I* (ibid. 98-118); Sebese, *Gesch. des Heraklides* (the period from 437-439 to 602) and Leontius (period from 532 to 790), H. Hübischmann has translated the chapters of Sebese relating to Armenia in *Zur Gesch. Armeniens und der ersten Kriege der Araber*, Leipzig 1875. See also: Jean Catholico, *Hist. de l'Arménie des origines à 925*, trans. V. de Saint-Martin, Paris 1847; Ghevond (Leontius), *Hist. des guerres et des conquêtes des Arabes en Arménie*, trans. V. Chahousarian, Paris 1856 (cf. A. Jeffery, *Ghevond's Text of his correspondence between Umar II and Leo III*, in *Harvard Theol. Review*, xxxvii, 1944); Asoghik of Tarso, *Hist. d'Arménie des origines à 1004* (German trans. by H. Gelzer and A. Burckhardt, Leipzig 1907; French trans., Pt. I by Dulaurier, Paris 1883, Pt. II by Macler, Paris 1917); Thomas Andronou (9th-10th cent.), *Hist. des Arméniens*, French trans. by Brosset in *Collection d'Historiens arméniens*, I, St. Petersburg 1874 (goes as far as 907; continued down to 1226); Matthew of Edessa, *Chronicle* (from 925 to 1116), French trans. by Dulaurier in *Bibl. Hist. arm.*, 1858. Other trans. in *Bröck. Collection ...* St. Petersburg (2 vols.), 1874-6 and *Deux historiens arméniens*, St. Petersburg 1870-1. Also, of the same chronicler, trans. by Orbelian, *Hist. de la Sibirie*, St. Petersburg 1864; Langlois, *Collection des historiens anciens et modernes de l'Arménie*, Paris (2 vols.), 1867-9; J. Muyldermans, *La domination arabe en Arménie*, drawn from the *Hist. universelle* of Vardan, Louvain-Paris 1927.

On the period of the Arab invasions and the Arab domination, see: Baladhuri, *Futuh*, 195-212 (trans. Hitti and Margulies, 2 vols., New York, 1916-17); Thopodschian, *Die Araber*, in the course of this article; Ya'qubi, 190-1 (the passages relative to Armenia in Baladhuri and Ya'qubi have been translated into Russian by P. Zuse, Baku 1927; in *Materials for the History of Azerbaijan*, fasc. III and IV; the same author has translated the passages from Ibn al-Athir

which concern the Caucasus, Baku 1940). Pseudo-Wakidi, *Gesch. der Eroberung von Mesopotamien und Armenien ...* Hamburg 1847; B. Khalawant, *Textes arabes relatifs à l'Arménie*, Vienna 1919; for the first Arab invasions, H. Manandian, *Les invasions arabes en Arménie*, in *Byzantion*, xviii, 1946-8, French translation by H. Herberich of a pamphlet of H. Manandian published in Erzeroum in 1924 under the name *Mane Hahadoghyan* (Short Studies); M. Ghazarian, *Armenien unter der arab. Herrschaft bis zur Entstehung des Bagratidenreiches*, in *Zeitschr. für arm. Philol.*, II, Marburg 1904, 149-225; H. Thopodschian, *Armenien vor und während der Araberzeit*, ibid., II, 50-71; Vasmer, *Chronology of the Governors of Armenia under the early Abbasids*, in *Zap. Kd. Vost.*, I (1925), 381 ff. (German translation Vienna 1931); F. W. Brooks, *Byzantines and Arabs in the time of the Early Abbasids*, in *Engl. Hist. Rev.*, 1900 and 1901; Daghabaschean, *Die Gründung des Bagratidenreiches unter Ascht Bagratuni*, Berlin 1893; A. Green, *La dynastie des Bagratides en Arménie* (in Russian), in the *Journal of the Russian Muséum*, I, Pt. St. Petersburg, 1893 (CNS, 51-130); J. Markwart, *Ost- und west. Streifzüge*, Leipzig 1903, 147-85, 391-405; R. Khalawant (Chalawant), *Die Entstehung der arm. Fürstentümer*, in *WZKM*, xvii, 60-69. See also: J. Laurent, *L'Arménie entre Byzance et l'Islam depuis la conquête arabe jusqu'en 886*, Paris 1919. On the 10th century and the Byzantine reconquest, see in addition to the already mentioned works of Grousset and Honigsmann: S. Runciman, *Romanian Leontopis*, Cambridge 1939, 151 ff.; M. Canard, *Hist. de la dynastie des Hamdanides*, I, 462 ff. and earlier; G. Schlumberger, *Un empereur byz. au X<sup>e</sup> siècle*, *Nicéphore Phocas*, Paris 1890; by the same author, *L'Épique byz. à la fin du X<sup>e</sup> siècle*, I, 1890 (1925) and I, 1900 (Pt. I, John Tzimiskès, Pt. II, Basil II); various articles by N. Adontz published in *Byzantion* (*Les Tarabouites en Arménie et à Byzance*, ix, 1934, 715 ff., x, 1935, 531 ff., xi, 1936, 21 ff. and 517, xiv, 1939, 407 ff., *Notes arméno-byzantines*, ix, 1934, 307-308, x, 1935, 161 ff., *Tornik le Moine*, xiii, 1938, 143 ff., and in the *Ann. de l'Inst. du Byzan.* et d'Hist. Orient. Brüssel, iii, 1933 (*Atat de Feri*); articles by V. Laurent in *Echos d'Orient*, xxxvii, 1938 and xxxviii, 1939; by H. Taronian, *Grigor Magistros et ses rapports avec deux émirs musulmans ...* in *REI*, 1941-7; by Leroy-Molingron on the rôle of certain Armenians at Byzantium, in *Byzantion*, xi, 1936, 580 ff. and xiv, 1939, 147 ff.; by Akulian, *Russierbyzantiner arm. Territorien durch Byzanz im XI. Jahrhundert*, 1912; by Z. Avalchikhvili, *La succession de David d'Ibérie*, in *Byzantion*, viii, 1933, 177 ff. On the settlement of emigrant Armenians in Byzantine territory, see, in addition to the already mentioned articles by N. Adontz, Grousset, op. cit., 488-9, 511, 522 and H. Grégoire, *Mélias le Magistre*, in *Byzantion*, vii, 1935, 79 ff. and ibid., 203 ff.; *Nicéphore au ed. roide*, Reference should also be made to works which deal with Byzantine history (see Krumbacher, *Bys. Literaturgesch.*, 2nd ed., 1068-9) and the publications of Vasiliev, *Byzance et les Arabes*; *La dynastie arménienne* (820-107), French trans., Brüssel, 1935 (*Corp. brux. hist. byz.*); and II, *La dynastie macédonienne* (867-959). St. Petersburg, 1902. In the Russian, French ed. of Pt. II only: *Textes arabes*, Brüssel 1950. See also F. Dölger, *Regesten der Kaiserurkunden des oström. Reiches*, Munich-

Berlin 1924-32; S. Der Nersessian, *Armenia and the Byz. Empire: A brief study of Armenian art and civilisation*, Harvard University, 1945. In addition, the chapters relating to Armenia in the Syriac chronicles (Ps.-Densy of Tell-Mahre, Elias of Nisibin, Michael the Syrian, Bar Hebraeus) and in works concerning the history of Islam and of the Caliphs, notably the *Memoirs of Dehlevy* on the *Sajjid*, *JA*, 1948, 4th ser., vols. 9 and 10). On persons of Armenian origin who figure in the history and literature of the Arabs, I. Kravčkovsky has written for the *Encyclopaedia of Soviet Armenia* (Erivan) the articles *Abkharys*, *Abd Šāli*, *al-Armān* and *Badr al-Djānānī* (see above for Bahām).

The main source for the Sāldjūkid period is the history (969-1071) of Aristakès of Lastivert (Aristakès of Lastivert), Armenian ed., Venice, 1845, French trans., 1864. Kirakos (Guiragos) of Gandzak (13th cent.) gives a contemporary account of events for the period 1165-1265: Armenian ed., Moscow 1858 and Venice 1865, French trans. by Brosset, 1870-1. See also J. Laurent, *Byzance et les Turcs seldjūkides dans l'Asie occidentale jusqu'en 1081*, Paris 1913-4 and the bibliography given there; C. Cahen, *La campagne de Mantzikert d'après les sources musulmanes*, in *Byzantion*, ix, 1934, 613 ff.; and by the same author, *La première pénétration turque en Asie Mineure*, in *Byzantion*, xvii, 1938. For a more ample bibliography, see the art. *SALEJŪKIDES*.

The monk Malakia composed a history of the Mongol invasion: Armenian ed., St. Petersburg 1790, Russian trans. by Patkanian, ibid. 1871, French trans. by Brosset, 1871. Thomas of Mophor wrote, in the 15th cent., a history of Timur and his successors: Armenian ed. by Chahousarian, Paris 1861.

The principal source on the sufferings of the Armenians under Shāh 'Abbās I is Arak'el of Tabriz, whose *Histoire* runs from 1602 to 1661: Armenian ed., Amsterdam, 1669, French trans. by Brosset.

On the history of the kingdom of Little Armenia, in addition to the *Gesch. der Kreuzzüge* by F. Wille and B. Kugler, the modern histories of the Crusades (Grousset, 3 vols., Paris 1934-6; Runciman, 3 vols., Cambridge 1931-3), the history of the last Crusades by Atiya, London 1938 and the history of Cyprus by Hill, Cambridge 1940, see V. Langlois, *Essai hist. et crit. sur la const. eccl. et pol. de l'Arménie sous les rois de la dynastie rouphénienne*, in the *Mém. de l'Ac. Impér. des Sc.*, de St. Pétersbourg, 7th ser., iii (1860), nos. 3; the same author, in the *Bull. de l'Ac. Impér.*, ... IV, 1861 and in the *Mélanges asiatiques*, iv; E. Dulaurier, *Étude sur l'org. pol., relig. et administr. du royaume de Petite Arménie*, in *JA*, 1861, xvii, 327-437 and xviii, 289-337; by the same author, *Le royaume de Petite Arménie*, in *RHC*, *Disc. arm.*, I, Paris 1861; and K. J. Basmanjian, *Les Lusignan de Poitiers au trône de la Petite Arménie*, in *JA*, 1901, vii, 520 ff.

In regard to the information provided by the mediaeval geographers, see BGA, ed. de Goije and BAHG, ed. v. Miki; Yāqut, I, 219-22 (cf. Heer, *Die Quellen in Yāqut's Geogr.*, *Wörterb.*, 188, 62-3); Abu 'l-Idā, *Tahrik*, 387-8; *Le Strange*, 129-31, 139-41, 182-4; A. v. Kremer, *Kulturgeogr.*, 1893, 342-3, 358, 368, 377; N. A. Karavolov, *Renseignements fournis par les écrivains arabes sur le Caucase, l'Arménie et*

*l'Asie arménienne*, in *Shornik materialov dlya opisiya mestnosti i plenon kuzbaza*, xxix, xxxi, xxxii and xxxviii, Tiflis 1908; Zörn (Djörze), Trans. into Russian of the passages in Yâkût relating to the Caucasus (ed. by the Inst. of Hist., Acad. of Sciences of Azerbaijan); and B. Khachatryan, in the Armenian review, *Handes Amorya* (Vienna), xvii, 27-8, 53-4, 112-3, 176-7, 252-3 and xviii, 53-4, 367-8.

On the wars of the last century, see V. Uchakoff, *Gesch. der Feldzüge des Generals Paskevitch in der asiat. Türkei während der Jahre 1828-9* (German ed., Leipzig 1836; cf. Ritter, *Erdbunde* x, 414-23); and W. Föster, *Der persische Krieg, 1826-8* (St. Petersburg, 1887 ff.).

In regard to the Crimean war, see the works of Ristow (1855 ff.), Bazancourt (German ed., Vienna 1856), Anitschkow (1857-60), Bogdanovitch (in Russian, 1867), Kinglake (London, 6th ed., 1893), C. Roussel (Paris, 3rd ed., 1894), Gellcken (1894), Hamley (London, 3rd ed., 1894), Rothian (1889), Kurz (1889), A. du Cassé (Paris 1892); and C. Roussel, *Hist. de la guerre de Crimée*, Paris 1877 (also to be added: E. Tarle, *Krymskaya voyna*, 2 vols., Moscow 1942-5).

On the war of 1877-8, see Greene, *The Russian army and its campaigns in Turkey, 1877-1878*, London 1880; v. Jagwitz, *Vom Flema bis Adrianspol*, Berlin 1880; and Kinspach, *Kritische Rückblicke auf den russisch-türkischen Krieg* (in German, by Kramer, Berlin 1885-7).

On the troubles in Armenia during the last decade of the 19th century, see F. D. Greene, *The Armenian crisis and the rule of the Turk*, London 1895; R. de Courson, *La rébellion arménienne*, Paris 1895; R. Lepsius, *Armenien und Europa*, Berlin 1896; G. Godel, *Les souffrances de l'Arménie*, Neuchâtel 1896. On the massacres, deportations and emigration of the Armenians since 1915, see the modern histories of Armenia cited above (J. de Morgan, *Kevork Aslan, Pasdermadjian*; Toghbanian, *Le peuple arménien, l'Arménie sous le joug turc*, Paris 1913; F. Nansen, *L'Arménie et le Proche-Orient*, Paris 1928; Batmanglian, *Hist. mod. de l'Arménie*, Paris 1922; Pasdermadjian, *Après de l'hist. mod. de l'Arménie* (especially from 1848 to 1920) in *l'Union, Cahiers d'hist. et de civ. arm.*, I, Paris 1948-9; J. Missakian, *A searchlight on the Armenian question, 1878-1920*, Boston 1920; A. Nazarian, *Verité historique sur l'Arménie*, Paris 1953; W. Leinbach, *Die Sowjet-Arménien*, Stuttgart 1950 (passages devoted to Russian Armenia); P. Roudot, *Les Chrétiens d'Orient (Cahiers de l'Afrique et l'Asie)*, Paris 1953, 171-99. Amongst other works, see also: A. J. Toynbee, *Les massacres arméniens*, Paris 1916; *The treatment of Armenians in the Ottoman empire*, British Blue Book, London 1916; H. Barbé, *au pays de l'épouvante, l'Arménie martyre*, Paris 1917; J. Lepsius, *Le rapport secret ... sur les massacres d'Arménie*, Paris 1918; ANONYMOUS, *Témoignages recueillis sur les atrocités turques commises en Arménie*, Paris 1920; C. Jäschke, *Präsident Wilson als Schlichter zwischen der Türkei und Armenien*, in *MSOS*, Berlin, xxxviii, 1935, II, 75-80. See also A. Andonian, *The Memoirs of Naim Yek. Turk. off. doc. relative to the deportations and the massacres of Armenians*, London 1920; and J. de Morgan, *Essai sur les nationalités (les Arméniens)*, Paris 1927.

On the history of the Armenian Church, see A. Ter Mikelian, *Die arm. Kirche und ihre Bezieh-*

*ungen zur byzant. vom 4.-13. Jahrh.*, Leipzig 1891; H. Golzer, *Der gegenwärtige Zustand der arm. Kirche*, in *Z.f. Theol.*, 1893, XXXVI, 163-71; the same author, *Die Anfänge der arm. Kirche*, in *SB. d. dtsch. Ges. d. Wiss.*, 1895, 109-24; S. Weber, *Die heid. Kirche in Armenien*, Freiburg in B., 1901; Ter Mikelian, *Die arm. Kirche in ihren Beziehungen zu den syrischen Kirchen*, Leipzig 1904; N. Ormanian, *L'Eglise arménienne, son hist., sa doctrine, son régime, sa discipline, sa liturgie, sa littérature, son présent*, Paris 1910; and the art. *Arménie*, by L. Petit, in the *Diction. de théologie catholique*, I, Pt. 2.

ARMIS [see BILAKI]

ARMY [see DİVANE, LASHKAR, ORDU etc.]

ARNAWUTLUK, the Ottoman Turkish name for ALBANIA.

1.—Language. Allegedly descended from Pelasgian, Albanian is an Indo-European language of "baten" type like Armenian, Indo-Iranian and Slavonic. No literary records occur before 1466 A.D., but ancient Illyrian and ancient Epirote, on the basis of personal and place names, are held to be the prototypes of Geg (northern) and Tosk (southern) Albanian respectively. Illyrian *mausia*, *mausia*, "bramble", and *grisa*, "file", are Albanian *manë*, *manë* and *griset* respectively. Macedonian, Thracian and Dacian were languages of Albanian type.

Known as *shqip* in Albania, *arshësk* in the Albanian colonies, the Albanian language spoken by some 1,500,000 in Albania, 700,000 in the adjoining Kosovo-Metohija area of Yugoslavia, and some 40,000 in Epirus. An archaic form of the language survives on the Greek islands of Hydra and Spetsa, and in Sicily and Calabria, brought there by Tosk exiles from the Turkish invasions. Impoverished by centuries of neglect, Albanian has a small native, but a large borrowed vocabulary. Thus the wheel, the cart and the plough are represented by borrowings and the usual Indo-European terms of kinship are absent. City, road-building, horticulture, law, religion and family relationship are expressed by Latin loanwords, much disguised by phonological breakdown. Terms used in the Orthodox ritual are Greek; names of prepared dishes, garments, parts of the house, and Islamic terms have come in via Turkish.

The composite alphabet is: *a, b, c* (like *ts*), *ç* (like *ch*), *d, dh* (like *th* in *thin*), *e, ë* (like French *e* in *le*), *f, g, gj* (like Turkish *ğ* before *e, i, ö*), *h, i, j* (like *y* in *yoke*), *k, l* (as in French), *ll* (as in English *all*), *m, n, nj* (as in *canon*), *o, p, q* (like Turkish *k* before *e, i, ö*), *r* (weak), *rr* (strong *trill*), *s, sh* (as in *ship*), *t, th* (as in *thin*), *u, v, x* (as in *adze*), *z* (as in *judge*), *y* (German *y*), *z, zh* (as in *pleasure*). The vowels *d, ð, e* are Geg nasals.

Geg is the dialect of Tirane, the capital, and the North, including Kosovo-Metohija. Tosk has a considerable literature. Its main deviations are: replacement of the infinitive by subjunctive constructions, absence of nasal vowels, occasional conversion of *s* to *r*, and representation of *ar, ven* as *na, na*. There are small differences of vocabulary.

The noun has three genders and five cases. A noun is linked to a following genitive or adjective by an inflected particle, thus *malë i verat*, "the mountain of the north", *malë i bukur* "the beautiful mountain", in which *i* of *malë i bukur* is the detachable case, definite article. Similarly *molle, l* "the apple", but *molle* "apple". The verb possesses an imperfect, aorist, subjunctive, optative, imperative, a negation particle, and a compound mood called the admirative.

2.—Literature. From the third century A.D. the Roman Church has maintained a bishopric at Scutari in N. Albania. This became the first cultural centre; evidence of this is Bishop John Buzuk's Liturgy of 1555, and the 17th century religious works of Hoti, Bendihi and Bogdani. Literary activity, tolerated by the Turks in the Catholic

North, was suppressed in the Muslim centre and the Orthodox South, but took root among the exile colonies of Sicily and Calabria. Matranga, descendant of the exiles, began a tradition of hymn-writing using folk-rhythms (1592), which was continued by Brancato (1675-1741) and the Calabrian Variboba (born 1725). The movement became secular with the folk-songs and chappades of De Rada (1819-1893), an ardent spokesman of Albanian liberation, and was continued well into the present century by Zef Shiro (1865-1927), Sicilian-born author of two allegorical epics and a collector of folk-songs.

The work of De Rada was helpful in inspiring three Tosk patriots, the brothers Abdyl, Sami and Naim Frashëri, to form a league at Prizren in 1878. Under the stimulus of the San Stefano settlement they sought Albanian autonomy and literary freedom.

After several years of activity in Istanbul, where they were joined by the lexicographer and Bible translator Kristoforidhi (1827-1895), they were forced into exile. At Bucharest Abdyl the politician, Sami the educationist, and Naim, the Bektaschi mystic of Albanian nostalgia, formed a literary society and printed the Albanian journal *Gjokashti* (1885) toward Thimë Mito and Spiro Dine, exiles in Egypt, collected folk-songs from the local colony. In Sofia Midhat Frashëri, son of Abdyl, published an almanach, an anthology and a journal, and wrote didactic essays and short stories with a moral. Books printed in exile were smuggled into Albania by caravan.

The absence of a literary centre, and the want of a standard alphabet, hampered the movement, and Sami's difficult phonetic spelling was replaced by a digraphic one resembling that of A. Santori of Calabria and the linguist Dh. Camarda (1821-1882) of Sicily. After independence in November 1912 the various literary currents combined. A Drenova (born 1872), the Tosk lyricist, Rihani, and L. Puvareci (born 1899) continued the Bucharest tradition, the last in an unorthodox style of his own; the Catholic North was represented by the nostalgic F. Shiroka (1847-1917), the linguist and historian A. Xanoni (1863-1915), N. Mjeda (1866-1937), the satirist Gj. Fibi (1871-1940), the folk-poet and elegist V. Prenushi (1885-1946), and the short-story writer E. Kolqi (born 1901). Foqion Postoli, and M. Gramen (1872-1931), the Tosk novelists, Kristo Floqi (born 1871), the dramatist, and F. Konitza (1875-1943) transferred their activity to Boston, U.S.A., where a literary society Vatra, and a journal *Dielli* ("The Sun") were founded in 1921.

The brief fascist regime (1939-1943) attracted a few writers with pro-Italian leanings; the present communist regime encourages writing on the partisan movement, the class struggle, work themes and peace. Textbooks are based on Russian models. There are three active theatres and a writers' union. This activity is paralleled in Kosovo-Metohija, where the communist themes are Titoist.

3.—Geography. Albania (Shqipëri, Shqipëri) lies on a N-S axis 20° E of Greenwich. With a total area of 11,097 square miles (28,748 sq. km.) it is bounded by Yugoslavia, Greece and the Adriatic, lying between N. latitudes 39° 35' and 40° 45', its total length is 267 miles. It narrows to 50 miles at Peshkop, and widens to 90 miles at the lake of Little Prespa. Its ten prefectures formerly had 39 subprefectures, now redrawn and renamed as 34 districts. Containing the limestone formation of the Dinaric Alps, the terrain is highest in the E, reaching some 7,000 feet in places. Of the western lowlands, some below sea-

level, the largest is the fertile Myzeqeja plain. The longest river, the Drin, rises in Lake Ohri (Ochrida), and flows N-W and S-W to the Adriatic below Shëngjin. The Mat, Ishëm, Arën, Semën-Devoll-Berat and the Vjosë flow in general N-W, but the Shkumbi, a torrent in winter, flows broadly E to W dividing the country into two roughly equal areas, Gegëria and Toskëria.

The mountain mass consists of three north-to-south barriers in Gegëria, and four N-W to S-E parallel ranges in Toskëria. The highest mountains are Tomor near Berat (7,861 feet: 2,396 metres). Denudation and deforestation have given the country a bare, rugged character. The lakes of Shkodër (Scutari), Ohri and Prespa are only partly in Albania; Thërza in the central plain is a marsh, and Mallë, below Korçë, has been drained.

Durrës (Durazzo) is the main port, with wharves and a shipyard; Valona has a fine natural harbour, and handles refined oil and bitumen; Saranda is a fishing port, and Shëngjin handles ore. Chief towns are Tirane, the capital (100,000), Shkodër (35,000), Korçë (25,000), Durrës (16,000), Vlorë or Valona (10,000), Gjirokastrë or Gjirakastër (12,000). Railways (80 miles) link Tirane with Durrës, Peshkop and Elbasan, but most towns are reached by road.

Climate ranges from European in the high country to sub-tropical in the S-W, and the vegetation is Mediterranean. Forests, mainly deciduous, include hornbeam, turkey oak, sumach, avellana oak, holm oak, juniper and cedar. The forest scrub includes ash, alder, buck beech, pomegranate and juniper. Densest forests are at Manuraz near Kruja.

Mann, *Albanian Literature, An Outline of Prose, Poetry and Drama*, London 1955; idem, *A Short Albanian Grammar*, London 1957; idem, *An English-Albanian Dictionary*, Cambridge 1957; S. Skendi, *Albania (Statistical, Historical, Political, etc.)*, New York and London 1957.

(S. E. MANN)

#### 4.—Population.

According to the census of 1955 the population of Albania was 1,304,310 (in 1930 it was 1,005,097). Outside Albania there are Albanians in Yugoslavia (750,000 according to the Yugoslav census in 1948), in Greece (estimated between 30-60,000) and in Italy (estimated at 250-250,000). The number of Albanians by birth all over the world is estimated at 3 millions (see *Albania*, ed. S. Skendi, New York 1956, 59). According to the 1930 census there were 45,000 Vlachs, 35,000 Slavs, 20,000 Turks and 15,000 Greeks in Albania. Approximately 20 percent of Albania's total population lived in towns in 1949-50. In the same year the larger towns were Tirane, the capital, with an estimated population of 80,000 (in 1930, 30,800), Shkodër 34,000, Korçë 24,000, Durrës 16,000, Elbasan 15,000, Vlorë 15,000, Berat 12,000, Gjirokastrë 12,000.

The Albanians are divided into two principal ethnic groups: The Gëgs in the North of the Shkumbi River and the Tosks to the South. The Turks called these two regions Gegallik and Toskallik. Not only in their dialects but also in the outlook and social behaviour the Gëgs differ from the Tosks. The Gëgs are considered as keeping national characteristics purer than the Tosks.

Generally speaking the barren mountains of Albania provided too little for an increasing population to subsist. Especially when an epidemic decimated

livestock, the helpless people had no choice but to emigrate or to fall upon neighbouring plains. They usually went out as mercenaries, shepherds or agriculturists.

Toward the middle of the 14th century the Albanians, under the pressure of the Serbs or as mercenaries of feudal seigneurs in Greece, migrated and settled in Epirus, Thessaly, Morea and even in the Aegean Islands. There most of the Albanians were gradually grazed, or migrated to Southern Italy under the pressure of the Ottomans later on. But about 1466 in Thessaly there were still Albanian districts in the towns as well as 24 Albanian *hahnes* in Livadia (Lebadea) and 34 in Istitia (see my *Pdih Deer*, Ankara 1954, 146). Under the Ottomans these *hahnes* had a special status and, later, are known as *anadolus*.

When Iskender-beg died in 1468 a number of the Albanians involved in his struggle against the Ottomans either retired to the mountains or migrated to the kingdom of Naples. In 1478, 1481 and 1492 more Albanians migrated to Southern Italy and Sicily where they preserved their language and customs down to the present day.

In the 15th century the Ottoman government transferred some Albanian *timar*-holders (see *timar*) of the feudal families (Mazarakli and Heykai) to Trebizond.

No large Turkish settlement is recorded in Albania except a small number of exiles from Konya, locally called Koniak. There are also the Yirukis of Kodjaçili, on the mountains to the East of Dibra where they were stationed apparently to safeguard the Rumel-Albania highway. The *virages* (the deported), sent c. 1470 from such parts of Anatolia as Sarughan, Kodjaçili, Djanik were also few in number (see *Sünni Defteri-Sandjahi Arnavud*, index).

The second significant expansion of Albanians in Rumel occurred in the 17th and 18th centuries. They came to settle in the plains of Djağovë (Yakovla), Prizren, Ipek (Peç), Kalkandelen (Tetovo) and Kosovo, especially after the mass migration of the Serbs from these areas in 1690. It seems that Albanian settlement was mostly the result of the land *muhalla* system (see my *Tasavvut nedir?*, in *Türk Arastirmaları*, Ankara 1942) prevailing there in this period. Albanians came to lease small tracts of lands from few *muhalla* owners in these rich plains and settled there as tenants permanently.

As for the Vlachs in Albania, they had lived a pastoral life on the mountains of North Albania side by side with the Albanians since the Slavic invasion in the 7th century and they took part in the Albanian expansion from the 11th century onwards. In the Ottoman Register of 835/1431 we find the Vlachs and their *hahnes* (*Eflak-hahnes*) in Southern Albania especially in the region east to Kanina.

The Albanian tribes to the North of the Drin River are called by the general term of *Mal-i-tor* (highlanders). Toward 1881 there were 19 tribes belonging to this group with a population of 35,000 Roman Catholics, 15,000 Muslims and 250 Greek Orthodox. The most famous tribes among them were Hoti, Klementi, Shkrelli, Kastrioti, Koçaj, Pulati, living on the mountains east of Scutari.

It seems that during the Ottoman conquest of Albania from 1385 to the end of the 15th century the rebellious clans had to retire once more to the most rugged parts of the highland. Their reappearance in the lowlands coincided later with the weakening of Ottoman control in the provinces in the 17th century, and, later on, they became "the terror of Rumel".

From the beginning the Ottoman government had to respect the tribal organisation and autonomy of these tribes. As they had actual control of the important mountain passes from Rumeli into Albania the government charged them with the guardianship of these passes and in return for these services made them exempt from taxation. A regulation dated 1496 (*Baybatalnik Arşivleri, İstanbul, Taha Def. 1496*) reads as follows: "The *ahşar* of Klement (Klement) consists of five villages. Their inhabitants of Christian faith pay one thousand *akde* of *ahşar* and one thousand *akde* of *ispende* to the Saadkajbegi and they are exempted from *ahşar* and *ahşar* *ahşar* and other taxes, but they are made *derbeş* (guardians of the passes) on the route Scutari-Petrijan's territory-Altun-ili as well as the route Medun-Kuca-Plava". Later in the 17th century the Klementi caused troubles through their depredations in Rumeli and their co-operation with the rebellious tribes of Montenegro (Karadagh).

To the south of Drin lived the Mirdite tribe, 32,000 in number (in 1885) and all Roman Catholics. They were divided into five clans called *hayraks*, namely Orush, Flandi, Spahli, Kujdesin, Dohri. Distinguished by their service to the Ottomans against the Venetians in 1696, the Hott were promoted to the first place among the clans. Their *hayrak* headed all the others. But today the Spahli tribe is the chief.

In tribal tradition the origin of the *hayraks* goes back to the Ottomans. In fact it was an Ottoman institution to give a *hayrak* or a *sandjak* to military chiefs as a symbol of authority. Each clan was under a *hayrakdar* i.e. standard-bearer, who was a hereditary chief. The public affairs of the clan were decided in the council of the hereditary elders. In order to discuss general affairs the five clans had their annual meeting at Orush. A *höküm-dar*, appointed by the Ottoman governor, arranged all kinds of affairs between the administration and the clans. The "captains" of the five clans of Mirdite claimed to descend from Lekë Dukagjin who played an outstanding rôle in Iskender-beg's struggle against the Ottomans. Lekë Dukagjin is believed to have codified the customary law practiced among the tribes, which is called *Kanuni i Lekë Dukagjinit* (A. Sh. K. Gjefor, *Kanuni i Lekë Dukagjinit*, Shkëmbër 1923).

These tribes used to send to the Ottoman army an auxiliary force composed of one man per house; an Ottoman practice which was also applied to the Yürüks and the Kurds. When from the end of the 16th century onwards the empire came to need more troops for its lengthy wars the Albanian auxiliaries seemed to gain an increasing importance. They were used especially in the local wars against the Montenegrins. The Mirdites were regarded as the bravest soldiers in Rumeli. But at the same time H. Beugard (1855) calls them "the greatest plunderers in the world". In 1855 when the *Taninmat* administration attempted to disarm them and enrol them in the regular army they rose up and infested the Zadrima (Zadrina) area with the result that the next year the government gave up these attempts. Later the Mirditch chief Pashë Buti Doda played an important part in the Albanian independence movement (1908). The "Republic of Mirdite", proclaimed under Yugoslav auspices in 1927, collapsed the next year.

### 5.—Religion.

According to the Italian statistics of 1922 (see, Albania, ed. S. Skendi, 58) out of a total population

of 1,128,143, 779,417 were Muslims, 232,320 Orthodox and 116,299 Catholics. The only significant Catholic group is located in the Shkodër (Scutari) district, while large Orthodox groups live in the districts of Gjinokastër (Argyrokastro), Korçë (Korice), Berat and Vlorë (Avlona). Muslims are spread all over the country, but mostly in the Central Albania.

Albania which became attached to the Patriarchate of Constantinople in 732 A.D., was split between Rome and Constantinople in 1054, the northern part coming under the jurisdiction of Rome. The Normans and the Angevins strengthened Catholicism in the country; Antivari was the seat of the Archbishop of Albania and Durazzo that of Macedonia.

Orthodox Albania was dependent directly on the Archbishopric of Ohrida. As the protectors of the Orthodox Church the Ottomans, even before their restoration of the Patriarchate of Constantinople in 1454, favoured Orthodoxy against Catholicism. However, for political reasons the Porte tolerated the Catholic church in Albania. The Albanian lords wavered between East and West according to the political conditions. The Orthodox Albanian immigrants to southern Italy had the same attitude, their church recognising the Pope's supremacy. According to the Ottoman year-book of 1895 there were, in the province of Yanya (Epirus and Albania south of the Devoll River), 223,885 Muslims, 118,033 Greeks, 129,517 Orthodox Albanians, 3,517 Jews and only 93 Roman Catholics. It must be added that a part of these Greeks were in origin Orthodox Albanians graced with the Greek religious and educational institutions which were zealously founded beginning with the second half of the 18th century. After the independence of Albania an autocephalous Orthodox church of Albania was finally recognised by the Patriarchate (1917). The first converts to Islam were the Albanian feudal lords holding *timars* from the Ottomans. Contrary to what is generally held conversion was not required as a condition for keeping their lands as *timars*; allegiance to the Ottoman state was sufficient in order to receive *timars*. Throughout the 15th century Christians were granted *timars*. By the end of the 15th century, however, only a few Christian *timar*-holders were left because of voluntary conversions.

Elbasan, built by Mehmed II in 1470/1476, became a Muslim centre from the outset, as did Veitë in Thessaly. It appears, however, that Islam had then only a few converts among the common people. At the beginning of the 16th century in four *sandjaks* of Albania (Elbasan, Ohri, Avlona and Iskenderiye) there were about three thousand Muslim *ra'sids* families. In Catholic sources written around 1622 it was estimated that only one thirtieth of the Albanian population was Muslim. During the 17th century the Venetians and Austrians attempted to foment an insurrection of the Catholic Albanians as well as the Orthodox Serbs who were feeling hostile to the government because of an increase in the *çiftlik*. In 1614 at a meeting of church dignitaries at Kuçit it was decided to ask for aid from the Pope. Toward 1622 the first Franciscan missionaries appeared in Albania. In southern Albania, where Catholics and the Serbs co-operated with the Venetians in 1649 and with the Austrians in 1689-1690, which made the Porte decide to have recourse to retaliatory measures. To escape these, the Christian populations in the plains of Peë, Prizren, Djakovë and Kosoovo, who were partly Albanian, migrated in mass or adopted Islam; but many of them became

crypto-Christians, locally called *laramant* (mistle). The Albanisation and Islamisation of these plains went hand in hand in the 17th and 18th centuries.

Conversion to Islam received a new impetus under the Hogahts and 'Ali Pasha (pasha) of Tepedelen. According to the contemporary witnesses, the latter forced a number of villages to adopt Islam. He is believed to have been a Bektaşî himself and in his time Bektaşîism (see BEKTAŞIYYA) made its greatest progress in Albania. Under King Zog its adherents were estimated at about 200,000. With its prosperous *tekkes* in Tirat, Akdabiser (the old centre of the Bektaşîs), Berat, and on the Tomor mountain, as well as its central organisation in the capital, Bektaşîism assumed importance in Albania. During the Congress of Korçë in 1919 the Bektaşîs sought to establish a community of their own, separate from the Sunnis. This was to be accomplished only under the Communist régime in 1945.

Islam played an essential part in Ottomanising the Albanians, and the Christian Albanians often referred to their Muslim competitors as Turks. On the other hand Islam prevented the Albanians from being assimilated by her Greek or Slavic neighbours. It is asserted that under the veneer of Christianity as well as Islam the primitive religious beliefs survived with the Albanians, especially in the highlands.

### 6.—History.

The Illyrian origin of the Albanian people is generally admitted, but their ethnic relationships to the Thracians, Epirots and the Pelasgians are still subject to argument. The Illyrian tribes first came into contact with Greek culture, through the Greek colonies founded on the Albanian coast, in the 5th century B.C. The principal one was Epidamnus near Durazzo (Durrës). The Illyrians formed their first independent political organisation in the third century B.C. Conquered by the Romans in 167 B.C., they were subject to strong Roman influence for centuries. The Roman highway to the Orient, Via Egnatia, started at Dyrrachium (Durrës) and followed the Shkumbi valley. Ptolemy mentions, for the first time, the *Albanoi* among Illyrian tribes and their capital *Αλβανόπολις* (near Croya). In the 7th century the invasion of Albania by the Slavs put an end to the romanisation of the Albanians who retired to the mountains in north Albania to live a pastoral life for half a millennium. In the 9th and 10th centuries the Bulgarian empire extended its rule over southern Albania, including Dyrrachium (Greek Dyrrachion), and toward the end of the 12th century the Serbs under Nemanja occupied northern Albania. The long coexistence with the agriculturist Slavs left a deep cultural imprint on the Albanian people. Finally, Emperor Basil II restored Byzantine rule in southern Albania, and conquered Dyrrachion (1005) which had seen the capital of the Byzantine *demes* of Dyrrachion since the 9th century. When toward the middle of the 11th century the control of Byzantium was weakened in the provinces the Albanians came out from their mountain retreats. From this time on, the Albanians, who were then located between the lines of Skodra (Shkodër), Dyrrachion and Ohrida-Prizren, are seen to be mentioned more by the contemporary sources, as *Αλβανοί* or *Αλβανίται* in Greek, *Arbanenses* or *Arbanenses* in Latin and *Arbanaci* in Slavic sources. The Ottomans first used the Greek form *Arvanit* and then its turcified versions *Arnavud* and *Arnavut*. Again from the 11th century on, Albania became

a bridge-head for feudal Europe to attack the Byzantine empire. Dyrrachion was temporarily taken by the Normans in 1081 and 1185, and by the Venetians in 1204. Then, it came into the possession of the Despot of Epirus, Theodore Angelus (1215-1230). In 1273 Charles of Anjou occupied Dyrrachion as well as the rest of the Albanian coastland, and called himself the "King of Albania". This started a long struggle between the Byzantines and the Angevins in Albania.

Anatolian Turks, as a result of their alliance with the Byzantine emperor, first came to know Albania in 1297/1337. During the Byzantine civil war the Albanian highlanders had increased their depredations in Albania, taking Timorë (Timoë), and threatened the other Byzantine strongholds, Kanina, Belgrade (Berat) Klisura and Skarapir. In order to establish his control in Albania as well as in Epirus, Andronikos III entered that province with an army which included a Turkish auxiliary force. It was sent by his ally Timur Beg, ruler of Aydin. The army overran the country as far as Durazzo (Dyrrachion). The rebels who retired into the mountains suffered great losses at the hands of the Turks. The Turks returned home through Thessaly and Boeotia (Cantaenous).

Before long Stephan Dushan occupied Albania (Croya in 1343, Central Albania 1343/1346). This seems to have accelerated the migration of Albanians into Greece. Native Albanian feudals and soldiers joined Dushan in his conquests further south (L. von Thallóczy—C. Jurek, *Zwei Urkunden* . . . 85). The *voysaks* whom we later find in Albania under the Ottomans settled there apparently with Dushan at this time. When in 1355 Dushan's empire collapsed, local feudal lords, Slav, Albanian or Byzantine in origin, appeared in all parts of Albania. Soon the Balghas (Balghis), in the north and the Thopias in the centre emerged as the most powerful of these lords. The Balghas possessed the coastland between Durazzo and Cattaro, and tried to secure control of a large area as far as Prizren. They came into conflict with Tervko, king of Bosnia, as well as with the Serbs who sought to bring this region, Zeta, again under their control. Soon the Balghas, who had already settled themselves in Avlona, Belgrade and Kanina, threatened Carlo Thopia in Durazzo. He asked for help from the Ottoman Turks in 1387/1385, as their *udj* (frontier) units had appeared near Yanoia killed in 1383/1381. Balgha II was defeated and already by an Ottoman army at Savra on the Vjosë River in Myzeqe in 1383/1381. Balgha II September 1385. This is recorded in Ottoman chronicles as the expedition to "Karl-ili", that is "the land of Karl" (Carlo Thopia), and it is dated correctly as 1387/1385. The Albanian lords, including Balgha's heirs, recognised the Sultan's overlordship. The Dukagjini of Alessio notified the Ragnasins of their peace with the Ottomans in 1381/1387. Alarmed by the Ottoman advance, Venice sent Daniel Cornaro to Murad I to protect Thopia (Ramadžan 789/October 1387), but on the other hand started negotiations with Thopia to take over the city. Thus the long Venetian-Ottoman rivalry over Albania had begun. As a vassal of the Sultan, Gjergj Stratišimirović, Balgha's heir in Scutari (Shkodër) and Dulligino, now wished to free himself from the Ottomans in his conflict with the Bosnians. Kefala Shalhin in Turkish chronicles Kavalas Shalhin, later Şihbül al-Din Şihbül Paşa) an *adji-beg* and probably *inbeg* of Liaskovik, embarked on a series of successful raids into Bosnia; but he was finally defeated by Bosnians near Trebinje 21 Şha'bân 790/27 August 1388). According

to Neghi, this expedition was made at the request of the "Lord of Skutari" (G. Stratinovic) who after Shahn's defeat was accused of a secret understanding with the enemy. After their victory at the Kosovo plain (1391/92) the Ottomans made Skopje (Škupi) a strong frontier centre by settling there the Turks from Sarajëu under Paşa-Yiğit (toward 1393/1397). Then Shahn came back and drove out G. Stratinovic from Scutari, and St. Sergius (1393/1395) who had returned to the Venetians for protection. Venice for its part took Alessio, Dravasto (1393), Drivasto (1396), all given up by the native lords for a yearly pension. The Ottomans too tried to keep the local lords on their side by guaranteeing them their lands as *timars*. Thus Dimitri Yonina (Gjonina), Konstantin Balsha, Gjergj Dukagjin as Turkish vassals all co-operated with Shahn against the Venetians.

The establishment of the Ottoman rule in Albania with its *tapu* (see TARU) and *timar* [s.v.] system started first in the region of Premeti (Premeti) and Korça (Korice). The regular Ottoman administration with its *sandjaks* and *hadsis* in towns and *sipahis* in villages is found there in the records going back to the time of Bayazid I (Bajazet I, *Archives, Istanbul, Malye no. 212*). This must have followed the Ottoman expedition in Albania in 1396/1397 and 1397/1397. The Ottoman records also show that Akshahar (Croya, Krupa) was granted tax exemption at the same period. Albanian forces under Cola Zaccaria, Dimitri Yonina, Gjergj Dukagjin and Dushman were present at the battle of Ankara in 1402/1402. Upon the collapse of Bayazid's empire in 1402, many of these Albanian lords (Ivan Kastriot, Cola Zaccaria, Nikola Thopia) recognised Venetian suzerainty. When in 1403 Georg Stratinovic died, Venice, which had already taken Scutari, asserted a right of his heritage—Dulcigno, Antivari and Rudia. But his son Balsha, supported by Stephan Lazarević and Vuk Branković of Serbia embarked upon a long struggle against Venice. The latter finally reached an agreement on Albanian affairs with their suzerain, Emir Süleymân (10 Djuždâd I, 812/29 September 1409). Then Paşa-Yiğit of Škupi forced Ivan Kastriot to submit to the Sultan's suzerainty (812/1410). In the South the Ottomans supported Albanian Spasas against the Toccoes. Finally war was declared against Venice during which the Ottomans made the real conquest of Albania from Northern Epirus to Croya (Akshahar) and formed the province of Arvanid-ili or Arnavud-ili (818/20/1415-1417).

The conditions which the Ottoman conquest brought into the country can be fully ascertained with the help of the details contained in the *timar* register of 835/1432 (*Şâhid-i defter-i Sancak-ı Arvanid*, ed. H. İnalcık, Ankara 1951). The names of various regions in the register frequently contains references to the chief feudal families who were vassals of the Ottomans: about 879/1476, Yuvan-ili (land of Kastrioti), Balsha-ili (east of Kavajë and south of Shkumbë), Gjonmari-ili (North of Peñin), Pavlo-Kurtik-ili (the Jilena Valley), Kondo-Miho-ili (area west of Elbasan), Zenebisi-ili (Zenebisi, Gjinokastër and its surroundings), Bogdan-Ripe-ili (north of Elbasan), Aghin-ili (Premeti). Besides these great families, many smaller Christian feudals kept some of their lands as *timars*. Among them we may mention Dohëri (in Carstod), Simon Komendi (in Kolindari), Bobza Family (Gjoni and his sons Gjoni and Andre in the Village of Bobza or Dubis), Karli family (Matja). This kind of *timars* constituted 16 per cent of all the

*timar*-holders in Arvanid-ili. Conversion to Islam was not considered necessary for possession of *timar*. One *Metropoliti* in Belgrade (Berat) and three *Patrikops* in Kania, Akshahar and Cartolov were given their former villages as *timars*. The Turkish population in the province consisted only of the military and religious personnel. The Turkish *timar*-holders with their men did not exceed 800 in number. The whole *sandjak* was distributed among about 300 *timar*-holders who lived in the villages or castles, namely, Argirikaš (Argirocastro, Gjinokastër), Kania, Belgrade, Iskarapar, Bratunogost, Yenidagkaly and Akshahar. Argirikaš (later on Argiri or Ergiri) became the seat of the *sandjak-beg* and in each county (*vilâyet*) centre there was a *sandjak* and *hadsis*. The revolutionary step taken by the Ottoman state was that it considered almost all the agricultural lands as owned by the state, because only such a system would enable it to apply its *timar* system. The peasants, therefore, must have had the feeling that they were under an impersonal central government as compared to their close dependence upon the feudal lords under the old regime.

In the north, the Ottomans supported first, Balsha III, and upon his death (824/1421), Stephan Lazarević of Serbia, against Venice, which finally had to return to Stephan, Drivasto, Antivari and Rudia (826/1423). In the south the despot Carlo Tocco died in 825/1429 and Murad II, taking advantage of the conflict between his heirs, took Yonina (Muharram 834/October 1430). After that a new land and population survey of Albania was effected (Šahâd 835/spring 1432) which meant the tightening of the Ottoman administrative control there. This survey may be regarded as the real starting point of the long Albanian resistance during the subsequent decades. Moreover it demonstrates the real character of the rebellion. Firstly some of the villages in the mountainous Kuvendi and Bozëgheq areas refused to be registered. In a few places they even killed their Ottoman *timar*-holders. Great feudal lords such as Ivan (Yuvan) Kastriot in the north, Arvaniti (Aranti, Armiti) Comnenus in the Argirikaš region, had to give up considerable parts of their lands for distribution to the Ottoman *sipahis* as *timars*. First Aranti took up arms, killed many *sipahis* in the autumn of 836/1432, and Thopia Zenebisi besieged Argirikaš, Alfonso V. of Naples, Venice and Hungary encouraged the rebels, who defeated 'Ali, son of Evrenus, governor of Albania, at the Bozëgheq pass. Encouraged by these developments Christian lords in central and northern Albania joined the rebellion. Finally in 837/1434 all the forces of Humel under Sinan Beg, governor-general of Rameli, combined to put an end to this dangerous rebellion which was giving hope to Hungary of a new Crusade. But Aranti managed to escape to the mountains. The additional records made after 836/1432 in the *defter* of Arvanid-ili indicate that he did not affect the Ottoman control of the country to any considerable extent. A great majority of the Ottoman and Christian *timar*-holders remained in possession of their *timars*. It appears that mostly the highlanders co-operated with the feudal families who had matrimonial connexions with their chieftains.

From 847/1443 onwards Iskender-beg [s.v.], the son-in-law of Aranti, assumed the leadership of the rebellion; his unusual energy and boldness, and the international situation which obtained at the time, gave the movement a character of international

significance. Setting aside the legend that has grown up around his person, it must be emphasised that the origin and the motives of his rebellion were not different from those of the other Albanian lords. Appointed *sandjak* of Akshahar (Croya) about 842/1438, he was dismissed in 1440. He wished to recover Croya and his father's lands in their entirety and to possess them as a feudal lord, not as a *timar*-holder. It is true that he made an alliance with other feudal families, Thopias, Balshas, Dukagjins, Dushmans, Leca Zaccaria and Aranti (The Alessio Meeting, 25 March 1444), but the idea of an Albanian united by a national leader is far from reality. He controlled only northern Albania while central and southern Albania always remained under Ottoman control. *Sandjaks* and *sandjak-begs*, based on Argirikaš (Gjinokastër), Ohrida or Belgrade (Berat) tried to suppress him with local forces. He waged guerrilla warfare all the time. Many of the battles described by Marino Barlezio with such fantastic figures were forces seem never to exceed 3,000. By the treaty of 26th March 1451 he became vassal of Alfonso V. of Naples and surrendered Croya to the king's men. Aranti, who had claims on southern Albania (Vaguetia, Valona, Kania) followed his example. Aranti was authorised by the king to accept in his name oaths of allegiance by other Albanian lords. So Zenebisi and others also became Alfonso's vassals. In return, the King agreed to grant a yearly pension varying between 300 and 1400 ducats to each of these vassals and to provide them a place to take refuge in case of danger. This simple change of masters was obviously determined by the fact that the Aragonese system appeared much more favourable than the Ottoman regime to the Albanian feudals. But, as witnessed by a contemporary Aragonese document, "the common people had hardly any complaints

against the Ottoman administration". (see C. Marinisco, *Alphonse VIII, M. de l'École Roum. in France*, Paris 1923, 104). A *timar* register made in 871/1466-67 included Dibra, Ilipolë, Kijka, Mat and Gernemiza (*Bajazet-ili Archives, Istanbul, Malye no. 306*). It is therefore seen that after Mehmed II's [s.v.] expedition in 870/1466, the *timar* system was extended into these areas. Whatever his real motives may have been, Iskender-beg, who died in his mountains, Murad II (in 852/1448 and 854/1450) and Mehmed II (in 870/1466 and 871/1467), was also glorified in his time as "Champion of Christ", by the Pope, and as the Albanian National hero, by the nationalists in the 19th century.

During the Ottoman-Venetian war of 1467-1479 Albania became one of the main scenes of operation. Finally the Ottomans were able to take Croya, Drivasto, Alessio and Jablak (Jabryk) in 1478, Scutari in 1479, and Durazzo in 1501. Alessio (Leob), which the Ottomans lost during the war of 1499-1503, was retaken in 1509. After having failed in their attempts in 1538, the Ottomans finally took Antivari (Bar) and Dulcigno (Ulcinj, Ölgün) in 1571, and thus completed their conquest of Albania.

It appears that up to the end of the 15th century Ottoman rule in Albania created a peaceful and prosperous era. Most of the old feudal families then adjusted themselves to the Ottoman régime, and even one of the Arantis named 'Ali beg had a large *timar* around Kania, Argirikaš and Belgrade toward 1506.

Until about 870/1466 Ottoman Albania was organised as a *sandjak* under the name of Arvanid (or Arnavud)-ili. Its subdivisions were the *vilâyet*s of Argirikaš, Kliaura, Kania, Belgrade, Timor-igje, Iskarapar, Pavlo-Kurtik, Cartolov and Akshahar. When in 1466 Mehmed II erected the fort of Elbasan, this region was set up as a new *sandjak*.

Sandjaks	Communities				Population				Officials and soldiers**				Tax revenues
	Towns	Fort	Villages	Christian households	Muslim households	Jewish households	<i>Sandjak-beg</i>	<i>K.âfâ</i>	<i>Z.â'im</i>	<i>Timar sipahis</i>	<i>Episkopi</i>	<i>Mudabirlik</i> in fortresses	
Iskenderiye; its <i>hadsis</i> divisions: Iskenderiye, Polgore, Bihor, Ipek, Prizrin, Kuvendi.	5	6	895	23,355	371	—	1	4	8	137	7	297	4,392,910
Awlonya; its <i>hadsis</i> divisions: Belgrade, Iskarapar, Premeti, Bogunya, Depedelen, Argirikaš, Awlonya.	7	7	?	35,370*	1,344*	525*	1	7	68	479	654	346 and 107 <i>azab</i>	6,991,830 in three <i>hadsis</i> of Argirikaš, Awlonya and Belgrade

\* These figures are for the *hadsis* of Belgrade, Argirikaš and Awlonya only.

\*\* We have not included in this list *dişdaris*, *halkbudas*, *halkis*, *imams*, or *ghayahis*, who were present almost in every town.

Moreover in the south the *sandjak* of Awlonya (Avlona) and in the east that of Ohri were created and in 1479 the *sandjak* of Iskenderiye (Scutari) was formed in the north. The following is a list established on the basis of the surveys of 912/1506 and 926/1520. (*Islap. Arşivesi*, *Tapu* no. 34 and 94), showing the administrative and military situation in the 16th century.

A comparison of the survey of 835/1431 with those of the 16th century reveal the fact that everywhere, in towns and villages, the population more than doubled during the intervening period, and in consequence the tax revenues increased similarly. The following illustrates this for the principal towns.

Towns	1431	The beginning of the 16th century
	Christian households	Muslim households
Agrikkas	121	143
Belgrade	175	501
Kanina	210	514
Prenedi	42	260
Kileura	100	514
Albaniyar	125	89

(These figures do not include the military or the civil officials).

The Albanian towns, which numbered 19 in the four Albanian *sandjaks*, were small local market-towns with populations varying between 1,000 and 4,000. Only Awlonya (Avlona) became a commercial centre of some importance (population 4 to 5 thousand). In order to further commerce, the government settled there a sizeable Jewish colony of the refugees from Spain (end of the 15th century). According to the *Kānūn-nāma* of Awlonya (see *Arnasid Defteri*, 123) the port handled goods imported from Europe, and velvets, brocades, mohairs, cotton goods, carpets, spices and leather goods came from Bursa and Istanbul. Some of the citizens of Awlonya even had business associates in Europe. Quite a large amount of tar and salt, produced near the city, was bought by the government at fixed prices. The tax income from Awlonya for the sultan's treasury alone amounted to about 32 thousand gold *ducats* a year. A garrison and a small fleet were stationed there permanently (for vols. 7 and 8). It must be noted that the Ottomans Albanian towns circa 1081/1670 see Ewliya Çelebi, continued the tax privileges of Albaniyar and Iskariyar which went back to Byzantine times, (see L. von Thallay-C. Jurek, *Zwei Urkunden aus Nordalbanien, Archiv für slavische Phil.*, xxi, 1899, 83). The *Defter* of 835/1431 reads as follows: "Let the inhabitants of Albaniyar guard the castle and be exempt from all kinds of taxation with the exception of *sharqia*". These tax exemptions were abolished toward the end of the 16th century.

The Ottomans did not radically change the taxation system which had existed in Albania under the Byzantines and the Serbs. *İspendie*, most probably a Serbian tax, was paid by every adult Christian male at the rate of 25 *akça*. The basic Ottoman taxes were the *hıgr*, which was actually one eighth of agricultural products, and the *dişma*. The Byzantine tax of two bushels of wheat and two of rye a year

survived in some parts of Albania under the Ottomans. So did fines called *bād-i kasal* [g.s.], apparently an adaptation of Byzantine *aerikon*. *Tavuk ve buğala* (Byzantine *karavakia*) also survived in Albania as an *iddet*. All these taxes except the *dişma*, which was collected for the sultan's treasury, were assigned to *timar*-holders. Under the Ottomans the rate of taxation seems not to have been lighter than before. But they abolished forced labour and determined, in advance, for each peasant, the amount of taxes due. Unlawful practices did exist, and the *Kānūn-nāma* of 1583 would seem to give a good idea concerning such abuses. It states that no *timar*-holder should subject his peasants to forced labour, make them carry hay for themselves, take their lands away without lawful reason, or force them to pay in cash the *hıgr*, which was to be paid in goods. The commonest complaint of a semi-nomadic people was that they were liable to the sheep-tax more than once a year during their move from one pasture to another.

At the beginning of the 16th century the public revenue in the *sandjak* of Iskenderiye (Scutari) amounted to 4,375,270 *akça*, half of which was assigned to the sultan and the other half to the *sandjak*-begi (449,953) and the *timar*-holders (3,770,118).

The Albanians occupied an outstanding place in the ruling class of the empire. At least thirty Grand-Viziers can be identified as of Albanian origin—among them Gedik Ahmed, Kodja Dāwūd, Dukagjini-Edo Ahmed, Lutfi, Kara Ahmed, Kodja Saliha Pasia, Naib, Kara Murad, and Tachmeto Ahmed. In the Kapd-kulu army, too, the Albanians were always present in great numbers. One obvious reason for it was that the *devşirme* [g.s.] system was practised extensively in Albania, as in Bosnia.

Two fundamental changes in the structure of the empire, namely the disruption of the *timar* system on the one hand, and the deterioration of the fiscal system on the other, had their impact on the situation in Albania as elsewhere. The first change, which coincided with the weakening of the central authority at the end of the 16th century made possible the formation of large estates in the provinces, while the second made it necessary for the state to assess new taxes and to reform the *dişma*, which due to its increased rate, affected particularly the Christian population. The discontent is manifested especially in the rebellious attitude of the Catholic highlanders in Albania in the 17th and 18th centuries and in their co-operation with hostile powers. For example, the original tax of 1000 *akça* a year paid by the Klementi clan had become a trivial amount by the end of the 16th century due to the depreciation of the *akça*, and the government therefore wanted instead to assess the *dişma* at 1,000 gold coins. This caused the rebellion of the tribes of northern Albania. They started to attack and plunder the plains of Rumeli as far as Filibe. In order to stop these depredations the Porte sent several armies against them and built a new castle near Gusinje. Their new uprising in 1638 was quelled by Dede Mehmed Paşa (see *Arnasid*, III, 399-409). The Klementi, Kuli (Kola), Pipera and the Khamirovi, who held the coastal range of Himara, co-operated also with the Austrian and Venetian armies during the wars of 1683-99, 1714-8, 1738-9.

On the other hand, as the central control weakened, the highlanders began to penetrate into Rumeli and even in Anatolia from the beginning of the 17th century. In the 18th century, *paşas*, *begs* and

*a'yās* everywhere took into their service these highlanders who were reputed to be the best mercenaries. They were organised in *bēlaks* of about 100 men under a *bēlak-bāg*, who, as a perfect condottiere, arranged everything for his men with the hire. The part played by such *bēlaks* is well illustrated by the example of Mehmed Ali in Egypt. Many Albanians also joined the mountain bands in Rumeli, called *Daghl* *shkëmbor* or *Kërbelas*.

In the same period the lease system of the state-owned lands (*miri aridit mülhata*) on the lowlands, coastal plains or inland basins, in Albania gave birth to the big land-owning class of *a'yās* [g.s.]. These absentee land-lords used every means to obtain more and more *mülhata*. Among them, the Bughatti family in the North, in the land of Gëgë, and Tepedeleni 'Ali Paşa (see 'Ali Paşa TEPEDELENİ) (1744-1822) in the south, in the area of Tokos, emerged as semi-independent despots. The first Bughatti (in Turkish chroniclers Bughatti or Bucattili, Mehmed Paşa, built up his power by acquiring large *mülhata* and by making an alliance with the Malisors, the highlanders, and thus forced the Porte to confer him the governorship of Scutari (İşkodra, Shkodër) (1779). After his death (1796), the Porte's attempt to get back these *mülhata* caused his son Kara Mahmud Paşa [g.s.] to rebel. 'Ali Paşa, too, possessed about 200 estates (*dükkān*). The Porte at first did not challenge the increasing power and authority of the Bughatti and 'Ali Paşa, as they were rightly considered to check the domination of the local *a'yās*, and the rivalry between these two *paşas* seemed to counterbalance each other. 'Ali Paşa once tried to extend his control into the zone of the Bughatti and fought them. Through his sons whom he managed to have appointed governors of Trevesda, Mores, Kallbi he actually formed a semi-independent state in Albania and Greece. In 1820, when the central government finally took action against him, he rebelled, and instigated the Greeks to revolt. The power of the last Bughatti, named Mustafa Paşa, was destroyed only in 1832 by the reformed army of Mahmud II. The centralist policy of the *Tanzimat* caused troubles with the autonomous tribes in North Albania.

The "Albanian League for the Defence of the Rights of the Albanian Nation" had been set up at Prizren on June 13, 1878, only to influence the decisions of the Congress of Berlin; but it proved to have great significance for the birth of an Albanian state later on. Encouraged by the Ottoman government at the beginning, the League set up resistance to the Montenegrins and Greeks in order to keep the Albanian provinces united (the four Ottoman *vilayets* of Yanya, İşkodra, Manastir and Kosova). But when the league tended to further the idea of an autonomous Albania, the Porte sent an army and dispersed the League (1881). The great powers, especially Austria-Hungary and Italy, encouraged this autonomy movement with the purpose of extending their influence over Albania while Russia was supporting Montenegro's territorial claims over Albania. On the other hand, by enlisting Albanians in his bodyguard and conferring special favours on them, 'Abd al-Hamid II was trying to win Albanian support. But the Albanian intellectuals, in co-operation with the Young Turks in Paris and elsewhere, were anticipating an autonomous Albania. In 1908 the stand taken by the Albanians against 'Abd al-Hamid at the Frizovik Meeting did actually help the Revolution to succeed. In the Ottoman Parliament the influential Albanian deputies, such

Encyclopaedia of Islam

as Ismail Kemal, Es'ad Toptani, Hasan Prishtina, joined in the *Hürriyet ve İtilaf* Party which sought decentralisation as against the centralist ottomanisation policy of the *İttihād ve Terakki* Party. While the heated discussions on an Albanian educational system was going on (the Congress of Manastir, November 1908) an uprising broke out among the Albanian highlanders who resisted the Ottoman government attempt to collect their arms. Finally, on 4th September 1912, the new Ottoman government accepted the Albanian demands for an autonomous administration. But the Balkan War completely changed the situation in the Balkans. A short time after the declaration of war, in November 1912, Ismail Kemal declared the independence of Albania at Awlonya (Vlorë). The London Conference proclaimed Albania an autonomous principality under the guaranty of the six powers (29th July 1913); but the newly elected prince, Wilhelm von Wied, had soon to leave the country (3rd September 1914). After the first world war Serbia laid claims to Shkodër and Durres. Seeing their country dismembered, the Albanian leaders hastily convoked a congress at Lushnjë (21st January 1920) and demanded the independence of Albania. A national government was formed in Tirana, and an Albanian partisan army drove out the Italians from Vlorë. Italy finally recognised the independence of Albania with the treaty of Tirana (3rd August 1920). The small Albanian state experienced a tumultuous parliamentary life during the first years of its existence (1921-4). The Muslim land-owning beys of the western and central plains came into conflict with the Popular Party (under its leader Fan Noli). A revolution forced Ahmed Zog, the Prime Minister, to flee to Yugoslavia. With Yugoslav support he came back into power (24th December 1924). A constituent Assembly proclaimed Albania a Republic and named Ahmed Zog (Zogu) President. He then signed a series of treaties with Italy (12th May 1925; 27th November 1926; 22nd November 1927 and March 1928) putting the country practically under Italian protection. In September 1938 Zog was proclaimed the King of Albanians. He fled from Albania one day before the Italians invaded the country on April 6, 1939.

(H. L. INALCIK)

**ARNIT**, Span. Arnedo, a small town in the province of Logroño, chief town of a *partido judicial*; it numbers about 10,000 inhabitants and is situated on the left bank of the Cicero, a tributary of the Ebro, about 22 m. (13 km.) from the capital. Arnedo is a toponym of Iberian origin which is found in the provinces of Burgos, Alabaico and Logroño, and which also occurs, in the last-named, in the district of five from Arnedo. In the middle of the 6th/12th century, Muslim Spain consisted, according to al-Idrîsî, of twenty-five *climes* (*klim*) or regions, among which figured that of Arnedo, with the towns of Calatayud, Daroca, Saragossa, Huesca and Tudela. The only Arabic work which describes it is the *al-Rasid al-Mufid*; according to this, it is "an ancient town of al-Andalus, 30 m. from Tudela, surrounded by rich cultivated plains. It is a place of great strength, and ranks among the most important. From this fortress one looks down on to Christian territory". Arnedo, Tudela and Oñate were the principal towns of the seignior of the Band East. In 308/920, 'Abd al-Rahmān III, in the famous campaign, called the *Muez* campaign, against Navarre, occupied Calatayud, which had been conquered two years previously by Sancho Garcés, and forced the latter to take refuge in Arnedo; Sancho Garcés left Arnedo when 'Abd al-Rahmān moved off in the direction of Pamplona to inflict a bloody defeat on the united forces of Navarre and Leon at Valdejunquera.

**AROR** (see ARAR).

**ARPA**, *Barley* in Turkish. The term *arpa tarasi* 'a barley grain' was used under the Ottoman régime to denote both a weight and a measure: a weight of approximately 35.5 milligrams (half a *kahla*), and a measure of rather less than a quarter of an inch, 6 equalling one *parmas* (itself equivalent to 1½ inches).

(H. BOWEN)

**ARPALIK**, (literally, "barley money"), a term used in the Ottoman empire up to the beginning of the 19th century to denote an allowance made to the principal civil, military and religious officers of

state, either in addition to their salary when in office, or as a pension on retirement, or as an indemnity for unemployment. This term does not appear in the historical sources before the 16th century, and corresponds, to begin with, to an indemnity for holders of *ajals*, paid to those who maintained forces of cavalry or had to look after the horses; the first beneficiaries were the Aghas of the Janisaries, the Aghas of the imperial stable and the Aghas of the *bebak*, that is to say the principal army and palace officers; this benefit was later extended to religious officials: the *shaykh al-Islām*, the *hâfi* 'fâker', the tutor of the sovereign, and later (17th century) to the vizier, and to 'ulama' who were already titular holders of *trâfîk*, and also to officials of the central or provincial administration, or to military officers who had specially distinguished themselves; the *Rhâns* of the Crimea were also numbered among the beneficiaries. The maximum amount of the *arpalik* was fixed at 70,000 aspers for religious officials, 50,000 aspers for the Aghas of the Janisaries, and 10,000 aspers for palace officials. These endowments took the form of the grant of fiefs of varying degrees of importance; it is said that some holders of *arpalik* furnished its revenues. The haphazard distribution of these grants caused serious disturbances in the military, economic and social organisation of the state, and from the 18th century onwards only the principal religious authorities could benefit by the grant of an *arpalik*. The *arpalik* disappeared at the time of the *Tanzîmât*: a fund for retirement pensions was then created, and after the proclamation of the Constitution, an indemnity for unemployment was instituted.

(R. MANTAS)

'**ARRĀDA**, a mediaeval artillery engine. In general, from Europe to China, there were everywhere in existence two main types of engines of projection which were operated by more than one man. In the case of the one, the heavy type of engine, the projectile was hurled from a great distance by virtue of the centrifugal force produced by the coiling of a great arm: these were the *mandangit* or *mangonit*; in the case of the other, a lighter engine, the projectile was discharged by the impact of a shaft forcibly impelled by the release of a rope: these were the '*arrāda*. The principle of the '*arrāda* only differs from the large arbalest mounted on a fixed chassis in the comparative lightness of the latter, and in the fact that the arbalest discharges its arrow itself instead of using it to propel a projectile. '*Arrāda*, like *mandangit*, were naturally siege and not field weapons. The word itself comes from an almost identical Syriac form, and corresponds to the Classical Greek *anagros*; but, strangely enough, it seems that in mediaeval Greek *manganikon* denoted a light weapon: this is a source of possible confusion.—To-day, '*arrāda* is applied to cannon. [See also 'ARABA].

(CL. CAHEN)

**ARRĀDJĀN**, town in Fārs. According to the Arabic authors it was founded by the Sāsānid king, Kawādh I (488, 496-531), who settled there the prisoners of war from Āmid (Diyārbaḥr) and Mayyā-fārīn, and gave to the new settlement the official name Web Āmidā (Kawādh) = "Great (or Better) Āmid of Kawādh", run together and arabicised into Wānyakubdh or usually simply Āmid-Kubdh (Marquart proposed to read so in al-Tabarī, I, 887, 888). Some Arabic writers have erroneously given to Arrādjān the name Abar(z)kubdh, which was borne by a district and a town on the western frontier of Abwāz (Khūzistān); see also ARABSTĀN. In any case, the name which is in common use, Arrādjān, comes from an older town which existed before the new one founded by Kawādh.

In the Arabic mediaeval age Arrādjān was a very frequently mentioned frontier-town of Fārs against Abwāz, and down to the end of the 7th/13th century was the capital of the most westerly of the five provinces of Fārs; a part of the province of Arrādjān belonged earlier not to Fārs but to Khūzistān (cf. Ibn Fakhr, 199; al-Makdisi, 421). Arab geographers describe Arrādjān as a large place with excellent bazaars, which manufactured much soap, grew great quantities of corn, possessed numerous date and olive plantations, and was considered to have one of the healthiest situations of the "deserted land" (Garnadî). The rise of the Assassins portended its decline; for they seized possession of several strongholds on the neighbouring hills and from there made frequent plundering raids on the town and its adjacent district, and finally took it in the 7th/13th cent. Arrādjān never recovered from the horrors of this conquest. The inhabitants emigrated mostly to the neighbouring town, Bībḥāhān, which succeeded Arrādjān as capital of the province.

According to the Arab geographers Arrādjān lay on the road leading from Shīrāz to Irāk, 37 miles distant from Shīrāz and al-Ahwāz, and a day's journey from the Persian Gulf; it was situated on the river Tāb, which here formed the boundary between Fārs and al-Ahwāz.

The ruins of Arrādjān were discovered by C. de Bode on the river Tāb (modern Ab-i Kurdistan or Mārūn) at 31° 40' N. Lat. and 50° 20' E. Long. (Greenw.). Mustawfî shows that the form Arrādjān or Arrḥān for the town, was in popular use at the beginning of the 8th/14th century. The site of the ruins, according to Herzfeld, is a ride of two hours by horse east of the ruins of Bībḥāhān on a canal leading out of the Mārūn River, and it forms an almost rectangular plain of ruin ca. 3930 × 2620 ft. near the Kūh-i Bībḥāhān. Cultivation has now effaced all structural remains, according to Stein. About two miles farther up the river remains of a bridge from the Middle Ages, and of a barrage below the bridge, still exist. The bridge was mentioned by Arab geographers.

(M. STRACKE-D. N. WILHELM)  
**al-ARRĀDJĀNĪ**, Nāṣir al-Dīn Abū Bakr AHMAD B. MUHAMMAD al-ANṢĀRĪ, Arab poet born at Arrādjān in 460/1067, died in 544/1149-50 at Tustar or 'Askar Muḥram. Religious studies, pursued mainly at the Niğāmiyya at Isfahān, enabled him to be nominated *hāfi* of Tustar, but he early devoted himself to poetry, which he considered as a means of livelihood, and wrote panegyrics, addressed in particular to the 'Abbāsid Caliph al-Mustazhir, in *ḡazels* form, with the traditional *nashb*. Although some critics praise his work, al-Arrādjān must be considered as a versifier of limited stature. His *diwān*, compiled by his son, was printed at Beirut in 1307/1889; several Mss. exist in London and Cairo.

**Etymology:** *al-arrādj*: Ibn al-Shuḥārī, *Hamdān*, Haydarābād 1345, 283; Sam'īn, *Asnād*, 248; Ibn al-Djauzī, *Muntazam*, Haydarābād 1359, 2, 139-40; Yāköti, I, 193-5; Ibn al-Aḥḡar, al, 96-7; Ibn Khallikān, ed. 1399/1881, I, 83-5; Brockelmann, S. (E.)

'**ARRĀF**, (A), the abstract is, '*arraf*, one of the names for a diviner. Literally "eminent in knowledge" or "a professional knower"; the European equivalent would be "wise woman" with a change of sex. There are several synonyms, *Tāḥib* (physician); "I said to the '*arraf* of Yamāma, "Treat me, for if you cure me you are indeed a physician"; and "I will give the '*arraf* of Yamāma his due and the '*arraf* of Naḡd, if they cure me." The two were respectively Rāḥib B. 'Adjāla and al-Aḥlak al-Asadī. *Kāhīn* (diviner) [g.a.] is especially one who deduces his answer from the words, behaviour or circumstances of the enquirer or finds things which have been stolen or lost. It is said that the '*arraf* is somewhat less than the *kāhīn*. Of course, opinions differ on the precise meaning of these words; a proverb says that the '*arraf* takes what escaped the thief. *Kawāḥin* or *ḥawāḥin*, dowser. *Hāfi* one who divines from the shape of the limbs or moles on the face. A tradition says that he who consults the '*arraf* or *kāhīn* is an unbeliever. Nevertheless the examples of their activity are Islamic. 'Amr b. al-'Ās was not a professional '*arraf* but was famous for his practical wisdom; from the names of two travellers, Ḥafra and Baṭṭāl, he deduced that 'Ughmān had been first besieged and then killed (al-Tabarī, I, 325). The *ḥijwān* al-Safā say that the *kāhīn* uses no tools, books or calculations but relies on his motherwit and interprets what he sees or hears. *Zāḡir* is employed to describe this method of divination which its first merit derives from birds or animals. Ibn Khaldūn sets out a theory of divination. "It is a property peculiar to the human soul. The soul is so constituted that it can divest itself of its fleshly integument and rise to a higher spiritual state. Men who belong to the rank of prophets through their natural disposition receive as it were a flash of intuition, and this enables them without effort on their part, without the aid of sensual means of perception, and without forcing the imagination; nor need they bring their bodies into play by uttered word or hurried movement. They need employ no artificial means. By divesting themselves of the flesh they put on the angelic state which is natural to them in less than the twinkling of an eye."

ARSLAN b. SALJUQ, the son, probably the father, of Saljuq, the founder of the Saljuq sultanates, Saljuq. His history is merged in that of the first contacts between the Oghuz led by his family and the Muslim states of Central Asia. His personal name was Isrāʾīl (cf. his brother Milḥḥān and Milḥān, mentioned in the *Maṭṭi*), and his Khazar or Avar-Central-Asian influence, with Arslan as a totemic name (cf. his famous nephews Tuḡril Muhammad and Çaḡrı Dāwūd). The beginnings of his history are confused during his lifetime with those of his nephew Isrāʾīl, who was sent to Isfahan to Isfahan and freed himself from the Kingdom of the Yabghu of the Oghuz; it is not disputed that his father, Saljuq, then sent him to the aid of one of the last Samānids who was engaged in a struggle with the Karakhanids. The affair is mentioned in the *Maṭṭi*, and the history of the family written under Alp Arslan about 1050; and it is generally thought that it is he who is mentioned, under the title of Yabghu, by the Ghazawid historian Gardizi, as associated with the Karakhanids; but latterly this version has been corrected by O. Pritsak, according to whom the title of Yabghu can only be understood to refer to the last Yabghu of the Oghuz Kingdom north of

Aral Sea. It is true that manuscripts of the Arab and Persian chronicles frequently attach to individual Saldjukids an appellation which can be read *yabghū*, but O. Pritsak has shown that side by side with the title of *yabghū*, which alone has been taken into consideration hitherto, there existed a totemic name *payghā*, and it is probable that the word must be read thus in some cases; I think however that as far as Arslan Isā'ī is concerned, he could not have had two totemic names, and did in fact bear the title of *yabghū*, indicative of the revolt of his family against the pagan kingdom of the north, and it seems to me probable, although not certain, that he is, in agreement with the traditional account, the person mentioned by Gardīzī.

The main features of his later history are less open to dispute. After the final collapse of the Sāmānids, he is found associated with the Karakhanid rebel at Bukhārā, 'Alī Tegin, in whose service he was eventually joined by his nephews Tughril and Çağrı. In 416/1025 he was involved, to a greater extent than they, in the defeat of 'Alī Tegin by the combined forces of the supreme Karakhanid Kade-Khān (supported mainly by the Kachaks) and Mahmūd of Ghazna, and his Oghuz were transferred to Khurāsān, separated from those of Tughril and Çağrı who soon emigrated to Khwārizm. Legend or adulation has obscured the account of this move which, according to some, was voluntary, but more probably was carried out on the orders of Mahmūd, as is asserted by others, in order to weaken 'Alī Tegin. At all events it is not open to dispute that Mahmūd kept Arslan Isā'ī prisoner, and that he died in captivity, about 427/1034, in a fortress on the borders of Hind. It is impossible to say what the connexion was between this fate and the persistent tendency to rebellion on the part of the Oghuz of Khurāsān from 418/1027 onward. Those historians, like Rāwandī, who wished to flatter the Saljdjūkid dynasty of Asia Minor, descended from Arslan's son Kutalmış (Kutalmış?), ascribed to the latter the role of secret liaison agent between the prisoner and his Oghuz, but it is impossible to verify this.

**Bibliography:** Cl. Cahen, *Le Maliknāmah et l'histoire des origines seldjūkides*, in *Oriens II*, 1949, which contains a survey of the sources, but which is to be revised in the light of the studies of Ouseyan Pritsak, in particular *Der Übergang des Reiches des Oghuzischen Yabghu, in Köprülü Armutian, Istanbul 1953*, or in *Annals of the Ukrainian Academy of Arts in the USA*, II, 2, 1952, together with my discussion in *JA*, 1954, 271-275; cf. also Pritsak's *Die Karachaniden*, in *Isl.* 1953. For the relations between Arslan and the Ghaznavids, a comprehensive account will be found in Muhammad Nāzīm, *The Life and Times of Sultan Mahmūd of Ghazna*, Cambridge 1931.

(CL. CAHEN)

ARSLAN B. TOGHRL (see SALDJUKIDS).

ARSLAN-ARGHUN, brother of Malikshāh who, on the death of the latter, seized possession of Khurāsān and the province of Balh, debated and put to death another brother, Burhān, who had been sent against him (488/1095), but incurred odium as a result of his positive measures against the supporters of his defeated brother and his destruction, as a preventative measure, of the ramparts of Marw, Nishāpūr, Sarakhs, Sabzwār etc.; he was finally killed in 490 by one of his slaves. His young son, aged seven, was easily swept aside by Sanjār, the brother and lieutenant of the Sultan Barkyārūk.

Ibn al-Athīr, x, 34, speaks of an Arslan-Arghūn, a brother of Alp Arslan, who received from him the government of Khwārizm at the time when Malikshāh was proclaimed heir-presumptive; the author of the *Abhār al-Dawlat al-Saldjūkiyya*, 40, gives the same information, but calls this Arslan Argūn the son of Alp Arslan, and therefore identical with the brother of Malikshāh; but according to 'Imād al-Dīn Bundārī, 257, followed by Ibn al-Athīr, 178-80, the brother of Malikshāh was twenty-six years old at the time of his death, and only possessed at the death of the former a small *ishā'* in Western Persia; although nothing else is known of a brother of Alp Arslan of this name, it seems as though we must conclude that two individuals of this name existed. Descendants of the brother of Malikshāh were still living at Marw in the middle of the 6th/12th century.

ARSLANLI (see GHURGHAN).

ARSUF, small fishing port on the coast of Palestine, 10 miles north of Jaffa. The Arabic name probably preserves its original dedication to the Semitic god Reseph. Under the Seleucids it was renamed Apollonia. In the early centuries of the Caliphate it was one of the principal fortified cities of the province of Filastin. It was occupied by the Crusaders under Baldwin I in 494/1101 and called by them Asotus; recaptured by Saladin in 583/1187; scene of an engagement between Saladin and Richard I, 14 Sha'bān 587/7 Sept. 1191; restored to the Crusaders under the truce with Richard 588/1192; retaken by John of Archa 600/1202; captured by sultan Baybars Bundukdārī after a forty-days' siege, 11 Radjāb 663/29 April 1265, and left in ruins.

ARTENA (see KETNA).

ARTILLERY (see BARBON, TOP).

ARTUKIDS, (not UZKURIDS), a Turkish dynasty which reigned over the whole or part of Diyar Bakr, either independently or under Mongol protectorate, from the end of the 5th/11th to the beginning of the 9th/15th century.

Artuk, son of Eksebh, belonged to the Turkoman tribe Döğür [q.v.]. In 1073 he was in Asia Minor, operating for and against the Byzantine Emperor

Michael VII, but he later appears principally as an officer in the service of the Great Saljuq Malikshah. In 1077 he brought the Carmathians of Bahrayn under the rule of Malikshah; in 1079 Malikshah placed him under the command of his brother Tutush in the Syrian campaign, and in 1084 under Ibn Diyar in the Diyar Bakr campaign; in 1085 he was sent to Khurāsān against the sultan's brother, Tuglugh. He received as an *ihdā'* Halwān, a strategic point in southern Kurdistan. From 1085 onwards, however, he intrigued in Diyar Bakr with Muḥsin, the Arab prince of Mawālī and Aleppo, who was at variance with Malikshah. The death of Muḥsin obliged him to re-enter the service of Tutush, who gave him Palestine (1086). The date of his death is not known; he left several sons, among whom were Sukmān and Ighlāz.

After the death of Malikshah, the Artukids, led by Tutush into Diyarbakr, helped him to dispute the throne with his nephews (1092-5); on the death of Tutush, they supported his son Rūdwān of Aleppo against another son, Duḥūk of Damascus; they later lost Palestine, and its reconquest by Egypt (1098) and subsequent occupation by the Crusaders finally prevented their return there. One of the two Artukid leaders, Ighlāz, then entered for a time the service of Muḥammad, one of the sons of Malikshah, whom he had supported against his brother Barquyārūk, and who made him governor of Trāb, but the Turkomans from whom the family derived its strength remained in Diyar Bakr. In 1097, the nephew of Sukmān succeeded in occupying Mārdīn. Sukmān himself, who had taken possession of Sarḡūd, was expelled from there by the Crusaders (1097), but, as a result of quarrels between the chiefs of Diyarbakr, obtained possession of Hīn Kayfā (1102), controlled numerous districts further north, and then inherited Mārdīn. He took part in the wars against the Franks, and in 1109 before Hārīn captured Count Baldwin of Edessa. He died soon afterwards.

Muḥammad, who became sole sultan by the death of Barquyārūk, sent Ighlāz back to Diyar Bakr, where in 1107 he had a hand in the defeat of Küldī Arslān of Rūm, who had been summoned by Muḥammad's enemies, and in 1108 he took the place of Mārdīn of one of the sons of Sukmān (another son, Duḥūk, retained Hīn Kayfā). Other chiefs, at Amūd, Ahlāt, Arrāz etc., carved out seigniories for themselves. Muḥammad tried to unite them for the Holy War against the Franks; he could not prevent the rupture, in the middle of the campaign, between Ighlāz and Sukmān of Ahlāt, who, however, died (1110). From then on, relations between Ighlāz and Muḥammad became strained; the former more and more avoided participation in the expeditions sent against the Franks by the Sultan, from which, having regard to the risks run, only Saljuqs actually stood to gain. In 1114, Ighlāz formed a Turkoman coalition against the governor of Mawālī, Aksumkur al-Barsukī. He was victorious, but, apprehensive of retaliation by Muḥammad, fled to Syria, and reached an understanding not only with Tuglugh, the atabeg of Damascus, who was also disturbed at the Sultan's Syrian ventures, but even with the Franks of Antioch; the latter, by crushing the Saljuq army (1115), saved Ighlāz. In 1118, Muḥammad died, and Ighlāz seized possession of the last Saljuqid post in Diyar Bakr, Mayyāfārikin. He was now a power to be reckoned with. Aleppo, threatened by the Franks and rent by anarchy, appealed to him, despite its leading men's dislike of handing over power to him. Ighlāz, secure as

regards the Saljuqids, did not wish to see the power of the Franks increase. In agreement with Tuglugh, he answered the appeal (1118), and in 1119, his Turkomans inflicted on the Franks of Antioch a resounding defeat. Their base, however, remained in Diyar Bakr, and, in face of the reaction of other Franks, Ighlāz was disposed to make peace. He was also called into action against the Georgians; this time he was defeated (1121). Nevertheless his prestige was unimpaired at the time of his death in 1122.

From 1123 onwards, his nephew Balak had been progressively building up, north-east of Diyar Bakr, astride the eastern Euphrates, a stable principality whose chief town, from about 1125, had been Khartpert. Moreover, as tutor of the Saljuqid of Malatya, who was a minor, he achieved fame by crushing, with the aid of an alliance with the Dānishmandī Gümüştegin, the Mangudjak of Erzinjān and the Byzantine governor of Tarsus, Gavran (1120), and later, while in the service of Ighlāz, by capturing Joscelyn of Edessa (1122), and, after the death of Ighlāz, Baldwin of Jerusalem, who had come to protect the Franco-Armenians of the border regions of the Euphrates (1123). He was then able to take the place of another nephew of Ighlāz at Aleppo but was killed while besieging Manbiḡ in 1124. Aleppo then passed out of Artukid hands.

In Diyar Bakr, where they remained firmly entrenched, Shams al-Dawla Sulaymān, son of Ighlāz, who had succeeded at Mayyāfārikin, also died at the end of 524/1129-30. Another son of Ighlāz, Timurtash, already master of Mārdīn, succeeded him. Balak's principality had passed to Duḥūk, the son and successor, since 1104, of Sukmān at Hīn Kayfā. From then on, the two branches maintained a separate existence for two centuries.

The period of expansion, however, was at an end. From 1127 Zenkī ruled at Mawālī, and from 1128 at Aleppo also; he built up a strong kingdom there. Timurtash acted as Zenkī's vassal, by hostile action against Duḥūk, then (1144) against his son Kara Arslan, as well as against the prince of Amūd whom Zenkī and he besieged in 1133. Duḥūk had been active in the north, where he had also controlled anti-Georgian expeditions; he had absorbed the small seigniories bordering on his own, especially to the east of Hīn Kayfā. But he was subjected to relentless pressure from Zenkī, who conquered Buḥtān, east of Diyar Bakr, and, on the accession of Kara Arslan, the districts lying between Hīn Kayfā and Khartpert. Kara Arslan was forced to effect a rapprochement with the Franco-Armenians of Edessa against whom, like Timurtash, he had waged war from time to time; the capture of Edessa by Zenkī (1144) was a disaster for him too, but he was saved by his enemy's death (1146). Not without difficulty Timurtash and Kara Arslan divided Diyar Bakr between them.

Zenkī's dominions were divided between Nūr al-Dīn at Aleppo, and at Mawālī a line of other princes, brothers and nephews of Nūr al-Dīn, who increasingly brought them under his tutelage. His struggle against the Franks and his efforts in the Muslim direction led him again to seek an alliance with the Artukids; he did not contend with them for Diyar Bakr and allowed them north of the Euphrates to take their share of the spoils of the Count of Edessa, but dragged them along in his wake in wars against the Franks or Byzantine. Nevertheless his relations with them were excellent, especially with Kara Arslan, and Alpā, the son and successor of

Timurtash, sought to secure his position by obtaining the protection of the Ishkī Arslān of Ahlāt, whom he was obliged to return to aid against the Georgians. Kara Arslan himself, in 1161, attempted to take Amūd from the Inlids and the Nisānids, but was prevented from doing so by a Dānishmandī attack; but soon his son Muḥammad, with Nūr al-Dīn, went to the aid of the Dānishmandīs who were threatened by the expansionist policy of the Saljuqids of Konya. The growing power of Nūr al-Dīn had imperceptibly caused the Artukids to assume the rôle of vassals, when Nūr al-Dīn died in 1174.

The history of the following years is mainly concerned with the resistance offered by the princes of Upper Mesopotamia to the ambitions of Salāh al-Dīn who, master of Egypt, gradually took possession of the Syro-Euphratian heritage of Nūr al-Dīn. The Artukids to begin with gave their united support to the Zenkīs of Mawālī. Then Muḥammad considered it more prudent to come to terms with Salāh al-Dīn, who captured Amūd, for long the object of his envious regard, and gave it to Muḥammad as fief; from then on it became the family seat (1185). Muḥammad's death shortly afterwards, which left only young princes on the throne of Amūd, Mārdīn, Ahlāt and Mawālī, together with the division of Muḥammad's dominions into two branches, Hīn Kayfā with Amūd, and Khartpert, increased their subjection to Salāh al-Dīn; the latter directly established his authority in Diyar Bakr in 1184 by the occupation of Mayyāfārikin.

The Artukids were from then on only remnants gradually whittled away by the successors of Salāh al-Dīn of the Ayyūbid dynasty, his brother al-ʿAdil and the latter's descendants, who became masters of Ahlāt in 1207 but were sometimes divided among themselves. Against the most powerful of them, al-Kāmil of Egypt, the Artukids became for a time vassals of the Saljuqids of Rūm, then expanding rapidly to the east, and then of the Khwāzizmshāh Jalāl al-Dīn Mangubert, who had become master of Aḡharbāyḡdīn and Ahlāt; Saljuqid vengeance caused them to lose the towns north of the Euphrates (1226), and the vengeance of al-Kāmil deprived them of Amūd and Hīn Kayfā (1232-3). Al-Kāmil quarrelled with the Saljuqid Kaykubād and was defeated, and as a result the Artukid of Khartpert, who had supported him, was dispossessed in his turn (1214). From then on only the Mārdīn branch remained; this continued to exist for nearly another two centuries. In 1260 its representative, al-Malik al-Saʿīd, endured a lengthy siege by the Mongols; but his death saved the dynasty, for his son, al-Muḡaffar, submitted to Hülegü and thus, as a humble vassal, preserved the heritage of his ancestors.

The internal organisation and the civilisation of the Artukid principalities are too little known and, on the whole, too lacking in originality, for them to merit a general study on their own. Forming, with the exception of Khartpert, part of the Muslim world since the Arab conquests, the territories over which the Artukids reigned continued to be governed by the same people (for example the illustrious family of the Dāwā Nubātā at Mayyāfārikin) and according to the same principles (summarised in the *ʿUhd al-Farid* of Muḥammad b. Talha al-Karḡhī al-Aḡwī, *vazir* of Mārdīn in the 7th/13th century) which had existed formerly or still existed in the neighbouring principalities. The taxes recorded in one or two inscriptions are those obtaining everywhere, and it would be unwise to attach more than a passing significance to the anecdote which emphasises the

lightness of the burdens borne by the rural elements subject to Timurtash, compared with those subject to Zenkī. The introduction of the Turkoman element had no effect on the traditional economic activity of the country, which was based on agriculture and stock-breeding, the iron and copper mines, and trade with Trāb and Georgia. Culturally, although we do not know of any writer of note who lived in the entourage of the Artukids, the Arabic literary tradition was sufficiently alive among them for a Uḡma b. Munkidh, for example, an exile from Syria, to have lived for several years at the court of Kara Arslan at Hīn Kayfā.

When all this has been said, we still have to see whether, by virtue of its origin or otherwise, the Artukid régime had any particular characteristics. The first problem is that of Turkoman influence. The Turkomans remained until the end an important element in the life of Diyar Bakr, in the south perhaps more than in the north, where the Kurds were always dominant; and Diyar Bakr was one of the starting points for the vast Turkoman migration of Rustem, which embraced about 1185-90 the whole of eastern and central Asia Minor. It is known, on the other hand, that the few verses which constitute the earliest specimen of popular literature in the Turkish language in western Asia, emanated from Artukid territory. There is no doubt that the Artukid dynasty did not remain purely Turkoman. The use of the symbolic arrow, however, continued for some time, and the princes (but not more than the Zenkīs, who were not of direct Turkoman origin) preserved in their style, alongside Arab and Persian names, specifically Turkish titles. There has been much discussion on the significance of the animal motifs on certain coins or in decorative work on buildings, which perhaps belong to a general group of Turkish traditional symbolic signs. None of this has much bearing on the actual organisation of the Artukid principalities. What perhaps has a greater bearing on this, if it must be attributed to an original tribal practice deriving from authority which was more family than individual, is the impossibility which faced the dynasty of avoiding apportionment, and the numerous and detrimental grants of spangars to "princes of the blood". All the same, it is hardly open to dispute that the continued existence of the dynasty at Mārdīn, and its replacement by the Ayyūbid Kurds north of the Tigris, should be related to the redistribution of the population and consequently to the support given to the Artukids by the Turkomans despite the existence of numerous Turks in the Ayyūbid army. This does not mean that the Artukids had had much quarrel with their Kurdish subjects, despite memories of the Marwānids; nevertheless one sees them pursuing on their eastern frontiers the same policy of reabsorbing the autonomous Kurdish states which Zenkī was following a little further south, and at the end of the century a massacre of Kurds, with whom they were indeed formerly half internixed, marked the beginning of the migration of the Turkomans to Rustem.

As regards religious belief, the attitude of the Artukids seems in general to have been fairly tolerant. It is true that they took part in the general trends towards orthodoxy which characterise the Saljuqid and post-Saljuqid period, and were among the most active builders of *madrasas* and mosques and executors of public works (bridges, *ḡāzīs*, etc.); and military defence works. Ighlāz, who was of necessity a diplomat, had avoided a complete break with

the Assassins; none of his successors had the appearance of a champion of orthodoxy comparable to that of Nūr al-Dīn, and one of them, al-Khartart, favoured the Twelver mystic Suhrawardī who, it is true, had at that time not yet been denounced as heterodox. The same tolerance, on the whole, characterised the relations of the Artukids with their Christian subjects. The latter complained, in the second half of the 6th/12th century in particular, of various tribulations; but popular disturbances sometimes among the Kurds, rather than any action by the government, seem to have been at the root of the matter. About 1180, Turkomans and Kurds massacred, on the borders north of Diyar Bakr, the Armenians of Qūbal Sassīn, but the latter constituted a quasi-autonomous group, intriguing frequently with the Shāh-i Armīn, and the action of which they were the victims was therefore of a political rather than religious nature. Towards their ordinary Christian subjects, it has to be admitted that the Artukids acted with clemency. There is no other explanation for the fact that the Armenian Catholics resided for a period during the 12th century at Dzvīk, in the province of Khartpert, and that the patriarch of the Monophysites constantly alternated his periods of residence at the Convent of Mār Barsawma (itself momentarily subject to the Artukids, but normally a dependency of Edessa, and one of the princes of Mālayra) with periods of residence at Āmid or at Mārdīn, where their election frequently took place with Artukid permission. Several bishops, especially Monophysites, always existed in Diyar Bakr, the Christian population remained numerous and, on the south-eastern frontiers of the province, the district of Tūr-ʿAbdīn remained a great centre of monastic life until the 8th/14th century.

The strange character of Artukid coins, which, like those of the Dīnshamānids, for long resembled ancient Byzantine coins, is sometimes explained as a Christian influence. This does not seem to me to be a sufficient explanation. To speak of the impossibility of finding an artisan capable of striking Muslim coins in an ancient Muslim country does not make sense; nor does the importance of trade with Byzantium carry greater weight, because it is impossible to believe that it had suddenly assumed greater importance than trade with neighbouring Muslim states, or that the copper pieces with which we are exclusively concerned could be used for any other purpose than local consumption. These arguments are admissible for the Dīnshamānids, but not for the Artukids, and the problem deserves to be reconsidered as a whole.

The history of the Artukids after the Mongol conquest, despite their disappearance from the larger political stage, should not cease to attract our interest as an example of how an autonomous principality adapted itself to new circumstances; unfortunately very little is known about it. The Artukids played the role of local servants of the Ilkhāns; they gained, apart from the title of sultan, the advantage of being considered for a time as auxiliaries or delegates of Mongol authority, and of recovering more or less permanently a considerable part of Diyar Bakr (Āmid, in a state of decay, Mayyāfārīkīn, perhaps Is'īrd) and in addition Khābūr, only Hīṣa Kayfā (Ayyūbīd) and Arzan (Saljūqīd) remaining autonomous. Moreover, like all the vassals of the Ilkhāns, the Artukids paid a second tribute to the 8th/13th century, as a result of the break-up of the Mongol state, found themselves once more free,

and subsequently free to bow momentarily before one or other of the new powers created by this break-up. The little which is known of their 'foreign policy' shows them trying to preserve their pre-eminence in the face of, on the one hand, the Ayyūbīds of Hīṣa Kayfā, against whom they waged in 735/1334 an unsuccessful war which cost them their possessions on the left bank of the Tigris, and on the other hand the Mōngols, Turkomans and Mamūlūks who contested Upper Mesopotamia with them. On the one hand they appear to have joined forces with the Turkomans against the Kurds of the north, supporters of the Ayyūbīds; on the other, however, no further mention of any special link with their parent tribe, the Dūger, now settled further to the west, on the borders of the Mamūlūk state; on the other hand, with the formation of the two great rival Turkoman federations of the Ak Koyūnlū and the Kara Koyūnlū in Armenia and Upper Mesopotamia in the middle of the 8th/14th century, the Artukids seem at first to have supported the enemies of the latter (although it is not possible to affirm that they belonged strictly to the Ak Koyūnlū group); but, some time before the invasion of Timūr, a general rapprochement seems to have taken place between the Mōngols (Djāla'irids) of Baghdad, the Kara Koyūnlū, the Artukids and the Mamūlūks.

Whatever the position regarding these disputed questions, on another plane, that of economic and social life, the increase, by comparison with pre-Mongol times, of the nomad element compared with the settled element, and the consequent decline of agricultural life, are not open to dispute. Nevertheless some towns, among them Hīṣa Kayfā and Mārdīn, perhaps derived profit from the surrounding decadence, which made them valuable places of refuge. Building was definitely still going on at Mārdīn in the 8th/14th century, and Arab culture, represented, for example, by the poet Sayf al-Dīn al-Hillī, still held an honoured position there. Christianity, favoured by the Mōngols, but sometimes ill-treated by their descendants, retained for its part a certain vitality in Artukid territory: the Monophysite patriarch often resided at Mārdīn, and Daniel bār al-Khātīb (5) is a theologian still held in respect there.

The invasion of Timūr caused fresh upheavals. Sūltān al-Zāhir ʿAlā, suspected of maintaining a connexion with Egypt, could not save his principality from the ravages of the conqueror. He contended with the Ayyūbīds, zealous vassals of Timūr, and especially with the Ak Koyūnlū who, to begin with, on behalf of Timūr, then, after his death, on their own account, sought to conquer the Artukid principality; in 800, al-Zāhir was killed making a vain attempt to save Āmid, and in 821/1409 his successor al-Sālib decided to abandon Mārdīn to Kara ʿUṣuf, the leader of the Kara Koyūnlū. This represented the end of the dynasty and of the period of comparative autonomy of southern Diyar Bakr.

**Bibliography:** The sources are those for the general history of the Near East from the end of the 5th/11th to the beginning of the 9th/15th century. For the 12th-13th centuries see the introduction to my *Syrie du Nord à l'époque des Croisades*, Paris 1940. Special note should be made of the following: for the 11th century, the History of Aleppo of Kanān al-Dīn Ibn al-ʿAdīn (ed. Sūfī Dūhān, Damascus vol. 1, 1921, vol. 2, 1924, vol. 3 in preparation); for the 12th century, Zayn al-Dīn Ibn al-Djāwād (the portion relevant to this period has not been published), and, for the Bahrayn episode,

the annotator of Ibn al-Mukarrab (De Goeje, *La fin des Kararmīn*, in *JA* 1895); for the 13th century, the Syrian chronicle of Michael the Syrian, ed. and trans. by Chabot, III, and above all, a unique extant chronicle originating from Artukid Diyar Bakr, the History of Mayyāfārīkīn of Ibn al-Azrak al-Fārīdī (unpublished); analysis of the political events in my *Diyār Bakr au temps des premiers Artukides*, in *JA* 1935; for the 13th century, before the Mongol intervention, ed. great histories of Ibn al-ʿAdīn (mentioned above), Ibn al-Aḥlī, Ibn Wāṣil (edition in course of preparation by Djāmāl al-Dīn al-Shayyāl, Alexandria; vol. 1, appeared in 1933), al-Djāzārī (*Oriens* 1931, 1931), and especially the section relating to *Djāzira* in the *Aʿlāh* of ʿIzz al-Dīn Ibn Shaddīd (unpublished); analysis in my *Djāzira au XIII<sup>e</sup> s.*, in *REI* 1934, which constitute the Arabic sources, and, in addition, in Persian, the History of the Saljūqīds of Asia Minor of Ibn Bīdā (facsimile edition by A. S. Erzi, Ankara 1936, critical edition by N. Lugal and A. S. Erzi, i, Ankara 1937; a Turkish version was edited by T. Houtsma, *Revue*, III, A. German translation by H. W. Duda is in the press.) and, in Syriac, the *Chronographia* of Gregory Abu ʿI-Farādī Bar Hebraeus (ed. and trans. by Budgen); for the Mongol, post-Mongol and Timūrid period, one must glean the fragments of information scattered among the standard chronicles of the Mamūlūks, the Ilkhānids and Timūr, and more especially in the *History of the Ayyūbīds* (of Hīṣa Kayfā, unpublished, analysis by the author in *JA* 1935), and augment this by the 12th/13th century period, the continuation of the Syrian Ecclesiastical Chronicle of Bar-Hebraeus (ed. Abbelles and Lamy) and (for the period since Timūr) the anonymous Syrian work edited and translated by Behusch (Bratislava 1858) and the Armenian history of Tamerlane by Thomas de Medzrop (ed. and trans. by Némé; see also the *diwan* of Sayf al-Dīn al-Hillī, and, perhaps, the *Kitāb al-Diyār al-Bahrayn* of Abū Bakr Thirīdī (end of the 13th century), which is not accessible to me (see *JA*, articles Diyarbakir and Akkoyunlu, and Faruk Sumar, article mentioned below).

The inscriptions, collected up to the beginning of the 14th century in *KEA*, have nearly all been studied by Sauvaget in the appendix to A. Gabriel, *Voyage archéologique en Turquie Orientale*, 1940; see also Sauvaget, *La tombe de l'Ortohid Balak (Ars Islamica 1935)* and Sūl. Savet, *Silvan Tarihī*, Diyarbakir 1949. — For buildings, see Gabriel, *op. cit.* — For objects d'art, see J. T. Reinoud, *Monuments Hittites*, II, 40, and P. Casanova, *Inscriptions de la collection Princesse Lénine*, 1896. For coins (not a few unpublished coins exist in private collections), the Istanbul and British Museum catalogues, and S. Lane Poole, *The Coins of the Urukids*, in *Musée Numismatique Chronique*, 1875; B. Butak, *Resimli türk paraları*, Istanbul 1947-50.

The only comprehensive modern studies are those, necessarily brief, by Karim, Halil Yūsuf (*Diyarbakir*) and Koyūnlū (*Artuk-ogulları*) in *JA*. My *Diyār Bakr* etc. mentioned above, one of my early works, is only of value for political events; see also my *Première Pénétration turque en Asie-Mineure* (Byzantin 1948) and my *Syrie du Nord* mentioned above; the histories of the Crusades of Grousset and Runciman; the valuable monographies on inscriptions by Van Boon, in *Abk. G. W. Göttingen 1897*, and in Strzygowsky, *Amida*

1910; H. Derenbourg, *Ossama b. Mounshid*, I, 1886; Faruk Sumar, *Diyarbakir*, in *Turkiyat Mecmuası* 1933. For the 14th century, see my *Contribution à l'histoire du Diyar Bakr au XIV<sup>e</sup> s.*, in *JA*, 1935; on Daniel bar al-Khātīb, Nau, in *Rev. Or. Chrét.* 1920.

**ARTVIN**, town in the far north-east of Turkey, 41° 10' north, 41° 50' east, situated on the Çoruh. It was ceded to Russia by the Treaty of San Stefano in 1878 together with Kars and Ardahan, and ceded back by Georgia on Feb. 23rd, 1921. Since then, it has been the centre of the *hads* and the capital of the *vilâyet* of Çoruh. In 1945, there were 3,980 inhabitants in the town itself and 16,966 in the *hads*.

(Fr. TAEGHNER)

**ʿARŪBA** (see TAʿHIGI)

**ʿARŪD**. 1. *ʿIlm al-ʿArūd* is the technical term for ancient Arabic metrics. *ʿIlm al-ʿArūd* and *ʿIlm al-ḥiʿr* are occasionally used synonymously in the sense of 'science of versification', and in this extended sense *ʿIlm al-ʿArūd* embraces not only the Science of Metre, but also the Science of Rhyme. Usually, however, the rules governing rhyme (*ʿIlm al-Kawf*), eg. *Kāf/ya* are treated separately, and *ʿIlm al-ʿArūd* is confined to metrics in the stricter sense. As such, Arabic philologists define it in the following manner: *ʿAl-ʿArūd ʿilm bi-ṣūṭ al-yuʿraf bihā yaḥiḥ aswān al-ḥiʿr wa-faḥḥah* ('*Arūd* is the science of the rules by means of which one distinguishes correct metres from faulty ones in ancient poetry').

There is no generally accepted etymology for this sense of the term *ʿArūd*. Some Arabic grammarians maintain that it acquired the meaning of metrics because the verse is constructed on its analogy (*yuʿraf ʿalayhi*); others say that the term was used because al-Khālī developed it in Mecca, and this city is also called al-ʿArūd. Georg Jacob (*Studien in arabischen Dichtern*, 1860) has suggested a curious explanation by pointing to the passage in the *Diwan* of the Hudhaylites (95, 16), where the poem is compared to an obstinate female camel (*ʿarūd*) which the poet tames. The most plausible explanation still remains the one based on the concrete meaning which *ʿarūd* has as part of a tent, and the transferred sense which it acquired in metrics, at the last foot of the first hemistich: originally it describes 'the transverse pole or piece of wood which is in the middle of a tent, and which is its main support and hence the middle portion (or foot) of a verse' (Lane). Since the last foot of the first hemistich in the centre of the line (*ḥaṣṭ al-ḥiʿr*) is as important for its structure as the centre pole is for that of the tent (*ḥaṣṭ al-ḥiʿr*), one may readily assume that *ʿarūd* then came to be the general term for the science of metric structure.

There are few works on metrics by Arab philologists, and their contents are of little value. This fact is all the more surprising if one bears in mind how many works of lasting value have been written by prominent Muslim scholars on grammar and lexicography. The *Kitāb al-ʿArūd*, which al-Khālī, the founder of the science of metrics, is said to have written, has not survived, nor have any of the works on the subject written by the older grammarians. The earliest monographs which we have concerning *ʿIlm al-ʿArūd*, in the wider sense, date from the turn of the 3rd century A.H. There are sections on metrics in some of the larger *ʿAdab* works; the oldest and the fewest of these can be found in the *ʿId al-Farīd* (Ed. Cairo, 1305, III, 146 ff.) of Ibn ʿAbd Rabbih (died 328/940). The following list gives the names of

4th century		
Ibn Kaysān	1, 110	<i>ṭalīb al-ḥawāfi wa-ṭalīb ḥarrahādhā</i> ; ed. W. Wright in <i>Opuscula arabica</i> (1859) 47-74.
Al-Šāhib al-Talkānī	S. 1, 199	<i>al-ḥudāʾ fi ʿ-ʿarūd</i>
Ibn Dīnī	1, 126; S. 1, 192	
5th century		
Al-Rabāʿī	S. 1, 401	
Al-Kunḍhurī	1, 286	
Al-Tibrizī	1, 279; S. 1, 492	1) <i>al-ḥāfi</i> 2) <i>al-wāfi</i>
6th century		
Al-Zamakhsharī	1, 291; S. 1, 311	<i>al-ḥudās fi ʿ-ʿarūd</i>
Ibn al-Kaṭṭāʾ	1, 308; S. 1, 340	<i>al-ʿarūd al-ḥāfi</i>
Al-Dahlān	1, 281	
Naṣībūn al-Himyari	1, 304	
Al-Sakkāt	1, 283; S. 1, 495	
7th century		
Abū ʿUjayy al-Andalusī	1, 310; S. 1, 544	<i>ʿarūd al-Andalusī</i> ; first printed Istanbul 1261; much commented upon.
Al-Ḥazratī	1, 312; S. 1, 545	<i>al-ḥudās al-ḥazratīyya</i> ; critical ed. by R. Basset: <i>Le Khazratīyah, Traité de métrique arabe</i> (Algier 1902); the text can also be found in all editions of the <i>Madmūn</i> ; <i>al-muḥad al-ḥāfi</i> ; much commented upon.
Ibn al-Ḥādīb	1, 305; S. 1, 332	<i>al-muḥad al-ḥādīb fi ʿim al-ḥāfi</i> ; ed. Freytag in: <i>Darstellung der arab. Verskunst</i> (1830) 334 ff.; much commented upon.
Al-Maballī	1, 307; S. 1, 539	1) <i>ḥāfi</i> 2) <i>arūd</i>
Ibn Mālik	1, 300	<i>al-ʿarūd</i>
8th century		
Al-Kalāwī	2, 259	
Al-Sāwī	2, 239; S. 2, 258	<i>al-ḥudās al-ḥusnā</i>
9th century		
Al-Damānīnī	2, 26	
Al-Kināʾī	2, 27; S. 2, 22	<i>al-ḥāfi fi ʿilmay al-ʿarūd wa ʿ-ḥawāfi</i> . First printed Cairo 1273; copied in the <i>Madmūn</i> ; much commented upon.
Al-Širwānī	2, 194	
11th century		
Al-Idarāʾī	2, 380; S. 2, 313	
11th century		
Al-Šabbān	2, 288; S. 2, 399	<i>manẓuma (al-ḥāfiyya al-ḥāfiyya) fi ʿilm al-ʿarūd</i> ; printed several times in Cairo; also copied in all editions of the <i>Madmūn</i> .

those Arab philologists whose works on metrics are preserved in manuscripts (—none commentates are omitted). They are arranged in centuries, reckoning from the Hijra, and details are given only in the case of the better known works; references to Brockelmann are, however, given in every case.

Just as the ancient Indians and Greeks developed their own form of metric poetry, so did the ancient Arabs. Ancient Arabic poems were already written and recited in the known metres a hundred years before Islam, and they retained their form more or less unchanged in the succeeding centuries. The usual ancient Arabic poem, the so-called *ḥaṣḥa*, (q.v.) is comparatively short and simple in its structure. It consists of 30 to 100 monorhyming lines (rarely of more), and there is no strophic division in ancient Arabic poetry. Each line (*bayt*, pl. *abyāt*) consists of two clearly distinct halves (*miṣrāʿ*, pl. *miṣrāʿāt*); the name for the first hemistich

being *al-paḍ*, that for the second *al-ʿadū*. Only these more obvious attributes of the line were recognised and named during the 11th century A.H. Al-Ḥallī Ibn Ahmad al-Farāhīdī (died ca. 1175 A.H. in Basra) was the first to investigate the inner, rhythmical structure of Arabic verse; he distinguished between different metres, gave them the names by which we still know them, and divided them up into their subordinate metric elements. The written description and analysis of observations made by ear presented, however, very serious difficulties. In all languages the choice and position of words in prose is solely governed by generally accepted syntactic rules and by the desire of the speaker to express his thoughts as clearly as possible. In poetry, however, when it is based on rhythm, the choice of words and their sequence within the line is not so uncontrolled. The rhythm of the verse and the metres in which it finds its external expression are

created by the following factors: 1) the observance of a definite order in the sequence of syllables within the line, and 2) the regular recurrence of accent, indicated either by stress or some other means. The rhythm of a line in poetry is as completely tied to the phonetic properties of the language in which it is written as are the syllables of the words in the prose of the language concerned. This is, above all, a matter of the *duration* of the syllables and the *stress* with which they are pronounced. Syllables have a measurable length in all languages, but whereas in some (e.g. in the Germanic languages) there is no fixed and definite proportion of length of syllables (for, although there are admittedly some syllables in these languages which are always long and others which are always short, there are many which have no fixed quantity), there are, on the other hand, other languages (such as ancient Greek) where the quantity of every syllable in every word is absolutely fixed. In these, there is a strict distinction between long and short syllables in prose, too; the ratio of their length is roughly 2:1. The position is similar with regard to the element of stress: whilst in every language there is one syllable in a word which is somehow raised above the others, the strength of this accent is, however, something which differs widely in the individual languages. Thus, for example, ancient Greek uses musical pitch, whereby individual syllables are distinguished only by a higher tone, whilst in the Germanic languages they are distinguished by an expiratory stress which renders them more emphatic in comparison with the other syllables. The rhythmic structure of the verse has in all languages to adapt itself to these qualities of the syllables. If the quantity of the syllables is definitely fixed, then the rhythm of the verse is attained largely by regularly recurring sequences of short and long syllables, forming metrical 'feet', which last the same length of time. On the other hand, stress, rather than any fixed quantity, is the characteristic by means of which definite syllables are distinguished from their neighbours, then the rhythm of the verse and the structure of its metre, will both be largely produced by the alternation of accented and unaccented syllables. In this case we speak of 'accentual' verse.

From the prose of the Kor'ān, and the poetry of the ancient poets, as it has come down to us, we know that in the ancient Arabic language the quantity of the syllables was definitely fixed. From certain grammatical facts one may assume that an expiratory accent was also present, though only slightly developed. *A priori* one can therefore assume that the rhythm in ancient Arabic verse (as in ancient Greek verse) found its expression in 'quantitative' metres. The theoretical treatment of this problem, however, was at that time a far more difficult one for the Arabic philologist than for the Greek prosodist. The latter used the term 'syllable', made a clear distinction between short and long syllables, and chose the short syllable, the *ῥόδος*, as the basic unit for measuring the duration of the verse. They also had a term and a graphic sign for the pitch by which one syllable in every word was distinguished. Arabic philologists, by contrast, did not possess the concept of syllable, let alone the refinement of the 'short syllable'. Al-Ḥallī, too, did not know the words 'syllable' and 'stress', yet his ear surely perceived what we call syllables and stresses, for his graphic paraphrases—which we can understand if we try hard—does

give us a clear picture of the rhythm in ancient Arabic verse.

Primarily, Al-Ḥallī made good use of the peculiarities of Arabic script, in which the face of each word is a guide to the quantity of its syllables: one individual 'moving' consonant (*ḥarf mutaharrik*), i.e. a consonant with a vowel sign (e.g. <sup>١</sup>ا, <sup>٢</sup>ب, <sup>٣</sup>ج), corresponds to what we call a short syllable, and two consonants, of which the first is 'moving' and the second 'quiescent' (*sākin*) (e.g. <sup>٤</sup>ك, <sup>٥</sup>ل, <sup>٦</sup>م), correspond to what we call a long syllable. There are only a few fixed spellings which fail to comply with this rule (e.g. <sup>٧</sup>ن, <sup>٨</sup>ي, <sup>٩</sup>و, <sup>١٠</sup>ز, <sup>١١</sup>ح, <sup>١٢</sup>ط, <sup>١٣</sup>ث, <sup>١٤</sup>ذ, <sup>١٥</sup>ر, <sup>١٦</sup>س, <sup>١٧</sup>ش, <sup>١٨</sup>ص, <sup>١٩</sup>ض, <sup>٢٠</sup>ظ, <sup>٢١</sup>ف, <sup>٢٢</sup>ق, <sup>٢٣</sup>غ, <sup>٢٤</sup>ف, <sup>٢٥</sup>ق, ## Circle 5

Mutakārib	FA <sup>o</sup> -Jun	FA <sup>o</sup> -Jun	FA <sup>o</sup> -Jun	FA <sup>o</sup> -Jun
Mutadārik	-ʿILUN   fā	-ʿILUN fā	-ʿILUN fā	-ʿILUN fā-...

The order of the 5 circles is based on an arithmetical principle. They are arranged according to the number of consonants in the mnemonic words of the metres which compose them. The three metres *Tawīl*, *Bastī* and *Madīd*, whose hemistichs consist of 24 consonants each, form the first circle; the two metres *Mutakārib* and *Mutadārik*, whose hemistichs consist of only 20 consonants each, form the last circle. The remaining metres, whose hemistichs consist of 21 consonants each, are divided among the three circles in the middle. The order of the metres within the circles is also a formal one: the *Adjās*<sup>3</sup> of a metre are first written around the periphery of a circle, thus the three *mafʿilān mafʿilān mafʿilān* of the *Hazādī* are inscribed around the periphery of circle 3. If one reads the same circle again, but starting at a different point, one automatically gets the mnemonic words of another metre: thus if, for instance, in circle 3 one does not begin with *mafʿil* (as in *Hazādī*), but only with the -ʿi of *mafʿilān*, one obtains the metric scheme of *Radjās*, and if one advances still further and does not begin reading till the -Jun, one obtains the scheme of *Ramal*. The possibility of dividing the *Adjās*<sup>3</sup> of a circle in various ways, and of reaching different metric schemes by doing so, is only due to Al-Khālīl having purposely constructed his circles so that the mnemonic words united in each circle not only produce the same total number of consonants, but coincide completely in their 'moving' and 'quiescent' consonants as well, if they are written in a certain relationship to one another. This can be clearly seen in the above table of the 5 circles if one transcribes the Latin letters into Arabic ones. The agreement emerges even more obviously if we substitute the signs which are used by the Arabic prosodists for the 'moving' and 'quiescent' consonants themselves. The following picture will then emerge for circle 3:

<i>Hazādī</i>	o   o   o   o   o   o   o   o   o   o   o   o
<i>Radjās</i>	o   o   o   o   o   o   o   o   o   o   o   o
<i>Ramal</i>	o   o   o   o   o   o   o   o   o   o   o   o

The same relative coincidence is also found between the metres contained in the remaining 4 circles. Al-Khālīl's object in arranging the metres in this purely formal system of the 5 circles has not been handed down to us either by himself, or by any of the later prosodists. It is quite certain, however, that this merely external superimposition of 'moving' and 'quiescent' consonants in the mnemonics is not meant to imply a rhythmic development of one metre out of another.

The 8 *Adjās*<sup>3</sup>, which, as we have seen, recur again and again in different distributions in the 16 metres, can be further split into their metric components. For Al-Khālīl, however, the metric component means something different than for the occidental prosodist. It is not the smallest indivisible unit of sound, but the smallest independent word occurring in the language. Accordingly, he distinguished two pairs of metric components which he apparently regarded as such because none of the 4 words concerned (each with its particular sequence of 'moving' and 'quiescent' consonants), could be derived from any of the other 3, whilst all 8 feet could be formed by combinations from these 4 words. He took the terms for these two pairs of components from two important parts of the text, and he distinguished between:

A: The two *Asbāb* (sg. *sabāb* "cord") which consist of two consonants each, namely

- 1) *sabāb ḥaḥīl* = 2 consonants, the first 'moving', the second 'quiescent', as in words like *حَلِيل*
- 2) *sabāb ṭaḥīl* = 2 consonants, both 'moving', e.g. words like *حَلِيل*

B: The two *Awāḍ* (sg. *waḍ* "peg") which consist of three consonants each, namely

- 1) *waḍid mafʿilān* = 3 consonants, the first two 'moving', the last 'quiescent', as in words like *مَفْعِلَان*

2) *waḍid mafʿilān* = 3 consonants, the first and third moving, the middle one 'quiescent', e.g.

words like *مَفْعِلَان*

In this manner, each of the 8 feet can be reduced

to its metric components as follows; thus *مَفْعِلَان*

*mafʿilān* = B1 + A1 + A1 or *مَفْعِلَان* muta-

*faʿilān* = A2 + A1 + B1. Each of the 16 metres

given in the circles can therefore be scanned on this

basis, e.g. *Wāfir* = *mafʿilān mafʿilān mafʿilān*

*ʿalān* = B1 + A2 + A1, B1 + A2 + A1, B1 + A2

+ A1 or *Sarī<sup>2</sup>* = *mutafʿilān mutafʿilān mafʿilān*

= A1 + A1 + B1, A1 + A1 + B1, A1 + A1 + B1.

Since it is thus possible to reduce all the metres

to their basic components, one might assume this

metric system to be complete. The fact remains,

however, that the 16 metres never actually appear

in the form in which they are given in the 5 circles,

but nearly always deviate from this ideal form—at

times to a considerable extent. In other words, the

sequence of 'moving' and 'quiescent' consonants in

ancient Arabic poems does not correspond to the

sequence determined by the circles. Therefore one

can no longer split the metric forms used by the

poets into the 8 ideal feet, nor yet divide these into

their two metric elements, because that method of

scanning is based completely on the sequence of

'moving' and 'quiescent' consonants in the ideal

metres of the circles. This fact, of course, known

to Al-Khālīl just as well as it is to us, and in fact

his circles are just a kind of rhythmic *Uṣūl*, from

which the actual metric forms used by the poets

deviate in a certain manner as *Furāʿ*. Consequently,

there are also two different terms designating the

metres. The ideal forms is the circles are called

*ḥaḥīl* (sg. *ḥaḥīl* "river, ḥaḥīl"; those deviating

from them, and actually occurring in ancient poetry

are called *awāḍ al-ḥaḥīl* (= metres).

The smallest of the deviations is the shortening

of the metre. This is immediately visible, because

then the metre no longer has its full (*ṭam*) number of

*adjās*<sup>3</sup>. According to the degree of shortening, there

are three possibilities. The line is either

a) *maḍḍī<sup>4</sup>*, if there is one *ḡīṣ* missing in each

of the two hemistichs (if, for instance, in *Hazādī*,

*Kāmil* or *Radjās* the foot is repeated only twice

and not three times); or

b) *maḥḥī<sup>5</sup>*, when a complete half (*ḡaṭr*) is absent

(as, for instance, when the *Radjās* is reduced to

one hemistich); or

c) *manḥāḥ*, when the line, on rare occasions, is

"weakened to exhaustion" i.e. (as for instance

in *Munsarīb*) when it is reduced to a third of its

size.

All these deviations only concern the external

shape of a metre and not its rhythmic structure,

which does find its expression in the sequence of

'moving' and 'quiescent' consonants. Thus, for

instance, *mafʿilān* is a metre in which this particular

sequence in the ancient poems differs from that

prescribed by the circles have been covered by a

special set of rules. This forms a necessary supplement

to the circles, because the deviations would be

arbitrary—and thus the circles would lose their

authoritative character as *Uṣūl*—there were no

such rules. Just as one is amazed at the regularity

of the first part of the system—the five circles and

their normal metres—so one is confused by the

second part with its casuality and its complications. This, however, is inherent in its very nature. Neither Al-Khālīl nor the later prosodists use the term 'syllable', and we can therefore not expect any general rules (e.g. concerning the reduction of long syllables to short, the omission of short syllables etc.). In effect, they were obliged to mention in each individual case whether and to what extent the 'moving' and 'quiescent' consonants in ancient poetry showed a plus or a minus as compared with the ideal scheme of the circles. This had to be done in every metre and every one of its feet in both halves of the line, and in order to denote them clearly, individual terms had to be created to cover each one of these numerous differences. A certain order and clarity emerges from this baffling list thanks to the fact that all deviations fall into two classes, which perform different functions and appear in different parts of the line.

The last foot of the first hemistich (*al-ṣarīḥ*, pl. *aṣṣarīḥ*) and the last foot of the second hemistich (*al-darīḥ*, pl. *ad-darīḥ*), that is to say, the ends of the two halves of the line, suffer most from deviations. The terms for these two vulnerable parts of the verse are definite, the terms for the other feet vary and are usually given the collective name *al-ḥaḥīl* ('stiffening'). By analogy, one also distinguishes two groups of deviations, the *Zihāfāt* and the *ʿilāl*. The *Zihāfāt* ('relaxations') are, as the name suggests, smaller deviations which occur only in the *ḥaḥīl* parts of the line in which the characteristic rhythm runs strongly, and their effect is a small quantitative change in the weak *Asbāb*-syllables. As accidental deviations, the *Zihāfāt* have no regular or definite place, they just appear occasionally in the feet. By contrast, there are the *ʿilāl* ('diseases', 'defects') which appear only in the last feet of the two halves of the lines, and there, as their name suggests, they cause considerable change as compared to the normal feet. They alter the rhythmic end of the line considerably, and are thus clearly distinct from the *ḥaḥīl* feet. As rhythmically determined deviations, the *ʿilāl* do not just appear occasionally but have to appear regularly, always in the same form, and in the same position in all the lines of the poem. A further difference between the two groups of deviations is the fact that the *Zihāfāt* fall only on the *Sabāb* (and there on its second consonant), whilst the *ʿilāl* alter the *Waḍid* in each of the last feet of the two hemistichs as well as in their *Sabābs*.

By applying the definite *Zihāfāt* and *ʿilāl* rules, and taking the normal form of the feet of each metre as a point of departure, one arrives at the forms actually occurring in the *Kasidas*. Just as the normal feet are denoted by their 8 mnemonic words, (*faʿilān*, *mafʿilān*, etc.), which express the normal sequence of their 'moving' and 'quiescent' consonants, there are also mnemonics denoting the forms which have undergone alteration because of *Zihāfāt* and *ʿilāl*, and these indicate the changed sequence of consonants. Thus, for instance, *mafʿilān*, when its *Sin* is lost, should become *mutafʿilān*. If, however, as in this case, the resulting form is not one linguistically possible in Arabic, then the same sequence of consonants (i.e. the same sequence of 'longs' and 'shorts') is expressed by an equivalent word which is linguistically acceptable, in this case, for instance, by *mafʿilān*. By contrast with the *Uṣūl* forms of the feet, these modifications are known as the *Furāʿ* forms of the feet. In the following, the *Furāʿ* will be added in brackets, if their form

differs from that of the *Uṣūl*. Space here does not permit a detailed list of all *Zibāḥī* and *'Alal* (cf. for the details the arabic compendia of the *'Ilm al-'Arūdī*). A few examples will be given, however, in order to illustrate the theoretical exposition, and to show how peculiar and complicated this particular part of the system is.

As already stated, the *Zibāḥī* appear when the *Sabab* in a line does not possess its full normal form, but shows a change in the second consonant. Then, however, one does not simply speak of a *Zibāḥī*, because this would be ambiguous. In order to describe the *Zibāḥī* accurately, one must state which consonant of a foot is affected, and whether that is a 'moving' or a 'quiescent' consonant. For example, one can divide the so-called 8 'simple *Zibāḥī*' into two groups, according to whether a *sabab ḥaḥfī* or a *sabab ṭḥabīlī* is affected. Even then, one must denote the eight cases by individual terms. 1) We have a *ḥaḥf*, if the second consonant of a foot is

missing, e.g., the *sin* in *مَسْتَعْلِي* [= مَسْتَعْلِي].

or the *alif* in *قَبْلِي*; we have a *jayy*, if the 4th

consonant is missing, e.g., the *fā* of *مَسْتَعْلِي*.

[مَسْتَعْلِي] = مَسْتَعْلِي; a *ḥaḥf*, if the 5th consonant is

concerned, e.g., the *nūn* in *فَعْلَانِي* or the *yā* in

*مَقَالِي*; and a *ḥaḥf*, when the 7th consonant

is missing, e.g., the *nūn* of *فَعْلَانِي*. 2) In the

*sabab ṭḥabīlī*, there can either be only the vowel of the second consonant missing (then one speaks of an *idmār*, in the case of the *ṭaḥa* of *muṭaḥaḥṭan* [= *muṭaḥaḥṭan*]), and of an *'aḥb* in the case of the *ṭaḥa* of *muṭaḥaḥṭan* [= *muṭaḥaḥṭan*] or both this consonant and its vowel (then one speaks of a *ṭaḥa*, if the *ṭa* of *muṭaḥaḥṭan* [= *muṭaḥaḥṭan*] is missing, and of an *'aḥb* in the case of the *ṭa* of *muṭaḥaḥṭan* [= *muṭaḥaḥṭan*]).

Whilst the *Zibāḥī* always lead to a minus, when compared with the normal *Sabab*, the *'Alal* (which change the last feet of the two hemistichs) fall into two groups, according to whether they arise out of an addition (*itṭidā*) or an omission (*naḥṣ*). 1) The *itṭidā*, for example, adds a 'quiescent' consonant

to the *waḥid maḍmūn*<sup>4</sup> (thus *مَسْتَعْلِي* becomes

*مَسْتَعْلِي*), the *ṭarṭīl* a *sabab ḥaḥfī* (thus *مَسْتَعْلِي*

becomes *مَسْتَعْلِي*). 2) On the other hand, the

*ḥaḥf* means the loss of a *sabab ḥaḥfī* (as for *muṭaḥaḥṭan*) [= *ṭaḥaḥṭan*] or for *ṭaḥaḥṭan*] [= *ṭaḥaḥṭan*], into being exclusively through the harmony of periodically recurring sequences of 'shorts' and 'longs', i.e., purely quantitatively, or whether the element of accentual stress was also a factor in deciding the shape of the rhythm of their poetry. Hence one has generally tended not to accept their system, making use of its terminology with reluctance and only to the extent required in order to understand the commentaries on the ancient poems.

It has already been pointed out that the quantity of the syllables is absolutely fixed in the ancient

through *'Alal* play the greater part for two reasons. Firstly because they produce a greater plus or minus in the normal feet than the weaker *Zibāḥī*, and secondly because they cause rhythmic variations, which recur throughout the whole poem. Because of the large range of varying line endings, a great number of sub-divisions appear in all metres; and because the *Darb*, the last foot of the second hemistich, is (being the end of the whole line) more concerned with these changes than the *'Arūd* (the last foot of the first hemistich), the possible metres are named after their different *Darbs*. The *Tawīl*, for example, has only one *'Arūd*, i.e., the last foot of its first hemistich always has the same form (shortened by *ḥaḥf* of *maḥṭaḥṭan*); but it has three *Darbs*, i.e., apart from the normal form of the last foot of its second hemistich there are two further forms of its *Darb*. Accordingly, one speaks of the first, second, or third *Tawīl*, depending on whether the *Darb* has the form *maḥṭaḥṭan*, *maḥṭaḥṭan* or *ṭaḥaḥṭan*. The same goes for all other metres. The *Kāmil*, which has 9, has the greatest number of *Darbs*. The sum of all possible *'Arūd* of all 16 metres is 36, and that of all *Darbs* is 67; in other words, the 16 ancient Arabic metres are used by the poets in a total of 67 rhythmic variations, merely counting the changes caused by *'Alal* in the line-ends and ignoring the sporadic *Zibāḥī* in the *ḥaḥf* of the line.

We are now—if we trust the Arabic prosodists and follow them on their circuitous ways—in a position to scan all the metres which appear in ancient Arabic poetry, and this would appear to bring to an end the exposition of *'Ilm al-'Arūd* in its general structure. Nevertheless, European Orientalists have never relied unreservedly on the Arabic prosodists, because the inner reason for the complicated structure of their system has not been understood. What was the reason for constructing the circles? And why formulate statements about ideal metres when one cannot arrive at the actual forms of the metres except by a complicated system of permissible deviations? To these objections we must add that the underlying concepts of Arabic prosodists, and the way in which they expound the patterns of sound and rhythm, are completely alien to us. They describe prosodic phenomena externally, according to the changes which the consonants of the words in the line undergo, whereas we are accustomed—as already mentioned—to explaining the changing metrical shape of a line in different languages by giving the characteristics of the syllables of the language concerned. In the system of the Arabic prosodists we do not, however, find any direct statement concerning the length and stress of syllables in ancient Arabic poetry. Therefore it seems that we have nothing to learn from them concerning the real essence of Arabic metrics, that is to say, nothing about the way in which the characteristic rhythm of ancient Arabic poetry originated, whether—as in ancient Greek—it came into being exclusively through the harmony of periodically recurring sequences of 'shorts' and 'longs', i.e., purely quantitatively, or whether the element of accentual stress was also a factor in deciding the shape of the rhythm of their poetry. Hence one has generally tended not to accept their system, making use of its terminology with reluctance and only to the extent required in order to understand the commentaries on the ancient poems.

It has already been pointed out that the quantity of the syllables is absolutely fixed in the ancient

literary Arabic language, so that one can assume that the rhythm in their verse has found its expression in some form of quantitative metrics. This basic assumption is shared by almost all the experts who have dealt with Arabic metrics. There is no agreement, however, on the question as to whether (and to what extent) factors other than the quantity of syllables shaped the rhythm of ancient Arabic verses. There are various views as to the composition and sequence in which 'shorts' and 'longs' are arranged into feet, and these, in turn, into metres; and there is furthermore the particularly vexed question of whether the rhythm of the lines found its expression exclusively in a quantitative pattern of 'shorts' and 'longs' in the individual feet (as in ancient Greek), or whether there was also a rhythmic stress (ictus), which occurred regularly and emphasised certain syllables in the line.

Heinrich Ewald, disregarding the theories of the Arabs, produced an entirely fresh theory regarding the organic growth of ancient Arabic metrics. He began with the thesis that its rhythm originated not only from the quantity of the syllables but also from the presence of marked stress on some of them (*rhythmum constat aequali arset et lictus vicissim se continere*). To begin with (in 1825), he found only iambic metres (marked by a recurrence of short and long syllables); but in his second presentation (1833) he distinguished 3 rhythmic kinds: *genus iambicum*, *genus anapaesticum*, *genus trochaicum*. This classification has gained currency because W. Wright accepted it and printed it at the end of his *Grammar of the Arabic Language* (3rd ed. 1898, vol. II, 361 ff.). Whereas Ewald could start on secure basis concerning the quantity of syllables, his conclusions, as far as the second rhythmic factor (stress) was concerned, could only be based on assumptions at which he had arrived by comparing the structure of Arabic verse with the structure of Greek metres and the sequence of 'longs' and 'shorts' within them. His conclusions not only cannot be proved, but are not, in fact, tenable because they start with the assumption that the same rhythm obtains in both Arabic and Greek metres, without adding any proof to this effect and without taking into account that the very presence of rhythmic stress in ancient Greek poetry is itself a matter of controversy. This is the reason why all the later experts who started from the same or similar assumptions as Ewald disagree both with Ewald and with each other on the important question of how to divide up the feet and whether any syllables are to be stressed (and, if so, which).

Stanislas Guyard advanced an entirely different explanation of the essence of Arabic metrics: he decided to adopt a musical beat, measuring the exact time of each syllable and fixing it by a musical note, instead of merely distinguishing metric 'longs' and 'shorts' at the ratio of 2:1. Accepting the division of feet and metres, handed down in the *Arud* manuscripts, he concluded from his musical measurements that a *tempo fort* and a *tempo facile* had to alternate every time. Apparent contradictions were explained either by describing a *tempo fort* as weak or by inserting a pausal note (*silence*)—which was not, however, graphically expressed—to play the rôle of a *tempo facile*. Other deviations were explained by the assumption of a double ictus in ancient Arabic feet, and he discarded the *maḥṭaḥṭan* foot as imaginary because it would not fit in with his theories. He was then in a position to assert that the 16 metres with all their variations did correspond

to the musical rhythm which he had assumed; but far from explaining the essence of the metric line-structure in Arabic poetry he had simply transposed it into a sequence of musical terms.

Martin Hartmann is concerned with the development of the various metres and with their derivations from each other, rather than with the actual essence of Arabic metrics. He therefore does not argue with Ewald, though one may assume that he disagrees with him because he goes so far as to say that there was nothing to indicate that the Arabs ever thought of quantitative distinctions in their poetry. Although Hartmann never explicitly says this, it has been asserted that ancient Arabic poetry was in his opinion accentual in character. On the other hand, he rightly asserts that the syllable with the main stress must always be of a constant length and that its preceding short syllable must equally be of a constant duration. Concerning the origin of the metres, he assumed that there were in the last resort instinctive rhythmic imitations of the regularly recurring sounds made by camels' feet. As a camel advances its feet in pairs, he assumes the basic metre to be the one which consists of the alternation of an accented and an unaccented syllable. Depending on whether one starts with the animal's first step, as it starts off from the static position, or from one of the intermediate paces, one gets the *Ḥasadī* (— — —) or *Radīj* (— — —); the difference between them being that the stress is on the first element in the first case and on the second in the other. According to him, *Mutakārib* and *Mutadārib* developed from these two basic metres by inserting not one, but in each case two, unaccented syllables between the two steps, i.e. between the two stressed syllables; and *Wajr* and *Kāmil* respectively by the alternate insertion of two unaccented syllables and one unaccented syllable between the two stressed ones. Similarly, he takes *Barīḥ* (— — — — —) and *Tawīl* (— — — — —) to be defective forms of *Radīj* and *Ḥasadī*. He, too, has difficulties with the derivation of other metres from the *diamb*, because unaccented syllables, but two stressed ones have to come together. Hartmann's expositions are subjective assumptions concerning the origin of Arabic poetry in general, and the derivation of metres from one original metre in particular. His arguments do not convince as he offers no conclusive proof, and also because he appears to believe that rhythmic occurrences can be adequately explained by the arbitrary inclusion or exclusion of syllable or by the simple assumption of an anacrusis or a pause. Hartmann himself admits that he has been unable to show what made the Arabs choose the particular combinations which appear in the 16 metres.

Gustav Hoelscher, too, has advanced a theory concerning the origin of Arabic metrics and the derivation of its metres from each other. The simplest, and according to tradition the oldest, metre, the *Radīj*, developed from rhymed prose, *Saḥf*, by regulating the number and quantity of syllables; it has a rising rhythm and is dipodically bound. In his opinion, all other metres developed from *Radīj*: first *Sarīḥ*, *Kāmil* and *Ḥasadī*; and then, with varying forms of synonym, *Wajr*, *Barīḥ*, *Tawīl* and *Mutakārib*. The same objections must be raised here as were raised in the case of Hartmann's theory of derivation: Hoelscher himself admits that *Ḥaḥf* and *Munawar* cannot be derived from *Radīj*, and apart from *diamb* metres he also lists *diatonic* metres of a falling rhythm. In addition,

Hoeherer deals extensively with the basic rhythmic factors which determine the essence of all metres. He says that the simplest rhythmical group, the beat or foot, has a "division of time into fixed proportions" and consists of a "regular change from light to heavy"; but he does not define these two factors any further. The rhythmical time-value of the syllable, according to him, is always one single "counting-unit", irrespective of its quantity, and the law according to which a long syllable has twice the length of a short one is not to be applied to Arabic poetry. Similarly, he admits the presence of an ictus, and states that a "bar" consists of two dynamically related parts (of which the second is always the heavier); at the same time he asserts that the stronger ictus, being free, is not tied to either of the two stresses.

Alfred Bloch, in contrast to Hoeherer, stresses the existing clear difference between 'long' and 'short'. His detailed study of the patterns in ancient Arabic prose and the facility with which it can be fitted into all metres lead him to the conclusion that—compared with other languages—ancient Arabic possessed truly ideal phonetic conditions which rendered it suitable to quantitative metrics. Furthermore, he regards quantity as the only factor shaping the rhythm of the verse, and (following Radloff Geyer) decides against the assumption of an ictus.

The reason why such varying and contradictory theories concerning the essence of Arabic metres have been advanced lies in the fact that we have no record of the recitation of ancient poems, and that the realistic exposition of the Arabic metricals has such a repellent character that it seemed justifiable to disregard them completely. Thus, different experts approached the subject from personal points of view (the musical analogy, analogies with the poetry of other peoples, etc.). Neither attitude towards the teaching of the Arabic metricals (metrical acceptance or outright rejection) is in fact justifiable. Surely as renowned a philologist as Al-Khali, whose fundamental achievements as a phonetician, grammarian and lexicographer are recognised even today, did not construct the five circles and the complicated metric system connected with them just for fun. One may assume with certainty that thereby he meant to express certain observations which he had made when he heard the ancient poems. Starting from this assumption, the author of this article has analysed all the parts of Al-Khali's system in order to arrive at the actual core of the theory of the circles. The following gives the most important results of these investigations, which bring out clearly the particular peculiarity of ancient Arabic metres.

Al-Khali purposely arranged the feet of the metres within the circles in such a relation to one another that all 'moving' and 'quiescent' consonants (i.e. all their long and short syllables) should coincide. In this way, the length of the syllables was graphically shown, and he did not have to use a term for it. Since the Arabic language is itself already mirror to the quantity of syllables, there would have been no need for Al-Khali to construct the circles; but he had only wanted to make statements concerning the length of the syllables in the feet. One must therefore assume from the start that he meant to express something else in addition, concerning the rhythm of Arabic poetry, by this arrangement of the metres in the circles.

b) Whilst the Greek metricals used terms for the

metric feet which state nothing other than a certain sequence of 'longs' and 'shorts', Al-Khali chooses mnemonic words to represent the 8 basic feet which correspond to words actually occurring in the Arabic language. But it is the stress which is the bond that integrates the syllables into the unity of a word. One is therefore tempted to assume that the mnemonics for the feet are meant to indicate that in them, too, one syllable was always to be stressed in each case.

c) This assumption is strengthened by the way in which Al-Khali further divides the feet up into their components. Whilst the Greeks accept the short and long syllables as basic metric units, Al-Khali again used actual words—the shortest words possible in themselves (i.e. monosyllabic and dissyllabic words)—to denote these smallest parts. These words too, state something concerning the stress obtaining in them. The two *Ashab*, i.e. (sequences of syllables

like  $\dot{\text{ka}}\dot{\text{d}}$  (kad = -) and  $\dot{\text{ka}}\dot{\text{a}}$  (kaka = -), do not have a stress of their own in prose either, but (practically or enclitically) adapt themselves to the preceding or subsequent words, whilst the two

*Waid* words  $\dot{\text{ka}}\dot{\text{h}}\dot{\text{d}}$  (kahlid = -) and  $\dot{\text{ka}}\dot{\text{h}}\dot{\text{a}}$  (kahlita = -) have a marked stress of their own in opposite directions. When the sequences of syllables form a line as metric components of a foot, then they have definite rhythmic function. The two *Ashab*, being unstressed parts of the foot, have no influence over the shaping of the rhythm, and are thus exposed to quantitative changes, the *Zibidat*, but the *Waid*, as the bearer of the stress, constitutes the rhythmic core of the metre, and as such within the line it is (as has been shown) against any change whether in sequence of syllables or in its quantity. Depending on which of the two opposing *Ashab* forms the core of the foot, we have a rising or a falling rhythm.

d) This substantiated assumption that those syllables in the line which form the *Waid* element carry the rhythmic stress becomes a certainty as a result of the following argument, which brings out the division purpose for the construction of the 5 circles. Only a 4 of the 8 basic feet can be absolutely and unambiguously scanned. These are the following: *FA'U-lun*, *MAFA'U-lun*, *MUFA'U-lun*, *ma-fa'U-lun*. Since every foot must have a *Waid*, one cannot divide these 4 feet into their components except as shown in print, the *Waid* being represented by capital letters. In other words, the syllables which carry rhythmic stress in these 4 feet are clearly established; consequently it is equally clear which syllables carry the stress in the 4 metres *Tawil*, *Wafir*, *Hasad* and *Mutakirih*, because these metres consist exclusively of unambiguous feet. But, according to the teaching of Al-Khali, there are two ways of analysing the other 4 basic feet. Either:

*fa'-ILUN*, *ma-ta'-ILUN*, *fa'-ILa-tun*, *ma-fa'-ILUN*, or: *FA'U-lun*, *ma-TAF'U-lun*, *FA'U-lun*, *ma-fa'U-lun*. In other words, the rhythmic stress in these 4 feet could actually lie on a different syllable in every case, and, accordingly, all metres which consist of these 4 feet could also have either a rising or a falling rhythm. In the case of these ambiguous metres—which form the greater part of those in existence—there is only one possible method of showing clearly in which of the two possible ways it is to be read, namely by placing it

in one of the 5 circles. The following well thought-out inner mechanism emerges as the actual reason for the construction of the circles: the first metre of every circle—with the exception of circle 4—is the leading metre, and consists only of unambiguous feet, for which the position of their *Ashab* is absolutely fixed; the second and third metres, however, consist of the 4 ambiguous feet. If one writes down the mnemonic words of these metres in relation to the construction of the circles; in the table, it will be found not only that the short and the long syllables coincide, but also that in every circle from the second metre onwards, one of two possible *Ashab* falls in its entirety (i.e. in its indivisible syllable-sequence) under the unambiguous *Waid* of the first metre. This, in turn, means that the second possibility of scanning is out of the question. Thus the circles are graphic figures whose purpose is to show which syllables bear the rhythmic stress as *Waid* elements by means of the arrangement of all metres in relation to one another. Thus, for example, the two feet *mafa'U-lun* *fa'ILUN*, which form the *Hasad*, cannot be unambiguously scanned. However, the fact that their *TAFU* and *FAU* do not fall under the *Waid* of the *Tawil*, but that in both cases their *ILUN* falls under the unambiguous *Ashab* *FA'U* and *MAFA'U* of the *Tawil*, shows (as clearly as if it were written in a table) which syllables of the *Hasad* actually bear the rhythmic stress. In this way it has been proved that the metres brought together in the circles 1, 2, 3 and 5 have, without exception, a rising rhythm, and we also know, on what syllables the stresses were laid.

e) Circle 4 differs from this rule. This is already clearly visible externally, because its first metre, the *Sari*, does not consist exclusively of unambiguous feet. This deviation was surely intended by Al-Khali, because (1) in contrast with the other circles, which are homogeneous and only incorporate metres of rising rhythm, circle 4 is not uniform; in it—and only in it—one finds the foot *ma-fa'U-LATU*, the only one of the 8 basic feet which has a falling rhythm, but that, too, never alone, but always together with one of the other 7 feet. The metres of this circle thus have a mixed rhythm of rise and fall. (2) The *Waid* *mafa'U*, the representative of rising rhythm, ( $\dot{\text{ma}}\dot{\text{fa}}\dot{\text{U}}$ ) has a particularly rigid structure in Arabic verse; it never undergoes any change within the hemistich and therefore clearly and distinctly dictates the rhythm of those metres in which it is to be found. In contrast with it, the *Waid* *mafab*, the core of the falling rhythm ( $\dot{\text{ma}}\dot{\text{fab}}$ ) is less clearly fixed in composition, hence variable and weaker in shaping rhythm. This explains why the syllables carrying the stress in the metres *Sari*, *Khalil* and *Munarih* do not stand out with the same clarity as in the other metres. It is certain that Al-Khali realised this, because he gave the circle the name '*al-ma'jablik*' ('the dubious one, the one of several meanings').

It becomes evident that analysis of the circles produces an answer to the questions which have been in dispute, and on which arabists have hitherto held such different views. (1) The rhythm of ancient Arabic metres was not only produced by the quantity of the syllables, but also by the syllables' rhythmic stress; we even know on which syllables this stress lay in all the metres. (2) Nearly all the metres have a clear, rising rhythm; in no metre was there exclusively a falling rhythm; only a few metres—namely those in circle 4—which occur more

rarely, have a rhythm which changes from rise to fall and which, because of this mixture, has less of a clear character. (3) The rhythmical core of all feet and metres (excluding the few in circle 4) is formed by the sequence of a short and a long syllable ( $\dot{\text{u}}\dot{\text{a}}$ ) which is inseparable in its sequence and unchangeable in its quantity, and where the long syllable always carries the stress.

Al-Khali listened to recitals of ancient poetry and embodied his observations graphically in the construction of the circles, hence the results of his analysis can be taken to be contemporary evidence; and, indeed, they lead us to a complete understanding of the peculiarities of ancient Arabic metres. As we shall see, a metric system, theoretically constructed from the inseparable core of the rising rhythm ( $\dot{\text{u}}\dot{\text{a}}$ ), is completely identical with the system of metres used by the ancient Arabic poets.

If neutral syllables are grouped around the core, we get feet of a rising rhythm; these cannot have less than 3 or more than 5 syllables. Thus we arrive at the following 7 feet: (1)  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$  (2)  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$ ,  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$  (3)  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$ ,  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$ . No further or different feet can be derived from the core  $\dot{\text{u}}\dot{\text{a}}$ . If one does not represent these feet by symbols, but in the manner of the Arabic grammarians by *poes memorabiles*, then one gets exactly those mnemonic words which Al-Khali fashioned for the 7 feet of the rising rhythm: (1) *FA'U-lun*, *fa'ILUN*, (2) *MAFA'U-lun*, *ma-ta'ILUN*, *fa'ILa-tun*, (3) *MUFA'U-lun*, *ma-fa'ILUN*.

Whilst the actual rhythmic core of these feet always appears in the same indivisible and unalterable form, with the stress on the 'long', the neutral syllables (which have an part in the shaping of the actual rhythm) are neither bearers of stress nor stable in their quantity; they can be either a 'long' or a 'short', and their only function is to bring some variation into the rhythm. Such variations do appear, and the difference between them depends on whether (a) the foot begins immediately with the core, which makes a rising rhythm especially strong:  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$ ,  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$ ; (b) whether the core is at the end of the foot, which gives the rhythm a somewhat hurrying and skipping character:  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$ ,  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$ ,  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$ ; (c) or whether the core is enclosed within the foot, which somehow hampers the forcefulness of the rising rhythm:  $\dot{\text{u}}\dot{\text{a}}\dot{\text{u}}\dot{\text{a}}$ . Just because the grouping of neutral syllables around the core determines the rhythmic variations, it is absolutely necessary to keep to this fixed shape of the feet when scanning the metres.

By combining these 7 feet, one gets metres of rising rhythm of the following 3 groups: (1) The 7 'simple' metres are arrived at by the repetition of the 7 feet in identical form. These 7 theoretically constructed metres are completely identical with the metres *Wafir*, *Kinad*, *Hasad*, *Radjaz*, *Ramal*, *Mutakirih*, *Mutadrikh* used by the ancient poets. (2) If the 7 feet are combined not with themselves (as sub 1) but with each other, there result according to the calculation of variables many possibilities of 'combined' metres. Most these potential metres, however, are incapable of realisation in the actual verse, they would offend against the general metric law according to which two cores can never succeed each other directly, but must always be separated by not more than two neutral syllables. It will then be seen that the three groups of feet, distinguished above, can be combined into compound metres only with

Hoelcher deals extensively with the basic rhythmic factors which determine the essence of all metres. He says that the simplest rhythmical group, the beat or foot, has a "division of time into fixed proportions" and consists of a "regular change from light to heavy"; but he does not define these two factors any further. The rhythmic time-value of the syllable, according to him, is always one single "counting-unit", irrespective of its quantity, and the law according to which a long syllable has twice the length of a short one is not to be applied to Arabic poetry. Similarly, he admits the presence of an ictus, and states that a "bar" consists of two dynamically related parts (of which the second is always the heavier); at the same time he asserts that the stronger ictus, being free, is not tied to either of the two stresses.

Alfred Bloch, in contrast to Hoelcher, stresses the existing clear difference between 'long' and 'short'. His detailed study of the patterns in ancient Arabic prose and the facility with which it can be fitted into all metres lead him to the conclusion that—compared with other languages—ancient Arabic possessed truly ideal phonetic conditions which rendered it suitable for quantitative metrics. Furthermore, he regards quantity as the only factor shaping the rhythm of the verse, and (following Rudolf Geyser) decides against the assumption of an ictus.

The reason why such varying and contradictory theories concerning the essence of Arabic metrics have been advanced lies in the fact that we have no record of the recitation of ancient poems, and that the exegetical expositions of the Arabic metricians have such a repellent character that it seemed justifiable to disregard them completely. Thus, different experts approached the subject from personal points of view (the musical analogy, analogies with the poetry of other peoples, etc.). Neither attitude towards the teaching of the Arabic metricians (uncritical acceptance or outright rejection) is in fact justifiable. Surely as renowned a philologist as Al-Khālīl, whose fundamental achievements as a phonetician, grammarian and lexicographer are recognised even today, did not construct the five circles and the complicated metric system connected with them just for fun. One may assume with certainty that thereby he meant to express certain observations which he had made when he heard the ancient poems. Starting from this assumption, the author of this article has analysed all the parts of Al-Khālīl's system in order to arrive at the actual core of the theory of the circles. The following gives the most important results of these investigations, which bring out clearly the particular peculiarity of ancient Arabic metrics.

a) Al-Khālīl purposely arranged the feet of the metres within the circles in such a relation to one another that all 'moving' and 'quiescent' consonants (i.e. all their long and short syllables) should coincide. In this way, the length of the syllables was graphically shown, and he did not have to use a term for it. Since the Arabic language in itself already mirrors the quantity of syllables, there would have been no need for Al-Khālīl to construct the circles if he had only wanted to make statements concerning the length of the syllables in the feet. One must therefore assume from the start that he meant to express something else in addition, concerning the rhythm of Arabic poetry, by this arrangement of the metres in the circles.

b) Whilst the Greek metricians used terms for the

metric feet which state nothing other than a certain sequence of 'long' and 'short', Al-Khālīl chooses mnemonic words to represent the 8 basic feet which correspond to words actually occurring in the Arabic language. But it is the stress which is the bond that integrates the syllables into the unity of a word. One is therefore tempted to assume that the mnemonics for the feet are meant to indicate that in them, too, one syllable was always to be stressed in each case.

c) This assumption is strengthened by the way in which Al-Khālīl further divides the feet up into their components. Whilst the Greeks accept the short and long syllables as basic metric units, Al-Khālīl again used actual words—the shortest words pronounced in themselves (i.e. monosyllabic and dissyllabic words)—to denote these smallest parts. These words too, state something concerning the stress obtaining in them. The two *Ashab*, i.e. (sequences of syllables like  $\text{شَاب}$  (šād = -) and  $\text{شَاو}$  (šāka = -)), do not have a stress of their own in prose either, but (pragmatically or stylistically) adapt themselves to the preceding or subsequent words, whilst the two

*Wafid* words  $\text{وَفِيد}$  (wafid = -) and  $\text{وَفِيدَت}$  (wafidat = -) have a marked stress of their own in opposite directions. When these sequences of syllables form a line, as metric components of a foot, then they have definite rhythmic functions. The two *Ashab*, being unstressed parts of the foot, have no influence over the shaping of the rhythm, and are thus exposed to quantitative changes, the *Zibhāt*, but the *Wafid*, as the bearer of the stress, constitutes the rhythmic core of the metre, and as such within the line it is (as has been shown) precluded any change whether in sequence of syllables or in its quantity. Depending on which of the two opposing *Ashab* forms the core of the foot, we have a rising or a falling rhythm.

d) This substantiated assumption that those syllables in the line which form the *Wafid* element carry the rhythmic stress becomes a certainty as a result of the following argument, which brings out the obvious purpose for the construction of the 5 circles. Only 4 of the 8 basic feet can be absolutely and unambiguously scanned. These are the following: *FA'Ū-lun*, *MAF'Ū-lun*, *MUF'Ū-lun*, *MAF'Ū-lun*. Since every foot must have a *Wafid*, one cannot divide these 4 feet into their components except as shown in print, the *Wafid* being represented by capital letters. In other words, the syllables which carry rhythmic stress in these 4 feet are clearly established; consequently it is equally clear which syllables carry the stress in the 4 metres *Tawil*, *Wafir*, *Hasad* and *Mutadarrak*, because these metres consist exclusively of unambiguous feet. But, according to the teaching of Al-Khālīl, there are two ways of analysing the other 4 basic feet. Either: *JA'ILUN*, *MUS-TA'ILUN*, *JA'ILUN*, *MUS-TA'ILUN*, or: *FA'Ū-lun*, *MUS-TA'ILUN*, *FA'Ū-lun*, *MUS-TA'ILUN*. In other words, the rhythmic stress in these 4 feet could actually be on a different syllable in every case, and, accordingly, all metres which consist of these 4 feet could also have either a rising or a falling rhythm. In the case of these ambiguous metres—which form the greater part of those in existence—there is only one possible method of showing clearly in which of the two possible ways it is to be read, namely by placing it

in one of the 5 circles. The following well thought-out inner mechanism emerges as the actual reason for the construction of the circles: the first metre of every circle—with the exception of circle 4—is the leading metre, and consists only of unambiguous feet, for which the position of their *Ashab* is absolutely fixed; the second and third metres, however, consist of the 4 ambiguous feet. If one writes down the mnemonic words of these metres in relation to the construction of the circles, in the table, it will be found not only that the short and the long syllables coincide, but also that in every circle from the second metre onwards, one of two possible *Ashab* falls in its entirety (i.e. in its indivisible syllable-sequence) under the unambiguous *Wafid* of the first metre. This, in turn, means that the second possibility of scanning is out of the question. Thus the circles are graphic figures whose purpose is to show which syllables bear the rhythmic stress as *Wafid* elements by means of the arrangement of all metres in relation to one another. Thus, for example, the two feet *mutaf'ilun* *ja'ilun*, which form the *Basit*, cannot be unambiguously scanned. However, the fact that their *TAFIL* and *JA'IL* do not fall under the *Wafid* of the *Tawil*, but that in both cases their *ILUN* falls under the unambiguous *Ashab* *FA'Ū* and *MAF'Ū* of the *Tawil*, shows (as clearly as if it were written in a table) which syllables of the *Basit* actually bear the rhythmic stress. In this way it has been proved that the metres brought together in the circles 1, 2, 3 and 4 have, without exception, a rising rhythm, and we also know, on what syllables the stresses were laid.

e) Circle 4 differs from this rule. This is already clearly visible externally, because its first metre, the *Sari*, does not consist exclusively of unambiguous feet. This deviation was surely intended by Al-Khālīl, because (1) in contrast with the other circles, which are homogeneous and only incorporate metres of rising rhythm, circle 4 is not uniform; in it—and only in it—one finds the foot *maf'Ū-LĀTIL*, the only one of the 8 basic feet which has a falling rhythm, but that, too, never alone, but always together with one of the other 7 feet. The metres of this circle thus have a mixed rhythm of rise and fall. (2) The *Wafid* *maf'Ū*, the representative of rising rhythm, (i.e.) has a particularly rigid structure in Arabic verse; it never undergoes any change within the hemistich and therefore clearly and distinctly dictates the rhythm of those metres in which it is to be found. In contrast with it, the *Wafid* *maf'Ū*, the core of the falling rhythm (i.e.) is less clearly fixed in composition, hence variable and weaker in shaping rhythm. This explains why the syllables carrying the stress in the metres *Sari*, *Khalil* and *Munariš* do not stand out with the same clarity as in the other metres. It is certain that Al-Khālīl realised this, because he gave the circle the name "*al-maḡḡalabik*" ("the dubious one, the one of several meanings").

It becomes evident that analysis of the circles produces an answer to the questions which have been in dispute, and on which arabists have hitherto held such different views. (1) The rhythm of ancient Arabic metres was not only produced by the quantity of the syllables, but also by the element of rhythmic stress; we even know on which syllables this stress lay in all the metres. (2) Nearly all the metres have a clear, rising rhythm; in no metre was there exclusively a falling rhythm; only a few metres—namely those in circle 4—which occur more

rarely, have a rhythm which changes from rise to fall and which, because of this mixture, has less of a clear character. (3) The rhythmic core of all feet and metres (excluding the few in circle 4) is formed by the sequence of a short and a long syllable (i.e.) which is inseparable in its sequence and unchangeable in its quantity, and where the long syllable always carries the stress.

Al-Khālīl listened to recitals of ancient poetry and embodied his observations graphically in the construction of the circles, hence the results of their analysis can be taken to be contemporary evidence; and, indeed, they lead us to a complete understanding of the peculiarities of ancient Arabic metres. As we shall see, a metric system, theoretically constructed from the inseparable core of the rising rhythm (i.e.), is completely identical with the system of metres used by the ancient Arabic poets.

If neutral syllables are grouped around the core, we get feet of a rising rhythm; these cannot have less than 3 or more than 5 syllables. Thus we arrive at the following 7 feet: (1)  $\text{شَاو شَاو شَاو}$  (2)  $\text{شَاو شَاو شَاو شَاو}$  (3)  $\text{شَاو شَاو شَاو شَاو شَاو}$ . No further or different forms of feet can be derived from the core  $\text{شَاو}$ . If one does not represent these feet by symbols, but in the manner of the Arabic grammarians by *poes memorabiles*, then one gets exactly those mnemonic words which Al-Khālīl fashioned for the 7 feet of the rising rhythm: (1) *FA'Ū-lun*, *JA'ILUN*, (2) *MAF'Ū-lun*, *MUS-TA'ILUN*, *JA'ILUN*, (3) *MUF'Ū-lun*, *MUS-TA'ILUN*, *MAF'Ū-lun*.

Whilst the actual rhythmic core of these feet always appears in the same indivisible and unalterable form, with the stress on the 'long', the neutral syllables (which have no part in the shaping of the actual rhythm) are neither bearers of stress nor stable in their quantity; they can be either a 'long' or a 'short', and their only function is to bring some variation into the rhythm. Such variations do appear, and the difference between them depends on whether (a) the foot begins immediately with the core, which makes a rising rhythm especially strong;  $\text{شَاو شَاو شَاو شَاو شَاو}$ ; (b) whether the core is at the end of the foot, which gives the rhythm a somewhat hurrying and skipping character:  $\text{شَاو شَاو شَاو شَاو شَاو}$ ; (c) or whether the core is enclosed within the foot, which somehow hampers the forcefulness of the rising rhythm:  $\text{شَاو شَاو شَاو شَاو شَاو}$ . Just because the grouping of neutral syllables around the core determines the rhythmic variations, it is absolutely necessary to keep to this fixed shape of the feet when scanning the metres.

By combining these 7 feet, one gets metres of rising rhythm of the following 3 groups: (1) The 7 'simple' metres are arrived at by the repetition of the 7 feet in identical form. These 7 theoretically constructed metres are completely identical with the metres *Wafir*, *Kāmil*, *Hasad*, *Radzās*, *Ramāl*, *Mutakarrir*, *Mutadarrak* used by the ancient poets. (2) If the 7 feet are combined not with themselves (as sub 1) but with each other, there result according to the calculation of variables many possibilities of "combined" metres. Most these potential metres, however, are incapable of realisation, since they would offend against the general metric law according to which two cores can never succeed each other directly, but must always be separated by not more than two neutral syllables. It will then be seen that the three groups of feet, distinguished above, can be combined into compound metres only with

ancient Lesbos); his father was a Turk, a Muslim soldier of the garrison of occupation (Ghassawi), or a Greek porter (Haebo). He had at least two brothers, who were with him in the Maghrib, Khayr al-Din and Ishāk. A sailor and a Muslim from an early age (Ghassawi), or only from his twentieth year (Haebo), he began to act as a privateer in the eastern Mediterranean. He later decided (the exact reasons for this decision are not known) to operate off the coast of the Maghrib.

It is fairly certain that from 1504 onwards, or soon afterwards, 'Arūdj and his brothers made their base at Goletta; they started in a small way with two ships, but soon took some remarkable prizes; as a result of these they increased both the numbers of their fleets, which comprised eight galleons in 1510, and their capital, which enabled them to honour their obligations to the ruler of Tunis. The latter, Abū 'Abd Muḥammad b. al-Ḥasan (1494-1526), in fact only authorised them to establish a base on his territory on condition that he received a share of the prizes. The Ghassawī describes on one occasion the magnificent cortège organised by the corsairs in Tunis to carry to the Hafsid ruler his share of the booty (text, 15-16; tr., 28-30). They were authorised to establish a secondary base on the island of Djerba, and 'Arūdj was even appointed *kā'id* of the island in 1510 (Haebo). Until 1512, they cruised in the western Mediterranean and off the Spanish coast.

The Spanish, however, occupied various points on the coast of North Africa, notably Oran (1509), the Peñon of Algiers, Bidjāya (Bougie) and Tripoli (1510). Despairing of being able to retake Bidjāya (Bougie) by his own efforts, the Hafsid governor of that town appealed to 'Arūdj who had then at his disposal twelve ships armed with cannon, and a thousand Turkish soldiers. 'Arūdj established a naval blockade of the port, while the "king" of Bidjāya (Bougie), supported by the Turkish troops, laid siege to it by land with three thousand "Moors". After eight days' bombardment, 'Arūdj lost his left arm. His brother Khayr al-Din took him back at full speed to Tunis where he spent his time recovering his health. In August 1514, he attacked Bidjāya (Bougie) for the second time, with twelve ships and 1200 Turkish troops. Again 'Arūdj was forced to raise the siege, this time because of bad weather, the appearance of a Spanish relief squadron, and perhaps the desertion of local contingents; it is even possible that he was forced to burn some of his vessels in the gulf of Bidjāya to prevent them falling into the hands of the Spanish.

He may perhaps have been already established at Bidjāya (Bougie), as the Ghassawī lead one to believe. At all events, he took refuge there after his second reverse before Bidjāya, because his relations with the Hafsid ruler had undergone a change—we do not know for what reason.

At this juncture, apparently, 'Arūdj conceived political ambitions. Haebo describes him as supplying corn to tribes in the vicinity which had been smitten by famine, thereby acquiring great popularity, and intervening in the quarrels of the Kabyle chiefs.

When King Ferdinand the Catholic died on 22 January 1516, the inhabitants of Algiers sought to rid themselves of the threat from the Peñon, and appealed to 'Arūdj, who had both ships and cannon. He answered their appeal, and indeed bombarded the Peñon without success. The leader of the Arabs of Algiers, Salīm al-Tūm, then sought to get rid of 'Arūdj and his Turks, who behaved as though they were in con-

quered territory. But 'Arūdj forestalled him, put him to death and seized power with the help of his Turks. Despite the intrigues of the son of Salīm al-Tūm, who had taken refuge with the Spanish, he succeeded in maintaining his position at Algiers by exercising the greatest severity. He also succeeded in repulsing a Spanish landing carried out by Diego de Yera (30 September 1516).

The Spanish then sent the Sultan of Ténis against him, but 'Arūdj went out to meet him and inflicted on him a severe defeat, as a result of which 'Arūdj made himself master of Milana and Ténis. According to the Ghassawī he then organised the territory he had conquered; Khayr al-Din had the territories to the East, with Dellys as his seat, while 'Arūdj took Algiers and the western territories.

'Arūdj then received an appeal from the inhabitants of Tlemcen, whose king had accepted a sort of Spanish protectorate. He at once organised an expedition with the greatest thoroughness, and entrusted the government of Algiers to his brother Khayr al-Din. He occupied in passing the stronghold of the Ka'fa of the Banū Raḡhā, now the site of Oued-Fodda, and left his brother Ishāk there with a small garrison. He then proceeded to Tlemcen, which he took possession of without great difficulty, after having defeated the troops of King Abū Hammū in the field (September 1517). Instead of raising to power the pretender Abū Za'ay, he made a link with the Spanish. 'Arūdj assumed power and despatched expeditions as far as Oudja and the Beni Saassen; he seems to have had the intention of negotiating with the ruler of Fez against the Spanish.

The latter did not give him time for this: in January 1518, a Spanish column under the command of Don Martín of Argote captured the Ka'fa of the Banū Raḡhā, thus cutting communications between Tlemcen and Algiers. In May, the Marquis de Comares, governor of Oran, marched on Tlemcen. There he laid siege to 'Arūdj, who hoped, it appears, to be relieved by the troops from Fez. The inhabitants of Tlemcen rebelled against the Turks, and forced 'Arūdj to shut himself up in the fortress of Mishawar (see FLEMMER). As supplies were running low, 'Arūdj attempted a sortie and managed to escape with few men, but he was overtaken, probably in the vicinity of the present Rio Salado (department of Oran) and put to death; he was 44 or 45 years of age (Autumn 1518).

It will be seen that on the whole very little is known about the history of 'Arūdj. It seems likely that political aspirations awoke within him, when he realised the political anarchy existing in the central Maghrib and the possibilities it offered to a bold man backed by a body of men equipped with fire-arms and artillery. But the possibilities were so great that 'Arūdj allowed himself to be carried away by ambition, and he failed because he was too far from his base, and had not prepared the ground politically to a sufficient extent.

*Bibliography:* Kitāb Ghassawī 'Arūdj wa Khayr al-Din, ed. by A. Noureddine, Algiers 1934, 6-147; rough translation in Sander Rang and V. Denis, *Fondation de la Régence d'Alger*, I, Paris 1857, 2-103; Diego de Haebo, *Epítome de los reyes de Argel*, tr. by H. de Grammont under the title *Histoire des rois d'Alger* in *R.Afr.*, xviii, 1880, 30-69 and 116-7; López González, *Cronica de los Barbanos*, Madrid 1854, in vol. vi of *Monumenta historica española*; H. de Grammont, *Histoire d'Alger sous la domination turque*, Paris 1887, 20-8; Ch. A. Julien, *Histoire de l'Afrique du Nord*, II,

429-6. The best known Turkish account is that given by Hüdūdī Khallā in his *Tuhfat al-Bihar* (Istanbul 1241/1728 and 1329/1914, Eng. tr. of chaps. 1-4 by J. Mitchell, *History of the Maritime Wars of the Turks*, London 1837). This narrative, which was used by Hammer in his account of the naval wars, rests on earlier sources, some of which are still extant. A list of Ottoman Ghassawīn dealing with the campaigns of 'Arūdj and Khayr al-Din is given in Aḡāh Sīrd Levend, *Gazavāt-nameler*, Ankara 1936, 70 ff. (R. LE TOURNAU).

**ARŪR** (AROR) also written AR-RŪR, town in Sind; it is surmised to have been the capital of King Musinaka, defeated by Alexander the Great, and to be mentioned in the 7th century A.D. by Hung-tang. The town was conquered by Muhammad b. al-Kāsim before 95 714 (al-Balādhuri, *Futūh*, 439, 440, 445) and it is mentioned by al-Istakhri, 172, 173, and al-Hirūdī, *Hind* (Sachau), 100, 130, according to whom it lay thirty *farṣakh* S-W of Multān and twenty *farṣakh* upstream from al-Masūra. The Indus used to flow near the town, but later it changed its course, destroying the prosperity of the town. The date of the change is uncertain; the local historians of the 17th-18th centuries (cf. Elliot-Dowson, *History of India*, I, 256-8) give a legendary account. Five miles west from the old site there exists a small town, Rohri, chief place of the *taluka* of the same name *Imperial Gazetteer of India* (Oxford 1908, VI, c. 43, 398). One of the names of the Gypsies, LŪT < \*Rūr, may be connected with Arūr (see LŪT).

*Bibliography:* Yāqūt, II, 833; H. Cousens, *The Antiquities of Sind*, Calcutta 1929, 76-9; V. Minorsky, in *J.A.*, 1933, 283; idem, *Hudūd al-'Ālam*, 246. (V. MINORSKY)

**'ARŪS** (see 'rus).

**'ARŪS** RESMI, also resm-i 'arūs, resm-i 'arūsiye, 'adāt-i 'arūd, etc., in earlier times *gerdek degleri* and *gerdek resmī*; an Ottoman tax on brides. The standard rates were sixty aspers on girls and forty or thirty on widows and divorcees. There are sometimes lower rates for persons of medium and small means. In some areas the tax is assessed in kind. Non-Muslims are usually registered as paying half rates, but occasionally double rates. On timar lands the tax was normally payable to the timarholder, though part or all of it might be reserved for the Sandjakbeyi or the Imperial Treasury. The destination of the payment was determined by the status of the bride's father or, in the case of widows, of the place where she resided or where the marriage occurred. Tax was also payable on the daughters of siphais, garrison janissaries, etc. These were paid to the Sandjakbeyi, the Beylerbeyi, the Su-baḡhī, or the representative of the Treasury, according to the rules inscribed in the *hikāms* and registers of the province. These also contain rules for the bride-tax paid on the daughters of Tatars, yurüks, müsallims, miners, and other special categories. No tax was payable by an officer who married two of his slaves to one another.

The tax, which seems to be of feudal origin, is already established in *hikāms* of the 13th century in Anatolia and Rumelia, and was introduced into Egypt, Syria and Iraq after the Ottoman conquest. It was abolished in the 19th century and replaced by a fee for permission to marry (*igāzname*) given by a *kā'im*. This was at the rate of 10 piastres for girls and 5 for widows.

**ARZACHEL** [see AL-ZARKĀL].

**ARZAN** (Syriac Arzōn, Armenian Arzan, Alzn). The name of several towns in eastern Anatolia. The most important was the chief city of the Roman province of Arzanene, Armenian Arzash, located on the east bank of the Arzaḡh River (modern Garzanu) a tributary of the Tigris, at about 41° 41' E. long. (Greenw.) and 38° N. lat. By Islamic authors Arzan is linked with the larger city to the west, Mayyāfārīn.

The origin of the name is uncertain but of undoubted antiquity; see the discussion in H. Hiltunen, *Die altarmenischen Ortsnamen, in Indogermanische Forschungen*, 26 (1904), 248, 311. On the pre-Islamic history of the town, a Syrian bishopric, see Marquart, *Erzincan*, 25.

Arzan surrendered to 'Iyād b. ḡhann in 204/80, and the district was included in the territory of al-Jazīra (Balādhuri, 170, later in Diyar Bakr. The town was in a rich agricultural district, and the average contained revenue from Arzan and Mayyāfārīn in Kūdlāma (BGA VI, 246). Until the rise of the Hamdanids Arzan was ruled by Armenian amirs allied by marriage, as well as allegiance, to the Arabs. Cf. Canard (below), 472.

At the beginning of the 11th/10th century the Hamdanid Sayf al-Dawla resided in Arzan when preparing expeditions against the Armenians or the Byzantine Empire. In 330/942 the Byzantines captured and sacked Arzan (Canard, 748). The Hamdanids recovered the town but had to fight many times with the Byzantines in the Diyar Bakr district. Afterwards the town lost its importance and in the 12th cent. A. D. Yāḡūt (ed. Wüstenfeld, I, 205) wrote that it was in ruins.

Few travellers have visited the site, but it was identified by J. G. Taylor in *JRGS*, 35 (1865), 26, where a plan of the ruins is given.

One should not confuse Arzan with a smaller nearby site also on a river, the Bohtānu, called Arzan al-Zarā; see J. Marquart, *Südarmanien und Arzan al-Zarā* (Vienna 1930), 41\*, and 341. Also to be distinguished from Arzan is Arzan al-Rūm (Erzurum), and nearby Byzantine 'Arzē.

*Bibliography:* In addition to references in the text cf. Marquart, *Die Entstehung und Wüstenfeld, I, 205*; M. Canard, *Histoire de la Dynastie des Ham-*

the colour of the animal and the growth of its mane. Facts for a more detailed description of these (cf. e.g. Jacob, *ibid.*, and Moritz, *Le.*, 47, n. 3) are, however, scanty. In Islamic countries today, one finds, according to Brehm, *Le.*, 1, 144 ff., the Berber lion, the Senegalese lion, the Persian lion and the Gadjard lion.

The Arabs caught lions in a primitive method which is still found in some parts today (Grünert, *Le.*, 141; Ebert, *Le.*, VI, 146; Brehm, *Le.*, 1, 151); according to Flavius, this was the method employed to catch animals for the circus: *RE*, XIII, col. 980. Following the example of the rulers of the ancient Orient, as well as that of the Achaemenids, Sāsānids and the Caesars, the Caliphs later went on lion-hunts themselves and in Islam, too, it became a prerogative of the rulers. They kept the lions in zoological gardens, trained them as companions, and organised shows with them in the Roman manner (cf. *RE*, XIII, col. 980 f.; Ebert, *Le.*, VI, 144-6; G. Contenson, *La vie quotidienne à Bagdad au IX<sup>e</sup> siècle*, Paris 1959, 140-3; W. von Soden, *Herrscher im AO*, Berlin 1954, 37, 75, 82, 134; C. de Wit, *Le.*, 10-4; Streck, *ibid.*; *Mos, Renaissance*, 385 f.; M. F. Köpff, *Le.*, 1, 599 f.).

"In Islamic art, the lion is probably the most frequently and diversely represented animal. It rarely has an apotropaic meaning, it sometimes has an astrological or symbolic one, but it is generally merely decorative and without any deeper significance. The main forms are:

- In the round, as in the Fountain of the Lions in the Alhambra, hewn in stone in Konya, in Fātimid and Saljūqid metal work, and in Persian ceramics of the 12th to 14th century (particularly as pouring vessels and censers).
- In bas-relief, and also flat, in the various spheres of art, and in almost any material, either:
  - passant, stant, sejant, rampant, either alone or paired, in the so-called 'heraldic style';
  - either in battle with other animals—such as bulls, gazelles or camels—or attacking them (thereby going back to ancient Iranian tradition);
  - explicitly heraldic: as in the Persian coat of arms (where it appears with the sun); as in the lion in the coat of arms of the Mamlūk Baybars and perhaps also in that of the Rūm Saljūqs of the name of Kibāḫ Arslan; also in nisamic representations;
  - as a lion mask (the head only) on later carpets and textiles.
- Partial representations are rare; the most frequent are: lions' paws, used as ornamental legs; lions' heads (modelled fully in the round) as door-knockers, as handles and in similar functions, usually in bronze.

There seems to be little direct debt to the ancient Orient or Hellenic art; the stylisation of the figure of the lion, at least, is nearly always typically Islamic, both in details and ornamentation. — There is as yet no iconographic study of the lion in Islamic art." [Information given in a letter from Professor E. Kühnle].

Fr. P. Dargabahr in the *Journal of the Warburg and Courtauld Institutes*, 1937, mentions occasions where plastic representations of lions are alluded to in Arabic literature. According to the results of his research, the Alhambra lions are of the 5th/11th century.

In heraldry, the best known example of the lion

is in the Iranian Imperial coat of arms [see below], which has its predecessor in numismatics. As M. F. Köpff shows, *Le.*, 1, 609, it dates from the reign of Fath 'Alī Shāh (1797-1834). — For *Asad* or *Arslan* coins see *ibid.*, 1, 613.

The use made of the lion in all these spheres is based largely on astronomical and astrological configurations. The constellation of *Leo* "with 27 stars and 8 shapeless ones" is, according to I. Idler, *Untersuchungen über den Ursprung u. die Bedeutung der Sternnamen*, Berlin, 1899, 134: "a collection of grammarians ignorant of the skies, which owes its existence to false interpretations and arbitrary changes of the older star-names. It is impossible to say in all cases exactly how they arrived at such corruptions" (see *ibid.*, 152-5, 159-68, 20-31, 52 f., 252 f., 272, 279, 317 f., 409 f., 422). The Babylonians already saw a heavenly hierarchy of kings in the zodiacal sign of *Leo* (2 lions = *Aras*, later: *Regulus* = *mulab*, the "royal", also: *hubb al-asad* "lion-heart"; *ibid.*, 164 f. and A. Jeremian, *Handb. d. so. Geisteswiss.*, 1929, 203, 218 f., 347), and they put the king of their animal kingdom into the place in the zodiac in which the summer solstice occurs. Hence it became the symbol of the victory of the sun (cf. *RE*, XIII, col. 983; Keller, *Le.*, 1, 52). Just as Jesus is called the Lion of Judah (comp. the title of the *Negus*) because he triumphed over death (*Abot*, V, 3), the Shī'ites call 'Alī b. Ṭālib the "Lion of God" (cf. Casati, *Le.*, 72, 87-93; Hamza was also called *Asad*; *ibid.*, Grünert, *Le.*, 4). In the Persian coat of arms he draws his sword *Dhū 'l-Fakr* (q.v.), and the rising sun appears in the background. — When the sun is in *Leo*, on July 20th, the flooding of the Nile begins, hence the lions' heads as water spouts and fountain heads (cf. Keller, *Le.*, 1, 47 f.; C. de Wit, *Le.*, 84-90, 120 ff.). — The apotropaic nature of the lion is of considerable significance. With his fierce look, warding off all hostile attack, he becomes the guardian of the throne (also of the throne of Allah; Grünert, *Le.*, 5), the gate, halls and graves (cf. Keller, *Le.*, 1, 58; Bonnet, *Le.*, 429; like the Sphinx: cf. C. de Wit, *Le.*, 66 f.). — Some representations of lions may, of course, have resulted from mere playfulness in modelling. However, W. Andrae, *Dargestellte Versuchskästchen in der so. Kunst*, in *Welt d. Or.*, 11/3 (1936), 350-3, shows that there was often a deeper reason behind it, especially when the lion, bull, and eagle occur together. Here, Islam took a great deal from older cultures without enquiring into its significance. Frequently, ancient Egyptian art provides the answer in a direct explanation of what is portrayed (cf. C. de Wit, *Le.*, especially 78, 84-90, 139 f., 398 f., 461-8).

It is impossible here to go further into the part played by the lion in the literature of mythology [some of this may be found in M. F. Köpff, *Le.*, 1, 601-3], the fable (e.g. of Luknān; in animal-fables he is often called (*al-Ussāna*, similar to our "mole beast"), and the proverb (examples from al-Maydānī in Grünert, *Le.*, 17).

The description of his biological attributes, too, his daring, strength and wildness (especially his roar), on the other hand, are repeatedly stressed. Mixed up with this, are superstitious ideas concerning him, such as the tale that he flees from the (white) cock — or from its crowing — that is to say, that he was originally shy of the light of day before he himself became the symbol for it (see above); according to the views held in antiquity (cf. *RE*, XIII, col. 975 f.; Casati, *Le.*, 59; Grünert, *Le.*, 18), the same is true of the use — sometimes medicinal — made of parts of

his body: brain, teeth, gall, flesh, fat, etc.; these are held to be infallible in their magic effects. The court apothecary in Stuttgart sold lions' excrement as late as 1561 as a remedy (cf. Keller, *Le.*, 1, 44; *RE*, XIII, col. 982; Grünert, *Le.*, 19 f.).

Names show most clearly how much the lion entered into the cultural history of man. *Uṣf al-Ghābā* "the lions of the thicket" is what Ibn al-Aḥlī (died 632/1234) calls his biography of the companion of the Prophet. The names formed with *Asad* (*Asad*), *Layḥ* (*li*) are numerous (sometimes theophorous: J. Wölhausen, *RAH*, 2, 64); in Turkish those formed with *Arslan* (particularly the Saljūqs; M. F. Köpff, *Le.*, 600-4 deals with personal names, place names and titles); in Persian, *shīr*, either alone or in compounds, such as *ghīrī* "lionhearted", *ghīrward* "hero" (the *asād*; Landberg, *Le.*, 116, 123 ff.; Fr. Wolff, *Glossar zu Ferdinā's Šāhnāma*, 1935, 584-7). In the Turkish of today, the word is usually *aslan*, which also means "brave, upright, good"; *arslançelm* "my little lion", is practically a term of endearment for boys. — Thus the likable traits of the animal, its traditional virtues, the dignity of its appearance, have triumphed everywhere.

**Etymology.** Owing to lack of space, the subject can only be roughly sketched.

Max Grünert, *Der Löwe in der Literatur der Araber*, Prague 1899, is little more than a study from a lexicographic standpoint. — M. Fuad Köpff's article *ARSLAN* in *IA*, 1, 598a-600a is hitherto the best exposition, not only for Turkish. There is no general survey of the Islamic field, and there are any number of monographs on particular areas. — For comparison with antiquity, the following will be found useful: the article "Löwe" (by Steier) in Pauly-Wissowa, *RE*, xiii, 1927, col. 968-990; Otto Keller, *Die antike Tierwelt*, 1 (Leipzig 1909), 24-64; further: Max Ebert, *Reallex. d. Vorgesch.*, vi, 114a-6b, VII, 318a-b and especially Paulus Casati, *Leontologie von Varna bis Goletha*, Berlin 1973, this also for oriental conditions. — For relationship with the ancient Orient: B. Landsberger, *Die Fauna des alten Mesopotamien*, Leipzig 1934; M. Streck, in *Vorderas. Bibliothek*, vi/2 (1916), 416 f.; H. Bonnet, *Reallex. d. Egypt. Religionsgesch.*, Berlin 1952, articles "Löwe", "Sphinx", and others; especially C. de Wit, *La rēle et le sens du lion dans l'Égypte ancienne*, Leiden 1951, *passim*. — Concerning Arabic and Semitic matters in general, cf. F. Hommel, *Die Namen der Säugtiere bei den südsem. Völkern*, Leipzig 1879, 287-94; C. de Landberg, *Études sur les dialectes de l'Arabie méridionale*, Hâk, Leiden 1909, 1237-40; G. Jacob, *Alphabet. Redainenheben*, Berlin 1897, 16-18; B. Moritz, *Arabien*, Hannover 1923, 40-41. — For ecology in general: Brehm's *Tierleben*, 1 (1893), 144-152.

(H. KINDERMANN)

**ASAD**, *Ramē* (later, dialect. *Benī Sedī*, Arab tribe. They are a tribe related to the Kindā (q.v.); the awareness of this interconnection remained remarkably alive, though it had little practical effect owing to the great distance separating them.

The homelands of the *Asad* are in North Arabia, at the foot of the mountains formerly inhabited by the Tāy (q.v.). In contrast to the latter, the *Asad* led a mainly nomadic life. Their grazing lands extended to the south and south-east of the Nejd, from the Shammar mountains (q.v.) to the Wādī 'l-Rumma in the south, and beyond it in the neighbourhood of the two Abās in the direction of Basra and further eastwards up to Sir. Here their territory overlapped with that of the 'Abā (q.v.), in the north

with that of the Yarbūṣ (q.v.) of the Tamīm (q.v.), for there the *Asad* owned the spring of Līd beyond the Dabnā (q.v.), as well as the adjacent tract of Hazn (Hedjira) to the north.

An important event in the pre-Islamic history of the *Asad* is their revolt in which Hudjir fell, the son of the last great ruler of the Kindā and the father of the poet Imru' al-Kays (q.v.), and in which they struck the disintegrating kingdom of Kindā (q.v.) a mortal blow. — The *Asad's* relationship both with their immediate and their more distant neighbours, the Tamīm and the tribes beyond the Wādī, varied. In contrast, at the end of the sixties and the beginning of the seventies of the 4th century A.D., a permanent alliance with the Tāy and the Ghāṭafān (q.v.) was developed, in which the Ghāṭafān (q.v.) and finally the 'Abā joined. A few decades later, however, a rift among the allies occurred, as a result of which clashes ensued, particularly between the *Asad* and the Tāy, until Islam established peace among the tribes.

An *Asad* family, the Ghāṭam, who had long been settled in Mecca, belonged to the inner circle of Muḥammad's disciples. But these connections in no way affected the great *Asad* tribe. At the beginning of the year 4/625, Muḥammad sent a raiding expedition to the *Asad* walls at Qāṭan, where were encamped the sub-tribe Fak'as, with their chief Tulayha (Ṭālib) and who, according to tradition, were contemplating an attack on Medina, already weakened by the battle of Uhud. It is conceivable that Tulayha took part in the siege of Medina, the so-called Battle of the Trench (627). When, after further unsuccessful struggles against Muḥammad, famine broke out among the *Asad*, Tulayha appeared with other chiefs in Medina at the beginning of 9/630 to embrace Islam. Though it is uncertain that Sura XLIX, 14-17 refers to their emissaries, as is maintained by tradition, nevertheless these verses undoubtedly reflect their attitude towards Islam. However that may be, their leader Tulayha is said to have proclaimed himself a prophet even before Muḥammad's death. During the ensuing widespread troubles of the Ridda wars, he succeeded in re-establishing the alliance with the Ghāṭafān and the Tāy, which was joined by sections of the 'Abā and Fak'as (Ghāṭafān). After being abandoned by the leader of the Fak'as (q.v.) at the battle of Buṣayḥ against Khalīd b. al-Walīd (q.v.), he took to flight (11/632). This victory of the Muslims broke the resistance of the insurgents in North Arabia, who then for the first time were converted to Islam, the *Asad* among them.

In the ensuing wars of conquest, we find the *Asad* predominantly on the Iraq front; Tulayha also, having in the meantime returned to Islam, fought both there and in Persia. — Most of the *Asad* were absorbed by al-Kūfa; here in the course of time, they evolved from warriors to men of learning; as a result many of those who handed down the Shī'a tradition, were men of the *Asad* from al-Kūfa. Smaller groups of the *Asad* were incorporated in the Syrian army and subsequently settled near Aleppo and beyond the Euphrates.

When the withdrawal of the Bakr (q.v.) and Tamīm left the way to the north open to them, in the second half of the 3rd/9th century, they extended their grazing lands along the Kūfa pilgrim road from al-Bīḥān (Bīḥān) in the Dabnā (q.v.) as far as al-Bakā. Later it was extended still further northwards; up to al-Kādisiyya (q.v.) on the frontier of the Sawād, in the East the *Asad* extended right up to Basra and in the West to 'Ayn al-Tamr (q.v.).

apart from their originality of matter and form. On the other hand 'Alī b. Ahmad, situated at the court of a prince of Arrān, Abū Dulaf composed on the advice of a minister, his *Gurāḥ-nāma*, the oldest of the epics complementary to the Shah-nāma of Firdūsī: this work is remarkable not only for its spirited narrative and for its style, but also for its supernatural episodes and philosophical discourses which foreshadow the later development of the Persian epic. The valuable *Lughat-i Furs*, a dictionary of rare words with quotations from Persian poetry, was probably written after the epic. A copy of the pharmacopoeial treatise of Abū Maḥmūd Muwaffaq b. 'Alī of Harāt dated 447/1055-6 one of the oldest Persian manuscripts, is in the handwriting of 'Alī b. Ahmad, and is dated and signed by him. K. I. Tahakik has tried to show that all these works are by one and the same author, Abū Maḥmūd 'Alī b. Ahmad (*Intafadulo Akademik Nank SSSR*, Leningrad 1934, 119-59; résumé by H. Massé in introd. *Gurāḥ-nāma*).

**Bibliography:** *Le Livre de Gurāḥ-nāma*, published and trans. by Cl. Huart, I, Paris 1926 (PELOF), trans. by H. Massé, II, *ibid.* 1950 (with a detailed introduction); *Lughat-i Furs*, ed. by P. Horn, Göttingen 1897; Tehran ed. 1947; *Index Firdousiensis*, ed. in facsimile by Seligman, Vienna 1859 (Gorman trans. by Achundow, Halle n.d.); H. Fāh, in *Verhandlungen des 5. intern. Orient. **ĀSĀF b. BARAKHIYĀ** (Hebrew Āsāf b. Berēkhiyā), name of the alleged *wazir* of King Solomon. According to the legend he was Solomon's confidant, and always had access to him. When the royal consort Dāḥiāda was worshipping idols Āsāf delivered a public address in which he praised the apostles of God, Solomon among them, but only for the excellent qualities he had manifested in his youth. Solomon in anger at this took him to task, but was reprieved for the introduction of idol-worship at the court. This was then done away with and the consort punished: the king became repentant.

**ĀSĀP-DĪKH**, title of the *Nizām* of Haydarshāh (q.v.).

**ĀSĀF KHĀN** Abū 'Iḥsān, second son of Dīshāngir's *walid-ahd* 'Iḥmād al-Dawla Ghāyih Bēg and elder brother of Nūr Dīshān.

After Nūr Dīshān's marriage to Dīshāngir in 1020/1611 Abū 'Iḥsān became *Khān-sāmān* with the title of 'Iḥmād Khān. In 1021/1612 his daughter Arghandān Bānū Begam Munṭir Mahāl married Prince Khurraw, the future Shāh Dīshān. He himself received the title of Āsāf Khān in 1023/1612 and attained in 1031/1622 the rank of *ḥusn ghāt* and *wasir* and was appointed *sahādir* of Bengal in 1033/1623. In 1023/1616 the imprisoned Prince Khurraw, eldest son of Dīshāngir, was delivered over to the charge of Āsāf Khān, now sharing the real power in the empire with Nūr Dīshān, 'Iḥmād al-Dawla and Prince Khurraw. Despite his negligence in allowing Mahshat Khān, the enemy of the Nūr Dīshān faction, to capture Dīshāngir on the banks

of the Jhelum in 1035/1626, his own flight to Atak and eventual seizure there by Mahshat Khān's forces, Āsāf Khān survived to become governor of the Panjāb and *walid*.

Āsāf Khān quickly despatched the news of the death of Dīshāngir in 1037/1627 to Prince Khurraw in the Dekkan. Always a supporter of the latter's succession, Āsāf Khān diplomatically proclaimed Dāwar Bahādhār as *pādshāh* at Bīnbur, pending the arrival of Prince Khurraw. He also placed Nūr Dīshān, who supported Prince Shahriyār, under restraint. His services in securing the succession of Shāh Dīshān were rewarded by the title of *Yasir al-dawla*, the rank of *ḥusn ghāt* and *wasir*, *de-asta* *sik-asta* and the office of *walid*. In 1047/1637-8 Āsāf Khān was employed as commander of the Mughal armies fighting against Muhammad 'Adil Shāh of Bijāpūr.

Āsāf Khān died in 1051/1641 and was buried in Lahore not far from Dīshāngir's tomb. A patron of Mughal miniature painting and a great builder, he left a fortune estimated, in European sources, at more than twenty five million rūpīs apart from his residences and gardens.

**AL-ĀSAMM**, "the deaf", a sobriquet applied to several people, notably: 1. SURYĀN b. AL-ABBĀD AL-ĀSAMM, called al-Āsammi an Umayyad general famous for his disfigurement, who led several campaigns against the Khāridjites, the most notable of which, about 70/767 or 79/767, led to the crushing defeat and death of the Akraḥ Khāridjite Kaṭari b. al-Fudā'a (q.v.).

**Bibliography:** al-Tabari, *Annales*, ed. by de Goje, II, 1018 (Cairo ed. v. 126); Dīshī, *Bayan*, ed. by Hāriri, I, 61, 402 and III, 282. 2. Abū 'Iḥsān Muḥammad b. Ya'qūb al-Nāṣirī, called al-Āsammi, a celebrated doctor and traditionist of the Shāfi'i school, born in 247/861, died in 346/957-8. A disciple of al-Rab' al-Murādi (d. 270/883) and al-Murādi (d. 264/876) (q.v.), he helped to make the latter's *Muḥḥasir* more widely known through the medium of a recension which attained great popularity; see *Fihrist*, 212. The Shāfi'i Saḥī b. Muḥammad al-Su'ūdī (d. 387/997), who was a pupil of his at Nisābūr, also won great renown.

Wüstenfeld, Cöttingen 1833 fol., II, 94, no. 61. Our edition of the *Tahabih* of Su'ūdī does not contain any notice on him. (R. BLACHÈRE)

**ĀSĀS** [see ISMĀ'ILĪYYA].

**'ĀSĀS**, the night patrol or watch in Muslim cities. According to Makrizī the first to carry out this duty was 'Abdallāh b. Ma'sūd, who was ordered by Abū Bakr to patrol the streets of Medina by night. 'Umar is said to have gone on patrol in person, accompanied by his *mawāl* Aslam and by 'Abd al-Rahmān b. 'Awf. (*Khitāt*, II, 223, cf. Tabari, I, 5, 2742; R. Levy, (ed.) *Ma'dūm al-Kurba*, 216; al-Ghazālī, *Nasḥat al-Mulūk* (ed. Hunā'ī, 13, 58). Later the 'āsās was commanded by a police officer, known as the *shāh al-āsās* (Makrizī, loc. cit.); Ibn Taghribirdī, II, 73; Nuwayrī, III, 151). Makrizī says that in his day the *shāh al-āsās* was popularly known as the *walī 'Asaf* (*Khitāt*, II, 103); a *shāh al-āsās* is reported in Basra in the time of al-Badīdī (Bādīdī, *Futūḥ*, 364. On the *Asaf*, apparently a synonym of the 'Āsās, see also Būdī, *Kabāliḥandī*, *Sulūk*, III, 93, citing the instructions given to them in 657/1257 by the Sultan). In Masūdī times there were also night patrols known as *ashūb al-arḥā*, coming under the authority of the *Wālī*, or chief of police; in Spain they were called *darrāḥān* (Makrizī, *Sulūk*, Cairo, II, 54; Makkari, *Analekies*, I, 135).

In the East, a diploma issued by the *khān* of the Salghūkhid Sāngar (d. 532/1137) orders the *shāh* of Ray to appoint 'āsās in the town wherever there may be the suspicion of vice and corruption ('*Alabāt al-Katābāt*, ed. Muḥammad Kaẓwini and 'Abbas Iḥṣāl, Tehran 1930, 44).

In Ottoman times the commandant of the 'Āsās ('*Asasbashi*) was a Janissary officer (according to 'Oghlān Nūrī the forerunner of the 28th *lāsh*, according to Hammer from an unspecified regiment). He was in charge of the public prisons and exercised a kind of supervision over public executions. He attended meetings of the *Et'wān* of the Agha of the Janissaries and at the Saray and the Porte, in case anyone was to be handed to him for execution. He also played an important role in public processions. He received one tenth of the fines imposed by the *Su Bahā* for drunkenness and similar offences by night, though not by day; in addition the 'Āsās levied a due (*Rasm-i 'Asasiyyi*) from every shop. (Ewliya Celebi, I, 317 = Hammer's translation, I, 2, 108-9, attributing their foundation to Melemedin II; 'Oghlān Nūrī, *Meḡallat-i Umur-i 'Osmaniyye*, I, 902-3, 954; Ömer Lütfi Barkan, *Osmanlı İmparatorluğunda Zırat Ekmomninin Husuk ve Mali Kanunları* I Kanunlar, İstanbul 1943, 69, 70, 134, 139, 147, 160, 162, 163, 164, 178, 400).

In Safawid Persia the night patrols were under the command of the *dürūghā*, and were called *ashūdh* (q.v.) and *gasm* as well as 'āsās. (Minorsky, *Tughhrat al-Malak*, 149). In 19th century Shīrāz the head of the night watchmen was known as *shir 'āsās* (Ann K. S. Lambton, *Islamic Society in Persia*, London, 1954, 14-15).

In Ghazda and in the other cities of the Maḥāl, the organisation of night watchmen not only assures public security and morals, but possesses a secret and almost absolute authority, superior even to that of the *Halifa* of the 'Āssāba and the *Diyāna* of the laymen, in the important affairs of the community. (M. Vigoroux, *La garde de nuit à Ghazda, in Bulletin de l'Association Saharienne*, no. 9, Algiers 1952, 9-16). The minaret of the Abādī mosque in the Maḥāl is called 'āsās, 'swatchmen'. (M. Mercier, *La civilisation urbaine du Mizab*, Algiers 1922, 60 f.).

(E.O.)

The term 'āsās is used in North Africa in the sense of 'night-watchman'. R. Brunschwig (*La Berbérie Orientale sous les Hafsides*, II, 203) mentions it in connexion with the night-watchmen in the *sūks* at Tunis. It is also found in Budget Meakin (*The Moors*, London 1902, 174) to denote the watchman who keeps guard at night over the caravans which have halted in the villages; the same custom, but without the word being used, is mentioned by M. Rey (*Souvenirs d'un voyage au Maroc*, Paris 1844, 124). At Fez, the word was used at the beginning of the 20th century to denote not only night-watchmen, but policemen in general.

Whether the word 'āsās is indicated or not, the use of guards at night, particularly in the central market, at warehouses and on the ramparts, was the general practice in North African towns up to the advent of the French. There is evidence of its use in Algiers (R. P. Dun, *Histoire de Barbarie et de ses corsaires*, Paris 1937, 102), where the *minzūr* (q.v.) and his agents patrolled the main streets at night, and in Fez (Leo Africanus, *Description de l'Afrique*, ed. E. Pauland, Paris 1936, I, 206), where "four police officers, not more", went the rounds from midnight until 2 a.m., and where the central market and warehouses were guarded by Berber porters or *baridiya* (R. Le Tourneau, *Fin avant le Protectorat, Casablanca-Paris 1929*, 190), while the police of the ward commanders ('*assida*) kept watch on the ramparts (*ibid.*, 253). At Wazān, the head of the family of the *Shayra* of the town paid each night 28 *gashs* who kept watch over the city (Budget Meakin, *The land of the Moors*, London 1901, 325), while at Safi, the Moroccan army took part in guarding the city by night (*ibid.*, 200).

In Spain, the term 'āsās does not appear to have been used. E. Lévi-Provençal (*K'asid*, 253), mentions the use of the word *darrāḥ* to denote night-watchmen; the person responsible for nocturnal security was sometimes known as *shāh al-ayl*, which is apparently the equivalent of the term: *shāh al-ghurfa* (E. Lévi-Provençal, *Hist. Esp. Mus.*, III, 155, following al-Makkari, *Analekies*, I, 134).

(R. LE TOURNEAU)

**ĀSFAR** (ā), yellow; also, in distinction from black, simply light-colored. Some Arab philologists and exegetes indeed claim for *asfar* also the meaning "black"; see the discussions thereon in the *Khazānat al-Adab*, II, 465. The Arabs called the Greeks *hannu 'Asfar* (sem. *hanūt al-ā*: *Ud al-Ghāba*, I, 274, 4b

infra) according to Tabari (ed. de Goeje, I, 357, 357-358, 358) signifying "Sons of the Red One" (Esau). In the Hadith mention is made of the contest of the Arabs with the Banu 'Aşfar and of the conquest of their capital Constantinople (Muhammad ibn al-Ash'ar, 174). *Malik ibn 'Aşfar* (Aghānī, 1<sup>st</sup> ed., vi, 125, 126) — the Christian prince, especially those of the Rūm (ib. 98, 99; infra; cf. Abū Tammām, Dīwān, ed. Beirut, 18 80, in a poem to al-Mu'tasim after the battle at 'Amuriya). Later this designation was applied to Europeans in general, especially in Spain. *Ta'arīḥ al-Suf* (Spanish Era) can thus be best explained; other views in ZDMG, xxxiii, 426, 427. Many genealogists have explained Aşfar as the name of the grandson of Esau (Σωφάρ in the Septuagint, Gen. 16, 16) and father of Rūmī (Rūmī, Gen. 16, 41), ancestor of the Rūm. According to the explanation of De Sacy (Not. d'Ést., ix, 437; Journ. As., 3. Serie, Pt. 1, 94), which Franz Erdmann accepts (ZDMG, II, 237-241), the designation Banu 'Aşfar was a literal translation originally referring to the Flavian dynasty, then became extended beyond it to the western nations. From his travels among the Nupayis (g.v.) H. Lammens relates that they designate the Emperor of Russia *Malik al-Aşfar* (Au pays des Nupayis in Rev. de l'Or. chrétien, Paris, 1900, 42 of the separate edition).

**Bibliography:** I. Goldziher, *Mohammedische Studien*, I, 268 ff.; Castani, *Annali dell'Islam*, II, 242; ZDMG, II, 363; JA, 10th series, ix, 230; 10th series, xiv, 199. (L. Goldziher)

**AŞFAR B. SHIRAWAYHI**, (Aşfar the son of Şifro), a Daylamite condottiere, to be more exact a Ghilzi, who played an important rôle in the civil wars which followed the death in 304/917 of the 'Alid Hasan al-Utrush (g.v.), the master of Tabaristān, and put an end to the domination of the 'Alids in this region. He made his appearance with another Daylamite condottiere, Mākan b. Kākūy (Ar. Kākū), in 312/923, in the struggles which brought al-Utrush's son-in-law and successor, Hasan b. al-Kāsim, surnamed *al-dā'ī al-naṣīr*, "the little missionary", into conflict with some of al-Utrush's sons, Abu 'I-Husayn and Abu 'I-Kāsim. He revolted against Mākan or was dismissed from his army by the latter for his execrable conduct, and entered the service of the Sāmānid prefect of Naysābūr. After the death of Abu 'I-Kāsim in 312/925, Mākan proclaimed one of the latter's sons, Ismā'īl, in opposition to one of his nephews Abū 'Alī, whom he had imprisoned in Dīrdjān; Abū 'Alī succeeded in escaping, killing his custodian, Mākan's brother, and appealed to Aşfar (312/927-8). Aşfar came to Dīrdjān and with 'Alī b. Şīrāghī, another Daylamite, the leader of Abū 'Alī's army, defeated Mākan and expelled him from Tabaristān. After Abū 'Alī's death in the same year, Mākan recovered Tabaristān and Aşfar returned to Dīrdjān, where he was appointed governor by the Sāmānid amir Naṣr. Then with the help of the Ghilzi Mardāwīz b. Ziyār, he again took possession of Tabaristān. Mākan had brought the Dā'ī Hasan back to power and they then tried to take Tabaristān from Aşfar, but were routed and the Dā'ī was killed in the battle by Mardāwīz. In this way the 'Alid dominion in Tabaristān came to an end, for Aşfar seized the other 'Alids and sent them to the Sāmānid at Buḥārā (316/928-9).

Aşfar, now master of Tabaristān, extended his power over Dīrdjān, over Rayy (from which he expelled Mākan), over Kāzwin and the other towns

of the Djabal. However he left Āmul to Mākan in condition that he did not seek to dominate the rest of Tabaristān. He proclaimed the sovereignty of the Sāmānid. He removed his family and treasures to Ālamūt (Ibn al-Ağfir, Kāfāt al-Mawt), the famous frontier fortress of the Ismā'īlīs to the North of Kāzwin, which he took by a ruse. Within a short time, he conducted himself as an independent prince, adopted the external marks of sovereignty at Rayy (golden throne and crown) and defied the Sāmānid and the Caliph. At this point the Caliph al-Makṭadī sent an army against him, under the command of his maternal uncle Hārūn b. Ghārib, which Aşfar completely routed near Kāzwin. However, Aşfar found himself the object of the hostility of both Mākan, who had not renounced his claims to Tabaristān and Dīrdjān, and the Sāmānid, who marched against him and reached Naysābūr. Aşfar's minister persuaded his master to make peace with the Sāmānid, paying him tribute, and recognising his suzerainty. In this manner Aşfar avoided war and took advantage of the situation to further extend his authority by deceit and fraud. He became increasingly tyrannical, took the most fearful revenge on the people of Kāzwin for having helped Hārūn b. Ghārib, and, in order to pay the tribute to the Sāmānid, collected a poll-tax of one dīnār per head on all the inhabitants of his possessions and even on foreign merchants in the country, in fact the *ḡizya* (the word occurs in al-Mas'ūdī).

His tyranny caused his lieutenant Mardāwīz to rebel against him; the latter made an alliance with the prince of Şāndrās in Tārum, Sālār, and with Mākan, and won over a large part of Aşfar's troops. After fleeing to Rayy, where he was only able to collect a small amount of money, Aşfar wanted to set out for Şāndrās and reached Rayy; then he turned back towards Rayy, his purpose being to reach Ālamūt so as to regain possession of his treasures there, raise new troops and take up the struggle again. But on the way, he was overtaken by Mardāwīz, who cut his throat (there are several versions of this occurrence). The chronology of events between 316 and 319 is not well established. Ibn al-Ağfir gives them in 316 and 317, while Ibn al-Fandīyār under 317. The latter is the most likely date for Aşfar's death. It is with Aşfar that the domination of the Daylamites in North-West Iran really begins, continuing with Mākan and Mardāwīz, and then the Buwayhids. According to al-Mas'ūdī, who stresses Aşfar's behaviour at Kāzwin (the *mu'āḍḍa* thrown from the top of the minaret, the suspension of the prayers, the ruined mosques), he was not a Muslim.

(M. KAVAN)

**AŞFI**, AŞAFI, (Fr. Saffi, Sp. Saffi, Port. Cafim or preferably Saffim), town and port on the Atlantic coast of Morocco, a few kilometres to the south of Cap Canin; about 25,000 inhabitants in 1936, and about 70,000 in 1953, of whom, in round figures, 62,500 were Muslims, 3,500 Jews and 4,000 Europeans.

Saffi does not appear to date from any very considerable antiquity. Al-Bakrī (5th/11th century) mentions it, without treating it as a place of any great importance. Al-Idrīsī in the following century considers it to be a relatively busy port, though its roadstead was not very safe. According to the same geographer, this was the point where the flotilla of the "Adventurers", who set out to explore the Atlantic Ocean, made landfall on its return (with a popular etymology of the toponymic; cf. E. Lévi-Provençal, *Proc. d'ér.*, 24). In the 7th/13th century there was a *ribāḥ* there. The history of the town is chiefly known since the intervention of the Portuguese, who accepted its submission just prior to the death of King Afonso V (1438-1481) and who occupied it in the first months of 1503. They built a great enclosure, which contained a castle called "Castle of the Sea" by the sea-shore, and adapted the old *baṣṣa* which they turned into their citadel (now Kečāla). Almost the whole of these fortifications still survive. Saffi was the main Portuguese stronghold in Southern Morocco. The Portuguese made it the centre of the manufacture of the rugs called *hambils* (Ar. *hanbū*), which were one of the basic articles of their trade with the rest of the Barbary States, with the Western Sahara (through their trading post at Arguin) and with Negro Africa (through their trading post at Milla, on the Gulf of Guinea). Enterprising and bold captives (governors), the most famous of whom was Nuno Fernandes de Ataíde, working through native notables, especially through one man who seems to have been a great chief, Yahyā b. Ta'fīf, gave Saffi a vast military and political sphere of influence which was expressed by at least two expeditions against the town of Marrakech. But this brilliant period was of short duration: the death of Nuno Fernandes de Ataíde, killed in a fight in 1516, then that of Yahyā, ambushed and killed in 1518, weakened the Portuguese and forced them to curtail their activity. In 1534 the Sa'fī Shaif of Marrakech subjected the town to a close and dangerous siege. After the fall of Santa Cruz de Cabo de Guat in March 1541 (see Azevedo), which provoked the attack of the Banū Shaybān, who set Buḥtūrī, *Hamān*, 156; Ibn Sallām, 377 and refs.—al-A'şhā of the Banū Taghlib (d. 92/710), see *Aghānī*, x, 98-100; Ibn Kutayba, *Uyūn*, II, 263; Brockelmann S I, 95.—al-A'şhā of the Banū Sulaym, a 2nd/8th century poet, see al-Dīḥabī, *Hayawān*, index.—al-A'şhā of the Tārid (Tārid), Iyās b. 'Amir, see al-Naghdī, *Aghānī*, I, 311-2. (E.v.)

**AL-A'ŞHĀ**, MAYMUN B. KAYS. Prominent ancient Arab poet of the tribe of Kays b. Tha'labah of the Bakr b. Wa'il (g.v.). Born before 570 in Dumā, a place in the Maṣūba oasis (south of Riyāḍ), died in the same place after 625. As his cognomen indicates, he suffered from an eye disease, and went completely blind whilst still in the prime of life. He set out in search of wealth in his youth. For years he travelled, probably as a merchant, and visited Upper and Lower Mesopotamia, Syria, southern Arabia, and Abyssinia in this way. After he became blind, he lived by his art, i.e. by writing paegeyries; yet he still travelled: to the governor of Hira, Iyās b. Kaḥba († 611), to Hadramawt to see Kays b. Ma'ṣūkaḥ (the father of Aḥl'āḥ), to Hawḍa b. 'Alī, prince of Dīḥaw a village in Yamāna. He had already tried his luck as a paegeyrist in earlier days. But poem No. 1, celebrating the triple victory of Prince Aswad of Hira (the brother of King Nu'mān), does not appear to have been a success. The poet was

remains of a Christian church, which was probably the Cathedral, are still to be seen.

**AŞFIZĀR** [see SANZĀWAR].

**AL-A'ŞHĀ**, "the night-blind", is the surname of a number of early Arab poets (17 in all; see al-Āmidī, al-Mu'tallī, 12 ff.; *Aghānī*, index; L.A., x.v.); each of them is connected with a tribe (A'şhā Banī Fulān) and, apart from the most celebrated of their number, al-A'şhā of the Bakr (or the Kays) (g.v.) and al-A'şhā of the Hamdān (g.v.), the following are worthy of note: al-A'şhā of the Bāḥila ('Amir b. al-Hārīḥ b. Riyāḥ) who is included among the *aṣḥāb al-mawṣiṭ* by Ibn Sallām, *Tuhāfāt*, ed. Shikrī, 169, 175 (with refs.); see also al-Buḥārī, *Hamān*, index; Abu Zayd al-Kuraḥī, *Ḥamān*, 135; al-Dīḥabī, *Hayawān*, I, 307; Ibn al-Shaḥrāṣī, *Muḥabbarāt*, Cairo 1906, 912; al-A'şhā of the Banū Mikhā ('Abd Allāh b. al-A'war), who is reckoned among the Companions of the Prophet; see Ibn Ḥaḍārī, *Iḥṣā*, no. 220. Al-A'şhā of the Banū Naḥḥāl — al-A'wad b. Ya'fur (g.v.)—al-A'şhā of the Banū Rabī'a ('Abd Allāh b. Khārdī), a poet of Kūfa of the 15th/11th century; see *Aghānī*, xvi, 357-7; C.A. Nallino, *Letteratura araba*, index; Brockelmann S I, 95.—al-A'şhā of the Banū Shaybān, see al-Buḥārī, *Hamān*, 156; Ibn Sallām, 377 and refs.—al-A'şhā of the Banū Taghlib (d. 92/710), see *Aghānī*, x, 98-100; Ibn Kutayba, *Uyūn*, II, 263; Brockelmann S I, 95.—al-A'şhā of the Banū Sulaym, a 2nd/8th century poet, see al-Dīḥabī, *Hayawān*, index.—al-A'şhā of the Tārid (Tārid), Iyās b. 'Amir, see al-Naghdī, *Aghānī*, I, 311-2. (E.v.)

**AL-A'ŞHĀ**, MAYMUN B. KAYS. Prominent ancient Arab poet of the tribe of Kays b. Tha'labah of the Bakr b. Wa'il (g.v.). Born before 570 in Dumā, a place in the Maṣūba oasis (south of Riyāḍ), died in the same place after 625. As his cognomen indicates, he suffered from an eye disease, and went completely blind whilst still in the prime of life. He set out in search of wealth in his youth. For years he travelled, probably as a merchant, and visited Upper and Lower Mesopotamia, Syria, southern Arabia, and Abyssinia in this way. After he became blind, he lived by his art, i.e. by writing paegeyries; yet he still travelled: to the governor of Hira, Iyās b. Kaḥba († 611), to Hadramawt to see Kays b. Ma'ṣūkaḥ (the father of Aḥl'āḥ), to Hawḍa b. 'Alī, prince of Dīḥaw a village in Yamāna. He had already tried his luck as a paegeyrist in earlier days. But poem No. 1, celebrating the triple victory of Prince Aswad of Hira (the brother of King Nu'mān), does not appear to have been a success. The poet was

deeply involved in politics. After the fall of King Nu'mān (in 501 or 502), the Bakr had begun their raids into the cultivated land of 'Irāk, along the Euphrates border where A'shā resided—presumably with the powerful Shaybān b. Thā'labā, who shared the area in which they migrated in summer with the nomad Kays b. Thā'labā. He threatened their death and destruction upon the valley of the Euphrates in an insolent reply to Khuraz II, who had demanded hostages. With equal boldness he confronted Kays b. Mas'ād, the head of the Shaybān, when the latter—under the impression of the great losses he had suffered—went to the court (No. 34; 26). Thus the poet may be said to have helped to bring about the battle of Dhū Kār (605). If the story and corrupted verses 3, 32-50 do indeed refer to Kays b. Ka'bā, then he was also active in that change which soon brought the victors of Dhū Kār under Persian influence again. In his home country, he interceded in favour of the rightful prince, Hawdja, to whom he was indebted, and ridiculed the usurper al-Harith b. Wa'ila (7, 4-6; 30). Meanwhile he had left the Shaybān in favour of the Kays b. Thā'labā, because he considered that the Shaybān had violated the honour of his tribe (6; 9). He was therefore deeply hurt, when (a few years later) he was accused in his own homeland and lost the case. Actually, he had been quite ready to reach an amicable solution until his opponent opposed him with a poetaster by name of Dībānān. The two met at a fair near Mecca. A tooth-stimmed up, Dībānān—dressed in an him with whips and spear-staffs, but was then dumbfounded by his verses. In A'shā allowed Mīshāl—his demonic alter ego—to appear for the first time (74; 38; 15). He had once previously had occasion to save himself from great danger by means of a hastily improvised poem (on Samaw'al (g.v.)). He subsequently, with or without their consent, interfered in the quarrel between 'Amlr b. al-Tufay' (g.v.) and 'Alkama b. 'Udā'ja (18; 19). He also defended 'U'ayyāna and Khāridja of the Fadira (Dhātān (g.v.)) against Zabān b. Sayyār, a well known chief of the same tribe (20, 27-37; Oriens 7, 302. This probably took place in the beginning of the twenties. As can be seen from 3, 67; 3, 32-34; 5, 64; 13, 69; 34, 13 al-A'shā was a Christian.

The poet was educated at Hira, where the tradition of legend and poetry was broader than that of any other individual tribe. His style is rhetorical and at times (especially in 1), artificial. Connected with this is his preference for sound-effects and for sonorous (Persian) foreign words, as well as for effective endings. He occasionally treats the traditional themes of the *basīda* with a high-handed indifference. He likes many types of allusion. Thus, for instance, *Harayyāta wadda*, 9, 4, prepares one for the recurrence of the theme, only with the motto inverted, in No. 6. The praise of Mecca and his panegyric on the leaders of the Dhātān (20, 27-37), both of which are otherwise apparently meaningless, indicate the whereabouts of A'shā, who had good reason on both occasions to avoid his homeland. The first passage discloses furthermore the place where he clashed with Dībānān, and the second shows A'shā's intention to proceed against Zabān, who is left out of the panegyric on leaders of the Dhātān.

The immediate impact of the poet seems to have been confined to his anonymous (Christian?) pupils and forgers, who counted on gaining the patronage of Ash'ath. Their works fill almost the whole of the second part of his *Dīwān* (No. 52-82), although

the first part, too, contains many a verse which is not authentic.

**Bibliography:** *The Dīwān of al-A'shā*, ed. R. Geyer (Gibb Mem. N. S. VI), London 1928; GAL, G 37; S I, 62-67; Mub. b. Sallām, *Tabaṭ*, 151; Caskel, *Oriens* 7, 302. (W. G. G. G. G.)  
**A'SHĀ HAMDĀN**, properly 'Abd al-Rahmān b. 'Abd Allāh, Arab poet, who lived in Kūfa in the second half of the 19th century. In his early career a traditionalist and Kufīn reader he was married to a sister of the theologian al-A'shābī, who in turn had married a sister of al-A'shā. Later he concentrated on poetry, acting on occasion as the spokesman of the Yamaniite faction. He was active in the wars that marked the governorship of al-Hadiqā and his health appears to have suffered during an expedition into Mukrān. The role which he played under 'Abd al-Rahmān b. al-Ash'ath is best known. He took part in his campaign against the Turks and was taken captive but escaped with the aid of a Turkish woman whose passions were enflamed for him. When Ibn al-Ash'ath turned against al-Hadiqā the poet's sharp tongue aided him with satires. The decisive battle at Dayr al-Djāmalidj resulted unfortunately; Ibn al-Ash'ath took to flight, and al-A'shā was led prisoner before al-Hadiqā, who immediately recalled to him some of his malicious songs. His extemporaneous flatteries availed him no longer: al-Hadiqā's sentence of death was carried out on the spot (8, 172-73). The poems of A'shā Hamdān, which have been preserved to us are reflexes of his adventures and political sentiments. The level of his poetry which remained curiously unaffected by the modernism of the Medinese school is considerable, both as regards his partisan verse and his treatment of the traditional motifs of erotic description. The vigour of his diction lends a certain attraction even to his handling of conventional topics.

**Bibliography:** *Aghānī*, V, 146 ff., 162 ff.; Mas'ūdī, *Mufaḥḥi*, V, 355 ff.; Tabaṭ, index; *The Dīwān of al-A'shā*, ed. R. Geyer, London 1928, 311-343 (50 pieces); Brockelmann, I, 62, S. 1, 95; Reicher, *Abriss*, I, 149-50; Guido Adler von Goutta, *Der Aghānīkhe* 'Abd al-Rahmān Hamdān, Diss. Freiburg i. B., 1912, contains translations of practically all A'shā's preserved verse.

**ASH'AB**, nicknamed "the Greedy", a Medinese comedian who moved in the circles of the grandchildren of the first four caliphs and flourished in his profession in the early years of the 8th century. He is said to have survived until 154/771. The historical information about him is rather plentiful; though contaminated by much legendary material, it permits us to get a glimpse at the life of a professional entertainer in the Umayyad period. The jokes and stories connected with his name concern politics, religion, and middle-class life. The middle-class jokes come last in the chronological development of the Ash'ab legend; but then, ever since early 'Abbasid times, they have enjoyed the greatest popularity in Islam. Among the famous jokes under Ash'ab's name, there is a brilliant parody of the foibles of *hadīth* transmitters: Ash'ab says that he heard 'Ikrima (or some other well-known transmitter) report that the Prophet had said that two qualities characterised the true believer. Asked which they were, Ash'ab replied: "Ikrima had forgotten one, and I have forgotten the other." Even more famous is the story of greedy Ash'ab who tries to get rid of annoying children by telling them that free gifts

are being distributed in some place, and then runs after them because he thinks his story might be true.

**Bibliography:** *al-Aghānī*, xvii, 82-103; O. Reicher, *Abriss*, I, 235-9; F. Rosenthal, *Humor in Islam and its Historical Development* (Leiden 1936), which centres around Ash'ab.

**ASHĀB** [see SAHĀRA].

**ASHĀB AL-HADITH** [see AHL AL-HADITH].

**ASHĀB AL-KAHF**, "those of the cave". This is the name given in the Kur'ān, and further in Arabic literature, to the youths who in the Christian Occident are usually called the "Seven Sleepers of Ephesus". According to a legend, in the time of the Christian persecution under the Emperor Decius (249-51), seven Christian youths fled into a cave near Ephesus and there sank into a miraculous sleep for centuries, awoke under the Christian Emperor Theodosius, were discovered and then went to sleep for ever. Their resting place and grave was considered, at any rate since the beginning of the 6th century A.D., as a place of worship. The story of the Seven Sleepers of Ephesus is found in various Oriental and Occidental literatures, particularly in Greek and Syriac; the Greek version would appear to be the earliest one (texts edited by Land, I, Guidi, Bedjan, Allgeier). Since Muhammad the legend is handed down in Arabic as well.

Muhammad has got to know the legend, like so many other stories of Jewish and Christian origin, has assimilated it and put it to edifying use in the Kur'ān (xviii, 9-26; hence the whole *sūra* is called *sūrat al-kahf*). The main outlines are clearly recognisable: The youths and their flight into the cave, so as to be able to remain true to the belief in the one God; their miraculous sleep, which lasts 309 years (v. 23), but which appears to them as at the most one day (v. 24); the circumstances of their discovery (by means of the ancient colnase, with which one of them attempts to buy provisions in the city). But some details remain doubtful. Muhammad himself points out that the number of the youths is variously given as three, five or seven, and that only God really has knowledge of the length of their sleep. It is strange that the dog who "stretcheth out his paws on the threshold" (v. 18), is taken into consideration when the number of the youths is given (v. 22); thus he also appears to be considered as holy. Not quite clear is the hint at the building of a place of worship over the resting place of the youths (v. 21). Particularly disputed is the expression *al-raḥīm* (v. 9; "those of the cave and (of) al-raḥīm"; N.B. the definite article).

The Arabic commentators and historians have attempted to overcome the difficulties in the interpretation of the Kur'ānic text and to fill in gaps, making use of much material from the Christian-Oriental tradition about the Seven Sleepers. Consequently their accounts are also of significance for the history of the transmission of the legend in pre-Islamic times. J. Koch and M. Huber have been at great pains to make use of the various reports for the history of legend and literature. Here a certain amount remains to be done. Huber's monograph *Die Wanderlegende von den Siebenschläfern* (1910), and his translation of Arabic texts in *Romanische Forschungen*, xxvi (1909) are however still to-day useful as collections of material.

The expression *al-raḥīm* is variously interpreted by the commentators. As the name of the dog (to whom the name *Kilmir* is otherwise given); as a place name; and as the name for an inscription,

which is supposed to have been put up in that place (cf. Horowitz, *Koranische Untersuchungen*, 95). Torrey suspected here a misreading for Decius, such an interpretation can however not be maintained (cf. Horowitz, loc. cit.).

Once the legend had taken root with the Muslims it was connected with various places within the Islamic world, so with a cave in Transjordan, in Cappadocia, in East Turkistan and in Spain. This does not however alter the fact that originally it belongs to Ephesus.

In the course of time the story of "the people of the cave" has drifted into the realm of the magical. In this way can be explained the custom of hanging up leaves on which the names of the sleepers are inscribed, for the sake of *baraka* or for averting evil. The name of the dog, *Kilmir*, plays a special part. Among the Turks of East Turkistan, as in Indonesia it was still customary in recent times to inscribe letters which it was desired to protect from loss, with the word *kilmite* instead of "registered".

In a treatise somewhat overloaded with symbolic details, L. Massignon has attempted recently to do justice to the story of the Ashāb al-Kahf, as it were from the inside, that is, in the sense in which it has become meaningful for Muslim believers.

**AŞĪĀB AL-RASS**, "the people of the ditch" or "of the well", are twice mentioned in the *Kur'ān* (xv, 38; I, 12), along with 'Ād, Thamūd and other unbelievers. The commentators know nothing for certain about them, and so give widely divergent explanations and all manner of fantastic accounts. Some take al-Rass to be a geographical name (cf. Yāqūt, s.v.); some hold that these people, a remnant of Thamūd, cast (rassa) their prophet Hanzala into a well (rass) and were consequently exterminated. It is also related that the mountain of the bird 'Anka' [q.v.] was situated in their region. Al-Tabarī mentions the possibility of their being identical with the Aşhāb al-Uḡdūd [q.v.]; otherwise he does not know anything about them; just as little do we.

**Bibliography:** The Commentaries on the verses of the *Kur'ān* in question, esp. Tabarī, *Tafsīr*, Cairo 1321, xix, 91; Damīrī, *Maṣābīḥ al-Hayawān*, xv, 'Anka'; Tha'alabī, *Ḥisn al-Anḥās*, Cairo 1292, 129-32; J. Horowitz, *Königliche Untersuchungen*, 1926, 94 f. [A. J. WERNICK]

**AŞĪĀB AL-RĀ'Y**, also **Abū al-Rā'y**, the partisans of personal opinion, a term of deprecation applied by the *ahl al-hadīth* [q.v.] to their opponents among the specialists in religious law. *Rā'y* [q.v.] originally meant "sound opinion", and was used of the element of human reasoning, whether strictly systematic (see *ḥukm*) or more personal and arbitrary (see *ḥuṣn*), which the early specialists used in order to arrive at decisions on points of religious law. The *ahl al-hadīth*, however, who rose in opposition to the ancient schools of religious law, regarded this as illegitimate; in particular they thought it wrong to reject, as the followers of the ancient schools used to do, traditions which were reported as coming from the Prophet, on account of *rā'y*. As a consequence of the success of this point of view in the theory of religious law (see *ḥukm*), each group was apt to qualify those who on any particular question gave to personal opinion a wider scope than they themselves did, as *aşhāb al-rā'y*, and it became impossible for those who did, in fact, use *rā'y*, to recognise this and to justify it from Islamic premises. There never was a school of thought in religious law that called itself, or consented to be called, *aşhāb al-rā'y*, and the distinction between *ahl al-hadīth* and *aşhāb al-rā'y* is to a great extent artificial. From the point of view of the *ahl al-hadīth*, both Abū Hanīfa and his school and Mālik and his school belong to the *aşhāb al-rā'y*, and they were indeed so called by al-Shāfi'ī, Ibn Kutayba, and others. For adventitious reasons, Abū Hanīfa and his school became the principal objects of the attacks of the *ahl al-hadīth*, and this gave rise to the erroneous opinion that they were the *aşhāb al-rā'y* par excellence. Warnings against *rā'y* and its partisans, sometimes with explicit mention of Abū Hanīfa and his followers, were even put into the mouth of the Prophet, his Companions and their Successors, and thereby became themselves traditions.

**AŞĪĀB AL-UḠDŪD**, "those of the trench", as opponents at the beginning of *Kur'ān*, LXXXV, which is difficult to understand. The verses 4-7 run: "Slain be those of the trench, of the fire fed with fuel, [to] when they are sitting by it (i.e. the fire), while they are witnesses of what they do (were doing) with the believers!" The ancient *Kur'ān* commentators and historians refer the passage inter alia to the persecution of the Christians in Najrān under the Jewish king of South Arabia [Ḥuṣayn Nuṣayr] [q.v.] which—as far as is historically established—is to be placed in the year 525. It is alleged that the Christian martyrs were burnt alive in a trench (uḡdūd) which had been specially dug for the purpose. Occasionally the passage in the *Kur'ān* is connected with a story which goes back ultimately to Daniel iii ("The men in the firing-oven").

In fact however the passage is to be understood in an eschatological sense, as Göttinge has recognised and Horowitz more closely explained. We are dealing with a scene of judgement typical of the *Kur'ān*. The *aşhāb al-uḡdūd* are unbelievers, who will go into the hell fire, as a punishment for what they did to the believers (verse 7). The objections, which K. Ahrens (ZDMG, 1930, 149) and R. Blachère (*Le Coran*, I, 120) have raised against this interpretation, are not decisive.

There remains the difficulty of explaining the expression *ahl al-uḡdūd*. A. Moberg thinks—though with strong reservations—of an influence of the Hebrew *Gē Hinnōm* (of Hinnom) in the sense of Hell (*Legenden*, 21; cf. Speyer, 424). According to R. Bell, "it may be that in 'the fellows of the pit' there is a sub-reference to the Quraysh slain at Badr, whose bodies were thrown into a well" (*The Qur'ān*, II, 646). Both interpretations are questionable.

**AŞĪĀM** (Turkish *Eşām*), plural of Arabic *ashm* (Turkish *şerh*), share. In Turkey the word was used to designate certain treasury issues, variously described as bonds, assignats, and annuities. The *ashm* are called annuities by Hammer (*Leibrenten*) and also in the Ottoman budget of 1862-3, where they are mentioned as *rentes viagères*. The description is not strictly accurate, as although the *ashm* were referred to the state on the death of the holder, they could be sold, the state claiming a duty

of one year's income on each such transfer. According to Mustafa Nūrī Paşa, the *ashm* were introduced in the early years of the reign of Mustafa II, when assignats on the proceeds of the customs of Istanbul and other revenues were issued to creditors of the state and other applicants, with an annual income of 5%. 'Abd al-Rahmān Wefīk remarks that most of the proceeds were spent in the war with Russia beginning 1182/1768. The handling of the *ashm*, he says, was at first entrusted to a *muḥallī* [q.v.], and later transferred to a *muḥallī*. The records of the *Eshām-i Mubāhar*, *Kalām* in the Istanbul archives begin in the year 1189/1775, and end in 1281/1864. According to Djewdet the *ashm* were introduced by the finance official Peykī Hasan Efendi, who first became *baḡdefterdār* in 1192/1778, after having previously been *defter-emni*. The issue of *ashm* on provincial revenues is reported in 1198-1200/1783-5. The practice of issuing *ashm* was continued by later Sultans, and Mahmūd II used them to compensate the *timar*-holders dispossessed by the land reform of 1831.

The first regular bond issue in the European style dates from 1256/1840, when bearer treasury bonds were floated, carrying a high rate of interest. These bonds, which circulated like banknotes, were called *Kā'imat Eshām* and *Kā'imat Ma'ṭure-i Nahlīyye* (see *Kā'ima*).

In 1864, in the course of the *Tanzimat* [q.v.] reforms, the old *Eshām-i Muḥḥabbi* *Kalām* was abolished. Meanwhile, however, in 1274/1857, a new internal loan was floated under the name of *Eshām-i Mubāhar*, and was followed by a series of others—*Eshām-i Ḥadīd*, *Eshām-i Ḥalāṭīyye*, *Ḥalāṭīyye* etc. These mid-19th century loans are sometimes referred to collectively as *Eshām-i Ḥalāṭīyye*.

**AŞĪĀR** see "eggril".

**AL-AŞĪĀRĪ, AL-MUBASHSHARA**, the ten, to whom Paradise was promised. The term does not occur in canonical *hadīth*, to which however the conception goes back. The traditions in question usually have the form: "Ten will be in Paradise", whereupon the names are enumerated. There are differences in the lists. Those who appear in the various forms extant are: Abū Bakr, 'Umar, 'Alī, 'Abdullāh, Talha, Zayd, 'Abd al-Rahmān b. 'Awf, Sa'd b. Abū Wakkās, Sa'd b. Zayd. In some traditions Muhammad himself is put before these nine (Abū Dāwūd, *Sunan*, bāb 8; Ahmad b. Hanbal, I, 187, 188 b.). In others Muhammad is absent and the tenth place is taken by Abū 'Ubayda b. al-Djarrāh (Tirmidhī, *Muḥṭaṣṣaf*, bāb 25; Ibn Sa'd, III, 279; Ahmad b. Hanbal, I, 193). Conceptions of this kind

owe their origin to the hierarchic tendencies that were prominent in the Muslim community, and that found expression even in the earliest creeds. **Bibliography:** Wessingh, *Handbook*; Muḥibb al-Dīn al-Ash'arī, al-Makki, *al-Risāl al-Nafīsa fi Maḥabib al-Ash'ar al-Aghara*, Cairo 1327.

(A. J. WERNICK)

**AL-AŞĪĀRĪ, ABŪ BURDA**, 'AMĪR b. Abū Mūsā, according to the accepted opinion one of the first *kādīs* of Kōfa. Apart from the fact that he was a son of Abū Mūsā al-Ash'arī [q.v.], little that can be considered authentic is known of his life and work. As a member of the Islamic aristocracy, it was only natural for him to be appointed as an official of the treasury (Ibn Sa'd); he also appears as one of the notables of Kōfa in 51/671, when he gave evidence against the followers of Ḥudr b. 'Adī [q.v.] (Tabarī, II, 131 f.; *Aghāni*, xvi, 77, and *Agāni* in 76/695-6, when he had banished to the Kharijī insurgent Shaḥīb b. Yazīd [q.v.] (Tabarī, II, 925). It is generally taken for granted that he was *kādī* of Kōfa, but even early sources give contradictory reports of the circumstances of his alleged appointment by al-Ḥajjāj [q.v.] (Mubarrad, *Kāmil*, II, 1, 20 f.; Waki', II, 391 f.), of the persons of his predecessor (Shurayb, according to Ibn Sa'd, to K. al-Mubāhar, and in Waki', *ib. cit.*; 'Abd al-Rahmān b. Abū Laylā, according to Waki', II, 407) and his successor (Sa'd b. Dhubayr, according to the *K. al-Mubāhar*; Sha'fī, according to Waki', II, 392, 413; his brother Abū Bakr, according to Waki', II, 414 f.), and of the length of his tenure of office (a very short time, according to Waki', II, 392; three years, according to Waki', II, 413; an unspecified time, between three and eight years, from 79/698-9 onwards, according to Tabarī, II, 1039, 1191). The accounts that Shurayb should have recommended Abū Burda and Sa'd b. Dhubayr as his joint successors to al-Ḥajjāj [q.v.] (Waki', II, 392), or that Mu'awīya on his deathbed in feeble should have advised his son Yazīd to avail himself of Abū Burda's good counsels (Ibn Sa'd, IV, 83; Tabarī, II, 299), are certainly apocryphal (cf. Lammens, *Mo'awia I<sup>er</sup>*, 339). Another anecdote (Waki', II, 409 f.; Ibn 'Abd Rabbih, *al-'Id al-Farid*, Būlak 1295, III, 140) makes Abū Burda peevishly complain to Mu'awīya of an attack by a poet. From Ibn Khallikān onwards, however, the person of Abū Burda is idealised. Abū Burda died in 105/721-2 or 104/721-2, at the age, it is stated, of more than 80 lunar years.

The traditional biography of Abū Burda reflects an absence of positive information, combined with the desire of fitting his name into the fictitious picture of the development of Islamic law and the administration of Islamic justice in the first century of the *hijra* which came to prevail. He played no part in the formation of the doctrine of the school of Kōfa, and he does not belong to its authorities. The one report on a judgement of his, on the ownership of household chattels, that occurs in an early source (Waki', II, 211), represents him as undecided among the secondary opinions held in the second century (cf. J. Schacht, *Origins*, 278 f.), and is therefore not authentic. In his time, the implications of the prohibition of *ribā* were only in the course of being worked out in 'Irāk rather than in Medina; the anecdotes which report that Abū Burda, having been sent by his father to Medina for study, was warned by his teacher there against the laxness of the 'Irākians in matters of *ribā*, must therefore be later, although they bear Egyptian *isālah* (on this phenomenon, see

Schacht, *Origins*, 130 f.). Abū Burda appeared as a transmitter of traditions because his name was used in "family circles", which were meant to authenticate sayings which his father was claimed to have related on the authority of the Prophet. The fact is attested already by Ibn Sa'd, but traditions themselves are quoted for the first time only by Waki'; some express repugnance for accepting government office (Waki', i, 63 ff.; ii, 22), an attitude which became fashionable only under the 'Abbasids (cf. E. Tyan, *Organisation judiciaire*, i, 387, n. 3; N. J. Coulson, in *JSOAS*, xviii, 1956, 211 ff.), another (Waki', i, 100) aims at enhancing the reputation of Abū Burda's father, Abū Mūsā, to the detriment of that of Mu'ādh b. Jabāl (it seems to presuppose the well-known tradition about the instructions of the Prophet to Mu'ādh, and could then be hardly earlier than the last third of the second century of the *hijra*); there are, finally, the alleged instructions of the caliph 'Umar to Abū Mūsā on the administration of justice, which appear for the first time in Waki' (i, 70 ff.); these are certainly not earlier than the third century of the *hijra* (cf. Tyan, i, 106 ff.). Abū Burda's reputation as a traditionist in his own right, with a respectable number of authorities from whom he was supposed to have heard traditions, had been established by the time of Abū Hātim al-Rāzī, and it continued to grow, together with the number of authorities from whom he was alleged to have transmitted, until Ibn Hajar could ascribe to Ibn Sa'd the statement that Abū Burda "was reliable and transmitted many traditions", although Ibn Sa'd said nothing of the sort.

A son of Abū Burda, Būlā, became *hādī* in Baṣra, and authentic, contemporary information on him is ample (cf. e.g., Waki', ii, 22 ff.; Pellat, *Le milieu basrien*, 288 ff.).

**AL-ASH'ARI, ABU 'L-HASAN**, 'Aḥḥād b. Isḥāq, theologian, and founder of the school of orthodox theology which bears his name. He is said to have been born in 260/873-4 at Baṣra, and was ninth in descent from the Companion Abū Mūsā al-Ash'ari. Little is known of his life. He was one of the best pupils of al-Diḡābī, head of the Mu'tazila in Baṣra, and might have succeeded him, had he not left the Mu'tazila for the party of the orthodox traditionists (*aḥl al-sunna*). This change or conversion is placed in 300/912-3. In later life he moved to Baghdad, and died there in 324/935-6.

The story of al-Ash'ari's conversion is told with many variations of detail. Three times during the month of Ramaḍān he is said to have seen Muhammad in a vision, and to have been commanded to adhere to true Tradition. He regarded this vision as authoritative, and, since the traditionists disapproved of rational argument (*balāḡ*), he gave up this also. In the third vision, however, he was told

to adhere to true Tradition but not to abandon *balāḡ*. Whatever be the truth of this story, it is a succinct account of al-Ash'ari's position. He abandoned the dogmatic themes of the Mu'tazila for those of opponents like Ahmad b. Ḥanbal, whom he professed to follow; but he defended his new beliefs by the type of rational argument which the Mu'tazila employed.

The chief points on which he opposed the doctrines of the Mu'tazila were:

(1) He held that God had eternal attributes such as knowledge, sight, speech, and that it was by these that He was knowing, seeing, speaking, whereas the Mu'tazila said that God had no attributes distinct from His essence.

(2) The Mu'tazila said that Qur'anic expressions, such as God's hand and face, must be interpreted to mean "grace", "essence" and so on. Al-Ash'ari, whilst agreeing that nothing corporeal was meant, held that they were real attributes whose precise nature was unknown. He took God's sitting on the throne in a similar way.

(3) Against the view of the Mu'tazila that the Qur'ān was created, al-Ash'ari maintained that it was God's speech, an eternal attribute, and therefore uncreated.

(4) In opposition to the view of the Mu'tazila that God could not literally be seen, since that would imply that He is corporeal and limited, al-Ash'ari held that the vision of God in the world to come is a reality, though we cannot understand the manner of it.

(5) In contrast to the emphasis of the Mu'tazila on the reality of choice in human activity, al-Ash'ari insisted on God's omnipotence; everything, good and evil, is willed by God, and He creates the acts of men by creating in them the power to do each act. (The doctrine of 'acquisition' or *kasb* [q.v.], which was in later times characteristic of the Ash'ariyya, is commonly attributed to al-Ash'ari himself, but, though he was familiar with the concept, he does not appear to have held the doctrine himself; cf. *JAS*, 1943, 246 f.).

(6) While the Mu'tazila with their doctrine of *al-manzila bayn al-manzilayn* held that any Muslim guilty of a serious sin was neither believer nor unbeliever, al-Ash'ari insisted that he remained a believer, but was liable to punishment in the Fire.

(7) Al-Ash'ari maintained the reality of various eschatological features, the Basin, the Bridge, the Balance and intercession by Muhammad, which were denied or rationally interpreted by the Mu'tazila. Al-Ash'ari was not the first to try to apply *balāḡ* or rational argument to the defence of orthodox doctrine; among those who had made similar attempts earlier was al-Hārith b. Asad al-Mubāshir. Al-Ash'ari, however, seems to have been the first to do this in a way acceptable to a large body of orthodox opinion. He had the advantage, too, of having an intimate and detailed knowledge of the views of the Mu'tazila (as is shown by his descriptive work, *Makhlāt al-Islāmiyya*, Istanbul, 1929; cf. R. Strothmann, in *Islam*, xix, 193-242). His many followers came to be known as the Ash'ariyya [q.v.] or Ash'aris, though they mostly deviated from him on some points.

To a European reader his argumentation differs little at first sight from that of the ultra-conservative followers of Ahmad b. Ḥanbal, since many of his proofs depend on the interpretation of Qur'ān and Tradition (cf. A. J. Wensinck, *Muslim Creed*, Cambridge, 1932, 91). This, however, was because his opponents also, including even the Mu'tazila,

used proofs of this sort, and he was always arguing *ad hominem*. Yet when opponents would admit a purely rational premise, al-Ash'ari had no hesitation in using it to refute them. Once the permissibility of such arguments was established, at least for many theologians, it was possible for the Ash'ariyya to develop this side of his method until in later centuries theology became thoroughly intellectualistic. This, however, was far removed from the temper of al-Ash'ari himself.

**AL-ASH'ARI, ABU MŪSĀ**, Ibn Kaṣṣ, Companion of the Prophet and military leader. Born about 614 A.D., Abū Mūsā, a native of the Yemen, left South Arabia by sea with several of his brothers and members of his tribe (the Ash'ar) and joined Muhammad at Khaybar at the time of the famous expedition against the Jews of that oasis (7/628) to swear allegiance to him (the information given in some sources [for example Ibn Ḥajar, *Taḥḥiṭ*, ii, 126] according to which he was one of the emigrants who went to Abyssinia, is therefore most unlikely to be authentic; Ibn 'Abd al-Barr, *Iḥḥād*, Haydarābād 1318, 392, no. 1622; 678-79, no. 678). In 6/630 he took part in the battle of Hunayn (al-Tabarī, i, 1667); in 10/632-3 he was sent to the Yemen with Mu'ādh b. Jabāl to spread Islam there and was one of the lieutenants of Muhammad and then of Abū Bakr in that region. 'Umar appointed him governor of Baṣra when he recalled al-Mughira b. Shu'ba [q.v.] from that post in 17/638 (al-Tabarī, i, 259); see also 23/688). At the request of the inhabitants of Kūfa, 'Umar appointed him governor of that town in 22/643-4, but after resigning him in the office for a few months, until the reappointment of al-Mughira (al-Tabarī, i, 2678 f.), he sent him back to Baṣra.

As governor of Baṣra, Abū Mūsā organised and carried out the occupation of Khuziṣṭān (17-21/638-42), of which he must be considered the conqueror (Caetani, *Annali*, 16 A.H., para. 205). The capital Sīk al-Ahwāz (cf. simply al-Ahwāz) fell into his hands as early as 17/638, but the campaign continued and offered many difficulties, for the numerous well fortified towns of the region had to be subdued one after the other, some of them having to be retaken after 21/642, the date of the fall of the second capital of Khuziṣṭān, Tustar (= Shustar or Shahrut). Abū Mūsā also took part in the conquest of Mesopotamia (end of 18-20/639-41), uniting his forces with those of 'Uyād b. Ghannam, and in the campaign on the Iranian plateau, where he is

mentioned as being present at the battle of Nihāwand; the occupation of several towns is ascribed to him (al-Dinawari, *Kunūn*, Bāḥḥān, etc.).

In 23/643-4, in a bloody but indecisive battle, he defeated numerous Kurdish tribes which had gathered with hostile intentions at Bayrūḥ (in the province of al-Ahwāz) and had attracted many of the inhabitants of the territory to their ranks; he laid siege to the town, where the survivors of the insurgents had found shelter, and took it after having subdued the rest of the country. It was on account of the distribution of the booty taken on this occasion that an accusation was made to the Caliph against him, to whom he had to justify his conduct (al-Tabarī, i, 2708-13). After this success, he advanced into Fars (end of 23/644) and, in several expeditions, gave support to 'Uḡaymīr b. Abī 'L-Ḥāḥ, who had begun the conquest of this province from Bahrayn and 'Uḡaymīr (al-Balāḥūrī, *Futūḥ*, 387).

There is an episode showing that discontent against Abū Mūsā was already threatening in 26/646-7 (al-Tabarī, i, 2829, where a movement of insubordination amongst his troops is reported under the year 29, which in fact took place in 26; Caetani, *Annali*, 26 A.H. para. 38). But the most serious protest against the abuses committed by him was brought to Medina by a delegation of Baṣrans in 29/649-50 (al-Tabarī, i, 2830), whereupon the Caliph 'Uḡaymīr decided to replace him at Baṣra by 'Abd Allāh b. 'Amir. However Abū Mūsā had won the respect of the inhabitants of Kūfa to such an extent, that they demanded his reappointment, when they drove out the governor Sa'd b. al-'As in 34/654-5 (al-Tabarī, i, 2930; al-Aḡḡālī, vi, 31), and he was governor of the town at the time of 'Uḡaymīr's assassination. Upon the election of 'Alī, Abū Mūsā took the oath of allegiance to him in the name of the Kūfians (al-Tabarī, i, 3089; al-Mas'ūdī, *Murūj*, 296 etc.), retaining his office, when the other governors of 'Uḡaymīr were dismissed (al-Ya'qūbī, ii, 208); but when war broke out between 'Alī and 'Āḥḥa, Talha and al-Zubayr, he called on his subjects to remain neutral (al-Tabarī, i, 3139; al-Dinawari, 133 ff., etc.), and, in spite of pressure, did not relinquish this attitude; as a result the partition of 'Alī expelled him from the town at the first opportunity (al-Tabarī, i, 3145-9, 3152-4) and the Caliph wrote him a letter of dismissal couched in the severest terms (al-Tabarī, i, 3173; al-Mas'ūdī, *Murūj*, iv, 308; cf. al-Ya'qūbī, ii, 220); yet a few months later he granted him *amān* (Nasr b. Mu'ādh al-Munkarī, *Waṣṭat Siffin*, ed. 'Abd al-Salām Muhammad Hāriri, Cairo 1395, 572; al-Tabarī, i, 3173).

Abū Mūsā was one of the two arbitrators appointed at Siffin in 37/657 to settle the dispute between 'Alī and Mu'āwiya and more exactly the arbitrator nominated to represent 'Alī, whose supporters had obliged him to choose someone neutral, so certain were they that the decision would be in their favour (for the details of the arbitration, see 'Alī b. Abī Talḥa). After the meeting at Aḡḥrub, Abū Mūsā withdrew to Mecca, but when Mu'āwiya sent Busr b. Abī Artāt to occupy the holy cities (40/660), he was afraid of his vengeance, for at Aḡḥrub he had opposed his election to the Caliphate, and according to some sources, he took to flight; Busr reassured him (see Caetani, *Annali*, 27 A.H., para. 8, note 3 for the different versions of this episode). After that Abū Mūsā took no further part in politics, as is shown by the uncertainty of the date of his death (47, 48, 50, 52, 53; 42 is the most probable date).

Abü Müsä was very highly thought of for his recitation of the Kor'ân and the prayers, for he had a pleasant voice (Ibn Sa'd, *Tabaqat*, ii, 106), but above all his name continues to be connected with kuranic studies, for he established a *majlis* which cultivated the composition of the vulgate of 'Ughlan (see Ch. Pellat, *Mûsen barien*, 73 ff.).

**Bibliography:** All the chroniclers and historians of early Islam, and all the collections of biographies of early personalities speak of Abü Müsä (the main ones have been indicated in the body of this article). Numerous quotations are to be found in Cactani, *Chronographia islamica*, 42 A.H., 479; idem, *Annali*, Indices and vols. vii-x, *passim*; Ibn Abi 'U-Hadid, *Sharh Nahj al-Baldha*, Cairo 1339, iii, 287-9, 291, 293 f., iv, 199 f., 237 f. On the conquest of Khuzistan: *Wahhausen, f., Skizzen und Vorarbeiten*, vi, Berlin 1890, 94-113.

(L. VECZEA VACSELIUS)

**ASH'ARIYYA**, a theological school, the followers of Abü 'U-Hasan al-Ash'ari (q.v.), sometimes also called Ash'arîya. (The history of the school has been little studied, and some of the statements in this article must be regarded as provisional.)

**External history.** During the last two decades of his life al-Ash'ari attracted a number of disciples, and this school was founded. The doctrinal position of the new school was open to attack from several quarters. Apart from members of the Mu'tazila, certain groups of orthodox theologians attacked them. To the Hanbalis [q.v.] their use of rational arguments was an objectionable innovation. On the other hand, to the Mâturidiyya [q.v.], who also were defending orthodoxy by rational methods, some of their positions seemed too conservative, and the criticism made by an early member of that school in *Sharh al-Fikh al-Akbar* ascribed to al-Mâturidi. Despite such opposition the Ash'ariyya apparently became the dominant school in the Arabic-speaking parts of the 'Abbasid caliphate (and perhaps also in Khurâsan). In general they were in alliance with the legal school of al-Shâfi'i (though al-Ash'ari's own school of religious law is not clear), while their rivals, the Mâturidiyya, were almost invariably Hanafis. Towards the middle of the 5th/11th century, the Ash'ariyya were persecuted by the Buwayhid sultans, who favoured a combination of the views of the Mu'tazila and Shî'a. But with the coming of the Saljûqs the tables were turned, and the Ash'ariyya received official support, especially from the great saint Nizâm al-Dîn. In return they gave intellectual support to the caliphate against the Fâtimids of Cairo. From this time on, until perhaps the beginning of the 8th/14th century, the teaching of the Ash'ariyya was almost identical with orthodoxy, and in a sense it has remained so until the present time. The Hanbali reaction centring in Ibn Taymiyya (d. 728/1327) was of limited influence. From about the time of the 9th/15th century, the Ash'ariyya were almost identical with Sunnism (d. 893/1490), however, though al-Ash'ari and the great names of his school were honored and accepted, the leading theologians no longer regarded themselves as belonging to the Ash'ariyya, and were in fact eclectic.

**Important members of the Ash'ariyya** (see the individual articles): al-Bâkhillân (d. 403/1013), Ibn Fûrak (Abü 'Abd al-Muhammad b. al-Hasan) (d. 406/1015), al-Ishârî (d. 418/1027), al-Baghaddî (Abd al-Râhîm b. Thâhir) (d. 429/1037-8), al-Samnânî (d. 444/1052), al-Djuywaynî Imâm al-Haramayn (d. 478/1085-6), al-Ghazâlî (Abü Hâmid Muhammad) (d. 505/1111), Muhammad b. Tûmarî

(d.c. 525/1030), al-Shahrastânî (d. 548/1153), Fakhr al-Dîn al-Râzî (d. 606/1210), al-Ijî (d. 736/1335), al-Djûrjânî (d. 816/1412).

**Internal evolution.** Little is known about the views of the Ash'ariyya in the half-century after the founder's death. al-Bâkhillân is the first person whose work is extant and accessible, and by his time it is noteworthy that the Ash'ariyya are making use of certain conceptions of the Mu'tazila (notably Abü Hâshim's doctrine of the *kalî*), and have perhaps been influenced by the criticisms of the Mâturidiyya. One point on which the school was beginning to differ from al-Ash'ari himself was in the interpretation of the corporeal terms applied to God, such as hands, face and sitting on the throne. Al-Ash'ari had said these were to be taken neither literally nor metaphorically but *bî-hâdî hayî*, "without asking how"; but al-Baghaddî and al-Djuywaynî interpreted "hand" metaphorically as "power", and "face" as "essence" or "existence"; and the attitude of most of the later Ash'ariyya was similar (cf. Montgomery Watt, *Some Muslim Discussions of Anthropomorphism*, in *Transactions of the Glasgow University Oriental Society*, xlii, 2-10). Again, while al-Ash'ari had insisted that man's acquiring (*kash*) of grace was created, thus emphasizing God's omnipotence at the expense of man's responsibility, al-Djuywaynî was able to put forward the view that the doctrine of the Ash'ariyya was *a via media*.

Towards the middle of the 5th/11th century there was a change in method. Ibn Khaldûn (tr. de Slane, iii, 61) speaks of al-Ghazâlî as the first of the "moderns", doubtless because of his enthusiasm for the Aristotelian syllogism, but there are already in al-Djuywaynî traces of methodological advance (cf. Gardet and Anawati, op. cit. infra, 72). It was al-Ghazâlî, however, who steeped himself in the doctrines of Ibn Sînâ and others of the *philosophers* until he could attack them on their own ground with devastating success. Little more was heard of the *philosophers*, but from this time onward their Aristotelian logic and much of their Neoplatonic metaphysics was incorporated in the teaching of the Ash'ariyya. This teaching rapidly became intellectualised in a bad sense, sometimes even views of doubtful orthodoxy were taken over, and the philosophical prolegomena occupied more space and attention than the strictly theological doctrines (notably in al-Ijî and his commentator al-Djûrjânî). In the end the school may be said to disappear in a blaze of philosophy.

(W. MONTGOMERY WATT)

**AL-ASH'ATH**, ABÜ, MUHAMMAD MA'ÛKARIB B. KAYS B. MA'ÛKARIB, of the clan of al-Hâdîd b. Mu'âwiya, a chief of Kinda in Hadramawt. The nickname, by which he is most commonly known, means "with unbent or disolevelled hair"; he also called himself *al-Shâhîd*, "the witness", "the scar-faced", and *U'ay al-Nâr*, said to be a South-Arabian term for "traitor". In earlier life he led an expedition against the tribe of Murâd, who had murdered his father, but was taken prisoner and

had to pay 3000 camels for his ransom. In 106/31 he was leader of the delegation (*wa'd*) which offered the submission of a section of Kinda to the Prophet at al-Madina. It was arranged that his sister Kayla should be married to Muhammad, but he died before she arrived in al-Madina. After Muhammad's death (11/632) al-Ash'ath rose in revolt with his clan and was besieged by Mun troops in the castle of al-Nadjar; according to the legend he surrendered the castle on condition of immunity for himself and nine others, but omitted to include his own name in the document of surrender, and barely escaped execution. He was, however, sent to al-Madina, where Abü Bakr not only pardoned him but married him to his own sister 'Umm Farwa or Kucayba (according to other reports his marriage had taken place already at the time of the delegation to Muhammad). He took part in the wars in Syria and lost the sight of an eye at the battle of the Yarmûk; he and his tribesmen were sent thereafter by Abü 'Ubayda to join Sa'd b. Abi Wakkâs at Kaddisiyya, and he commanded one of the Arab forces which occupied western Iraq. He settled in Kûfa as chief of the Kindite sector, and appears to have taken part in the expedition to Aḡharbâjdân in 26/646-7. At the battle of Siffin he played a leading part both in the fighting and in the negotiations, and he represented as having forced 'Alî to accept the principle of arbitration and to agree to the selection of Abü Müsä on the Iraqi side (see Sa'd b. al-ʿAḡḡ, *Pro-Sa'īte tradition* accordingly represents him and his whole house as inveterate traitors. He died in Kûfa during the government of al-Hasan b. 'Alî (40/661), to whom one of his daughters was married. For his descendants see *IBN AL-ASH'ATH*.

**Bibliography:** I. Cactani, *Chronographia Islamica*, A.H. 40, 139; Ibn Sa'd, vi, 13-14; Muhammad b. Hâshim, *al-Muḡharib*, Index; Na'ir b. Mu'âdh, *Was'at Siffin* (Cairo 1305), *passim*; general histories of the Caliphate. (H. RECKENDORF \*)

**AL-ASH'DAK** [see 'AMR B. SA'ID].

**(AL-)ASH'DJĀ' B. 'AMR AL-SULAMĪ**, Abū 'U-Walid, Arab poet of the end of the 2nd/8th century. An orphan, he settled at an early age at Bagra with his mother, and, when he showed signs of talent, the Kayates of the town who, since the death of Baghrār b. Burd (a *ma'rad* of the Banū 'Ukayl) had not possessed any poet of eminence, adopted him and fabricated for him a Kayate genealogy. His formative period at an end, he went to al-Rakka to Dja'far b. Yaqd al-Harmakî, who presented him to al-Raghd, and, from then on, he became the panegyrist of the caliph and his entourage (Barmakids, al-Yasim b. al-Raghd, al-Anin, al-Fadl b. al-Rabi', Muhammad b. Manṣûr b. Ziyâd and others). The greater part of his surviving work consists of panegyrics which were assured of the widest possible circulation through the agency of the Kayates of Bagra; there are also a few funeral orations, notably Anawati, *Introduction à la Théologie Musulmane*, Paris 1945, esp. 52-76.

**'ASHK**, an Arabic word meaning lover, frequently in the mystical sense. Among the Anatolians and Aḡharbâjdânî Turks, from the late 9th/15th or 10th/16th century, it is used of a class of wandering poet-mistress, who sang and recited at public gatherings. Their repertory included religious and erotic songs, elegies and heroic narratives. At first they followed the syllabic prosody of the popular poets, but later were subjected to Persian influence, both directly and through the Persian-influenced Turkish Sôfi poets. Kôprülü has argued that they represent a social element distinct alike from the popular poets, the court poets, and the *madrasa* or convent-educated religious poets, and are the successors of the earlier Turkish bards known as *oḡas* [q.v.]. They are especially numerous in the 17th century, when we find them among the dervish orders, the Janissaries, and other branches of the armed forces. The most famous among them are Gewher and 'Ashk 'Omër.

**Bibliography:** Kôprülü, Mehmed Fu'ad (= M. F. Kôprülü), *Türk Sazâzârlar ve mûnir ve tîhîkâr*, i-v, İstanbul 1929-30; idem, *Türk Edebiyatında 6k Mutasavvıflar*, İstanbul 1918, 390-2; M. K. Kôprülü, *Türk Sazâzârları antolojisi*, i-ii, İstanbul 1939-40; numerous other writings by M. F. Kôprülü on this subject will be found listed in *Faust Kôprülü Araştırmaları*, İstanbul 1953, xxviii. For an account of the impression made on a young Turk in the 19th century by the 'Ashk poets, see the autobiography of Ziyâ Paḡba, translated in Gibb, *Ottoman Poetry*, v, 46, 51-2. A context between 'Ashks in Muḡla is described by H. J. van Lennep, *Travels in little-known parts of Asia Minor*, i, New York 1879, 253-4. See further H. Rûsâ, *Orientalia*, i, İstanbul *Mûteallımları*, i, İstanbul 1933, 3 ff. (*Der Sängerwelt der*) (B. LEWIS)

**'ASHK**, MUHAMMAD B. 'UḤMÂN B. BAYRİZ, Turkish cosmographer, born about 964/1553 in Trebizond, the son of a teacher at the Koran elementary school of the Khâtuniyya mosque. At the age of 20, he left his native town to see the world. The geographical part of his writings (mentioned below), contains references to his travels covering Anatolia and Rumelia. He did, for instance, take part in 'Uḡmân Pasha's (died 993/1585) campaign in the Caucasus and southern Russia in the years 989-992/1581-1584. After 994/1585, he spent several years in Salencia, whence he participated—in 1002-1003/1593-1594—in Kodja Sinân Pasha's (died 1004/1596) Hungarian campaign. In 1005/1596, he settled in Damascus, where he completed the writing of his cosmographic work in Ramadan 1006/April-May 1598. The date of his death is not known.

Muhammad 'Ashk's work, *Mandîr al-ʿavâsim* is composed of two parts. Part I begins with the creation of the world and describes the 'upper' world, and something of the 'lower', i.e. the stars, paradise and its inhabitants, and hell and its inhabitants. Part II treats the 'lower' world in 18 chapters. Chapters 1 to 12 are strictly geographical, and 13 to 18 are of a more general nature. In a final chapter, he speaks of the duration and the end of the world. The work is a vast compilation of the reports of the older Arabic and Persian cosmographers, geographers and natural scientists. It is clearly arranged under headings and written in Turkish, giving precise references to the source in every case. In the geographical part, he mentions in addition—again with references—what the personal view of each author on individual objects was. There are const-

closed at the far end by a wall. Two side passages connect this entrance-hall with the rest of the building. This entrance shows a clear similarity to that of the Fātimid palace of al-Ḳāʾim recently excavated at Mahdiyya (see M. S. Zbars, in *JA*, 1956, 79-93).

3. The site of another fortified town faces Yaghr and the castle, from which it is separated by a distance of two and a half km, and a valley. This is Benta (Banya), which covers an area sloping down towards the north of Kat Tsumali. Near the bottom of the slope is a steep escarpment, the escarpment which borders the valley and the continuation of it extends towards the Kat, against which the town rested. At the foot of this rocky eminence there used to be a dungeon. Three gates are set in the rampart. The ground is covered by numerous ruins. Of these the most easily identifiable is the mosque. The prayer chamber, which is preserved in the courtyard, had seven naves and four bays. Several concrete springs discharge themselves in the town.

It is possible to regard these three sites in the same region as marking three phases in the history of the Zīdī Sanjāhiya, and to see in them three successive foundations. Manrah, Bīst al-Sūltān is not a town, but a refuge and an observation post of the Sanjāhiya, and probably preceded the founding of a real city. The affinity between the neighbouring castle of Yağlır and the palace of Mahdiyya permits the identification of the castle and the town with the foundation of Zīdī (324/934), authorised by al-Kā'im and carried out with the collaboration of an Hishmīyan architect.

Denia, on the other hand, probably represents the city of Bulukkin (364/974), of which al-Bakrī gives such a remarkably exact description.

**ASHKĀBĀD** (properly **ʿASHKĀBĀD**; according to the Turkish pronunciation of the Arab word **ʿAshk**, "love", called by the Russians since 1924 **Ashkhabad**, previously till 1921 **Ashkhabad** 1921-3 **Bulduzack**)

**ASHKABAD** (properly **ʿASHKABAD**; according to the Turkish pronunciation of the Arab word **ʿashq**, 'love', called by the Russians since 1924 **Ashkhabad**, previously till 1921 **Ashkabad**, 1921-4 **Poltorka**) (pop. 152,000), the capital of the SSR of Turkmenia, situated 120 km. S. of Ashgabat. It lies on the border of the KUM and developed out of a Turcoman *auil* with 1851, time of the Russ. conquest) 300 tents. Already in the year 1897 it had, as capital of the district of Transcaspia (Zakaspiskaya Oblast'), 19,125 inhabitants, chiefly merchants and officials. The city developed rapidly, and possessed already before 1917 a considerable library and a museum of interest for the ethnology of the Turkmen and a library (with some Persian manuscripts). After 1917 in spite of the difficulty of maintaining a sufficient water supply the city became an important industrial centre in this district (woven wares, silk carpets, foodstuffs, building materials), possessing a large number of enterprises. In 1950 60,000 *ʿashkabadis* (i.e. *ʿashkabadis*) lived there. 1950 60,000. 1950 60,000. 1950 60,000.

Formerly an unimportant town named Khaykūra, the new town of Ashraf dates from its foundation by Shāh 'Abbas I in 1592/1612-3. Intended by 'Abbas to be the group of large fortresses surrounding the royal palace and scattered along the Sāī road but eventually the royal residences extended over a considerable area, and comprised six separate establishments, each with its gardens. According to Fraser five of these, the Bāgh-i 'Imrān, the Bāgh-i Hāshimī, the Bāgh-i 'Alī, the Bāgh-i Nāqūshah, the Hāram, the Khavāh, and the Bāgh-i Tappa, were enclosed by one wall, while the sixth, the 'Imrān-i Chaghma, lay outside. Spacious accommodation was provided for guests and travellers. Great skill was employed in the construction of the walls, which were made of stone blocks of stone and marble being brought from Bākd, and joined by iron clamps cemented with Bādo.

An eminent scholar, theologian and *suhr*, he was a very busy life, teaching, preaching, writing, lecturing, and making occasional journeys to other parts of the country. He was a prolific writer, his works exceed one hundred in number. These are mostly on the subjects of *fiqh*, *hadith*, *tasawwuf*, *akhlak* and *usul al-fiqh*. His first work, a commentary entitled "*Zir-i-Bam*", was written while he was still a student; he lost it in *Al-Bahar-i-Nawaid*, published in 1355/1935-6. His most famous works are: 1) *Bayan al-Kutub*, a commentary of the *Kutub*, in 12 vols. in Urdu, completed in 24 years and first published at Delhi in 1334/1916-7. A revised and enlarged edition was published at Thana Bhowan, in 1352/1934-5 at Delhi in 1349-7. Since then several editions have appeared; 2) *Bilghat Zumar*, 10 vols., also appeared;

Urdu, a compendium of Islamic teachings meant for women. The 13th vol. '*Naḥḥi Gawhar*' for men was added much later. It has been frequently printed in India and Pakistan and is still in great demand. A collection of his *fatāwā* in 8 vols., compiled posthumously, is in process of publication.

**Bibliography:** 'Asḥraf al-Basim, *Asḥraf al-Sa'adīn*, 4 vols. 1-40, Lucknow 1357/1935, is called *Ḥikmat al-Sa'adīn*, (which also contains a full list of his works written up to the year 1354/1933-6), appeared in 1362/1943, also from Lucknow; 'Abd al-Majdī Daryābādī, *Ḥikmat al-Ummad*, A'zamgarh, 1371/1951; 'Abd al-Rahmān Khān, *Sirat al-Asḥraf*, Multan 1375/1956; *Al-Islām*, (Karachi) July 1953, 56; 'Abd al-Bāḥ Nāḍī, *Ḥikmat al-Muḥaddidīn*, Lucknow 1950; idem, *Tadhīrat Taṣawwuf o-Sulḥā*, Lucknow 1949; idem, *Tadhīrat Taṣawwuf o-Tahḥīḥ*, Lucknow 1943; idem, *Tadhīrat Ma'āzīyyah*, Lucknow 1956; Sulaymān Naḍwī, *Yādī Raḥṭān*, Karachi 1955, 283-291; Ghulām Muḥammad, *Hayāt al-Asḥraf*, Karachi 1951. (A. S. BAZMEE ANSARI)

**ASHRAF 'ALI KHĀN**, foster-brother of Ahmad Shāh, King of Delhi (1161/1748-1167/1754) was born in Delhi c. 1140/1727. His father Mirzā 'Alī Khān "Nakir" was a courier of Muḥammad Shāh (c. 1703). His uncle Irādī Khān was the *nāẓim* of Murshidābād during the reign of Ahmad Shāh. A composer of poetry in both Urdu and Persian, he wrote under the pen-name of a "Fayyāḥ" (Fayyāḥ) and enjoyed the title of "Zaḥf al-Mulk Kōḥlūkh Khān Bahādur", conferred on him by Ahmad Shāh.

He lived in Delhi till the dethronement of Ahmad Shāh in 1167/1754, when he left for Mirzā Murshidābād. He seems to have been unfavourably received by his uncle and after a brief stay with him returned to Delhi. In 1174/1761 when the Durranis again attacked India he left Delhi for good and went to Fayyābād. He, however, soon fell out with his patron Shujā' al-Dawla (q.v.) and left for 'Aḥmādābād (Patna) where he was well received by Rājā Shītib Shāh, Governor of Bengal and Bihar and a great patron of learning. Offended by an unkind remark of Shītib Shāh he decided to leave him. But soon after he somehow came into contact with officials of the East India Company and appears to have entered their service. Thereafter he led a comfortable life and died at 'Aḥmādābād in 1186/1772-3.

A good poet, his compositions are, however, marred by biting satire and lampoon. His Urdu and Persian *divān* was published at Karaḥ in 1950.

(A. S. BAZMEE ANSARI)

**ASHRAF DJAHANGIR** b. S. Muḥammad Irādīn was born in 688/1289 at al-Simnān (Khurāsān), the principality of his father. His mother, Khādīja, was a granddaughter of al-Imam Yaṣaf (q.v.). A *hāfi* of the Qur'ān, with its seven readings, he completed his education at the age of 14. His love for mysticism took him to 'Alī' al-Dawla al-Simnānī (q.v.), a leading *shāfi* of his days, whose company he frequented. Succeeding his father, on the latter's death in 705/1305-6, to the principality he soon abdicated in favour of his brother Muḥammad and set out for India having been told to do so in a dream. Passing through Mā warā' al-Nahr, he visited Baghdad and Samarkand and then left for Uṭṭh (q.v.) where he met Djalāl al-Dīn al-Bukhārī, surnamed Djahānīyān Djahān Gashī (q.v.). After a long series of travels covering Delhi, several places in the Indo-Gangetic plain, Bihār and Bengal, including Sunārīyān, near Dacca, he finally settled at Rūhābād (an old name for Kāḥawḥa, a village 52 miles from Fayyābād), where he died on 27 Muharram 808/July 6, 1405 and was buried in his own *khanqāh*.

A short time after having settled at Kāḥawḥa he again left on his global travels, this time visiting Mecca (twice), al-Madīna, Karbalā', al-Najaf, Turkey, Damascus, Baghdad, Kāḥān, al-Simnān, Meshed, Ghazna and Kabul, returning to Rūhābād via Mullān, Pākpatan and Delhi. On his first voyage to Mecca he was accompanied by Badr al-Dīn Shāh Maḍār (q.v.).

The statement in the *Lata'if al-Asḥraf* (II, 105-6) that Sulṭān Irādīn Shāhī (804/1401-848/1444) was introduced to him by Kādī Shihāb al-Dīn Dawlatābādī early on his arrival in India is apparently wrong as the Sulṭān succeeded to the throne in 804/1402 while the saint died four years later in 808/1405. The meeting, therefore, must have taken place during the closing years of the life of al-Asḥraf.

He is the author of *Daḥḥar al-Murād* and *Mahābāt al-Asḥraf*, the latter is highly spoken of by 'Abd al-Hakī Dīhlawī (q.v.). His shrine is visited, in thousands, by persons possessed and patients suffering from mental derangement in the hope of obtaining a cure.

**Bibliography:** Niṣām al-Yamānī, *Lata'if al-Asḥraf*, 2 vols. Delhi 1298/1880-1; Ghulām Sarwar Lahorī, *Khawāt al-Aḥyā'*, Cawnpore 1914, I, 371-2; 'Abd Allāh Kāḥshī, *Ma'āzī al-Wāḍiyat* (Punjab University MS.); 'Abd al-Rahmān Cichī, *Mir'āt al-Aḥrār*, Dār al-Muḥasinnī, A'zamgarh MS. fol. 539; Salāḥ al-Dīn 'Abd al-Rahmān, *Na'im al-Safīyya* (in Urdu), A'zamgarh 1369/1948, 441-82; 'Abd al-Hakī Muḥaddīdī Dīhlawī, *Aḥḥār al-Aḥyār*, Delhi 1332/1914, 156; 'Abd al-Hayy Naḍwī, *Nuḥḥat al-Khawāḥir* (where a large number of his works is enumerated), Haydarābād (De.) 1371/1951, III, 32-4; Muḥammad Akhtar, *Tadhīrat al-Awḥār al-Hind*, Delhi 1950, II, 177-9.

**ASHRAF OGHULLARI**, march-wardens of the Salḡūks in Anatolia during the second half of the 13th century. Members of a Turkoman tribe which had been settled by the Anatolian Salḡūk state on its western frontiers, they embellished the town of

Gurgurum, and subsequently Beyşehir, and established a principality in that region.

The first of the family who is known to us is the Salḡūk amir Ashraf-oghlu Sayf al-Dīn Sulaymān Bey, who played an important part during the reigns of Ghīyāṭ al-Dīn Kaykhusraw III and Ghīyāṭ al-Dīn Mas'ūd II. After the conquest of the town of Rūhābād, had put Kaykhusraw III to death, they ordered Mas'ūd II to rule in his stead (Rah'ī I 682/June 1283), but Kaykhusraw's mother, who was at Konya, proclaimed his sons as his successors, with the approval of the Ilkhānids, thus declaring herself against Mas'ūd. She invited the Ashrafid Sulaymān Bey to Konya and appointed him regent for these infant sovereigns (Rah'ī I 684/14 May 1285). With assistance from the Mongols, Mas'ūd II, who was at Kayseri, disposed of the two children and seized power, whereupon Sulaymān Bey withdrew to Beyşehir. Subsequently (687/1288) he made submission to Mas'ūd and came to Konya.

Mas'ūd II wished to have his brother Siyāvūsh whom he regarded as a rival, placed under restraint. He therefore sent him to Beyşehir, ostensibly for the purpose of bringing back the Ashrafid's daughter as a bride for himself. By prior arrangement the Ashrafid arrested and imprisoned Siyāvūsh, but was compelled to release him and send him to Konya by the threats of the Karamānid Günerī Bey, who was favourably disposed towards Siyāvūsh (Sulḡūkname, Paris, Bibliothèque Nationale, Persian MS. no. 1533).

By this time the Salḡūk state had lost its authority, and Sulaymān Bey was in perpetual conflict, sometimes with his neighbours and sometimes with the Salḡūk governors: at one point he was even in danger of falling into the hands of the Karamānid, who was attacking Beyşehir, but he later gained the victory. He also suffered considerably at this period from assaults on this territory by the Ilkhānid Gaykhāṭā.

Sayf al-Dīn Sulaymān Bey died on Monday 2 Muharram 702/27 August 1302, and was buried in the mausoleum he had had constructed a year before beside his mosque in Beyşehir. Sulaymān had embellished Beyşehir, which he called Sulaymānşehir, with a number of foundations, and had repaired the fortress, placing his inscription over the fortress gate in 689/1290. He built his mosque, a distinguished work of art, in 696/1296, and his mausoleum in 1302. In his *shakfiyya* he appointed his sons Muḥammad and Ashraf as *mudallim* of these foundations (Khālī Edhem, *Anadoluda İslāmî Emlaklar*, *TEDEM* year 5, 139-41; Yusuf Akçurt, *Beyşehir hitabeleri ve Eşref oğulları camii ve türbesi*).

He was succeeded by his elder son Muḥabir al-Dīn Muḥammad Bey, who added the towns of Akşehir and Bolvadın to his domains. The Ashrafid anclir Dīyā' al-Dīn Shihābī held the market mosque in Akşehir in 720/1320 (I. H. Uzunçarşılı, *Kütahya*, II, 26). When the anclir Çobān, the Ilkhānid governor of Ashrafid among the Anatolian beys who came to offer him their obedience (*Musammarat al-Aḥḥār*, 311), this must have been Muḥabir al-Dīn Muḥammad.

Muḥammad Bey died after 1320 and was succeeded by his son Sulaymān II, whose reign however was of short duration. The influence of the Ilkhānids in Anatolia having been so weak, Demirtaş, the anclir Çobān, was appointed governor of Anatolia. In his efforts to subdue the Anatolian beys, who had grown accustomed to acting independently and rebelliously, he first took Konya (1320), which had

come under Karamānid control. A few years later he marched on Beyşehir, seized Sulaymān Bey, killed him, and threw his corpse into the Beyşehir lake (the *Mas'ūd al-Aḥrār* records that he was tortured to death: his eyes were put out, his nose and ears cut off, and his severed testicles were hung about his neck) on 12 Dhu 'l-Kāda 726/9 October 1326 (this is the date shown in the Paris MS of the *Sulḡūkname*; the *Tahwīz al-Nadīm* gives the year of his death as 722/1322-3).

With the murder of Sulaymān II the principality of the Ashrafids came to an end. After Demirtaş's time, their territories fell into the hands partly of the Hamānids, partly of the Karamānids. No coins of the Ashrafids have yet come to light, but it is possible that coins of Muḥammad Bey exist.

In his *Mas'ūd al-Aḥrār*, Shihāb al-Dīn 'Umārī says that the Ashrafids possessed almost 70,000 cavalry, 60 towns, and 150 villages.

It is evident from the titles used by Sayf al-Dīn Sulaymān Bey in his inscription which he placed over the gate of the fortress of Beyşehir (which he called Sulaymānşehir) in Dīyāḥidā 1 689/May 1290 (*Amir al-Mu'ayyad*), and on his other inscriptions (*Amir al-Aḥrār*; see Hall Ethem and Yusuf Akçurt) that he was an amir of the Salḡūks.

The mosque of Sulaymān Bey, its minbar and *mabrah*, are choice works of art. The ornate ceiling of the mosque, which is rectangular in shape, is supported on 48 wooden pillars, decorated with stucco-work. The *mabrah* is adorned with porcelain mosaics, Kur'ānic verses and *hadīṭs*. The minbar is a masterpiece of the woodcarver's art, made of jointed sections of ebony. Around the front of the door to the minbar is inscribed the Throne-verse, in Salḡūk *maṣṣāḥ* script, while above the doorway are seen the names of the first four caliphs, in Kufic lettering. The mausoleum of Sulaymān Bey, though most artistic, has become dilapidated with age.

There exists a philosophical work in Arabic, in 9 sections, entitled *al-Fuṣūl al-Aḥrafīyya fī Uṣūl al-Burhāniyya wa 'l-Kaḥfiyya*, written for the Ashrafid Muḥabir al-Dīn Muḥammad Bey by Shams al-Dīn Muḥammad Tuḡṭarī. The author had embellished Beyşehir, which he called Sulaymānşehir, with a number of foundations, and had repaired the fortress, placing his inscription over the fortress gate in 689/1290. He built his mosque, a distinguished work of art, in 696/1296, and his mausoleum in 1302. In his *shakfiyya* he appointed his sons Muḥammad and Ashraf as *mudallim* of these foundations (Khālī Edhem, *Anadoluda İslāmî Emlaklar*, *TEDEM* year 5, 139-41; Yusuf Akçurt, *Beyşehir hitabeleri ve Eşref oğulları camii ve türbesi*).

The Ashrafid family:

#### ASHRAPI (see SIKRA).

**ASHRAFIYYA**, Derivish-order (according to D'Osson), which takes its name from 'Abd Allāh Ashraf (ʿAṣṣaf) Rumi, died 899/1493 in Çin Iplik.

al-'**ASHSHĪBĀ** (a.), the gatherer or vendor of herbs, from the Arabic *ashbā*, a word which means a fresh annual herb which is afterwards dried. In medical literature, the word is chiefly used to denote simples, and consequently *al-ʿashshibā* means a vendor of or authority on medicinal herbs. Thus for example the celebrated physician Ibn al-Sunayyīn (d. 699/1301), in a note preserved in his own hand on the title-page of Ms. No. 3721 of the Aya Sofya, calls his teacher, the famous pharmacologist Ibn al-Baytār (q.v.), *al-ʿashshibā al-milāḥi*, "the herbalist of Malaga". In this connexion it should be noted that the word *al-ghaddīdār*, which is lacking in most dictionaries, means an authority on plants or a botanist; it is derived from *ghaddā* "to grow up", for tree, bush, shrub or any plant with a strong woody stem, and also for plants in general.

(M. MEYERHOF)

al-**ASHṬAR**, Mlik b. al-Hārith al-Naḥḥāʾī, warrior and political agitator of the time of the Caliph ʿUthmān and supporter of 'Alī. He was surnamed al-Aṣṭar, "the man with inverted eyelids", as the result of a wound received at the battle of Yarmūk (15/636). He distinguished himself by his boldness in the campaign against the Byzantines and even dared to venture beyond Darb in enemy territory (see Caetani, *Annali*, index). He was one of the most persistent agitators against the Caliph ʿUthmān and the ruling class of the period and defended the rights—of the claims—of the warriors to the *ḥaṣṣ* (booty consisting of landed property). After a violent scene in the presence of ʿUthmān's governor at Kūfa, Saʿd b. al-ʿĀs (13/653-4), he was banished from Kūfa to Syria together with ten other agitators; Muʿāwiyah subsequently sent him back to ʿIrāq, but Saʿd sent him on to the governor of Hims. As the agitation persisted in Kūfa, he lost no time in returning and stirring up the masses (al-Tabarī, I, 2907-17, 2921, 2927-31). He is to be found at the head of the band of seditionists who prevented the return of the governor Saʿd b. al-ʿĀs and who took upon themselves to obtain the appointment by the Caliph (34/654-5) of Abū Mūsā al-Ashʿarī (q.v.) (al-Tabarī, I, 2927-30; al-Masʿūdī, *Murūj*, IV, 264-5). At the time of the insurrection in Medina, which ended with the assassination of the Caliph ʿUthmān (35/656), he brought two hundred men from Kūfa (Ibn Saʿd, *Burʾ*, 49) and was one of those who besieged "the House" (al-nuḥḥār) (al-Tabarī, I, 2989 f., etc.); his name is even cited among the murderers of the Caliph (Ibn ʿAsākir, in Caetani, *Annali*, 35 A.H., paras. 137 and 169; Ibn ʿAbd Rabbih, *ʿIḥḍ*, [Bibl. 1293], II, 278 etc.).

His violence came to the fore also during the election of 'Alī, for he threatened several recalcitrants, forcing them to swear the oath of allegiance to him (al-Tabarī, I, 3008-9, 3075-77; al-Ḥawārī, 152). He then attached himself to 'Alī, but was often among those of his supporters who presumed to impose their own will on him.

During 'Alī's campaign against ʿAṣṣā, Talha and al-Zubayr, he was sent to Kūfa with other men of importance to persuade the inhabitants to take 'Alī's side, and after succeeding in this objective,

he brought reinforcement to his master. He took part in the battle of the Camel (36/656); the sources mention a duel which he fought with 'Abd Allāh b. al-Zubayr, and other brave deeds. At the head of the vanguard of 'Alī's army in the campaign against Muʿāwiyah, he obliged the inhabitants of Kūfa to build a bridge of boats over the Euphrates to enable the troops to cross (al-Tabarī, I, 3259-60). At the battle of Siffin in which he commanded the right wing of the army, he displayed real and bravery (al-Tabarī, I, 3283, 3284, 3294-300, 3327, 3328; al-Dinawarī 194-8; al-Masʿūdī, IV, 341-9).

'Alī wanted to have him as an adviser at the time when the famous arbitration between himself and Muʿāwiyah was proposed (see AḤI and TALIC), but his supporters refused, well aware that such a choice would mean the continuation of the war; when al-Aṣṭar was informed that a truce had been decided upon, he wanted to go on fighting, for he thought that victory was near and the speech which he delivered on this occasion has come down to us (Nasr b. Muḥsin al-Minkārī, *Waḥīd* 591/6, 504 f.; al-Tabarī, I, 3313 f.; cf. al-Ḥawārī, 152); he then tried to avoid signing the agreement. It was probably because of his uncompromising attitude towards the truce with Muʿāwiyah, that 'Alī got rid of him, by appointing him firstly governor of Mawṣil (as well as of other towns of ʿIrāq and Syria which were in his possession, but al-Aṣṭar encountered opposition from al-Dubhāk b. Kays al-Fihri, appointed governor by Muʿāwiyah, and had to withdraw to Mawṣil) and then governor of Egypt; it is not known precisely whether this took place immediately after the recall of Kays b. Saʿd or after the dismissal of Muhammad b. Abī Bakr who had proved himself a bad politician (al-Kindī, *Governors* 22-4; al-Makrīzī, II, 336; al-Tabarī, I, 3242; al-Yaʿqūbī, II, 222; al-Masʿūdī, *Murūj*, IV, 492; Caetani, *Annali*, 37 A.H., paras. 221-3). However that may be, al-Aṣṭar never reached the seat of his appointment, for when he arrived at al-Kutrum (37/658 or 38) he was poisoned by the local *ghāyṣ* (not the *questor* but the *legislator*, see J. Maspero, in *BIFAO*, XI, 125-61), (al-Tabarī, I, 3392-5). On hearing of his death, 'Alī and Muʿāwiyah are said to have spoken the words which have subsequently become famous:

—The former: *ʿAlī ʿayyadun wa ʿA ʿayyan* "full[er] hand and mouth [to the ground]"; an expression indicating the pleasure felt on seeing someone fall (Maycānī, *Amṣāl*, II, 475; cf. Caetani, *Annali*, 37 A.H., para. 224, n. 1); the latter: "God even has troops in the honey"; Muʿāwiyah has been suspected of being the instigator of al-Aṣṭar's assassination; more certain is the fact that Muʿāwiyah considered al-Aṣṭar one of the "arms" of 'Alī, the other, according to him, being 'Amr b. al-ʿĀsir. From the physical point of view, al-Aṣṭar was a giant; his sword bore the name *al-ladīd* "the sheen of running water" (TA, II, 93).

**Bibliography:** Information on al-Aṣṭar is to be found in all the chronicles and histories dealing with the early period of Islam as well as in the collections of biographies of early personalities; Caetani, *Annali*, index and vols. vi-x, *passim*; several quotations of sources, *ibid.*, 37 A.H., paras. 312-9; Nasr b. Muḥsin al-Minkārī, *Waḥīd* 591/6, ed. Abī al-Salām M. Ḥārūn, Cairo, 1965, index; Ibn Abī Ṭ-Hādīd, *Shurh Naḥḥ al-Balāghah*, Cairo 1399, I, 158-60, II, 28-30, 80, III, 416, 417.

(L. VECCHIA VAGLIERI)

**ASHTURKA** (see SUPPLEMENT).

'**ASHCRĀʾ**, name of a voluntary fast-day which is observed on the 10th Muharram.

1.—When Muhammad came to Madīna he adopted from the Jews amongst other days the 'Āshūrā'. The name is obviously the Hebrew *ʿāzār* with the Aramaic determinative ending; in Lev. xvi, 29 it is used of the great Day of Atonement. Muhammad retained the Jewish custom in the rise, that is, the fast was observed on this day from sunset to sunset, and not as in other fasts only during the day. When in the year 2 Muhammad's relations with the Jews became strained, Ramaḍān was chosen as the fast month, and the 'Āshūrā'-fast was no longer a religious duty but was left to the option of the individual. On the day of the first Jewish month, the fast was originally observed cannot now be ascertained owing to our defective knowledge of the calendar of the period; naturally its observance coincided with the Jewish on the 10th Tishri, and so fell in the autumn. The 10th Muharram finds early mention as the 'Āshūrā'; probably the tenth day of the first Muslim month was selected to harmonise with the tenth day of the first Jewish month. From the calculations which have already been made, it does not seem possible that it could have been originally celebrated on the 10th Muharram (see Caetani, *Annali*, I, 431 f.).

Presumably for the sake of distinguishing themselves from the Jews some fixed the 9th Muharram either place with it in place of the tenth as a fast day, with the name *Tāʾūʾ*.

The Jewish origin of the fast is obvious; the well-known tendency of tradition to trace all Islamic customs back to the ancient Arabs, and particularly to Abraham, states that the Meccans of olden time fasted on the 'Āshūrā'. It is not impossible that the tenth, as also the first nine days of Muharram, did possess a certain holiness among the ancient Arabs; but this has nothing to do with the 'Āshūrā'.

The fast of the 'Āshūrā' was later and is still regarded by Muslims as commendable; the day is kept by the devout of the entire Sunnī world; it is holy also on "historical" grounds: on it Noah left the ark, etc. In Mecca the door of the Kaʿba is opened on the day of the 'Āshūrā' for visitors (see Sachik Hungarik, *Atika*, II, 21). In the cities where Shiʿite or come under Shiʿite influence quite different usages have become associated with the 10th Muharram; in this connexion see **MUHARRAM**.

**Bibliography:** The Chapter *Saum ʿAshūrāʾ* in the Collections of Traditions, and the appropriate sections in the Fikḥ-books; Goldziher, *Ursprung jüdischer la litteratur des muslimen*, in *Denkschriften der Akademie der Wissenschaften*, 1876, 8-9; A. (A. J. Wessink)

II.—**ʿAshūrāʾ** (ʿAshCRĀ) in the Maghrib. In practice a distinction is usually made between *ʿĀghar*, the name given to the month of Muharram, and *ʿĀshūrā*, the name of the feast celebrated on the tenth of that month. The supererogatory fast enjoined on that day seems to be unevenly kept, whilst alms-giving is a more usual practice. Perhaps the reason is why children from the kūrānīk schools, at *ʿĀshūrā*, go from door to door, singing and making collections for their masters. The dead are also honoured by visits to their tombs, which are copiously watered, and

branches of myrtle are placed on them. The feast is celebrated by eating special dishes (fritters, flat cakes and gruel), and especially, eggs and poultry. Popular manifestations of *ʿĀshūrā* vary according to the region and are at times on an extraordinary scale.

Three essential elements can be distinguished in the practices in use: 1) *Fire and water rites*. A bonfire of branches, leaves and grasses is built; this is very frequently lit by a person of repute, who is possessed of *ḥaraka* (q.v.). Whilst the bonfire burns, those present jump over it (*ʿamni ʿṣf* of Takrūdān). Also very common practices are throwing burning faggots from the bonfire into the river, mixing water with the ashes, bathing and sprinkling oneself with water. 2) *Marriage rites* (when a sacrificial animal is sometimes slaughtered). These are especially observed in Morocco: Douzrou ceremony (Tafilalet); the making of dolls and puppets representing *ʿĀghar* and his fiancée *ʿĀshūrā*, in the Region of Agadir, in the Sūs and the Middle Atlas, etc.; 3) *Carnival rites*, mainly in Morocco, in Western Oman, all along the coast of the Sahara, in the Sahara, Egypt and Libya. The Maghribi carnival (*farja*), with numerous variations, almost always includes a trial, an execution and a funeral; the victim is usually an old man or an old woman, dressed up in a burlesque costume, at times wearing animal skins or pelts or a tunic made of plated plates (*ghayb ʿĀshūrā* at Ouargla, *ba-ḥḥa* at Biskra, *ba-ḥḥa* in Morocco and at Tiemcen, *ba-ḥḥa* in Southern Morocco and Oran, *ba ʿĀshūrā*, *bāḥ ʿĀghar* elsewhere, etc.). One of the figures in the *farja* is usually that of an enormous beast, a lion, a mule or a camel, which both delights and terrifies the spectators.

It is generally agreed that the complex customs of *ʿĀshūrā* in the Maghrib reflect the survival of very ancient agrarian rites, in fact the celebration of the death of the year coming to its end and the birth of their popular aspects, which are both sad and joyful. The traditional Muslim Shiʿite mourning has, in all likelihood, become grafted on to this magico-religious substratum, whilst the lunar calendar has taken over a solar year cult, subjecting it to a temporal displacement. Through these superimpositions, remains of this ancient disrupted ceremonial have, here and there, become haphazardly attached to Muslim feasts (the two *ʿids* and *maṣūʿ* [q.v.]) and to the various periods and holidays of the agricultural year (*rās el-ʿāim*, *ennāyir*, *rbīʿ*, *ʿashūrā* [q.v.]).

(P. MARÇAIS)

AL-ʿĀSĪ is the name in use among the Arabs for the Oronetes. The classical name of this river, the most important in northern Syria, is preserved in Arabic literature as al-Urnat, al-Urund. Presumably the origin of the word ʿĀsĪ, like that of the Greek, *Asios*, must be sought in an ancient native name. The common explanation of al-ʿĀsĪ = "the rebel" is a popular etymology with no actual foundation, and the name *al-nahr al-malḥ* = *fluvius inversus* is probably a scholarly invention.

The river-system of the ʿĀsĪ begins to the north of the watershed formed by the highland-valley of al-Bikāʾ not far from Baʿalbak, but really only obtains its volume of water farther north near al-Humal from a spring, generally called simply the Oronetes Spring, which wells forth in a strong stream from the rock. Following the line of the Syrian canal to its northern end, the river flows through several lakes or marshes (those of Kadas and of Fāmiya = Kalʿat al-Mudhī); on its banks are situated the most important towns of central Syria, Hims and Hama. At the point where the Syrian buttresses reject the faults of Armenia and Asia Minor the river turns away from the north and flows towards the south-west, receives the streams which, rising in the most northerly regions of Syria, discharge into the marshes of al-ʿAmk, and reaches the sea below Antākya, to the south of the Amanus, at a point where the coast is flat and devoid of natural harbours (Seleucia and al-Suraydiyya were artificial). The geographical peculiarities of the course of the Oronetes, and its comparatively abundant flow, have long permitted the traditional use of its waters for irrigation. But the favourable conditions which it presents for large-scale modern development have as yet only given rise to partially realised projects.

**ASILA** (now Arzila in Fr. and Port., *Asila* in Span.), town and port on the Atlantic coast of Morocco, situated about 30 km. S.W. of Tangier and not far from the mouth of al-Wādī al-Hulw (Oued el-Helon). According to Spanish statistics, the population rose from slightly over 6,000 inhabitants in 1935 to just under 16,000 in 1949, with a majority of Muslims, a negligible Jewish minority and a small number of Europeans, mainly Spaniards.

The name *Asila* seems to derive from the form *Asila* (Strabo), *Zila* (Itinerary of Antoninus and the Anonymous of Ravenna) or *Zila* (Ptolemy and Pappus of Mela); but the ancient authors tell us hardly anything about the town, which may have originally been a Phoenician trading-post. In contrast, it is frequently mentioned and described by the Arab historians and geographers, among others by Ibn Hawkal and al-Bakrī. According to the latter, *Asila* was twice visited by the Normans in the 3rd/9th century. In the 6th/12th century, al-Idrīsī describes it as a small town in complete decay. But trade must have enjoyed a certain prosperity there in the 6th/12th century, because at the time of the disaster suffered by the Portuguese before Tangier (1437), Jewish merchants and Genoese and Castilian business men seem to be found there; the Waṭṭāsī sultans of Fez seem also to have made *Asila* one of

their principal bases. However, the history of the town is only really well known in the period during which it was occupied by the Portuguese (1476-1550). They took it, partly with a view to taking Tangier in the near, on 14th August 1476, under the command of King Alfonso V, called "the African" (1493-81), with the aid of his son, the future John II. The almost immediate result of the fall of *Asila* was the fall of Tangier, which the Portuguese entered without striking a blow. The new masters built a strong citadel at *Asila* with a dungeon and a vast walled enclosure, which contained the whole town; the whole of these fortifications still survive today. The Portuguese garrison, in conjunction with the garrisons of Ceuta, al-Ksar al-Saghir and especially of Tangier, had constantly to contend with the hostility of the marabouts, of local chiefs (Djābal Harub), of the Kāḥda of al-Ksar al-Kabir, Larache, Tetaun and Chechaouen (Mawlay Ibrahim) and of the Waṭṭāsī sultans of Fez, especially Muhammad al-Burtakāl; they endured several sieges; the most serious was that of 1508; the Portuguese lost the town and only retained the citadel; they were saved by the intervention of a squadron which arrived from Portugal, which was soon after reinforced by the Spanish fleet of Pedro Navarro. Furthermore, the fortress was handicapped by the insecurity of its port, which was blocked by a reef. In August 1550, King John III of Portugal (1551-57) had it evacuated — a few weeks after the capture of Tangier — and concentrated all his forces in Northern Morocco at Tangier and Ceuta. In 1577, *Asila* was recaptured by King Sebastian (1557-78), as the price of his alliance with the Saʿdī prince Muhammad al-Masliḥ and with a view to the expedition in which he lost his life, at the battle of the Three Kings, or the battle of al-Ksar al-Saghir (4th August 1578). It was at *Asila* that the Christian army landed and it was from *Asila* that it set out on 29th July 1578 to meet the Moroccan army, Philip II, King of Portugal since 1580 following the death of Cardinal Henry, gave the town back to the Saʿdī sultan al-Manṣūr in 1589. From this date onwards, *Asila* has led a quiet and obscure existence. It formed part of the region subject to the authority of the Sharfī Kavayim, when it was occupied in 1914 by the Spaniards, who incorporated it in their zone.

**Bibliography:** All the requisite information on *Asila* prior to 1589 is collected together in David Lopes, *História de Arzila durante o domínio português*, Coimbra 1924-5 (based strictly on the sources, especially Bernardo Rodrigues, *Anais de Arzila*, ed. David Lopes, 2 vols., Lisbon 1915-9); see also Adolfo L. Guevara, *Arzila durante la ocupação portuguesa*, Tangier 1940, and Pierre de Mevial, David Lopes and Robert Ricard, *Les Sources inédites de l'histoire du Maroc*, Portugal, 5 vols., Paris 1934-53, and the bibliography of the article *Asīfī* concerning the Portuguese period. For recent events: Tomás García Figueras, *Miscelánea de estudios históricos sobre Marruecos*, Larache 1949, 421 ff. (R. RICARD)

**ʿĀSĪM**, ANŌ BAKR ʿĀSĪM B. BARDALLAH AN ʿĀSĪM (ANŌ BAKR al-ʿĀSĪM), a *mawla* of the Banī Dīnawayma of the Asad. Some say Bardalla was his mother's name and his father's name ʿAbd Allāh, though he was known Abū ʿl-Naḍḍīq. He is said to have been a dealer in wheat (*ḥanḍal*) who succeeded as-Sulamī as head of the Kūfan School of Kūṭān Readers, where his preeminence in Kūṭānī studies secured him a place as one of the Seven Readers whose systems became canonical. Indeed

through his pupil Hafs [q.v.] his system of pointing and vowelising the Kūṭānī text has become the *textus receptus* in Islam. He is classed as a Follower and had a small part in transmitting *ḥadīth*. His fame, however, was as a *kāfir* and a teacher of *ḥirāʾ*, in which he had the reputation of being a *ḥudūdī*. In this branch of learning he is said to have been the pupil of Abū ʿAbd al-Rahmān al-Sulamī (d. 74/693-4), Zirr b. Hubayy (d. 82/701-2) and Abū ʿAmr Saʿd b. Iyās al-Shaybānī (d. 96/714-5), through one or other of whom his readings may be traced back to all the most famous names in Kūṭānī learning among the Companions. He had a large number of pupils who transmitted his system, but his two *uṣūls* in the canonical list are Abū Bakr b. ʿAyyūb (d. 194) and Hafs b. Sulaymān (d. 190). He died late in 127 or early in 128/745.

**Bibliography:** Ibn Khallikān, i, 304, 305 (no. 314); Ibn Kutayba, *Maʿārif*, 263; Ibn al-Nadīm, *Fihrist*, 29; Ibn al-ʿImād, *Shajarat* i, 175; Ibn al-Djazarī, *Ghāyā*, no. 1496; idem, *Najm*, i, 156; al-Dīnī, *Taysir*, 6; Ibn Hajar, *Tahdhīb*, al-Fahḥāḥ, v, 38-40; al-Dhahabī, *Miṣbāḥ al-Fidāl*, ii, 5 no. 26. (A. JEFFERY)

**ʿĀSĪM**, AHMAD, imperial historiographer of the Ottoman empire, born in ʿAyntāb (the modern Gaziantep) in south-eastern Anatolia about the year 1755. He was the son of Seyyid Mehmed, a clerk of the court, who became famous as a poet under the name of Diḥmāt. His father's view of the old-established ones in the place. In his early youth he acquired an equally fluent knowledge of Arabic and Persian, and this helped him in later years to achieve his fame as a translator (*mudrjim*) of well-known dictionaries. To begin with, Seyyid Ahmed was the secretary of the law-court of his home town, and later in nearby Kilis. In 1790 he went to Istanbul, where he gained the sultan's favour with a translation of the *Burḥān-Ḳāṭib* which was dedicated to Selim III. He subsequently became a professor. In 1802 he was sent to the Hijāz, and on his return he brought his whole family from ʿAyntāb to Istanbul. In 1807 he became imperial historiographer (*taʿdīf-sūti*), as such he compiled a history of the Ottoman empire for the period 1700-1807 (two volumes) from the peace treaty of Sistova (4 August 1791) to the accession of Mahmūd II (28 July 1808). Later, he translated the *Kamūs al-Muḥīṭ* (which was reprinted several times) into Turkish. In later years he returned to his calling as a teacher, then as judge (Muḥallā of Selāḥī, Feb. 1814), and died on 26 Sept. 1819 in Skutari, where he owned a house near the wall of Nuh (Nuh bawā). He lies buried in the Karāḍja Ahmed cemetery, and the inscription on his tomb is in ʿOṣmānī Muḥallīferi i, 375.

In his capacity as imperial historiographer, he surpasses his predecessors in a presentation which is at the same time a fluent day-to-day chronicle, yet also critical in its treatment of events. Finally, he translated the Cairo chronicle of the French occupation, by al-Djazarī—which became known in Europe too (French ed. by A. Carlini, Paris 1838)—from Arabic into his mother-tongue. This version is preserved in manuscript form in Paris (Bibl. Nationale st. 1283; cf. E. Blochet, *Catal.*, ii, 221) and in Cairo. It was never printed because the Cairo chronicle was soon afterwards translated again by the court physician Mustafa Beldīzī Efendi, and then printed (as *Taʿrīḥ-i Mīr*, 260 St. 12, Istanbul 1282) after having previously appeared as a *taḥṣīl* in *Djorlā-ḥawāḍir* (cf. *JAS*, 1868, i, 477 f.).

**Bibliography:** *Sijill-i ʿOṣmānī*, iii, 283; A. D. Mordtmann, in *Angewandte Allgem. Zeitung*, of 29 June 1875, supplement no. 180; Fatm. *idhḥāḥ*, 226; *GOW*, 339 f. with further bibliographical details; ʿOṣmānī Muḥallīferi, i, 375 f.; *Türk Mey-kurları* (Istanbul, n.d., ca. 1946) 47 f. (with a picture which pretends to be a portrait).

**ʿĀSĪM EFENDI ISMĀʿĪL** [see *ʿĀSĪM-ʿĀSĪR*]. **ASIR**, the *tabḥalīs* of Mirzā ʿIṣṣāl al-Dīn Muḥammad b. Mirzā Muḥsin, Persian poet and pupil of Faṣṣīl Haravī. Born at Isfāhān; probable date of death 1049/1639-40, though some sources give later dates. Unlike many of his contemporaries, he did not migrate to the Mughal court, but became a boon companion and close relative (according to one account the son-in-law) of Shāh ʿAbbās I. He composed most of his poetry under the influence of alcohol, from an excess of which he died. His *diwān*, comprising *ḥayās*, *mathnawīs*, *lardi*-*ḥands* and *ghazals*, was lithographed at Lucknow in 1886.

**Bibliography:** The MSS. Catalogue of Beza (British Museum), ii, 681, and Persch (Berlin), no. 938. *Kiṭāb al-ʿĪḥāṣā*, 1639; Ethé, in *Gr. I. Ph.*, ii, 311.

(R. M. SAVORY)  
**ʿĀSĪR**, a region in Western Arabia named after a confederation of tribes in al-Sarāt [q.v.]. The concept of a separate region intervening between al-Hijāz and the Yaman developed in the 19th century and is now sanctioned by official Saudi Arabian practice, which uses the name ʿAsir for the highlands southwards from al-Nimās to Naḍrān, and Thihāmat ʿAsir for the lowlands bordering the Red Sea between al-Kahma and the Yaman frontier.

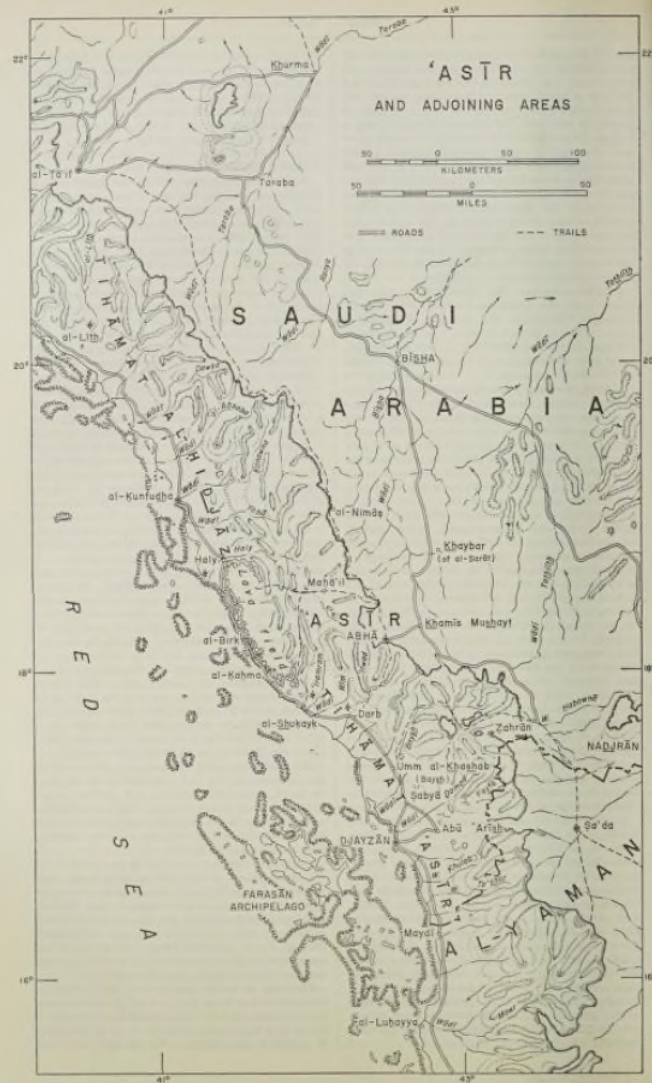

From al-Tāʾif to the Yaman there is no gap in the bold range of al-Sarāt. The core is crystalline rock, but in certain fault zones volcanic activity has produced lava fields, one of which, reaching the Red Sea just south of Hāly, used to form the natural boundary between al-Hijāz and the Yaman. The main drainage divide, some 50 to 75 m. (50 to 120 km.) inland, rises abruptly to heights of over 6000 ft. (2,000 m.), with peaks over 9000 ft. (3,000 m.). Streams fed by rain from the fringe of the monsoons have carved great gorges in the steep seaward flanks. Drainage on the gentler eastern slope follows fracture zones northwards, creating the major wadi systems of Biḥja and Taḡhlīḥ, which eventually turn eastwards to empty their flood waters into Wādī al-Dawāsir. Along these wadi systems Philby traces the Road of the Elephant (*Darb al-Fil*).

The highland capital is Abḥā [q.v.], the centre of the confederation of ʿAsir, which consists of Banī Muḥayyid, Banī Māllik, ʿAlkam, and Raḥīʿa wa-Ru-fayḥa. Other important tribes are Riḍāʾ al-Hijāz and Shāhrān north of Abḥā, and elements of Kaḥṭān, including ʿAbida, from Abḥā south to Zahrān.

Along the re-tilled coast of Thihāmat ʿAsir are the little ports of al-Kahma, al-Shubayk, and Dīḥayn (classical Dīḥān), the last being the capital of the district, which also embraces the Faraṣān Archipelago. Inland from Dīḥayn is an extensively cultivated area surrounding Umm al-Qhaḥab (Bayḥ), Sabāʾ, and Abū ʿArīḥ. Among the larger wadis debouching on the plain of Thihāmat ʿAsir are those of ʿIṭwad, Bayḥ, and Damaḥ.

Terracing is widely practiced in the highlands, where rainfall of c. 12 in. (30 cm.) a year provides for the cultivation of grains and fruits. Coffee is grown near the Yaman border, and *ḥāt* on the slopes of Dīḥal Fayṭā. Grains and vegetables are raised

in Thāma, and some indigo around Sabyā and Abū 'Arīsh. The *shaw palm* is cultivated for its fruit and leaves, which are woven into baskets and mats, but almost all dates come from Bisha or by sea.

The ways of the mountaineers tend towards those of Najd, while the ways of the lowlanders indicate the closeness of their contact with Africa. Dwellings vary from mud-brick buildings with projecting stone tiles in the mountains to thatch huts on the coast. There are virtually no tent-dwellers in the mountains or on the coastal plain, the nomads using a mat shelter. The isolation of mountain towns and ranges has contributed to the complexity and fragmentation of the tribal system. The Arabic speech of some of the tribes is held to be remarkable for its purity and freedom from outside influences, but *haghāgha* and other dialectal deviations are not uncommon.

The name 'Asir was originally borne by several Kahlātite tribes centred on Ahḥā and who attached themselves to the 'Adnītes of 'Anz b. Waḥd. Among the early divisions of 'Anz were Rabi'a, Rofayda, and Mālik. Other old tribes in the region were *Khayḥ'am* (including Shahrān and Akūb) and al-'Ad (including al-Hijir, Alma', and Ard Shā'ir), among whose branches were Ghāmid and Zahrān. Sections of Kināna were established along the coast.

In the time of the Ziyādids (q.v.) in the Yaman (204-409/819-1015), the lord of 'Aḥḥā, Sulaymān b. Tarf al-Hakamī, held Thāma from al-Sharḥa to Haly (Mikhhlāf Ibn Tarf or al-Mikhhlāf al-Sulaymān, a name still used on occasion by the inhabitants). In 460/1067-8 the Sulayhid 'Alī b. Muḥammad defeated Tarf and his Abyssinian allies at al-Zarāḥ, 'Umda al-Hakam's birthplace.

The Tarfids gave way as rulers of the Mikhhlāf in the 5th/11th century to the Sulaymānid Sharifs, who after a passing hegemony in Mecca had been supplanted there by the Hāshimids (see MAKKA). The principal Sulaymānid capital was Dajazān while lesser Sulaymānid dynasties arose in Sabyā, Damad, etc. One of the Sulaymānids, 'Clay b. 'Isā 'Al Wadhī, taught al-Zamakhsharī in Mecca; many others turned to nomadic life in the Mikhhlāf. A victory of the Mahdids of the Yaman over the Sulaymānids in 560/1164-5 was instrumental in bringing about the occupation of the Yaman by Saladin's brother Tūrān Shāh. Sulaymānid authority, impaired by the advent of the Ottomans, yielded to a more vigorous local dynasty, the Khayrīdids, *gharīf* descended from the House of Kaṭāda in Mecca, in time installed themselves in the position once held by the Sulaymānids as independent rulers in the Mikhhlāf; the foremost figure among them in the early 19th century was Ḥamūd b. Muḥammad Abū Mismār of Abū 'Arīsh (d. 1235/1828).

For centuries intertribal feuds had kept the highlands disunited. The missionary zeal of Wadhī, advancing westwards from Central Arabia late in the 19th century, provided a basis for unification under Muḥammad b. 'Amir Abū Nuḥḥa al-Rufayda, who held power until 1235/1828, the year of the fall of the Saudi capital al-Mudayyir; the Wadhīd tribesmen of 'Asir came into conflict with Sharīf Ḥamūd in the lowlands, who, though he recognised the authority of 'Alī Sa'ūd at times, was never a sincere convert.

Muḥammad 'Alī Pāshā's forces from Egypt, which had occupied al-Hijāz as a base for the war against 'Alī Sa'ūd, carried on campaigns to the south in al-Sarāt and Thāma on various occasions until 1256/

1840, the year of their withdrawal from Arabia under pressure from the Western powers. In 1259/1823-4 a chief of Banī Muḥayyid, Sa'ūd b. Muslat, became the dominant figure in 'Asir al-Sarāt, a position held by himself and his successors, with one main interruption, for the next century. In 1248/1833 'Alī b. Muḥayyid al-Muḥayyid cooperated with Turke Būlmez and other Albanians who had mutinied against the Egyptian authorities; later the men of 'Asir broke with the mutineers and defeated them. Upon 'Alī's death in 1249/1833-4, the succession fell to 'Aḥḥā b. Ma'q al-Muḥayyid, the first to found a dynasty in the highlands. A new advance southwards by Muḥammad 'Alī's commanders, who took control of the Mocha coffee trade, coupled with a forward movement in Central and Eastern Arabia, prompted the occupation of Aden by the British in 1254/1839. The departure of Muḥammad 'Alī's troops from Arabia shortly thereafter left 'Aḥḥā master of 'Asir al-Sarāt and the Khayrīdids masters of al-Mikhhlāf al-Sulaymān as well as much of Thāma al-Yaman.

Following the death of 'Aḥḥā in 1273/1856-7, his son Muḥammad drove al-Hasan b. Muḥammad, the last of the Khayrīdids, out of Abū 'Arīsh in 1280/1863. The expanding power of 'Alī Sa'ūd in Thāma provoked Ottoman intervention, facilitated by the opening of the Suez Canal. In 1280/1862 Muḥammad Radīf Pāshā defeated Muḥammad b. 'Aḥḥā at Rayda and put him to death. 'Asir, established as a *mutasarrifiyya* attached to the *wilāyat* of the Yaman, remained under Turkish rule for more than forty years, but this rule often extended no further than the towers of the garrison town of Abḥā.

Early in the 20th century the place of the Sulaymānids was taken by Sayyid Muḥammad b. 'Alī al-Idrīsī. He was the great-grandson of Ahmad b. Idrīs, the founder of the Ahmadiyya (Idrīsīyya) *tarīqa* who had migrated from Morocco to Sabyā, which was to become the Idrīsī capital. Relying on his great prestige as a man of religion, al-Idrīsī brought the lowlanders under his sway, negotiated with the Italians on the other side of the Red Sea, and laid siege to the Turks in Abḥā. The Sharīf of Mecca, al-Ḥusayn b. 'Alī, led an expedition southwards to relieve the beleaguered garrison of Sulaymān Shāfiḥ Kamālī Pāshā in 1310/1911.

During the First World War, al-Idrīsī was the first independent prince in Arabia to join the British against the Turks by virtue of a treaty signed in 1333/1915. After the defeat of the Turks the British awarded the port of al-Mudayyir to him rather than Imam Yahyā of the Yaman. An attempt to annex the highlands having failed, al-Idrīsī solicited the mediation of 'Abd al-'Azīz 'Alī Sa'ūd, but this was rejected by al-Hasan b. Muḥammad 'Aḥḥā, the lord of Abḥā since the evacuation of the Turks in 1337/1918. An expedition sent by 'Abd al-'Azīz occupied Abḥā in 1388/1920. 'Alī 'Aḥḥā later revolted and continued the struggle briefly, but in 1342/1923 the resistance of the dynasty ebbed away and the highlands were incorporated in the Saudi State. Muḥammad al-Idrīsī concluded a treaty with the Sa'ūd in 1391/1920, but the dissensions within the Idrīsī realm subsequent to his death resulted in the establishment of a Saudi protectorate. The Imam of the Yaman maintained a claim to the Idrīsī territories until the Treaty of al-Tā'if finally determined their appurtenance to Saudi Arabia in 1353/1934.

(R. HEADLEY, W. MULLIGAN, G. RENTZ)

**ASIRGARH**, a fortress situated 21° 28' N., 76° 18' E. in the Burhanpur taluq of the Nimr district of Madhya Pradesh, about 2,500 feet above sea level and 850 feet high from its base, dominating the only route through the Satpura range to the Narmada and the Tapi from north west India to the Dekkan.

Probably of great antiquity (see H. Cousens, *List of Antiquarian Remains in the Central Provinces and Berar*, Arch. Surv. India, 1897, p. 39, A. Cunningham, *Report on a Tour in the Central Provinces*, Calcutta 1879, 120-1, Gazetteer, [Khandesh] Bombay 1880, 557-58). Asirgarh was certainly a stronghold of the Tak branch of the Coulhan Rajputs from the 3rd/9th century. It was stormed by 'Alī al-Dīn Khāḍīrī, then muḥtaṣ of Karra, in the winter of 695/1295-6 on the way back from his Dekkan raid (see Tod, *Annals and Antiquities of Rajasthan*, ed. Crooke, 1920, ii, 1465 and 1467 where the date Samvat 1351 is given), but not permanently occupied by Muslim forces until about 800/1400 when it was seized by Malik Nāṣir Khān Fāriḳī to become the supposedly impregnable stronghold of the Fāriḳī sultāns of Khandesh. (See Firūḡiā, text, ed. Briggs, ii, 544, *Ā'in-i Akbarī*, text, ed. Blochmann, i, 475 and Bombay Gazetteer, loc. cit.).

Asirgarh was captured by Akbar in 1009/1600-1, becoming the headquarters of the *marzubān* of the frontier *shibā* of Dāndīgh. (On Akbar's conquest see Vincent Smith, *Akhbar al-Ghāzī Muḥṣi*, Sec. ed. 1902, 272-286).

In 1021/1623 Shāh Jihān, then in rebellion against Dīlshadūr, took refuge at Asirgarh and later c. 1063/1650-1 built a mosque there. In 1132/1720 it passed into the hands of Nizām al-Mulk, *sahādar* of Malwa, and was lost entirely to the Mughals in 1173/1760 when the Mahrattā Badājīrā Peshwā occupied it. Asirgarh was first captured by the British in 1218/1803 and finally occupied by them in 1234/1819.

*Bibliography*: see text; also *Gazetteer of the Central Provinces*, ed. C. Grant, Nagpur 1879, *Imperial Gazetteer*, vi, Oxford, 1908, and Arch. Surv. India Report, 1922-23. (P. HADLEY)

**ASITĀNA** [see ISFARUD].

**ĀSIYA**. This is the name given by the commentators to Pharaoh's wife, who is twice (xxviii, 9 and lxxi, 1) mentioned in the Qur'ān. She plays the same part as Pharaoh's daughter in the Bible, so that there is obviously confusion. In the second passage these words are put into her mouth: 'My Lord, build me a house with thee in Paradise, and deliver me from Pharaoh and his doings and deliver me from the wicked'. In connexion with this passage it is related that Āsiya endured many cruelties at the hands of Pharaoh because of her faith (she was an Israelite); and finally he even caused her to be crucified; at her prayer God took her soul to himself, so that only the body fell on the stone.—It is also related that Pharaoh scourged her to death, but on Moses' praying to God she did not feel any pain. J. Horowitz explains the name as a corruption of *Aseneth*, the name of Joseph's wife in Gen. xli, 45.

(A. J. WESSINK)

**'ĀSKALĀN**, a town on the coast of southern Palestine, one (Hebrew: 'Ashkelon) of the five Philistine towns known to us from the Old Testament; in the Roman period, as *oppidum Ascalo liberum*, it was (according to Schreiner, *Geschichte des Jüdischen Volkes im Zeitalter Joseph*, ii, 75-7) 'a flourishing Hellenistic town famous for its cults and festival games' (Derevis-Aphrodite-afrodite); in the Christian period a bishop's see (tomb of the *tres fratres martyres Aegyptii*).

'Āskalan was one of the last towns of Palestine to fall into the hands of the Muslims. It was taken *subita* by Mu'āwīya shortly after the capture of Kaysariyya in 19/640, but may have been briefly occupied by 'Amr b. al-'Ās before that. It was reconquered for a short time by the Byzantines during the time of Ibn al-Zuhayr and was subsequently restored and refortified by 'Abd al-Malik b. Marwān (Balādhuri, *Futūḥ*, 142-4). According to an inscription from a building which was discovered by Clermont-Ganneau, the Caliph al-Mahdi in 155/772 caused a mosque and minaret to be erected there (*RCEA*, i, 32-3). After varied fortunes the town passed into the hands of the Fātimids, under whose rule, according to Mukaddasī and Nāṣirī Khutaw, it attained some prosperity. It housed a mint, and served at times as a secondary naval base. Together with some other coastal towns, it was retained by the Fātimids, even after the loss of the rest of Syria and Palestine to the Saljūqs, though sometimes this retention amounted to no more than a nominal suzerainty over the local rulers. In 492/1099 the Egyptian army retreating from Jerusalem entered the town, and for a while it seemed that 'Āskalan itself was about to pass under Frankish rule. It was however saved by the internal dissensions of the Crusaders, and was retained by the Egyptians. For the next century and a half it was a frontier city and a key military objective in the struggle between the Crusaders and the Muslim rulers of Egypt. For the first 55 years after the coming of the Crusaders, it

was held by the Egyptians, and used by them as a bridgehead and as a base for raids into Frankish territory. With its population swollen by refugees from the Frankish occupied areas, and its garrison reinforced from Egypt, it became a major military centre. Despite the partial resumption of trade with Jerusalem, life in this outpost was difficult, and the Egyptians found it necessary to send new supplies and relief troops several times a year (William of Tyre, XVII, 22; Ibn Muḥammad, *Annales*, 92). According to William of Tyre, the whole civil population, including children, was on the army payroll. After the fall of Tyre to the Crusaders in 1124, the position of 'Āskalan was much weakened. To neutralise the threat which it offered to Jerusalem, the Crusaders surrounded it with a ring of fortresses, and in 548/1153, after a siege of seven months, Baldwin III got possession of the town by a combined land and sea attack. It now became the base for Frankish military and political activities in Egypt. After the battle of Hittin it had, like most of the Crusader strongholds in Palestine, to surrender to Salāh al-Dīn (583/1187). In 587/1191, after the defeat at Arsūf, the latter found himself unable to hold 'Āskalan against Richard of England and therefore destroyed the town. The Muslim population migrated to Syria and Egypt, the Christians and Jews moved to Jerusalem. A vivid description of the destruction of the town and the evacuation of its inhabitants is given in the anonymous Mamlūk chronicle published by K. V. Zettersteden (*Beiträge*, 233-5). Richard reached 'Āskalan in Dhū'l-Hijja 587/January 1192 and rebuilt the fortress, but according to the peace terms of August-September of the same year, it had again to be demolished. The rivalries between al-Sālih Ayyūb of Egypt and al-Sālih Ismā'īl of Damascus once more let it slip into the hands of the Franks. It was garrisoned and refortified by the Hospitallers, who successfully defended it against an Egyptian attack in 642/1244. After the decisive battle of Ḥaḥāza (17 Oct. 1244), 'Āskalan could, however, no longer expect help, and it fell in 645/1247 to Fakhr al-Dīn Yūsuf b. al-Sayyikh. In order to make it impossible for the Christians to effect a landing, the Mamlūk Sultan Baybars (q.v.) demolished a number of places on the Palestine coast, and in 668/1270 levelled the last vestiges of 'Āskalan, filling the harbour with trees and rubble (Makrīdī, *Sulūk*, i, 590). The town, which had never recovered from its demolition by Saladin, remained desolate until modern times. Abu 'l-Fida' (239), Ibn Battūṭa (i, 126), Muḥṣī al-Dīn (432), Piri Re'is (*Bahriyye* 724, English trans. by U. Heyd, *A Turkish Description of the Coast of Palestine*, *Israel Exploration Journal*, vi, 1956, 205-7) and Volney (Syria, ch. 10) all describe it as ruined.

In antiquity and the Middle Ages the environs of the town were famous for their win, sycamores and *henna* (Kyprios). It has given its name to a species of onion (*shālūt* = *allium ascalonicum*). Mediaeval authors, using an expression attributed to the Prophet, often call 'Āskalan the 'Bride' of Syria, *Sponsa Syriae*, *'Arūs al-Shām*.

In the period of the Shī'ite supremacy of the Fātimids failed the construction by al-Aḥdāb b. Isḥāq al-Dīnālī (491/1098) of the Maḡhārah for the reception of the head of the Prophet's grandson, 'Āskalar. This highly venerated relic was in 548/1154 saved from the Franks and carried off to Cairo (cf. Makrīdī, *Khiṭāṭ*, i, 427; Mehren, *Cahiraq of Kerdas*, Copenhagen 1870, ii, 61-2; *RCEA* vii 262-3; Ibn Taymiyya (ed. Schreiner, *ZDMG*, 53, 81-2) dismisses the whole story as a fable). Besides Husayn's

chapel, later Muslim pilgrims visited, in particular, Abraham's Well.

(R. HARTMANN-B. LEWIS)

**AL-'ĀSKALĀNĪ** [see IBN HADJAR].

**AL-'ĀSKAR** [see DĪYAR].

**AL-'ĀSKAR** [see SĀMARĀ].

**'ĀSKAR MUKRAM** ('Mukram's Camp'), formerly a town built on the site of a camp pitched by an Arab leader named Mukram whom al-Ḥadīdīdī had sent to Khiristān to suppress a revolt near al-Aḥwā. This camp or entrenchment adjoined the ruins of Rustam Kawāḍī (corrupted by the Arabs into Rustakubādī), a Sāsānian town which the Muslim Arabs had destroyed. 'Āskar Mukram was situated on both sides of the Masrukān canal (the modern Abi-Garzar) just above the point where it now flows into the Shatayr (= Shatayr, 'the small river'), the main arm of the Kārūn (at the time of which we write, the Masrukān canal joined the Shatayr much further to the south, near al-Aḥwā); furthermore, the Dirfāl Rūd (modern Abi-Dīn) flowed into the Shatayr just west of the town. Owing to its favourable situation and its relatively good climate (see Hamd Allāh Mustawfī, *Nuzha*, 112), 'Āskar Mukram developed into a flourishing town and became the chief place on the Masrukān canal; two bridges of boats linked the two parts of the town. It was a mint-town during the 14th/10th century, under the Bīyid ruler Mu'izz al-Dawla; cf. *ZDMG*, xl, 452. The ruins now known as the Hand-i Kīr ('Brimen Dam') are those of 'Āskar Mukram; the remains of that town and of earlier cities cover an area of nearly 9 sq. m. (see Layard, *A Description of the Province of Khuzistan*, in *JR Geog.* S. xvi, 52, 63, 64, 95 and 96). The inhabitants of Shughitar (Arab. Tustar) wrongly identify 'Āskar Mukram some ruins near their city, which they therefore call Laghar (Persian = Arab. al-Hawara). 'Āskar; according to Hamd Allāh Mustawfī, 'Āskar Mukram was formerly known as Laghar.

'ASKARI; from 'ashar, soldier; in Ottoman technical usage a member of the ruling military caste, as distinct from the *ra'iyâ*—the subject population of peasants and townspeople (*ra'iyâ* sometimes means the subjects generally, sometimes only the peasants). The term 'askari denoted caste rather than function; it included retired or unemployed 'askaris, the wives and children of 'askaris, manumitted slaves of the Sultan and of the 'askaris, and also the families of the holders of religious public offices in attendance (*muâssem*) on the Sultan.

The Ottoman 'askari class comprised both the slave military estates and the free military land levies (see *Sipahi*). The latter seem to have originated with the ghazis who established themselves in the conquered lands. They were further recruited from the military landed gentry of the newly acquired territories, some of whom retained their Christian faith for a generation or two before becoming assimilated to Ottoman Islam.

In matters of personal status the Muslim 'askaris, like the Muslim *ra'iyâ*, were generally subject to the provisions of the *Shari'a* but were under the special jurisdiction of the *Kadı*'asker [q.v.]; in administrative, fiscal, and disciplinary matters they were ruled by special codes of regulations issued by the Sultan—the *hukûm-i sipahiyân*. This assured them important privileges and exemptions, as against the *ra'iyâ*, who were, for example, forbidden to bear arms, ride horses, or hold fiefs. The 'askaris were in theory not a privileged feudal aristocracy; they had no prescriptive or hereditary right to fief, office, or status, all of which could be conferred or withdrawn at the will of the Sultan. In fact the Sultan normally confined these fiefs and offices to members of the 'askari class, who were still considered as such even when deprived of office or fief. On the other hand it was regarded as contrary to the basic laws of Empire to appoint men of peasant stock (apart of course from the *deughirme* of boys) to 'askari positions; Köçü Bey and later memorialists adduce the violation of this rule as one of the causes of Ottoman decline. An 'askari could, by decree, be demoted to the *ra'iyâ* class or a *ra'iyâ* promoted as a reward for exceptional services to be an 'askari. Both were infrequent in the early period. By the early sixteenth century, however, Sultan Süleymân found it necessary to issue a decree confirming sipahis of peasant descent in their fiefs, and protecting them from dispossessment on these grounds. In the period of decline the dilution of the military caste by the intrusion of peasants and townspeople becomes a common complaint. By the 18th century the extension of the fiefs to the peasantry and of Janissary affiliation to the merchants and artisans had distributed the status of 'askari so widely as to deprive it of any real meaning.

(B. LEWIS)

AL-'ASKARĪ. Two Arabic philologists of the 14th/15th century, both bearing the same name al-Hasan b. 'Abd Allāh, but of a different kunya, are known by this name, a relative noun derived from 'Askar Mukran in Khuzistān.

(i) **Abū AHMAD al-HASAN b. 'ABD ALLĀH b. SA'ĪD** was born in 'Askar Mukran, on 26 Shawwāl 293/11 August 906 and died there on 7 Dhu 'l-Hijja 382/3 Febr. 993. The date 382/940 is less probable. He began his studies under his father and the traditionist 'Abdān, d. 306/919, and continued them at Baghdad, Basra, and Isfahān under Ibn Durayd, d. 321/933, and the traditionists al-Bughawī, d. 379/989, and Ibn Abī Dīyāl, d. al-Sijistānī, d. 378/989. He also met al-Sāfi and other men of letters. Then he returned to 'Askar Mukran. He declined an invitation of the vizier al-Sāhib Ibn 'Abbād, but paid him a visit when the latter came to 'Askar Mukran. He went several times to Isfahān where his brother, the traditionist Abū 'Alī Muhammad had settled, e.g. in 349/960 and again in 354/965. He was a scholar of vast erudition and wrote a number of books (see Brockelmann S I, 193) but he was little known outside of Khuzistān; Yāqūt had great difficulties in obtaining information about him. His chief work, the *Kitāb al-Ta'yīn*, contains useful information about rare and difficult words and proper names occurring in traditions and poems and misunderstood by their transmitters. It was utilised by Yāqūt (*Ma'diyya*, vi, 384) and by 'Abd al-Qādir al-Baghdādī (see *Ilm al-Khishāna*, 31 f.). Much of his learning has been preserved through the writings of his pupil Abū Hāshim al-'Askari.

**Bibliography:** Abū Nu'aym, *Ghazika'at Isfahān*, I, 272, II, 291; Sam'ānī, *Ansāb* fol. 390 b; Yāqūt, *I'rshād*, III, 126-135; Ibn Khallikān, *Cairo* 1299, I, 234 f.

(ii) **Abū HILĀL al-HASAN b. 'ABD ALLĀH b. SA'ĪD**. Of his life very little is known. He was a pupil (but not a sister's son, for he never calls him *shaykh*) of the famous Abū Ahmad al-'Askari and owed to him the bulk of his learning, as is proved by the numerous references in his writings. He wrote amongst other works (see Brockelmann, I, 126 and S I, 193 f.) for the benefit of budding writers (1) *Kitāb al-Sinā'at* by al-Katib al-Wā'ili-Shāfi (Istanbul 1320, Cairo 1952; cf. P. Schwarz, in *MSOS* 15, 206-230), a systematic handbook of rhetoric, (2) *Diwan al-Ma'āni* (Cairo 1352), an anthology of the most elegant and original expressions of ideas met with in poetry and prose, (3) *Kitāb al-Furūq al-Lughawiyya* (Cairo 1353) dealing with synonymous words, (4) *al-Ma'diyya fi Babshiyat al-Aghya'* (Cairo 1353); abridged ed. by O. Reicher, in *MSOS*, xviii, 103-130), a list of words meaning "remainder". (5) *Diwanharat al-Amthal* (Bombay 1306-7 and on the margin of al-Maydānī, *Cairo* 1310), a collection of proverbs. Not yet published is his *lafiz* whose title *Mahāsin al-Ma'āni* suggests that he dealt mainly with the stylistic beauties of the Kur'an. The latest known date of his life is the year 395/1005 in which he finished dictating his *Kitāb al-Aṣṣāṭ* on the so-called inventors of arts etc. (Yāqūt, *I'rshād*, III, 138). He is said to have died after 400/1010.

**Bibliography:** Yāqūt, *I'rshād*, III, 135-9; Suyūṭī, *Daḥḥa*, 221; 'Abd al-Qādir, *Khishānat al-Adab*, I, 112; Brockelmann, *Index*, *Index arabic* in *IV<sup>e</sup> série*; R. Sellheim, *Die klassisch-arabischen Sprichwortsammlungen*, The Hague 1934, 138-42.

(J. W. PECK)

AL-'ASKARĪ, Abū 'l-Hasan 'Alī b. Muhammad, the tenth Imam of the Twelver Shī'a. He is commonly known as al-Nakī and al-Hādī. He was the son of the ninth Imam Muhammad b. 'Alī al-Ridā [q.v.], and was born in Medina. Most Shī'ite authorities give the date of his birth as Rabi' al-Awwal 214/Sept. 829, though others say that he was born in Dhu 'l-Hijja 212 or 213/Febr.-March 828 or 829. His mother, according to some sources, was Umm al-Faḍl, the daughter of al-Ma'mūn; according to others she was a Maghribī Umm Walad called Sumāna or Sūsan. The latter story seems more likely in view of the statement in some chronicles that the marriage between Muhammad b. 'Alī al-Ridā and Umm al-Faḍl, though contracted in 202/817-8, was not consummated until 215/830. (al-Tabarī, III, 1029, 1102-3; al-Mas'ūdī, *Murūj*, vii, 61-2; al-Ya'qūbī, II, 552-3. Some Shī'ite traditions say that Umm al-Faḍl poisoned her husband and died childless—al-Majlisī, *Diḥār*, xii 99 ff.). His father died in 220/835, and like him he became an Imam while still a small child. (Reasons of the Ismā'īli theological works). He lived peacefully in Medina until the accession of al-Mutawakkil, whose anti-ʿAlid policy soon brought him into difficulties. In 233/847-8 or 234/848-9, on the basis of reports reaching the Caliph, that Abū 'l-Hasan was engaged in seditious activities, Yāqūt b. Harjama b. Aḥsan was sent to Medina to escort him to Sāmarrā al-Taharī, III, 179; al-Nawbahghī, 77; *Nadwūn* vi, 271). He seems to have won the Caliph's respect and, though kept under surveillance, was not molested. He was greatly esteemed for his piety and modesty. He remained in Sāmarrā until his death, which took place in Djumādā II or Rabi' al-Awwal 254/June-July 868. His *nisba* al-'Askari derives from 'Askar Sāmarrā. He was buried in his home in that town. According to Shī'ite tradition he was poisoned by the Caliph (cf. al-Mas'ūdī, *Murūj*, viii, 583, who already appears to know this story). The *Mahāsil al-Talibiyin*, however, does not include him among the 'Alid martyrs. His *biḥ* was Muhammad b. 'Uthman al-Samarrāi. Abū Ahmad al-'Askari owed to him the bulk of his learning, as is proved by the numerous references in his writings. He wrote amongst other works (see Brockelmann, I, 126 and S I, 193 f.) for the benefit of budding writers (1) *Kitāb al-Sinā'at* by al-Katib al-Wā'ili-Shāfi (Istanbul 1320, Cairo 1952; cf. P. Schwarz, in *MSOS* 15, 206-230), a systematic handbook of rhetoric, (2) *Diwan al-Ma'āni* (Cairo 1352), an anthology of the most elegant and original expressions of ideas met with in poetry and prose, (3) *Kitāb al-Furūq al-Lughawiyya* (Cairo 1353) dealing with synonymous words, (4) *al-Ma'diyya fi Babshiyat al-Aghya'* (Cairo 1353); abridged ed. by O. Reicher, in *MSOS*, xviii, 103-130), a list of words meaning "remainder". (5) *Diwanharat al-Amthal* (Bombay 1306-7 and on the margin of al-Maydānī, *Cairo* 1310), a collection of proverbs. Not yet published is his *lafiz* whose title *Mahāsin al-Ma'āni* suggests that he dealt mainly with the stylistic beauties of the Kur'an. The latest known date of his life is the year 395/1005 in which he finished dictating his *Kitāb al-Aṣṣāṭ* on the so-called inventors of arts etc. (Yāqūt, *I'rshād*, III, 138). He is said to have died after 400/1010.

**Bibliography:** a full account, with citation of sources, of the life, works, miracles, companions, and dealings with the Caliphs of the 10th Imam is given in Muhammad Bākir al-Majlisī, *Bihār al-Anwār*, xii, Tehran 1302, 126-153. Earlier notices are contained in al-Mas'ūdī, *Murūj*, vii, 206-9, 379-381; al-Ya'qūbī (Houtsma), I, 614; al-Khatib, I, 445-6. De Sams' translation, II, 214-6; al-Nawbahghī, *Furūq* al-Shāfi, ed. Ritter, 77; Mufid, *al-I'rshād*, Tehran 1308, s.v.; In addition to the texts cited in the article, reference may also be made to al-Shahrastānī, ed. Cureton, I, 128 ff., ed. Badrīn 347-8; Abū 'l-Ma'ālī, *Bayān*, ed. Schefer,

164 ff., ed. Ibbāl 42; D. M. Donaldson, *The Shi'ite Religion*, London 1933, 209 ff.; J. N. Hollister, *The Shi'a of India*, London 1935, 87-89.

(B. LEWIS)

AL-'ASKARĪ, AL-HASAN [see AL-HASAN AL-'ASKARĪ].

ASL [see 086].

AL-ASLĀH, the most suitable or fitting, a term used by theologians in a technical sense. The "upholders of the *aslah*" were a group of the Mu'tazila who held that God did what was best for mankind. It is nowhere stated who composed the group. Abū 'l-Hudhayl held that God did what was best for men. Al-Nazzām introduced the refinement that there were an infinite number of equally good alternatives, any of which God might adopt instead of acting as He does; in this way he avoided the implication that God's power is finite. Others, because of the difficulty of maintaining that the actual world is the best possible, said that it was only in religion that God did what is best for men, viz. sent prophets to guide them. There was much diversity of opinion on this point among the Mu'tazila. The orthodox later used the story of the three brothers to show the absurdity of the view. One brother died young and went to Paradise; one grew up and was good and went to a higher place in Paradise; and one became wicked and went to Hell. If one tries to justify the lack of opportunity of the first to gain the highest position by saying that God knew he would become wicked if he grew up, then, on the suppositions of the "upholders of the *aslah*", it is impossible to explain why God did not cause the third to die young (cf. al-Baghdādī, *Usul al-Dīn*, Istanbul 1346/1928, 139 f.). The later Mu'tazila of Basra seem to have made similar criticisms of the Mu'tazila of Baghdad.

Divested, however, of the suggestion that a certain course of action was obligatory for God, the concept of *aslah*, identified with God's wisdom (*ḥikma*), has survived in orthodox Islam and found literary expression, for instance, in the *al-Risāla al-Admiyya* of Ibn al-Nafī [q.v.] (cf. J. Schacht, in *Homage to Milā-Vallieros*, II, Barcelona 1956, 325 ff.).

**Bibliography:** Ash'arī, *Mahāsil*, Istanbul 1299, I, 246-51, II, 573-8; Khayyāṭ, *Intisār*, Cairo 1344/1925, 8, 24 ff., 64 ff., Baghdadī, *Furūq*, 116, 167; Djuwayni, *I'rshād*, Paris 1938, 165 ff. (= tr. 255 ff.); Goldziher, *Vorlesungen*, 99; A. J. Wensinck, *Muslim Creed*, Cambridge 1932, 79-82; on the origin and background of the term, J. Schacht, in *St. L.*, I, 29.

(W. MONTGOMERY WATT)

ASMA', daughter of the caliph Abū Bakr by his wife Rutayla bint 'Abd al-'Uzza of 'Amīr b. Lu'ayy. She was the elder half-sister of 'Ā'ishā, and one of the early converts to Islam in Mecca. At the time of Muhammad's flight from Mecca with Abū Bakr, she took her girl in two to serve for the Prophet's provision-bag and the strap of his water-skin; this is the traditional explanation of her nickname *Dhāt al-Nidākhayn*, "She of the Two Girlies". After the Hijra she was married to al-Zubayr b. al-'Awwām [q.v.], and their son 'Abd Allāh was reputedly the first child born in the Muslim community at al-Madīna. She is said to have had four other sons and three daughters. Apart from several anecdotes illustrating her piety and self-denial, little more is reported of her except her courageous behaviour before and after the death of her son 'Abd Allāh b. al-Zubayr [q.v.]; in connexion with this she is credited with circulating a Tradition

from the Prophet denouncing the "two liars" (*al-haḍḍābānī*) who should issue from Ṭhābit (i.e. al-Mughira b. Shu'ba and al-Ḥaḍḍāb b. Yūsuf). She died in Mecca shortly afterwards, in 73/93.

**Bibliography:** L. Caetani, *Chronographia Islamica*, A.II. 75, § 36; Ibn Sa'd, viii, 282-6; Ibn Hanzal, *Muwad*, Cairo 1313, vi, 344-55.

(H. A. R. GIBB)  
AL-ASMA' AL-HUSNA.—"The most Beautiful Names", these being the divine Names. "To God belong the most Beautiful Names—pray to Him, using these Names"; *Kawṣar*, vii, 179; xvii, 125, x, 8; lix, 24, etc. Pious Muslims have always revered the mystery of the Name, which at one and the same time both designates and veils the Named (cf. *ḥidāṭ al-ism*).

**The Theological question.** A chapter of "Muslim theology" (*ʿilm al-tawḥīd*) is devoted to the divine Names. Problem stated: can one name God, and what, with regard to God, do the Names attributed to Him mean? *Preliminaries.* What is the name (*ism*)? Is it identical with the named (*muṣammā*) and with the denomination or definition (*ṣamsiya*)? On this problem in general see *ISM*. *Application of the divine Names.* The reply of the narrators of Tradition, reiterated by the strict Aḡharites, is: the divine Names can only be given to God by *taḥḍīḥ*, i.e. by preconceived "determination"; by which we understand as God Himself has "determined" it in the Qur'ān and secondarily in the *Sunna*. The employment of the latter in this connexion must be limited to "authentic" (*ṣāḥiḥ*) and "good" (*ḥasan*) *ḥadīṭ*. Some people admit a possible determination derived through *ijmāʿ*. According to the Mu'tazilites and the Kāramiyya, when *ʿaḥd* (Reason) proves that an attribute (either of existence, or negative or of action) is suitable to God, it is permissible to employ the corresponding Name, whether or not it is mentioned by the texts. This is a case of attribution of the Name by human reason. Al-Ghazzālī admits this solution for those attributes (*ṣifāt*) which, he says, designate a significant added to the essence; he does not admit it for the employment of the Name designating the divine essence itself. "Middle" solution of the Aḡharite al-Bīḥillīn, followed by many later Aḡharites: if the text or the tradition gives an attribute to God or speaks to us of an act of God (but in these cases only), "according to the rules of the language", one may designate Him by the corresponding Name, even though the texts do not "determine" it. And one should in particular exclude non-scriptural names, which would evoke a notion incompatible with the absolute divine perfection. (God should not be called *ʿarīf*, as *maʿrifa* "presupposes that some intention has been overcome"; likewise He should not be called *ḥabīb*, *ʿabīl*, etc.). According to this thesis, which has become current, the Names must, therefore, either be scriptural or at least have a scriptural derivation. *Two related problems:* a) the Names are eternal, Aḡharite thesis, in opposition to the Mu'tazilite thesis which holds them to be contingent; b) Hanafite-Māturīdite line: they are equal in importance and excellence (cf. *Fikḥ Akbar*, ii, 26); Aḡharite line: a hierarchy exists among them with the Name *Allāh* taking precedence (or, as the Sūfīs are prone to say, with some other Name known to the initiated, or even the ineffable Name, only attained through initiate experience, taking precedence).

**The 99 Names.** A *ḥadīṭ*, transmitted by Abū Hurayra, states: "To God belong 99 Names, a

hundred less one; for He, the Odd Number (= the Unique) likes (to be designated by these enumerated Names) one by one; whoever knows the 99 Names, with *taṭarrūʿ* (piety), the nature and attribution of these Names became one of the most diligent devotions in Islam. The pious Muslim repeats them and meditates on them, usually with the help of the 99 beads of the *subḥa* ("rosary") (q.v.), except for the *Wahḥīb*, who object to this custom as being a reprehensible *bidʿa* ("innovation"). It appears that a Syriac Christian custom already made use of the *subḥa* to count off an enumeration of divine Names, which was much shorter than the Muslim enumeration.

In fact, on the one hand, the traditional 99 "most Beautiful Names" do not exhaust the list of all the Qur'ānic Names; on the other hand, some of them do not occur *ad litteram* in the Qur'ān. As a result, the list was not always absolutely fixed and was liable to contain variants. It does not suffice, therefore, to settle the entire question of the divine Names. But the place held by this recitation in Muslim piety gives it an outstanding importance. It expresses clearly enough the pious Muslim's faith in God, and what the supreme Name *Allāh*, which, in itself, recapitulates all the others, means for him. We shall reproduce the most usually accepted list, in accordance with the *ḥadīṭ*, with a translation and a brief commentary. As space does not permit us to trace its usage historically, we shall take it in its finished form, as given by most of the *tafsīr* to Qur'ān, xvii, 170. Fairly frequently the Name *Allāh* is as though set apart, the hundredth Name if one so desires (thus the *tafsīr* of the *Qalālaya*). But it is also at times considered as the first of the enumeration; in which case the 67th Name *al-ṣubḥid* is suppressed and joined to the 68th *al-ʿakad*. Main references: *al-Mabūd al-ʿAsd* of Ghazzālī (Cairo ed. n.d.), especially 23-72; *Mawḍūʿ* of ʿAḍud al-Dīn al-Idḡī, commentary by al-Djurdānī (*Sharḥ al-Mawḍūʿ* Cairo ed. 1325/1907 vol. 8 211-17) who himself refers to al-Ghazzālī and to Sayf al-Dīn al-ʿAmīd.

The usual order may be established as follows: the first 13 Names (or Names 2 to 14 when the list starts with *Allāh*) are the 13 *ḥurūf* enumeration of verses lix, 22-24. The subsequent order seems to be mainly metonymic, governed by assonances, associations of verbal forms, doublets having both a correlative and paradoxical sense, etc. Connexion with the attributes (*ṣifāt*), where indicated by us, is that put forward by al-Ghazzālī or al-Djurdānī. Also to be noted: the Arabic root of several of these Names expresses different, sometimes opposite meanings, which are, therefore, present together in the mind of the Muslim reciting and meditating on the *subḥa*. It is therefore impossible at times to translate a Name into a European language by one single word.

**List of the "99 most Beautiful Names".** 1) *Allāh*, name belonging to God, "designates God Himself and may not be applied to any other being"; 2) *al-raḥmān al-raḥīm*, the Benefactor (or the Merciful), the Compassionate; depend on the attribute of will, both connoting the same sense; however according to al-Ghazzālī, *rahīm*, unlike *rahīm*, may only be applied to God (reminder of *Rahmān*, divine proper Name?); 4) *al-malik*, the King, indicates independence (negative attribute) towards all things, the dependence of everything as regards God (active attribute), and perfection of the divine power (attribute of power); 5) *al-quḍḍā*, the

Holy, in the sense of Separated (negative attribute), indicates: a) the absence of all blemish; b) that neither imagination nor sight can penetrate the mystery of God; 6) *al-salām*, Peace; a) possessor of a flawless peace (negative attribute); b) giver of peace and salvation at the beginning of the creation and at the time of the resurrection (active attribute); c) will pronounce the benediction of peace over his creature (attribute of speech); 7) *al-mu'min*, the Believer; a) with regard to this Name, the doctors of *ḥadīṣ* speak of God's "increate faith" in Himself; Idḡī comments: God is *mu'min* in as much as He puts faith in Himself and in His Messenger, meaning that He authenticates Himself and authenticates His Messenger by His supreme Veracity; this He accomplishes either by affirming Himself and His Messenger (attribute of speech), or by working, by "creating" the miraculous proof; b) God may also be called *mu'min* towards his disciples as a source of security and protection (*amān*); 8) *al-muḥayyis*, the Vigilant; a) ever present witness, whose omniscience is on guard over everything (attribute of knowledge); b) to be associated with *amīn*, taken as sincere, truthful in His speech (attribute of speech); 9) *al-ʿazīz*, both the Powerful and the Precious; a) negative attribute: means according to al-Ghazzālī, rare, very precious and difficult to obtain,—God is so rare that He is absolutely Unique, so necessary that nothing would exist without Him, so inaccessible that He alone can know Himself; according to al-Idḡī: without father or mother, whom no place can contain, and nothing resembles Him; b) attribute of action: He punishes whomsoever He wishes, is the Master of the retribution for actions; 10) *al-ḡhāḡḡir*, the Very Strong, the Haughty;—nothing or will may resist; according to another sense of the root *ḡḡr*; who sets to right, who restores, according to His Desire, what concerns His creatures. Depending on the circumstances: attribute of action, or negative and positive together. Synonym: *ʿazīm*, with the sense "all deficiency is diverted therefrom"; 11) *al-mutakabbir*, the Haughty;—according to al-Ghazzālī, everything seems base to Him in the sight of His Essence; al-Idḡī—al-Djurdānī: meaning also very close to *ʿazīm*; 12) *al-ḡhāḡḡ* and 13) *al-ḡhāḡḡ*, according to al-Idḡī—al-Djurdānī have a single sense: the Producer, the Creator of things; 14) *al-musawwir*, the Organiser, who ordains and composes the forms (*ṣuwar*) of things. These last three Names depend on attributes of action. Al-Djurdānī analyses them more closely: all three connote the passage from non-being to existence, the first towards determination, in accordance with the divine decree (*ḡadar*); the second towards existentialisation properly so called (*wuḡḡḡ*); the third towards the co-ordination of forms, according to the best of ordinances.

The Names 2 to 14 are given in the same order as *Kawṣar*, lix, 22-24. Now follow Names grouped in preference according to euphony.

35) *al-ḡhāḡḡir*, the Indulgent, pre-eminently the Pardoner, who knows how to remit the sentence of punishment even for one who deserves it (al-Ghazzālī makes it, by participation, the human qualitative of Jesus, just as he made *al-ḡhāḡḡir* his qualificative of Muhammad); attribute of will; 16) *al-labbār*, the Deceivator, He who always subdues, dominating and never dominated (negative attribute of action); 17) *al-wakḡḡ*, the constant Giver, who gives abundantly, receiving nothing in return (active attribute); 18) *al-razzāz*, the Dispenser of all good, who dispenses what pleases Him; primarily concerns the physical

needs of every human being (al-Djurdānī), but also the spiritual needs of rational creatures (al-Ghazzālī, —attribute of action; 19) *al-fatḡḡ*, (three shades of meaning according to the various connotations of the root), a) the Victorious, who vanquishes difficulties and brings about victory (active attribute); b) the Judge, whether pronouncing sentence (attribute of speech), or making known the decision (attribute of will); c) the Revealer, who discloses to men that which remained concealed from them (al-Ghazzālī); 20) *al-ʿalīm*, Knowing in a perfect manner everything which is knowable; Name directly bound to the attribute of knowledge (*ʿilm*) which is an attribute of essence (*ḡhāḡḡ*); a "natural" (*ḡāḡḡ*) attribute is involved, says al-Djurdānī.

The six following Names, whilst referring to Qur'ānic roots, are not to be found *ad litteram* in the Qur'ān; they are therefore regarded as "traditional". They go in pairs, opposites and correlative at the same time, except the absolute gratuitousness of God's gift. 21) *al-ḡhāḡḡ*, he who restrains, and 22) *al-matī*, he who expands (the lives, the hearts of his servants); 23) *al-ḡhāḡḡ*, who humbles and humiliates, and 24) *al-raḡḡ*, who raises in dignity; 25) *al-mu'azz*, who gives honour and strength, and 26) *al-muḡḡḡ*, who abases and degrades; 27) *al-ʿamī*, the Hearer, and 28) *al-bāḡḡ*, the Seer; God hears and sees all things, according to two "attributes of the essence", which the Qur'ān affirms, and which reason, this time, cannot prove; *al-bahām*, the Judge in his act of sovereign decision; idea of wisdom and providence (al-Ghazzālī, attached to the attributes of knowledge, speech, action); 30) *al-ḡāl*, the Just, who is supreme Justice,—nothing bad can come from Him (negative attribute); 31) *al-lafī*, the Benevolent, who creates in His servants a grace of benevolence (*laḡḡ*), to come to their help (attribute of action); 32) *al-ḡhāḡḡ*, a) the Sagacious, very close to *ʿalīm*, in the sense of knowing the intimate secrets of creatures (attribute of knowledge); b) who chooses, who decides freely (attribute of speech); 33) *al-ḡālīm*, endowed with gentleness, who is slow to punish (negative attribute); 34) *al-ʿazīm*, the Inaccessible (cf. the sense given with regard to *al-ḡhāḡḡ*); according to al-Ghazzālī is beyond the limits of human understanding, just as the earth and sky cannot be taken in at a single glance;

35) *al-ḡhāḡḡir*, the Very Indulgent, who pardons much; a) according to al-Idḡī—al-Djurdānī: identical in meaning to *al-ḡhāḡḡir*, just as *al-raḡḡm* and *al-raḡḡm* are identical in meaning; b) according to Ghazzālī: *al-ḡhāḡḡir* stresses that God pardons even repeated sins, whereas *al-ḡhāḡḡir* conveys in an absolute manner and without precision the infinite pardon of Muhammad; 36) *al-ḡhāḡḡ*, the "Very Grateful", in a metaphorical sense, coming from *ḡhāḡḡ* (gratefulness), i.e.: a) who gives much as reward for little (attribute of action), b) and proclaims the eulogy of whomsoever obeys him (attribute of speech);

37) *al-ḡāl*, the High; for al-Idḡī: synonym of *al-mutakabbir*; for al-Ghazzālī: God, primary Cause, is on the highest step of the scale of being; 38) *al-kabīr*, the Great; for al-Idḡī: synonym of *al-mutakabbir* and of *al-ḡāl*; for al-Ghazzālī: synonym of *al-ʿazīm*, stresses the absolute perfection of the being of God, whose eternal existence is the source of the being of all creatures; 39) *al-bāḡḡ*, the vigilant Guardian: sense close to *ʿalīm* according to al-Idḡī, for vigilance (*ḡāḡḡ*) is the opposite of negligence and forgetfulness, and therefore has its origin in *ʿilm*; a) God is Vigilant, continually

in action, by this action watching over the whole universe, without having to give His attention to things one after the other (negative attribute); b) He assures the permanence of created forms, by a vigilance which resists deprivations (attribute of action); 40) *al-mukāṭṭ* (four shades of meaning), a) the Nourisher, source of strength, for He creates nourishment (physical and spiritual); synonym of *al-ṣāḥib* (al-ḡhazzālī), b) the Detourner, who decrees and fixes destiny, attribute of power (*ḥakīm*); c) the Witness (*shāhid*), who knows the Mystery (*al-ghayb*), attribute of knowledge; d) the Present; 41) *al-ḥāsib*, the Calculator, He who settles accounts: a) who gives sufficiency, for He creates for His servants what is sufficient for them (active attribute); b) who, by His words, asks of whomsoever is submissive to the Law, account of what he does of good and of evil (attribute of speech); 42) *al-djāʾil*, the Majestic, worthy of veneration; a) according to al-ḡhazzālī, it is the stress placed on the Beauty of the divine Being which distinguishes this Name from *al-mukāṭṭabir* and *al-ṣayṭon*, with their adjacent meanings; b) according to al-Idrī, synonym of *al-mukāṭṭabir*; c) according to al-Djurdjūdī, qualified by the attributes of majesty (*djādāl*) and beauty (*djāmal*); 43) *al-ḥārim*, the Generous; four shades of meaning: a) endowed with liberality (attribute of action); b) who fixes the measure of generosity (attribute of power); c) from whom comes all nobility (attribute of relation); d) who pardons faults; 44) *al-raḥib*, the jealous Guardian, sense close to *ḥafiz* (and thus derived from the sense of *ṣālim*), according to al-ḡhazzālī, with a stress placed on an absolute and jealous vigilance; 45) *al-muḍallif*, the Assenter, who grants prayers; al-ḡhazzālī, who hastens to satisfy the needs of creatures, who anticipates them; 46) *al-wāḥid*, the Omnipresent, who embraces and contains all things; He extends His generosity to everything which exists, His knowledge to everything which is knowable, His power to everything which may be determined by it, absolutely and without His having to pay attention successively to things (al-Djurdjūdī); 47) *al-ḥakīm*, the Wise; a) synonym of *al-ṣālim* (al-Idrī), endowed with wisdom, i.e. with knowledge of things as they come from Him and with the production of actions according to what is expedient; b) the Prudent in His decisions: which corresponds to the perfect soundness of His providence, the guiding of the world and to the benefit from the accomplishment of His decrees; 48) *al-wāḥid*, the Very Loving; a) who loves the well-being of His creatures and procures it for them gratuitously; b) refers to the attribute from which proceeds the praise He bestows on the believer and the reward which He gives him; 49) *al-muḍallif*, the Glorious, a) whose actions are resplendent, whose favours abound; b) the praise due to him belongs to Him alone; 50) *al-bāḥiḡ*, the Revivifier, who will revivify every creature on the day of the Resurrection (this name has only a traditional origin); 51) *al-ḡhādī*, the Witness, a) who knows the Mystery, b) and who is Present (cf. 3rd. sense of *al-mukāṭṭ*); 52) *al-ḥakīm*, the Ideal, supreme Truth, connotes *al-ṣāli* (same kind of attribute): a) necessary by essence (ontological truth); b) perfectly truthful in His speech; c) the praise due to Him (truth); manifest; 53) *al-wāḥid*, the Trustee, He to whom everything is entrusted, who takes care of all the needs of creatures; 54) *al-ḥāḥi*, the Strong, who has power over all things; 55) *al-muṭin*, the Unshakable, whose power is without limit; 56) *al-wāḥi*, the Friend, the Protector, in the sense of helper,

defender; and also: the Holder of authority; 57) *al-ḥamīd*, Worthy of praise (attribute of relation); 58) *al-muḥṣi*, the Numberer, who comprehends and knows comprehensively all numbered things (*al-ṣālim*) and has power over them (*al-ḥāḥi*); 59) *al-muḥṣi*, the Innovator; a) absolute creator of beings; b) whose favours are purely benevolent; 60) *al-muḥṣi*, He who resuscitates, who causes the creature to "return" after its destruction; 61) *al-muḥṣi*, the Creator of life, and 62) *al-muḥṣi*, the Creator of death,—He who causes to live and to die; 63) *al-ḥāḥi*, the Living, one of the "essential attributes", "in the obvious sense" (al-Idrī); God is always acting and watching, whereas none can act upon Him in any way and none can perceive Him without dying; He is Living in the highest and most perfect degree of life, by reason of the absolute perfection of His Activity and His Knowledge (al-ḡhazzālī); 64) *al-ḥāḥi*, the Self-Subsisting: a) who subsists in Himself and by Himself, without any reason for being other than Himself (negative attribute); b) who rules and co-ordinates creatures, and none can subsist without Him; 65) *al-wāḥid*, the Opulent (the Perfect), to whom nothing can be lacking or be needed (negative attribute); 66) *al-wāḥid*, the Noble, the High (*al-ʿālī*), attribute of relation: to whom sovereignty and power belong (attribute of action), (N.B.—Here the majority of the enumerations insert the Name *al-wāḥid*, the Unique; al-ḡhazzālī and al-Idrī, who omit it, recall the sense in connexion with the commentary on the following Name); 67) *al-ḥāḥi*, the One, pre-eminently essential attribute, the very attribute of divine perfection,—differs from *al-wāḥid* as follows: *al-ḥāḥi* the One by Essence, absolute simplicity of the Essence, insuperable and inimitability of the divine attributes; *al-wāḥid*, the One God, there is no other God; 68) *al-ḥāḥi*, the Impenetrable; a) the Master, He who reigns (attribute of relation); b) sense close to *al-ḥāḥi*: from the acts of His adversaries neither trouble nor move (negative attribute); c) the Very High in dignity; d) He to whom one prays and supplicates (attribute of relation); e) in whom there is no "fellow": negation of all mixture and of all possible division into parts; 69) *al-ḥāḥi*, the Powerful, and 70) *al-muḥṣi*, the All-powerful; 71) *al-muḥṣi* and 72) *al-muḥṣi*, He who brings near and sends away: He brings near to Himself whomsoever He wishes and shows him his preference; He sends away from His sight whomsoever He wishes; 73) *al-ḥāḥi*, the First and the Last (Alpha and Omega): He is before everything and nothing is before Him; He is after everything and nothing is after Him (Primary Cause, efficient and final, according to al-ḡhazzālī),—negative attributes; 75) *al-ḥāḥi* and 76) *al-ḥāḥi*, the Patent and the Latent;—Patent: a) known by decisive proof (attribute of relation); b) which manifestly dominates all things (attribute of action);—Latent: a) screened from the senses (negative attribute), b) who knows the hidden things (attribute of knowledge); 77) *al-wāḥi*, the Reigning (al-Idrī); 78) *al-muḥṣi*, the Very High, the Exalted, synonym of *al-ʿālī*, the High, but with a supplementary idea of triumph; 79) *al-ḥāḥi*, who causes piety (*ḥayr*) to function in the heart and bestows the benefits; 80) *al-muḥṣi*, the "Essential", as of pure and gratuitous favour, returns to His servants if they return to Him, repenting of their faults; 81) *al-muḥṣi*, the Avenger, chastising whomsoever disobeys him; 82) *al-ṣāḥi*, who rubs out the traces of faults on the leaves where actions are inscribed; 83) *al-ṣāḥi*, the Merciful, the Compassionate, who

wishes to lighten the burdens (sense close to *rahīm*), according to al-ḡhazzālī; 84) *al-ḥāḥi*, the Master (King) of the Kingdom, who possesses in complete sovereign independence the world and each creature; 85) *al-ḡhāḥi* *wa* *l-ḥāḥi*, the Lord of Majesty and Generosity, sense close to *al-ḡhāḥi*, observe al-ḡhāḥi and al-ḡhāḥi; 86) *al-muḥṣi*, the Just, al-ḡhazzālī specifies "on the Day of Judgement"; (al-Djurdjūdī recalls that the root, according to the verbal forms, has both the meaning of "just" and "unjust"); 87) *al-ḡhāḥi*, the Assembler: a) who assembles beings according to their similitudes, their differences, their oppositions (al-ḡhazzālī); b) who reunites adversaries on the Day of Judgement (al-Idrī—al-Djurdjūdī); 88) *al-ḡhāḥi*, the Independent, who lacks nothing; 89) *al-muḥṣi*, the Enricher, who embellishes every creature, from whom creatures derive their perfection; 90) *al-muḥṣi*, (traditional Name only), the tutelary Defender; correlative of *al-ḥāḥi*, the vigilant Guardian; *al-ḥāḥi* stresses the idea of guarding, protecting,—and *al-muḥṣi* the idea of prohibiting and suppressing and excluding; 91) *al-ḥāḥi*, He who afflicts, and 92) *al-wāḥi*, He who favours: two traditional Names only; they teach that evil and good, affliction and favour, harm and benefit derive only from God; 93) *al-ḥāḥi*, the Light,—God is Light: a) of a perfect and manifest evidence in Himself, b) and He it is who makes all things manifest and evident, by causing them to pass from non-being to being; 94) *al-ḥāḥi*, the Guide, who creates the "right direction" (*al-ḥādī*) in the hearts of believers; and leads every being, rational and irrational, towards its end; 95) *al-ḥāḥi*, the Creator-Inventor, who is at the beginning of everything: a) who creates and invents without a model; b) who is Himself First absolutely, and nothing is similar to Him; 96) *al-ḥāḥi*, the Eternal, who remains,—without end; 97) *al-ḥāḥi*, the Inheritor,—who continues to exist after the annihilation (*fanā*) of His creatures,—to whom returns everything which His creatures possess; 98) *al-ḥāḥi*, the Leader, who directs with justice; who leads on the way of the Good; 99) *al-ḥāḥi*, the Very Patient, slow to punish, and who always acts in due time: sense close to *al-ḥāḥi* (traditional Name only).

Such is the list of the 99 "most Beautiful Names". Other lists exist, which sometimes exceed this number: one then encounters *al-raḥib*, the Lord, *al-muḥṣi*, the Benefactor, *al-muḥṣi*, He who gives, who grants (his gifts), *al-ḥāḥi*, the Sincere, the Truthful, *al-sāḥi*, who protects and who vouches, etc. To conclude, there are numerous studies on the divine Names which seek to group them according to the attributes (thus, al-ḡhazzālī, *Makṣad*, 72 ff.), with a predilection for imparting an appearance of spiritual meditation to this presentation. There are many examples of this in *taḥṣīṣ*. It is then no longer so much a question of providing a commentary on the 99 "most Beautiful Names", as of applying all the rules of *taḥṣīṣ* and of language to magnify the divine Mystery. For the use of the divine Names in *ṣūfi* prayers, see the article *ṣūfi*.

**Bibliography:** I) In addition to the Arab authors cited in the body of the article, reference should be made to the main Kur'anic *tafsīr*, and the very numerous manuals of *ḥadīṣ*, chapter on *al-asma'* *al-husnā*; 2) an example among many others of a *ṣūfi* "meditation": Ibn 'Aṭīr, *Alḥāḥi* of Alexandria, *al-Kaṣd al-Muḍjarrad fi Maṣṣiṭ al-Imal-Muṭarrad* (Cairo, al-Azhar ed., 1348/1930); 3) references in European languages: A. J. Wen-

sinck, *Muslim Creed*, Cambridge 1932, 196, 239; (non-typical) list of the *asma'* *al-husnā* ap. J. Windrow Sweetman, *Islam and Christian Theology*, I, 1, Lutterworth Press, 1945, 215-216; Miguel Asín Palacios, *El judío medio en la Creencia, compendio de teología dogmática de Alghazālī* (trans. of the *Iḥṣāḥ*, followed by fragmentary annotated translations of the *Makṣad*), Madrid 1929, 435-471; Y. Moubarek, *Les Noms, titres et attributs de Dieu dans le Coran et leurs correspondants en épigraphie sud-sémitique*, in *Muséon*, 1955, 86 ff. (L. GARDET).

AL-ASMA' AL-HUSNĀ. Abū Sa'īd 'Abū al-Malik R. RUYAR, Arabic philologist, d. 237/858 (also other dates in Yāqūt, *Irbid*, and later writers). The date of his birth, often stated as 123/828, is said not to have been known to himself; (see *Irbid*, vi, 86). The *nisha* al-Asma' is derived from one of his ancestors, Asma', that of al-Bāḥil from the ill-reputed Kayseite tribe al-Bāḥil, a relationship which is alluded at in a satirical poem of a contemporary poet; (see Ibn al-Mu'tazz, *Tahṣīṣ al-Shi'ar*, 130, and *al-Shi'ar*, 58 f.). In an anecdote he presents himself as an offspring of Banū 'Aṣur b. Sa'd b. Kays 'Aṣlān; (see al-Kāḥi, *al-Amāl*, i, 117).

This scholar and his contemporaries Abū 'Ubayda (q.v.) and Abū Zayd al-Ansārī (q.v.) constitute a triumvirate to which later philologists owe most of their knowledge about Arabic lexicography and poetry. They were all of them disciples of the leading philologist of Basra, Abū 'Amr b. al-'Alāḥ (q.v.). Among their numerous disciples the litterateur al-Djāḥiz has left in his works a monument of their learning. An astonishing memory and an unusually critical mind distinguished al-Asma'. From his teacher he had taken over also an accurate consciousness of the limits fixed to philological knowledge; (see an utterance of Abū 'Amr quoted by Suyūfī, *al-Muṣṣir*, i, 123). The method of seeking information from the bedouins in matters concerning grammar and lexicography which seems to have been developed in Basra under the stimulus of Abū 'Amr was taken over by his disciples. A list of the bedouin teachers of the Bagdadi is given in *Fihrist*, 43 f.; (cf. *al-Muṣṣir*, ii, 401 f.). In Basra common people were familiar with his scholarly interests and could suggest to him where he could find a *ḡhayṣ* possessing a perfect knowledge of the *lughā*; (see *al-Muṣṣir*, ii, 307). Anecdotes tell also of his rides into the desert to visit bedouins and collect pieces of poetry from their lips. Already as a young man he was sought by students who were anxious to learn from him, and his *madḡḡ* was widely known. Of the different branches of philological work which had already developed, lexicography particularly corresponded to his talent, whereas Abū Zayd is said to have been his superior in grammar and al-Kāḥi to have been in despair about him in metrical matters; (see Ibn Dīnār al-Kāḥi, 397). There are several traditions about the circumstances which brought al-Asma' to Baghdād and the court of Hārūn al-Raḡḡid. According to a story told by al-Marzubānī and quoted by al-Yāqūt, ii, 66, he had met the caliph already in Basra. As a crown-prince Muḥammad al-Amīn summoned him and he was introduced to the caliph by the vizier al-Fadl b. al-Raḡḡ; (see *Ta'rikḡ Baghdādī*, x, 471). According to al-Djāḥizīyārī, al-Wazā'ir, 189, he was introduced to Hārūn al-Raḡḡid by Dja'far b. Yahyā al-Barmakī. The Barmakids bestowed substantial benefits on him; (see Ibn al-Mu'tazz, *op. cit.*, 98). This did not restrain him however from satirising

them after they had fallen into disgrace; (see al-Dihāghīyārī, 206). As an intimate of Dī'a'far he was himself in fear of his life when he got to know about the fall of Dī'a'far in 187/803; (see al-Dihāghīyārī, 206). In al-Asma'ī's opinion, the poet Ishāq b. Ibrahim al-Mawqīf, his rival at the court, was more successful in obtaining from the caliph a ready-money consideration for his wit; (see *Asghārī*, v, 77, al-Huṣrī, *Zahr al-Adab*, 1012, and *Iṭṭihād*, ii, 203). The 'Ibd of Ibn 'Abd Rabbih contains a number of the "extraneous tales" (*naṣidat*) and the "amusing stories" (*muṣalāḥ*) with which al-Asma'ī entertained the caliph. After the death of Hārīm, al-Asma'ī seems to have returned to Basra. According to the last piece of evidence he died in Marw; (see Ibn Khallikān, nr. 359).

Among the disciples of al-Asma'ī and related circles of Basra and Baghdad there circulated numerous stories told by him or about him which found their way into Arabic literature. Some of them certainly catch authentic features of his character. Thus we are told that, at the summit of his career, though possessing at that time considerable property, he persisted in living as a poor man. As against the luxuriousness of the Persians, the plain living ascribed in tradition to 'Umar b. al-Khaṭṭāb and al-Ḥasan al-Baṣrī represented to him the pure Arab way of living; (see al-Dihāghī, al-Buḥārā, (al-Hāghīrī), 186). The numerous sayings of unlearned men and women of the desert told by him are certainly meant also to illustrate, not only the *balāgha* but also the sincere piety of plain-living people. His predilection for the sentimental and pathetic elegy—he is said never to have transmitted satirical poetry—is in accordance with his idealisation of the Arab race according to his own religious feelings. In authentic traditions he relates the sayings of al-Ḥasan al-Baṣrī. Numerous traditions beginning with the formula "I heard a bedouin saying in his prayer" are in the same spirit. In the works of later writers these sentimental features dominate the character of al-Asma'ī. We find them in the romantic story put into the mouth of al-Asma'ī in one of the fictitious "traditions" (*ahādīth*) of Ibn Durayd; (see al-Kāll, al-Amālī, ii, 7). In the *Mukhḍarat al-Aḥbar* of Ibn al-'Arabī, the learned philologist of Basra tells, as did his contemporary the Egyptian mystic Dha'ī-Nūn, about his meetings with poor bedouins and young girls who revealed to him an unexpected and extraordinary insight into the mysteries of the divine love; (see *op. cit.*, i, 81 and 133).

His orthodox contemporaries and later writers agree that al-Asma'ī was an orthodox Sunnī. According to Ibrahim al-Harīrī (d. 283/89), there were among the philologists of Basra only four definite adherents of the *ṣuṇna*, one of them being al-Asma'ī; (see *Ta'rikh Baghdad*, x, 418; cf. Ibn al-Anṣārī, 170). As an instance of his piety tradition adduces that in order to "avoid sin" he answered with strict silence to any philological question which evidently had or could have a bearing upon the reading of the Kur'ān or the wording of tradition. (A list of examples is given in *al-Muṣṣir*, ii, 325 f. Whereas for Abū 'Amr and Abū 'Ubayda the study of the *luḡha* was dependent on that of the Kur'ān, al-Asma'ī thus separated in himself the "reader" from the grammarian and the transmitter of poetry. In accordance with the attitude held by his teacher Nāfi' and the readers of Medina (see about this subject *Two Muqaddimas in the Quranic sciences*, ed. A. Jeffery, Cairo 1954, 183) al-Asma'ī consequently abstained also from *tafsīr*; (see *al-Muṣṣir*, ii, 416, and *Iṭṭihād*, i, 26 f.). In this

respect he was opposed to people of Mu'tazilite and Kadarite outlook who, in his view, commented upon the Kur'ān according to their "opinion" (*ra'y*), as did Abū 'Ubayda in his *al-Maḡāzī*; (see *Iṭṭihād*, ii, 389 and vii, 167).

As a transmitter of poetry al-Asma'ī and his generation were essentially influenced by "the great transmitters", Hammād al-Rāwīya and Khafā' al-Aḥmar (q.v.). The inconveniences connected with the unreliable character of these persons were clearly seen by him; (see *Iṭṭihād*, iv, 140 and *al-Muṣṣir*, ii, 406; cf. Blachère, 99 f.). In order to collect in a complete and definite form the odes of the great pre-Islamic poets he sought persons known to have a reliable knowledge of the tradition. In his work he developed a critical method remarkable for his time, a deep knowledge of the topography of the Arabian peninsula, of the genealogies of the tribes and, above all, of *luḡha* and of grammar. Handed down by his disciples, these critical remarks found their way into the works of later commentators. On the basis laid by al-Asma'ī, his disciple Ibn Ḥabīb, 'Alī b. Abd Allāh al-Tūst and, finally, al-Sukkarī, prepared the definitive editions of the *diwān*.

From the 72 pieces or fragments of pre-Islamic or early Islamic poets which he collected in an anthology called *al-Asma'īyyāt* (ed. Ahlwardt, *Sammlungen alter arabischer Dichter*, i, Berlin 1902), we can get an idea of al-Asma'ī's literary taste. On the subject of criticism (*nadh*) al-Asma'ī's numerous writings of al-Asma'ī are quoted in later writers. In a note-book called *Fuḥūlat al-Shu'arā'* (ed. Torrey, ZDMG, 1911, 487-516), his disciple Abū Ḥātim al-Sijistānī collected answers given by his teacher to the question which poets are to be regarded as *faḥl*. Whereas Abū 'Amr, according to al-Asma'ī, was never heard to quote an Islamic poet (Ibn Raḡhīb, *al-Umda*, i, 73), his disciple valued the new poets who mastered the *luḡha*; (see for instance Ibn al-Djarrāh, *al-Warāḥa*, 60. For his criticism of the *muṣallāt*, see J. Fück *Arabiya*, 22 f.).

Applying to the rich lexicographical materials collected by him the systematic methods employed by philologists from the very beginning of these studies in 'Irāq, i.e. of grouping together items of similar material, al-Asma'ī composed a series of monographs the titles of which are listed in the *Fihrist*, 55. In his *Diwān al-'Arab*, which is lost but is copiously quoted by Yāqūt in his *Ma'āḍim*, he often seems to adduce a first-hand knowledge of topography; (see for instance *Ma'āḍim*, i, 705). About the size of these treatises we know from *Fihrist* only that the *Ḥawār al-Hadīth* was written in 200 folios. A number of them, however, have been preserved; (see Brockelmann, i, 104 and S. I, 164). That these specimens of al-Asma'ī's lexical work do not represent the final state of his collections seems obvious, if one compares for instance the rather meagre text of his *al-Nabāt wa'l-Shadīr* (ed. Hafner, Beirut 1898) with the rich material on the subject quoted from al-Asma'ī by Abū Ḥanīfa al-Dīnawarī in his *Kiṭāb al-Nabāt*.

Among the disciples of al-Asma'ī, Abū Naṣr Ahmad b. Ḥātim al-Bāḥilī was known to be his *ra'yīya*. He is said to have transmitted the books of his teacher to Tha'lab; (see *Iṭṭihād*, ii, 140). As a transmitter of them there is mentioned also Abū 'Ubayd al-Kāsim (q.v.), who divided the books of al-Asma'ī into chapters and added some pieces of information to them on the authority of Abū Zayd al-Anṣārī and the philologists of Kūfa; (see *Iṭṭihād*, vi, 162 f.).

For later lexicographers the main source of information about materials collected by al-Asma'ī was the *Tahdhīb al-Luḡha* of al-Azhārī. In the introduction (ed. Zetterstéen, MO, 1920, 1 f.), al-Azhārī mentions the direct and indirect sources from which he drew these materials.

'ASR (al, time, age; particularly the early part of the afternoon, until the sun becomes red; hence *ja'at al-'asr*, the ritual prayer in the afternoon, cf. SAKĀT. (Ed.)

ASRAṬĪL [see TIRAZĪL].

ASS [see ALĀN].

ASSAB, town and port at the N.W. end of the Bay of Assab on the coast of Eritrea. The surrounding country is arid and is inhabited by Afar (Danakīl). Assab is generally identified with the ancient Sabae, described by Strabo (xvi, 772) as *πάλαι εὐχρηστὴρ*. Its importance is due to its position opposite Mukhā and at the end of a caravan route leading to the Ethiopian plateau, both the Red Sea and the coastal desert being comparatively narrow at this point. In 1936-39 the Italians built a motor road from Assab connecting with the main Add Ababa-Assmara road near Desaye. Assab was known to the Jesuit missionaries of the early seventeenth century; they describe it as Ethiopian territory. It was occasionally visited by European voyagers who found it a useful place in which to careen their ships. In 1641 it was called "a very good road . . . where you may have wood and water freely, and refreshing for your money or coarse calicos". (Sir W. Foster, *Letters received by the East India Company from its servants in the East*, i, 131). It is mentioned from time to time in the Company's records and is said to have been ruled by a Muslim "King". In 1866 it was acquired from the Sultan of Bahayta by the Italian traveller, ex-missionary and propagandist for colonial expansion, Giuseppe Sapeto, acting for the Rubattino shipping company, by which it was used as a coaling station. It became an Italian colony in 1882 and with the extension of Italian rule was made the capital of a commissariat. In 1928 Ethiopia was granted freedom of trade at Assab which became increasingly important commercially.

ASSAM, name of the easternmost province in the Republic of India, situated between East Pakistan and Burma, within 23° 19' and 28° 16' N. Lat., and 89° 42' and 97° 12' E. Long. It comprises the Brahmaputra valley and the hill ranges enclosing small plateaus, the shelter of numerous hill tribes and refuge of the Mongol hordes. The province

covers 85,012 English square miles, and its population in 1951 was 9,043,707, of whom 1,996,456 were Muslims, three-fourths of these being concentrated in the westerly districts of Goalpāra and Kāmārup, contiguous to North Bengal, and Cachar, adjacent to Pakistani Sylhet. Since 1920 their percentage has considerably increased in other neighbouring districts owing to immigration from Bengal, the eastern portion of the valley remaining unaffected.

In Sanskrit records the valley is called "Lawhitya", Prāg-jyotisha", or "Kāmārupa". The word, Assam (correctly Āsāma, locally pronounced Ahōm), is connected with the *Shani* or *Tais*, a group of Tibeto-Burmans, who settled about 8th century A.D. in Siam, Upper Burma, and finally in this province. Its derivation from Sanskrit A = āsāma (= "people") is unwarranted. The Ahom migrants had a sense of history, and produced works called *Iṭṭihād*. The first king known is Sukaphā, who, in 1228, occupied a portion of the Upper Valley. His successors gradually conquered the neighbouring tribes and established the Ahom kingdom. The western valley, with the city of Gawahāṭī, which lay outside their domains, retained the name of Kāmārup, and was ruled by petty landlords, collectively called Bārābhūiyas. Twice they were integrated into the kingdom of Kāmārup-Kāntā, first by the Khens, and next by the Kochas, northern rural neighbours of the Muslim Sultāns of Bengal.

The Muslim advance into Kāmārup falls into three stages. The first, which began in A.D. 1206 with Bakhtiyār Khālji, is a period of raid, occasional occupation and imposition of tribute. It culminated in 1357, when Sikandar Shāh founded the mint of Castlān'urī Kāmāri (possibly Gawahāṭī). It is in one of the neighbouring caves that Ibn Baṭṭuta possibly met the famous saint Shāh Dildāṭ Tahrīf. The second period began with the defeat of Kāmāvara, the king of Kāntā, by Bārābhūiyas, and the final occupation of Kāmārup by 'Alā' al-Dīn Husayn Shāh after overthrowing the Khen king, Nīlambar, in 1498. So far the Muslims had not contacted the Ahoms. Kāmārup being alone mentioned in contemporary Muslim records. The *Burani* speak of first Muslim invasion in 1532 by Turbak (possibly Babr-bak = "naval officer"), obviously an official posted in Kāmārup, but the invading forces were utterly routed. With the downfall of the Huayn Shāhī dynasty in 1538, the Kochas emerged and established their kingdom. Of this period the tomb of Sulṭān Ghayyūḍ al-Dīn Awliya at Hajo is an important memorial. The third period began in 1612, when Islām Khān, the Mughal Governor of Bengal, subjugated the Kochas and occupied Kāmārup once again. Hereafter wars with the Ahoms became frequent, and Assamloomed large in Persian chronicles. In 1662 Mir Djuṃlā finally reduced the Ahom king and imposed an annual tribute on him. The subsequent weakness of the Mughals encouraged the Ahoms, who by 1682 occupied the whole Brahmaputra valley and continued to rule till 1824, when the British intervened to check the threat of the Burmese and integrated Assam into their territory. The Ahoms retained the services of the Muslims for their skill in arts and crafts. The *Marias* (barriers) and the *Garias* (tailors by profession) are even now common to some districts. In the middle of the 19th century a large percentage of the Muslims were affected by the "Farā'īdī" movement. The humbler peasants have developed a peculiar local culture, combining with their faith in Islām the local rites and customs and national festivals of this region.

**‘ASSĀR**, **SHĀMS AL-DĪN MUHAMMAD**, Persian poet, born in Tabriz, died in 779 or in 784/1382-3; he was one of the panegyrist of the prince Uways (q.v.) and is chiefly known for his poem *Mīhr u Mughlārī*, at the end of which he gives the date of its completion [to Shawwāl 778/1377]; this poem consists of 5,120 distichs and was later translated into Turkish. In the words of Ethé (*Gr. I. Pél.*), it is "the story of a love, free from every frailty and pure from every sensual lust, between Mīhr, the son of Shāhshūrah, and the comely strippling Mush-tārī".

**Bibliography:** Von Hammer, *Gesch. d. schönen Redekünste Persiens*, 254 [analysis and translation of selected passages; the name of the poet is erroneously given as 'Alī(Dī)]; Peiper, *Comment. de libro persico Mīhr u Mughlārī*, Berlin 1839; Fleischer, in *ZDMG*, xv, 359 ff.; Rieu, *Cat. **ASSASSINS** [see *ḥashshīn*].

**ASSUAN** [see *uswān*].

**ASTARĀBĀDHĪ**, Astarābād, (Istirābād in Sanskrit, Anadī).

1. A town in Iran situated ca. 23 m. east of the S-E corner of the Caspian Sea at 36° 40' N. lat. and 51° 42' E. long. (Greenwich) on a tributary of the Karāsū. It is 377 ft. above sea level and 3 m. from the foothills of a mountain chain, a spur of the Elburz. The town lies on a plain which ends in the Turkoman steppes to the north. Astarābād is now called Gurgān (not to be confused with medieval Gurgūn, Arabic *Gurjān*, to the N-E).

The pre-Islamic history of the town is unknown, and it is uncertain whether it existed before Islam, although Mozdammān in *SF Hayr*, *AK*, 1869, 336, identifies it with ancient Zadrakart. The etymology of the name is also obscure. Folk etymology connects the name with the Persian word for "star", or for "mule", and appropriate stories are told of the origin of the town.

Astarābād was the second city of the province of Gurgān in Islamic times and underwent the same fortunes as the capital city Gurgūn. The province was raised by the Arabs in the time of the caliph ‘Uthmān al-Baladhīrī, *Futūh*, 334, and again by Sa‘īd b. ‘Uthmān under Mu‘awīya, but it was not conquered until Yazīd b. Muḥallab defeated the ruling Turks of the area in 98/716. There is a tradition that Yazīd founded Astarābād on the site of a village called Astarak.

There were frequent rebellions in Gurgān during both the Umayyad and the ‘Abbāsid caliphates. Astarābād is rarely mentioned by historians, and the geographers also give little information. It was a silk centre according to al-Istakhārī, 213. The port of Astarābād (and Gurgān) on the Caspian, Astarābād, was an important trading centre. The *Uyūd al-‘Ālam*, 134, says the people of Astarābād spoke two languages, one of which is probably preserved in the dialect used by the Hurafī sect.

After the Mongol conquest of Iran we find Astarābād replacing Gurgān as the most important town of the area. The province was the scene of strife between the last Il-Khāns, the Timurids, and local Turkish tribal leaders. Sometimes during this period the Kādjir tribe of Turkomāns became the leading power in Astarābād, Aghā Muhammad, first of the Kādjir Shāhs, was born in Astarābād. Shāh ‘Abbās I, Nādir Shāh, and Aghā Muhammad all erected buildings in Astarābād. The town, located on the steppes, continually suffered the depredations of Turkomāns.

Astarābād had many mosques and shrines (see Kabūn, below), and was called *dar al-mu‘minin* probably because of the many sayyids living there. The name of the town was changed to Gurgān under Rīdā Shāh, and in 1950 it had ca. 25,000 inhabitants. There are few old remains in the town, and only two are noteworthy, the Imāmzāda Nūr and the mosque of Gulshāh. Rablow (below, 725) lists the shrines of the town as well as the inscriptions.

2. The province Astarābād, as it existed under the Kādjirs, was bounded on the north by the Gurgān River, on the south by the Elburz Mts., on the west by the Caspian Sea and Māzandarān, and on the east by the district of Dījārlān. The district (*shahristān*) of Gurgān under Rīdā Shāh was smaller. The province could be divided into two parts, the mountain area and the plains. The former is well-watered with many trees, while the latter is fertile, even marshy but becomes desert to the north. Wheat and tobacco are grown extensively here. The population is mixed, with Persian speakers predominant in the mountain area and the towns, and Turkomāns on the plains.

**Bibliography:** A history of Astarābād was written by a certain al-Idrīsī (d. 405/1014) which has not survived. (see Brockelmann S E 270); H. E. L. Kuhn, *Māzandarān and Astarābād*, London 1928, 71-7; Yāqūt, i, 242; G. Melgoum, *Dus siid. Ufər des Kaspiischen Meeres*, Leipzig 1868, 107-24; J. de Morgan, *Mission scientifique en Perse*, i, Paris 1894, 82-112; Le Strange, 378-9. For recent information on the town and province of Gurgān, see *Farkhānāh-i Dījārlān* by S. Ibrāhīm, ed. Kāzmāzī, 3, Tehran 1951, 224-5. A plan of the town appears in *Rāhnāmā-yi Irān*, Tehran 1952, 203. See also art. on Astarābād in *Dīkhkhudā, Luḡat-nāma*, Tehran 1952, 2143-6.

(R. N. FRAYE)  
**AL-ASTARĀBĀDHĪ**. The *nishā* of several Muslim scholars of whom Raḡl al-Dīn al-Astarābādī and Rukn al-Dīn al-Astarābādī (see below) are the best known. Yāqūt describes Astarābād as a city producing scholars proficient in all sciences and mentions the *Kāfī* Abū Naṣr Sa‘īd b. Muḥammad b. Imāmī al-Muṭarrīf al-Astarābādī (d. circa 540/1155-6), the *imām* Abū Nu‘aym ‘Abd al-Malik b. Muḥammad b. ‘Adī al-Astarābādī, author of a treatise on the verification of traditions (d. 320/932) and the *ḥādī* al-Husayn b. al-Husayn b. Muḥammad b. al-Husayn b. Rāmd al-Astarābādī, a much-

travelled scholar who consorted with Sūfīs (d. in Baghdad in 412/1021-2). There were several well-known Astarābādī ‘ulamā in Safawid times, including Ahmad b. Tāj al-Dīn Ḥasan b. Sayf al-Dīn al-Astarābādī, author of a biography of the Prophet, ‘Imād al-Dīn ‘Alī al-Shar‘ī al-Kāfī al-Astarābādī, author of a treatise on the recitation of the recitation of the Qur‘ān, and Muḥammad b. ‘Abd al-Karīm al-Ansārī al-Astarābādī, who translated an Arabic work on ethics. The *nishā* al-Astarābādī is given also to several lesser known scholars, such as al-Ḥasan b. Ahmad al-Astarābādī, a grammarian and lexicographer, and the traditionist Muḥammad b. ‘Alī.

**Bibliography:** Yāqūt, i, 242; Storey, 42, 177, 192; Suyūṭī, *Daḡayāt al-Wu‘ūd*, Cairo 1396/1908, 218; Ethé, *Catalogue of Persian MSS.*, in the *Library of the India Office*, Oxford 1903-37, 724-826 (1162); Loth, *Catalogue of Arabic MSS. in the Library of the India Office*, London 1877 i, 258; Muḥammad b. Imāmī Abū ‘Alī al-Ḥāṭirī, *Munlaḥ al-Maḥal* (Bibliothèque Tehran 1302/1885); the *Manḥad al-Maḥal* of Muḥammad b. ‘Alī al-Astarābādī is published as a supplement to this; ‘Abī Akbar Dīkhkhudā, *Luḡat-nāma*, Tehran 1332/1953, s.v. *Astarābādī*. (A. J. MANGO)

**AL-ASTARĀBĀDHĪ**, RAḢĪ AL-DĪN MUHAMMAD B. AL-ḤASAN, author of a celebrated commentary on the *Kāfīya*, a well-known grammatical work of Ibn al-Ḥajjīb. Al-Suyūṭī, who praises the commentary as unique, admits to knowing nothing of Raḡl al-Dīn’s life, except that the work was completed in 683/1284-5, and that Raḡl al-Dīn was reported to have died in 684 or 686/1285-6. He also wrote a lesser known commentary on the *Shāfiya* of Ibn al-Ḥajjīb. The *ḥādī* Nūr Allāh Shāhshūrī interprets a reference in the introductory prayer as meaning that this commentary on the *Kāfīya* was written in Najaf, but the term *ḥaram* which occurs in the Arabic edition could refer just as well to Mecca, where Suyūṭī obtained his information on the date of Raḡl al-Dīn’s death. There seems no doubt, however, that Raḡl al-Dīn was a Shī‘ī.

**Bibliography:** Suyūṭī, *Daḡayāt al-Wu‘ūd*, Cairo 1396/1908, 248; Muḥammad b. al-Ḥasan al-Hur, al-‘Amāl, *Amāl al-‘Amāl*, lithographed, Tehran 1302/1885, 61; Kāfī Nūr Allāh Shāhshūrī, *Madjalis al-Mu‘minin*, fifth *Madjīs*; Brockelmann I, 21, 303, 305; S. I. 332, 533, 713; M. S. Howell, *A Grammar of the Classical Arabic Language*, Allahabad 1894, Introduction, xi. Raḡl al-Dīn’s commentary on the *Kāfīya* was published in Cairo in 1251/1939. (A. J. MANGO)

**AL-ASTARĀBĀDHĪ**, RUKN AL-DĪN AL-ḤASAN B. MUHAMMAD B. SHARAFDĪN AL-‘ALAWĪ, known as Abū T-Ḥadī al-Sayyid Rukn al-Dīn, a Shī‘ī scholar best known for his commentary on the *Kāfīya*, a grammatical work of Ibn al-Ḥajjīb. This commentary, the *Wāḍiyā*, is known also as the *Mutawassit*, or "intermediate", as it was the second of three commentaries. Al-Suyūṭī, quoting Muḥammad b. Raḡl’s appendix to the *Ta’wīḡ al-Baḡhdādī* (the passage is not included in the abridged *Baghdādī* edition of 1938) says that he enjoyed the patronage of Naṣr al-Dīn Tūst (q.v.) in Marāgha where he taught philosophy and composed commentaries on *Ṭabarī*’s *Taḡrīd al-‘Alawī* and *Kawāṣir al-‘Abbāsid*. He accompanied Tūst to Baghdad in 672/1272, and after the death of his patron in the same year, settled in Mawṣil, where he taught in the *Nāriyya madrasa* and composed his commentary on Ibn al-Ḥajjīb. From Mawṣil he went on to Sulṭāniyya,

where he taught Shāfi‘ī jurisprudence. He died in 715/1315-6 or 718/1318-9 (two MSS. in the Bibliothèque Nationale give the date of his death as 717/1317-8 and 719/1319-20). Rukn al-Dīn was reputed for his modesty as well as for the honour in which he was held in the Mongol Court.

**Bibliography:** Suyūṭī, *Daḡayāt al-Wu‘ūd*, 228; Sulṭī, *Tabaḥṭ al-Shāfi‘iyya al-Kubra*, Cairo 1306, vi, 861; Ethé, *Catalogue of Persian MSS.*, in the *Library of the India Office*, Oxford 1903-37, 724-826 (1162); Idem, *Arabic MSS.*, in the *British Museum*, London 1894, 946; de Slane, *Bibliothèque Nationale Catalogue des Manuscrits Arabes*, Paris 1883-95, 2369, 4037; Brockelmann I, 305, 51, 530; M. S. Howell, *A Grammar of the Classical Arabic Language*, Introduction, v. (A. J. MANGO)

**ASTARĀN** [see *ASTURĀN*].

**ASTORGA** [see *ASTURGA*, in the Suppl.].

**ASTRAKHĀN**, city and district. The city lies on the left bank of the Volga, some sixty miles from the point where it runs into the Caspian Sea, 46° 21' N, 48° 2' E, 20.7 m. below normal sea level, 7.6 m. above the level of the Caspian Sea. Ibn Baṭṭūta, ii, 410-2, who passed through here in 1313, mentions for the first time a settlement supposed to have been founded by a Meccan pilgrim, whose religious reputation brought the district exemption from taxes; this was supposed to explain its name, viz. *Hāḡḡī* *Tarkhān* (*tarkhān* means among the Mongols in later times a man exempt from taxes, a nobleman). Other forms of the name are *Cytrykan* or *Zytrykhān*, in Ambr. Contarini’s account (1487) *Citican*, in Turkish-Tatar sources also *Akhākhān* and *Ashtarakhān*. The settlement lay on the right bank of the Volga on the Shārenī (or Zārenī) hill; the first coins discovered are from 776/1374-5 and 782/1380-1. (777/1375-6: Chr. Frāhn, *Münzen d. Chane etc.*, St. Petersburg 1832, 22, no. 102; Idem, *Reuensio etc.*, St. Petersburg 1826, 300, no. 1; A. K. Markov, *Inv. Katalog*, St. Petersburg 1896, 860; 1380-1; Idem, 470; P. S. Savčev, *Monety Dzhidano*, ii, St. Petersburg 1858, 18, no. 416; also the Kaiser-Friedrich Museum, Berlin, possessed a specimen.) In the winter of 798/1395-6 Timur destroyed the city, as well as Saray (q.v.) (Shāhī, *Zāfar-nāma*, ed. Tauer, i, 158-64). In contrast to the latter Astrakhān rose again and took over eventually its importance as a centre of trade; in the course of this it became, as earlier the neighbouring Khazar city of Itil (Aḡd) (q.v.), eventually the centre of the traffic on the Caspian Sea and the lands bordering on it.

In 871/1466 there was established in Astrakhān, during the decline of the Golden Horde (cf. *BAṬṬIN*) a Tatar dynasty of the Noghay princes stemming from the Tatar Khān Kūčūk Mehmed. The territory ruled by the Khān Khānī (871-908/1469-91) and his brother ‘Abd al-Karīm (in Russian and Polish *Ablungirym*; 896-910/1490-1504) encompassed the country as far as the modern Stavropol’, Orenburg (Khalov), Samara (Kuybyshev) and Saratov, and was divided into various *uluses*. The population supported themselves mainly by cattle raising, hunting and fishing. Conflicts with the *begs*, the rapid changes of the Khāns after 910/1504 on interference of the Chinese Tatars and the Nogheys brought the Khānate into difficulties; the Khān ‘Abd al-Rahmān 941-5/1534-8 sought help against these and the Ottomans from the Russian Czar. (For a list of the Khāns see Zambaur, 247, and for a genealogical table *ibid.*, 245.)

of the *hadiya* into  $2 \times 12$  hours, starting from 0° and 180°, as shown in Fig. 1a (outer rim), is often found on European, but never on oriental astrolabes. The latitude for which a *saḥba* is designed is usually engraved near the middle of the disc; it may be expressed in various ways: by degrees and minutes (e.g. "valid for the lat. of 38° 54'"), by the name of a particular city ("valid for the lat. of Mecca"), or by the duration of the longest day ("valid for 14<sup>h</sup> 45<sup>m</sup>"). N.B. Ascending errors are sometimes found in the descriptions of astrolabes in

European collections, where *abjad* numbers are misread for names of (non-existing) places. The number of the *saḥba*'s varies; a good instrument may contain nine and even more. Certain astrolabes have also a *saḥba* which gives for a particular geographical latitude the projection of the circles of position, as required for the calculation of the astrological *directions* (*ḥasyr*); others have a *saḥba* "for all latitudes" (*ḥi-ḥamā' al-'arad*) also called the "tablet of the horizons" (*saḥba al-ḥayyān*) or "general tablet" (*ḥamā'a*), which carries only the projection of the

Fig. 1a. Face of an astrolabe showing the division of the *Saḥba*.

meridian and that of the horizon for a number of latitudes; the projection of the latter is often reduced to one-half of each arc of horizon. This disc serves to solve, for any latitude, the problems concerning the hour and the azimuths of the rising and setting of stars (cf. Michel [1], 91-2). The "perfect" (*ḥāmil*) astrolabe, moreover, bore the circle of the sun's equation. Finally, by interchanging the four quadrants of a *saḥba*, such fanciful figures as the "magical tablet" are obtained (see Michel [1], 61 and Fig. 44); although being only a geometrical play, they allow the same measurements to be carried out as does an ordinary *saḥba*. An astrolabe on which all of the 90 almanacs are marked, is called "complete" *ḥāmil*, L. *solipartitum*. If only every second, third, fifth, sixth, ninth, or tenth, almanac is marked, it is called *nisfi* (*bipartitum*), *ḥalḥāl* (*tripartitum*), *ḥūmal*, *ṣadī*, *ṭaw'ī*, *ṣaḥrī*.

The *ʿashabāt* represents the vault of the fixed stars turning around the earth at rest represented by the *saḥba*. In order to allow the diagram of the *saḥba* to be seen as clearly as possible it is wrought in the shape of an openwork plate, having of course due regard to its solidity and the space required for attaching the protuberances or pointers (in the sing. *ḥaḥba*, *ḥaḥbiyya*) indicating the fixed stars. It is because of this reticulated form that it has been called a "spider", referring of course to the spider's web (Gr. *ἀράχνη* and L. *aranea* may both mean the spider and its web). In designing this "spider", no limits are imposed on imagination, and almost every conceivable type is found, from the simplest geometrical pattern to the most beautiful leaf and scroll designs. As shown in Fig. 2, its most important part is the circle of the zodiac, (*minṭaqat al-ḥurūd*), which is constructed in exactly the same way as all other circles represented on the *saḥba*. It is divided into the 12 *ḥurūd* comprising 30° each, but it is well to note that this division, radiating not from the pole of the ecliptic, but from that of the equator, does not indicate ecliptic longitudes, but the points of the zodiac having the right ascensions 0°, 30°, etc., and their subdivision into degrees (*muḥallatun ḥawā*, see Michel [1], 67 f., and Hartner [1], 254 f.). At the point of contact with the southern tropic, the zodiac carries a little point or hand, *A*, which serves to read the graduation on the *hadiya*. The spider is rotated by means of one or several handles, *M*, called *mudr* or *mudhr*. By combining parts (halves, fourths, sixths, even twelfths, i.e., single signs) of the zodiac represented in northern with others represented in southern projection, the zodiacal belt assumes more or less fantastic shapes for which equally fantastic names were invented: *al-Birūnī* and others tell us about *ḥabīb*, "drum", *ḥāḥ*, "maypole", *ṣarṣanj* or *masarjan*, "crab", *ḥadāḥ*, "shell", *ḥawrī*, "bull", *ḥaḥā'ihī*, "anemone" astrolabes, etc. Probably the *asturlāb ṣawrahī*, "boat astrolabe" of *Aḥmad al-Sijzi* (c. 400/1009) belongs to this category. For more detailed information, see Frank [1], 9 ff. and Michel [1], 69 f.

Other planispherical astrolabes based on other projections than the stereographic are to be regarded as theoretical constructions without practical significance, e.g. the astrolabe devised by al-Birūnī and called *ṣafḥat al-'ayn* "cylindrical", because of its projection (Ptolemy's "Analemma"), which al-Birūnī called *cylindrical*, and which we now call orthographic; the circles of the sphere are projected there in the form of straight lines, circles and ellipses. The *ṣafḥat al-'ayn* astrolabe, described by al-Birūnī (*Chronology*, 358-9), appears

to have been only a stellar chart in equidistant polar projection, i.e., the pole of the ecliptic was the centre of the projection, the parallels with the ecliptic or circles of latitude (*ḥawā'ir al-'arḥ*) were represented by equidistant concentric circles and the circles of longitude (*ḥawā'ir al-fal*; N.B.: in European

Fig. 1b. Stereographic projection on the equator.

astronomy, illogically, these great circles through the poles of the ecliptic are called "circles of latitude" by equidistant radii. The other projection mentioned on 359 f. is a peculiar variant of the one devised by al-Zarqālī (see below).

(b) The back of the astrolabe is nearly always divided into four quadrants. The outer rim of the two upper are graduated from 0-90°, starting

from the horizontal line; the altitude of the sun or a star, taken with the aid of the alidād, is directly read on this graduation. Although the rules for the arrangement of the designs on the back are less strict, it can be said that the distribution of the diagrams in most cases is as follows: The upper left quadrant carries horizontal and/or vertical lines representing sines and cosines; the upper right, several sets of curves, one of which indicates the altitude of the sun when standing in the azimuth of the *hība*, valid for a number of cities and for any position of the sun in the zodiac, while another set indicates the altitude of the sun at midday for various geographical latitudes at all seasons of the year; the lower two quadrants contain the shadow squares, one devised for a gnomon of seven "feet" (*hadam*), the other, for a gnomon of twelve "fingers" (*asha*). As these divisions, which were first introduced by al-Zarkālī (hence lacking only on the very oldest instruments, such as the one made by Ahmad and Muhammad, the sons of Ibrahim of Isfahan, in 374/984-5, Oxf. Lew. Evans Coll.), may be interpreted

Fig. 2. Spider of an astrolabe.

as the tangents and cotangents of the altitudes measured, it can be said that the back of the astrolabe offers a graphical demonstration of the main four trigonometrical functions.—Apart from these divisions, all kinds of calendaric, astrological, and religious information can be found. Characteristic differences must be noted here: Spanish-Moorish astrolabes always have a Julian calendar, Egyptian, a Julian or Coptic, while Persian never have any solar calendar. Similarly, the lines indicating the times of prayer are apparently found only on Maghribī (including Spanish-Moorish) astrolabes (according to a personal communication from M. Henri Michel).

The alidād is a flat ruler turning around the *hub* on the back of the astrolabe. Figs. 3 a and c show the two principal types employed. Fig. 3b being a drawing in perspective of *a*. The straight line A B passing through the centre is called *hub*, L. *linea fiduciae* or *fidci*. The two arms of the alidād are sharpened to a point (*ghatba*, *ghaziya*) and each has a rectangular plate (*litha*, *dafra*, *hadaf*) standing at right angles to the plane of the alidād itself, through which a hole (*ḥaḥba*) is bored above the *linea fiduciae*.

The inconvenience that a special *paṭha* is required for each latitude was remedied by the Spanish Arab al-Zarkālī (Azarquiel, Arzachel) who made the vernal or the autumnal point the centre, and the solstitial colure (i.e. the meridian passing through the solstitial points) the plane of projection. In its final form, which al-Zarkālī called *al-ghabdhāya* in honour of al-Mu'tamid b. 'Abdā, king of Sevilla (461-84/1068-91), the entire instrument consists of a single tablet with two small subsidiary pieces. On the face of the tablet in stereographic "horizontal" (as opposed to the ordinary, "vertical" projection the equator is represented with parallels (*madārī*) and its circles of declination (*manārī*), and with the ecliptic with its circles of latitude and longitude; the projections of the equator and the ecliptic, then, are straight lines through the centre. Then evidently the tablet is valid for any geographical latitude; moreover, since the projections of the two hemispheres exactly coincide, it suffices to add the principal stars, to make it replace the "spider" of an ordinary astrolabe. A rod (*ṣaḥ* *maḥ*) "oblique horizon", with an attached perpendicular ruler, both turning about the centre of the graduated face, fulfils the functions of the *paṭha* of the common astrolabe; by inclining it at an appropriate angle to the line of the equator

Fig. 3. Types of alidads.

we obtain the horizon of the place of observation, and can then deduce from its divisions the eastern and western amplitudes or else solve any other problem of spherical astronomy. On the back of the tablet are the alidād and the markings found on the back of the common astrolabes; but al-Zarkālī further added the "circle of the moon", which enabled him to follow also the course of our satellite.—This simple and perfected astrolabe was called by the other Arabs *al-saḥba al-zarkālīya*, "the tablet of al-Zarkālī". As mentioned above, the idea of making the solstitial colure the plane of projection appears to have been first conceived by al-Bīrūnī, whose *Chronology* was composed 30 years before al-Zarkālī was born. But curiously enough, he there (359 f.) acquiesces in devising a purely schematic, not projective, diagram, with the circles of longitude and latitude drawn through *equidistant* parts of the radii. It is, therefore, really al-Zarkālī who must be credited with the invention of this new type of an astrolabe. Through the *Libros del Saber* (Vol. 3, Madrid 1864, 135-237: *Libro de la aḥḥā*) the instrument became known and famous under the name *Saphasa*. It is practically identical with Gemma Frisius's *Astrolabium* (sic) *Catholicum* of 1556; the astrolabe of Gemma's pupil, D. Juan de Rojas Sumiento (published 1550) is a variety of it, where the stereographic is replaced by orthogonal projection (cf. above, al-Bīrūnī's "cylindrical" pro-

jection). Another early variety of al-Zarkālī's astrolabe is the *saḥba ḡhabhāya* (or *ḡhabhāya*), about which we do not yet possess any accurate information.

For the difficult problem of deriving the date of manufacture of an astrolabe from the astronomical data on which it was based (position of the vernal point, longitudes of stars and, in some cases, the longitude of the perihelion), see Michel [1], 133 ff. and Pouille [1]; for a demonstration that the application of modern astronomical methods necessarily leads to false conclusions, see also Hartner [2] 104, 135-8. No conclusions whatever can be drawn from the (extremely slow) variation of the obliquity of the ecliptic; astrolabists nearly always assume it to be 23½° sharp.

II. The linear (*ḡhabhā*) astrolabe, also called *ṣaḥ* *ṭ-Ṭūl*, "the staff of al-Ṭūl", after its inventor al-Muṣaffar b. Muṣaffar al-Ṭūl (d.c. 610/1213-4) consists of one single piece, viz., a rod, with a plumb-line attached to its mid-point (i.e. the projection of the North Pole) a second thread fastened at its lower end, and a third thread, which is freely movable. The rod represents the NS line of an ordinary *saḥba*; its main divisions are those points in which the horizon, the almucantars, etc. meet the NS line. In the upper part are marked, moreover, the centres of the horizon and the almucantars, in the lower, the points in which each of the 12 *ḥurūf* and its subdivisions, as represented on the "spider", intersect with the NS line, in the course of one complete revolution of the latter. Another graduation, serving for measuring angles, indicates the cords of the angles 0-180°, where the cord of 180° equals the length of the whole rod. For further information, see Michel [1], 132-2, and Michel [2]; a first description was given by Carra de Vaux, *L'astrolabe linéaire ou bâton d'El-Touli*, in *J.A.*, 9th series, v, 464-516.

III. The spherical (*ḡhabhā*, *aharī*) astrolabe, called *astrolabio redondo* in the *Libros del Saber* (Vol. 2, Madrid 1864, 113-222, text compiled by Isaac b. Sid [Isaac ha-Haztan, called Rabbi Zag], exhibits without projecting the diurnal movement of the sphere relatively to the horizon of the place of observation. Its history is at least as long as that of the flat astrolabe. P. Tannery, *Recherches sur l'hist. de l'astronomie ancienne*, Paris 1893, 53 ff., in dealing with the principle of the latter, demonstrates how easily the idea of a globe carrying the main constellation, surrounded by a hemispherical "spider" carrying the horizon and the hour lines, could have been derived from the hemispherical sundial, *σφαῖρα* (called *σφαῖρα* by Eudoxus). The *Fihrist* (trans. by Suter in *Abh. z. Gesch. d. math. Wiss.*, Vol. 6, 19, 1892) mentions Ptolemy as the first manufacturer of a spherical astrolabe, but this is evidently due to a confusion with the *σφαῖρα* *ḡhabhā* described in *Alm.* 5, 1 (see introduction to the present article). Neither can the instrument devised by al-Battānī (*Op. astr.*, ed. Nallino, Vol. i, 319 ff.) be called a spherical astrolabe, as it is a combination of a celestial globe with an armillary sphere which lacks the essential characteristics of the astrolabe, above all the "spider". The main steps in the development of the spherical astrolabe before Alphonse X are marked by the treatises of Kūṣṭā b. Lūkkā (d.c. 300/912), Abū 'Iṣḥāq al-Nayrīzī (d.c. 310/922), al-Bīrūnī (*K. fi 'Idā' al-Waḥid al-Mumkina fi Saḥab al-ḡhabhā*), and al-Ḥasan b. 'Alī 'Umar al-Marrākushī (d.c. 660/1262, see L. A. Sédillo's sur- view of the section on the spherical astrolabe in *Alm.*, sur

les instruments astron. des arabes, Vol. i, Paris 1854).

The spherical astrolabe serves the same purposes as the planispherical astrolabe. Its main disadvantage is, that it is considerably less handy than the latter and yet does not yield better results. The instrument as described in the *Libros del Saber* consists of the following pieces: (a) a metal globe on which are engraved three complete great circles representing the horizon, the meridian, and the first vertical; furthermore, in the upper hemisphere, the almucantars and the halves of the vertical circles that lie between the horizon and the zenith. The lower hemisphere, as on the flat astrolabe, carries the lines of the unequal hours (the equal hours can be read directly on the equator). On the meridian a number of pairs of diametrically opposite holes are bored so as to make the instrument adjustable to any geographical latitude; (b) the openwork "spider" containing the ecliptic, the equator, a number of fixed stars, a quadrant of altitude, and (only on the Alphonse astrolabe) a shadow quadrant and a calendar; (c) a narrow semicircular strip of metal fitting closely to the surface of the "spider" and fastened with its centre to the pole of the ecliptic, about which it can be turned freely; together with the two diopters (tangent to the globe and parallel to one another) fastened at either end of it, it forms the alidād of the spherical astrolabe; (d) an axis passing through the appropriate pair of holes on the globe and through the equatorial pole of the "spider".—On the Alphonse astrolabe, the equator, otherwise always represented as a half great circle, is given the shape of a small (1) circle parallel to the equator proper. The astrolabe of al-Marrākushī, instead of the alidād, has a metal strip (*saḥba*) turning about the pole of the equator, with a small gnomon fixed at right angles to it, which can thus be set on any point of the equator. For detailed information, see Seemann [1].

(W. HARTNER)

AL-ASWAD b. Ka'ān al-'Assī, of the tribe of Ma'dhijilī, leader of the first *rida* in al-Yaman. His proper name is said to have been 'Aḥala or 'Abhala, and he was also known as *Ḍhu 'l-Kūmār*, "the veiled one" (or *Ḍhu 'l-Himār*, "the man with the donkey"). After the murder of Khurāsānī Parwiz (Ar. Abarwiz) in 628, but possibly not before the capture of Mecca in 630, the Persians in al-Yaman, under Bādhām (or Bādhān), made an alliance with Muhammad, since they realised that they could obtain no further aid from Persia. The Arabic sources say they also became Muslims, but some European scholars place their conversion to Islam after the *rida* (or "apostasy"). Whatever the date of conversion, the alliance meant that the part of al-Yaman controlled by the Persians had become part of the Islamic political system. After the death of Bādhām Muhammad seems to have recognised a number of local leaders as his agents in different parts of the region, besides sending some agents from Medina. The neighbourhood of San'a remained under Bādhām's son, *Shahr*. About the end of 10 (March, 632) men of the tribe of Ma'dhijilī under al-Aswad al-'Assī expelled two of Muhammad's agents (Ikhālīd b. Sa'īd and 'Amr b. Huzm) from Naḡrān and the surrounding district, dethroned and killed *Shahr*, occupied San'a, and brought much of al-Yaman under the authority of al-Aswad. Kays b. al-Makhlūf al-Murādī acted in concert with al-Aswad against his rival for the leadership of Murād, Farwāh b. Musayk, who had been recognised by Muhammad. Al-Aswad's movement was thus directed against the political system established by Muhammad, not against the Persians as such, since some of them retained important positions in San'a. The religious aspect is not as evident as in the *rida* elsewhere, but al-Aswad increased his influence by claims to be a soothsayer (*kāhin*), speaking in the name of Allāh or al-Rahmān, and by practising sleight-of-hand. His mosothism is probably derived from the Christianity or Judaism of al-Yaman, not from Islam, since there is no record of his having become a Muslim. Al-Aswad's rule lasted only a month or two, for his death is said to have been before that of Muhammad (in Rabī' I 11/June 632). He was killed by some of those who cooperated with him, namely, Kays b. al-Makhlūf and the Persians Fayrūz (or Firiz) al-Daylamī and Dādhawayh, assisted by the widow of *Shahr* whom al-Aswad had married. Muhammad is said to have instigated this movement against al-Aswad, but this report is perhaps only a later reconstruction of the events.

**Bibliography:** al-Tabarī, I, 1795-99, 1853-68; al-Balādhurī, *Futūḥ*, 105-7; J. Wellhausen, *Skizzen und Vorarbeiten*, VI, Berlin 1899, 26-34; Caetani, *Annali*, III, 672-85; W. AL-ASWAD b. YA'FUR (also called Yu'far and Ya'fir) b. 'Abd al-Aswad al-Tamīmī, Abū 'l-Djarrālī, pre-Islamic Arab poet who lived probably at the end of the 6th century A.D. He is said to have travelled about among the tribes, composing elegies or satires in verse, and was for some time the companion of al-Na'udān b. al-Mundāḡhī, he is sometimes called al-A'ḡḡā of the Banū Naḡhāl, because he was night-blind, but he lost his sight at the end of his life, which is thought to have been extremely long. Of the poems which have come down to us, the most celebrated are a *ḥajda* in *dīl* al-Aswad, probably from his later years and containing the usual commonplace on life's difficulties, the approach of death, the flight of youth, the infirmities of old age, etc.

**Bibliography:** His poems have been collected by L. Cheikh, *Shu'arā' al-Naḡrāniyya*, 475-85; two *ḥajdas* figure in the *Mufaḍḍalīyya*, I, 445-57, 846-9; Ibn Kutayba, *Shi'r*, 134-5; idem, *Ma'arīf*, Cairo 1353/1934, 282; *Djumāhī, Tabakh*, 33-4; *Ishtakī, Hamāla*, index; Ibn Durayd, *Iḡḡāḥ*, 149; *Aḡḡāḥ*, 21, 134-5; *Baḡḡāḥ*, *Ḥajda*, I, 103-6; *Alkhayrūn, Raḡda*, 44 ff.; O. Roscher, *Abriss*, I, 178. (CH. PELLAT)

ASYŪT, town in Upper Egypt. Asyūṭ, the largest and busiest town of Upper Egypt, is situated Lat. 27° 1' N. on the west bank of the Nile. Owing to its situation in one of the most fertile and sheltered districts of the cultivable Nile valley, and also to its being the natural terminus of great desert highways it was in antiquity an important town (Syoet, Greek; Lykopolis) and the chief town of a Nomos. Under Islam Asyūṭ remained the chief town of a *kāra* (modern *markaz*, "district"), and on the inauguration of the division into provinces became the capital of a province (*samal*, now *mudiriyya*).

Asyūṭ is the colloquial form of the literary Uṣyūṭ. Both are Arabisms for the Coptic Siout, to which in the late registers of the Middle Ages the form *Suyūt* or *Sarūt* corresponded. But as early as the time of al-Kalāshānī (d. 521/1118) the popular pronunciation was Asyūṭ.

A history of Asyūṭ cannot be written for the reason that we scarcely find any mention of it in the historians, and only towards the end of the Mamlūk period, under 'Alī Bey, did it play any historical part, viz. in the year 1183/1769-70, when it was for a time the centre of revolt. From the accounts of geographers and travellers we ascertain that it enjoyed unbroken prosperity throughout the entire Islamic period. At the end of the 19th century, it gained considerably in importance, especially after it became linked by rail with Cairo (in 1292/1875). Its population has risen from 28,000 in 1293/1876 to 42,000 before the first world war and about 120,000 at the present time.

In the Middle Ages Asyūṭ was famed for its agricultural products, its industry and trade. Besides corn and dates, quinces of an exceptional size were found here. The main industries were the weaving of woollen, cotton and linen goods. Owing to the alum and indigo obtained from the adjacent oases dyeing was extensively carried on; e.g. the materials manufactured for export to Dār Fūr were dyed here. Its specialties were fine linen goods, called *ḍaḡḡī* after their chief place of production Ḍaḡḡ in Upper Egypt, and fine woollen goods and carpets modelled on the classical Armenian products. Today Asyūṭ still manufactures black and white tulle shawls with silver applique-work, which are much sought

after in Europe, and represent the last remains of an industry once very famous throughout the Orient. Further Asyūṭ was engaged in the preparation of opium and in the making of high-quality pottery which, with its antique patterns, is still much in demand as black and red "Asyūṭ-ware".

There was a brisk trade in all these products throughout Egypt and abroad. The direct trade with the Sūdān is specially famous. The annual Dār Fūr caravans (numbering about 1500 camels) brought slaves, ivory, ostrich-feathers and other products of the Sūdān, and received in exchange the products of Egypt's industries, especially stuffs. The scholars of Napoleon's expedition made careful investigations into this trade which has now so much declined.

Like all the industrial towns of Egypt, Asyūṭ had a large Christian population—60, according to others as many as 75, churches and chapels—, but no Jews at all, a fact explicitly stated.

Caravanserais, barazā, bath—some of the latter famous and very ancient—, mosques and other public buildings adorn the town to-day as formerly. In one of the mosques stood a *minbar* which at certain seasons was filled with corn and carried through the streets as a *maḥmal* (Ibn Duḡnāḡ). Like all the flourishing towns of modern Egypt, Asyūṭ has a strong administration of Levantines.

Asyūṭ is the birth place of Plotinus, the Coptic Saint John of Lykopolis and of several Arab scholars named al-Suyūṭī, of whom the versatile historian Ḍalāl al-Dīn (d. 911/1505) is the best known.

ATA, a Turkish word meaning "father", and also "ancestor" (cf. the expression *ata-ḡāḡ* "proverb"). Among the Oghuz, the qualifier *ata* was appended to the names of people who had acquired great prestige; this term can also bear the derived meaning of "wise", and even of "holy", "venerated".

"ATA", "gift", the term most commonly employed to denote, in the early days of Islam, the pension of Muslims, and, later, the pay of troops. It is "impossible" (cf. the expression *ata-ḡāḡ* "proverb"). Among the Oghuz, the qualifier *ata* was appended to the names of people who had acquired great prestige; this term can also bear the derived meaning of "wise", and even of "holy", "venerated".

The traditional starting-point is the organisation of the pensions by 'Umar b. al-Khaṭṭāb. The first Muslims had derived no material advantage except their share of the booty from successful expeditions. The flow of taxes into the coffers of the nascent caliphate enabled a better regulated form of reward to be envisaged, which the traditionalists and jurists explain in connexion with the organisation of the first *dīwān* and within the framework of their theories, subsequently evolved, on the utilisation of *ṭay'*; the various versions which they give accord ill

with one another, because they all reflect the desire, conceived at a later date, to find in the decisions of 'Umar a precedent which did not exist. The main outlines, however, are clear: according to a hierarchical order which took into account kinship with the Prophet and especially seniority as regards admission to Islam, graduated pensions were distributed to the whole Muslim population which had been displaced from its homes by the holy war (the *muhājirūn* and *anṣār* of the early days, together with the fighting men of a later date), women, children, slaves and clients (still not numerous and not by definition foreigners), but excluding, of course, the Bedouin and others who remained in Arabia and elsewhere, unaffected by the military expansion of Islam. The amount ranged from 200 to 12,000 dirhams, the great majority of the men receiving from 500 to 1,000 dirhams annually. The registration and classification of those eligible constituted the organisation of a service which recruited the first *dīwān*, and the division of the beneficiaries into groups, *ṣafā'a*, under the control of an *amīl* [g.n.]. All the quotations relevant to these questions are given with a commentary in Caetani, *Annali*, IV, 368-417, to which should now be added Abū 'Ubayd Ibn Sallām, *Kaṭib al-Amṣal*, 225-71, and the references in Tritton, *Notes on the Muslim system of pensions*, in *ESOAS* 1954, 179-2, which also deals with the century following.

This system, conceived in terms of conditions at the time of 'Umar, obviously could not continue unchanged. The ramification of family trees, conversion on a large scale, the slowing-up of the rate of the conquests and the reduction in the benefits derived from war, the increasing complexity and specialisation of military techniques during the Umayyad period, and later, during the 'Abbasid period, the increasing professionalism and progressive "de-arabisation" of the army, led, after many tentative procedures and irregularities, to a distinction between, on the one hand, civil pensions, reserved for the descendants of the Prophet's family ('Alid and 'Abbasid branches) and in general most of an honorary than concrete nature (we are, of course, not discussing here the salaries of officials, cf. 302), and on the other hand military pay; as regards the army, a distinction was made between the class of professional soldiers, registered in the *dīwān* and entitled to regular pay, and occasional volunteers, not registered in the *dīwān*, who received a smaller allowance confined to their period of effective service. On the other hand, whereas under the Umayyads, in spite of the ephemeral effort of 'Umar b. 'Abd al-'Azīz (cf. Wellhausen, *Arabische Reich*, 186-7), the *maḥallī*, who were by that time numerous and were for the most part Iranians, were virtually excluded from the benefit of pay, under the 'Abbasids, it was the Khurāsānīs, and later the other elements, Turks, Daylamites, etc., who, as professionals, were almost the only persons to receive pensions, and the Arabs in the end were systematically removed from the registers in the course of the 3rd/9th century, at least in the East. In the early days, payment was made principally on a provincial basis, or, in Syria and Spain, on the basis of military districts called *dīwān* [g.n.], as a charge on the local taxes; but 'Abbasid centralisation made the majority of these payments a charge on, or placed them under the direct control of, the Treasury (*bayt al-māl* [g.n.]).

Although the amount of the payments seems to have been subject to considerable fluctuation, the

annual pay of a foot-soldier, in the second century of 'Abbasid rule, can be estimated to be of the order of 1,000 dirhams = 70 dinars, or three times the pay of a Baghdad journeyman, and that of a cavalrman twice as much. Commanders and specialised corps naturally received more. Kādūnā describes in detail the functioning of the system, the differences between the various categories, the minute detail of the rolls, the different intervals at which different payments were made (W. Hoenerbach, *Zur Hostenverwaltung der Abbasiden*, in *Id.*, 1949). But, dating from before his time, *ad hoc* payments were made, especially on the occasion of an accession, in addition to the regular pay; and it seems that there had always been, in addition to pay proper, distributions of provisions and equipment. Arms were a charge on the Treasury. The army was therefore always expensive, and became increasingly so as military technique became more complex and heavy cavalry and siege operations played a greater part in it. Disturbances prevented the government from reducing the number of its effectives; and the troops, realising that they were indispensable, increased their demands; the Treasury found it increasingly difficult to maintain regular payments, and the discontent of the troops could only be appeased by increases in lieu of arrears, thus creating a vicious circle.

From the 4th/10th century onwards, the control exercised by the military over the political authority caused the replacement of payments by fiscal assignments which the interested parties collected from a domain the revenue of which was the equivalent of the amount of pay due (see 1814f).

'ATĀ' n. **ABĪ RABĀH**, a prominent representative of the ancient Meccan school of religious law. Born in Yamān of Nubian parentage but brought up in Mecca, he was a *muallā* of the family of Abū Mayyara b. Abī Ḥuṭaym al-Fihri. He died in Mecca in 114 or 115 (732 or 733) at a very old age (88 or even 100 years are mentioned). 'ATĀ' is the oldest ancient Meccan jurist whose name is more than a name to us; an analysis of the doctrines ascribed to him enables us to separate an authentic core from later, fictitious accretions. In the manner common to his contemporaries, he did not hesitate to use his personal opinion (*ra'y*), both in its disciplined and in its arbitrary form (*ḥiyāḍ* and *istihād*, respectively); statements which, reflecting a later fashion of thought, make him reject *ra'y*, are therefore spurious. The extent to which 'ATĀ' may have used traditions from the Prophet and from the Companions as legal arguments, is difficult to ascertain; if he did so, he presumably made use of *muṣal* (g.v.) traditions. Owing to the rapid development of Islamic law at the beginning of the second century of the *hijra*, some of the distinctive opinions of 'ATĀ' seem to have become unfashionable already towards the end of his life; this is probably reflected in the statement that some younger contemporaries of his ceased attending his lectures, and that the *muṣal* traditions transmitted by him are weak. This was more than compensated by attributing to him, when the attitude to traditions had changed, personal contact with an ever-increasing number of Companions of the Prophet, though some Muslim critics themselves point out that he did not bear traditions from 'Abd Allāh b. 'Umar, Umm Salama and others, and express doubt concerning his direct contact with 'A'ṣṣa. At the

beginning of the second century, the interest of the specialists in Islamic law had already spread from purely religious problems to more technically legal questions; the authentic doctrines of 'ATĀ' bear this out, and he did not specialise in the ceremonies of *ḥajj* as some sources assert in deference to the fiction that this was the favourite subject of the scholars of Mecca. Already during the life-time of 'ATĀ', his reputation spread far beyond Mecca, and Abū Ḥanīfa states that he was present at his lecture meetings; this is perhaps the earliest authentic piece of evidence on technical instruction in Islamic religious law.

'ATĀ' BEY, Ṭayyārāde 'ATĀ' Allāh Ahmad, known as 'ATĀ' Bey, Ottoman historian. He was born in Istanbul in 1225/1810, the son of a palace official. He himself was educated in the palace, and held various official positions. In 1297/1880 he was given the *ḥijāz* to take up an appointment as administrator of the sacred territory (*ḥarām*) of Mecca, and died in Medina in 1294/1877 or 1297/1880. His most important work is his five volume history, known as *Ta'rikh-i 'ATĀ'* (Istanbul 1291-3/1874-6). Its chief interest derives from his intimate knowledge of the organisation, customs, personalities, and affairs of the Imperial household in the 19th century. As an autograph copy of his *diwān* is preserved in the *Millet* library.

MUHAMMAD 'ATĀ' BEY, (1856-1919), Ottoman scholar, journalist, and public official. After the revolution of 1908 he became a member of the Financial Reform Committee and was for one week Minister of Finance. He published many articles in journals and periodicals, under the names of Melḥārī and 'ATĀ', and also produced a literary anthology called *Ḥijāz*, which was extensively used as a school text-book. His most important undertaking was the Turkish translation of Hammer's History of the Ottoman Empire. This version, based on the French translation of J. J. Bellier, began to appear in Istanbul in 1329/1911. Of the fifteen volumes that were planned, only ten actually appeared, the last in 1337/1918.

'ATĀ' ALLĀH EFENDI (see *QATĀB*).

'ATĀ' MALIK DJUWAYNĪ (see *AL-JUWAYNĪ*).

'ATĀBA, modern Arabic form *lūn* verse, common in Syria, Palestine, Mesopotamia and 'Irāk. The first three lines not only rhyme, but generally repeat the same rhyming word with a different meaning (*ladīn* *lām*). The last line rhymes with the paradigm 'atāba ("lovers' reproach"), the last syllable of which is often supplied without making sense. The metre is a sort of *saḥr*. A peculiar form common in 'Irāk is called *lūn* *ḥijāz* ("man of some") or *lūn* *and* *and* with *ḥijāz* (1939).

(H. RITTER).

**ATĀBĀK** (ATĀBEG), title of a high dignitary under the Saldjūkīds and their successors. The term Turkish and first appears in appearance in Muslim history with the Saldjūkīds; it is therefore reasonable to enquire whether any precedents exist in the Turkish societies of Central Asia. So far no occurrence of the actual word seems to have been reported and the fact that in the Orghon civilisation there is apparently a person called *ata*, father, acting as a tutor to a young prince, is too vague to enable one to affirm a connection; the same is true of similar cases existing in other civilisations (see for example Ḥārūn al-Raḥīdī and Yahyā al-Barmakī); moreover no such office has so far been noted even under the Karakhānīds. The term *atabeg*, therefore, seems to be more precisely characteristic of the Oguz or the Saldjūkīds. Even under these latter, the first definite location of the title, which was of great authority, to make history as the title of Turkish military chiefs, applies to an Iranian 'civilian': Malikshāh, who was very young when he came to power, added the term *atabeg* to the *lubb* of his waste Niğām al-Mulk, thereby indicating that he conferred upon him the entire delegation of his own authority, as though he were his father (Ibn al-Athīr, ed. Tornberg, x, 34; *CCF*, vii, no. 273-274). Nevertheless the fact that from the death of Malikshāh the title is to be met with in all branches of the Saldjūkīd dynasty, including that of Asia Minor, which has a specific evolution, prompts one to admit its existence already at the origin of the régime. In these circumstances there is no reason to reject the evidence, not apparently previously adduced, of the *Atabeg* al-Ḥusayn al-Saldjūkīyūn, ed. Mub. Nāzim, 28-29, which places a Turkish *atabeg* beside the young Alp Arslan during his father's lifetime in the person of a certain Kutb al-Dīn Kulāṣī ('Kilā Sārī'). The honour conferred on Niğām al-Mulk, a non-Turk and *warir*, appears to have been something of an exception, all the more characteristic of his ascendancy.

However that may be, from the death of Malikshāh, the *atabeg* appear more and more regularly, whilst the role played by them increases, favoured by princely minorities and strife between pretenders. Henceforth only Turkish military chiefs are involved, corresponding to the growing influence acquired by this element during the period of the Saldjūkīd régime's decay. Malikshāh's son Barkiyārūk, apparently during his father's lifetime, had the *ḥimā* *Gümüşṭakīn* as "preceptor (*murabbiyy*)" and *atabeg* ("ḥimā al-Dīn al-Isfahānī, abridgement by Bundārī, ed. Houtsma, 83; cf. al-Riḥāwī, *Nihāt al-Jūdā*, ed. Mub. Kazwīnī, 140). He, in turn, created others for his young brothers Saḡḡar and Muḥammad, when he accorded them autonomous appanages, and on his death-bed, also for his son Malikshāh, who was still a child. At the same time, on the death of Malikshāh's brother Tutuḡ, whose appanage was in Syria and who was the unfortunate rival of Barkiyārūk, we find an *atabeg* with each of his sons Rudwān and Dukāk. Henceforth every Saldjūkīd prince seems to have had an *atabeg*, at least if he

was endowed with an appanage whilst still a minor; in other words, wherever there were several sons, there were also several *atabegs*. As they now issued exclusively from the category of military chiefs of servile origin, their function may in a way be associated with the duty of every slave or manumitted slave to guard the interests of his master's family to which he himself belonged. Furthermore the *atabeg* frequently made his position as a "father" complete by marrying his pupil's mother, when the latter became a widow (for example early on, Tuḡhtakīn at Damascus, the mother of Dukāk). As far as his authority, this consisted in his sharing in the unrestricted power of the prince and therefore it cannot be defined by precise attributions, as in the case of ordinary functions. However, he could be dismissed by another *atabeg*; in any case, when the prince grew up, the *atabeg*'s authority naturally disappeared, only leaving room for his influence as a councillor, who had the prince's ear; if the *atabeg* assumed more than that, a rupture with the prince followed (for example Rudwān and Dukāk), or even the *atabeg*'s execution (Kutluḡṭakīn by Barkiyārūk's brother Muḥammad).

This, at least was the initial state. But relatively soon the *atabeg*'s position was consolidated at the expense of that of the prince. The office of *atabeg* gave its holder great authority, which he was normally tempted to perpetuate. But in addition, from the second generation of Malikshāh's heirs, the respective roles of prince and *atabeg* were reversed. The starting point now was that either willingly or under duress the sultan would bestow a major governorship on a powerful *amir* and, in order to safeguard the formal dependence of the latter, he attached one of the Saldjūkīd children to him, whose *atabeg* he became. For a while the young prince continued to serve as a cloak beneath which the chief concealed his own ambitions; such was the case in the disputes which brought Sultan Mas'ūd into conflict with various of his relatives, each of whom was urged on by his *atabeg*. Thus Firās, Adḡarḡaydīn and, at one time, Mawṣil, each had his respective *atabeg* and their claimant to the Sultānate. A corresponding evolution took place in the case of the minor Saldjūkīd dynasty of Kirmān (Mub. b. Ibrāhīm, *Histoire des Saldjūkides de Kirmān*, ed. Houtsma, 35-132 passim and index, especially under Kutb al-Dīn Mub. b. Ḥuḡkuḡ). A further new stage was reached when the *atabeg* succeeded in making hereditary, in addition to his office, possession of the governorship, which in theory constituted his reward for it. This was accomplished after the middle of the 6th/12th century by the family of the *atabegs* of Adḡarḡaydīn, who were descended from Ildigiz, the *atabeg* of Sultān Arslan. Lastly at the beginning of the century, the death of Dukāk without heir at Damascus, far away from the centres of the Saldjūkīds, enabled the *atabeg* Tuḡhtakīn to found a dynasty which was both autonomous and in his own name. Elsewhere all-powerful *atabegs* reached the same results by suppressing their suitors, who were completely devoid of resources; this was accomplished at Mawṣil on the death of the *atabeg* Zangī by his heirs in 539/1144 and was similarly achieved against the last Persian Saldjūkīd, with the help of the Caliph, by the heirs of Ildigiz, who summoned the *Ḥusayn* *Arizmshāh* into central Iran (588/1192). Moreover the sultan's disappearance did not hinder the masters of Adḡarḡaydīn and of Mawṣil from continuing to have themselves called *atabeg*; the word, hence-

forth, had in practice the exclusive sense of territorial prince. Thus it seems that from the middle of the 6th/12th century the title in Kān had been adopted by the Salghūrids, the vanquishers of the real *atabegs*, without their having any longer a sultan under their tutelage. The most famous of the Atabeg dynasties is that of Mawṣil, by reason of the work devoted to them by their historians and subject Ibn al-Aṭṭār. A further new dynasty of pseudo-atabegs was to appear in the 7th-13th century in Luristan (Ḥamd Allāh Mustawfī Kāzvinī, *Ta'wīḡh Qazvīn*).

The title *atabeg* was still to be met with among the successors of the Salghūrids, in particular under the Khwārizm-shāhs, who did not allow those who bore it, exclusively tutors of young princes, to acquire much influence (Djawaynī, II, 22, 23, 39, 209). Later on, in all those states which derived from the Mongol conquest, the appellation *atabeg* is to be met with upon occasion fortuitously, applied to indefinite princely tutors or as one of a number of simple honorific titles inherited from the past (see references in M. F. Köprülü, art. *Atabeg* in *IA*). More remarkable is the penetration of this title, attributed to military and feudal leaders, into Christian Georgia, which had borrowed other institutions from neighbouring Ḥalabīyah, with whom they were alternatively at war or in matrimonial relationship (J. Karst, *Le code géorgien du roi Vakhtang, Commentaire*, I, 211 ff.; M. F. Brosset, *Histoire de Géorgie*, I/2, passim; Allen, *A History of the Georgian People*, 1932, chap. xxiii).

Among the Salghūrids of Asia Minor, the *atabeg* is attested from the beginning of the reign of Kılıç Arslan I, in the person of Ḥunnuarīsh al-Sulaymānī (consequently a mamlūk slave of his father Sulaymān b. Kutlugh) (Ibn al-Arak, quoted in a note by Amédro to the History of Damascus of Ibn al-Kalīnī, 157). Shortly afterwards the mother of the young Salghūrid of Malatya, to protect him against his brother of Konya, gave him a series of *atabegs*, whom she took in marriage, the last of them being the neighbouring Artukid Balak (q.v.) (Michael the Syrian, trans. Chabot, 191 and 200). In the main branch, *atabegs* were also reported in the 6th/12th century (RCEA, no. 3376-3377), and then in the 7th/13th century; the power of the sovereigns prevented them from expanding and it is only after the disaster which ended in the Mongol protectorate that the title occurs borne by men with a decisive influence on the régime, such as Ḥalāl al-Dīn Karatir. However, in Asia Minor the actual conditions of the evolution had given the power to a team of high dignitaries, friends or enemies according to the case, rather than to a single individual, and the *atabeg* was not the most important. In this area he does not appear to have survived the Ḥalghand régime and he was unknown to the Ottomans.

The title of *atabeg*, however, still had a fairly long independent career in the Mamlūk state. The Ayyūbids had made it known in their realm; it may perhaps have found expression in the ephemeral tutelage which al-Aḥdāḥ exercised in 595/1198 over his young nephew, the son of al-Aḥd in Egypt; in any case it was used more permanently and formally during princely minorities in the Yemen and particularly at Aleppo (History of Aleppo of Ibn al-Adīm, passim). This is the way in which it reached the Mamlūks. The founder of the régime, Ḥay al-Dīn Ayyūb, bore the title, not as tutor to a prince, but as regent-son of the famous heir and widow of al-Salāh Ayyūb, Shādīr al-Durr; and the title,

sometimes accompanied by considerable power, at other times devoid of it, survived down to the end of the dynasty. If one may believe al-Makrīfī (*Sulḥ*, trans. Quatremère I/1, 2), Ayyūb bore the title of *atabeg* of the armies; but no contemporary author has attributed it to him and one must perhaps envisage a confusion in al-Makrīfī's mind with the title of *atabeg al-ṣāḥib* (q.v.), which was usual in his time. In effect it then corresponded with a kind of supreme military command, though it only acquired this extended meaning apparently under the Circassians, following the suppression of the office of *na'ib*.

**Bibliography:** The only general study is by M. F. Köprülü, *op. cit.*, where detailed references and additional information will be found. For the sources and other materials, apart from those already cited in the article, see below the articles *MANLŪKS* and *SALGHŪRIDES*. On the Great Salghūrids and their Irano-Iraqī successors, the information used here has been taken mainly from Ibn al-Aṭṭār, *Ḥimāḍ al-Dīn al-Isfahānī*, and Rāwandī. See also Sanaullah, *The decline and fall of the Salghūrid Empire*, Calcutta 1935; M. A. Köymen, *Büyük Selçuklu İmparatorluğu Tarihi*, II, Ankara 1954; I. H. Uzunçarşılı, *Osmanlı Devleti teşkilâtına medfai*, İstanbul 1941, 207. For Asia Minor, see principally the chronicles of Ibn Bībī and Aksarayī, *passim*. For the Mamlūks, see the following article. (CL. CAHEN)

**ATABAK AL-'ASĀKİR.** After the decline of the office of the vicery (*Nā'ib al-Saltana*) the Atābak al-'Asākīr (Commander-in-Chief of the Mamlūk Army became the most important *amir* in the Sultanate. His functions were much broader than the name of his office indicates. For all intents and purposes he had become the sultan's vicery. Very frequently the title *mudabbir al-manālik* or *mudabbir al-manālik al-idāmiyya* was appended to his name. It was common, especially in the Circassian period, for him to succeed the sultan on the throne. (See D. Ayalon, *Studies on the Structure of the Mamlūk Army*, in *BSOAS*, 1954, 58-59, and references on p. 59, n. 6.) (D. AYALON)

**ATABEG** [see ATABAK].

**ATABEG AL-'ASĀKİR** [see ATABAK AL-'ASĀKİR].

**ATĀ'Ī.** 'ATĀ'Ī ALLĀH b. YAHYĀ a. Pā 'ĀLĀ b. Naṣrīn, known as New'ī-zāde 'ATĀ'Ī, prominent Ottoman poet of the early 17th century and connoisseur of Taṣhīḥīrī-zāde's biographical work on the Ottoman 'ulama' and dervishes. (Mubliḥ, *Ḥikāla*, iv, 263, incorrectly gives his *ism* as Muḥammad). He was born in Istanbul in Shawwāl 991/1583, where his father (who, under the *maḥabbas*, New'ī, enjoyed high esteem as a poet and scholar from 998 to 1003), he was tutor to the ill-fated sons of Murād III) was at this time professor of the Dīn'ar Agha madrasa; his mother was the daughter of the famous Niḥāḥīdī Mehmed Paṣhā (Sijīrī-i 'Oṭmānī, iv, 131). Having studied under Kāf-zāde Fayḍ Allāh Ef. (the father of the anthologist Fayḍī) and Akhlī-zāde 'Abdūllah Ef. he began his career as professor of the Dīnābāziyya madrasa in Istanbul (Safar 1044/1605), but was soon to be transferred to the judicial class by his appointment as *hāḍī* of Lādīa in Šar'f. 1017. He held a number of such posts in Kūmilī (Šar'khī) gives the most detailed information about these, the last of which was Üsküb, whence he was dismissed at the end of 1044/1635. He returned to Istanbul where he died in Rūmādī 1, 1045 ('Uṣṣhāḥī-zāde, I, 266 and

Ḥalāḥī Khāṭṭa, I, 724, et al., *id.*, *Faḥḥa*, II, 168 erroneously give the year 1044; characteristically unreliable, Rīdā gives 1046) and was buried beside his father in the court-yard of the Šar'khī Wafā mosque. He was survived by a son, Mehmed, who was also of the 'ulama' (*Faḥḥa*, loc. cit.).

The most famous and valuable of his works is the *Ḥadā'iq al-Ḥabībīn fī Tahkīmāt al-Shāhīdīn* (completed in Rabi' II, 1044 and printed in Istanbul, 1268), in which he brings down to his own day the biographical sketches of the Ottoman 'ulama' and dervishes begun by Taṣhīḥīrī in his Arabic *al-Shāhīdīn al-Nu'māniyya* (Bröckelmann, II, 425). Like the latter, it is organised according to the reign in which the individual died, the last being that of Murād IV, but the language is now Turkish and the notices are far more precise in detail and frequently contain 'ATĀ'Ī's personal remarks and reminiscences. The style is similar to that used by Moḥḍī in his translation of the *Shāhīdīn*, and, while to the taste of recent generations almost intolerably elegant, was greatly admired by his contemporaries; and, indeed, it is this alone which redeems the work from being a mere statistical summary. The popularity of his poetry, too, has survived (cf. Gibb, *Ottoman Poetry*, III, 232 ff., for the 19th century Ottoman critics), though at least one modern scholar, M. F. Köprülü, has found his magnificence works deserving of study. These latter are included in his *Ḥama*, of which the fifth portion, entitled *Ḥuṣṣ al-Aḥdīr*, was until recently regarded as lost or non-existent. For a full analysis of the other four we need a short account of his *divan*, all still unpublished, cf. Hammer-Purgstall, *Gesch. osman. Dichtkunst*, III, 244-283. (It should be remarked that the chronogram given here for the date of completion of the *Nafah al-Aḥdīr* is 1020, while that given by A. S. Levend is 1034). The only other work ascribed to him is a legal monograph, *al-Kawā' al-Ḥasan fī Dīwān al-Kawā' al-Liṣan*, (Bröckelmann, II, 427), which, from its title, appears to be a reply to an unfinished work by his contemporary Mollāḥī Ahmed Ef. (cf. *Ḥadā'iq*, 667).

**Bibliography:** To the works mentioned by Babinger, 171 and Bröckelmann, II, 427, should be added those given by Behebot Günl, *İstanbul Kütüphanelerinde al-Shāhīdīn al-Nu'māniyya Tercüme ve Zeyilleri*, *Türkiyâ Mecmuası*, vii-viii, citz 2 (1945), 161; Šar'khī, *Wahā'iq al-Fudā'ī*, (Sulaymāniyye, Beḥr Aḡa, 479), I, 34; Riyāḍī, *Riyāḍ al-Shu'arā'*, (Nurmoṣmaniyye, 3724), f. 116b. 'Uṣṣhāḥī-zāde's *Ḥayāt al-Shāhīdīn* was used in the Murād Mollā MS., nr. 1432, f. 26a. Sadeddin Nūbzīn Ergin, *Türk Saikler*, II, 541-550, gives the most extensive selection of his verse and reproduces in his article the statements of Šar'khī, Riyāḍī and Rīdā, as well as the opinions of M. F. Köprülü. On the *Ḥama*, cf. Aḡh Sīrī Levend, *Atay'nin Hüye-i Eḥar'ī*, (Ankara, 1948); however, his argument in support of 1046 as the year of 'ATĀ'Ī's death is unconvincing. (J. WATSON)

**ATAK** (Attock), a fort in West Pākistān 33° 55' N, 72° 15' N, commanding the passage of the Indus just below the junction with the Kābul river. Atak was founded by Akbar in 969/1581 (under the name Atak-Banārās) to defend the main invasion route from Kābul via Peshāwar against the incursions of his brother Mirzā Ḥakīm. For contemporary explanations of the name see Friglitte, I, 222 and Abu 'I-Faḍl, *Aḥbar-nāma*, Bib. Ind. Text., II, Calcutta 1881-87, 355; for a comment on its possible

historical derivation see Cunningham, *Arch. Sur. India*, II, 1871, 7.

Coming into British occupation at the end of the second Sikh war, Atak lost some of its military value with the opening (1300/1885) of the combined road and rail bridge to carry the Grand Trunk road and the North-West railway.

**Bibliography:** see text; also *Gazetteer of Kānpūrdī District*, (rev. ed.), 1893, 4. Lahore 1895, 260 and *Imperial Gazetteer* VI, 158.

(P. HARDY)

**ATALĪK.** A term synonymous with *atabeg*, used not only among the Turks, but also in the Caucasus, Turkistan, and by the Thimrids and the Turkish dynasties of India. It was still used in the 19th century by the *amirs* of Dīlkhārah and Kāhira, and the *amir* of Kāshghar, Ya'qūb Bey, bore the title of *atalik ghāi*.

**Bibliography:** See the article, with a very full bibliography, by M. F. Köprülü in *IA*, s.v. (R. MANTRAK)

**'ATAMA** (a), the third third of the night, according to the lexica, from the time of waning of the *shahā* (the red colour of the sky after sunset). This definition covers exactly the right time for the *salāt al-'iḡāḥ*, which is therefore often called *salāt al-'atama*, even in quite large a number of traditions. But later on, pious circles rejected this name, since the *salāt al-'iḡāḥ* is expressly called thus in the *Kur'ān*. A tradition appeared which declared the use of *'atama* with regard to the prayer to be characteristic of Bedouins, who used to milk their camels at that time and call the milking itself *'atama*. Muslims are requested to use the name which Allāh himself used in the Holy Book.

**Bibliography:** Wensinck, *Handbook*, s.vv. *'atama*, *'iḡāḥ*. (M. PLESSNER)

**ATAR**, town in Mauritania, chief place of the Circle of the *Adrar*, situated at a height of 230 m. on the route Saint-Louis to Tindouf, about 420 km. to the east of Port-Etienne. The *Ḥṣar* has 4500 inhabitants belonging for the most part to the Snucids, a tribe of marabout. According to local tradition Atar was founded in the 16th or 17th century. At this period the pilgrims' caravans to Mecca was organised each year by the Idan Aḥl al-Chingettū (Shiukh) who used to give the imamate to a distinguished member of the Snucids. It happened that they broke with this tradition in favour of a Ghellaw. Outraged, a group of the Snucids left the town in protest and arrived at an important settlement of the Azougi which has now disappeared, but was then rich enough for the Portuguese to have established a factory there in the 15th century. So this display of temper gave birth to Atar.

Although Chingettū has remained the spiritual and religious capital of the *Adrar*, Atar is now the principal commercial centre, providing a market for the great nomads and the southern outlet for the products of Moroccan workers. It is here that graziers come to sell their camels and sheep and to stock themselves up with tea, sugar, indigo, oil etc. It is also to its important palm-grove that they come to perform the process known as *gofa*, the cleaning of the dates, which brings in great wealth at the time of the date-harvest.

When, at the beginning of the 20th century, Copeland and his successor, Colonel Montagu Capelose, extended French influence to the north of Senegal, they were soon forced to the conclusion that no peace was possible in Mauritania while the

mountainous range of the Adrar provided an ideal centre for armed insoultants.

It was Atar, capital of the Adrar, "the Key to the Situation", that Colonel Gouraud chose as the objective for his column in 1908.

After defeating the Emir's warriors and the *félis* of *Shaykh* Mâ al-Aynayn at the pass of Hamoud, he entered the Ksar on 9 January 1909 and received the submission of the chief of the Smâwids, Sîdâ Ould Sîdî Baba.

Since then Atar, linked by road and air to Senegal and Morocco has considerably increased its economic and commercial importance.

(S. v. OTTON LOYWEK)

**ATATÜRK** (Mustafa Kemal), the founder and first President of the Turkish Republic, was born at Salonica 1881 and died at Istanbul on 10th November 1938. He lost his father, 'Ali Rîdâ, whilst still very young, so that it was his mother, Züleyhâ Khânüm, who saw to his education. When twelve years of age, he entered the military preparatory school at Salonica, where one of his teachers made him take the name of Kemal in addition to Mustafa. In 1895 he entered the Military School of Monastir, then in 1899 that of Istanbul, where he started to take an interest in political life and to play an active part in the secret opposition movements, which the despotism of Sultan 'Abd al-Hamid (r. c.) had called into being. He obtained the diploma of the Academy of War of Istanbul in 1905, and was then sent to Damascus as a Captain, where he founded the *Ittihad ve Hürriyet* (Fatherland and Freedom) group. Upon his return from Salonica, he only took part from a distance in the activities of the *Ittihad ve Hürriyet* (Union and Progress) movement. He took part in the defence of Tripolitania, when it was invaded by the Italians (1911-2), was appointed Military Attaché in Bulgaria and, during the first world war, distinguished himself in the Dardanelles fighting (1915) and, as an Army Commander, in the fighting in the Caucasus (1916) and in Palestine (1917). After a short visit to Germany, he reassumed command of the 7th Army in Palestine, with which he retreated as far as the area north of Aleppo, where he was at the time of the Mudros Armistice (30th October 1918). Mustafa Kemal did not agree with the Draconian terms of the Armistice and came into conflict with Sultan Mehmed VI. Recalled to Istanbul, where his national feelings were severely tested, he was then appointed Inspector of the Army of the North at Erzurum on 30th April 1919. On 19th May, he landed at Samsun with his army and went up to fight for the total independence of Turkey, threatened by the designs of the Allies, by relying on the troops which had remained faithful to him.

On 22nd June he issued a circular from Amasya condemning the government of the Sultan and of the Grand Vizier Dâvud Ferîd Paşa. Through the medium of the congresses which he assembled at Erzurum (23rd July) and at Sivas (1st September) he launched the demand for the independence and unity of Turkey. On 23rd April 1920, having won a certain number of political and military personalities to his cause, he assembled the first Great National

Assembly (*Büyük Millet Meclisi*) at Ankara, which elected him President. The struggle had begun against both the Government of Istanbul and the Allies, more particularly the Greeks (1920-2). His decisive part in the campaigns conducted against the latter caused the Assembly to bestow on him the title of *Gâhî* ("The victor").

The Armistice of Mudanya (11 October 1922) set the seal on Mustafa Kemal's victory, and on 21st November 1922 he obtained the vote abolishing the Sultanate. The Lausanne Conference (November 1922-July 1923) gave complete independence to Turkey, as well as national frontiers. The second Great National Assembly, the majority of whose members belonged to the People's Party (*Halk Fırkası*, modern *Tk. Halk Fırkası*), founded by Mustafa Kemal (subsequently the People's Republican Party: *Cumhuriyet Halk Partisi*), on 29th October 1923 proclaimed the Republic; Mustafa Kemal was elected President—an office to which he was constantly re-elected until his death—while 'İsmet Paşa (İsmet İnönü) was appointed Prime Minister and Ankara became the capital of Turkey. The abolition of the Caliphate was voted on 3rd March 1924.

The first years of the Turkish Republic were marked by the force determination of Mustafa Kemal to modernise the country, to free it from foreign economic tutelage and to secularise it. Relying on a single absolutely devoted party, he imposed a Constitution which virtually placed all power in the hands of the President of the Republic (30th April 1924). Secularisation, marked by the suppression of the religious courts, *Kur'anic* schools and dervish orders, the prohibition of the wearing of the fez, the abolition of the article of the Constitution declaring Islam the state religion, brought about local risings (Kurdistan and the Ismir region) and reactions in some political circles, which were swiftly suppressed. Modernisation and turkisation proceeded hand in hand through the nationalisation of foreign companies, the impulse given to agriculture and industry, the creation of national banks, the development of means of communication, the reform of the alphabet, the vote for women and the introduction of new civil, criminal, and commercial codes. Mustafa Kemal's decisions, sanctioned by the Assembly without opposition, were disseminated throughout the country by the local sections of the People's Party and by the *Halk okulları* (Houses of the people); the whole nation was affected and impregnated by the new ideas. In November 1934, a law required all citizens to use family names; the Assembly accorded Mustafa Kemal that of Atatürk. In foreign policy, he showed himself to be pacific, though determined to protect the independence of his country; he concluded treaties of friendship or alliance with the neighbouring states and with the Great Powers. He signed a pact with Greece, Rumania and Yugoslavia, "the Balkan Entente" (9th February 1934), which was extended eastwards by the Pact of Sa'diabad (Turkey, 'Irâk, 'Irân and Afghanistan, July 1937).

Mustafa Kemal died on 10th November 1938 at Istanbul, mourned by a whole nation, who saw in him the liberator and the restorer of their country. A provincial tomb was erected at the Ethnographic Museum in Ankara; on 28th November 1953, his remains were solemnly transferred to the vast mausoleum erected in his honour in the capital.

Mustafa Kemal was a man uncompromising in nature, impatient of opposition, exacting in his

demands both upon himself and others, his sole objective being the restoration of his country and the promotion of its greatness. Opposed to the Sultanate and to Islam, he strove relentlessly to suppress them both, for he considered them responsible for the decay of the Ottoman Empire. His passionate love of his country led him into the severe treatment both of ethnic minorities long settled in Turkey and of prominent Turks whose crime was that they did not subscribe to all his political ideas. Yet Atatürk has imparted to the new Turkish régime the deep imprint of his personality. There could be no question for his successors of going back on his work, except in the matter of religion and in the democratisation of the régime.

**Bibliography:** A complete bibliography of works dealing with Atatürk will be found in *IA*, vol. I, fasc. 20, Istanbul 1949. Additional bibliography: Atatürk, *Nutuk* (1919-27), vols. (R. MANTRAN)

**ATHARA**, a tributary of the Nile, known to the ancients as Atcharos. It rises in Abyssinia not far from Gondar and, entering the Sudda near Gallabat (Kallabâb) is joined lower down by the Salim and Setti; it joins the Main Nile at a point about 200 miles north of Khartûm. During the flood season (end of May to end of September) it contributes a considerable amount of silt-laden water to the Nile; for the rest of the year it dries up into a series of pools.

The town of Athara near the river mouth is important as the headquarters of the Sudda railways (population of the Municipal council area 36,143), and as the junction for the Red Sea line. In the battle of the Athara fought on 8 June 1898 at Nakhabayla, a short distance upstream from the river mouth, the Anglo-Egyptian forces under Sir Horbert (later Lord) Kitchener destroyed a Mahdist army of 12,000 infantry and 4,000 horsemen commanded by the Darwîsh amîr Mahmûd Ahmad.

(S. HILFELSON)

**ATEIBA** [see 'ATAYBA].  
ATEIK, a district in Soviet Turkmenistan on the northern slope of the frontier mountains of Khurân (Kopet Dag), between the modern railway-

stations Gjaurs and Doghak. The name is really Turkish, Etek, "edge border" (of the mountain-chain), and is a translation of the Persian name given to this district, viz. Dâman-i Kûh, "foot of the mountain"; but the word is always written Âtak by the Persians. During the Middle Ages no special name for Atek appears to have been in use; being a district of the town of Abward (q.v.) it belonged to Khurân in the 10th/16th and 11th/17th cents. It fell into the power of the Khâns of Kh'ârim, and later into that of the Turkmanis; before the appearance of the Russians the frontier with Persia was never clearly defined. Previous to the delimitation of the borders in 1881 a part of Atek with Abward belonged to the principality of Kâldî, which was subject to the overlordship of Persia.

(W. BARTHOLOMÉ)

'**ATF**' (= connexion), an Arabic grammatical term denoting a connexion with a preceding word. Two kinds of 'atf are distinguished: '*atf al-nasab*' or '*atf*' properly so-called, and '*atf al-bayân*'.

2. The simple co-ordinative connexion ('*atf al-nasab*') consists of the co-ordination of a word with a preceding word by means of one of the ten particles of connexion, e.g.: *âhuma Zayd wa-'umar*. The co-ordinative particles (*al-nasab*) or *burûl* or *atf* are distinguished according to their degree of strength: *wa* is used for the simple co-ordinative relationship (*li'-'dham*); *fa*, *thumma* and *hathâ* express relationships of governance and subordination (*li'-'tathîr*); *aw*, *imâd*, or *an* express a fluctuation between these two terms (*li'-'tathîr al-hukm bi' al-âdâ 'îmâdîyyah*), and *âi*, *hal*, or *lâkin* an antithesis (*li'-'tathîr*). '*atf*' can connect words (*mufrad 'alâ mufrad*) as well as clauses (*djumla 'alâ djumla*). According to Ibn Ya'îsh, *nasab* is a term belonging to the terminology of Kûfa, '*atf*' to that of Basra.

2. The explicative connexion ('*atf al-bayân*') is an apposition, which however cannot be an adjective, and which, in contrast to *hathâ*, explains the preceding word (*imâdh li'-'muthâ'ik*), e.g.: *djâ'a al-âhûdâ Zayd*, or *âhuma 'ilâhî Abû Hâfî 'umar*. From this point of view '*atf al-bayân*' has exactly the same value as *wa-huwa*.

In both kinds of '*atf*', the second word is called *al-ma'wâf*, and the preceding *al-ma'wâf 'alâyah*.

**Bibliography:** See the works on grammar, especially Zarnakshahî, *Ma'ajal*, 50, 51, 74, 140, 142, 143; *Dist. of Techn. Terms*, 1007-10.

(G. WEIZ)

**ATFÎH**, town in Middle Egypt. ATFÎH (also written with *t* instead of *f*) is a small town of 4,300 inhabitants on the east bank of the Nile at the latitude of Fayyûm. The name of the town in old Egyptian was *Tep-peh* or *Pe* Hathor nebî Tep-peh, i.e., "house of Hathor, lady of Tepepe". The Copts changed this name to *Petpeh*, the Arabs to *Atfih*. The Greeks, identifying Hathor with Aphrodite, called the town Aphroditopolis, abbreviated to Aphrodite. The town must still have possessed importance in the Christian period, for it had over twenty churches, of which ten were still standing in the 13th century. The ancient *woûg*, later known as Kûrât Atfîh, was also called al-Sharkîya by reason of its position on the east bank. On the occasion of the division of Egypt into provinces, towards the end of the Fâtîmid period, a whole province, Ifthîya, was named after the town of Atfîh. Not until the year 1250/1254-5 was the region of Atfîh reunited to the province of *Wâhî*, of which it constituted a district (*markaz*).

Information about Atfîh is very scanty. There is no doubt that at the time of the Mamlûks the town

was already in a state of complete decay. It was only to do something for this region. The incessant raids by Bedouins and Mamlūks came to an end; canals were built or restored. Athir is to-day a port of no more than local importance; trade is only on a small scale.

(C. H. BECKER\*)

**ATFIYĀSH**, MUHAMMAD R. YUSUF R. 'ĪSĀ R. ŠĀḤIR, called Kutb al-A'ẓam, Iḥādī scholar and author of *Bint Iḥād* (arabised: Banū Yaḥyā) in the Maḥab, d. 1332/1974, 94 years old. Descendant of a family of scholars, he brought about, by his extensive literary activity (of which the few items in Brockelmann, S II, 893, cannot give an adequate idea), a real renaissance of Iḥādī religious studies in the West. This went parallel with an increasing strictness in religious practices and in social life, the effects of which, seen through the eyes of the women of the Maḥab, have been described by A. M. Goichon (*REL*, 1930, 231 ff.). Šahyih Atfiyāsh was in close relations with his conligionaries in the East, where another great Iḥādī scholar, 'Abd Allāh b. Humayyir al-Sālimī (Brockelmann, S II, 823), was his contemporary. Whilst defending his point of view vigorously, he did much to make the Iḥādīs known to and respected by the other Muslims, and this brought him into contact with sultan 'Abd al-Hamid II. The leading Iḥādī scholars in the Maḥab in the present time are his disciples. His library, a unique collection of Iḥādī and other works in manuscripts and in printed and lithographed editions, is a *ṣaḥif* in *Bint Iḥād*; it contains many of his autograph manuscripts.

His main works are: commentaries on the *Kur'ān*: *Ḥimayn al-ʿĀd id Dīr al-Ma'ād*, 14 vols., Zanibar 1350; *Taḥyir al-Taḥyir*, 6 vols., Algiers 1326; traditions: *Waḥī' al-Damīna*, 3 vols., Cairo 1306-26; religious law: *Sharh al-Nu'* (commentary on the *K*, al-Nu' of 'Abd al-ʿAzīz b. Ibrāhīm al-Mu'adī, d. 1223/1808; Brockelmann, S II, 827), Cairo 1305-43; *Shihād al-ʿĀd sul-Tarḥ*, 2 vols., Cairo 1348; *Sharh al-Nu'* Ibn al-Nasir (on this author, see Brockelmann, II, 538), 2 vols., Algiers 1326; *Taḥyir al-Ghāmīr*, Algiers 1310; dogmatics: *Sharh Riḥāl al-Tawḥīd* (commentary on the *ṣāḥīd* of Abū Ḥalīf 'Umar b. Dīnār), Brockelmann, S II, 537), Algiers 1326; *al-Dihāb al-Khāḥīd*, Cairo 1343; also works on grammar and philology, some poetry, and writings on various subjects.

**Bibliography:** Biographical notice in Abū Ishāk Bishrīn, Atfiyāsh (nephew of the author), al-Dī'āya id Sabī al-Mu'minin, Cairo 1341/1923, 100-9; J. Schacht, *Bibliothèques et manuscrits arabiques*, in *R. Afr.*, vol. 100, 1956, 373 ff.

(J. SCHACHT)

**ATHĪR** (A.), pl. *athār*, literally "trace"; as a technical term it denotes: 1) a tradition (see *Waqf*); 2) a relic: *al-athār al-sharīf* (pl. *al-athār al-sharīf*), relics of the Prophet, hair, teeth, autographs, utensils alleged to have belonged to him and especially impressions of his footprints [see *KADAN*]; these objects

are preserved in mosques and other public places for the edification of Muslims. Relics are also called, both by Christians and Muslims, *dhāḥīr* ("treasure").

**Bibliography:** I. Goldziher, *Mus. St.*, ii, 356-68. For a description, with illustrations, of the sacred relics preserved in Istanbul see Tabiri Ō, *Al-ḥikā' Saadāt Dairisi wa Emman-i Muhaddis*, Istanbul 1953.

3) *athār* is also used as a technical term in the theory of causality, although it is less commonly used than *fi'ā*, *ʿila* and *ṣabah* with their derivatives (*qāʿi*). From the *mu'aththir*, i.e. from a higher, active being or thing, (for example, God), emanate *ta'athirāt*, "influences", to which correspond under certain conditions *athār*, "impressions", in lower beings or things. In contrast to the higher being, the latter behave in a passive (or better: receptive) manner. This use of the word is most frequently found in the astrologers and natural philosophers, with reference to the influence of the stars (considered as higher beings possessing a soul) on the terrestrial world and on men. In addition, the atmospheric phenomena, which are also under the influence of the stars, are called *al-athār al-ʿulwiyya* (q.v.). The Meteorology of Aristotle was translated into Arabic with this title. *ʿAthār fi ʿulwī* (ἄθαρὰ ἐν ὕψι) is the name given to the emotions and ideas of the sensitive soul, because the soul experiences the impressions of things. (T. DE BOER\*)

**al-ATHĪR al-'ULWIYYA**. "The meteorological phenomena", title used by the Arabs to designate the Meteorology of Aristotle and that of Theophrastus.

1. In his *Riḥāl fi Kamīyāt Kutub Aristūṭilis wa al-ṣaḥāḥ al-ṭayyir* fi *Taḥyir al-Falsafa*, al-Kindī mentions, in fourth place among the books of physical sciences (*al-faḥḥīyyāt*), The Book of the phenomena of the air and of the earth (*Kitāb al-ḥādīth al-Di'aw* wa *l-'Arḍ*); (see M. Gudi and R. Walzer, *Una scritto introduttiva allo studio di Aristotele, Studi su al-Kindī*, i, *Atti della R. Acad. dei Lincei*, Mem. della classe di scienze morali, 6, 6, 1937). The same division of the *faḥḥīyyāt* occurs in al-Yāqūt, ii, 149, who cites the book *Fī ʿl-ʿAthār* wa *buḥūḥ Kitāb al-Manḥūḥ fi ʿl-ʿAthār al-'Ulwiyya*; (see also Klamroth, *Über die Aussätze aus griechischen Schriftstellern bei al-Yaqubī*, ZDMG, xl, 1887, 415-43). The title *al-ʿAthār al-'Ulwiyya* also appears in the *Fihrist*, 251, and Ibn Abī Usayb'a, 38. In the *Fihrist*, 251, and Ibn Abī Usayb'a, 38, the *ʿAthār* work Kitāb al-ʿAthār, the Meteorology belongs to the middle books, i.e., the physical sciences; (see P. Kraus, *Jābir b. Ḥayyān*, p. 322 ff. *Mém. de l'Institut d'Égypte*, 45, 1942).

The first attempts to make Aristotle's works on the physical and biological sciences accessible in Arabic are represented by the paraphrases translated by the Melchite Yuhannā (Yahyā) b. al-Bitrik, *maḥūd* of the Caliph al-Ma'mūn. His translation of the Meteorology, clearly made on the basis of a Syrian original, has come down to us in two manuscripts, one of which is preserved at Istanbul (*Yusuf* 1179), and the other at Rome (Vat. bebr. 378). The first three books of the *al-Bitrik* work were translated into Latin by Gerard of Cremona; (see Lacombe, *Aristoteles latinus*, i, 56). Of the fourth book, the *Treatise on Chemistry*, three versions of the Arab-Latin text have been indicated by Fobes; (see *Classical philology*, 10, 1915, 297-314). Of these texts, contained in the ms. cod. Bibl. Nat., lat. 6225, represents a version made on the basis of the work of Ibn al-Bitrik.

Among the works of Abū ʿIḥāyir al-Ḥasan b. Suwayr (born 331/942), the *Fihrist*, 265, mentions the translation of a *Kitāb al-ʿAthār al-'Ulwiyya*, but whether this title in fact refers to the Meteorology of Aristotle is uncertain. On another meteorological work of Ibn Suwayr, see also Ibn Abī Usayb'a, i, 323. The great commentary of Olympiodorus on the text of Aristotle was translated, according to the *Fihrist*, 251, by Abū Bishr Mattā b. Yūnus (died 388/998), and that of Alexander of Aphrodisias by Yahyā b. 'Adī (died 363/973). None of these translations has come down to us. On the commentary of al-Fārābī (see Ibn al-Khif, 279, and Ibn Abī Usayb'a, i, 338. In the *Kitāb al-Shifā'* of Ibn Sīnā, the Meteorology and the Geography form part of the fifth *ḥaṣṣ*; that part of it dealing with the halo and the rainbow has been translated by Horten and Wiedemann (*Meteorologische Zeitschr.*, 30, 1913, 233-244). In the *Kitāb al-Naḍīr* (Cairo ed. 1938, 135-7), Ibn Shāh gives the extract of the detailed account of the *Kitāb al-Shifā'*. Of Ibn Rughbī's commentaries on the Meteorology, we possess the Arab text of his abridgement (ed. Haydarābād 1365).

The ideas expounded by Aristotle in the Meteorology, especially those of the fourth book, have played an important rôle in the history of physical ideas in Islam. At the beginning of the third century of the Hijra, the Mu'tazilite theologian al-Nazzām (q.v.), criticised the doctrine expounded by the *dahiriyya* of the four elementary qualities (*ḥawā ḡharīyā*); this he considered to be arbitrary, since it was based only on the sense of touch (*ḥawā, malsama* = 76 *ḥawā*). He knew the fundamental theory of the two exhalations (*ḥawā, ḡharīyā*) and expounded an opinion on the saltiness of the sea; (see the fragments of his writings cited by al-Djābir, *Kitāb al-Ḥayyān*, vi). In Djābir's system, the doctrine of the elements is clearly based on that of Aristotle; (see Kraus, *op. cit.*, 163 ff.). In the Arab tradition of the Meteorology, the doctrine of the four *ḡharīyāt*, down to Ibn Rughbī, the doctrine vaguely indicated by Aristotle (1390 to 61) of the influence of the Spheres on the sub-lunar world is interpreted in conformity with the astrological theory expounded for example in the Book of the Treasure of Alexander, the Arabic text of which is cited by Ruska, *Tabula smaragdina*, 80. According to this theory, "the world below follows the world above, and the individual bodies of the former are subject to those of the latter, because the air is contiguous (*muttaḥ*) to the exterior of all the bodies and to the Spheres as well". In the *Sirr al-Khalīqa*, a hermetic work attributed to Balīnās (Apollonius of Tyana) (see Kraus, *op. cit.*, 147, n. 2), the idea of the influence of the Sphere is presented under the form of a cosmogony, according to which the successive development of minerals, plants and animals is due to the increasingly rapid motion of the Sphere. This idea is also present in Ibn al-Bitrik's paraphrase of *Meteor.*, i, 1: "The movement of things directed (by the celestial bodies) belonging to the earth such as plants, the creation and production of animals, minerals, etc. taking into account their transformation and stability, is produced by the celestial influence". This theory is also expounded by the *Iḥwān al-Ṣafā'* in the chapter on *al-ʿAthār al-'Ulwiyya*, *Riḥāl*, ii, 34 ff. It is explicitly attributed to Aristotle by 'Alī b. Rabhān al-Tabarī, *Furūḡ al-Ḥikma*, 21. See also Ibn Rughbī, *al-ʿAthār al-'Ulwiyya*, 6.

2. The Meteorology of Theophrastus (Ἰηρὶ (μετεωρολογία), the Greek original of which is lost, was partly translated by the celebrated lexicographer Abū ʿIḥāyir b. Bahlūl al-Tirhānī (this is how it should be read, Ibn Abī Usayb'a, i, 1, 109); see Bergsträsser, *Neue meteorologische Fragmente des Theophrast* (*Sitzungsber. der Heidelb. Akad. der Wiss. Phil.-hist. Kl.*, 1918, 9). The Syrian text translated by Bar Bahlūl has come down to us; see Drossart Lulofs, *The Syrian translation of Theophrastus' Meteorology* (*Annuaire de l'École des Études orientales* d'A. Moussier, Louvain 1915, 33-49). (B. LEBWIS)

**ATHIENS** [see *ATINA*].

**'ATHIR**, **'ATHIR**, formerly a harbour on the coast of Palestine between the promontory of Carmel and al-Tanfira (Dora), on a little tongue of land which lies to the north of a small bay and is washed on three sides by the sea. According to the *Itinerarium Burdigalense* there was a mutatio Certha there, but the name 'Athir appears to be ancient. 'Athir appears in the light of history in the period of the Crusades. In 581/1187 it fell into Saladin's hands. In 1218 the Castellum Peregrinorum, as the Franks called it was reconstructed as a powerful Templar-fortress. Along with Districtum-Detroit (Ḥirbat Ditrē) it had to guard the passes of Carmel leading south. In 1292 it was conquered and demolished by the Mamlūk Sultan al-Ashraf Khalīl. In the late 14th century al-Uḡmīnī speaks of 'Athir as the southernmost *waḥā* of the *mamlaka* of Safad (*BSOAS*, xv, 1953, 483).

Rey, *Étude sur les monuments de l'architecture militaire des croisés en Syrie*, 93-105; E. von Müllien, *Recherches sur le Karmel*, 258-277 (= *Zeitschr. d. Deutsch. Palästina-Verein*, xxxi, 187-186); A. S. Marmarid, *Textes géographiques arabes sur la Palestine*, Paris 1931, 137; reports by C. S. Johns on excavations at the Pilgrims' Castle will be found in *QDAP*, ii, 1933, 41-104; iii, 1934, 145-164; iv, 1935, 121-132. (R. HARTMANN)

**'ATHIR** or **'ATHIR** (both pronunciations are well attested, the second one mostly in poetry, cf. *LA*, i, 24 v.v.).

(1) Mountain not far from Tabāḥ (q.v.), known as a haunt of lions (*ma'sada*), like ʿIṭwād, Shārā etc. (cf. Hamādī, i, 34, 127, 12; Forster, *litter.*; Ka'b b. Zuhayr, *Dihāt Su'ūd*, 46; Uṭwa b. al-Ward, ii, 6). (2) District in NW Yaman on the Red Sea, between Djāḥān (Dijān) and Hamidā (al-Hamādān), or Shārdā and Haly ('Umīra). Main towns: 'Aḡr (see below), Bayḡh, Dūrayḡh, Haly, Sirayn. *Wādīs*: al-Amān, Bayḡh, Rīm, 'Haramrām, Zanīl, al-'Amūd. Having received 'Aḡr, Shārdā, Haly and Zarāḥ (i.e. al-Bitrik al-Sulaymānī) under his dominion, Sulaymān b. Tārī, the viceroys of the Banī Ziyād in Zabīd, made himself actually, although not formally, independent of Abū ʿIḥāyir ca. 350/960, and the territory enjoyed great prosperity until the expulsion of Banū Tārī in 452/1061. The annual revenue of Ibn Tārī from the trade is given by 'Umīra as 500,000 *'aḡr* *dhīr* (= 21) of a *ḡhāḡ*, just as the *ma'sada* of Mecca, al-Makhlūḡ 99. With the succession of the Sulaymānī *gharīf* from Mecca there was a rapid decline, until Yaman was conquered by the *ḡhūz*, the mercenary troops of the Ayyubids, ca. 560/1165.

(3) The capital of the district and a seaport of importance. It was situated on the pilgrin road

from Sa'd's, between al-Hadjar (= *Ḥaḥḥān*) and Bayd, and is quoted already in the year 12/632 as belonging to the insurgent al-Aṣwad [q.v.]. Scarcity of water and the silting up of the bay brought about the decline of the town in the 6th and 7th/12th-13th centuries. In the time of al-Ḥanādī (ca. 700/1300) it was since long in ruins. According to him (MS Paris 2127, fol. 125b), in the biography of ʿAlī al-ʿAḡḡrī the name 'Aṭir also was transferred to the opposite island (is.), usually called Farasā [q.v.]. The name is not on the maps; the closest correspondents would be *Ḥor Abū es-Seba*, or *Qawz* (al-*Ḥa*'aḥīra) 32 km. N. of *Ḥīran*.

(4) A small place on the maritime road 'Adan-Mekka, between 'Ara and Sukyā (*Tunāza*, 8), three farsaḥs from the former village (Ibn al-Muḍāwir, 100).

*Bibliography*: Hamūdī, tr. Forrer, 47-51; Yāqūt, ii, 615; Makdūḥ, 53, 70, 86; Kay, *Yaman* 7, 11, 141 ff., 240 f.; Ibn al-Muḍāwir, 54 (*Ḥa*'aḥīd *Aṭir*), 100; Sprenger, *Post-u. Reiseboten*, 150; idem, *Die alte Geographie Arabien*, 45-54, 197; on the orthography of the name: Ibn al-ʿAḡḡrī, *Ḥaḥḥān*, ii, 122 and *Ḥaḥḥān*, *Magātib*, 177 f. (O. Löfcrs).

**ʿATIKRA**, Meccan lady, the daughter of the *ḥaṣṣ* Zayd b. 'Amr and sister of Sa'd b. Zayd, of the clan 'Adī b. Ka'b. She embraced Islam early and took part in the *ḥijra*. She was married first to 'Abd Allāh, a son of Abū Bakr, then after his death to 'Umar b. al-Khaṭṭāb (in 12/633 according to al-Tabarī, i, 2077), whom she bore a son 'Iyād (Ibn al-Tabarī, i, 2077). When 'Umar was killed, she married al-Zuhayr b. al-'Awām, whose death she lamented in a much quoted elegy (Ibn Sa'd ii, 79 etc.). The sad story of this beautiful woman and her husbands whose lives ended so tragically was soon turned into a fanciful romance and embellished with spurious love-poems and elegies.

*Bibliography*: Ibn Sa'd vii, 192-5; ii, 207; Ibn Kutayba, *ʿUyūn al-ʿAḥbāb*, iv, 114 f.; Hanūka (Freytag), 193 ff.; *ʿAḥbāb*, xvi, 133-5; 'Aynī, ii, 278 f.; *Ḥisnat al-ʿAdāb*, iv, 351 f. etc. (J. W. Fock).

**ATIL**, or Iṭl, sometimes Atil (Iṭl-Khazarān, also *Ḥazarān* Atil, the *Ḥazarān* capital, a double town on the lower Volga, itself called Atil, Iṭl [q.v.] in the early mediaeval period. The exact site is unknown. According to al-Mas'ūdī (*Murūḡ*, ii, 7), the capital was transferred to Atil from Samanān in the neighbourhood of the Caucasus in the time of Sulaymān (Salmān) b. Rabi' a al-Bāḥlī, i.e. about 30/850, though elsewhere (*Tunāb*, 62) he says that Balandjar, also in the Caucasus region, was the original *Ḥazarān* capital. Already at this date the Arabic sources speak of al-Bayḍā', 200 parasangs from Balandjar (al-Tabarī, i, 2068), but which doubtless the later capital is intended. Ibn Rusta (1291) gives what are apparently the earlier *Ḥazarān* names for the double town on the Volga. According to al-ʿIṣṭaḥṣī (220), the west part, which was the larger, was a straggling town of felt tents with a few clay houses, several miles in extent and surrounded by a wall. The *Ḥazarān* proper, i.e. the Judaised ruling class, as well as the army and the royal caste, built of brick, were on this bank. Most of the Muslims, estimated in all at 10,000, lived on the east bank, which was the commercial part of the town. Markets, baths, mosques, etc. are mentioned. There was also a considerable Christian population, and a colony of pagan *Ḥakāliba* and *Rūs* (*Murūḡ*, ii, 9, 12). The correct naming of the double

town appears to be: west bank, *Ḥazarān*; east bank, Atil (cf. Ibn Hawkal, 389 note). Like its modern counterpart Astrakhan, it was an important entrepôt of trade. The products of the north, especially furs, passed through the *Ḥazarān* capital, while contact was made with Kievan Russia to the west and with *Ḥīra* to the east. The slave-trade seems to have been of importance. In the sixties of the 10th century the *Ḥazarān* capital was destroyed by the *Rūs* (Ibn Hawkal, 15, 392; Russian Chronicle, anno 965) and never recovered its former prosperity, though the *Rūs* withdrew and attempts were made to rebuild it (Ibn Hawkal, 392; cf. al-Makdīdī 161). The *Ḥazarān* state appears to have drawn out a precarious existence for some time afterwards, but *Ḥazarān* Atil ceases to be mentioned.

**ATINA**, Athens, capital of Greece. The history of Athens in pre-Islamic times will not be treated here. The first close—admittedly hostile—contact with the Muslims was made in 283/896, when Saracen pirates occupied the town for a short time (cf. D. G. Kambourglous, 'H Ἰστορία τῆς Ἀθηνῶν πόλεως', Athens 1934). Certain Arabic remains, and influences on the Arabic style in Athens, have been traced back to this event (cf. G. Soteriou, *Arabic remains in Athens in Byzantine times*, in: *Praktikā (Proceedings) of the Academy of Athens*, iv (Athens 1929), reproduced by D. G. Kambourglous, *Le*, 160; cf. also *Byzant-Nesgrich*, *Jahrbücher*, xi (Berlin and Athens), 233-60). The whole question still appears to be in need of clarification. Cf. K. M. Setton, *On the role of the Moslems in the Aegean in the ninth and tenth centuries and their alleged occupation of Athens*, in: *American Journal of Archaeology*, vol. LVIII (1954), 311-9. Shortly after the time of Justinian I, Athens had sunk to the level of a provincial town, and apart from its great buildings, there was nothing left of its ancient cultural importance. During the period of the Burgundians and the Catalans, who occupied it in 1311, bringing it under the sovereignty of the kings of Aragon (cf. Kenneth M. Setton, *Catalan Domination of Athens 1311-1388* (Cambridge, Mass., 1948 with excellent bibliography on pp. 261-301). From 1388 to 1458 the Florentine house of the Acciajuoli ruled in Athens. In 1397 it was temporarily taken by sultān Bāyezīd I. In some Turkish sources this capture is mentioned as taking place before the battle of Nicopolis (which took place on 25 Sept. 1396); after the conquest of Salonica (which is mentioned as having taken place in the previous year (Nesgri, Rūbī); in others, as taking place after that battle (Sa'd al-Dīn and his plagiarists, Solakräde and Ḥādīdī Khalīfa as well as Mīnēdīlīm-besleh). The latter date seems preferable, as Timurtaş is mentioned as the conqueror of Athens, and the *Chromatikon* mentions a raid by Ya'qūb-Paşa and 'Mour-taş', *Μουρτασ* = Timurtaş against Morea in summer 1397. Doubtless it was only a temporary occupation of the town, perhaps no more than a raid, so that Greek sources do not mention the event explicitly (cf. Sa'd al-Dīn, *Taḡl al-Turāḥ*, i, 149 f.; the whole question, J. H. Merdman, *Die erste Eroberung von Athen durch die Türken im Ende des 14. Jahrhunderts*, in: *Byz.-Nesgrich*, *Jahrbücher*, IV,

346-350). It was not until Mehemmed II, that Athens, "the city of wise men" (*madīnat al-ḥakamā*) finally came under Ottoman rule, when the Conqueror personally made his triumphal entry in the last week of August, thus beginning nearly 350 years of Turkish occupation. Concerning this event and all its details, cf. F. Babinger, *Mahmud der Eroberer und seine Zeit*, Munich 1933, 170 f.; (Italian edition, *Maometto II il Conquistatore ed il suo tempo*, Turin 1936, 246). In the following centuries, Athens sank into insignificance, as one can gather clearly from reports of western travellers (cf. in particular Count de Laborde, *Athènes aux XV<sup>e</sup>, XVI<sup>e</sup> et XVII<sup>e</sup> siècles*, Paris 1854, 2 vols.). The Parthenon had been converted into a mosque, and barracks were built in the Propylaea. Turkish domination meant a time of decadence for Athens, which sank to the status of a small country town. In autumn 1687, it was besieged by a Venetian admiral, Francesco Morosini (subsequently Doge), and on this occasion the Parthenon was largely destroyed (on Sept. 26th) by a bomb which hit the ammunition stored there. The two mosques of the city were turned into places of Catholic and Protestant worship (the latter because a considerable number of German mercenaries were present) by the Venetian Provveditore Daniele Dolfin. Shortly afterwards, however, on April 26th 1688, Athens was abandoned by the occupying troops (which were much reduced by an epidemic) and the Turks re-entered. A city-wall—built largely from the remains of ancient monuments—was erected in 1777. From the 17th century onwards, there was great interest in the monuments of Greek antiquity in Athens, hence there are detailed descriptions dating from that time, especially in French (e.g. J. Spon (1678) and G. Wheeler (1682); cf. also Sh. H. Weber, *Voyages and Travels in Greece, the Near East and adjacent Regions made previous to the Year 1801*, Princeton, 1953. These describe vividly to what a pitiable state Athens had sunk. The Greek fight for liberation increased this devastation. In 1822 Athens was conquered by the Greeks, but had to be ceded to the Turks again no later than 1826 (the Acropolis in 1827). It was only after the London Conference (1830), that Athens was incorporated into the new kingdom of Greece. It became the capital of the country at the end of 1834, and soon developed into an intellectual and cultural centre. Owing to the quick economic and political development there was a steep rise in population. Today Athens has about one million inhabitants. The university was founded in 1835.

*Bibliography*: The best bibliography of the history of Athens during the periods of Catalan and Florentine rule is found in Kenneth M. Setton, *Catalan Domination of Athens 1311-1388* (1948) in chapter XII, from 1388 onwards. Concerning the Turkish rule cf. Th. N. Philadelphos, *Τουρική τῆς Ἀθηνῶν ἐστὶ Τουρκοκρατία* (Athens 1902, 2 vols.). A detailed description of Athens in the 17th century is found in Ewliya Çelebi, *Seyahatnâme*, viii, Istanbul 1928, 249-67; in connexion with this, see also short notices by Ḥādīdī Khalīfa, in J. v. Hammer, *Kunst und Natur*, Vienna 1812, 190 ff. There is a thorough study of Athens in the Middle Ages and in modern times by Wm. Miller, *The Latins in the Levant*, London 1908, 335 ff., with numerous further bibliographical details. Ferd. Gregorovius, *Die Geschichte der Stadt Athen im Mittelalter*, Stuttgart 1889, 2 vols. See also G. C. Miles, *The Arab Mosque in Athens*

in *Hesperia*, *Journal of the American School of Classical Studies at Athens*, xxv (Athens 1956), 329-44 (with plate 49). (FRANK BABINGER)

**ʿATIRA** (pl. *'atā'ir*) denoted, among the Arabs of the *qishliyya*, a ewe (and by extensions its sacrifice) offered as a sacrifice to a pagan divinity, either as a thanksgiving following the fulfilment of a prayer (concerning in particular the increase of flocks), or when a flock reached the total of a hundred head (cf. the word *fara'a*); the head of the idols before which the sacrifice was performed was smeared with the blood of the victims. If one bears in mind on the one hand that these sacrifices (which were also seen behind the phrase *radjābiya*; hence the phrase *radjābiya* took place in the month of *radjāb* (i.e., in the spring), and on the other hand that in principle the first born were used for the sacrifice, a close connexion will be established with the sacrifice which took place during the *'umra* (q.v.), and also with the Jewish Passover and the magic rites which introduce a scapegoat. It seems that the Prophet forbade these sacrifices (cf. the *ḥadīth*: *la fara'a* (sacrifice of firstlings) was *la 'atā'ir*).

*Bibliography*: *LA*, s.vv. *'atira*, *radjābiyya*; Wellhausen, *Recht*, 118; J. Chelhod, *La Sacrifice chez les Arabes*, Paris 1955, 151 and refs. quoted; cf. Jausen, *Moab*, 359; see also *Ḥādīdī*, *Hayasūn*, i, 25, 216, 218.

**ATJĒH** (Atelch, Achin), the most northerly part of the island of Sumatra. Here flourished the once powerful Muslim empire of Atjeh, which is now a province of the Indonesian Republic. The southern limit was, under Dutch rule, formed by the residences of Tapanuli and "Sumatra's Oost-kust", now the province Sumatra Utara. In earlier times the province, or at least the sphere of political sovereignty of Atjeh extended much farther towards the south. A considerable part of both the east and west coasts of Sumatra was subject to the authority of Atjeh, and even pagan chiefs in the Batak regions received their rank at the hands of the princes of Atjeh.

Great-Atjeh. Only the district to the northwest with the Atjeh river and the port Atjeh, the former residence of the princes of Atjeh, was from the first reckoned as Atjeh proper. The Dutch named it Great-Atjeh and the capital Kuta Radja (i.e. fort of the prince). The port of Sabang situated on the island of Puló Wē (to the north-east of Kuta Radja) only dates from the beginning of the 19th century. The inhabitants of the littoral (Baroh) are distinguished in many respects from the population of the highlands of the interior (Tunong); the customs and speech of the former (who live of course in the vicinity of the residence) are always considered to be the more refined.

The Dependencies. The other districts situated on the west, north and east coasts were under Dutch rule usually referred to as the Dependencies. Among the important towns are: on the west coast: Meulaboh, Tapa' Tuan and Singkil; on the north coast: Sigli in the region of the former empire of Pidie (Pedir), Meureudu, Bireuen, Peussangan, Lho'Sukun and Lho'Sumawe. In the region between the latter place and the river Djambi Ays stood the flourishing empire of Pajene, which Ibn Battūta (ed. De-fremery and Sanguinetti, iv, 228 ff.) visited in

1) In this article *tj* is retained in deference to the official orthography in Indonesia; *t* = closed, *e* = open *e*; *o* = open, *o* = closed *o*; *au* is one vowel (not a diphthong).

the year 746/1345. On the east coast are situated among others: Idi, Langsa and Kuala Simpang. A steam tramway joins the east and north coasts with Kuta Radja. A part of the population has migrated thither from Great-Atjeh; many Malays have also settled here from the neighbouring districts.

With an estimated rice export surplus of 45,000 tons in 1922, and an important export of betel nuts, patchouli, copra, rubber and live-stock, Atjeh developed under the Dutch government into a thriving country, in spite of the ruin of the traditional pepper culture, to which the settlements in one part of the Dependencies had owed their original existence. Large irrigation works were completed or were under construction. The road system was extended. In addition on the West and East Coasts of Atjeh extensive acreages of waste ground were cleared by Western estate companies for the planting of rubber, oil-palms and fibres. The BPM (Batavia Petroleum Maatschappij) had fields in operation in Rantau (Kuala Simpang), and Peureula (Langsa); a gold mining concession was granted to a whist mining concern.

Gayô and Alas-Countries. High mountain-chains overgrown with virgin forest separate the littoral from the Gayô-country; transverse chains divide the region of the Gayôs into four districts. The most northerly (containing the great Tawar lake and the sources of the river Peusangan) is occupied by the so-called "Trang Lang" (i.e. people of the lake), the plain to the south of it is occupied on the other hand by the "Urang Döröt" (i.e. people of the land); to the southeast lies the table-land of Sér-bôdjari containing the sources of the river Peureula which flows in an easterly direction. The fourth table-land, situated in the south and containing the bed of the river Tripa which discharges its waters on the west coast, is called Gayô Luô (i.e. the wide, spacious Gayô-countries). The Alas-countries lie south of this. The population of these regions, who differ in many respects from that of Atjeh, have from the first recognised the authority of Atjeh. The four chiefs appointed by the princes of Atjeh in the several parts of the Gayô-country (the so-called "Kedjaruns") were the mediators between the Gayôs and Atjeh. Two of these Kedjaruns had their sphere of influence in the region of Lake Tawar (their distinctive titles were Rôdjô Bukit and Siah Utamal, one among the Döröt (with the title Rôdjô Lingêl), and the fourth in Gayô Luô (Kedjarun Pétambang). Sér-bôdjari was formerly without inhabitants; later its most eminent chieftain was also called Kedjarun (Kedjarun abuk). In the Alas countries the authority of Atjeh was represented by two Kedjaruns.

The most important administrative centres are Takéngin, on Lake Tawar, and Blang Kedjêren, in Gayô Luô. In the sub-district of Takéngin, which has an area of 70,000 hectares under fir trees, an important government resin and turpentine industry has developed. Plans for the establishment of a paper factory were in an advanced state of preparation at the time of the Japanese invasion in 1942.

For accurate information about the people of Atjeh we are indebted above all to C. Snouck Hurgronje, who (first in the years 1891-1892) investigated the previously but little known social, political and religious conditions of this nation. (*De Atjehers*; Batavia 1893-1894; cf. the English translation of this work which is provided with a new introduction and some additions by the author: *The Achehese*, Batavia-Leiden 1906; *Amstelsche afdelen 1*, The Hague 1927, 47-438).

and later described at length the land and customs of the Gayôs (*Het Gayoland en zijne bewoners*, Batavia 1893). A wealth of ethnographical details was collected by J. Kroeber and published in his work *Atjeh*, 2 vols., Leiden 1922-23, which also includes the Alas region.

Population and Language. Little is known about the origin of the people of Atjeh. Linguistically they belong to the Malay-Polynesian peoples. Slaves (from the island of Nias, etc.) and other foreigners (e.g. merchants from Hindustan) have influenced to some extent the composition of the population. Atjeh has many dialects, and each dialect again many variants; the literary language has in general closest affinity with the idiom of the Barôh-district. For the literature of Atjeh see Snouck Hurgronje, *The Achehese*, II, 66-189. A general is an independent language, whilst Alas is a Northern-Batak dialect. In the 19th century Malay was almost unknown in Atjeh except among a portion of the inhabitants of the sea-ports, but formerly it was the language of the court and from earliest times in Atjeh letters, official documents and many works on theology were written in Malay. The earliest Achehese adaptations of Arabic and Malay works date from the 17th century. Now Indonesian is the official language. For further details see C. Snouck Hurgronje, *Studies on Atjehische klanen schrifters*, in *TiG*, 21:25 (1893), 346-442, also *Atjehische Taalindien*, *ibid.*, xli (1900), 144-262; K. F. H. van Langen, *Handboek voor de beoefening der Atjehische Taal*, The Hague, 1889; H. Djalaludinograt, *Atjehisch-Nederlandsch Woordenboek*, Batavia 1933-1934; P. Voorhoeve, *Three old Achehese MSS.*, in *BSOS* 12 (1932), 335-345; G. A. J. Hazeu, *Gayô-Nederlandsch Woordenboek met Neder-Gayôisch register*, Batavia 1907.

Tribes and Families. There are still preserved traces of a division of the population of Atjeh into 4 tribes. The members of such a tribe or family—Achehese: *kasom* (from the Arabic *kasim*, people)—regard themselves as blood-relations in the male line, and have (especially in regard to blood-feud and the payment of blood-money) common rights and obligations. The members however of the various *kasoms* are scattered throughout the country; only where many kinsmen dwell together are they wont to choose a chief to represent their common interests. The Gayôs are divided into families who dwell together under their chiefs (Rôdjôs). When Rôdjôs disagree decision rests with the Kedjaruns.

Administration of the Villages. In Atjeh the *Kewtjêh* (i.e. the elder) is the head of the *Gampông*—i.e. the village, also a quarter of a town (Mal. *hampang*); in case of necessity he consults the "eldest" (i.e. the people who have had experience of life). The religious affairs of the *Gampông*, e.g. leading the community in the *Salat*, are the concern of the *Teungku meunasah*. The title *teungku* is borne in Atjeh both by people whose functions are connected with religion, and by those who have acquired some acquaintance with the sacred law. The *Gampông*-Teungkos or *Teungku meunasah* are not men of learning. Their rank has become hereditary, and in Snouck Hurgronje's time the ignorance of many *Teungkos* was so great that they were scarcely able to administer their office without the help of other people.

The Princes, Uleëbalangs and Sagi-chiefs. In historical times Atjeh has always been divided into many small districts, whose hereditary chiefs—

the so-called Uleëbalangs (i.e. commanders-in-chief)—lived in constant feud with each other. They paid homage however to the prince of the port of Atjeh as their common over-lord. The latter had the title of Sultan in official (Malay) documents, but was usually called by the Achehese *Radja* or *Pôlow* (i.e. "our master"). Whilst the Sultans and their male relatives bore the title *hambu*, the male members of the Uleëbalangs families bore the title *teuku*.

The power and dignity of the Achehese princes and the riches and splendour of their court, which are mentioned both in the earliest Malay and European accounts, depended on the tribute of the neighbouring regions on the coasts and the harbour-dues of the capital Atjeh. The hold Achehese mariners were master of sea and harbours; if they demanded tribute few dared resist. The interior of the country possessed little interest for the princes. Even when the empire was flourishing (2nd half of the 16th cent. and particularly during the 1st half of the 17th) the authority of the Sultan was confined to the immediate vicinity of the capital.

By the end of the 17th cent. the princes had become quite dependent on the Uleëbalangs in Great-Atjeh. The latter had at that time apparently on the ground of common interests formed themselves into three federations, the so-called *Sagis*, "sides", i.e. of the triangular-shaped Great-Atjeh. Each *Sagi* had an overlord (*Panglima-Sagi*), whose authority however did not extend beyond the common *Sagi*-interests. (In the Dependencies such federations are found). The Sultan chosen by the three *Sagi*-chiefs used to pay to them a certain sum. He usually belonged to the family of the previous ruler, but strangers, e.g. Sayyids, who dwelt in Atjeh, were sometimes elected to the Sultanate. In the course of time other chiefs obtained a voice in the choice of a ruler; according to tradition at one period 12 chiefs (including the 3 *Sagi*-chiefs) formed a kind of electoral college.

The majority of the Uleëbalangs in Great-Atjeh and the Dependencies later received their authority from the Sultan's hand and in witness thereof were given a document bearing the ruler's seal (a so-called *Sarakata*; on the Hindustani origin of this seal see P. Roessier, in *ITiG*, Series 7, v, 19-28; cf. C. Snouck Hurgronje, *ibid.*, Series 7, vi, 32-35). Not all the Uleëbalangs thought it worth while to go to the expense involved in the acquisition of a *sarakata* or deed of recognition; more important than the "tribal sikurucung" (the nine-fold seal of the sultan) was the "tribal limang" (the five-fold seal, i.e. signifying the hand as a symbol of power, meaning the ability to protect one's own interests). The Kedjaruns of the Gayô and Alas peoples on the other hand usually received a kind of dagger as symbol of their rank.

Division into Mukims. The Friday-service according to the *Shahîte* doctrine is only valid if 40 *Mukims* are present. A *Mukim* is a person domiciled in the place and satisfying the stipulations of the law. Since the population of most of the *Gampôngs* was not numerous enough to be able to hold a regular Friday-service with 40 participants, it became the custom to group together several *Gampôngs* and as near the centre as possible of such a district to construct a mosque for the Friday-service. Hence *Mukim* here pronounced *Mukim* acquired, not only in Atjeh but also in some other Malay regions, the meaning: department, circle. Each Uleëbalang was lord over several of these *Mukims*. Further the names of

the 3 *Sagis* have been derived from the original number of their *Mukims*; i.e. they are called: the *Sagi* "of the 22 *Mukims*" (in the south), the *Sagi* "of the 25 *Mukims*" (in the west) and the *Sagi* "of the 26 *Mukims*" (in the east of the triangular-shaped Great-Atjeh). These ancient names were preserved even after the number of the *Mukims* in the *Sagi* of the 25 *Mukims* and especially in that of the 22 *Mukims* had mounted up owing to the increase in the population.

The chiefs of the *Mukims* bore the title of *Ineum*. This word denoted originally the leader of the Friday-service (Arab. *Inâm*). The *Ineums* became however gradually hereditary, secular chiefs, who transferred the leadership of the Friday communal prayer to special officials.

Administration of Justice. Laws. As a general rule the chiefs themselves were wont to fulfil the functions of judges; they based their decisions on the unwritten law of custom (*'Adat*). There are indeed some statutes (*Sarakata*), which tradition credits Meukuta 'Alam and other famous rulers with having issued, and the Achehese, who know these laws only by name, ordinarily assume that they contain an exact statement of their law; they really consist however only of brief regulations regarding matters of administration, court-ceremonial (including the homage to be rendered to the ruler by the Uleëbalangs), the division of the harbour-dues and the fulfilment of several religious obligations. These regulations date from the time when the princes attempted, without permanent result however, to centralise their imperial administration; Muslim scholars at the court also left their impress on these laws (for fuller information see C. Snouck Hurgronje, *The Achehese*, I, 4-16; K. F. H. van Langen, *De inrichting van het Atjehsche staatsbestuur onder het sultanat in ITiG*, Series 5, lii, 381-471; *Translations from the Majlis Asih* (by T. Braddeley) in *Journal of the Indian Archipelago*, V (1851), 26-32; an edition of the Malay text by G. W. J. Drewes and P. Voorhoeve is in the press). Further both the Sultan and the Panglimas had their *Kali* (= *Kâjê*), but these ecclesiastical judges only took a share in the administration of justice on certain special occasions (e.g. in the division of an inheritance, in some forms of divorce, in contracting marriages, and in other cases where the religious law was usually followed; on other occasions only if the chiefs expressly took them into council). The judge of the sultan bore the title *Kali Maishôn Adé = Kâjê Maliku 'Adat*; his hereditary office degenerated in course of time; he became the peculiar chief of several *Gampôngs* within the sultan's realms. Also the rank of the other *Kalis* became hereditary, and if those people who were *Kali* in virtue of their hereditary right possessed the knowledge requisite for this office it was by a rare chance.

Religion. From earliest times there existed trade relations between Atjeh and Hindustan. The civilisation and language of Atjeh were at first subject to Hindu influence; later Islam reached the shores of Atjeh, probably conveyed thither by Hindustani merchants. When Ibn Batûta visited Pash in 1345 Islam held the field; the ruler of the country warred against his unbelieving neighbours. The Achehese are orthodox Muslims, but Islam as it exists in Atjeh and elsewhere in Indonesia has some peculiar features which are to be explained by its Indian origin. Such are, for instance, the existence of a heterodox

mysticism and some characteristics distinctively Shi'ite. The first month, *e.g.*, is in Atjeh always called *Asan Uda*, obviously from the two martyrs Hasan and Husayn who are held in special honour in Shi'ite countries. The representation of a captive standard of 'Ali's sword *Dhu 'l-Fakr* with a Shi'ite marginal inscription has formerly led some scholars to the false opinion that the Acheneese were partly Shi'ite (cf. A. W. T. Juyaboli, *Ein Afjehsche Nag mit Arabische opskrifter in Tidjschrift voor Ned.-Indië*, 1873, II, 325-340; 1875, I, 471-476; M. J. de Goeje, *Atjeh in De Nederl. Spectator*, 1873, 358). The Acheneese in general were last in the fulfilment of many religious duties. The *Salat* for instance was usually neglected by the majority. On the other hand many Acheneese are wont annually to *jola* in the *Hadjdi*. Further the *Kutab* (Malay, Arabic and Acheneese) were studied in various places under the guidance of masters learned in the law (cf. C. Snouck Hurgronje, *Eene verzameling Arab. Mal. en Afjehsche handschriften en gedrukte boeken in Nidjan van het Indische Gewest*, van Kunden en Wadisch, XXXIX (1907), n.° vii; also *The Acheneese*, II, 1-27). The students who mostly came from remote districts lived in a common residence (*ramhang*). Whilst yet the Empire flourished the splendour of the court not rarely induced foreign scholars from India, Syria and Egypt (including a son of the celebrated Ibn Hadjar al-Haytami) to settle in Atjeh.

Many Acheneese pilgrims became members in Mecca of one of the orthodox mystic brotherhoods (especially the *Kadiriyya* or *Nakshbandiyya*) but these *Tariqas* did not have in Atjeh the same importance as in many other parts of Indonesia. Formerly there were prevalent in Atjeh the forms of pantheistic mysticism which at that period were generally spread throughout Hindustan. The most famous representatives of this heterodox tendency in Atjeh were Shams al-Din al-Samarat<sup>2</sup> (i.e. of Pasé; d. 1630) (g.v.) and his predecessor Hamza Fanqur (g.v.). Its chief opponents were Rukri (g.v.) and 'Abd al-Ra'uf al-Sinkul (g.v.). Certain forms of the ancient heterodox mysticism have been preserved till recent times, but such differences from the orthodox teaching, which are based on ignorance, are gradually disappearing before the increasing communication with the centre of Islam. (Fuller information in Snouck Hurgronje, *The Acheneese*, II, 13 f.). Veneration of saints has still an important place in the popular faith of the Acheneese. The pilgrim visits the tombs of illustrious saints and seeks by gifts and vows to secure their favour and intercession. Some of the most celebrated Acheneese saints were foreigners, as e.g. the Arab Temgku Andjör, who died in 1782, and the Turkish or Syrian 'saint of Gampöng Bitay', who according to tradition came to Atjeh in the 16th cent.

At the summit of religious life stood the *ulamas* (Arab. *ulama'*, used as a singular in Acheneese) the supreme authorities in the field of religious law and doctrine, who were held in great respect by the people. They ranked much higher than the *alem*, who however learned was not considered as a real authority, any more than was the escholarly *malim* or the *leubé*, as anyone would be described who—even though he was quite unlearned—carried out his religious duties more or less faithfully. The *ulamas* were much more respected too than the village religious functionary, the *temgku munanah*. In the same way that the *ulabalangs* were the exponents of the *adat*, so were

the *ulamas* the champions of the *huküm*, although the *ulabalangs*, in accordance with the *huküm*, were at the same time the religious head of their own territory. The essential co-operation of *huküm* and *adat*, described by Snouck Hurgronje as the basis of Acheneese society, must—as this author observed—be seen in this light:

'The *adat* assumes the part of mistress, and the *huküm* that of her obedient slave. The *huküm*, however, avenges herself for her subordination whenever she sees the chance; her representatives are always on the look-out for her opportunity to escape from this servile position.' (*The Acheneese*, I, 153).

History. The province of Atjeh was the first part of Indonesia where Muslim kingdoms were founded. The first mention of such a kingdom is by Marco Polo; when he visited Atjeh's north coast in 1292, there was a Muslim king in Ferlec, i.e. Perak (Ach. *Peureula*), whilst two other countries, Basma or Basman and Samara, were still heathen. These last names cannot be identified with Pasé and Samudra, as the first Muslim king of Samudra-Pasé, al-Malik al-Salih, died in 1297, so that it seems unlikely that in 1292 the people of Samudra were still 'wild idolaters' and 'brutes of man-eaters' (H. K. J. Cowan in *Djawa* 19 (1930), 121 ff.). For some centuries the port of Samudra, afterwards called Pasak (Ach. *Pasé*), remained an important centre for the diffusion of Islam in the Indian Archipelago. Its dynastic history may one day be reconstructed from the inscriptions on tomb-stones and coins. Malay chronicles (*Sidjarah Melayu* and *Hikayat Radja-radja Pasai*, ed. from the unique MS. R. A. S. Ratiles Mal. 67 by E. Dulaurier, *Chroniques Malayes*, 1849; romanced ed. J. P. Mesd, in *JSRAS* 66 (1914)), Chinese, Arabic (Ibn Batuta, see above) and European sources; until now, much material has been collected but a publication of the inscriptions is still lacking. (Reports on the work of the Archaeological Survey in: *Oudheidkundig verslag*, 1912 ff.; cf. *Encyclopaedie v. Ned. Indië*, I, 1917, s.v. *Blang Me*). Many of the tomb-stones were imported from Cambay in Gujarat (J. P. Moquette in *TBG* 34 (1912), 336-339); one tomb, dated 781 A.H., has inscriptions in Arabic and in Old-Malay (W. Stutterheim, *AO* 14 (1936), 268-279; cf. G. E. Morrison, *JMBRAS* 24 (1950), pt. I, 162-165); another stone, dated 823 A.H., on the grave of an Indian immigrant, is inscribed with a Persian *ghazal* by Sa'di (H. K. J. Cowan, *TBG* 80 (1940), 15-21). The kingdom lasted until the 16th century. It was still independent when Tone Pines collected information for his *Sama Oriental* in Malacca, 1521-23 (ed. A. Cortesão, Hakluyt Soc. 2nd Ser. 89, 90 (1944)), and its trade profited greatly by the decline of Malacca after its capture by the Portuguese. This prosperity was not to last long. Though Pasé's traditional enemy Pedir (Ach. *Pidia*) was at that moment in decay owing to the death of its king Madafara (Muzaffar Shah?) and its being at war (apparently with Atjeh), the rising power was not Pasé but Atjeh. First, describes its ruler as a pirate-king, 'a knightly man among his neighbours'. He had already subdued the adjoining country of Lamby (Lamuri, Lambr) and the land of Bilar, between Atjeh and Pedir (Ach. *Bilene*). This probably refers to Sultan 'Ali Mughayyat Shah, the first sultan in Djajadiningrat's list, whose date of accession is uncertain. Tomb-stones of some of his predecessors have been found after H. Djajadiningrat compiled his list from Malay chronicles and European

sources (*BTJLV* 63 (1910), 135-263), but the exact relations between these predecessors are still unexplained, and Sultan 'Ali Mughayyat Shah, by conquering Daya to the west and Pidie and Pasé to the east, became the real founder of the empire of Atjeh. Leaving aside, for the time being, the data on the earlier sultans, we reproduce Djajadiningrat's list of the princes of Atjeh with only a few modifications in the dates:

- I. 'Ali Mughayyat Shah (?-1530).
- II. Salih al-Din (1530-? 1537).
- III. 'Ali<sup>3</sup> al-Din Ri'ayat Shah al-Kahhar (i. 1537-1571).
- IV. 'Ali Ri'ayat Shah or Husayn (1571-? 1579).
- V. Sulthan Muda (a child, reigned only some months in 1579).
- VI. Sulthan Sri 'Alam (1579).
- VII. Zayn al-'Abidin (1579).
- VIII. 'Ali al-Din of Perak or Mansur Shah (1579-? 1586).
- IX. 'Ali Ri'ayat Shah or Radja Buyung (i. 1586-? 1588).
- X. 'Ali<sup>4</sup> al-Din Ri'ayat Shah (i. 1588-1604).
- XI. 'Ali Ri'ayat Shah or Sulthan Muda (1604-1607).
- XII. Iskandar Muda (posthumous name: mar-bum Makota 'Alam) (1607-1636).
- XIII. Pasakan 'Abd al-'Ali<sup>5</sup> al-Din Mughayyat Shah (1636-1641).
- XIV. Tadj al-'Alam Sa'fiyyat al-Din Shah (1641-1675).
- XV. Nur al-'Alam Nakiyyat al-Din Shah (1675-1688).
- XVI. 'Hayat Shah Zakiyyat al-Din Shah (1678-1689).
- XVII. Kamalat Shah (1688-1699).
- XVIII. Badr al-'Alam Sharif Hāshim Djamāl al-Din (1699-1702).
- XIX. Perkasa 'Alam Sharif Lamtoy b. Sharif Ibrahim (1702-1703).
- XX. Djamāl al-'Alam Badr al-Munir (1703-1726).
- XXI. Djawhar al-'Alam Amal al-Din Shah (reigned only a few days).
- XXII. Shams al-'Alam or Wandt Teling (reigned only a few days).
- XXIII. 'Ali<sup>6</sup> al-Din Ahmad Shah or Maharaja Lela Melayu (1727-1735).
- XXIV. 'Ali<sup>7</sup> al-Din Djohan Shah or Dörtük Auk (1735-1760).
- XXV. Mahmud Shah or Tuanku Radja (1760-1781).
- XXVI. Badr al-Din (1764-1765).
- XXVII. Sulayman Shah or Radja Udahna Lela (1773).
- XXVIII. 'Ali<sup>8</sup> al-Din Muhammad Shah or Tuanku Muhammad (1781-1793).
- XXIX. 'Ali<sup>9</sup> al-Din Djawhar al-'Alam Shah (1793-1824).
- XXX. Sharif Sayf al-'Alam (1815-1820).
- XXXI. Muhammad Shah (1824-1836).
- XXXII. Mansur Shah (1836-1870).
- XXXIII. Mahmud Shah (1870-1874).
- XXXIV. Muhammad Dawud Shah (1874-1903).

'Ali Mughayyat Shah's two sons Salih al-Din and more especially 'Ali<sup>3</sup> al-Din Ri'ayat Shah al-Kahhar increased the importance of the new kingdom. From Turkish archive documents we learn that the latter sent an embassy to Constantinople in 973/1563 for help against the Portuguese and

saying that several of the heathen rulers of South East Asia had promised to embrace Islam if the Ottomans would save them. The arrival of the embassy coincided with the Szeged campaign and the death of Sulayman. The embassy therefore waited two years in Constantinople and then a naval expedition was prepared under the command of the Admiral of Suez, Kurdoghlu Khair Reis, consisting of 19 galleys and some other ships with guns, supplies, etc. This expedition was however diverted to deal with an insurrection in the Yemen and instead two ships with supplies and military technicians were sent to Atjeh. It would seem that they entered the service of the Sultan of Atjeh and stayed there. (See Saffet, *TOEM*, 10, 604-614; 11, 678-683; I. H. Uzunçarsili, *Osmanlı Tarih*, II, 1949, 388-389, and III/1, 1951, 31-33). In the first half of the seventeenth century Atjeh reached its greatest prosperity, attaining its zenith during the reign of Iskandar Muda, honoured after his death by the title of *Mekuta 'Alam*, i.e., Crown of the World (*supra* n.° XII). The dominion of the Acheneese was extended far to the south during his reign. Iskandar's expedition with a great fleet against Pahang and Malacca forms the subject of an important Acheneese epic the *Hikayat Malak Dagang* (ed. H. K. J. Cowan, *The Hagoes*, 1937). In 1638, during the reign of his successor Iskandar Djahid, *supra* n.° XIII) a Portuguese embassy came to Atjeh and tried in vain to win over the Sultan to their side in the war against the Dutch (see: Agostino di S. Teresa, *Breve racconto del viaggio . . . al regno di Achien*, Roma 1632; Ch. Beillard, *Histoire de Pierre l'Herminier*, Paris 1889). Four princesses ruled over Atjeh in the second half of the seventeenth century (1641-1699). This period of feminine rule was naturally much to the advantage of the *Ulkebalangs* whose power and authority were thereby increased; but on the other hand many disapproved of this state of affairs and declared on the authority of a *fatwa* received from Mecca that it was forbidden by law for a woman to rule. Thereupon at the beginning of the eighteenth century arose a series of dynastic wars. Some of the princes who contended for the throne were Sayyids (i.e. descendants of Husayn) born in Atjeh. The best known among these was Djamāl al-'Alam n.°, XX). After he was deposed in 1726, he held out for a considerable time against the later Sultans, amongst others against Ahmad (*supra* n.°, XXIII), a man of Bugis descent, ancestor of the last dynasty of Acheneese princes) and his son Djohan Shah (*supra* n.°, XXIV). The contest between Djamāl and Djohan Shah and the death of the former are the subjects of another great Acheneese epic, the *Hikayat Pajud Mahamat* (still unpublished; cf. Snouck Hurgronje, *The Acheneese*, II, 88-100). Even after the authority and wealth of the court had gradually become insignificant, there survived, indeed till quite recent times a great reverence among the Acheneese for their rulers whom they honoured as the representatives of a glorious past.

[Th. W. JOYNSBELL (P. VOORHOEF)]

The Atjeh War. In the 19th century the piracy and slave trade of the Acheneese and their raids on neighbouring territories constituted a constant danger. The Dutch government were at first not in a position to put a stop to this evil as they had pledged themselves to England in 1824 not to extend their dominion in Sumatra to the north, but this obligation was removed by a new

treaty with England in 1872. The landing of Dutch troops in 1873 was the beginning of a war (the Atjeh War), which lasted—with several pauses—from 1873 until 1910, in which year the pacification was considered complete.

Broadly speaking the three components inspiring this unexpected opposition were the *ulamas*, the *ulibalangs*, and the sultanate. Of these three the *ulamas* were the strongest, and the sultanate the weakest component. This last fact is understandable, since—as we have seen above—the influence of the sultan was very limited. With the capture of Kutaradja, the sultan's stronghold, the Dutch considered the sultan's government as at an end, and the Dutch administration took over his position and rights. Meanwhile, after the death of Sultan Mahmūd Shāh, the six-year old Muhammad Dāwūd, grandson of Sultan Mansūr Shāh (*supra* No. XXXIII), was elected sultan. The "pretender-sultan" Muhammad Dāwūd, who had taken refuge with his court at Keumala in Pidie, hunted by Dutch troops from hiding place to hiding place, finally made his submission in 1903. In 1917, because of underground activities, he was banished from Atjeh. The *ulibalangs*, the secular authorities or "lords of the country" (*The Achehese*, I, 88), so far as they were not willing to accept Dutch authority, had to be subdued one by one. One of the most influential of them was Teuku Panglima Pōhō Muhammad Dāwūd, the chief of the *sagi* of the XXII *Mukims*. Now that the sultan's government had lapsed the Dutch recognised the *ulibalangs*—with the exception of those in Great-Atjeh, which was regarded as the personal domain of the sultan—each as independent rulers in their own right, whose relationship with the Dutch government must be determined by treaty.

On the advice of Snouck Hurgronje the form of treaty selected from 1898 onwards was the so-called *horte verklarung* (short contract). In this the rulers recognised that their territories formed part of Netherlands India, and undertook not to have any kind of political contacts with foreign powers, to follow and maintain all the regulations, and to obey all the orders given them by the Civil and Military Governor of Atjeh. The *ulamas*, the spiritual leaders of the people, were the real inspirers of the struggle. Here we can mention only one well-known family, the *Tiribetungkus*, of whom Tjibh Saman (d. 1890) was the best known. They were named after the *gamping* Tjib in Pidie, an important centre of Islamic scholarship. The *ulamas* went throughout the land preaching the holy war; their war-chest was the *sakal*-tax levied on the people. The native chieftains were ignominiously thrust into the background. The long duration of the war and the fanaticism with which it was fought are explained by the character of a holy war which it assumed. From this period comes the *Hikayat Prang Sabi* (ed. H. T. Damsté, *BTLV*, 84, 1928, pp. 545 ff.) in which the faithful were called to a holy war. After the submission of the "pretender-sultan" the *ulamas* and some *ulibalangs* conducted a guerrilla warfare, though Panglima Pōhō also submitted a few months after the sultan. In 1911 Teungku Ma'at, the last survivor of the *Tiribetungkus*, was killed.

It was a long time before the Dutch government came to comprehend the full significance of these three fundamental components in the Atjeh War, and to adapt their policies and tactics accordingly. The investigations of Snouck Hurgronje were the first to provide the political insight upon which the military campaigns of Governors J. B. van Heutsz (1898–

1904), G. C. E. van Daalen (1905–1908), and H. N. A. Swart (1908–1909), could be based (cf. K. van der Maaten, *Snouck Hurgronje en de Atjeh-Oorlog*, 2 vols., Oostersch Instituut, Leiden 1948, and the literature listed therein). Governor Swart was the last governor to be charged both with the civil government and the military command in Atjeh.

The Dutch administration. Since the sultanate was swept away by the Atjeh War, the highest authority was considered to have passed to the "regents" of the sultan, the *ulibalangs*. This administrative institution, which drew its sanction from 'adat' (local customary law) was fitted into the Dutch administrative system in the following way. The *ulibalangs* territories were recognised as "native states" (*zelfbesturende land-schappen*), and their relationship with the Dutch government was regulated by the *horte verklarung*. Exceptions to this were the district of Singkel, the district and the sub-district of Singkel, both of which were classed as "directly ruled territories" (*rechtstreeks bestuurd gebied*). Great-Atjeh, the territory of the three *sagis*, was included in this category because after the conquest it had wrongly been assumed that here, in contrast to the rest of Atjeh, the chiefs were dependent officials of the sultan. The border territory of Singkel was included on historical grounds. A section of this district had been brought under Dutch rule earlier, forming part of the residency of Tapanuli, and therefore in determining the form of administration the system in force elsewhere in that residency was followed. But here too the existing administrative frame-work based on 'adat' law was maintained, so that the *panglimas* *sagi*, the *ulibalangs*, and so on, as 'native chiefs' were made government officials.

The 'adat' system which was thus embodied in the administration presented a picture of infinite diversity. It embraced about 200 *ulibalangs* acting as independent rulers, and about 50 *panglimas* *sagi*, *ulibalangs* and local chiefs with various other titles in the directly ruled territories. The size of each territorial unit varied from a village to the equivalent of a Dutch province, the populations from a few hundred to more than 50,000, and the educational background of the rulers from a simple primary school course to training at the Civil service college (*Bestuurschool*) in Batavia.

Over this Indonesian administrative framework extended the Dutch administration; its task was the creation and enforcement, through these institutions, of peace, order and the rule of law, and the economic and cultural development of the land. The Government (later Residency) of Atjeh and Dependencies, administered by a Governor (later a Resident), was for these purposes divided eventually into four districts, each administered by an Assistant Resident. These were the district of Great-Atjeh, and the districts of the North Coast, the East Coast, and the West Coast. They in their turn were subdivided into a total of 21 sub-districts, each administered by a *Controleur* (District Officer).

The policy of government was consistently directed towards promoting a larger measure of personal initiative on the part of the chiefs, and bringing the Indonesian administration into line with Western standards. So the old type of chief, ruling like a patriarchal despot, gradually made way for more progressive younger men.

Thus under the Dutch régime the administration remained wholly in the hands of the hereditary *ulibalang* caste, a caste consolidated on the one hand

by intermarriage between families already related to each other in a variety of ways, and divided on the other hand through the operation of historical feuds. The hegemony of this caste, moreover, was not confined to the sphere of government. In accordance with the 'adat' the administration of justice was also in the hands of the *ulibalangs*, whilst in accordance with the *hukim* they were the religious leaders of their own territory. In addition they had often important trading and other economic interests, and usually disposed of extensive estates, especially in Pidie, where a medieval system of feudal holding still prevailed. Finally—their sons being considered first for all forms of education and training—they had in a certain sense also an intellectual monopoly.

When the Japanese War broke out there were three *ulibalangs* of outstanding importance. Teuku Njā' Arif, the chief of the *sagi* of the XXVI *Mukims*, had represented Atjeh in the *Volksraad* until 1917. Teuku Muhammad Hasan, ruler of Glumpang Payōng (Pidie), had previously been employed in the Residency offices at Kutaradja, where he exercised a great influence on political policy. Teuku Hagji Tjib Muhammad Džōhan Alamsjah was the ruler of Pessangan (Bireuen).

Whilst the *ulibalangs* group historically linked itself increasingly closely with the Dutch régime, amongst the *ulama* group, taken as a whole, the anti-Dutch tradition was maintained. The predominant position which the *ulamas* had attained during the Atjeh War was lost again with the return of peace, and the traditional superiority of the *ulibalangs* was restored. So there developed gradually between these two groups, which had co-operated during the war, an antipathy—a recurring theme in the history of Atjeh—as the result of which the *ulamas* regarded the *ulibalangs* as traitors.

Religious life itself was left to develop freely, in keeping with the tradition of the Dutch régime. At first Tuanku Radja Keumala (whose father was a great-grandson of Sultan Muhammad Shāh, *supra* XXXI), acted as adviser on religious affairs. But after his death this office was not refilled, whilst the advisory council on religious affairs established in 1919 under the title "raad *ulama*" ("Council of 'Ulamā'), of which this learned descendant of the sultan formed the central figure, was discontinued. For this reason the Dutch authorities were subsequently dependent for their information about developments in the religious sphere upon the *ulibalangs*, who were considered legally the religious leaders of their own territories. Ultimately, just before the Japanese invasion, another descendant of a former sultan, Tuanku 'Abd al-'Aziz, *Imam* of the great mosque at Kutaradja, was made unofficial religious adviser. He was not an *ulama* in the sense which was attached to that word in Atjeh, and although known as *adim* (see above) he did not enjoy anything like the prestige of his eminent predecessor.

Religious instruction retained an important place next to secular education. Besides elementary religious education Atjeh possessed a large number of so-called religious secondary schools in which geography, history, economics, etc., were also taught. Many *ulibalangs* made a point of having one or more religious schools in their territory, which through the fame of the *ulamas* trained in Egypt, Mimang-kaban, or in Atjeh itself who taught in them, would enhance their own reputations. That these *ulamas* were often more or less openly anti-Western in outlook they accepted as part of the bargain.

As for the third component in the struggle against the Dutch—the Sultan's party—its rôle was played out. The "pretender-Sultan" died in exile in 1939 in Batavia. His son was allowed to return to Atjeh. The other descendants of the sultanate remaining in Atjeh wielded little influence. An exception was Tuanku Mahmūd, an important political figure, who had been trained at the Civil service college in Batavia. He held a government post in Celebes for some years before returning to Atjeh as senior native official in the service of the resident there. In 1911 he succeeded Teuku Njā' Arif as a member of the *Volksraad*, and after the death of the "pretender-Sultan" became undisputed head of the sultan family. A campaign started in 1939 by some Achehese merchants for the restoration of the sultanate met with little response; there was practically no support for it from the *ulibalangs*, who saw in it a threat to their own position.

The political situation itself developed favourably. The last resistance incident took place in 1913, and the military garrison was gradually reduced. The *kāfir*-bait and the idea of a holy war—negative expressions of the religious consciousness—gave way to a positive local Achehese patriotism, which expressed itself in the normal impulse to be master in one's own house, or more specifically to get an increased number of posts in the administration occupied by one's fellow countrymen.

Modern nationalist ideas had as yet hardly any hold on the Achehese people. The same was true of the Muhammadiyah movement, which originated in Java. Though it fixed as its target the advancement of religious life, and had its connexions over the whole of Indonesia, it struck no responsive note in Achehese religious life. It remained—despite its Achehese leadership—a distinctly non-Achehese movement, which attracted mainly non-Achehese elements, or locally the militant part of Achehese society, which in the absence of a purely political movement sought in it satisfaction for their political and social aspirations. The religious ideas of this young Islamic modernist movement were quite alien to the more conservatively orientated religious life of the Achehese.

As a counter-weight to the modernist ideas of the Muhammadiyah, the *PUSA* or *Persatuan Ulama Seluruh Atjeh* was founded at Bireuen in 1939, under the influential patronage of the ruler of Pessangan. Under the direction of Atjeh's most prominent *ulama* it was to be the vehicle of that typically Achehese strictly orthodox religious life. Its membership was not necessarily limited to *ulamas*. Anyone else who could identify himself with its aims could join it, and its most prominent leader was Teungku Muhammad Dāwūd Beureu'eh from Keumangan (Pidie). The movement seemed to fulfil an important need. Through it both conservative and progressive *ulamas* were brought together, and branches were set up throughout Atjeh. To have assumed a political, let alone an anti-Dutch, character, would have been inconsistent with the aims of the movement. Its attitude towards the government and the *ulibalangs* was completely correct, and many *ulibalangs* accepted the position of adviser to their own local branch. The position of patron was offered to Tuanku Mahmūd. A youth movement was founded under the name *Pemuda Pusa*, with its headquarters at Idi. The more advanced and militant elements, reacting against the pressure of the *adat* authorities, sought within this movement a refuge, and a means of expressing

their own ideas. As a result the youth movement quite quickly began to take on a more militant and subversive character. So the *Pusa* itself gradually developed into a new and potent weapon in the hands of the *ulamas* in their struggle against the Dutch régime and the *ulitbalangs*.

We have already dealt briefly with economic developments in this period, and with education in its religious aspect. Secular education expanded steadily. At the time of the Japanese invasion Atjeh had one higher grade school, thirteen schools giving Western elementary education, 148 elementary vernacular schools, 45 *vervolgcholen* or advanced vernacular schools and one trade and handicraft centre, founded either by the Dutch government or the native states. There were besides a number of private schools giving elementary Western education, supported by the Muhammadiyah and Taman Siswa societies.

The Japanese occupation. Even before Japanese troops occupied Atjeh in March 1942 rebellions against the Dutch government broke out in Great-Atjeh and in the North and West Coast districts. These took on the character of a national rising, particularly in the *sagi* of the XXII *Muslims* and in the sub-district of Tjilang, on the West coast. After the Japanese troops had landed the rebellion spread quickly. As during the Atjeh War the most important component of the rising was formed by the *ulamas*. It was led by Teungku Muhammad Däwüd Beureu'eh at the head of the *Pusa* and the Pemuda *Pusa*, which provided a single organisation spread over the whole of Atjeh, admirably suited for the preaching of the holy war. The participation of the *ulitbalangs* was at first limited to a number of discontented political elements of purely local importance. That the rebellion in the *sagi* of the XXII *Muslims* was able to assume the character of a national rising is explained by the support which the *ulamas* experienced from the chief of the *sagi*, the son of the great resistance leader of the Atjeh War, Teuku Panglima Pölm Muhammad Däwüd, who had died shortly before the outbreak of the war. In Tjilang the participation of Teuku Sals of Lageon, one of the only two native rulers who had earlier supported the movement for the restoration of the sultanate, set its stamp on the nature of the rising there, so that the third component from the Atjeh War, that of the sultanate, re-appears at this time too. The movement was stimulated from the Japanese side, for immediately after the fall of Penang in December 1941 a fifth column organisation was formed from the Acehese colony there, which sent its agents back to Atjeh as "refugees" from Japanese violence. Shortly before the Japanese landing Teuku Nja' Arif, the chief of the *sagi* of the XXVI *Muslims*, joined the rebellion, whilst later Teuku Muhammad Hasan of Gumpang Payong also declared that he had already been in contact with the Japanese before their attack.

From the beginning the Japanese stood in a different relationship to the *ulitbalangs* and the *ulamas* than had the Dutch. From the outset they received support from the *ulamas* more perhaps than from any one else. An attempt by the *Pusa* to take over power locally from the *ulitbalangs*, however, was not sanctioned by the Japanese, since they could not allow the existing social order to be dislocated by the sweeping aside of the government machinery based on the *'idat*. It would have undermined their own military strength. Instead Japanese policy was aimed at linking both of these

political forces, that of *'idat* and that of *hakim*, in order to obtain the co-operation of the people as a whole in their war effort. The Japanese tried therefore just like the Dutch to keep a balance between both groups. The fact that the *ulitbalangs* too had taken an important share in the rising made this policy acceptable.

The rule of the *ulitbalangs* was thus maintained. In the sphere of government the position of the *ulitbalangs* was even strengthened. Dutch government officials made way for Indonesian *gema-chi* who were chosen, with a single exception, from leaders of the *ulitbalang* families. Two *ulitbalangs* represented Atjeh in the delegation from Sumatra which visited Japan in 1943, one—Teuku Muhammad Hasan—being designated as its leader. In the advisory Council for Atjeh created at the end of 1943, Teuku Nja' Arif was appointed chairman, and Teuku Muhammad Hasan deputy chairman. As it was first constituted, the majority of its members belonged to the *ulitbalang* class; but this was no longer the case when it was re-constituted in 1945.

Nevertheless the position of the *ulamas* was considerably strengthened, at the expense of the *ulitbalangs*. At the beginning of 1943 Teuku 'Abdul 'Azis was appointed adviser for religious affairs for the whole of Atjeh, and some months later he was made chairman of the newly created advisory council on religious affairs. Teungku Muhammad Däwüd Beureu'eh was appointed deputy chairman of this council, which had branches throughout Atjeh, and he quickly became the leading figure in it. The principal object of this and similar organisations was to bring religion into the service of the Japanese war effort. In 1944 a court was established to hear religious cases under the name *shäy-khin*, and in the *ulamas* and the *ulitbalangs*, and in the *Pusa* predominated. Eventually one of the members of the executive committee of *Pusa* was appointed inspector of religious education. Teungku Muhammad Däwüd Beureu'eh and a number of other *ulama* were members both of the first and of the second Council for Atjeh.

The administration of justice too was re-organised, and largely withdrawn from the control of the *ulitbalangs*. In the magistrates courts (*shä-khin*) in particular a large number of those appointed as members were supporters of *Pusa*, leaders of the resistance movement, and other enemies of the *ulitbalangs*.

This policy of holding a balance between both groups could satisfy neither the *ulitbalangs*, nor the *ulamas*. To be sure, the *'idat* was no longer the mistress and the *hakim* her obedient slave-girl. But the *ulamas* would only be satisfied with a position in which the *hakim* would be mistress and the *'idat* the slave. So both groups conducted a remorseless struggle over the heads of the Japanese.

Meanwhile the pressure on the Japanese was growing from day to day. The Japanese army of occupation was dependent on what the country itself could provide both for its food and for the labour supply needed for the construction of roads, airfields and fortifications. To provide this, an almost intolerable burden was through the agency of both the *ulitbalangs* and the *ulamas* imposed on the people. Increasing discontent was the result. More and more *ulitbalangs* refused to provide the service of their men for the use of the occupying forces, whilst it became ever harder for the *ulamas* too co-operate in satisfying the Japanese demands. In September 1943 mass arrests took place throughout

Atjeh and amongst those arrested were several *ulitbalangs*. In August 1944 the ruler of Gumpang Payong, who was suspected of underground activities and of conspiring with the Dutch, was arrested with some other *ulitbalangs*, and executed shortly afterwards. At the moment of these mass arrests the ruler of Pussangan was already for some months in prison. The possession of a copy of the *Hibayat prang sabi* ("Summons to the Holy War") or its recitation was made an offence. In two instances there was open resistance. As early as 1942 there were insurrections in Bayu, in the district of Labé Sumawé. There an *ulama* Teungku 'Abd al-Djalil who, despite his youth, was already head of a large religious school, is said to have preached the *prang sabi* against the Japanese. He and his followers were killed in the bloody conflict which followed. In 1943 there was another insurrection in Pandrah, in the sub-district of Bireun. Here the heavy economic burden of compulsory deliveries and "voluntary" labour produced an outbreak which was savagely repressed.

The Japanese invasion brought at first a revival of the negative element of *häfir* hatred. But as Japanese pressure increased the positive element of local patriotism grew, stimulating the urge to take control into Acehese hands. In the end, as the result of the Japanese promise of independence, this developed into the idea of a unity, based on religion, which would embrace the whole of Indonesia.

Indonesian Independence. The Japanese surrender in August 1945 did not bring any restoration of the Dutch régime in Atjeh and only the island of Sabang was occupied by Dutch troops. The way was thus open for a final reckoning between the *ulamas* and the *ulitbalangs*. In December 1945 a civil war broke out which ended in February 1946 with the annihilation of the power of the *ulitbalangs*. A number of *ulitbalang* families were massacred to the last male child. Hundreds of members of *ulitbalang* families disappeared into republican internment camps as "enemies of the Republic", and their property was confiscated. Amongst them were the chief of the *sagi* of the XXVI *Muslims* and the ruler of Pussangan.

This annihilation of the power of the *ulitbalangs* cannot be viewed solely as a result of the antithesis between *'idat* and *hakim*. Social, political and economic factors were also involved. Religion played the part of the instrument of a social revolution against the position which the *ulitbalang* class held in society as a whole, a position which had been described at some length above.

Soon after the *Pusa* emerged victorious from the civil war, its leader Teungku Muhammad Däwüd Beureu'eh became military governor of Atjeh. His adherents filled those posts in the administration, the police and the judiciary which had formerly been occupied by the *ulitbalangs*. The lack of experience, high-handedness and corruption of the new rulers, who in fact were supported by only a minority of the population, soon led to increasing unrest, and in 1948 there was an abortive insurrection in Kuta-radja. But so long as the central government of the Republic had not reached a settlement with the Dutch, its hands were full elsewhere and there was no question of its intervening in Atjeh. The common struggle for the recognition of Indonesian independence was in these years the only aim; Acehese local patriotism and the idea of Indonesian unity for the moment coincided.

After the transfer of sovereignty from Holland to the Republic of Indonesia at the end of 1949 the intervention of the central government could no longer be avoided. For administrative purposes Atjeh was included in the province of North Sumatra, so that Teungku Muhammad Däwüd Beureu'eh lost his position as governor. Acehese military units were gradually replaced by non-Achehese troops, thus depriving the *Pusa* of their military support. In 1951 a large number of *Pusa* leaders were arrested under cover of the general round up of Communist leaders, undertaken throughout Indonesia at this time, and insufficient *Pusa* adherents in official positions were removed from their posts. But the expectation of the central government that they could in this way gradually steer the government in Atjeh back into normal channels, was not realised. In September 1953 Teungku Muhammad Däwüd Beureu'eh and his followers launched a rebellion against the central government. A bloody guerrilla warfare followed, which lasted until the middle of 1957 when an informal truce was reached between Teungku Muhammad Däwüd Beureu'eh and the local authorities. The year before, in October 1956, Atjeh was again granted the status of an autonomous province.

AL-'ATK, a valley in Nadjd, the northernmost of those cutting through the western wall of the cuesta of Tuwayk. It is a true wadi with a strong flood whenever there is enough rain. The valley forms the dividing line between the district of Sudayr to the north and the district of al-Majmal to the south. Its head (*tar'a*) is in the low ground west of Tuwayk in the vicinity of the oasis of al-Kayab, south of which there is a large salt pan (*manlabah* or *sabbah*). After passing north of the hills of al-Bakarät (pl. of *habra* = she-camel 3-5 years old), the valley goes through the escarpment of Tuwayk by a narrow passage. Just east of this passage, the valley of Urtä descends from the uplands of Sudayr and the valley of Thidki comes up from the south to join al-'Atk.

Farther on, the main valley of Sudayr—in which lie Djaldjil, al-'Awda, and other oases—and the valley of 'Ushayra come together and then empty into al-'Atk from the north, as does the valley of al-Hay (a settlement of the Wahābī Ighwān belonging to the tribe of Subay<sup>4</sup>) from the south. After passing south of Khaym Abū Rukba and north of Ruwaygh (a settlement of the Ighwān belonging to al-Suhūl), al-'Atk cleaves through the escarpment of al-'Arāma. The valley runs by a few kilometres north-west of the wells of Hafar al-'Atk and comes to an end at Rawdat al-Tanāh just west of the sands of al-Dahmā'. This basin also receives the waters of the valleys of al-Shawki and al-Tayri, the latter of which runs only c. 1 km. west of Hafar al-'Atk.

The sweet water wells of Hafar al-'Atk (25° 32' 04" N, 46° 30' 28" E) are over a dozen in number, all lined with stone, with a depth of c. 25 ba' (c. 40 m.). Each well has its own name; those with the most water are al-Qhabbbijjaya and Sudayr. These wells mark the western end of Banū al-Kunbar, a well beaten desert trail coming from the town of al-Djūbail ('Aynayn) on the Persian Gulf coast. From the wells the traveller may ascend the valley to Sudayr or al-Mahmal or proceed westwards to the district of al-Waḥm lying beyond Naḥd al-Balāḍ. Popular tradition has it that the first wells here were dug by the chiefs of Banū Khālid, masters of Eastern Arabia until its conquest by the Muslims; the Bahilī state of Al-Sa'ūd at the close of the 18th century. During the summer several thousand Bedouins may congregate at Hafar al-'Atk, their tents filling the depression in which the wells lie and lining the edges of the circumambient hills.

The valley is regarded as lying within the range of the tribes of Subay<sup>4</sup> and al-Suhūl, while the wells belong to al-Khūdān, a group consisting of al-Nabata and al-'Uyaynāt, both sections of Subay<sup>4</sup>. Members of these tribes, like most of the townsfolk of Naḥd, pronounce the name 'atka, while other Bedouins in Naḥd and the east say 'atā, associating the name with the word 'atā = having many bushes and trees. The pronunciation 'atka is seldom if ever heard, but the written form Bān al-'Atk is in al-Hanḍālī, i, 147, who also mentions al-Bakrī and Bān Dīl Urdī. Ibn Bishr, *Uyaynāt al-Maghrib* (Mecca ed.), i, 44, 72, 108; ii, 26, speaks of al-'Atk and Hafar al-'Atk, and Ibn Bulayhid, *Ṣaḥīḥ al-Aḥbār*, i, 137, identifies al-'Atk as one of the two places called al-'Atka or al-'Atkin in early Arabic poetry.

(GEORGE REZTE)

**ATLAS**, general name for the mountains of North Africa (Morocco, Algeria and Tunisia), which give it its originality and variety in contrast to the monotonous Sahara platform. Although this name, of unknown origin, was already used by the Greeks, the classical authors, Strabo (Book xvii) for example, give us few details. The Arab geographers lack precision and, like Strabo, often apply the name to the mountain chains otherwise called Adīr al-Dereen, a term in fact reserved for the High Moroccan Atlas and the Saharan Atlas of Algeria (al-Bakrī, trans. de Slane, 2nd ed., 281, 293; some authors, al-Bakrī, 303-4, al-Dīrī, al-Maḡrib 73-4, Ibn Khāldūn, *His. des Berbères*, trans. de Slane, i, 158) erroneously extend it as far as the Nefāsa, to Egypt and even beyond. The Northern chains—the Rif and Tell Atlas—were known to Strabo (xvii), and the Rif, to al-Bakrī (214); according to Ibn Khāldūn (i, 128) the Dereen chains form "a girdle enclosing the Maghrib al-Akṣā from Asfi to Tara", including,

therefore, the Middle Atlas, Leo Africanus (*Description de l'Afrique*, trans. Épaulard, Paris 1936, 4 and 49-50), rather more exact, distinguishes the northern chains from the Atlas in the strict sense extends the latter right into Egypt, Marmel (*Africa*, i, 5) distinguishes between 'la Sierra menor' and 'la Sierra de Athalanat mayor' in the south, which will henceforth be referred to as the Little Atlas and the Great Atlas. French geologists and geographers, above all in the last half century, have determined their characteristics and various aspects.

The chains of the Atlas are structurally folded mountains, related to the Tertiary chains of Europe; like these, they have been rejuvenated by Pliocene and Quaternary upheavals, which raised them considerably above the Mediterranean and the rigid Sahara platform. The Sahara begins to the south of the Southern Atlas escarpment (fault, flexure, abrupt straightening out of the strata), which extends from Agadir to Gabes, therefore, do not form part of the Atlas. As for the Anti-Atlas of Morocco, of which the Dj. Sagro is merely an extension, this stands on its own: it is only the raised edge of the Sahara platform. It is a great asymmetrical massif, reaching 2,531 metres at the Dj. Aghūl, and consists of consolidated rocks of the Pre-Cambrian and Primary ages. It falls away to the depressions of the Sūs and the Dades (which the great granitic and volcanic mass of the Sirwa, 3,304 metres, separates) and runs down to the plains of Dra (Dar'a) and Tafilalet, intersected by the wrinkle or scar of the Dj. Bani.

In the "Atlas regions" a first complex, and the most extensive, contains both moderately folded mountains, often of considerable height, and relatively low zones: plateauxs and high plains. The High Atlas is a huge "fundamental fold", a chain 750 kms. in extent, which rises to 4,000 metres and over (4,165 m. at the Tubbak, 4,070 at Mgħn); in spite of its latitude, it bears traces of quaternary glaciation, though it no longer retains everlasting snows. Hemmed in to the west between the Sūs and the Hawz of Marrakesh, it breaks up, despite several considerable peaks, into ridges and deep transverse valleys, and may only be crossed by high cols, historical routes to the Sūs (Tizi n-Test) and the High Dra (Tizi n-Tighka). In the centre and the East it becomes primarily calcareous (Jassic and Jurassic), with narrow faulted anticlines and broad synclines; after the Dj. 'Ayyaghūl (3,751 m.), the chains lose height and peter out in the South of Eastern Morocco. The "wāḍi" Dades, Ghedda, Za (the route from Fez to Tafilalet) and Guir break away from it by majestic cross valleys—the Saharan Atlas of Algeria continues the High Atlas. Its massifs, the mountains of the Kyūr, of the 'Amīr (Dj. 'Amūr), of the Ouled Nail and of the Zab loose height progressively from the South-West (2,236 m. at the Dj. Aissa) to the North-East (less than 1,000 m.) There are remains of folded mountains, ridges isolated by broad pediments, which the nomads easily cross in spite of their elevation above the Sahara. On the further side of the Biskra depression, rises the Aurès (Awraṣ), the only massif of the Saharan Atlas and the highest mountain in Algeria (2,329 m. at the Chéla). Its majestic chains with their very broad folds lying S.-W./N.-E., are separated by the deep valleys of the "wāḍi" Abdi, el-Abiōd and el-Arabi: these "wāḍi" flow through savage gorges to reach the "southern Auris depression", which sinks down to below sea level. The Nememcha

mountains to the East of the Auris tower above this depression and then subdivide northwards into isolated ridges, the remains of broad domes. In Tunisia, the chains deriving from the Saharan Atlas cover the entire mountain country, except the north-west. The structure of domes, frequently faulted, and of broad basins, to be observed in the Tebessa mountains, is continued in the Djurdjura range of Tunisia. Its anticlines, generally calcareous, (1,154 m. at the Dj. Chambū) and separated at times by broad transverse rift valleys, rendering communications easy, converge towards the N.E. to form one single chain bristling with sierras (Dj. Zagħwān, 2,298 m.) extending as far as the Gulf of Tunis North of the Dorsal range, the High Tell and the Medjerda regions are composed of compressed folds, which, however, only produce mountains of moderate height, separated by broad basins, by the deep depression of the Middle Medjerda and by its tributary valleys: the "wāḍi" of Melléque, Tessa and Siliana. In the south the anticlinal chains of limestone or sandstone rise among broad plains, generally synclinal and covered by alluvium. From a W.-E. direction on the parallel of Gabes, they are turned back in a S.-N. direction, bordering the plains of Eastern Tunisia.

North of the High Atlas and of the Sahara Atlas of Algeria, extend vast regions of low relief, which, however, are twice intersected by transverse chains: the Middle Atlas and the mountains of the Hodna. The Middle Atlas has the same rocks and the same style as the central High Atlas with narrow faulted anticlinal folds (Dj. Ben Naer, 3,354 m.) and broad synclinal depressions. But in the N.W. it descends in step plateauxs; the faults separating them are covered with volcanic cones and coulées. Heavily watered, it gives birth to the principal rivers of Morocco: Oum er-Rbia (*Umm el-Rbia*), Sebou, Moudouya. The Middle Atlas separates the rigid block of primary terrains of the Moroccan "maeseta" (central plateau, hills of the Rehama and of the Djebilet, sedimentary phosphate plateau, alluvial plain of the Tadla, the Bahira and of the Hawz of Marrakesh) from that of the Oran-Moroccan borders, which is almost completely concealed by secondary sediments. The Rokam, to the east of the Moudouya, is extended by the Deboudou and Djerdara plateaux, in Morocco, and by the undulating and faulted plateauxs of the Tell Atlas of Oran: the mountains of Tlemcen, of the Mekarra, of Saïda and Frenda. North of the Sahara Atlas, the High Algero-Moroccan plains, rising to 1,200 metres in the West and 800 metres on the meridian of Algiers, are structurally similar, consisting of three quarters buried beneath considerable old alluvial deposits (basins of the Chott Gharbi and Chott Chergui and of the Zahrez); only the Oued Touil (Upper Chelif) reaches the sea. Further to the E., the narrow chain of the Hodna mountains and the Belezma massif, separate the high plains of the eastern and Constantine regions of Algeria (800 to 1,050 m.). The W.-E. secondary chains of which they are made up, calcareous domes or ridges, leave gaps between them and continue, intermittently spaced out, across the high Constantine plains, which they dominate, rising to several hundred metres. The so-called region of the Sebāḥ (in the south encloses the drainage of the Rhumel, the Seybouse and the Medjana (Melléque). As for the chains of Eastern Tunisia, these are incompletely drained behind the camber of the Sahel.

Bordering the Mediterranean, a second complex is formed, extending from Tangiers to Bizerta, by the chains of the Rif and the Tell Atlas. They are very complex in structure. The cemented and loose sediments of the Secondary and Tertiary have on several occasions been heavily folded. They have been pushed and overlapped southwards by the primary eruptive massifs of the "coastal belt", which only subside still South of Ceuta and Kabylia; these massifs dominate in the south the lofty calcareous sierras of the Djebala and the Bokkaya (Morocco), the Djurdjura and the chain of Numidia. All the rest is formed of a thick and plastic mass of clay, sandstone and schistose sediments, usually discharged in "slip sheets" and, in Morocco, clearly carried down in a southerly direction. These structurally very complex mountains have been cut and broken up by transverse gorges and longitudinal valleys due to the vigorous erosion caused by Mediterranean torrents. The chain of the Rif, from Ceuta to Melilla, forms a crescent of mountains (2,450 m. at the Dj. Tiddigine), which is enlarged in the south by a variety of hills carved by the tributary rivers of the Ouergha and Sebou in the Rif and Pre-Rif sheets. From the Melilla peninsula to the Trara massif, the heavily folded zone narrows and follows the hills of the Low Moudouya, the Beni Snassen mountains and the Tell plateauxs of Oran. Then it bifurcates, continuing on both sides of a long depression, running from the suburbs of Oran to the elbow of the Middle Chelif; to the North are the hills of the Sahel of Oran, which are succeeded by the Dahra and Millana mountains (Zaccar, 1,579 m.), and to the south, the Tessala and the Ouled Ali and Beni Chougrane mountains, which border the inland plains of Sidi Bel Abbès and Mascara, giving way in the East to the great Ouarsenis massif (1,985 m.), which directly dominates the high plains. The longitudinal depression recommences East of Medea and runs down by the valley of the wāḍi Sahel-Soummam as far as Bougie (al-Bigljāya); along its northern edge runs the Mitidja Atlas, rising above the alluvial plain of the Tadla and the hills of the Sahel of Algiers, after which it is bordered by the Djurdjura Kabylia, culminating in the Laifa Kabylia peak (2,308 m.); to the south rise the Titeri mountains and the long Biban chain. East of Bougie, the Babor (2,004 m.) and the chain of Numidia are contiguous to Eastern Kabylia and directly dominate the softer reliefs of the Ferdjousa and Constantine mountains. The crystalline terrains of Eastern Kabylia are partly obscured by oligocene clays and sandstones, bearing cork forests. These same sandstones form the mountains encircling the littoral plain of Bône and, in Tunisia, Khroumira and the Mogad regions.

The Atlas makes North Africa a country of mountain chains encircling plains, which are often both elevated and arid. The relief accentuates and diversifies the climatic contrasts due to the proximity of the Mediterranean and the Sahara. Dominating the Tell regions, the steppe areas of the high plains and the desert of the Saharan Piedmont, the principal massifs are original geographical environments, which have played a considerable though mainly negative rôle in the history of the Maghrib.

**Bibliography:** See the articles MOROCCO, ALGERIA, and TUNISIA. (J. DESPESQ).

**ATOM** (see AL-BUḤ' ALLAHU LĀ YATADILĀZU).

**ATRĀBULUS** (see TARĀBULUS).

**ATREK**, a river in the north of Khurāsān, which has its source on the mountain of Hārīr

know the mixing of drafts and potions, powders and spices" (al-Dimaghī, *Kitāb al-Ṭibb al-Mahsūn al-Ṭibbī*; cf. H. Ritter, in *Isl. 7*, 59). Today the term also sometimes includes dyers and dye-merchants, although the perfume merchants are the noblest and wealthiest of the ʿattārūn. As in the Middle Ages, herbal remedies—that is to say, the greater part of the medicines offered—are still sold dry (i.e., roots and wood chopped small; herbs, leaves, and flowers whole or crushed; and fruit or seed just dried). The containers were generally provided by the bazaar druggist (Nāṣir-i Khusrāw, *Safar-nāma* [ed. Ch. Schefer], Paris 1881, 53). The plants and animals which a druggist used, and the methods of obtaining his raw materials, are particularly vividly presented in the illuminated Persian Dioscorides manuscript Topkapı Saray Ahmed III, 2147 f. 204-475 (written in the year 867/1463). Medicines were usually given in simple form (*adviya mufrada*, *Simplex*), but they were sometimes compounded (*adviya murakkaba*, *Composita*) by the ʿattār in the presence of the patient, who, if need be, was given a dose right away. Compare with this the miniatures in H. Buchthal, *The Jeweled Book: The Walters Art Gallery* (c. 1912), 23-24; Bahr Faris, *La Livre de la Théorie en Art Islamique*, vol. II, Cairo 1951, plates XI and XII.

The professional knowledge of the bazaar druggist is usually scanty, and his medicines are often completely spoilt by storage under unsuitable conditions for excessive periods. Druggists have always been known for their cheating in measures and general quackery, as is attested by both by specialised works on fraudulent practices, (such as *Kitāb al-Mukhlif fi Kaṣf al-Aḥwāl wa-Haṭṭ al-ʿAṣār* of ʿIḥṣārī [7th century A.H.; cf. E. Wiedemann, *Sitzungs-Berichte der Physikalisch-medizinischen Societät in Erlangen* 43, 206-32], which is still much read in the Orient) and by treatises on the duties of a market supervisor (*mukhtashib*). M. Meyerhof reports, for instance, how French perfumes are diluted and tampered with in the bazaar, bottled in oriental flasks, and then sold to the Europeans as genuine oriental scent and to the local inhabitants as improved Persian products. Concerning weights, measures, and vessels used by the ʿattārūn, more information can be found in G. C. Miles, *Early Arabic Glass Weights and Stamps*, Supplement, New York 1951 (illustrated); for a container for measuring cf. F. E. Day, *Bulletin of the Metropolitan Museum of Art* 11, 259. In *Der Bazar der Drogen und Welckgründe in Kairo*, *Archiv für Wirtschaftsforschung im Orient* 3 (1918), 1-40, 185-218, M. Meyerhof describes how the druggists worked in mediaeval and more modern times. The best known druggists' quarter (*suk al-ʿattārīn*) of ancient times was in al-Fustāt (E. J. Worman, *JQR* 8, 1906, 16-18), which was burned down almost completely in 503/1108 (but was, according to Ibn Dikrūk, rebuilt under the Mamūlūk), also referred to in documents from the Geniza. The *suk al-ṣif* of Damascus is also worthy of note (H. Sauvare, in *J.A. 9* series, vol. VII, 1896, 381, 404). A woodcut in E. W. Lane, *An Account of the Manners and Customs of the Modern Egyptians* II, facing p. 9, gives a vivid picture of a druggist's shop in the 19th century. Original bills for medicines, prescriptions, and similar texts from a druggist's practice, exist in considerable numbers on papyrus. The fact that this particular calling was very widespread is borne out by the frequency with which the term al-ʿattār appears as a cognomen, especially amongst poets and

scholars for whom this calling may well have served as an additional source of income. The best known instance is Farīd al-Dīn ʿAttār.

The same word is used in India to denote an alcohol-free perfume-oil produced by the distillation of sandalwood-oil through flowers (for instance, roses).

**Literature:** [Apart from works already mentioned in the text:] A. Dietrich, *Zum Drogenhandel im islamischen Ägypten (Veröffentlichungen aus der Heidelberger Papyrus-Sammlung, N.F. no. 1)*, Heidelberg 1954; G. Wiet, *Les marchands d'épices sous les sultans mamouls (Cahiers d'Histoire Égyptienne)*, Cairo 1955. (A. Dietrich) ʿATTĀR, FARĪD AL-DĪN MUḤAMMAD B. ʿIḤṢĀRĪ. Persian mystical poet. The dates of his birth and death cannot be fixed with any certainty. According to Dawlatqāsh, he was born in 513/1119 and the general belief is that he was killed by the Mongols in Nishāpūr in the year 627/1230. This would mean that he lived to the age of 114, which is improbable, and besides, Nishāpūr was conquered by the Mongols as early as 617/1220. According to a *ṭarīkh* verse in some manuscripts (e.g. Ibrahim, *l.c.* 579), and other sources (Saʿīd Nafīsī, *Ḍawādīq*, 607), according to the inscription on the tomb erected by Mir ʿAlī Shīr, he died as early as 586/1190, that is to say, three years after writing *Manṭiq al-Tayr* (Saʿīd Nafīsī 129). Saʿīd Nafīsī adheres to 627 as the date of his death, but he bases this assumption on the spurious book *Muṭṭah al-Futūḥ* and on the statement of ʿIḥṣārī that ʿAttār had emigrated from Balḫ to ʿIḥṣār with his father in 618/1221. This emigration, however, probably took place as early as 616/1219 (Ritter in *Isl. 26*, 1942, 117-8). Nothing definite concerning the dates of his life can be got from ʿAttār's own works. The one which seems to contain most biographical information, *Maṣḥar al-ʿAḍḡāʾ*, is a forgery, which unfortunately misled Mirza Muḥammad Kāẓimī as well as the author of this article. ʿAttār was a pharmacist and doctor, and whilst not actually a Sūfī, he admired the holy men and was edified by the tales told about them, from his youth onward.—When attempting to compile a list of ʿAttār's works, one meets with a peculiar difficulty: the works attributed to him fall into three groups which differ so considerably in content and style that it is difficult to ascribe all three to the same person. The main works of the first group are *Manṭiq al-Tayr*, *Ḥikm-nāma* and *Maṣḥar-nāma*; those of the second group are *Uḡẓ-nāma* and *Ḍawādīq al-Ḍiḥ*; and those of the third *Maṣḥar al-ʿAḍḡāʾ* and *Lisān al-Ghayb*. There is, in addition, a fourth group of works which can—on the basis of internal evidence—be proved not to be by ʿAttār. The first group consist of a clear, well-constructed main story, which is interspersed with numerous—generally short—subsidiary tales. These tales reflect a wealth of religious and profane life. Told with mastery skill, these subsidiary tales are richly varied in subject, and they are the main charm of the works of this group. In the second group the number of tales is much reduced, and the interest is withdrawn from the external world and all that occurs in it. A limited number of ideas are pursued with intensity and great emotion, and with many repetitions. The recurring themes are: complete *fanā*, even through physical death, monistic pantheism (there is nothing other than God, and all things are of one substance), the knowledge

of one's self as everything, as God, as identical with all prophets. People are repeatedly recognised as God by others, and addressed as such. The presentation is broad and ill-ordered, and full of tiresome repetitions. Frequently one does not know who is speaking or who is being addressed. Anaphora is used excessively: on occasions a hundred consecutive lines begin with the same words. Saʿīd Nafīsī considers the works of this group as spurious, and attributes them to a writer of the third group, a man from Tān who lived in Tān for a long time, who was undoubtedly a Shīʿite and must have lived in the 9th/15th century. He considers the change of style, which had been accepted both by Muḥammad Kāẓimī and by the author of this article, to be impossible. One might object that a change of style and a limitation of the field of interest are not out of the question in a poet, that the beginnings of the use of anaphora can be found in the works of the first group; and also that some of the themes frequent in the second group are traceable in the first. I therefore do not regard it as utterly impossible that the works of the second group should be genuine, though it is rather doubtful. In the time of ʿIḥṣārī—that is to say in the 9th century at least, these works were considered genuine, because ʿIḥṣārī's remark in the *Nafahāt al-ʿUn* that the light of Hallāj had manifested itself after 150 years in ʿAttār, can be based only on the works of the second group, in which Hallāj plays an extensive part.

The epics of the third group, on the other hand, have been conclusively proved to be spurious. In the *Maṣḥar al-ʿAḍḡāʾ* the name of the real author, the poet Hāṭī (died 791 A.H.) and Kāsim-i Anṣārī (died 837 A.H.) and prophesies the appearance of ʿIḥṣārī al-Dīn Rūmī (Saʿīd Nafīsī 146 ff.). I find such a difference in style and content between the works of the second and those of the third group, that—unlike Saʿīd Nafīsī—I should not ascribe them to the same poet. With regard to the probable chronology of the works (on the basis of self-quotation), see my *Philosophia X*, in *Isl. 25*, 1939, 144-156. The conclusions drawn in that article from the statements in the *Maṣḥar al-ʿAḍḡāʾ* (whose author has the audacity to claim all ʿAttār's genuine and famous works as his own) as also in my own article "ʿAttār" in *IA*, are now superseded.

**Individual works:** First group:

1) *Dīwān*: apart from love poems, this contains the exposition of the same religious thoughts as governs the epics. Printed in Tehran, but not in a critical edition.

2) *Muḥṭṭā-nāma*: a collection of quatrains arranged according to themes, with an elucidatory prose introduction describing the origin of the work—which originally formed part of the *Dīwān*—and the destruction of the two works *Ḍawādīq-nāma* and *Shāh al-Kāth* (Ritter, *Philosophia X*, 152-155). Incomplete publication, Teheran 1353.

3) *Manṭiq al-Tayr* (*Mahmūd al-Tayr*): grandiose poetic elaboration of the *Risālat al-Tayr* of Muḥammad or Ahmad Ghazālī. The birds, led by the hoopoe, set out to seek Simurg, whom they had elected as their king. All but 30 perish on the path on which they have to traverse several dangerous valleys (*Ḥaṭṭ ṣuddī*: this part appears as an independent work in some manuscripts). The surviving 30 eventually recognise themselves as being the deity (*al-murgh* = Simurg), and then merge in the last *fanā* in the divine Simurg. Inadequate edition by Garcin de Tassy, Paris 1857; *Mantic uttar on le langage des oiseaux . . . par Farid-uddin Attar; Traduction* Encyclopaedia of Islam

*française and La poésie philosophique et religieuse chez les Persans d'après le Mantic uttar, ou le langage des oiseaux de Farid-uddin Attar*, 3rd edition, Paris 1860; on the translation by Baron E. Hermelin, Stockholm 1929, see Jan Ryplá in *Archiv Orientalni* 4, 1932, 149-160. The best edition known to me is the one which appeared in Bombay in 1313 A.H., published by Cooper and Cooper. For other editions of *Manṭiq al-Tayr* and for works of ʿAttār in general, see E. Edwards, *A Catalogue of the Persian printed books in the British Museum*, London 1912; A. J. Arberry, *A Catalogue of the Library of the India Office, Vol. II, Part IV, Persian Books*, and the catalogues of manuscripts. A Turkish commentary was written by Shemʿi in 1005/1596-7 (MS. Carullah 1716). For Turkish translations and studies, cf. my article on "ʿAttār" in *IA*.

4) *Maṣḥar-nāma*: a *ṣifī* disciple (*ṣāḥib*), in his helplessness and despair, is advised by a *pir* to visit successively all mythical and cosmic beings: angel, throne, writing tablet, stilus, heaven and hell, sun, moon, the four elements, mountain, sea, the three realms of nature, Iblis, the spirits, the prophets, senses, phenomena, mind, heart and soul (the self, the *ego* of the soul), in his own self, he eventually finds the pathlead. The tale may have been inspired by the *ḥadīth al-ghaʿfāʾ*. Printed in Tehran 1298 A.H.

5) *Lisān-nāma*: a king asks his six sons what, of all things in the world, they wish for. They wish in turn for the daughter of the fairy king, the art of witchcraft, the magic cup of Dījam, the water of life, Solomon's ring, and the elixir. The royal father tries to draw them away from their worldly desires and to inspire them with higher aims. Edition by H. Ritter, Istanbul-Leipzig 1940, *Bibliotheca Islamica* 12. Concerning a Turkish edition, cf. the article *Attār* in *IA*.

6) *Avār-nāma*: it has no framework-story, and repeatedly mentions the gnostic motif of the entanglement of the pre-existing soul in the base material world. ʿAttār is supposed to have given a copy of this book to the young Dīlāl al-Dīn Rūmī. Printed in Tehran 1298/1880-1 Cf. H. Ritter, *Das Meer der Seele, Mensch, Gott und Welt in den Geschieden des Fariduddin ʿAttār* (Leiden 1955) for content and ideas of Nos. 3, 4, 5 and 6.

7) *Khusrāw-nāma*: a romantic novel of love and adventure, concerning Khusrāw, the son of the emperor of Rūm, and Gul, the daughter of the king of Khristian, with many adventures, befalling above all the faithful Gul, who is besieged by a succession of suitors. Synopsis in *Philosophia X*, *Id.* 25, 160-173. Printed in Lucknow 1295/1878.

8) *Pand-nāma*: a small moral treatise which enjoyed great popularity; it has been printed in Turkey alone at least eight times (1253, 1252, 1253, 1257, 1260, 1267, 1291). Concerning further editions see the Saʿīd Nafīsī 109-10 and the above mentioned catalogues. It has been translated into several languages (compare Geiger-Kuhn, *Grundriss der iranischen Philologie*, II, 603 and Saʿīd Nafīsī 108-10). As early as 1109 it was published in London by J. H. Hunter, then by de Sacy together with a French translation: *Pandemeh ou Livre des Conseils*, Paris 1819. For the Swedish translation by Baron Erik Hermelin, see Jan Ryplá in *Archiv Orientalni* 4, 1932, 148 ff. The Turkish translation, completed in 964/1557, was by Enzeli, who died in 988/1586, and it was repeatedly printed in Turkey together with the Persian text (1229, 1266, 1280, 1281). Turkish commentaries: Shemʿi (died 1009/1600-1), Saʿīd-nāma; Shuʿrī

(died 1105/1693-4) autograph of 1083 A.H. Istanbul, Darülmünevi 185; 'Abdī Pasha (died 1113/1701-2), *Ma'ādi*; Bursalī Ismā'īl Hakkī (died 1137/1724-5), in great detail, printed Istanbul 1200; Mehmed Murād (died 1264/1849) *Mahāzār*, Istanbul 1252, 1260.

9) *Tadhkirat al-awliyā*: an extensive prose work which contains the biographies and sayings of Muslim mystics. It ends with a biography of Hallāj, who plays such an extensive part in the works of the second group. Other biographies—over 20 in number—have been added in some manuscripts. In these, as also in his epics, Attār has taken his sources freely, and has often altered them in the light of his own religious ideas. For the numerous Turkish studies and translations, see the article Attār in *IA*; in addition Sa'dī Nafīs 110-112. The text of the edition by R. A. Nicholson, *The Tadhkirat 'Awliya' of Shaykh Farīdu'd-dīn 'Aṭṭār*, London-Leiden 1905-1907, Persian Historical Texts 3 and 5, is not always trustworthy. Other editions in Sa'dī Nafīs 112 and in the above mentioned catalogues.

10) *Bahār-nāma*: the birds complain to Solomon about the nightingale which, they say, disturbs them with her song to the rose. The nightingale is called upon to defend herself. Eventually Solomon orders that she be left in peace. Sa'dī Nafīs (106-7) regards this book as spurious. Printed in Tehran 1312.

11) *Mi'vāḡ-nāma*: could well be an extract from the *asf* of any *maḥṣūf*. In the only manuscript which I have seen, it covers a mere two pages.

12) *Qismat-nāma*: a rather short story which might come from any of Attār's epics. Jesus resurrects a skull in the desert; the dead man, who had been a great king, tells Jesus about the torments of the grave and of hell; he then embraces the true faith and dies for a second time. For Turkish editions of this little work, see *IA*: Attār.

The works of the second group (described above):

13) *Uṣṭur (Shāhūr)-nāma*: the central figure of the first part of this work is a Turkish puppet player, who appears as a symbol of the deity. He has seven curtains to his stage and has seven assistants. He breaks the figures which he himself had created and tears the curtain. He sends his assistants in all directions and himself withdraws in order to guard his secret. A wise man asks him for the reason for his actions. By way of a reply, he is sent in front of seven curtains. There he beholds a strange, fantastic series of events, the meaning of which is to be understood symbolically. He is always sent on by a *pīr* without any clear information, and on his arrival at the 7th curtain he is asked to fetch from the God his revealed matters concerning Himself, the way towards Him, the creation, and the prophet Muḥammad. There is repeated mention of decapitation as a means of reaching God, and Hallāj is repeatedly pointed to as the great example. The fruitless wandering from one curtain to another is reminiscent of the cosmic journey of the *saḡik* in the *Majma'at-nāma*. The second part deals almost exclusively with Hallāj. On the scaffold he has talks with Dīmāwīd, Shāykh-i Kabīr (Ibn al-Khaffī), Ḥayyāt and Shīhlī, and in these, as God, he develops a monoistic-pantheistic theology. In spite of its length, the *Uṣṭur-nāma* is an important and interesting work which deserves closer study. Metre: *Ramāl*.

14) *Dīwānār (Dīwānār) al-Dhāt*: this epic was written after the *Uṣṭur-nāma*, because the latter (as well as the *Majma'at-nāma*) is quoted in it. In this

work, too, Hallāj is continuously presented as a model of the *fanā* and of becoming God. Amongst other stories, it contains the one of 'Alī whispering the divine secrets into a cistern. These secrets are then betrayed by a reed which had grown in the cistern and had been cut into a flute. The connexion with the 18 introductory lines of the *Maḥṣūf*, in *IA* is that it is this story (which goes back to Mīdās-donkey-ears via Nīrān) which has inspired Dīlāl al-Dīn; Sa'dī Nafīs, who considers the work a later forgery, assumes the reverse to be the case (p. 114) (H. Ritter, *Das Provenienz des Maḥṣūf al-Manṣūr*, in *ZDMG* 93, 169-196). The epic also contains the story of the youth who went on a sea voyage with his father, recognised himself as God and jumped into the sea in order to lose himself completely in the divine nature. The youth is also recognised as God by a fellow-passenger. The motif of the recognition of a man as a God by another man also appears in other works of this group. This work was printed in Tehran in 1315/1355.

15) *Haylāḡ-nāma*: a poor imitation of the second part of the *Uṣṭur-nāma*. Metre: *Hazāfī*. Lithographed, Tehran 1253.

16) *Manṣūr-nāma*: a short tale in the metre *Ramāl*, beginning: *Idā Manṣūr ay 'ayyān dhārīn fād*. It is a short description of the martyrdom of Hallāj.

17) *Blār-nāma*: a short *Maḥṣūf*, the centre of which consists of self-dedication (*Man khudāyān man khudāyān man khudāyān*) and *fanā* by decapitation. It contains verses from other *maḥṣūfs* of this group. Its content is connected with the second part of the *Uṣṭur-nāma*. Lithographed, Tehran 1319 and several times in Lucknow.

The works of the third group (undoubtedly by another hand):

18) *Maḥṣār al-'Aḡḡīh* (the "place where miracles appear"): is an honorary name for 'Alī, to whose glorification this work is dedicated. He is the divine man, the bearer of divine secrets, the *Shāh* of all beings, prophets and angels. Legends about 'Alī play a large part. The author claims all the works of Attār as his own, and gives great biographical detail, including the meeting with Naḡm al-Dīn Kubrā. Lithographed, Tehran 1323. Sa'dī Nafīs 126 ff.

19) *Lisān al-'Aḡḡīh*: again a *Shāfi'ite* work by the same poet, who explicitly renounces Abū Bakr and 'Uṭmān. Sa'dī Nafīs 122-3. These two works have no literary value.

Works of the fourth group (demonstrably spurious on the basis of internal evidence):

20) *Khayyāl-nāma*: for contents see E. Berthels, *Farīdud-dīn 'Aṭṭār's Khayyāl-nāma*, in *Bull. de l'Ac. des Sc. de l'URSS*, Classe des Humanités 1929, 201-214. Hājjī Khānā attributes the work to a certain Khayyāl-i Khāḡānī. Berthels considers it genuine.

21) *Waslāt-nāma*: the poet is a man called Buhlāl. Sa'dī Nafīs 131-132.

22) *Kanz al-'Aḡḡīh* (= *Kanz al-Bayr* = *Tarjamat al-'Aḡḡīh*): compiled 699/1299-1300. *Philologia X*, 157; Sa'dī Nafīs 120.

23) *Miftāḡ al-Futūḡ*: compiled 688/1289-90, according to other manuscripts 587/1191-2, by a man from Zanḡian. *Philologia X*, 157; Sa'dī Nafīs 127-128.

24) *Wasṣiyāt-nāma*: compiled 820/1416-7. *Philologia X*, 158. Perhaps = *Waslāt-nāma*.

25) *Kanz al-Hakā'ik*: contains a panegyric to a prince by name of Nīk Ghāzī. Concerning the possibly corrupt name of this prince see Sa'dī Nafīs

122, Ritter, *Philologia X*, 158. Concerning four other spurious works, compare *ibid.*, 154.

*Bibliography*: Works other than those mentioned in the text: Mirzā Muḥammad Karvī, Introduction to E. G. Browne's edition of the *Tadhkirat al-awliyā*; H. Ritter, *Philologia X* in *IA*, 25, 2939, 134-173; idem, the article in *IA*. (All three articles still take *Maḥṣār al-'Aḡḡīh* to be genuine and use it as a source for biographical matter); Sa'dī Nafīs, *Dīwānār dar Ahwāl u Akhbār Farīdud-dīn 'Aṭṭār Nīshābūrī*, Tehran 1328. Apart from these, histories of literature and catalogues of manuscripts.

(H. Ritter)

AL-'ATTĀR, HASAN B. MUHAMMAD, Egyptian scholar of Maghrebine origin, born in Cairo after 1180/1766. He studied at al-Azhar, and was one of the few 'ulama' who, after the occupation of Egypt by Bonaparte, entered into relations with the French scholars and took an active interest in the new learning. He then spent many years in Syria and Turkey, and on his return to Egypt was employed as editor of the Official Journal (*al-Wakā'if al-Miṣriyya*) founded by Muḥammad 'Alī (1244/1828). In 1245/1830 he was installed as Shāykh al-Azhar by Muḥammad 'Alī, with whose programme he was thought to be in sympathy, and died in office in 1250/1835. He was probably most influential as a teacher of Rūḡa' Rūḡa' al-Taḥṭāwī (p. 6), but his handbook of correspondence (*Inṣāḡ al-'Aḡḡīh*) enjoyed a wide vogue, and was frequently reprinted at Cairo and in India.

*Bibliography*: 'Alī Pasha Muḥārak, *al-Khāṭir al-Dīdān*, iv, 38-40; Fh. Tarrāf, *Ta'wīḡ al-Salāḡ al-'Arabiyya*, i, Beirut 1913, 128-30; Brockelmann, II, 471; S. II, 720; E. W. Lane, *Modern Egyptians*, chap. ix; J. Heyworth-Dunne, *Hist. of Education in Modern Egypt*, London 1940, 154, 265, 397; Sulaymān Raṣād, *Kanz al-Dīwānār fi Ta'wīḡ al-Azhar*, Cairo 1320, 138-41.

ATTACK (see ATAR).

ATTRIBUTE (see SIFA).

AURUS (see AWRA).

AVARS (AWAR, from *Aḡḡār* Turkish *avars*: "unstable", "vagabond") Ibero-Caucasian people, inhabiting the mountainous part of the autonomous Soviet Socialist Republic of Daghistan (basins of the rivers Koyus of Andi, Koyus Awar, Kara-Koyus and Tseyserdzh) and the northern part of the Soviet Socialist Republic of Azerbaijan. The Avars are Sunni Muslims of the Shāfi'ī rite. In 1925 their numbers were estimated at 240,000, of whom 40,000 approximately were in the Belokani and Zakatali districts of Azerbaijan.

The Avars are divided into two major groups—formerly federations of tribes (*ba*), which are subdivided into clans (*khān*); the Maasral group (from *maas* "mountain" in Avar, in Russian *gorki* from the Kumik *kar*; mountain) to the North of the plateau of Khūnūḡ, and the Bagaual (in Avar: rough men), composed of the southern clans. The Avars claim to have been converted to Islam by the Arabs. According to a legendary tradition, Islam is said to have been introduced to Khūnūḡ by the Amir Abū Muslim, and his tomb and sword are still shown there. In point of fact, this tradition confuses Amir Abū Muslim, who never went to Daghistan, and the Shāykh Abū Maṣlama, who is reputed to have lived there in the 5th/11th century. In point of fact, when the Arabs arrived in Daghistan, Christianity and even Judaism had

already taken root in the Avar country and Islam only penetrated very slowly, since Christianity in the Georgian rite survived at Kakhil until the 10th/16th century. However, in the 5th/11th century, the Tanaḡ *aul*, capital of the Avar principality of the Nutsal, originally a vassal of the Kād-Kūmūḡ (see *LAK*), was already a Muslim stronghold and one of the principal centres of Arab culture of Upper Daghistan. The Islamisation of the country was completed during the brief period of Ottoman domination (1665-1015/1558-1666), that is to say at the time of the formation of the Avar Khānate, whose rulers claimed (legendary) descent from the Arab governors of Khūnūḡ.

In the 11th-12th/17th-18th centuries, the Avar Khānate dominated Upper Daghistan culturally and politically, especially with Ummu-Khān Avar (died 1634), who codified the Avar *shad*, and his successors who received tribute from the King of Georgia and from the Khāns of Shīrwān, Sheki and Darband. However, the lords of Khūnūḡ were never able to completely unite Avaristan, which remains divided amongst a multitude of clans, some grouped in free federations (*ba*) and others tributary to the Khānate.

In 1727 the Avar Khānate accepted the Russian protectorate for the first time, but soon rejected it. It was again imposed for a second time on Ummu-Khān in 1802, then once more in 1803 on his son and successor Sultān Ahmad Khān.

In 1821, after the revolt of Sultān Ahmad Khān, Avaristan was occupied by Russian forces which, without assuming power directly, were content to provide the ruler with military advisers. From that time, the plateau of Khūnūḡ served the Russians as a springboard for the conquest of Upper Daghistan. At the beginning of the 19th century, the Avar country became the field of activity of the initiates of the Nakḡbandiyya order, who in 1830 instigated a popular movement there directed both against the Khānate, which was in alliance with the Russians, and against the "infidels". The Khānate was overthrown in 1834 by the Imam Ḥamza Beg (p. 2), and the Russians were shortly afterwards expelled from Avaristan. The surrender of the Imam Shāhīn (p. 2) on 25 August 1859 put an end to the imāmate; the Russians re-established the Avar Khānate, placing Ibrahim Khān of Meḡtulin at its head. However, on 22 February 1863, Ibrahim Khān was arrested and sent into exile; on 2 April 1864, the Khānate was finally suppressed and its territory annexed to the Avar *oblast* administered directly by the Russian authorities.

After the October Revolution, the Avar territory became part of the autonomous Soviet Socialist Republic of Daghistan, attached to the Russian Soviet Federative Socialist republic (decree of the Supreme Soviet of January the 20th 1921).

The Avar language belongs to the North-Eastern branch (Daghistan) of the Northern group of Ibero-Caucasian languages. Its sphere extends from the *aul* of Cirioṭ to Novo-Zakatali in Azerbaijan, 170 km. further to the South; it is subdivided into numerous dialects (almost one to each clan) forming two main groups: the Northern (or Khūnūḡ) dialects and the Southern dialects (Anstūn, Gōlḡ, Gidatli and Zakatali). The literary language was formed from the *holmāṡ* ("language of the army"), the vehicle of inter-tribal relations from the 16th century onwards. In the middle of the 17th century, Avar was endowed with an Arabic alphabet (completed by numerous signs for the transcription of

Ibero-Caucasian phonemes), called "Old 'Adjām'" which was finally perfected by Dibir, *khāfi* of Khizārk (1747-1827). Avar literature was born at the same period with Muhammad b. Mūsā of Kodatli (died 1798), who wrote in Arabic, and Dibir, *khāfi* of Khizārk, who translated *Kalila wa Dimna* into Avar. At the beginning of the 19th century, it was enriched by a spate of religious and didactic works, then, in Shāmlī's time, by satirical and lyrical works, the chief representative of which was the poet Mahmūd of Ilet-Kalghal rosso (1873-1919). This literature first of all found expression in Arabic and then in Avar. In 1920 the old alphabet was replaced by a simplified Arabic alphabet of 38 letters (called "New 'Adjām'"), for which in 1928 a new Latin alphabet was substituted and then in 1935 a Cyrillic alphabet.

At the present time (1957), the Avars are numerically the largest nationality in Dagestān (200,000 for a total population of one million) and the most advanced. They have a literature of their own, the most famous representative of which is Hamzat Tsadaia (1873-1951), Lenin Prize winner in 1950, an Avar language press and a well developed network of schools, where instruction is given in the national language up to the 5th class, and in Russian in the senior classes.

The literary Avar language is used by the Ačl (*q.a.*) and by the thirteen small, Ačl (*q.a.*) and Dido (*q.a.*) nationalities, which have no written language and are rapidly becoming absorbed into the Avar nationality; it also serves as a secondary language for certain other peoples of Upper Dagestān, who are subject to the cultural influence of the Avars (Dargi, Laks [*q.a.*]). Russian, however, continues to be the administrative language of Dagestān, the Avars of Azerbaijan are losing the use of their mother tongue, which is being replaced by Ādlārī Turkish.

In the territory of Avaristān occupying the mountainous and little arched region of Central Dagestān, the Avars remain essentially nomadic sheep breeders, and in the valleys horticulturalists on a small scale (terraced orchards). Traditional crafts are very much developed: woven woollen goods, carpets, copper work (*asls* of gold, silver, and iron), work in leather, work in gold, artistic work on wood (*asls* of Ustakal and Batsada), wrought iron work (*asls* of Sograt, Golot, Kādhli). The industrialisation of the country, which was started about 1936, is still in the initial stages.

**ĀWA** (*Awā*, *Āwā*), the name of two towns in central Iran.

1) A town of Āwa, at present called Āwājī, lies 70 m. (111 km.) S.W. of Karwīn on the road to Hamādīn, ca. 33° 35' N. lat. and 49° 15' E. long. (Greenw.). The town is reckoned in the cold zone (*sardīst*) because of its altitude. In 1950 it had ca. 1800 Persian and Turkish speaking inhabitants.

There are only short notices of the town in medieval geographers. Yāqūt, i, 587, mentions a savant called Āwāl from there. The only old building in the vicinity is a caravansary from the time of Shāh 'Abbās.

2) Another town, also called *Āwā*, is now a village in the Āwājī-Ābād county of the Sāva district, ca. 18° 12' N. (30 km.) west of Kūmīn on the usually dry Gāwādhā River, 34° 45' N. lat. and 50° 20' E. long. (Greenw.). The medieval geographers mention it together with Sāva. It was plundered by the Mongols but apparently regained importance, if this is the Āwa where Il-Khānāid coins were minted (see B. Spuler, *Die Mongolen in Iran*, Berlin 1955, 129).

The present village had 885 inhabitants in 1950, ancient Shī'ites as in the past of the town. There are many ancient artificial mounds in the vicinity of Āwa, and an old (*mimāda*) in the village.

**AWADH** (Oudh), a tract of country comprising the Lucknow and Faizābād divisions of the Indian State of Uttar Pradesh. It has an area of 24, 168 square miles and a population of 15, 314, 950, of which 14, 156, 139 are to be found in the rural districts. Census of India, 1951. Even before the British came, Awadh was one of the great alluvial plains of northern India, has been the peculiar home of Hindu civilisation. It corresponds roughly to the Middle Country, the Madhyā-desha of the sacred Hindu writings, where dwelt the gods and heroes of the Epic Period whose deeds are recorded in the *Mahābhārata* and the *Rāmāyana*. Here too arose a number of religious religions against the sacerdotalism and the social exclusiveness of Brahmanism. Apart from marauding expeditions, such as Mahmūd of Ghazna's attack upon Manāid and the doubtful exploits of Sālār Mas'ūd Ghāzi recorded in the *Mir'āt-i Mas'ūd* of 'Abd al-Rahmān Cishī, it was not until the last decade of the twelfth century, in the days of Kutb al-Dīn Aibak, that the Muslim invaders established themselves in Awadh and annexed it to the Delhi Sultānate. It formed a province of Muhammad b. Tughlūk's extensive empire, but towards the close of the fourteenth century was absorbed by the Shārkī kingdom of Dīwānpūr, of which it remained an integral part until reconquered by the Lodī sultans of Dillī. In the reign of Albar it was annexed to the Lodī empire. According to Abu'l-Fadl it was divided into five *sarkhs* and thirty-eight *parganas*. It extended from the Ganges on the south-west as far as the Gandak on the north-east; and from the river Sai in

the south to the Tārāi of Nepāl in the north. (*J'ān-i Akhār*, ii, 170-7; Jarrett, H.S., *Bib. Ind.*, 1891). Local traditions in Awadh, however, conflict with the Muslim accounts and suggest that the Rājput chiefs maintained their authority practically intact throughout the Muslim period. (W. C. Bennett, *The Chief Clans of the Rohilkhand District*, 1895). The weakness of the central government after the death of Awarangzib gave the nawābs of Awadh an opportunity of asserting their independence, although nominally they still acknowledged the authority of the Mughal emperor.

Sa'adat Khān Būrhān al-Mulūk, the founder of the Awadh dynasty, was descended from a respectable Sayyid family of Shāhājpur (*Mawādh*) al-Lahāb of Khān Khān, ii, 901). During his nawābship (1722-39) Benares, Ghāziyūr, Dīwānpūr and Cūmār were annexed to his dominions. His successor, Sa'ad Dījān (1739-54), was appointed *waizir* of the empire in 1748. He invited the Marāthās to assist him against the Bangash Pathāns of Farrukhābād who were supported by the Rohillas. The engagements entered into at that time formed the basis of later Marāthā claims on Rohilkhand. Sa'ad Dījān's son and successor, the *nawāb-wāizir* Shujā' al-Dawla (1754-75), came into conflict with the rising power of the English East India Company and was totally defeated at Balasor in 1764. This left Awadh at the disposal of the Company. By the treaty of Allahābād (1765) Clive restored Awadh to Shujā' al-Dawla, with the exception of Kora and Allahābād, which were handed over to the emperor for the upkeep of his dignity and expenses. This alliance with Shujā' al-Dawla was purely defensive. It was the germ of all subsequent subsidiary alliances with Awadh because the extraordinary expenses of all troops supplied by the Company were to be defrayed by Shujā' al-Dawla. By these means Awadh was converted into a buffer state against Marāthā encroachments. In the main this was a sound policy. Its chief weakness from a strategic point of view was the handing over of Kora and Allahābād to the Mughal emperor as the defence of Awadh necessitated the defence of these districts. The reinstatement of Shujā' al-Dawla was a wise move as the Company at that time were in no position to annex and administer Awadh. By the treaty of Benares (1773) Warren Hastings placed the Company's relations with this important buffer state between Bengal and the Marāthās on a firmer footing. In future its ruler had to defray all the expenses of the Company's troops required for the defence of his country, namely 210,000 rupees a month. Because the emperor had deserted the Company and become a puppet in the hands of the Marāthās, Kora and Allahābād were sold to the ruler of Awadh for fifty lakhs of rupees. (For these negotiations see *The Benares Diary of Warren Hastings*, ed. C. Collin Davies, Camden Miscellany, Royal Historical Society, vol. lxix, 1948).

The accession of the incapable Āṣaf al-Dawla (1775-97) enabled the hostile majority on Warren Hastings' council to alter his policy towards Awadh. By the treaty of Faizābād (1775) the subsidy for the use of the Company's troops was raised to 260,000 rupees *per mensem* and the new nawāb was forced to cede Rājā Chait Singh's *amindārī* of Benares, Dīwānpūr and Ghāziyūr in full sovereignty to the Company. By the treaty of Cūmār (1781) Hastings, who had regained control over his council, proposed to reform Āṣaf al-Dawla's administration by reducing the number of English troops stationed

in his territories. Unfortunately the weakness of the nawāb's government prevented this and Hastings was forced to retain both the permanent and temporary brigades. His share in the resumption of the *ghāzīs* and in the sequestration of the treasures of the bigwigs of Awadh, the mother and wife of Āṣaf al-Dawla, formed one of the charges against him on impeachment. Certain conclusions may be drawn from Hastings' conduct of the Company's relations with Awadh. His object was to prevent any development which would impair the efficiency of the buffer state and weaken the Company's defences. He therefore contended that the Company had a right to dethrone a disloyal or unsuitable ruler. He also insisted on ministers favourable to the British connexion. The trouble he experienced in controlling the English Residents in Awadh, both Middleton and Bristow, illustrates the difficulty of formulating written instructions which were not liable to misinterpretation. Because of the close connexion between Awadh and Bengal a policy of non-interference was impossible. Under the incapable Āṣaf al-Dawla Awadh could not have preserved its independence without the Company's assistance. It certainly would not have been free from Marāthā depredations. In the main Hastings' policy was followed by Lord Cornwallis and Sir John Shore. Cornwallis reduced the Company's demands on Awadh to fifty lakhs of rupees a year, but, on the accession of Sa'adat 'Alī Khān (1798-1814) Shore raised the subsidy to seventy-six lakhs. In 1801 Lord Wellesley forced Sa'adat 'Alī Khān to cede Rohilkhand, Farrukhābād, Mainpūr, Etāwah, Cawnpore, Fatehgarh, Allahābād, Azimgarh, Basti, and Gorālpur. This meant that Awadh ceased to be a buffer state, for, except where it was bounded by Nepal, it was entirely surrounded by British territory. Its weakness as a buffer state had been Wellesley's excuse for these annexations. Sa'adat 'Alī Khān was succeeded by his eldest son, Ghāfi al-Dīn Haydar, who was the first ruler of Awadh to assume the title of king. The remaining kings of Awadh were Nāsir al-Dīn Haydar (1817-37), Muhammad 'Alī Shāh (1837-41), Amjad 'Alī Shāh (1841-47) and Wajid 'Alī Shāh (1847-56).

It was a provision of the treaty of 1801 that the ruler of Awadh should introduce into his country a system of administration conducive to the prosperity of his subjects and calculated to secure their lives and property. In spite of repeated warnings nothing was done and misgovernment continued unchecked. On these grounds Awadh was annexed by Lord Dalhousie in 1856. Wajid 'Alī Shāh received a pension and was allowed to reside at Calcutta where he died in 1887, his title expiring with him. The annexation of Awadh was one of the causes of the 1857 Mutiny. Some of the fiercest fighting during this uprising took place at Lucknow and Cawnpore.

After its annexation Awadh was controlled by a Chief Commissioner, until, in 1877, both Agra and Awadh were placed under the same administrator, who was known as the Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Awadh. The title of Chief Commissioner was dropped on the formation of the United Provinces of Agra and Oudh in 1902. It was not, however, until 1921 that this administration was raised to the status of a Governor's province.

The first land revenue settlement after annexation was carried out with a lack of consideration for the great *talukdār* families of the province, who were ousted from the greater part of their estates. This

was reversed after the Matiny when Lord Canning reverted to a *talabādei* settlement and confirmed the rights of the *talabādei* by *sauahs*.

To-day in Awadh Muslims are to be found chiefly where they held sway in the past, their preference for urban life explaining their presence in the chief towns. The old *talabādei* system has been abolished and a new rural hierarchy of officials and village organisations has sprung up as a result of the Uttar Pradesh Village Panchayat Act of 1917. Villages or groups of villages with a population of 1,500 have been constituted into a *gāon sabbā* with certain powers of local administration. Groups of *gāon sabbās* are controlled by *panchayat sādāts* with judicial powers extending to civil, criminal and revenue cases. There are about 9,400 *gāon sabbās* and 2,180 *panchayat sādāts* in Awadh.

#### AWĀDHĪLA [see 'AWĀGHĪLA]

**AWĀ'IL**, Plural of *awā'il* "first", technically used to denote various ideas such as the "primary data" of philosophical or physical phenomena; the "ancestors" of either pre-Islamic or early Islamic times; and the "first inventors" of things (or the things invented or done first).

In the last mentioned connotation, the term characterises a minor branch of Muslim literature with affinities to *adab*, historical, and theological literature. Among the Muslims themselves, only the 10th/11th-century Ḥādīdī Khāfī (Flügel, I, 490; Istanbul 1941-3; col. 1996, defines the *awā'il* as a separate "science" relating to history and *adab*.

Curiosity about the origin of things was deeply rooted in the historical consciousness of the ancient Semites and reached the Arabs through such literary media as the Bible. The Hellenistic world possessed a literature on the first inventors (*Peri Heurētikon*, cf., most recently, A. Klein Günther, *Peri Heurētikon*,

in *Philologia, Supplementband XXVI*, 1, 1934), the history of science, such as the origins of medicine, became known in Islam directly through translation (cf. Ishāq b. Hunayn, *Tārīkh al-Atibbā'*, in *Oriens*, 1954, 55-80, whose source was Ps.-Galen's *Commentary on the Hippocratic Oath*, or, more generally, the ample material preserved in the introduction of Abū Sulaymān al-Sijistānī's *Science al-Hikma*). For the Muslims, the knowledge of the "firsts" connected with the history of Muhammad and the beginnings of Islam was a matter of far-reaching legal and practical importance in many respects, and already the earliest known literature on the biography of Muhammad pays attention to it. Muslim customs, such as clipping the moustache, using the toothpick, etc., were justified by ascribing their first use to the great religious leaders of the past, in this case Abraham (cf. *Tha'ālīh*, *Lafā'ih al-Ma'arīf* (De Jongh, 61). With the growing historical interest of the Muslims not only in political history but also in the history of civilisation and science (cf., especially, the introductory remarks to each chapter of the *Fihrist*, on the origin of the science treated in that particular chapter), the question: Who was first? was soon asked in connection with every conceivable subject and always answered, though often in a rather fanciful manner. Nevertheless, the *awā'il* works are brilliant expressions of the cultural outlook and historical sense of their authors, and they are full of valuable material and interesting insights. The wide intellectual appeal of the subject shows itself in the fact that since the beginning of our era, the Chinese, *Science and Civilization in China* I, 51 ff., Cambridge 1954) and again in late medieval Europe, successful works on the first inventors were produced, such as the alphabetically arranged chapter on the inventors from *De viris illustribus* by the fourteenth-century Guglielmo da Pastrengo (published in Venice 1547, under the title *De originibus rerum* fol. 78a-93a) and the famous, widely read first appeared in 1499, by Polydore Vergil which first appeared in 1499.

Our oldest known representative of the Muslim *awā'il* literature dates from the beginning of the 3rd/9th century. The large *Muṣannaf* of Abū Bakr b. Abī Shayba (d. 235/849; Brockelmann, S I, 215) is said to contain, at (or near, near) the end, a section on *awā'il*, which was used as a source in al-Sijistānī, *Mabshūh al-Wasā'il* (cf. *Ma'arīf al-Awā'il*). It appears to deal with the *awā'il* of early Islam and the origins of Muslim history and customs. The end of the section is preserved in MS Berlin 9409; the large sets of the *Muṣannaf* could not be consulted.

At the same period, works entitled *Kutāb al-Awā'il* were composed by Ḥishām b. al-Kalbī (Yāqūt, *Iṣṣāḥ*, vii, 251; al-Madkhalī, *Fihrist*, 104; al-Hasan b. Maḥbūb (*Fihrist* 221), whose list of items is duplicated in Yāqūt, *Iṣṣāḥ*, ii, 12, under the name of Ahmad al-Rakkī; and a certain Sa'ūd b. Sa'dūn al-ʿAṭīr (*Fihrist* 171) of unknown date. Since none of these works is preserved or quoted in the later *awā'il* literature, it remains extremely doubtful whether they dealt with *awā'il* in the sense discussed here (or, at any rate, contained some *awā'il* material). According to the description given in *Fihrist* 133, the *Kutāb al-Awā'il* by the 4th/10th-century al-Ma'rūbī appears to have dealt not with first inventors but with the history of the ancient Persians and the Mu'tazila.

Late in the 3rd/9th century, Ibn Kutayba, *Ma'arīf* (Wüstenfeld, 273-7, devoted to the *awā'il* a chapter in a historical context (cf. also the later

al-Tha'ālīh, *op. cit.*, 3-17). In an *adab* context, a chapter on *awā'il* appears in the early 4th/10th century in al-Bayhaqī, *Mabshūh* (Schwally, 392-6. Theological *awā'il* works were written at about that time by Abū 'Arūba [s.n.] and al-Tabarānī (d. 360/971; Brockelmann, S I, 279).

*Adab* literature provided its first monograph treatment of the subject in the *Kutāb al-Awā'il* of Abū Ḥilāl al-ʿAskarī (d. 393/1003), who claimed to have had no predecessors. He restricts himself to material derived from Arab and Muslim history, with the inclusion of some Persian and biblical references, and ignores 'Greek' cultural and scientific data. He succeeds in clearly underscoring the view of Muslim historians that every important and good invention dates back to the pre-Islamic and early Islamic period while subsequent ages as a rule produced insignificant and undesirable inventions. Al-ʿAskarī's book remained a much quoted standard work which served as a basis for later efforts, such as the *awā'il* works of the 8th/14th century al-ʿAtā'ī and al-Suyūṭī (cf. Brockelmann, I, 132; S I, 193 f.).

There appears to have been a gap of about two centuries in the *awā'il* literature. From the early 7th/13th century, we then have the *Ghayat al-Wasā'il* (cf. *Ma'arīf al-Awā'il* by al-Mawṣilī (cf. Brockelmann, S I, 597 f.; H. Ritter, in *Oriens*, 1950, 80 f.). A historical handbook based on the *awā'il* scheme is the above-mentioned *Mabshūh* by the 8th/14th century Shībī (cf. Brockelmann, II, 90 f.; S II, 82; F. Rosenthal, *A History of Muslim Historiography*, 190, fn. 1), a highly instructive Chinese *awā'il* literary effort appears to have been continued by the poet Ibn Khafī Dārāyā (cf. Brockelmann, II, 17; S II, 7; Ḥādīdī Khāfī (Flügel), i, 490). On the other hand, the theological inclination of some 9th/15th-century scholars finds expression in their *awā'il* works, which might have followed the lead of Ibn Ḥajar's *Khawāt al-Dawā'ir* 'alā *Ma'arīf al-Awā'il* (which has not yet been recovered, cf. Ḥādīdī Khāfī, loc. cit.). Abū Bakr b. Zayd al-Djā'irī (form uncertain, d. in 883/1478, cf. al-Sakhāwī, *Daw'*, xi, 32 f.) thus arranged his *Kutāb al-Awā'il* (Ms. Berlin 9368) more or less according to the chapters of the science of traditions, and the same was done by al-Suyūṭī, in his instructive *Wasā'il* (cf. *Ma'arīf al-Awā'il*) which was based on some degree upon al-ʿAskarī. In turn, al-Suyūṭī's work was used by 'Alī Dede al-Bosnawī (d. 1007/1598, cf. Brockelmann, II, 562 f.; S II, 635) who, as was the custom among certain later authors, also included the "last things (*awā'akhir*)" that happened (cf. in this connexion al-Sakhāwī, *Fā'id*, Damascus 1349/1930-1, 131; F. Rosenthal, *op. cit.*, 214 f. For a further user of al-Suyūṭī, cf. G. Vajda, in *RSO*, 1950, 31). Another great historian of that time, Ibn Ṭūlūn (d. 923/1546), wrote *ʿUmeḍ al-Rasā'id* fī *Ma'arīf al-Awā'il* (Ms. Cairo, Taymur, *Tārīkh* 1467; cf. Ibn Ṭūlūn, *al-Fah al-Maghūb*, Damascus 1348/1929-30).

The subject was also verified in a work entitled *Wasā'il al-Sā'il* (cf. *Ma'arīf al-Awā'il*) (cf. Ḥādīdī Khāfī (Flügel), cf. 435) which appears to have been preserved in MS. Cairo, *Madīnāt*, 474, fol. 28b-36b. In the Cairo manuscript, the author is called Shams al-Dīn Muḥammad b. Muḥ. b. Muḥ. b. (Abī) Ḥ-luṭī, apparently either the father or the son, who died in 971/1564 and 993/1585, respectively (cf. Ibn al-ʿImād, *Shadhārāt*; Brockelmann, II, 567; S II, 594). The active literary interest in the subject continued into modern times (cf. M. al-Thirānī, *al-Zuhra* fī *Tarīkh al-Sā'il*, ii, 481).

**'AWĀLIK** [see 'AWĀLE].

**'AWĀMIR**, al- (sg. 'Āmir), a tribe of Bedouins and villagers in Southern and Eastern Arabia. The tribe is split into three main groups living in the following areas: (1) al-Raff between the southern edge of al-Rub' al-Khālī and Wādī Ḥudramūt, (2) southern al-Zafra between Katar and al-Buraṣmī, and (3) 'Uṣūn. The groups are completely separate and have little intercourse with each other, though they recognize their common kinship, and the two main divisions of the tribe, *Āl Badr* and *Āl Laza*, exist in all three groups. The southern group, whose range abuts on that of al-Say'ar at the well of Ṭamūd in the east, is mainly nomadic, though its members are not accustomed to pasturing their herds in the sands of al-Rub' al-Khālī, as is done by most of the Bedouin tribes in this region. The chief (*amīr*) of this group is Ibn al-Ṭabāzī of *Āl Badr*. Like most of the Arabs in this part of Arabia, the southern 'Awāmīr are *Shāfi'īs*. The central group consists entirely of nomads, who are among the hardest sand-dwellers of eastern al-Rub' al-Khālī, moving about so much that they have no claim to a range of their own. The shāikhly clan headed by Ibn al-Rakkādī of *Āl Badr* is said to have had an origin outside the tribe. Some of these 'Awāmīr are Hanbalis, the rest *Shāfi'īs*. The eastern group is found almost entirely in villages in the area between Wādī Ḥafin and Wādī 'Andām south of the Samā'ūd pass through the mountains of al-Ḥajar, with some offshoots in al-Bāṭina, al-Zāhira, and the vicinity of Muscat. There are two principal chiefs in this group, Ibn Khams of *Āl Badr* in Ka'fat al-'Awāmīr and Ibn Sulaymān of *Āl Laza* in al-Ḥumayk. As *Shāfi'īs* the eastern 'Awāmīr recognise the ḥādī Imam of 'Uṣūn and the temporal authority of his lieutenant in al-Sharḥiyya, Ṣāḥib b. 'Isā al-Ḥarīṭī. These 'Awāmīr have a tradition of having emigrated long ago from Najd, and their war-cry of *Yā awlād 'Amīr b. Sa'ya'a* indicates their claim to a descent from the famous tribe of ancient times (see 'Amīr b. Sa'ya'a). Certain smaller elements in Eastern Arabia such as *Āl Salm* and *Rayt Kay'āl* tend to associate themselves with the 'Awāmīr; in some cases this may be due to the attraction of a glorious name.

**Bibliography:** Arabian American Oil Co., *Oman and the Southern Shore of the Persian Gulf*, Cairo 1952; S. Miles, *The Countries and Tribes of the Persian Gulf*, London 1899; *Memorial of the Government of Saudi Arabia* (Bureau of Arbitration), 1955. (R. L. HEADLEY)

'AWĀNA B. AL-HAKAM AL-KALBĪ, Arabic historian, d. 127/764 or 133/770. His genealogy and descent are disputed. His father's name is given as al-Hakam b. 'Awāna b. 'Yūd b. Wizr (Yāhūt, vi, 93; cf. *Djama'at* (Levi-Provençal), 428, and *Fihrist* 134); Abū 'Ubayda, however, asserted that al-Hakam's father was a slave tailor (Yāhūt, *ibid.*, citing verses by Dhū 'l-Kumma, for which cf. Ibn Sallām, *Tabaḥḥiṭ* 134; cf. also Ibn al-ʿAṣbār, 482, and *Aschbi*, xvi, 121). Al-Hakam was the lieutenant of Asad al-Kaṣīr in Khurāsān in 109/727 (Tabarī, II, 250; Balādī, *Futūḥ*, 428) and later governor of Sind, where he founded al-Mahfūza and al-Manṣūra (Balādī, 444). According to Ibn al-Nadīm, 'Awāna was a blind Kufan narrator and scholar in poetry and genealogy, and compiled two historical works, on the life of Muḥammada and the Umayyads. The latter are known only from citations in later works; al-Tabarī quotes 'Awāna in 51 passages, all of which (except for one passage relating to 'Umar and another to the battle of the Camel) relate to events from Muḥawiya to 'Abd al-Malik; al-Balādī cites him frequently for the same events, and in *Futūḥ* adds further citations relating to the conquest of al-Firās, also to the conquest of Tabaristān under Sulaymān. He is thus one of the chief authorities for the early Umayyad period. He seldom cites his own sources, but shows some care in fixing the dates of events; his style is clear and lucid, and his narratives are often detailed. He is also interested in poetry and literary events (for which he is often cited in the *ʿAḥḥān* and in other literary works), as well as in social life and administration. Although he is charged with partiality towards the 'Uḡḡāniyya and the Umayyads (Yāhūt, vi, 94), the quotations from his works show little evidence of prejudice, whether for the Umayyads, or for Kufa, or for Kalb. They are transmitted chiefly through Ḥishām b. al-Kalbī, al-Madī'ī, and al-Haytham b. 'Adī, but occasionally also by other scholars; he is not, however, as asserted by one of Yāhūt's authorities, the source of most of al-Madī'ī's information.

**AWAR** [see AWAS].

'AWĀRID. A term used under the Ottoman régime down to the second quarter of the nineteenth century to denote contributions of various types exacted by the central government in the sultan's name, and hence often referred to as 'awārid *diwānīyya*. The Ottoman *fiṣṣa*-system dispensed the central government from the collection of revenues for the payment of the feudal militia and many officers and officials, while the institution of *waḥf* likewise relieved it of responsibility for the initiation and upkeep of public works of all kinds. But both deprived it of vast revenues, and those that remained to it, whose collection was sanctioned by the *sharīʿa*, often proved insufficient for its needs. At first only in emergencies, but later annually, therefore, it resorted to the exaction, by the sultan's 'awārid, or customary, authority, of money payments, of unpaid services, or of contributions in kind, either

from the generality of tax-payers, or from those of particular area; and it was to these demands that the term 'awārid was applied, apparently because the total exacted varied according to the government's need and was hence regarded as 'awārid, "accidental".

'Awārid were imposed, not directly on individuals, but on what were called 'awārid-*khān*s, which, however, were not actual "households", but rather "contribution units", so that a whole village or quarter of a town, for instance, might constitute no more than a fraction of one of them. Care was taken, when 'awārid were first imposed, or at least when their imposition was regularised, to ensure a just apportionment of the burden amongst all contributors according to their resources, and if for any reason those resources were impaired as time went by, the government's demands were adjusted accordingly.

It seems to be uncertain whether 'awārid were originally money payments on the one hand, or contributions in kind or by way of service on the other. Eventually, in any case, units that rendered services, or furnished supplies, were exempt from payments in cash ('awārid-*akḥḥ*), but the latter, when in any emergency it was decided how much money was needed, the total was apportioned amongst all the 'awārid-*khān*s concerned and the provincial *ḥāḥ*s were instructed to collect a similar sum from each. As for persons rendering services to the state on the 'awārid principle, typical of these were the *kurekchis* (oarsmen supplementing the war captives and criminals likewise employed in the imperial galleys), each of whom was supported during his term of service by contributions from the other members of his 'awārid-*khān*. Among supplies furnished as 'awārid were barley, straw and other provisions, together with carts and animals to transport them, for troops on campaign; timber, pitch, sailcloth, etc. for the admiralty; foodstuffs for the imperial kitchens; and cloth for the uniforms of the Janissaries.

Units that normally performed services or furnished supplies might be obliged, if they were unable, or were not required, to do so for any reason, to make cash payments to the treasury instead. The term applied to such payments was *bedel* (plural *bedelāt*) (see BADAL); they became more and more usual from early in the seventeenth century, by which date the exaction of 'awārid was no longer occasional; and that these *bedelāt* were distinguished from the 'awārid *akḥḥ* proper may indicate that 'awārid had been in origin cash exactions, from which units performing services or furnishing supplies were exempted by way of recompense, and that this exemption endowed those units with as it were an *oḡḡāḥ* status, which they preserved by paying *bedelāt* instead of reverting to the payment of 'awārid *akḥḥ*.

During the seventeenth and eighteenth centuries many fresh 'awārid contributions were exacted from tax-payers under a large variety of names; and since little care was by that time taken to ensure that the tax-payers could meet the demands made upon them, many found it hard to do so. It therefore became a practice amongst the charitable, when founding *waḥfs*, to devote all or part of the revenues so engaged to the assistance of such needy contributors; and the term 'awārid *waḥf* was used of such foundations. In course of time, however, the original object of such *waḥfs* would often be forgotten; and then the revenues in question would be devoted to

other needs of the village, or the quarter of the town, concerned.

AL-'AWĀSIM, name of a part of the frontier zone which extended between the Byzantine Empire and the Empire of the Caliphs in the North and North-East of Syria. The frontier strongholds of this zone are called al-'Uḡḡār (g.c.) or frontier strongholds properly so called, whilst those which were situated further to the rear, are called al-'Awāsim, literally "the protectresses" (sing. al-'awṣim).

Following their quick successes in Syria and Mesopotamia, the Arabs for a while made no attempt to extend their conquests and confined themselves to making raids into Byzantine territory, on the further side of the Amanus (al-Lukān, g.c.) and the Taurus. In the time of 'Umar and 'Uḡḡmān, the Muslim frontier strongholds were those which were later to be called al-'Awāsim, situated between Antioch and Manbij, whilst those which were more recently to bear the name al-'Uḡḡār (a kind of *no man's land*), in the vast region extending to the North of Antioch and Aleppo, up to Taurus and the Taurus, where the towns had been purposely depopulated by Heraclius when he withdrew from Syria, and where the Byzantines only left guard-posts (*masāḥik*) held by local irregular troops, the *Mar-dāḥīs*; they are perhaps to be identified with the [ḡarḡimig] who were sometimes on the Byzantine side and sometimes on the side of the Arabs, whom they also provided with *masāḥik* and spies. This region, periodically ravaged by Muslim incursions, was designated by the Arabs by the name al-'awāsim, the outside countries, the exterior zone, or *awāsim al-Rūm* (al-Tabarī, II, 1317; cf. Ibn al-ʿAṣbār, under 98), an expression still in use in 'Abbasid times by the poets Abū Tammām and Buḥārī. The Umayyads began to acquire a footing in this zone on the further side of Antioch and to occupy the main strategic points situated where roads intersected or at the entrance to the mountain passes. According to Theophanes (cf. Bonn, 555-6, A. M. 6178), the withdrawal of the Mar-dāḥīs, as a result of the treaty of Justinian II with 'Abd al-Malik, left this whole region undefended, and was subsequently disastrous for the Byzantine Empire.

The whole of this frontier zone in the beginning was dependent on the *ḡund* of Hims. But from the time of Yazīd b. Muḥawiya, it was detached and made into a special *ḡund*, that of Kinnasrīn. In 170/786, Ḥārīn al-Rashīd, with a view to ensuring the defence of the frontier region exposed to Byzantine attacks, rather than with any offensive objective, (for he also organised the advanced zone for defence), detached from the *ḡund* of Kinnasrīn a certain number of strongholds, Manbij, Dulūk, Raḥbān, Kūrus, Antioch, Tinn, which he called al-'Awāsim, because the Muslims protected themselves by them, and because they afforded them protection and defended them when they returned from their

expeditions and left the frontier (*ḡaḡḡ*) (al-Balādī, 440). Another definition is provided by Ibn Shaddād: "because the inhabitants of the frontier strongholds (*ahl al-ḡuḡḡ*) protected themselves by them when a danger threatened them from the enemy", and al-Kalkashandī gives another: "because they protected from the enemy the Muslim territory which was behind them (*dīnash*), for they bordered upon the country of the infidels". The same author thinks that the expressions al-'Uḡḡār and al-'Awāsim are different names applied to the same thing, which is certainly not correct, for they are both quite distinct and must have been so at an early period. But as, at the time of the creation of this province, which from 173 had the 'Abbasid 'Abd al-Malik b. Sulaymān as governor with residence at Manbij, the advanced strongholds were included in it, both expressions must have been used interchangeably (see al-Tabarī, II, 604; Ḥārīn al-Rashīd separated all the frontier strongholds of the ḡazira and Kinnasrīn, made them into a single territory and called them al-'awāsim).

'Awāsim and ḡuḡḡ are often united under a single command, at times with the *ḡund* of Kinnasrīn, at other times the ḡuḡḡ form a separate province. The geographers do not agree on the number of localities which form part of the 'Awāsim: Ibn Khurraḍḡibhīh also includes al-Djūma, Būḥā, Bālis and Ruḡāṭat Ḥishām; Ibn Hawkal: Bālis, Sandja, Samosate (Sumaysāt), Dīr Manbij, Ibn Shaddād also names Baghrīs, Darbasak, Artāb, Kaysum, Tall, Kabāba and Yāḡūr, other localities. In the 10th century, the capital of the 'Awāsim was Antioch.

The region of the 'Awāsim, like that of the ḡuḡḡ, was the scene of bloody wars between Byzantium and the Arabs; it was reconquered by Nicephorus Phocas, who obliged the emirate of Aleppo to cede him the whole western and northern part of the region. Thereafter, the word al-'Awāsim is simply a geographical expression, which continues to be used in the period of the Crusades and the Mamlūks by the Arab geographers.

We have only sparse information on the economic situation of this region, which seems to have been fairly prosperous in 'Abbasid times. The sum of the taxation of the *ḡund* of Kinnasrīn and the 'awāsim together was 400,000 dinars according to Ibn Khurraḍḡibhīh, and 360,000 according to Kudāma. The population was very mixed. It included, besides indigenous elements (Christians of the towns and settlements, [ḡarḡimig] of the Amanus) several elements which had emigrated or been transported thither: Arab tribes, especially Kaymites, who had established themselves there, the Kūḡāb extending up to Dulūk, foreign elements coming from India via Mesopotamia, such as the Sayāḡīḡa (g.c.), brought to the region of Antioch by Muḥawiya, and the Zozī (g.c.), also transported to the same region by Muḥawiya, then by al-Walīd b. 'Abd al-Malik. It is known that one of the reasons why the Zozī were settled in this country (as in Cilicia by Yazīd II and by al-Muḥāsīn), is that this tribe practised the breeding of water buffaloes, and the presence of buffaloes cleared marshy territories, such as those of the 'Amk (g.c.) of Antioch, or of Cilicia, of the lions which infested them (see al-Balādī, 162, 376; Wellhausen, *Das Arabische Reich*, 415; M. Hartmann, *Das Lateinische Reich*, 71).

(M. CANARD)

'AWĀZIM, AL- (sg. 'Āzim), a Bedouin tribe in North-eastern Arabia of reputedly ignoble origin, in that its descent is not regarded by other tribes as pure (qulū). Although Arabs of pure stock do not intermarry with the 'Awāzim, the tribe has earned their esteem for its desert lore and courage in battle, having been one of the most loyal and effective supporters of 'Abd al-'Azīz Āl Sa'ūd during his conflicts with other tribes in Eastern Arabia in 1333-48/1013-29. During this period the 'Awāzim broke away from their relationship as clients of the powerful tribe of the 'Dhūmal. The 'Awāzim range through the northern part of the Eastern Province of Saudi Arabia, mainly in the areas of al-Sūdā and al-Radī'if, and along the coast of Kuwait and in the Neutral Zone between the two countries. Although the Ruler of Kuwait has a number of 'Awāzim as personal retainers, the tribe is officially recognised as subject to the authority of Saudi Arabia. Its members are preponderantly Mālikīs. It has *hājras* at Thibāl, al-Hināh, and 'Uṣayyik. The chief of the tribe (1937) is 'Id ibn Dhiḥmā'.

(W. E. MULLIGAN)

AWDAGHOSH (or Awdaghoshī) African town, now no longer extant. According to Ibn Kh. it was situated between the country of the Blacks and Sijilmasa, at about 51 days' march from this oasis and 25 from Ghāna. Barth thinks that it must have been situated between long. 10°-11° W. and lat. 18°-19° N., not far from Ksar and Barka, that is to say to the South-West of the post of Tidjika in French Mauritania.

Little is known about this town, which seems to have been at the outset a trading colony established by the Zenaga (Sanhādja) on the Northern border of the Kingdom of Ghāna. At the end of the 4th/10th century, after the Zenaga had conquered a large part of the Kingdom of Ghāna, Awdaghosh became the capital of a powerful state. As its sovereignty, from 350-60/970-71, it had a Sanhādja, who numbered more than thirty black kings among his vassals and whose empire measured sixty days' march in length and breadth. In the following century, Awdaghosh was attacked by Ibn Yaṣīn, the founder of the Almoravid dynasty. The town was taken by assault, pillaged and its inhabitants massacred (446/1054-5). From that time onwards, the power of the Zenaga progressively declined; their kingdom was invaded

by the Sūdā, at the beginning of the 7th/13th century; they had to abandon it, or were reduced to the rôle of tributaries.

In al-Bakrī's time (5th/11th century), Awdaghosh was still a flourishing city. The population, quite considerable in numbers, was composed of Arabs from the Maghrib and Ifrikiya, Berbers (Berbadjima, Lawāḥ, and Nafāḥ), and the nomadically Natfawa, and doubtless also Blacks. The town, surrounded by a suburb of gardens and palm groves, contained mosques and schools, sumptuous public buildings, elegant houses and busy markets. An important trade flourished there in cereals and fruits from the Muslim lands, ambergris brought from the Atlantic coast, worked copper and gold (read; gold; dust served as money. Signs of decadence were already visible in the time of al-Idrīsī (6th/12th century). The population was very scanty, trade exiguous, and the inhabitants maintained themselves almost exclusively by camel breeding. Doubtless, Awdaghosh's disappearance coincided with the ultimate destruction of the power of the Zanāta.

'AWDHĀLĪ, (pl. 'Awādhilī, cf. 'Awdhilī, cf. al-'Awd (with *d* for *dh*) in al-Hamdanī, *passim*), dynastic title of (a) tribe, (b) district (ca. 500 sq. km., 10,000 inhabitants) in the Western Aden Protectorate. It lies between the Lower Yaḥdī (W), Fadlī (S) and 'Awladī (E) territories. In the N. beyond the "status quo line" of 1934, are the districts Dāhir (Dahr) (< Zāhir, cf. al-Hamdanī) and Rasāṣ (capital: Baydā' viz. Mawara). Part of Dāhir (with 'Aryab as its centre) and Daḥḥina (with Kulayta) have been incorporated into the 'Awdhilī district. Its N. part is dominated by the mighty mountain al-Kawr (Kōr), serving as a barrier between Sarw Himyar and Sarw Madhājī (al-Hamdanī 80, tr. Forrer 102; Kūr, with erroneous vocalisation); it is ca. 2,000 m. high. On the terraced hill-slopes and in the fertile plateaus round Mukayyas and Lōdar (N. respectively S. of al-Kawr) fruit and vegetables are grown for export. Honey is an essential product of the country, the climate of which is near tropical. The Sultan belongs to the 'Awadhilī, a branch of the old Haytham tribe, hence the dynastic name Ibn al-'Awadhilī. His residence is at Lōdar (also called al-Ghūdā). After family feuds at the turn of the century (Landberg, *Dafnā*, 1622) the political situation was stabilised; a treaty with the British was made in 1912 by Sūlīb b. Husayn Dībil. The population mostly consists of free tribes, who only obey the Sultan in case of war. In the border countries (especially Daḥḥina) the local *ghaydh* are almost independent. There is a *sharī'a*-court at Zāra, two self-supporting schools and two dispensaries in the district. At Lōdar and Mukayyas are landing-grounds for aircraft.

AWDĪ (see *AWDĪ*).

AWDĪLA. This name designates both an oasis and a group of three palm groves situated on the traditional caravan route, which in the South of Cyrenaica and between the 30th and 29th parallels, runs through the *Wādī* and *Djāzira* to Tripoli and Fezzān by Marada and the *Djāzira*. Awdīla has been known, since Herodotus (iv, 172, 182) and the classical authors, for its abundance of dates and as a halting place. Its rôle as a halting place seems to have been enhanced by the Arab conquest of the Maghrib. Ibn Hawkal (trans. de Slane, *JA*, 3d series, xiii, 163) describes it in the 4th/10th century as a small town recently attached to the province of Barka; likewise, 200 years later, al-Idrīsī (trans. Jaubert, i, 248); in the 5th/11th century, al-Bakrī (*Description de l'Afrique septentrionale*, trans. de Slane, 32) speaks of it as an important centre with several mosques and bazaars; he notes that Awdīla is the name of the district, that of the town being *Ardyā*. In the 10th/16th century, grain was imported from Egypt (Leo Africanus, *Description de l'Afrique*, trans. Épaulard, 436-4). Awdīla was occupied by the Turks in 1640. It has been visited and described by the travellers Hornemann (1798), Hamilton (1852), Beumann (1862) and Rohlf (1869 and 1879) (see the bibliography). The development, from the middle of the 19th century, of the trans-Saharan Sahel order has kept Europeans away, except Rosita Forbes and Hansen-Bey (1920). It has only been studied during the Italian occupation (1928-1943), in particular by the geographer Scarin. Since then, it has formed part of the Kingdom of Libya.

The name Awdīla only designates the most westerly oasis whilst that of *Djālo* (which is applied to El-Erg and El-Leḥbe, 30 km. to the S.E.) has imposed itself on a whole area, which also includes the mediocre palm grove of *Djākera* (or *Leḥkerreḥ*), 30 km. to the North. The three oases, which are situated in slight depressions with scanty pastures in the middle of a vast desolate plain of sand and gravel (*serir*), have a continental and very arid climate, with little wind; the annual rainfall between 1911 and 1940 was 11 mm. 7.

Water, which is not far below the surface and is fairly copious, is obtained by draw-wells (worked by donkeys) and from wells functioning with balance-beams. It is used primarily to water the palms, occasional pomegranate and fig trees, little patches of cereals, lucerne and vegetables. Stock-breeding is very poor and trade dwindling, even at *Djālo*, which for a century has taken Awdīla's place in the caravan trade with the Sudan and Egypt. This economic and demographic decline, due to emigration, was halted by the Italians, who established their residence at El-Erg (*Djālo*) and joined the oases to Ajdābiya by a track extending for 270 km. (and from there a road, 190 km. long, goes to Benghazi). Awdīla itself, very much in decay, possessed in 1934 18,000 palm trees, 270 gardens, and 1,500 inhabitants, who have remained Berber-speaking and are grouped in four divisions, living in four adjoining wards: Es-Sobka, Es-Saraha, El-Hati and Es-Zagana—plus a small group of Maghābra, Arabic-speaking, living dispersed in the palm grove. *Djālo*, which has not declined to the same extent, has 50,000 palm trees, 123 gardens and 2,700 inhabitants divided up into 14 "families". They are distributed between two villages, one of which, El-Erg, is rather dispersed, whilst the other, El-Leḥbe, is more con-

centrated, and in a number of dwellings scattered throughout the oasis. These are the Maghābra most of whom are former nomads who have become arabised and who have a taste for trade. *Djākera* is simply a palm grove (13,000 palm trees) and not systematically irrigated; it is inhabited only by a few very poor families (400 inhabitants) and visited for the date harvest by the *Zāya* nomads of the Oaḥī Fāreg region to the North-West. The houses of these settlements, built of large unbaked bricks and more rarely of loose stones, have no upper storeys, and are strung out along twisting lanes and blind alleys. The dwellings, located apart in the gardens, often inhabited by former slaves, are usually palm huts (*serir*). The mosques, very rustic in character, have multiplied under the influence of the Sanusiyye; those of Awdīla generally have several domes; the mosque of *Djākera* is made of palm trees, including the minaret.

Scarin, *Le oasi crenache del 29° parallelo*, Florence 1937. No complete study has yet been devoted to the Berber spoken at Awdīla. For fragmentary studies in this dialect see: A. Basset, *La langue Berbere*, in *Handbook of African Languages*, Oxford 1952, 69-70.

(J. DOREN)

AWFĀT (or WAFĀT; in the Ethiopian chronicles *Idrā*), an Ethiopian Muslim state (1285-1415) situated in the plateau region of Eastern Shoa, including the slopes down to the valley of the Hawṣh. At the end of the 7th/13th century a number of Muslim states existed in eastern Shoa; the predominant one (whose Malghudī dynasty had been founded according to tradition in 283/896) shown in a document recently discovered by E. Cerulli to be in the last stages of disruption, was conquered in 684/1285 by the ruler of one of its tributaries, whose dynastic title was Walasma'. He conducted campaigns to reduce various Shoa and 'Alfar regions, including the nomad state of Adāl. The reconstituted state, under the name of Awfāt, is first mentioned by Ibn Sa'ūd, who says that the region was also known as *Djabara* (*Djabarta*). Awfāt seems to have been alternately tributary to the powerful pagan kingdom of Dāmo, to the Christian kingdom of Abyssinia, and at times independent. The northernmost of a number of Muslim states (Hadya, Fatagār, etc.), it became the buffer-state against the advance of the Abyssinian power southwards. Hakk al-Dīn, warring against 'Amḍa Syōn, was overwhelmed in 1328 and Awfāt made tributary to Abyssinia. Al-'Umarī's important account of Awfāt at this time shows that its territory extended eastwards to include Zayla'. Continually in revolt against Abyssinia, its last attempt to regain independence was under Sa'ūd al-Dīn, with whose defeat and death in 877/1473 the kingdom came to an end and its original territory was annexed to Abyssinia. When the Walasma', after brief exile in Yaman, returned to

Africa they formed a new state out of their former provinces of Adal-Zayla', and took the title of kings of Adal or Zayla' [qq.v.] with their capital at Dakar and later Harar [qq.v.].

**'AWFI**, MUHAMMAD B. MUH., SA'DID AL-DIN (wrongly called Nūr al-Din) Bughāt, renowned Persian anthologist. 'Awfi traced his descent from 'Abd al-Rahmān b. 'Awfi, a companion of the Prophet, from whom he derived his surname. He came from a learned family of Transoxiana, and was probably born somewhere educated at Bughāt. The exact date of his birth is not known. In 597/1204 he went to Samarkand to serve at the court of Ilak Khān Sultān Djalāl al-Din Ibrāhīm b. al-Husayn Tughlugh Khān of Samarkand where his maternal uncle Shāraf al-Zamīn Majd al-Din Muhammad b. 'Adnān al-Surghakātī was serving as a court-physician. In 600/1205, when the tension between the Ghūrīd Sultan al-Mu'izz al-Din or Shāhshāh al-Din Ghūrī and Sultān 'Alā' al-Din Muhammad Khān Aramghah had become acute, he went to Khān Aram. Soon afterwards he went to Shāh-i Naw and Nasā, and attended some of the meetings of Shāhshāh Majd al-Din Shāraf Ibn al-Mu'ayyid al-Bughātī. Then he started on his literary tour of Khurāsān and was in Nishāpūr in 603/1206, where he stayed for a considerable period and made the acquaintance of various eminent persons. From there he went to Harāt and remained in Sijstān till 612/1215. It appears that he returned to Bughāt, journeyed through Khurāsān and Ghazna, crossed the river Indus, and, passing through Sind and Gujrat came for the first time to Lahore to seek the patronage of the sultān 'Ayn al-Mulk Fakhr al-Din al-Husayn at the Court of Malik Nāsir al-Din Kabāka, to whom he dedicated his famous anthology, the *Lubāb al-Ahbar* in 617/1220. He served for a time as *hādī* in Kanbāyat or Cambay, where he completed his Persian translation of al-Tanūkhī's *al-Faraj ba'd al-Shidda* in 620/1223. This period coincides with the attack of the Mongols on Khān Aram and their advance towards Multān and Delhi, when Shams al-Din Iltutmish besieged the fort of Bhakkar and overthrew Kabāka in 625/1228. 'Awfi changed masters and attached himself to the court of Iltutmish, to whose sultān Nūr al-Mulk Muhammad the Abī Sa'd al-Dīnawaydī he dedicated his famous collection of anecdotes, the *Dīwānī al-Rihāyat wa-Ladīmī al-Rihāyat* in 625/1228. It appears that 'Awfi lived in Delhi till 630/1232, in the early years of Rādhīyā's reign.

The *Lubāb* occupies an honourable place among Persian anthologies, but 'Awfi's *magnum opus* is the *Dīwānī* which contains more than 2000 historical and literary anecdotes relating to various dynasties that ruled in Persia before the Mongol invasion. Much of the material for this book is drawn from rare or lost works, hence its importance as

an original source. A comprehensive *Introduction* to this work was published in the Gibb Memorial Series in 1929. The Persian text, based on the earliest MSS., is ready for press, and the first volume is to appear shortly.

**Bibliography:** 'Awfi, *Lubāb*; Muhammad Nizāmī-Din, *Introduction to the Tanāmī al-Hikāyat*, London 1909; Storey, *J.*, 781-4.

(M. NIZAMUDDIN)

**AL-AWHAD** [see AVYDIBIS].

**AWHADĪ**, RUKN AL-DIN, Persian poet, born c. 680/1281-2 at Marāgha in Agharbadjān. The fact that he lived for many years in Isfahān has led the author of the *Haft Ihlām* to state that he was a native of that city. Little is known about his life, but there is scarcely any doubt that he died in 738/1337-8. He was buried at his birthplace where his tombstone is still to be seen.

Awhadī, who took his *fakhriyāt* from the name of

his master, Shaykh Awhad al-Din of Kirmān, was the author of a *divān* which amounts to about ten thousand verses. Some of these are eulogies of his patrons, Abū Sa'īd, the Tighān, and his vizier, Ghayyāh al-Din Muhammad, son of Rāghī al-Din Faḍl Allāh. In one of his poems he attacks the pretensions of a contemporary poet, Salmān of Sāva.

As a poet, Awhadī displays little originality. He is reckoned by most Persian critics as second-rate in view of some weakness which is to be found in his poetic diction. Moreover, the greater part of his verse, although not without some grace, is often laboured and lacks that subtle light and shade in bringing his ideas before the reader which is characteristic of the best Persian poetry.

Awhadī's best work is to be found in his two *mathnawī* poems, the earlier of which is entitled *Dah-nāma* or, as it is called in some MSS., *Manṭiq al-'Udhūd*. This consists of ten letters addressed by an imaginary lover to his mistress and is not of outstanding poetic merit. It was dedicated to Wajih al-Din, grandson of Nāsir al-Din of Tūs, in 705/1306-7. The other *mathnawī*, the *Dīwānī Dīam* (the goblet of Dīamghid), is longer and far better known. It displays a more fully developed talent, and when it was first composed, achieved a great measure of popularity. Like the *Hadīyat al-Habiba* of Sanā'ī, it covers the whole field of ethics, with advice on moral discipline, the upbringing of children, civic responsibilities and so forth; but the last part changes its theme and deals with the Shī'ī Path and all that appertains to it. The *Dīwānī Dīam* was written in 735/1332-3 and was dedicated to Ghayyāh al-Din Muhammad.

**Bibliography:** Dawlatiāh 210 f.; Browne, iii, 141-6; Rthé in the *G.P.P.*, II, 299. Edition of the *Dīwānī Dīam*, Tehran, 1347/1928-9, and of the *Dīwān* by A. S. Usha, Madras 1951.

(G. MEREDITH-OWENS)

**AWKĀF** [see WAKF].

**'AWL** (A., literally "deviation by excess"), the method of increasing the common denominator of the fractional shares in an inheritance, if their sum would amount to more than one unit. This has, of course, the effect of reducing each individual share. For instance, a man dies leaving a widow, two daughters and both parents. The share of two daughters would be  $\frac{1}{2}$  =  $\frac{2}{4}$ , that of the widow  $\frac{1}{4}$  =  $\frac{1}{4}$ , that of the father  $\frac{1}{2}$  =  $\frac{2}{4}$ , and that of the mother  $\frac{1}{4}$  =  $\frac{1}{4}$ , total  $\frac{5}{4}$ . The denominator is therefore increased to 27, and the two daughters receive  $\frac{1}{18}$ , the widow  $\frac{1}{27}$ , and the

father and the mother each  $\frac{1}{18}$ . This particular problem is called *al-mas'ala al-minbariyya*, because 'All is reported to have solved it off-hand when it was submitted to him, whilst he was on the minbar. The 'awl is accepted by all the Sunnī schools of Islamic law. The Ḥādī, too, recognise it, but they ascribe its introduction to 'Umar. The *Ighnā'* 'aḥariyya or 'Twelve' Shī'ites, on the other hand, reject it and reduce the share of the daughter (or daughters) or that of the full or consanguine (but not of the uterine) sister (or sisters) instead.

(Ed.)

**AWLĀD** [followed by the name of the eponymous ancestor of a tribe, see under the name of that ancestor].

**AWLĀD AL-BALAD** was the term used during the Sudanese Mahdiyya (1881-98) to designate persons originating from the northern riverain tribes, of which the Danākila group and *Dīa'*shayn were the most important. Many *awlād al-balad* were domiciled, temporarily or permanently, away from their tribal centres by the main Nile. The Danākila were boatbuilders and sailors, especially on the White Nile, while both they and the *Dīa'*shayn played an important rôle as merchants and slave-traders in Kordufān, the Baḥr al-Ghazāl and Dār Fūr. The Mahdī Muhammad Ahmad found much support among the *awlād al-balad*, particularly those dispersed in the west and south. In general they formed the ruling class under him. After his death in June 1885, they were gradually displaced from the chief offices by his successor, the Khalifa 'Abd Allāh, but clerical and other subordinate posts were largely filled by *awlād al-balad* until the end of the Mahdiyya. Chief among the *awlād al-balad* were the *Aghrīf*, relatives of the Mahdī, whose nominal leader was the Khalifa Muhammad Sharīf. In 1886 the group attempted to overthrow 'Abd Allāh and failed. The *awlād al-balad* were seriously weakened by the defeat of the Mahdī invasion of Egypt at Tūghlūq in 1889, since they had formed the bulk of the expeditionary force and large numbers perished, including their leading general 'Abd al-Rahmān al-Nuḍūmī. A rising of the *Aghrīf* and Danākila in Omdurman in 1891 was foiled by 'Abd Allāh and was followed by repressive measures. In 1897 the *Dīa'*shayn of al-Matamma under their chief, 'Abd Allāh Sa'd, revolted and communicated with the Anglo-Egyptian forces under Kitchener. A Mahdī army under Mahmūd Ahmad put down the rebellion and sacked the town.

**Bibliography:** Special allusion to the term is made by F. R. Wingate (J. Overwaller, *Ten years captivity in the Mahdī's camp*, London 1892, many ed.).

(P. M. HOLT)

**AWLĀD AL-NĀS**. The mamlūk upper class constituted an exclusive society. Only a person who himself was born an infidel and brought as a child-

slave from abroad, who was converted to Islam and set free after completing his military training and who usually bore a non-Arab name, could belong to that society. These rules implied that the mamlūk upper class should be a non-hereditary nobility, for the sons of the mamlūks and mamlūk amirs were Muslims and free men by birth, were born and grew within the boundaries of the mamlūk sultanate and bore Arab names. As such they could not belong to the upper class and were automatically ejected from it. They were joined to a unit of non-mamlūks called the *halqa* [q.v.] which was socially inferior to the pure mamlūk units. Within the *halqa* the sons of amirs and mamlūks formed the upper stratum. They were known as *awlād al-Nās* 'children of the people', i.e. 'of the best people, of the gentry', for the 'people' were the mamlūks, the members of the exclusive society.

The *awlād al-Nās*, but for quite a small number of exceptions, attained no higher rank than that of Amir of Ten and Amir of Forty. Occasionally the *awlād al-Nās* were favoured for political reasons. Thus sultan al-Nāsir Hasan (748/1347-758/1354) preferred amirs from *awlād al-Nās* to mamlūk amirs. The privileged position of the *awlād al-Nās* under sultan Hasan was, however, exceptional, and contrasted sharply with their status under other rulers. Since theirs was an element which, by its very nature, was excluded from the ranks of the mamlūks, their chances for advancement and for attaining key positions were seriously limited. In the course of time they declined together with the *halqa*, and saw the same restrictions applied to them as to the rest of that body, viz. reductions in pay, sale of their fields, exemptions from military expeditions in exchange for cash payments (*badī*), tests in the use of the bow and arrow designed to prove that they were badly trained and thus not entitled to all the privileges of full-fledged soldiers. Toward the end of the mamlūk era, the name *halqa* fell into disuse, while that of the *awlād al-Nās* became extremely common.

There was, both among the *awlād al-Nās* and the other members of the *halqa*, a strong leaning toward piety and pre-occupation with other-worldly affairs. Many of them left the military service and became theologians or *fakhs*. (See D. Ayalon, *Studies on the Structure of the Mamlūk Army*, in *BSOAS*, 1953, 456-58 and references on p. 456, n. 1).

(D. AYALON)

**AWLĀD AL-SHAYKH** (Banū Hamawīya) were originally an Iranian family of *shāhs* and *shāhī* *fakhs*, a branch of whom emigrated to Syria and became influential under the later Ayyūbid kings, al-Malik al-Kāmil (615-35/1218-38) and his sons. The member of the clan earliest known, Abū 'Abd Allāh Muhammad b. Hamawīya (Pers. form Hamawayh) al-Dīwāny, died in 530/1135-6, was a celebrated *shāhī* *fakh* and author of several works on mysticism (al-Sam'ānī; Ibn al-Aḥlī, xi, 39; Abū 'l-Faraj Ibn al-Djāwī, *al-Muntazam*, Haydarābād, x, 63-4; Yāqūt, ii, 425; Haḍḍīdī Khālīf, ed. Flügél, ii, 612, no. 7231). His grandson 'Imād al-Din Abū 'l-Fath 'Umar b. 'Alī, died 577/1181, went to Damascus, and in 563/1167 Nūr al-Dīn, 541-69/1167-74, appointed him inspector of all the *ahd* institutions at Damascus, Hama, Hama, Barṣabak and other places in Syria. Hence he became the ancestor of the Syrian and Egyptian division of the family; but the connexions with the Iranian branch were maintained (Sibt Ibn al-Djāwī, *Mir'at al-Zamān*, Haydarābād, 272). Of these his brother

'Abd al-Wāhid (died 588/1192; Ibn al-Furāt, *cod. Fird.* iv, 146a), and his grand-nephew Sa'd al-Dīn Muhammad (died 636/1254; *ET* ii, 260 & IV, 33; Sibṭ Ibn al-Jawzī, 651) are the best known.—'Imād al-Dīn 'Umar had two sons: *Shaykh* al-*ghayy*h Sadr al-Dīn Abū Ḥasan Muhammad (545-617/1148-1202), was born in Khurāsān, came with his father to Damascus and became his successor. He married the daughter of the famous *Kādi* Ibn Abī 'Aṣrīn (died 585/1189; Ibn Khalkālin, no. 334; transl. de Slane ii, 32-5) by whom he had four sons, famous as a friend (Baṣṣ) *shaykh* al-*ghayy*h. Sadr al-Dīn, a twiend of Sultān al-Malik al-'Adil, 595-625/1198-1218, later went to Egypt, where he was invested with the same offices as he had held at Damascus. He died at Mawṣil on the way to Baghdad as an ambassador of al-Malik al-Kāmil.—His younger brother *Tājī* al-Dīn Abū Muhammad 'Abd Allāh, 572-642/1177-1244, went in 593/1196 to the Maghrib and served under the Almohad sultans al-Manṣūr Ya'qūb (580-95/1184-98) and al-Nāṣir Muhammad (595-610/1198-1213) for seven years in a military capacity. After his return he settled down at Damascus and followed his father and brother as an inspector of the *ḥāḥ* institutions of the Syrian capital. He wrote several works on history, only the titles of which have survived; Ibn Khalkālin saw the autograph of one of his books about Spain at Damascus in the year 668/1269 (Ibn Khalkālin, no. 839, transl. de Slane, iv, 337).—The fame of the family rests upon the four sons of Sadr al-Dīn, especially on *Fakhr* al-Dīn Yūsuf, born about 560/1164, who entered upon a political career, and al-Kāmil sent him in 612/1217 as his envoy to the caliph. He gained his reputation as a skilled diplomat, being al-Kāmil's ambassador to the Hohenstaufen emperor Frederick II from 624/1229 until the conclusion of the treaty concerning Jerusalem, February 18th, 1229. During this period he became the friend of the emperor who discussed with him even very political problems and wrote him two letters after his return to Italy (Ibn Naḍī al-Hamawī, *Tarīkh al-Manṣūrī*, M. Anwar, *Bibl. Sic. App.* ii, 25). *Fakhr* al-Dīn Yūsuf held several high posts during the latter part of the reign of al-Kāmil and was a member of the council at Damascus after the king's death in Rājab 635/Feb.-March 1238. After his return to Cairo al-'Adil II b. al-Kāmil (635-7/1238-40) dismissed him despite his good services and even threw him into prison. He remained out of office until 642/1246, when al-'Adil's successor and brother al-Sāliḥ Naḍīm al-Dīn Ayyūb b. al-Kāmil (637-47/1240-9) restored him to all his former honours and appointed him commander-in-chief of the Egyptian army. When in 1249 Louis IX of France threatened to attack Egypt, *Fakhr* al-Dīn Yūsuf was entrusted with her defence, but after the Frankish invasion of the Nile Delta he sacrificed Damietta and retreated with his army southwards to al-Manṣūra. When al-Sāliḥ died shortly afterwards (Monday 14th Shā'abān 647/22th Nov. 1249) the sultana Shūjā' al-Durr made *Fakhr* al-Dīn regent in the absence of the new sultān al-Mu'azzam Tūrghān b. Naḍīm al-Dīn Ayyūb. In the meantime the crusaders slowly advanced towards the Nile and entered the city. In the fighting *Fakhr* al-Dīn was killed on Thursday 4th Dhū Ḥiḥ 647/8th Feb. 1250.—The three brothers of *Fakhr* al-Dīn, 'Imād al-Dīn 'Umar, Kāmil al-Dīn Ahmad and Mu'īn al-Dīn Hasan started their political activities only in the latter part of al-Kāmil's reign having been before

engaged in the teaching of the Shāfi'i madhhab at Cairo. They, too, belonged to the crown circle after al-Kāmil's death at Damascus and thanks to the influence of 'Imād al-Dīn 'Umar the nephew of the late sultān, al-Djāwād Yūsuf b. Mawḍūd b. al-'Adil, died 641/1243 was elected vice-regent of Damascus. When he conspired against al-'Adil II, the sultān sent 'Imād al-Dīn back to Damascus in order to force the abdication of al-Djāwād. But al-Djāwād had him arrested soon after his arrival and murdered on Thursday, 26th Jumādā al-awwal 641/January 1249.—Kāmil al-Dīn Ahmad, the least famous of the four brothers, was appointed by al-Sāliḥ in 637/1240 as an ambassador to negotiate a peace-treaty with Count Theobald of Jaffa and the king of Navarre, and afterwards commander-in-chief of an army to regain Damascus. But Kāmil al-Dīn was defeated by al-Djāwād and al-Nāṣir Dāwūd b. al-Mu'azzam (died 656/1258) in Dhū Ḥiḥ 638/May-June 1241, and taken prisoner. He died a year later on 13th Šafar 640/22th Aug. 1242 at Hama.—The youngest brother Mu'īn al-Dīn Hasan was appointed *waṣī* by al-Sāliḥ in 637/1240 and four years later became his representative and commander-in-chief in the campaign for the reconquest of Damascus. The siege began at the end of 642/May 1245, and six months later Mu'īn al-Dīn forced 'Imād al-Dīn to return to the city, which he had held since 637/1239, in Syria for Bal'abak, Boṣra and some other places. Mu'īn al-Dīn survived his triumph for only a few months and died of typhoid on Monday 24th Ramaḍān 643/12th Feb. 1246.

Of the two sons of *Tājī* al-Dīn Muhammad the elder Sa'd al-Dīn Khidr, 592-674/1196-1246, is known as the author of a small chronicle from which Sibṭ Ibn al-Jawzī and al-Dhahabī drew most of their information about the Baṣṣ *shaykh* al-*ghayy*h.

'AWLAKI (pl. 'AWALIK, vulg. Mawālek; for the etymology, see Landberg, ii, 184 f.) (a) tribal confederation and (b) territory in south Arabia, between the Indian Ocean and the desert (Rumail Sahāyān). It is the easternmost district of the Western Aden Protectorate. The boundaries are in the W the Fadl, 'Awdhāl and Bayḥān districts, in the E the Dīḥī territory of 'Iṣṣa, the Wāḥidī sultanate of Bal-Hā and the indeterminate area of Djerdan, 'Iṣṣa ('Urma) with Shabwa, and Al Burayk. This country is divided by Kawa al-'Awd (the continuation of Kawa 'Awdhāl) into two halves of very different character.

1. Upper 'Awlāki territory (ca. 100,000 sq.km., 120,000 inhabitants) is by far the richest and most powerful. The climate is tropical, the fertile ground produces wheat, maize, tobacco and indigo. Arḍ al-Mahāḡir in the N belongs to this tribal confederation (cf. al-Hamdānī, 89) which comprises the subtribes Marāḡī, Rabīḡ, Hamūmū, Dārīyān and Dabkīrī. They inhabit the district round Anabī (Nāḡīb), where the Sultan of Upper 'Awlāki has his residence.

He also controls the wide plateau Arḍ Marīḡha, where Nisāyīn bedouins live in Wāṣī, Haḡḡar and Hudayr. The main *wadī* are: 'Abadān, Durā, Kāwra, Marīḡha. In the NW, not far from Bayḥān al-Kāḡh, are rich salt-mines at Khāḡh. The other great tribal federation, the Ma'īn or Ma'ān (cf. Ma'īn, Ma'ān "Minaeans"), is grouped round the old town (Sūḡ) Yeghbum, in the SE part of the territory. Here resides the second chieftain, the *shaykh* of Upper 'Awlāki, who like the Sultan always is chosen from the Ma'īn. Their sub-tribes are: Maḡhīb, Bū Bekr, Bū Kās, Kās, Sulaymān, Tawālā, Mikrāba and Thawbūn. For the most part these tribes are independent *ḥāḡīb*, they are fond of fighting and often enlist for service abroad. Treaties with the British were signed in 1903 by the *shaykh* of Yeghbum, Muḡsib b. Farīd, and in 1904 by the Sultan of Anabī, 'Awād b. Sūḡh. There is an aerodrome at Anabī.

2. Lower 'Awlāki territory (ca. 80,000 sq.km., 12-15,000 inhabitants) is for the most part arid and barren; there is seldom rain enough in the mountains to make the *wādī* flow. The most important valley-system is that of W. Ahwar (also called 'Uḡrūb), formed by the junction of W. Dīḡār, coming from Daḡlusa, and W. Dēḡa (Laika), which starts S of Ḥabbān (q.v.) and passes through the highlands of Marīḡha. Here live the clans (ḥawāḡīb) of the Kumḡh in W. Labākha and Abī Shām'a in Maḡhīb S of Yeghbum; they exercise a certain authority over the primitive bedouins of the tribe Bū Kāzīm, who are scattered all over the W and S parts of the territory. Other towns in W. Dēḡa are: Khār, Shadīma and Kulūyā. On the coast are small villages, inhabited by fishermen. The Sultan resides at Ahwar (Hawar), ca. 5 km. from the coast and a little E of the wādī. Just as Ahyan and Lahḡī, Ahwar properly denotes the district, then its centre, al-Maḡhīb (acc. to Landberg II, 273, 326, 1834), which is a series of villages rather than a town. The population (ca. 5,000) is chiefly agricultural. A treaty with the British of 1888 was renewed in 1944 by S. 'Aydārī b. 'Aḡh (murdered in 1948). The adviser agreement has resulted in better security and a revival of agriculture and trade. There is an aerodrome and a wireless station. One sub-grade and one indigenous school are reported in the district.

AWLIYĀTA (T., "holy father") is the old name of the city called since 1938 Džambul after the Kazakh poet Džambul Džabaev (1846-1945), which lies on the left bank of the Tālās in the Kazakh SSR. Until 1917 it was the capital of the district of the Sīr Daryā in Russian Turkestan and obtained its name from the grave of the holy man Kāḡh Rihān, which is mentioned as early as the 17th century, see Maḡmūd b. Walī, *Dār al-'Aḡar*, MS India Office 545, fol. 119r. Its mausoleum dates from the 19th century and bears no inscription. On the other hand the grave of the "little holy one" (*Kiḡh Awliyā*) there is an inscription of 660/1262; the grave is that of the prince Ulugh Būḡe Khān

Khān Dā'ūd Beg b. Ilyās. (The inscription is published in *Zap. Vost. Otd. Imp. Russk. Arkheol. Ob.* xii, V.).—The city of Awliyā Ata which came into being only in the 19th century, was conquered by the Russians in 1864, became a fortress, and contained, in 1897, 12,000 inhabitants; it was famous for its fruit growing and its cattle and wool trade. In the surrounding district of Awliyā Ata (71,097 sq.km., with 297,004 inhabitants) ancient Turkish inscriptions were found in 1896 (*Zap. etc.*, xi).

The present day city of Džambul lies on the Turkish line just north of the frontier of the Kirgiz SSR, and contained in 1926 19,000 and by 1939 as many as 62,700 inhabitants. It possesses a sugar, a meat processing, and other factories, and is besides a centre of trade. The district of Džambul (since 1936) contains 138,600 sq.km. and is mountainous in the south; in the north there lies the Bad Pak Dala steppe.

Close to Awliyā Ata—Džambul lay evidently the city of Tarāz (q.v.), which may be regarded as its precursor.

AWLONYA, Alb. Vlora, Valona, town in southern Albania. (See ARBANTURIL) Awlonya, usually called Valona, is today a town of about 10,000 inhabitants. It lies in the bay of the same name, and is some 2½ m. (4 km.) inland from the harbour. It played an important part in antiquity as Aulon (hence Avlona). Concerning its history in the Middle Ages, cf. Konst. Jireček, *Valona im Mittelalter*, in: Ludwig v. Thallwitz, *Historisch-ethnographische Forschungen*, i, Munich and Leipzig 1916, 168-87. In June 1417, the Ottoman armies entered the area of Valona, and occupied the town, together with the fortress of Kanina and Berat. The general Hamza-Beg became commander-in-chief of Awlonya, and the Ottomans—who had never before possessed an Adriatic port—soon began to build ships there. In 1418, there was a vain attempt by the seignior of Venice to regain Awlonya for its former owner Ragina (the widow of Duke Mriksa), a citizen of Venice. Awlonya remained Ottoman property, admitted Christians as farmers of taxes, and was governed by a Sanjak-Bey; it was an important bulwark against the West. As late as the 14th century, the inhabitants (apart from Albanians and Slavs) were mostly Greeks, and denominationally belonged to the autocephalous archbishopric of Ohrid up to the 18th century. Awlonya was used twice during the 15th century by the sultan Mehmed II as a base for a raid on Apulia, Italian territory only 47 m. (75 km.) away. (Otranto, cf. F. Babinger, *Mehmed II. der Eroberer und seine Zeit*, Munich 1933, 439 ff. and Ital. transl., *Muhammed II il Conquistatore, ed il suo tempo*, Turin 1936, 370 ff.). As governors, Valona had frequently capable civil servants who were devoted to the sultan, as for instance Gedik Ahmed Paḡha, who maintained this as a base for ambassadors and emissaries sent to Italy. In the nearby fortress of Kanina, there were the Vlora, who had been there

since the time of Bayezid II and were related to him by marriage (cf. Ekrem Bey Vlorë, *Aus Herat und vom Tumor*, Sarajevo 1911, *Zur Kunde der Balkanhalbinsel*, No. 13) and who traced their origin back to Ghāzī Sulaymān Rāgha (cf. P. Babinger, *Römische Streifen*, Berlin 1935, 24 f.). In the 17th century, the fortress of Awlonya was surrounded by high and thick walls with many bastions. Within the fortress, there was a mosque endowed by Sulaymān the Magnificent, and in the middle there was a tower—identical with the white tower of Salonica—built for the same sultan, supposedly by the Ottoman architect Sinan. There is a clear description by Ewliya Çelebi of the Awlonya of his day (cf. the German translation by F. Babinger, *Römische Streifen*, 25 f.). The order of the *Dakka* appears to have been very active around Valona. After 400 years of Turkish rule, Albanian independence was declared in Awlonya in 1912, and it seceded from the Ottoman Empire. From 1914 to 1920, the town was occupied by the Italians, and during the First World War it formed an important base for military operations in the Balkans. By the Treaty of Rapallo, this bridge-head on the Adriatic and barrier in the Straits of Otranto had to be returned to Albania—with the exception of the island of Saseno. From April 1939 to autumn 1943 Awlonya, together with the rest of Albania, was once again in the hands of the Italians.

**Bibliography:** Apart from works mentioned in the text of the article, cf. the travels of Pouqueville, W. M. Leake, Lord Holland, L. Heuzey, G. Weigand, C. Patich, which give a description of old Awlonya. (F. BARTSCHKE)

**AWNI** [see MUHAMMAD II].

**AWRANGĀBĀD**, a town and district in the state of Bombay having in 1951 a population of 1,179,404. During the reign of 'Alī al-Dīn Shāhī the Hindu rulers of this part of the Deccan were forced to pay tribute to the Muslim invaders. In 1547 it was incorporated in the Bahmani kingdom and with the disintegration of that kingdom became part of the Nizām Shāhī sultanate of Ahmadnagar. Under Malik 'Ambar, an able Abyssinian minister, Ahmadnagar offered a stubborn resistance to the Mughal invaders, but, after his death in 1626, was annexed to the Mughal empire. During the decline of Mughal power in the first half of the eighteenth century AWRANGĀBĀD was added to the dominions of the Nizām of Hyderabad. In 1956 it was incorporated in the state of Bombay.

The town of AWRANGĀBĀD, previously named Khirdi, was the capital of the Ahmadnagar sultanate in the days of Malik 'Ambar. It was burned to the ground by Mughal forces in 1612, but was rebuilt and renamed AWRANGĀBĀD in honour of AWRANGZIB, who lived there during his second viceroyalty of the Deccan. The neighbouring village of Khuldābād contains the tombs of Malik 'Ambar, AWRANGZIB, and Āṣaf Dīsh, the founder of the Hyderabad state. It was once famous for its gold brocade, but this and other industries have declined.

There is another small town of the same name in the Gāyā district of Bihar.

(C. COLLIN DAVIES)

**AWRANGĀBĀD SAYYID**, a small town in the Bulandshahr district of Uttar Pradesh, founded in 1704 by Sayyid 'Abd al-'Azīz, a descendant of Sayyid Djalāl al-Buṣayn of Bulghār.

(C. COLLIN DAVIES)

**AWRANGZIB**, ARU'U-ṬIẒAFAR MUHAMMAD MUḤYI 'L-DIN AWRANGZIB 'ĀLAMGHIR Bādshāh-i

Ghaṣī (1027-1118/1615-1707), the third son of ShāhJahān and Mumtāz Mahāl (daughter of Āṣaf Khān) was born at Dhul in Malwa on 15 Dhū 'l-Ka'da 1027/15 Nov. 1618.

I. *Early Years (1027-08/1618-58)*. He certainly received a very good education according to the standards of the day, for throughout his life he could hold his own in disputations with the 'ulama' as well as men of letters, and his Persian compositions have been regarded with respect.

In 1044/1655 AWRANGZIB was made a commander of 10,000 men and put in nominal charge of a successful campaign against Dīdār Singh Bundelā. In 1045/1656 he was appointed Viceroy of the Dakkhin but resigned in 1053/1644, either owing to a fit of religious fervour or on account of his bitterness against Dārā, his elder brother, whom ShāhJahān seems to have had chosen as his successor. Nevertheless he accepted the governorship of Gujjarāt and was thence transferred in 1055/1646 to the command of Balgh, which the Mughal officers had conquered under the nominal command of Murād Bahāghar, the Emperor's youngest son. But the Uzbeks were too strong and Dhul was too far; AWRANGZIB established his reputation as a general and an administrator, but he had to give up Balgh to Nāzar Muhammad Khān and beat a retreat. Appointed governor of Multān in 1057/1648, AWRANGZIB was directed by the Emperor to recapture Kandahār from the Persians. He besieged Kandahār twice—in 1058/1649 and 1061/1651—but the enterprise was too difficult and he had to retreat. AWRANGZIB can hardly be blamed for this, for Dārā Shukoh to whom the third siege of Kandahār was assigned failed even more disastrously.

AWRANGZIB was assigned the Viceroyalty of the Dakkhin for a second time in 1062/1652. His revenue expert, Murād Kālī Khān, did much to settle that desolated territory by his revenue system (*dhara*). In 1065/1655 AWRANGZIB laid siege to Golkunda and could have extinguished that kingdom but the Emperor ordered him to accept a tribute and make peace. In 1066/1657 he attacked Bidjāpūr and had captured Bidār and Kālyān when orders were sent, came from the Emperor directing him to accept 'peace' terms. Soon after that ShāhJahān fell ill (27 Dhū 'l-Ka'da 1067/15 Sept. 1657) and his four sons prepared to fight for the throne.

II. *War of succession, 1067-08/1658-59*. The war of succession shows AWRANGZIB at his best as a general and an administrator; he was never to attain that standard again. Dārā Shukoh, the heir-designate at Āgra, had the prestige of the imperial authority and the advantage of moving on interior lines. But he showed himself lacking both in capacity of organisation and strategy. Shujā'ī, the second son, who was governor of Bengal, assumed the crown (as did the youngest brother, Murād) and moved towards the capital. But he was decisively beaten at Bahādurpūr (11 Dī Jumādā I 1068/14 Febr. 1658) by the imperial army under Rājā Dīsh Singh and Sulaymān Shukoh and fled back to Mungla. But Dārā's southern army, under Dīswant Singh, could not prevent AWRANGZIB and Murād from joining their forces near Ujjāin. The two brothers crushed Dīswant's forces at Dharmat (12 Rājadh 1068/15 April 1658) and then crossing the Chāmū, defeated Dārā decisively at Sāmghrūr, eight miles from Āgra (16 Shā'ban 1068/29 May 1658). AWRANGZIB then followed his father to the Āgra fort and then arrested Murād near Mathor and sent him to Gwalior where he was executed in Rab' II Dī Jumādā I 1072/Dec.

1661. AWRANGZIB crowned himself hurriedly at Dhul and then pursued Dārā as far as Multān. Then he had to march eastwards to meet Shujā'ī, whom he defeated signally at Khajūrah, near Allāhabād (10 Rab' II 1069/5 Jan. 1659). Leaving Mr Dīwan to pursue Shujā'ī to Arrakh, where that unfortunate prince met his death, AWRANGZIB once more marched west because Dārā, supported by Shāh Nawāz Khān, the governor of Gujjarāt, had entrenched himself at Deorai, near Admār. Dārā was defeated after a three day battle (28 Dī Jumādā II 1069/23 March 1659) and, while he was fleeing towards Kandahār, Malik Dīsh, his Baluch host, captured him and brought him to Āgra, where, after he was paraded with every disgrace, he was put to death as a heretic. AWRANGZIB's power was now unchallenged and he celebrated his second coronation on 14 Rāmādhān 1069/5 June, 1659.

*First half of the reign, 1068-92/1658-81*. The Mughal Empire during AWRANGZIB's long reign was really ruled by a series of wars, many of which were of his own seeking. His general, Mr Dīwan, conquered Kūf Bahār and Assam (1073-3/1661-63) with a terrible loss of life, including his own, but the Pathāns rose in revolt—the Yūsufzāis in 1077/1667 and the Afrīdīs in 1083/1672—but though the Emperor stationed himself at Hasan Abdāl (Rāwālpur district), the efforts of the imperial officers were strangely unavailing and peace could not be restored till 1085/1675. The death of Mahārāja Dīswant Singh of Mārwar on 25 Shawwāl 1089/10 Dec. 1678, started the Rājput war. AWRANGZIB stationed himself at Admār for the better conduct of the campaign, but his own son, Prince Akbar, rebelled against him and fled to Sambhādī. The latter error made peace with Rājā Rāj Singh in Dī Jumādā I 1092/June 1681, but the Rathors of Mārwar continued their struggle till Adīl, son of Mahārāja Dīswant, entered Bidjāpūr as a victor in 1118/1707. Meanwhile a new opponent of the Empire had risen in the Deccan, Shīwājī son of ShāhJī Bhonsla, a first-rate diplomat, guerrilla warrior and organiser of victory. Shīvājī Khān, the Emperor's uncle, was sent against him and failed disastrously, but Dīsh Singh, who succeeded Shīvājī, compelled Shīwājī by the treaty of Purandar (Dhū 'l-Ka'da 1118/16 Dec. 1689) to hand over 23 out of his 37 forts. Shīwājī came to AWRANGZIB's court, found that he would only be given the status of a *panāh-nāgar* (commander of five thousand), and pretended to faint owing to a weak heart; he was interned by the Emperor's order but succeeded in escaping back to his homeland. In 1089/1669 he began offensive operations against the Empire, plundered Sūrāt for a second time (1081/1670) and started a series of plundering raids for the levy of *danā* (one-fourth) against the imperial territories. Though Shīwājī who had crowned himself in 1085/1674, died in 1091/1680, Mughal administration in the Deccan was completely demoralised. Meanwhile all the great officers of AWRANGZIB, including even Rājā Dīsh Singh, had failed disastrously against Bidjāpūr. In Shā'ban-Rāmādhān 1092/Sept. 1681 AWRANGZIB decided to march to Burhānpūr; he was not destined to return to northern India again.

*Second half of the reign, 1092-1118/1681-1707*. In spite of the increasing inefficiency of the imperial civil and military machine, which Persian writers have loved to make the object of their humour, the Emperor succeeded in his three immediate objectives. The city of Bidjāpūr, governed by a minor king, Sikandar

'Adīl Shāh, and torn by internal strife, only surrendered after it had withstood a siege of sixteen months (23 Shawwāl 1097/12 Sept. 1686). Golkunda was conquered after a siege of eight months, owing to the treachery of one of its principal officers (14 Dhū 'l-Ka'da 1098/21 Sept. 1687). Lastly, Sambhādī, son of Shīwājī, was captured at Sangawāghwar and executed (26 Shā'ban 1100/15 June 1689). But this did not bring the Deccan under AWRANGZIB's control. The absence of a centralised Mahratta power left the field open to Mahratta captains—half heroes, half bandits—and the imperial officers often preferred to make a separate peace with them. Forts were captured and lost. "All the various tribes residing in central and southern India were up in arms with Mahratta aid and concert against the officers of the Emperor and the cause of law and order in general." In the midst of this turmoil AWRANGZIB died on 27 Dhū 'l-Ka'da 1118/2 March 1707.

One need not go beyond these exhausting wars to discover the reasons for the failure of the Mughal Empire. The picture left for us by Khān Khān, a historian whose family had been in AWRANGZIB's service, is one of increasing corruption, harassment of the peasantry, neglect of government of officers in charge and failure of the state's financial resources. Whatever the reason, the Emperor was lax in the maintenance of discipline and Khān Khān repeatedly tells us that no imperial officer, whatever his offences, was seriously punished. AWRANGZIB's religious policy has been a matter of controversy, which will continue to simmer on for some time to come. Equally valid evidence seems to be available on both sides. Even with reference to his *dīyā*, (1090/1679), a retrogressive poll-tax on the higher classes of Hindus at the rate of Rs. 3-1/3, 6-2/3 and 12-1/3 (but not higher) per year, we have Khān Khān's statement that it could not be levied and remained largely a tax on paper. To avoid misunderstanding it should be added that the term *gīrya* was used in a very loose sense in medieval India and often meant any tax other than the land-tax (*shāhādī*). (See also AL-FATĀWA AL-'ĀLAMGHIRIYA).

**Bibliography:** A complete list of all the available authorities on ShāhJahān and AWRANGZIB is given in Storey, 564-99. Only the more important printed works are listed here: Djalāl Tabāṭabā'ī, *Pīdāsh-nāma*, Lucknow 1892; Salih Kanboh Lāharī, *Amal-i Salih* (Bibliotheca Indica); Wāḥid-i 'Ālamghirī (ed. by Syed Zafar Hasan), Allahābād; *Ālamghir-nāma* (Bibliotheca Indica); Wāḥid-i 'Ālamghirī, Lucknow and Cawnpore; the *Dīwān-nāma* of Nī'mat Khān 'Ālī, Lucknow and Cawnpore, also English translations by Chandra Lal Gupta and Aṣṣan Lal Verma (Āgra 1909) and by Baij Nath Fīgar (Lucknow 1928); *Maḥājir 'Ālamghirī* (Bibliotheca Indica); *Āḥām-i 'Ālamghirī*, Persian text and English translation by Sir Jadunath Sarkar; Khān Khān, *Munshāghab Lubh* (Bibliotheca Indica). Two contemporary works—Bernier, *Traité de Mours*, *Storia de Mogor*, 1658-1708 (Ed. W. Irvine)—are available in English. Among modern works, Sir Jadunath Sarkar, *History of AWRANGZIB*, 5 vols. stands pre-eminent. Reference may also be made to Mawlawī Shībī, *AWRANGZIB 'Ālamghir* (in Urdu); Lane Poole, *AWRANGZIB*; Zaheruddin Faruqī, *AWRANGZIB* (Newal Kishan); Sir J. N. Sarkar, *Anecdotes of AWRANGZIB*.

(W. IRVINE—MUHAMMAD HABIB)

**AWRĀS** (Aurès): *أوراس* *urās* in Procopius, *De bella vand.*, I, 8, ii, 12-13, 19-20 mountain massif of Algeria, forming part of the Eastern Saharan Atlas. So far it has not been possible to discover the meaning of the word Awrās.

The Awrās is a compact massif 8,000 sq. km. in area, which extends from the depression leading from Batna to Biskra as far as Khenchela, and the valley of the Wādī Ḥ'Arab, between the high plains of southern Constantine (Shākh) and the Saharan depression of the Zibān. Its summits (Djibāl Chéla, 2,327 m., and Kef Mahmel, 2,322 m., the highest in Algeria) and its ridges tower nearly 1,000 m. above the "South-Auraisian" depression. The western Awrās comprises three long chains running S.W.-N.E., separated by the deep valleys of the Abdi and al-Awad Wādīs, which discharge through narrow gorges into the Sahara. The eastern Awrās is much more massive. Differences of altitude and aspect create a diversity of bio-geographical zones. The northern and north-western slopes, short and steep, nevertheless have an adequate rainfall and can be cultivated without irrigation; they are covered with forests of holm-oak and, on the often snow-clad peaks, are forests of cedar and green mountain glades. The southern slopes, which are much longer and drier, comprise three zones in which crops are irrigated in terraced fields: a cool zone, above 1,500 m., also often covered with snow, and characterised by forests of holm-oak, pastures, summer crops and walnut-trees; a middle zone, with patches of badly-neglected Aleppo pine and juniper forest, and, in the foothills, winter (barley and wheat) and summer (maize and sorghum) cereal crops, figs, apricots; below 800 m., the first palm-trees appear, growing along the *wādīs*, at the foot of slopes on which are found only occasional junipers, clumps of *alfa* and extremely poor pasture.

The inhabitants of the Awrās live on cereals, which they sow on the mountain and at the foot of the northern (Chara) and southern (Sahara) slopes, fruit, and a few vegetables, and by stockbreeding, in which goats play a greater part than sheep. For the cultivation of the crops, the men move from the northern slope to the Sahara. The winter migration, during which the flocks are moved from the high zone to the foot of the mountain, involves families in a semi-nomadic way of life.—The inhabitants of the Awrās are villagers, except in the east, where they live in hamlets of *gawris* dispersed in the woods. Their villages, often built on the hillside, with the houses in terraces, are sometimes dominated by a *guelia* (ha'a, fortified granary). The people of the Awrās (115,000) are still Berber-speaking, except on the borders where there has been penetration by arabised tribes.

These Berbers are called Shāwīya by the Arabs. The women continue to speak Berber whilst the men adopt Arabic for use outside the family.

Worked stones show that the Awrās has been occupied since Old Neolithic times. Roman influence is indicated by the ruins of cisterns and irrigation ditches, oil-mill grinding stones, etc. The Byzantines confined themselves to building a line of forts along the foot of the Northern face of the Awrās. When Ḥ'kha b. Nāṣir [g.c.] entered the Maghrib, the Berbers inflicted serious losses on him and it was near the Awrās, at Tahāda, that he met his death when returning from his great expedition towards the West. After the destruction of the Kingdom of Kusayla [g.c.], the Awrās became the centre of the

resistance offered to the Muslims, who only succeeded in suppressing it at the beginning of the 2nd/8th century, after the bloody struggles to which the legend of the Kāliina [g.c.] is attached. Following upon these wars, Borters from Tripolitania and the South of Libya established themselves in the Awrās; converted to Islam willingly or by compulsion, they retained a spirit of independence which was shown by the eagerness with which they adopted heretical doctrines, Ibadism in the 4th/10th century; it was from the Awrās that Abū Yazīd appeared, whose revolt for a brief moment imperilled the Fatimid Empire. The Hilāl invasion contributed to the arabisation of the whole area of the mountain massif, but the populations succeeded in retaining their independence intact, escaping from the authority of the Hafsids [g.c.], then from the domination of the Turks; the latter, however, set up in the area some chieftains devoted to their policy, whose authority remained precarious. From the 16th/16th century, preachers from the extreme South of Morocco gave the Islam of the Awrās the appearance which it was to retain until 1935: a religion closely linked with a specific social structure. At this last date, the Algerian 'alams' intervened, especially against the cult of Saints.

The inhabitants of the Awrās have always retained their old political organisation, of which the village remained the basis, a true municipal republic administered by the assembly of the people, or *djam'a*, in conditions analogous to, though rather more sketchy than, those which existed in Kabylia. The French occupation only superficially put an end to this state of affairs. In 1845 the Duc d'Aumale took Mghūnegh, whilst Bedeau made the main tribes recognise French authority; further expeditions, however, were required in 1848-1849 and 1850 to repress a revolt; French troops had to intervene again in 1859 and 1879, when risings had broken out. In 1866, the judicial system of the Māliḥs was applied to the Awrās and *Kādi* were sent there, but local customary law continued to be applied, as a supplement to Islamic Law and the French Penal system.

**al-AWS**, one of the two main Arab tribes in Medina. The other was al-Khazraj, and the two, which in pre-Islamic times were known as Banū Kayla from their reputed mother, constituted after the Hijra the 'helpers' of Muhammad or Ansār [g.c.]. The genealogy as given by Ibn Sa'd (iii/2, 1) is: al-Aws b. Tha'laba b. 'Amr (Muzaykiyā) b. 'Amir (Mā' al-Samā') b. Hāritha b. Imrī' al-Kays b. Tha'laba b. Māzin b. al-Aad b. al-Ghawth b. Nabī b. Mālik b. Zayd b. Kahlan b. Saba' b. Yaḥyā b. Ya'rub b. Kahtan. The following table gives the genealogical relationships of the chief divisions of the tribe:

was a decisive event in the growth of Islam in Medina, and from the battle of Badr until his death in 5/627 he was the leading Muslim of the Banū Kaylā or Ansār (q.v.). The enmity between the Aws and the Khazraj after died gradually, and is not heard of after the institution of Abū Bakr as caliph.

MONTGOMERY WATT)

**AWṢ** s. **HADJAR**, the greatest pre-Islamic poet of the tribe of Tamim; al-Aṣmaʿī frequently praises and comments on his poetry; in contrast the early anthologies, except the *Ḥamka* of al-Buḥārī, do not mention him at all. Whether al-Farazdaq, when he boasts of having "inherited from the family of Aws a tongue like poison," means our poet, cannot be ascertained. Fragments of some length do not appear before the time of Ibn al-Sikkīt, who probably wrote a commentary to his *dhīḥn*, and quotes him in his lexicographical work.

With the early critics Aws was famous for his description of the (wild) ass, the bow, and "noble virtues". He exhorted the Lahabids to "turn to Hind to avenge his father al-Mundhir III, who was murdered in 344, and mentions the battles of al-Kaʿb and al-Suʿbān in which his tribe was involved. A charming anecdote tells the story of his acquaintance with Faḍla b. Kalada of the Banū Asad to whom he dedicated a well-known elegy. Aws seems to be earlier than al-Nābigha.

Tradition relates that Zubayr was the transmitter (*rawī*) of both Aws and Tufayl al-Ḥanawī. Kretschmer makes Aws the *rawī* of Tufayl without indicating his source.

**AWṬĀD** (Ar., sing. *awṭād*, literally "peg"), the 3rd category of the hierarchy of the *Riḍāʾ al-ʿUṣāb*, comprising four holy persons, also called *al-ʿUṣāb*, "the pillars" (see *ARABICA*). Each of them is charged with the surveillance of one of the four cardinal points, in the centre of which were their dwelling place.

(I. GOLDZIEHER)

**AL-AWWĀʾ** [see *NUḤUM*].

**AWWAL** (form. *alā*, plur. *awwāl*), first. — I. As a philosophical term, *awwal* was brought into Muslim thought by the Arab translators of Aristotle and Plotinus as the equivalent in Arabic of the Greek words *πρῶτος* and *ἄρχειν*. Thus in the *Pseudo-Theory* of Aristotle, that is to say, in the Arabic translation of the last three *Enneads* of Plotinus, *awwal* indicates either the *First Being* or the *First Created*. Similarly, in the *Iḥwān al-Safā* we already find the expression *al-kayd al-awwal* to express the

first causality derived from God, the same expression being again found in the *Budd al-ʿAḥd* and the *Sicilian Questions* of Ibn Sabʿīn. The word *awwal* is likewise used by the Muʿtazilites, al-Kinānī and al-Fāḥidī; but it was Ibn Sīnā who systematised its use in philosophical terminology. The word *awwal* subsequently became customary among those Eastern and Western thinkers familiar, either directly or indirectly, with the thought of Avicenna.

II. Used in the singular, *awwal* indicates among the philosophers God in the sense of *First Being*. With the expression the *Necessary Being*, it is the cause of God most frequently employed by Muslim philosophers; in this sense it is usually employed alone, though at times such reiterative expressions as *al-mabdaʾ al-awwal*, *First Principle*, are to be encountered.

III. In several compound expressions, *awwal* indicates essentially causal priority, and secondarily temporal priority, as in the terms *al-maʾlūl al-awwal* (First Cause), *al-awwāl al-ʿilāl* (First or Elementary bodies), *al-haḥḥa al-ʿilāl* (First movement).

IV. Used in the plural, *awwāl* (q.v.) indicates the first ones in date and, in philosophy, the thinkers of former ages.

V. Likewise in the plural, *awwāl* also indicates the *first principles* in the order of being and knowledge; for example: *al-mabūd al-ʿilāl*, the *First Principles* in the order of being or *Separation Principles*, as they are called in the *First Intelligibles* that is to say, the *First Principles* of Knowledge.

VI. From *awwal* is derived the abstract noun *awwalīyya* (plur. *awwalīyyāt*), which in the Philosophers indicates the essence of that which is first.

VII. In the plural, *awwalīyyāt* translates *τὰ πρῶτα* and *ἄρχειν* indiscriminately and means the *First Principles* in the order of knowledge, that is to say, the propositions and judgements immediately evident by themselves.

**AL-AWZĀʾ**, **AWZĀʾ** (Ar. **ʾAMR** **ʾAL-RAHMĀN** s. **ʾAMR**, the main representative of the ancient Syrian school of religious law. His *nisba* is derived from al-Awzāʾ, a suburb of Damascus, so called after a South Arabian tribe, or an agglomeration (*lawāʾiq*) of clans, who lived there (Ibn ʿAshʿar, *Taʾrīḥ*, *Dimaḥq*, ed. al-Munajjid, II, 1934, 144; Yāqūt,

I, 403 f.). An ancestor of his had been made a prisoner in Yaman (al-Masʿūdī, *Murādī*, VI, 214). He seems to have been born in Damascus, and he did part of his studies at least in al-Yamāna, where he went in Government employment. Later, he moved to Bayrūt where he died, about 70 years old, in 157 (774); he is buried in the village of Ḥaṭṭa, near Bayrūt, where his tomb is still visited by pilgrims (Heffening, 146, n. 4).

Al-Awzāʾʾs writings, which he dictated to his disciples and of which the *Fihrist*, 227, mentions a *Kitāb al-Sunan* fi ʿl-Fiqh and a *Kitāb al-Maʾāḍīʾ* fi ʿl-Fiqh, have not been preserved in their original form. His *Masaʾid* (Hāḍiḡī Khallāfa, ed. Flügel, no. 12066) was presumably composed at a later date, as were the other works of this kind. Al-Awzāʾʾs opinions, however, are extensively quoted (1) in Abū Yūsuf's *al-Radd ʿalā Shīʿat al-Awzāʾī* (Cairo 1357; also, with comments by al-Shāfiʿī, in his *K. al-Umm*, VII, Bihāk 1325, 303–306; cf. Hāḍiḡī Khallāfa, ed. Flügel, no. 231), a refutation of al-Awzāʾʾs criticisms of the opinions of Abū Ḥanifa; an original version of al-Awzāʾʾs *K. al-Siyar*, by one of his immediate disciples, was still in existence in the 11th/12th century (Heffening, 149 f.); (2) in al-Tabarī's *K. Taḥḍīr al-Fuḥalāʾ* (ed. F. Kern, Cairo 1902, and J. Schacht, Leiden 1933).

Al-Awzāʾʾs opinions, as a rule, represent the oldest solutions adopted by Islamic jurisprudence. The archaic character of his doctrine makes it likely that he, who was himself a contemporary of Abū Ḥanifa, conserved the teaching of his predecessors, who are nothing more than names for us, in the generation before him. His systematic reasoning, though explicit, is on the whole rudimentary; it is overshadowed by his reliance on the "Islamic tradition". By this he understands the uninterrupted practice of the Muslims, beginning with the Prophet, maintained by the first Caliphs and by the later rulers, and verified by the scholars; this is the "sunna of the Prophet", even though it may not be expressed in formal traditions going back to him. Al-Awzāʾī opposes this idealised concept of *sunna* to the actual administrative practice, and he makes the "good old time" last until the killing of the Umayyad Caliph al-Walīd (II) b. Yazīd (II) in 126 (744) and the civil war which followed it, so that it includes most of the Umayyad period. In this concept of *sunna* and in other respects, al-Awzāʾī's doctrine comes nearest to that of the ancient Ṭākrāns.

Al-Awzāʾī shows as yet no trace of the anti-Umayyad feeling which became fashionable under the ʿAbbāsids, and it is likely that his attitude to the ʿAbbāsids was cool (this is reflected by an anecdote about his meeting with the ʿAbbāsīd conqueror ʿAbd Allāh b. ʿAlī, though the story itself seems to be legendary; cf. Barthold, in *Id.*, xviii, 244). Nevertheless, he succeeded in gaining the respect and esteem of the new rulers, and in particular of the future Caliph al-Maʾmūn as a prince, whom he seems to have met. The applications which al-Awzāʾī addressed to this prince, to the Caliph al-Manṣūr, and to influential persons at the Court, on behalf of political prisoners, the public of Bayrūt, and others (Ibn Abī Ḥātim, *Tahḍīr al-Maʾrifa*, 187 f.), are doubtless genuine. The statement that the Surika (governor of Damascus on behalf of the Umayyad al-Walīd II and of the ʿAbbāsīd ʿAbd Allāh b. ʿAlī; cf. al-Safadī, *Umarāʾ*) *Dimaḥq*, ed. al-Munajjid, Damascus 1935, 35) made al-Awzāʾī come from Bayrūt to Damascus (Ibn Abī Ḥātim,

*ibid.*, 187), is difficult to fit into what little is known of al-Awzāʾī's biography.

A number of al-Awzāʾī's disciples, amongst whom al-Walīd b. Maʾayad (d. 203) is prominent, are mentioned by Yāqūt (I, 783 f., s.v. Bayrūt). Similarly to what happened in the other schools of religious law, the ancient school of the Syrians transformed itself into the personal *madhhab* [q.v.] of al-Awzāʾī. It prevailed not only in Syria but in the Maghrib, including al-Andalus (Islamic Spain), before it was superseded by the *madhhab* of Mālik, in the Maghrib about the middle of the 3rd (9th), in Syria towards the end of the 4th (10th) century (J. Lopez Otero, *La recepción de la escuela malikita en España*, Madrid 1931, 16 f.; R. Castañón Calderón, *Los juristas hispano-musulmanes*, Madrid 1948, 32, 43 ff.; Heffening, 146; Barthold, *ibid.*). The anecdotes on how al-Awzāʾī overcame Mālik in disputation (Ibn Abī Ḥātim, *ibid.*, 185 f.), reflect the struggle between the two schools.

**AYA**—plu. *āyāt*, a sign, token, miracle, verse of the Qurʾān. The original meaning is a sign or token and as such is found in the pre-Islamic poetry (plur. *āy* and *āyāt*, with plur. of plur. *āyāt*, cf. Nöldeke's *Belegwörterbuch*, sub. *voc.*), where it is the equivalent of the Hebrew *ōṭ*, Aramaic *ōṭā*; Syriac *ōṭā*, the plur. *ōṭāṭ* occurring in the Lachish Letters (IV, 11) for the fire-beacons used for signalling. This original meaning occurs in the Qurʾān, where the ark is called the token of Saūl's kingship (II, 248/249), and the sun and moon are signs of day and night (xvii, 12/13). The wonders of nature are also tokens of Allāh's presence and power (xxix, 20/19 ff.; xli, 103 etc.), but such are also portents from which men should take warning (II, 164/159, 26/64; xxi, 67 ff. etc.). It is the duty of the Messengers whom Allāh sends to rebuke to men these demonstrations of Allāh's power, or wisdom, or judgment as they appear in nature or in history, and it is the condemnation of communities that they reject the signs of Allāh that are rehearsed to them (II, 61/81 s.; 73/74; xxvii, 61/81 ff.; vi, 182/181). From wonder to miracle is an easy step (xlii, 47 f.; xiv/43; xlii, 38; xxxvi, 134), and by a further step the accounts telling of such portents or tokens of Allāh's might could be called His signs (II, 252/253; xli, 7; xv, 23; xxxiv, 19/18; v, 73/79). By a final step each verse of such an account becomes a sign (vi, 124; xxviii, 87; III,

108/104 etc.). In the Masorah to the *Kur'an* *aya* (plur. *ay*) always means verse, and there was considerable discussion as to verse-endings (*ru'us al-ay*), verse-numbering, and the *fuḍū'il* of certain verses such as the "Throne Verse" (ii, 253/256), the "Light Verse" (xxiv, 35), the final verses of *sūra* ii, etc., which brought peculiar blessings to such as recited them in specified ways. These various meanings of *aya*, save the last, correspond closely with Jewish and Christian usage, where the particular religious use of the word is for the signs that attest the divine presence and which accompany and testify to the work of the Prophets.

**AYA SOFYA**, the largest mosque in Constantinople (Istanbul), and at one time the leading Metropolitan Church of Eastern Christendom. It was known generally as 'H Meryēn, *Eccelesia* up to 1453, having been called *Sophia* (without the article) around 400 A.D., and since the 5th century, 'H 'Ayaia *Sophia*.

According to the most recent research, the original Aya Sofia was not built by Constantine the Great, but, in accordance with his last wishes, by his son, Constantius, after the latter's victory over his brother-in-law Licinius. It was then built in the shape of a basilica, and consecrated on 15 February 360 (cf. A. M. Schneider, *Die vorjustinianische Sophienkirche*, in *BZ*, 1936, 36). This "Great Church" met with frequent and diverse changes. There were fires and earthquakes which ravaged it (the first wooden-roofed basilica went up in flames on 20 June 404 on the occasion of the expulsion of Bishop John Chrysostom). Reopened on 8 October 415, it remained undamaged for over a century until the night of the 13th of January 532, when once again it went up in flames (as did the greater part of the city, including the imperial archives) during the fight between the rival hypodrome factions.

The emperor Justinian immediately made known his decision to rebuild the church in such splendour as had never been seen before. Even before this, Justinian had already ordered that valuable materials from old monuments in the provinces of his vast empire (where heathen works of art were deliberately left to decay) were to be sent to the imperial residence, and after the fire these materials were largely used to rebuild Aya Sofia. Two of the greatest architects of all times, Anthemius of Tralles and Isidore of Miletus, were placed in charge of the reconstruction. Since the emperor had ordered that the new building must be proof against both fire and earthquake, they decided to use a dome-and-cupola design as being the surest means of escaping these dangers. The opening of this magnificent building took place on 27 December 537 with enormous pomp, and the proud Justinian could exclaim: "Solomon, I have surpassed you!" Even during his own reign, however, the eastern part of the dome collapsed in an earthquake (on 7 May 558) and the ambo, tabernacle, and altar were smashed. The dome had been designed too flat, and it was now raised by more than 20 feet, whilst the supports of the big pillars were strengthened. It was

ready for reopening on 24 December 562. The church has an enviable position: to the south there is the Augusteum, with an equestrian statue of Justinian, meant for national festivities; to the north (well within the Saray walls of today) are court churches, noble monasteries and the palaces of the court officials; and to the east, that is to say towards the sea, stands the imperial palace.

The west presented a court-yard called the Atrium, flanked by open halls, to the visitor. From here, a number of doors (perhaps four or five) led into an enclosed hall (Exonarthex) which still belonged to the Atrium. From this, five doors led to the actual extreme north and south ends. Further passages branch off, and nine rectangular openings from the entrances to the inner part of the church. The centre one of these was elaborately coloured and used to be the king's door.

The area covered by the church is almost square: the internal length is about 75 metres (excluding the main apse to the east) and the breadth is about 70 metres. The floor is shaped in the form of a cross, and above it the almost hemispherical pendentive dome rises to a height of 36 metres. Since the outside walls alone could not have carried it, it had to be supported in addition by four pillars, and these in turn are supported by small but structurally important arches and their corresponding pillars. To the east and west of the dome, there are two further semi-circular chambers, each of which has three chapels of the interior was the two-storey arrangement of all the side-chambers adjacent to the centre aisle, where the galleries (as was customary in Byzantine churches) were reserved for women. The weight of the building is carried by 107 columns (40 below and 67 above), usually monoliths of coloured marble (*verde antico*), but in some cases of red porphyry. An overwhelming impression was created for the mediaeval spectator by the wealth of ornament: the lavish use of marble everywhere, the pictures of Christ and of the Mother of God, the Prophets, Apostles, and other saints which turn the walls into a sea of colour, not to mention the mighty Seraphim (in the spherical triangles of the main dome), and the gold-mosaic which adorned the dome, apse, and walls with such a splendour as had never been seen before. The mosaic ornamentation was probably not finished until the last years of Justinian, and during the reign of Justin II.

The original walls and vault of the original building consist of brick throughout. The sanctuary (57/60) lay to the east of the central part of the church and was divided from it by an iconostasis of considerable height, adorned with pictures and open-work pillars. It contained the altar and the ciborium and led into the main apse. There were 425 priests (who admittedly also served three other churches) and 100 doorkeepers in the days of Justinian. Shortly before the collapse of the Byzantine Empire, the number of church officials in the Aya Sofia was estimated at 800.

The first major repairs to Aya Sofia were made in the time of the emperor Basil II. A part of the dome collapsed during an earthquake on 26 October 986. The emperor had the damage repaired (the clumsy flying buttresses on the western façade probably date from that time; cf. A. M. Schneider, *Die Grabungen im Westhof der Sophienkirche*, Berlin 1941, 31 ff.). In 1202 the church was severely damaged during the Latin

sack of Constantinople, when it was ruthlessly plundered, the holy vestments and vessels even being used to clean and feed the invaders' horses; yet it became, nevertheless, the chief church and place of veneration for the new dynasty. The most extensive changes still undertaken in its Byzantine times were made in the 14th century. In the first half, the walls were strengthened on all sides, the eastern wing in particular being buttressed from outside by high and broad supports.

We have no description of the interior of Aya Sofia in Byzantine times from Muslim reports. The first Muslim who mentions the cathedral in detail is Ahmad b. Rusta (124 ff.; trans. G. Wiet, Cairo 1955, 139 ff.); the author lived around 290/902-903 but derives his description from Hārūn b. Yahyā, who was a prisoner of war in Constantinople some time during the ninth century. Hārūn does not really describe the building, which he calls al-Kāns al-'Uzūd (i.e. *May-Ey* 'Eccelesia'), but he does describe in vivid detail a feast-day procession, to the church of the Byzantine emperor. On this occasion, the Muslim prisoners of war were led to the church (this might perhaps mean to the atrium of it), and there they greeted the emperor with the cry "May God preserve the king for many years" (*ihād*, 125). One detail is of particular importance: he mentions that beyond the *Mağlūḡ* (by which he presumably meant benches) there were 24 small doors with openings a span square, at the western gate (these are not mentioned anywhere else). One of these little doors opened automatically, and closed again of its own accord, at the end of each of the 24 hours. With the decline of the Caliphate, the Muslims and the Christians came more and more silent about far-away Constantinople. Only four centuries later, after Asia Minor had been occupied by Turkish tribes, Shams al-Din Muhammad al-Dimashqi (ed. Frāho and Mehren, St. Petersburg, 1865, 227)—who, however, is dependent on the work of the slightly earlier paper-merchant Ahmad (*ihād*, viii)—mentions the Aya Sofia in a few lines. The one remarkable thing is his statement that the church harboured an angel whose home was surrounded by a barrier (*dardāshin*), presumably meaning the area of the altar and ciborium together with the iconostasis itself.

A few decades later, Muhammad b. Baṭṭāta (ed. Defrémery and Sanguinetti, II, 434) is the first to ascribe the erection of Aya Sofia to Aḡa Barlaāmi (i.e.), supposedly, a cousin of King Solomon. Ibn Baṭṭāta's main merit is the detailed description of the atrium. As he stresses, he was not allowed to enter the church itself, possibly because he would not comply with the order (mentioned by him) to kneel before the cross at the entrance.

When the Turks conquered Constantinople (29 May 1453), crowds of the defenceless population fled into the church, in the firm belief that an angel would appear in the sky and drive the victors forever back into their Asiatic home-country after they had advanced as far as the columns of Constantinople the Great. However, the Turks came on, smashed the doors of the house of God, and dragged the frightened people—both men and women—away to slavery. Eye-witnesses do not, however, mention any blood-bath in the holy place, as was often stated to have been the case. After this wild spectacle of loot and plunder, the ruler himself—though not seated upon a horse, as it was usually stated—entered the church. His *muwaḍḍiḥ* spoke the invitation to prayer which contains the con-

fession of faith, and he threw himself down—together with his followers—before the one God, and thereby the temple of Constantius and Justinian was dedicated to Islam.

There are very considerable changes in the interior resulting from the rules of the victorious religion. The mosaics which had formerly adorned the walls and vaults, and which had seemed to their Greek creators to have been fashioned for eternity, were hidden under a grey lime-wash (since Ewliya Celebi, *Seyhkalimat* I, mentions the mosaics, a few must still have been visible in his time, that is to say, in the 17th century). The iconostasis between the priests and the lay folk was torn down, and the rich decorations of the east wing, the *ihna*, were stripped. As the ancient Byzantine churches faced Jerusalem, whilst the Salāt had to be performed facing Mecca, the Turks have prayed more towards the south, and not towards the eastern wing of the mosque, ever since the days of the conquest. From the time of Mehmed II, the preacher—bearing a wooden sword—ascended the pulpit on Fridays, on every afternoon of Ramadan, and on Bayram festivals (see the article 'AḡAZA and Juyrbol', *Handbuch der islam. Geistesg.*, 84, 87); and there were always two flags by the side of the pulpit. Furthermore, we know that Mehmed II erected the mighty buttresses against the south wall, where he also built the first of those high, slim minarets. Selim II erected the two buttresses in the north and the second minaret on the north-east corner. His son, Murād III, was responsible for the other two.

Sultan Murād III undertook thorough repairs of the mosque. In the first place, this meant the correction of minor defects which had come to light as time went on, but he also contributed considerably to the embellishment of the bare chamber. He placed the two huge alabaster urns on the inside near the main entrance; each of which holds 1250 litres; he also donated the two large estrades (*maṣṣaba*). On the right hand one, the *Kur'an* was recited during most of the day in that changing intonation which is peculiar to the oriental liturgy of all denominations whilst the other was meant for the prayer leaders. At great expense, Murād III also gilded the half-moon which crowned the dome. This had a diameter of 50 els, and had replaced the cross. Thus the Muslim subjects of the Porte could behold the emblem of their faith from as far off as the summit of Bithynian Olympus.

In the second half of the 16th century, the conversion of the churchyard immediately to the south of the mosque into a mausoleum for the sultans was begun. The oldest tomb is that of sultan Selim II. His son Murād III and his grandson Mehmed III are also buried there. Sultan Mehmed III's 19 brothers, whom he had killed on his accession to the throne, are also entombed here. A few decades later, the dethroned sultan Mustafa I suddenly died, and a suitable grave could not be found immediately; the old baptistry (on the southern side of the narthex), which the Turks had used for oil storage since their conquest, was taken over for the purpose. Later on, the nephew of Mustafa I, Sultan Ibrahim, was likewise buried there. Since then, the large oil stores have been kept in the hall and courtyard on the north side of the baptistry.

Sultan Murād IV (1623-1640), whose reign saw a certain measure of general revival, had the bare walls embellished in a memorable way by the great calligrapher Būṣṣāḡī-rāde Mustafa Celebi, with large gold-lettered quotations from the *Kur'an*. Some

of these letters, such as *Abf*, are as much as ten eils long. These beautifully painted and often inter-twining verses are, however, dwarfed by the clear and boldly drawn names of the first four Caliphs (these are written by Tekeddü'l-ade Ibrahim Ehsedi, *c. Hadikat al-Diyar*, i, 4). There is a magnificent *minbar* dating from those days. It is also known that it was Ahmed III who erected the enclosed raised throne for the ruler, the *mahyara*, on the north side of the main apse. Mahmud I (1730-1754) donated the large sultan's loggia on the first floor in the gallery and also a charming fountain and a school (both in the courtyard on the southern side); the large eating-house ('*imaret*') in the north, and above all the valuable library in the mosque itself. There is, however, indubitable proof that this last was built on an older foundation already in the mosque. All of this is essentially part of the House of God in the Orient.

From the time of Murad IV, the conqueror of Baghdad, there was a perceptible decline in the maintenance of the mosque, which coincided with the general decline of the empire. In 1827 Sultan 'Abd al-Medjid commissioned the Italian brothers Possati as architects to renovate the building in order to avoid the threatened collapse of some parts, as well as to give the whole a more dignified appearance. The work took two years. The lime-wash was only left in the places which depicted human forms; apart from this, the walls came back into prominence with the disclosure of their old splendour. The red and yellow striped paint on the outside dates from the restoration. The way in which the sultan showed his veneration for the great deeds of his forbears is somewhat strange: all the minarets were repaired with the exception of that of Mehemmed II, who had dealt the final and decisive blow against the Byzantine empire. The Italian architects, however, were eventually allowed to make this minaret as high as the others. The eight round tablets inscribed by the calligrapher Mustafa 'Izzet Efendi were put into Aya Sofya under Sultan 'Abd al-Medjid.

It is fortunate indeed that the mosque has not suffered from earthquakes since the 10th century. It must be admitted that it is largely thanks to the buttresses which the last Byzantines and the Turks put up against three sides of the walls that this gigantic building (standing, as it does, on seismic ground) has served mankind longer than any other building in Europe. The storms which blow from the Balkans or from the sea, on the other hand, seem to be increasingly dangerous to the mosque.

In summer 1906 the Minister of Education ordered thorough repairs in the library building, which was looked after by *Khadjan* who officiated one day of the week each.

In Ramadan, the mosque made an interesting picture when princes and officials assembled for afternoon prayers. At the *tarawih* prayers (said an hour and a half after sun-down) there was less ceremony. The dome was lit by innumerable lamps which were arranged in a circle. The greatest splendour of all was to be seen during the 27th night or the *Laylat al-Kadir* (Turk. *Kadir geces*), in which the Kur'an descended from heaven to earth. The earlier rulers frequently attended the ceremony, but Sultan 'Abd al-Hamid II only honoured the mosque with his presence (if at all) in the middle of Ramadan, when he came by boat to do honour to the relics of the Prophet in the ancient castle of his ancestors during a short visit (*Yavuz'un Ziyaret-i Kibrik-i Sa'adet*).

Immediately after the conquest, the Turks took over the many legends which had grown up concerning the origin and the excellence of the church during the last years of Byzantine rule, substituting them in Muslim terms. A history of Aya Sofya (library of Aya Sofya, No. 3023) was written very shortly after the victorious entry, by Ahmad b. Ahmad al-Gilani (in Persian, on a Greek model) at the order of Mehemmed II. This was later translated into Turkish by Ni'mat Allah (died 969/1562-2). According to Kâtib Celebi (ed. Flügel, II, 116) there was a second Persian writer, who, in the same ruler by the astronomer and cosmographer 'Ali b. Muhammad al-Kushij (q.v.). This work, however, can apparently no longer be identified. There is another version of the year 885/1483-4, by an anonymous author, which is now in the Staatsbibliothek Berlin (MS. Orient. K. 821) as an appendix to an Ottoman history (the *Tawârîkh-i Kustantiniyya* [Fleischer, *Kat. Dresden*, No. 123]; written three years later) which is more interesting but otherwise similar in thought and sources. According to the *Tawârîkh-i Kustantiniyya* the story is that Asafiyâ, the extremely wealthy wife of the great Constantine b. 'Alaiyya, died very young and ordered in her last testament that a church should be built which should exceed all other buildings of the time in height. An architect is said to have arrived from Firangistan. He is reported to have begun by digging down 40 eils, in order to reach water; then, having built the church with the exception of the dome, he is said to have fled. The building then stood untouched for 10 years, until he returned and put on the dome. It is also stated that the particular marble—otherwise only known by the Dios (it is actually a "marble metal", *Mermar Mâdeni*)—was brought from many countries. The "metal" for the four mottled (*posakli*) pillars (in fact, of course, they are simply of the hardest marble) is said to have come from Mount Kaf, and the large doors are alleged to have been made from planks of Noah's ark and already used by Solomon for his buildings in Jerusalem and Kyrikos (Ayvalik). The total expenditure is said to have come to 360,000 gold bars (each of 360,000 fillets). In the time of the grandson of Constantine the Great, emperor Heraclius (a contemporary and secret follower of the Prophet), the dome is said to have crashed down, but the pious ruler rebuilt it immediately. The *Tawârîkh-i Kustantiniyya wa Aya Sofya* of 'Ali al-'Arabi Ilyâs, who was then in the service of the Grand Vizier 'Ali the Fat (died 28 June 1565) and was a teacher (Flügel, *Kat. der Kgl. Bibl. Vienne*, III, 97), dates from the time of Suleyman the Great. The earliest edition belongs to the year 970/1562-3. Two years later, the author added a few insignificant details to the work and brought it out under a different title (*Tawârîkh-i binâ-yi Aya Sofya*, in the Bibl. Nationale in Paris, Turkish MSS. Suppl., no. 1516; *Tawârîkh-i Kustantiniyya wa Aya Sofya* as *bulâfi-i Hikâyât*, in: *Perseus: Catalogue of Turkish manuscripts of the Kgl. Bibl. Berlin*, no. 232. Fourteenth has a further manuscript, *Cod. cod. man. Bibl. Reg.*, 329, no. 147, l. 1). According to this, Aya Sofya was built under the emperor Ustününb by the architect Ignadüs (as also in Mehmed 'Aghâ). Generally speaking, the author of this is more plausible. He also gives far more detail than his predecessor of the 15th century, because he gives various versions. Thus, he must be regarded as the best Turkish authority on the history of their greatest mosque,

although he is utterly unreliable from our point of view.

The contents of the legends which continue to be woven around Aya Sofya change from one epoch to the next. They seem to have their spiritual peak in the 12th century, a time when the Ottomans in general also appear as the greatest despisers of this world. At that time the place was shown on which the Arabic heroes of the first century A.H. were said to have prayed on the occasion of their siege of Constantinople; the place in the centre of the nave, from which Khidr supervised the building of the church. In the southern gallery a hollowed-out is pointed out as having been the cradle of Christ. One of the anecdotes which one could still hear told by young theologians in much later years mentioned Husayn-i Tabrizi and the way in which he is supposed to have got his professorship in the mosque; the mystic (Sâfi) Sultan Mehemmed II the Conqueror had held out his hand to him so that he had to kiss the inside (dyd), instead of the back of the hand, whereupon he promptly asked for the appointment as *mudir* of the Aya Sofya. The so-called "Damp Pillar" (*yaglı direk*) and the "Cold Window" (*soğuk pencere*) near the Killa gained great fame as places of pilgrimage where miracles happened within the holy walls in the time of 'Abd al-Hamid II. The window was the place where 'Abdülâk Al-Shams al-Din (whose words had a truly strong influence on the men of his time, amongst them Mehemmed the Conqueror himself) first expounded the Kur'an. Until very recently, everyone was still convinced that the blessings brought by the currents of fresh air which entered through this "Cold Window" were of beneficial influence to the depth of theological knowledge.

In 1934, President Kemal Atatürk decreed that Aya Sofya was to cease being a place of Islamic worship, and put it under a museum administration. Subsequently, the lime-wash which had covered the figures in the mosaics was removed, and amongst others the following pictures reappeared in 1936: a beautiful representation of an enthroned Christ and Child, surrounded by the emperors Constantine (with a model of the town he founded) and Justinian (with a model of the church of St. Sophia) above the southern narthex door; and over the central door, leading from the narthex to the church (the old Emperor's Door), a representation of Christ enthroned, with an emperor (Leo VI? or, more likely, Basil I, cf. A. M. Schneider in *Orientalia Christiana*, 1925, 79-79) at his feet in adoration; and, finally, a Madonna in the curve of the apse.

**Bibliography:** Procopius, Agathias, and Paulus Silentiarius are the most trustworthy of the Byzantine sources of the time of Justinian. Of the more recent ones, there are above all: Pierre Gilles, *De topographia Constantinopolitana libri sex*, in: *Lyons*, 1567 and repeatedly after that date; idem, *De Bosphoro Thracico libri tres* (Lyons 1567, and repeatedly after that date); Charles du Fresnoy, sieur du Cange, *Historia Byzantina*, Paris 1680; J. von Hammer, *Constantinopolis und der Bosphorus*, i, Pest 1822; Σαράβριος Α. Βούζαντος, *Κωνσταντινούπολις*, i, Athens 1851; C. Fossati, *Aya Sophia of Constantinople, an account of its state*, London 1852; W. Salzenberg, *Altchristliche Baudenkmäler von Konstantinopel*, Berlin 1854; Auguste Choisy, *L'art de bâtir chez les Byzantins*, Paris 1883; J. P. Richter, *Quellen der byzantinischen Kunstgeschichte*, special number of *Quellen-schriften für Kunstgeschichte und Kunsttechnik des*

Mittelalters, Vienna 1897, by Eitelberger von Edelberg and Ilg; W. R. Lethaby and H. Swainson, *The Church of Sancta Sophia, Constantinople; a study of Byzantine building*, London and New York 1894; Heintz, Holzinger, *Die Sophienkirche und verwandte Bauten der byzantinischen Architektur* (in: *Die Baukunst*, edited by R. Bornmann and R. Geul, no. 10, Berlin and Stuttgart 1898); Εὐγένιος Μετρίδης, *Ἀνωμαλίες, Ἐκπαρσις τῆς Ἀγίας Σοφίας* (in: *Ἡ βιβλιοθήκη*, 3 vols., Athens and Leipzig, 1907-1909); Alfons Maria Schneider, *Die Hagia Sophia zu Konstantinopel*, Berlin n.d. (1938); a Turkish account, giving the inscriptions and a description of the additional buildings in Turkish times: Hüfio Hüseyin, *Hadikat al-Diyar*, Istanbul 1285/1864, i, 3-8; further bibliography in *IA*, II, 47-55 (Arif Müfid Mansel). On the description of Hürin b. Yahya see M. Izidin, *Un prisonnier arabe à Byzance*. — In *REI*, 1914-6, 41 ff., where earlier studies are cited; on the Muslim legends see F. Tauer, *Notizen zur den Versionen persanes de la légende de l'édification d'Aya Sofya*, in *Mélanges Funad Köprülü*, Istanbul 1953, 487 ff.; idem, *Les Versions persanes de la légende sur la construction d'Aya Sofya*, in *Byzantinistica* XVI, 1954, 1-26.

Not far from the Great Sophia, there is the Small Aya Sofya (Küçük Aya Sofya) near the Djumdi square. It was built by Justinian, and was formerly dedicated to Saint Sergius and Saint Bacchus. A cupola rose from an octagonal base (which was extended by four apses). The guardian of the harem of Mehemmed II (Kizlar Aghasi) changed it into a mosque, and since then it has been fully equipped for Muslim teaching and worship. The porch, and the five flat cupolas rising from it, are of Turkish origin.

(K. SCHREINER-FR. TAECHNER)

**AYA SOLÜK**, Ayasuluk, Ayasulugh, Ayasolukh (from Ἀγίου Θεολόγου, i.e. the apostle and evangelist John, who lived and died there). In mediaeval western (Latin) sources, the town is referred to as Alolungo, today (since 1914) it is known as Selçuk. It is a small town on the western coast of Anatolia, 37° 35' north, 27° 20' east, on the site of the Ephesus of antiquity (still referred to as Afis or Ufais by Arabic geographers) in the plain which surrounds the mouth of the river Küçük Menderes (the Kaystros of antiquity), at the foot of the Bulbul Dagli (Korek-oglu), and now on the railway between Izmir and Aydin. It is the capital of the *mâhiye* of Alkondir in the *kaza* of Kuvasad (*vilâyet* of Izmir). At the end of the 19th century it had 2,793 inhabitants (according to V. Cuiet, *La Turquie d'Asie*, II, 305), in 1935 it had 4,023 (the *kaza* of Kuvasad had 17,879).

In the Middle Ages, Aya Solük was a town of considerable importance. In Halîfâ, who visited it in 723/1331 (II, 908 ff.), describes it as having 15 gates, and it was an important commercial centre on the banks of the river Kaystros, where gardens and vineyards flourished. The harbour, which had been the source of the town's prosperity, was silted up with deposits from the river Kaystros as early as the Middle Ages. Instead of Ephesus, the harbour of Kuvasad, some 15 kms. to the south-east (referred to as Scala nova in western mediaeval sources) began to flourish; this had 5,442 inhabitants in 1945.

The advance of the Arabs to Ephesus was only a temporary one (824/798). Similarly, the occupation by Turkish troops after the victory of Melizogard (1071)—under the Salghuk sultan Alp Arslan—came to an end with the victory of the crusaders of the

#### AYAZ

AYAZ, ABU 'U-SAYID, favourite slave of Sültân Mahmûd of Ghazni. Details of the life of the historical Ayaz are difficult to discover, but he was a Turkoman and, if the tradition utilised by Djalâl al-Din Rûmî, d. 887, is accepted, of humble origin also. The *Ta'rih-i Raykâh* reports Mahmûd's successor Mas'ûd as describing Ayaz as his father's 'successor' and as unsuitable for appointment to the governorship of Ray because of his lack of experience of life outside the court. His death is recorded by Ibn al-Athîr under 449/1057-8. According to the *Çakir Mahalla*, Ayaz was not remarkably handsome but possessed a sweet expression and olive complexion, and was greatly endowed with the arts of pleasing, in which respect he had few rivals in his time. This tradition is also found in Sa'dî.

In Persian literature Ayaz appears as a symbolical figure under many guises. In the *Gulistan* and *Bûstân* of Sa'dî he appears as a symbol of true love, in the *Mathnawî* of Djalâl al-Din Rûmî he figures as a type of the Perfect Man, in 'Awfi's *Diwân* al-Hikâyât as a model of loyalty and sagacity and as a fit brother-in-law to Mahmûd. In the *Çakir Mahalla* the cutting off of Ayaz's locks in a fit of passion by Mahmûd is made the occasion of a display of poetical skill by 'Unsuri; in the *Tadhkirat al-Ash'iyâ* an unsuccessful attempt by Mahmûd to pass off Ayaz as sultan before Shaykh Abul-Hasan Khurkânî is used as proof of that saint's sagacity. In his *Mahmûd u Ayaz*, Zulfî has woven romance around the relationship of the sultan and his catamite.

AYAZ, the amir, lord of Hanagûgh, played an important rôle in the struggles for the throne between the rival Süldûk princes Barkiyârûk and Muhammad I. After having first taken the latter, in 494/1100 he went over to the side of Barkiyârûk,

and, after the latter's death, became the Atabeg of his son Malikshâh, who was a minor. He could not, however, hold his own against Muhammad, and was treacherously murdered by him in 499/1105.

*Bibliography*: Ibn al-Athîr, x, 199 ff.; Houtsma, *Receuil*, ii, 90; see also BAKRIVÂRÛK and MUHAMMAD B. MALIKSHÂH.

AYBAK (Turkish pronunciation Aybeg), properly called 'Izz al-Din ABU 'U-MANÇUR AYBAK (AYBEG) al-MU'AZZAM (as a *mamlûk* of al-Malik al-Mu'azzam) Sharaf al-Din 'Isâ, who was first (507-612/1113-1218) governor of Damascus and then (612-624/1218-1227) sultan of the empire of Damascus after the death of his father al-Malik al-'Aṣîl. In 608/1211-2, Aybeg received the town of Ṣalḥiyyah in the Ḥawrân and the adjacent lands as a fief and was appointed major-domo (*ustadh-dâr*). When al-Malik al-Nâsir Dawûd succeeded his father on the throne of Damascus, Aybeg even became regent of Damascus and had the entire political administration in his hands. Shortly afterwards, however, al-Malik al-Ashraf, Dawûd's uncle, took possession of Damascus; Aybeg was deprived of the office of regent, but retained his fiefs in the Ḥawrân. In 636/1238-9, he was still called 'Lord of Ṣalḥiyyah and of Zur'a'. He was subsequently suspected of treason and lost his political standing; he died in Cairo in 646/1248-9. His remains were taken to Damascus and placed in the mausoleum built for him. The districts of Ṣalḥiyyah and Zur'a were Aybeg's fiefs. He was the founder of the Aybeks.

Aybeg was indebted to his father for buildings of various types which he undertook. He erected three Hanafî academies at Damascus and one in Jerusalem. As major-domo, it fell to him especially to attend to the building of khânas: as governor of Ṣalḥiyyah, he sought to render flourishing that part of the trade route from Northern Arabia and from Babylonia to Damascus which crossed his territories; he built the desert fortress, Kal'at al-Arazk and repaired the great reservoir (*maḥḥ*; elsewhere *hîrak*) at 'Inâk and had a great ḥâḍin set up at Sâla. His real for building communicated itself to his subordinates, especially to his *mamlûk* 'Alam al-Din Kayas. Among the buildings which he erected in his fiefs, the following are especially worthy of mention; a ḥâḍin at Ṣalḥiyyah (612/1214-5); a tower in the fortress of Ṣalḥiyyah (612/1210-1); arcades and a tower (*maḥḥ*) in the mosque of Ṣalḥiyyah (630/1231-2); a fort in the Kal'at al-Arazk (631/1236-7); a ḥâḍin at Zur'a (636/1238); a reservoir at 'Inâk (636-637/1238-1240); a mosque at al-'Aṣîn (638/1240-1). The mosque and ḥâḍin of Sâla must have been built about 630/1232-3. The exact date cannot be established because of the fragmentary state of the inscriptions. Sharaf al-Din 'Isâ and his *mamlûk* Aybeg are both known at the time of the Crusades.

#### AYBAK KUTB AL-DIN (see DELHI, SULTANATE OF)

'AYDARUS ('Edrâs, often misunderstood as Idris; etymology obscure, cf. Shihî, *Maghra*, ii, 152) a family of learned *ayyids* and *shâhs* in South Arabia, India and Indonesia, belonging to the Sakka branch of the Bâ 'Alawî [q.v.] and still playing an important rôle in Hadramawt. Wüstenfeld (*Geiten*, 29 ff.) quotes from al-Muhibbî the details on more than thirty members of the family down to the 17/17th century. In the 19th century there

were in Hadramawt five 'Aydari *manşabs*, at Harn, Bawr, Şalla, Thibî and Ramla. Among the numerous members of the clan, known for its literary activity, are:

1. The ancestor, 'Abd Allâh b. Abû Bakr (al-Sakrân) b. 'Azzâz al-Rahmân al-Sakkâf (611-865/1208-1465) of Tarim, who was called by his father al-'Aydari. He received the *shâh* from his uncle 'Umar al-Muhdâr and succeeded him at his death (833/1430) as *nâshib* (*manşab*) of the Bâ 'Alawî. By that time he had already won a reputation for piety by means of severe asceticism. He taught *fatwa*, *hadith* and *fiqh*, but had a predilection for the mystics. [cf. Ghazâlî, *Wustâ*, ii, 127 ff.; *Maghra*, ii, 148 ff.; Wüst., *Čwî*, 30 ff.; Brockelmann, ii, 418 f., S II, 617; Sarkis 1399 f. 5. Shaykh b. 'Abd Allâh b. Shâhîd (no. 3), b. 992/1585 in Tarim, d. 1042/1651 in Dewlâbâd. After studies in his native town, in Yaman and Hîdjâz he sailed for India in 1025, visited his uncle 'Abd al-Kâdir in Ahmadâbâd and was taught by him. From there he went to Deccan and was favourably received by Sültân Burhân Niẓâm Shâh and his Grand Vizier, Malik 'Anbar (Ambur). After a rupture he entered the service of Ibrahim II 'Adil Shâh at Bidjâpur. He held a privileged position with this sultan, whom he had cured from a disease. After the death of 'Adil Shâh he returned to Dawlatâbâd and was in high favour with the vizier Fakr Khân, the son of 'Anbar. He wrote a book on Sûfism called al-Silsila but it fell into oblivion. See *Maghra*, ii, 127 ff.; Wüst., *Čwî*, 30 ff.]

6. 'Abd Allâh b. Shaykh (no. 5), b. 1017/1708 in Tarim, d. 1073/1662 in Shîhr. He was educated by his uncle 'Ali Zayn al-'Abidin (no. 7) and his cousin 'Abd al-Rahmân al-Sakkâf, whom he succeeded in the dignity of a *manşab*. After two visits to Mecca and Medina he went to India, visited his cousin Dja'far al-Sâdîk (no. 8) in Sûrat, a disciple of his father, the Grand vizier Jahangir Khân, and Sültân Mahmûd b. Ibrahim Shâh at Bidjâpur. Back in Arabia he spent his last years in the seaport of Shîhr, where his grave and mosque are venerated and visited by pilgrims. See *Maghra*, ii, 177 f.; Wüst., *Čwî*, 40 f.; Berg, *Hadramawt*, 85, 94.

7. 'Ali b. 'Abd Allâh b. Shaykh (no. 3), called Zayn al-'Abidin and Tadj al-'Arifin (984-1041/1577-1602) of Tarim. He had many disciples and won great influence at the court of the Kaḥrî sultan. His literary production is restricted to a collection of *Rasâ'id*, among them one sent to the Zaydî Imâm al-Ḥusayn b. al-Kâsim in answer to his claim for obedience from the people of Hadramawt. See *Maghra*, ii, 221 ff.; Wüst., *Čwî*, 58.

8. Dja'far al-Sâdîk b. 'Ali Zayn al-'Abidin (no. 7), b. 997/1589 in Tarim, d. 1064/1654 in Sûrat. Having finished his studies in Arabia he migrated to the Deccan in India, where he had a high position at the court of the Grand Vizier Malik 'Anbar. During his stay there he learnt Persian and translated al-'Id al-Nahâs (above, no. 3) into that language. After the fall of Fakr Khân in 1038 he continued his literary activity at Sûrat. He translated the Persian work of Dîrâ Shikhî (ca. 1055/1655) into Arabic with the title *Tuhfat al-Ash'iyâ* bi-Tarjumat Saḥînat al-Awḍiyâ. See *Maghra*, ii, 85 ff.; al-Sakkâf, *Ta'riḥ*, i, 214 and (enlarged) ii, 9 ff.; Wüst., *Čwî*, 37 f.; Brockelmann, S II, 619.

9. Dja'far b. Muṣṭafâ b. 'Ali Zayn al-'Abidin (no. 7), b. 1084/1673 in Tarim, d. 1142/1729 in Sûrat. In 1105 he left his home and sailed from Shîhr to India, where he witnessed the conquest of Sûrat by Bahâdur Shâh, and found favour with the sultan. Writings: (a) *Kaḥf al-Wahm 'an ma' Ghulamâ min al-Fahm*; (b) *Ma'rifat al-Habib*; (c) *al-Fah* al-

travels for the sake of study and collecting books. Among his disciples was Ahmad Bâ Dja'bir al-Hadramî, on whose premature death in 1001 he wrote *Sadh al-Wajâ' bi-Habib al-Iḥbâ'*. On his father's mystic ode *Tuhfat al-Murid* he wrote the commentary *Baghyat al-Mushafid*. Other works: (a) *al-Fah* al-Kashshîr *fi Tadhkirat al-'Aydari* *risāya*; (b) *al-Nâr al-Sâfir* etc. (see below); (c) *Ta'rif al-Aḥyâ' bi-Fadâ'id al-Iḥbâ'* (Cairo 1311, in the margin of *Iḥbâ' al-Sâda* by Muṣṭafâ al-Zabidî). For further details see *Nûr* 334-343 (autobiogr.); *Maghra*, ii, 148 ff.; Wüst., *Čwî*, 31 ff.; Brockelmann ii, 418 f., S II, 617; Sarkis 1399 f. 5. Shaykh b. 'Abd Allâh b. Shâhîd (no. 3), b. 992/1585 in Tarim, d. 1042/1651 in Dewlâbâd. After studies in his native town, in Yaman and Hîdjâz he sailed for India in 1025, visited his uncle 'Abd al-Kâdir in Ahmadâbâd and was taught by him. period in the year 963-4, when the town under its bishop Yuhanna b. Ra'ba made peaceful submission to the Prophet during his Tabūk campaign. Under Islam Ayla became an important meeting-place for Mecca-bound pilgrims coming from Egypt and Syria, and trade flourished. Although the town stood at the meeting-point of Egypt, Syria, and the Hijāz it was generally considered as belonging to Syria and is described by al-Mukaddasī (178), writing in 985-6, as "the port of Palestine." The 4th/10th century marked the height of its prosperity under Muslim rule, as is clear from the account of al-Mukaddasī. In 415/1024-5 Ayla was sacked by 'Abd Allāh b. Idrīs al-Dīqārī and some of the Banū al-Dīqārī, while in 463/1072-3 it is said to have been destroyed by an earthquake (Ibn Taghribirdī, *Nuḡm* (Popper), II, 230).

The Crusading period brought a long era of strife to Ayla and at the end of it the town lay largely in ruins. Baldwin I, King of Jerusalem, took Ayla (Helin) in 1116 and it became incorporated into the Latin Kingdom of Jerusalem under the banner of al-Karak and Montreal. In 1172 the Franks were driven out by Saladin, who left a garrison in the town. Frankish control was briefly reasserted by Renaud de Châtillon, lord of al-Karak, in 1182-1183 during his remarkable but foolhardy campaign against the coast of the Hijāz and the Red Sea. With the destruction of Renaud de Châtillon's fleet by Saladin's commander Usūn al-Dīn, Tūfī' in 1184, Ayla passed permanently into the hands of Islam, but in a depleted condition. Abū'l-Fidā' (1273-1332) states that in his time nothing was left of the town but the stronghold near the shore (*Tabuk*, 86-7).

This stronghold, which probably was the predecessor of the still-standing late Mamlūk fortified caravanserai in al-'Akaba (p. 81), does not represent the original fortification of Ayla. The original fort that protected Ayla lay on the island now known as Dīqārī al-Fī'awn, which lies on the opposite side of the Gulf of the coast of Sinai but within sight of the town. This island was already occupied in Byzantine times. It was this island fort which was besieged by Renaud de Châtillon in 1182, and the first fort on the mainland appears to have been built by Renaud de Châtillon in 1182 or 1183. In Abū'l-Fidā's day this mainland stronghold was the residence of an Egyptian governor.

**AYLŪL** (see Ta'fīḡ).

**AYMAK**, Mongol and Eastern Turkish word meaning "tribe" and "group of tribes" (= Turkish *ül*); in Modern Mongolian, "province"; in the USSR, "rayon". In Afghanistan the four nomadic tribes of partly nomad origin: *Qizilbash*, *Hazara*, *Piruzkhil* and *Tayman*, are called the "Four Aymaks" (Čār, or Čahār, Aymak) (see ČAHĀR AYMAK).

(B. SPULER)

**AYMAN** b. **KHURAYM** b. **FATĪR** b. **al-'ASHIM** **al-Asadī**, Arab poet of the Umayyad period, son of the Companion of the Prophet Khuraym al-Sakīn, whose *hadiṡ* he has handed down. After settling at Kūfa, he composed, like many of the poets of that town *ghazal* poems, but also panegyrics on the Umayyad princes 'Abd al-'Azīz and Hishr, son of Marwān; although he contracted tubercular leprosy (*shayr*), his poetry allowed him to enjoy their intimate friendship, and this favour won him the surname of *Ḥabīb al-Ḥabībāt* (the friend of caliphs). In some of his poems he touches on political matters; he ventures to compose a panegyric on the Banū Hāshim, and manifests his desire not to take up arms against other Muslims (particularly against 'Abd Allāh b. al-Zubayr, with regard to whom he wished to remain neutral); on the other hand, he is hostile to the Khawāridjites and the murderers of 'Uthmān, so that, contrary to the *Aghāni* which makes him a Shi'ī, he must rather be considered a partisan of 'Uthmān.

**'AYN** (see HUGĀ').

'AYN in its basic sense signifies the eye, the organ of sight, requires then the meaning of the function of sight, the seeing, and is as frequent in semantics—compare e.g. *ḥabā*, creation, and *fī'ā* action, which can mean in Arabic as in English the acting and the effect of the acting—can also denote the effect of the function of sight, the aspect, the thing viewed, and especially in the plural, *a'yān*, the particular things that are perceived in the exterior world. It is therefore not astonishing when we read in Khāṣṣī's *Maḥāṣin al-'Ulūm* (ed. van Vloten, 143) that in an old translation of Aristotle's *Categories* which he ascribes to 'Abd Allāh b. al-Mukaffā', the first category, *oideia*, substance, which signifies a particular concrete individual, e.g. a particular man or a particular man, was rendered by 'ayn. However, in a later translation of the *Categories* by Ishāq b. Hunayn the word 'ayn is replaced by the Persian word *jawhar* and this word becomes the technical term in all later philosophy for all the meanings of *oideia*, substance. But in a less technical sense to express the concrete things the philosophers still frequently use the term 'ayn. When e.g. Avicenna in his *Nadīāt* repeats the Aristotelian statement at the beginning of the *Hermeneutics* that the written words are the signs of the spoken words, the spoken words the signs of what is in the soul, i.e. its representations and concepts, and these representations and concepts in the soul the signs of the things in the exterior world, he gives for the things in the exterior world (in Greek *τὰ πράγματα*) the term *a'yān*. It is interesting to note that Ishāq b. Hunayn in his translation of the *Hermeneutics* translates *τὰ πράγματα* by the term *al-ma'nā*, a literal translation of the Stoic term *σπουδαίονα* or *ἡμετέριον*, "meanings" (these "meanings" are called by the Stoics *πράγματα*—see Sextus Empiricus, *adv. log.* II, 12—but in another sense than that which the term *πράγματα* has in Aristotle). The Muslim philosophers accept from the Stoics the division of the "something", *ti*, in

Arabic *shay'*, (i.e. anything that can be thought of) into two classes, things that exist in the exterior world, and things that exist in the mind, and they use for the former the expression *fī 'a'yān*, for the latter *fī 'aḥḥān* (*aḥḥān* is the plural of *ḥān*, mind) and it is in this opposition of the exterior world to the purely mental entities that the term *a'yān* is specially used by the philosophers. In this sense 'ayn is synonymous with *shay'*, *individuum*, and it can express also the identity of the individual thing. But a common word denoting a concrete individual, like "horse", can signify both a particular horse, e.g. the horse in my stable, and the class "horse", when you say "this is a horse", meaning that this is an animal which possesses the nature, the general characteristics of a horse (according to the Arabian grammarians an *ism 'ayn*, a word denoting a concrete individual is an *ism ḡnā*, a generic word). The philosophers give to this universal character of a thing the name of *māriyya*, quiddity, or *ḥabā*, essence, but in theology and mysticism the term 'ayn is frequently used to express this meaning. And since according to the neoplatonising mystics and philosophers the universals exist eternally in God's mind, these eternal ideas are called by the mystics *a'yān* or *a'yān ḥabā* (*ḥabā* means stable or eternal), whereas the philosophers use different other terms like *ḥabāṭ* and *ma'nā* (some Mu'ta'zilites too employ the terms *a'yān* or *ḥabā* to express the eternal ideas in God's mind). None of the neoplatonising mystics our world is but a dream-world and true reality lies in a world beyond and God is the one truly Real and the ultimate source from which all being and all beings spring, 'ayn in its double sense of the real and of source—for in Arabic 'ayn can mean also source—is used by the mystics to indicate the super-existence of God's deepest essence. In this sense it is rare in philosophy, but we find it in Avicenna, for instance when he speaks in the *Ishārāt* (ed. Forget 205) of those mystics who penetrate to the 'ayn, the contemplation of God's inner nature. Finally it may be remarked that the term 'ayn al-yahī, the contemplation of the evident, can be used in the double sense of "intuition", i.e. the pre-rational sense of intuitive understanding of the philosophical first principles, and the post-rational sense of the intuitive understanding of super-rational mystical truth.

**Bibliography:** see ANṬIYYA; for the mystical use of the term see R. A. Nicholson, *Studies in Islamic Mysticism*. (S. VAN DEN BERGH)

'AYN in the medical terminology of the Arabs, like 'ayw', 'oed', 'Ange' etc. in that of the Europeans, not only refers to the bulb or eye-ball, *Ar, muḥla, baṣr* al-'ayn, but also to the whole of the organs which make up the apparatus of vision, *ḡimā' al-ayn*.

The study of the human eye, for the doctors of medicine and those who wrote on the subject in the Islamic world, constituted one of the most remarkable branches of their science. This branch of knowledge, which is the equivalent of the ophthalmology of the West at the present day, has borne different names at various periods. Thus it was called *kuḥl*, a word which originally designated collyrium (black) of antimony—the pre-eminent medicine and cosmetic in the East—, which was subsequently used in a much wider sense for the "science and art of caring for the eyes"; *ḥakāḥila*, from the same root and used in the same wide sense; *ḥabā al-'ayn*, *ḥabā al-'ayn*, an expression still in use; *ḥabā ramadī* and *'ilm al-ramad*, where

this latter term, which originally only meant "conjunctivitis", now embraces eye diseases of all types.

From the point of view of the history of medicine, this branch synthesises and reflects the evolution of Arab Medicine as a whole. Thus it is that two periods are distinguishable here: the initial period of formation, when the scholars of the East, for the most Christians, translated Greek ophthalmological science into Arabic and used it as it stood; and, secondly, the period of development, during which other scholars systematised this material, perfected it and enriched it by their original contributions. Among the former must be mentioned Yuhannā b. Māsawayh, a native of Dīmalshāpūr and the author of the *Kitāb Ḍaḡḡal al-'A'yān*, and Hunayn b. Ishāq of Hīra (121-283/690-577), to whom the *Kitāb al-'A'yān* (121-283/690-577), to whom the *Kitāb al-'A'yān* has been attributed; and among the latter, 'Alī b. 'Isā (g.n.), also a Christian, of Baghdad (first half of the 3th/11th century), author of the celebrated *Taḡhīrāt al-Kahhān*, and his great contemporary 'Ammār b. 'Alī (g.n.), a Muslim of Mawṣil who practised in Cairo, author of the *Kifāy al-Muḥabbāt fī 'Ilm al-'A'yān*. The works of these four authors must be considered as the cornerstones of Arab ophthalmology.

To give an idea of the originality of Arab thought on this subject, it is sufficient to recall the relationships of cause and effect, which 'Alī b. 'Isā was the first to discern, between trachoma (*ḡhar al-'ayn*, today *ramad ḥabāṭ*, *tarḥūma*, *tarḥūma*) and the conjunctivitis which precede it, on the one hand, and the "cornea panus" (*ḡhar al-'ayn*, *panus-trichiasis*) (*inḥabā al-ḡhar*) which follow it, on the other hand; and in the operation of cataract (*ma'*, *ma' nāzil* fī 'l-'ayn and in the modern language *katarrakt*) the astonishing section of the (soft) crystalline lens performed by al-Mawṣilī, which eight centuries later, was to be adopted in the West and continued down to the present day. New contributions in this special field are to be sought in the treatises on general medicine, like the *Kawān* of Ibn Sīnā, where, for example, we find the term "anatomical" description of the eye motor muscles, as well as of the lachrymal ducts; also in the works of non-medical authors, such as the famous 'aristotele on Optics, the *Kitāb al-Manāṣir*, of Abū 'Alī b. al-Haytham, of Baṣra (died ca. 43/1039), in which this great scholar put forward his rational theory of vision, refuting that of the Greeks' "sight-spirit", inherited by the Arabs (*rūḥ al-baṣar*, *rūḥ baṣarī*, *rūḥ nūrī* etc.). Neither should the numerous minor works on ophthalmology be neglected which appeared everywhere and with great frequency in Islamic countries, some of which are in dialogue form (see the *Kifāy al-Mawṣilī* fī 'l-'ayn of Hunayn) and even in poetic form (see the *Manāṣir* fī 'l-'ayn, author unknown, Vat. Borg. 873). Finally it should not be forgotten that there were oculists who enjoyed great fame, none of whose works on the subject have yet come to our knowledge. Such is the case, for example, of Ishāq al-Jarāḥī (3rd/9th century), who practised in Cairo before moving to al-Kayrawān, where he became one of the most enlightened masters and authors on general medicine of the Middle Ages.

'ĀYIN, "evil eye". Belief in the evil eye is well established in Islam. According to Abū Hurayra, the Prophet said al-ṣayrū ḥāḍir. "The evil eye is a reality" (al-Bukhārī, commentary of al-Kaṣṣāḥ al-Saḥīḥ, viii, 390, 463). It is the evil action of an envious glance which is envisaged by the recommendation given in the Qur'ān, cxiii, 5. Orthodoxy, however, makes the Prophet condemn this belief (Mundtāḥib Kān al-'Ummal, iv, 22; Nihāya li-Ḥadīth al-Faḥḥ, iv, 203). This superstition, universally current, dates from before Islam in the Middle East countries, where it continues to be prevalent. It frequently finds expression both in religious traditions and in popular folklore: "the majority of human beings die as victims of the evil eye", "the evil eye empties the houses and fills the graves", etc. The effect of the evil eye, *ṣayrū bi'l-ṣayrū, ḥāḍir, ḡaḥḡa*, etc. is generally instigated by a desire to harm transmitted by a look pregnant with hate or envy, *ṣayrū, naḡḡa* or *naḡḡa*, but it can be involuntary and result from the naturally injurious power of a strange or staring look *maḡḡa* (Ibn al-Sikkī, *Taḥḡīb al-Aḡlāḡ*, ed. Cheikh, 545-46; al-Muḥarrar, *Kāmil*, 329). Deep-set eyes, blue eyes or eyebrows which meet are reputed to be baneful. Some animals, such as the viper (al-Danīlī, *Hayāt al-Hayawān*, i, 242) are considered as having a poisonous glance. The eye suffices to disseminate the evil. Its power, however, may be coupled with that of the spoken word: evil eye, *fascinum oculi*, and evil mouth, *fascinum linguae*, frequently go together. An unfortunate word or misplaced praise is capable of harming the person to whom they are addressed and of releasing the maledic action. Of all people suspected of possessing the evil eye, the most feared are women, especially old women or those who are unmarried or sterile. But likewise equally all who are ill-favoured or consider themselves placed at a disadvantage by nature. As a corollary, pregnant women, small children and, generally speaking, everything which is beautiful, happy, or precious, is liable to the assaults of envy, and certain circumstances augment the vulnerability of persons and things which are enviable: pregnancy, childbirth, marriage and in general, feasts and celebrations, illness, debility, death of those concerned; loss of livestock, deterioration or destruction of objects or situations; the consequences feared from the evil eye are innumerable. People strive to protect themselves against it or to remedy its calamitous effects. Whether preventative or curative, the prophylaxis of the evil eye is varied (al-Suyūṭī, *Rakma*, 50-58) use of formulas, gestures, fire rites, fumigations; use of salt, alum, horn, metal, etc.; the wearing of phylacteries, amulets, jewels; tattooing. Originally, doubtless the veil worn over the face was one of these means of prophylaxis. The most effective protective symbol is the number five, *ḡhamma* [5, 6] and the figuration of the five-fingers of the hand spread out (LeFebvre, in *Bull. Soc. géogr. Alger*, 1907, 411-417). The ritual attaching to the evil eye, like the belief itself, is very much more a matter of magic and superstition than of religion, even where the formula is derived from orthodox Islam.

'AYN DILFA is a spring in the north of Syria which is of some importance on account of its situation on the road between Antioch and Aleppo, somewhat west of the large ruins of the monastery of Kaṣr al-Baḡdāt. Its source is on the northern slope of the ḡḡab al-Baḡdāt and it runs through a narrow channel cut out in the rock into a well-house (*sāḡḡ*). According to an Arabic inscription, this well-house was built in 877 (1474-1475) by an inhabitant of the neighbouring village, of the name of Maḡlūb b. al-Muḡd. It is highly probable that on account of the spring a settlement already occupied the spot in ancient times. A few remains of buildings from the Christian era, still more from Islamic times, can yet be seen. There are also a few inscribed Muslim tombstones. The place is nowadays uninhabited; it belongs to the people of Semedā. From time to time nomadic Turcomans or Kurds used to camp there in their tents. The spring was of importance for the caravans between Antioch and Aleppo, which often used to rest there.

(E. LITTMANN)

'AYN DJĀLŪT, spring of Goliath, mentioned by the mediaeval geographers as a village between Baysān and Nabulus, in the ḡḡud of Filāṣṡṡ. It stood at the head of the Wādī DJĀLŪT, and is said to have owed its name to a tradition that by it David slew Goliath (cf. A. S. Marmaridj, *Textes géographiques arabes sur la Palestine*, Paris 1915, 152; G. Le Strange, *Palestine*, 354, 461). In the chronicles of the Crusades the neighbourhood is called Tubānā or Tubānī. It first appears mention in ḡḡum. II 578/Sept. 1153, when the armies of Salāḡīn and of the Franks camped there face to face and then separated without an engagement (W. B. Stevenson, *The Crusades in the East*, Cambridge 1907, 232-3; R. Grousset, *Histoire des Croisades*, ii, Paris 1948, 724; S. Runciman, *A History of the Crusades*, ii, Cambridge 1952, 459; K. M. Setton (ed.), *A History of the Crusades*, i, Philadelphia 1955, 599).

'Ayn DJālūt is chiefly known as the site of the famous battle, fought on Friday 25 Ramaḡān 658/3 September 1260, in which a Mongol army, commanded by Kitbuga Noyon, was defeated by a Mamlūk army from Egypt, led by the sultan al-Malik al-Muḡarrāf Kūṡus. The vanguard of the Mamlūk army was commanded by Baybars (1260-1). The strength of the Mamlūk force was estimated at 120,000; that of the Mongols at 10,000 horsemen

(thus the Syrian and Arabic texts of Bar-Hebraeus; Rashīd al-Dīn speaks of "a few thousand"). The Mongol forces and their Christian auxiliaries, after at first sweeping the Mamlūk left wing (or, according to others, vanguard) before them, were set upon and annihilated by the main body of the Mamlūk army. The Mongol general Kitbuga was captured and put to death. Hulekū, infuriated by the defeat, prepared to send a punitive expedition to Syria, but was prevented from doing so by the inner struggle within the Mongol Empire following the death of Möngke Khan (Mangu Khān) in September 1259 (cf. Rashīd al-Dīn, 359).

The Arabic and especially the Egyptian chronicles regard the battle of 'Ayn DJālūt as a decisive victory, which saved the Syyro-Egyptian Empire and ended Islam itself from the Mongol menace. For the first time, a Mongol army had been defeated in pitched battle; the fact that the victors were largely Turkish, and overcame the Mongols by using their own methods of warfare against them, if anything added to the significance of the victory, for it meant that the vitality and energies of the steppe peoples were now being harnessed to the service of Islam (see for example the remarks and verses of Abū ḡhāma, *Tarāḡīm*, 208 and Yānūlī 367; D. Ayalon, in *The Wafāḡiya in the Mamlūk Kingdom*, IC, 1951, 90, has drawn attention to the highly significant comments of Ibn ḡḡāḡḡ al-ḡhar, v, 372, on the rôle of the steppe peoples in rejuvenating and renewing Islam). The Persian and other sources sympathetic to the Mongols tend rather to present the battle as an inconclusive engagement in which a small Mongol force was overwhelmed by vastly superior numbers, who were saved from retribution only by Hulekū's preoccupation with other and more important matters.

The victory by no means ended the danger from the Mongols, who continued to hold Mesopotamia and 'Irāq and to threaten Syria from both north and east. In the event, however, 'Ayn DJālūt was the high water mark of Mongol advance, though it seems likely that the ebbing of the Mongol tide was due to events in the East at least as much as to Mamlūk resistance.

**Bibliography:** the contemporary Egyptian accounts of the battle are those of the two biographers of Baybars, Ibn ḡḡāḡḡ al-Dīn and Ibn 'Abd al-Zāḡir, whose narratives seem to underlie those of most subsequent Egyptian historians. Ibn ḡḡāḡḡ al-Dīn's account of 'Ayn DJālūt is unfortunately not included in the surviving fragment of his work (MS. Soliman 1509, Edinburg; published in Turkish translation only; M. Şerefeddin Yalḡkaya, *Baybars Tarīḡi*, Istanbul 1941), which, however, contains several allusions to the victory. A probably abridged version of Ibn 'Abd al-Zāḡir's narrative was published from the R. M. manuscript by S. F. Sadeque, *Baybars I of Egypt*, Dacca 1956 (12ff., and index). A fuller text of the same book is to be found in Istanbul (MS. Fatḡā 4107). Ibn 'Abd al-Zāḡir is at some points to emphasise Baybars' vital contribution to the victory. Of the later Egyptian accounts, the most accessible are those of Maḡrīṡ (Ṣalāḡ, i, 430 ff. = Quatremaire, *Sultan Muḡarrāf*, i, 104-6) and Abū 'l-Maḡḡḡīn, *Caḡro ed.*, vii, 79. There are also Syrian (Abū ḡhāma, *Tarāḡīm*, 208; Rashīd al-Kaṡṡān al-Sāḡī, see 'T-Fāṡ', *Caḡro* 1948, 207-9; Yūṡuf, *ḡḡay Muḡarrāf al-Zāḡān*, i, Haydarābād 1934, 360 ff., citing Ibn al-Zāḡir, etc.) and 'Irāḡī (Ibn al-Fuṡāḡī, *Al-Rawḡḡḡ al-Dīḡmā*, Bagḡḡād 1351, 344) ac-

counts, as well as brief allusions in Frankish and Eastern Christian sources (*Eracles*, ii, 444; Wm. Tyre Cont. ed. Migne 1044; the Armenian chronicle of Grigor of Akane, ed. R. P. Blake and R. N. Frye, *HJAS*, xii, 1949, 349; Mufaḡḡād b. Abī 'T-Faḡāḡ, ii, ed. and tr. L. Blochet, *Patr. Or. xi*, 447; Bar-Hebraeus, *Chronographia*, Oxford 1932, 419-40; Abū 'T-Faḡāḡ, *Taḡwīḡ Muḡarrāf al-Dīḡḡal*, Beirut 1890, 489; al-Maḡḡīn b. al-'Amīd (ed. Cl. Cahen), *BEL. Or. xv*, 1955-7, 175). The chief Persian source is Rashīd al-Dīn (ed. and tr. E. Quatremere, Paris 1836, 349-352). See further B. Spuler, *Die Mongolen in Iran*, Leipzig 1939, 57; H. H. Howorth, *History of the Mongols*, iii, London 1889, 167 ff.; R. Grousset, *Croisades*, ii, 603 ff.; Runciman, *Crusades*, iii, 312-3; Stevenson, *Crusaders*, 334; A. Waas, *Geschichte der Kreuzzüge*, i, Freiburg 1956, 317; Cl. Cahen, *La Syrie du Nord*, Paris 1940, 710-1. (B. LEWIS)

'AYN AL-DJARR, an ancient and important site in the Bīḡāṡ [q.v.] and an Umayyad residence, the Arab name of which, now pronounced 'Anḡjar, corresponds to the Greek and Syriac *Gerha* and 'In Geru. The main source of the Līṡān, which comes forth at the foot of the Anti-Lebanon, not far from the modern road from Beirut to Damascus, for a long time formed a swampy lake there stretching to Karak Nāḡ, which was only finally drained in the Mamlūk period. The remains of a temple, later converted into a small fort (hence the expression *ḡim Maḡḡal* used at the period of the Crusades), which still dominate the present-day village of Maḡḡal 'Anḡjar, doubtless mark the site of ancient Chalcis of the Lebanon, the capital of a state which extended from Coele Syria to Irtira, before being annexed to the Roman Empire. In contrast, the archaeological remains which exist not far away, in the interior of a vast enclosure furnished with towers, and which the excavations now being undertaken will make better known to us, have been identified by J. Sauvaget with the Umayyad town founded about 95-96/724-725 by the Caliph al-Walīd b. 'Abd al-Malik and built, as is attested by inscriptions and the Aphroditē papyri, with stones from the quarries of Kāḡīd in the Bīḡāṡ and by the use of forced labour. Its character as an agricultural settlement has been inferred from the existence of hydraulic works, contemporary with the ruins, but at what period it was completely abandoned is not known. The Arabic texts, which first speak of the victory there of Marwān b. Muḡammar, in Safar 127/November 744, over the troops of Sulaymān b. ḡḡḡḡ and the passage of the Abḡḡāḡid forces when they occupied Syria, continue to fail to mention it incidentally without giving any precise information as to the actual condition of the old Umayyad town at the time.

'AYN MÜSÄ: (1) A spring at the entrance of the Sik at Wādī Mūṣā (Petra). It was a source of water for a large Edomite site now known as Tawllān, occupied in the 13th-6th centuries B.C. (Nelson Glueck, *The Other Side of the Jordan*, New Haven, 1940, 24). Islamic tradition associates this spring with Kū'rin 2: 57, where Moses strikes a rock with his staff and brings forth twelve springs. This appears to represent a blending of the twelve springs of Elim (Exodus 15: 27) with the striking of the rock at Horeb in Exodus 17: 6. Yāköf (s. v. Wādī Mūṣā) gives the same story repeated later by al-Bayḍāwī (*Taḥrīr*, commentary on Kū'rin 2: 60 according to the Egyptian verse numbering). The twelve springs burst forth from a stout tree which Moses had carried with him and set down on this spot. William of Tyre (*A History of Deeds Done Beyond the Sea*, tr. E. A. Babcock and A. C. Krey, New York, 1943, ii, 144) associates the spot with Exodus 17: 6, which probably represents the then current Crusader tradition. Musil (*Arabia Petros*, iii, Vienna 1908, 330) reports that in his day the spring was venerated by the Ljāḍīyah Arabs because of its association with Moses.

(2) A spring north of al-Kalr in Hawrān, in Syria (René Dussaud, *Topographie historique de la Syrie antique et médiévale*, Paris 1927, 349; Baedeker, *Palestine and Syria*, Leipzig 1912, 163). (3) A small spring near the foot of Qlābal al-Muḥajjam east of Cairo (Les Guides Bleues, *Égypte*, Paris 1950, 253).

'UYUN MÜSÄ: (1) A group of springs rising near Mt. Nebo north of Ma'dāba in Jordan. They give their name to the Wādī 'Uyūn Mūṣā, which drains into the Dead Sea. The springs, which are now used as a water supply for the town of Ma'dāba, probably were associated with Moses already in Byzantine times (F.-M. Abel, *Géographie de la Palestine*, I, Paris 1933, 460). The local Arabs are reported to believe that the springs are inhabited by spirits, to whom the Arabs annually make a sacrifice (Archimandrite Bōlās Salmān, *Khawāt 'Aṣim fi Sharḥ al-Urdun*, Hārīṣ (Lebanon) 1929, 185).

(2) A group of about a dozen springs approximately 12 km. SE of Suq, near the shore of the Gulf of Suq. Al-Makīdī (2nd ed. de Goije, Leiden 1906, 67) mentions them by name, but says nothing further about them. At this spot there exists a small settlement, which formerly carried on trade in turquoise with the Bedouin from Sinai (T. Barron, *The Topography and Geology of Sinai (Western Portion)*, Cairo 1907, 36-37, 101, 212; Léon Cart, *Au Sinai et dans l'Arabie Pétrée*, Neuchâtel 1915, 15-16). (H. W. GLIDDEN)

'AYN SHIMAS is a town in Egypt. 'Ayn Shams is the Arabic name of the ancient Egyptian town of Ōn, which the Greeks called Heliopolis because of its famous sun-temple. A recollection of this cult is contained in the Arabic name ('the spring, or the eye, of the sun'), which must be a popular arabicised form of an old name. In the first centuries of Islam 'Ayn Shams was still, according to some authorities, an important town, and the capital of a district (*khira*), but according to others, a collection of ruins used as a public quarry. The Fīṭmān al-'Aḍī built castles on the spot but afterwards the buildings fell completely into ruins. The extensive ruins, especially the two obelisks (*misallat*) of the temple, stirred the imagination of the Arabs. One of them has been preserved until the present day; the other fell down in 536/1258. It is said to have contained over 200 *hīn* (quintals) of brass. During

the Arab period a statue of a beast of burden with a man on its back still stood between the two obelisks.

The other curiosity of 'Ayn Shams was its balsam-garden, which was cultivated under the supervision of the government. During the Middle Ages the balsam-tree is said to have grown only here, though formerly it had also been a native plant in Syria. According to a Coptic tradition known also by the Muslims, it was in the spring of 'Ayn Shams that Mary, the mother of Jesus, washed the clothes of the latter on her way back to Palestine after her flight to Egypt. From that time onwards, the spring was benedicted, and during the Middle Ages balsam would only produce their precious secretion on land watered by it.

(C. H. BECKER)

'AYN AL-TAMR, a small town in 'Irāk in a fertile depression on the borders of the desert between Anḥāl and Kūfa. It is 80 miles west of Karbalā'. The Arabic name means fountain of dates. It was probably called so because of an abundance of palm trees (Yāköf, iii, 759).

According to al-Kalālī, it was part of the Hīrite kingdom of Dīnāyahma al-Abrāh (al-Tabarī, 759; Yāköf, ii, 378). There Shāḥūr is said to have married Najira, the daughter of the King of Hufra. (al-Tabarī, i, 829; Yāköf, ii, 383; al-Ḥamādī, *al-Buldān*, i, 30). It was probably also a *ṭawāḥid* of the *asān* of Bīkhabūdh al-Aḥā, as it was in the 'Abbāsid period (Ibn Khurraḍḍīh, 8; Kudāma, 236; Yāköf, i, 241, 771).

When the Muslim commander Qāḥlād b. al-Walīd attacked it in the year 12 A.H., 'Ayn al-Tamr was a military post (al-Tabarī, i, 205; al-Balādhūrī, 246) with a fortified citadel (al-Tabarī, i, 205; al-Balādhūrī, 246-7; Qāḥlād devoted and massacred al-Balādhūrī, 246-7; al-Tabarī, i, 204; al-Balādhūrī, 110; Yāköf, iii, 759; Caetani, *Annali*, ii, 261, 940, 991). He captured and enslaved some of its non-combatant inhabitants. These were the first enslaved captives to arrive in Medina (al-Tabarī, i, 206). The sons and grandsons of many of these captives became prominent figures in the military, administrative and intellectual life of Islam (cf. their names in al-Balādhūrī, 247; al-Tabarī, i, 204, 212, 217, ii, 801; al-Balādhūrī, 247; al-Tabarī, i, 204, 212, 352, 357; Yāköf, iv, 807; Aghānī, iv, 3259).

Scanty information about the Muslim conquests indicates that 'Ayn al-Tamr had a Christian population and a church (al-Tabarī, i, 204; al-Balādhūrī, 247; Yāköf, iv, 807), and also a Jewish community and a synagogue (al-Yā'qūbī, ii, 151). But probably the majority were Arabs from the tribes of Taghlib, Namir and Asad, who were sedentary agriculturists.

'Ayn al-Tamr preserved its importance in the Islamic period, not only for its products by which the nomads of Arabia and 'Irāk were supplied, but also for its geographical situation on the routes of communication between the fertile centre of 'Irāk and the Syrian desert. It also commanded the military approaches from the western desert to 'Irāk and especially to Kūfa (cf. al-Ḥamādī, i, 209,

807, 2121, ii, 946, 1352; al-Balādhūrī, 62; Yāköf, iv, 137; Ibn Khurraḍḍīh, 97; Ibn Hawkal, i, 34; A. Musil, *Importance* *Euphrates*, 41, 293-311).

Its importance led the governors of Kūfa to station in it a military force to protect one of the approaches to their *marj* (cf. al-Tabarī, i, 344; ii, 773, 1132, 1945, 1946, ii, 217; al-Balādhūrī, *Annāl*, v, 293).

Its rather isolated position induced some of the Khāridjites to make it a centre for grouping revolutionary forces (al-Tabarī, i, 183, 773; al-Yā'qūbī, ii, 228, 387; al-Balādhūrī, *Annāl*, v, 45; Yāköf, iii, 759).

By the end of the 3rd/9th century 'Ayn al-Tamr was inhabited by the Banī Asad (al-Tabarī, iii, 225). 'Ayn al-Tamr was a fortified town (al-Makrīdī, 117) in the 4th/10th century, a *ṭawāḥid* of the *asān* of Bīkhabūdh al-Aḥā. At this time its products included 14 *bayḍar*, 300 *hurr* of wheat, 400 *hurr* of barley and 45,000 *dirhams* per year (Ibn Khurraḍḍīh, 10; Kudāma, 237). Its lands were considered *ḡhīr* (al-Balādhūrī, 248).

For the period of the decline of 'Irāk from the 6th/12th century onwards, information on 'Ayn al-Tamr is scanty and it is confused with Shūḥḥa, a neighbouring village. It was captured and looted by the Mongols who captured Baghdād ('Azarī, *Tārīkh al-'Irāk bayn al-Bīdāyān*, i, 357). During the turbulent 10th/16th century some of the Bedouins used it for a refuge ('Azarī, *op. cit.*, v, 182).

Gertrude Bell visited 'Ayn al-Tamr and described it as a walled village with a citadel. She mentioned its sulphurous waters, cereals and 170,000 palm trees (*Ammarah to Amarah*, London 1924, 139).

At present 'Ayn al-Tamr is the centre of a district (*nahya*). It has four quarters: Abū Ḥardan, Kaṣr Ṭhamir, Kaṣr al-'Ayn, and Kaṣr Abū Hwaydī. The sedentary population numbers 2144, and the rural and nomadic population is 3181 (1947 Census of 'Irāk).

(SALEN A. EL-ALI)

'AYN TEMUSHENT, a town in Algiers situated 45 m. (72 km.) S-W of Oran, on the road to Tlemcen, and on the site of the Roman city of Albulae and of Kaṣr Ibn Sīnā, mentioned by al-Bakrī in the 5th/11th century (de Slane's trans., 1913, 146, 160) to the S-E of the plain of Cillia, and it became part of the territories belonging to Philaretus. First, a little before the arrival of the First Crusade the Saljūqs took Tarsus, Mijsina and 'Ayn Zarba (Michael the Syrian, iii, 173, 179). Tancred, nephew of Bohemond, conquered Cilicia in 1097 and Bohemond, installed in the principality of Antioch, took possession of it and also of Tarsus, Adana and Mijsina in 1098. These places, the object of a dispute between Bohemond and the Byzantines, were recaptured by the latter, but the Armenian Thoros I, a descendant of Roupen, who was established in the mountains to the north of Sis, and who reigned from 1100 to 1129, took Sis and Anazarba from the Byzantines (*RHC Arm.* i, 499). During the reign of Leo I, brother of Thoros, Bohemond wanted to establish himself again in Cilicia and marched on 'Ayn Zarba, but he came into conflict with the Dānişmandids of Cappadocia who also wanted the country, and was killed in 1130. After Leo had conquered Tarsus, Adana and Mijsina in 1132-33, the Byzantines invaded Cilicia in 1137 and John Comnenus recaptured 'Ayn Zarba and took Leo prisoner (Kamāl al-Dīn, ed. S. Dabab, ii, 263), but in 1137 Thoros II, son of Leo, regained 'Ayn Zarba as well as the other large towns in Cilicia. Kūḡī Arslān II of Konya, at the instigation of his ally Manuel Comnenus, attacked 'Ayn Zarba without success. In 1159

the first element of the name *Asa* for 'Ayn, spring; cf. Sachau, in *ZA* VIII, 98. It acquired a certain importance from the time of Hārūn al-Raḡhīd who organised the frontier for defence. In 180/796 he rebuilt and fortified it, and settled people from Khurāsān there (al-Balādhūrī, 172; Ibn al-Falāh, 113; Ibn Shaddād, in Ibn al-Shūhba, *al-Durr al-Muntahab*, 183). In 212/827 'Abd Allāh b. Ṭāhir, governor of the region between Rakka and Egypt, settled Africans from Egypt in the town (Michael the Syrian, iii, 60). In 220/835 al-Mu'taḍī brought in some Zottī (al-Balādhūrī, *loc. cit.*, al-Ma'qūdī, *al-Tawḥīd*, 351) were the object of a Byzantine attack in the same year, and of another in 247/855 when they were captured with their families and their buffaloes and carried off to Constantinople (al-Tabarī, iii, 1169 and 1246; cf. Vasiliev, *Byzance et les Arabes*, Fr. edit., i, La dynastie d'Amorium, 126 and 224). In 287/900, the eunuch Wasīf, who wanted to cross from 'Ayn Zarba into Byzantine territory was captured by the troops of al-Mu'taḍī to the north of the place.

'Ayn Zarba is included by the Arab geographers among the frontier towns of the Dughlūr (Ibn Khurraḍḍīh, 100; Kudāma, 229, 231; Ibn Rusta, 107; al-Yā'qūbī, 352 etc.). It flourished mainly in the 4th/10th century. In his book on the Dughlūr, Ibn Hawkal, 121, described it as a town like those of the *ghawr* (probably because of the similarities of climate and products), in the middle of a plain where palms grow, and surrounded by fertile lands (cf. al-Isfahānī, 55, 63). It was fortified by the Hamdīdī Sayf al-Dawla who, says Yāköf, ii, 701, spent 3 million *dirhams* on it. Nevertheless it was taken by Nicephorus Phocas, to whom it surrendered at the end of the year 359/962 (see the detailed description of the siege and the ravages of the Byzantines, particularly the felling of 20,000 palm trees, in Ibn Miskawayh, ii, 190-1; for other references see M. Canard, *Hist. de la dynastie des Hamdānides*, i, 866-8). The Muslims were expelled and emigrated to Syria. The town remained in Byzantine hands until the time when the Armenians, expelled from Armenia, occupied it together with the other towns of Cilicia, and it became part of the territories belonging to Philaretus. First, a little before the arrival of the First Crusade the Saljūqs took Tarsus, Mijsina and 'Ayn Zarba (Michael the Syrian, iii, 173, 179). Tancred, nephew of Bohemond, conquered Cilicia in 1097 and Bohemond, installed in the principality of Antioch, took possession of it and also of Tarsus, Adana and Mijsina in 1098. These places, the object of a dispute between Bohemond and the Byzantines, were recaptured by the latter, but the Armenian Thoros I, a descendant of Roupen, who was established in the mountains to the north of Sis, and who reigned from 1100 to 1129, took Sis and Anazarba from the Byzantines (*RHC Arm.* i, 499). During the reign of Leo I, brother of Thoros, Bohemond wanted to establish himself again in Cilicia and marched on 'Ayn Zarba, but he came into conflict with the Dānişmandids of Cappadocia who also wanted the country, and was killed in 1130. After Leo had conquered Tarsus, Adana and Mijsina in 1132-33, the Byzantines invaded Cilicia in 1137 and John Comnenus recaptured 'Ayn Zarba and took Leo prisoner (Kamāl al-Dīn, ed. S. Dabab, ii, 263), but in 1137 Thoros II, son of Leo, regained 'Ayn Zarba as well as the other large towns in Cilicia. Kūḡī Arslān II of Konya, at the instigation of his ally Manuel Comnenus, attacked 'Ayn Zarba without success. In 1159

Manuel recaptured it with the other places in Cilicia, but Thorsos II took it again in 1162 (cf. concerning these events, F. Chalandon, *Les Comnènes*, II, 113-6, 426-30 and R. Grousset, *Hist. des Croisades*, II, 51, 86, 333, 399, 560).

The Rupenians kept Cilicia until the 14th century. From 1266 the Mamlūks of Egypt made numerous invasions into the kingdom of Little Armenia (see the articles ARMENIA, CILICIA, MYSTRA, SLS); during one of them the region of 'Ayn Zarba was pillaged (in 1279, Bar Hebraeus, *Chronographia*, 462). Finally in 823 A.H. = 776 A.H. = 1374 A.D., in the reign of Malik Aghra Shāhān, Cilicia was conquered, 'Ayn Zarba destroyed, and Leo led into captivity in 1375 (see *KHC* Arm. I, 686 and 719). After this the town lost all importance. Like the rest of Cilicia it passed into the hands of the Turkoman family of Ramadān-oglu in the 13th century and then to the Ottomans in the 16th.

In the 14th century the name of the town was corrupted into Nāwārā (cf. Abu 'l-Fidā', II, 2nd part, 29). To-day the place is in ruins and is known as Anavara.

**Bibliography:** In addition to the sources mentioned in the course of this article, see Le Strange, 129; Ritter, *Erkunde*, XIX, 56; G. Schlumberger, *Un empereur byzantin au X<sup>me</sup> siècle*, *Niephore Phocas*, 191 ff. (M. CANARD)

**AYNABAKHTĪ**, Turkish name for Lepanto, or Naupaktos, in Greece. It is on the Gulf of Corinth, has a picturesque position, but is—these days—an impoverished small town, called Epaktos by the people and Lepanto by the Italians. It is surrounded by crumbling walls which date from the times of Venetian rule, and is dominated by a fortress. In the Middle Ages, Aynabakhtī ruled over the Gulf of Corinth, and in 1407 it came under Venetian rule (cf. Vitt. Lazeari, *L'acquisto di Lepanto*, 1407, in: *Nuovo Archivio Veneto*, XV (Venice 1898), 267-833; in 1485 it was unsuccessfully besieged by the Ottomans, but was taken by them in 1499. Don Juan of Austria (at the age of 20) won a victory near the Osa island on 7 Oct. 1571 in a very bloody sea-battle, in which he commanded 250 ships (partly Venetian, partly Spanish), supported by the Pope, and met a Turkish fleet of equal strength of which he sank 200 vessels. The town remained the seat of a Turkish Sandjak-Bey until it was once more conquered by the Venetians in 1687, who retained it until the Peace of Karlovac (28 Jan. 1699). After this it became Turkish again, and on 12 March 1829 it became Greek. Opposite the Bay of Aynabakhtī, the Gulf of Corinth narrows to a width of 1½ m. (2 km.). The fortifications erected here by the Venetians, called Kāstro Moras in the south, and Kāstro Roumelias in the north, were formerly known as the Small Dardanelles, but have long fallen into ruins. Today, the town has about 2000 inhabitants and is the seat of a bishop.

**'AYNĪ**, HANAN EFENDI AL-SAYYID HANAN B. HANAN AL-'AYNĪ, one of the most celebrated poets of the reign of Mahmūd II, born at 'Aynṭāb in 1180/1766 and died at Constantinople in 1253/1837. Of very humble origins, he left his native town in 1780, travelled about Anatolia for ten years and settled in Istanbul, where he studied at the madrasa of Sütlü Aynal; after holding various appointments in the offices of the administration, in 1831 he became professor of Arabic and Persian in the Chancellery of the Sublime Porte. His poetry caused Sütlü Mahmūd II to look on him with particular favour, and to grant him pensions and honours. On his death he was buried at the Mawlawi monastery at Galata. His contemporaries did not have a very high opinion of him, and have left us a picture of him as having been very much a courtier in outlook, with a love of luxury and money, and profoundly egotistical. Though belonging to the Mawlawi sect, he was in constant communication with members of the Nakshbandi sect, who exerted a strong influence over him.

Works: *Najm al-Djawākir* (1236/1820-1), Turkish, Arabic and Persian dictionary; *Nawāṭ-nāma*, a *madḥ* on the destruction of the Janissaries; *Kulliyāt* (1238/1822), comprising the *Diwān*, which contains *ḥādisas* and encomia written for the Sütlü Selim III and Mahmūd II, *ghazals*, stanzas, chronograms and *mathnawis*, a résumé of his philosophical reflections on the life of man from the Creation. It cannot be said that 'Aynī displayed either great poetic temperament or great literary culture.

**AL-'AYNĪ**, ARŌ MUHAMMAD MAHMŪD B. AHMAD B. MUḤA BADR AL-DIN, was born 27 Ramaḍān 762/22 July 1361, at 'Aynṭāb, a place situated between Aleppo and Antioch. He belonged to a family of scholars (his father was a *hāfi*) and began his studies at an early age, first in his birthplace and then at Aleppo. When he was 29 years old, he visited Damascus, Jerusalem and Cairo. He was initiated into the mystical doctrines of Sūfism in the latter town and for a time entered the darwīsh monastery of the Barkūbiyya, which had recently been founded. After making several journeys to Damascus and to the town of his birth, he established himself finally in Cairo, where he was appointed *mukhtasib* in 801/1398-1399, during the reign of the Sütlü al-Malik al-Zāhir; he was several times dismissed and re-appointed, and, in 804/1400-1, he succeeded in obtaining the much envied post of inspector of pious foundations (*naẓir al-aḥḥās*). On the accession of the Sütlü al-Malik al-Mu'ayyad Shāyikh (815/1412), he was disgraced. However, shortly after he was again in favour and was again appointed to the office of *mukhtasib*. His knowledge of the Turkish language, moreover, contributed to making him

*persona grata* with the rulers of his time, the Sütlü al-Mu'ayyad, al-Malik al-Zāhir Tatar and al-Malik al-Aghra Barsbay. He translated al-Kudūrī's legal treatise into Turkish for Tatar; he read his Arabic chronicle, translating it orally into Turkish as he went along, to the Sütlü al-Malik al-Aghra in the long and frequent interviews he had with him. For the rest, the one-time *Sūfi* of the Barkūbiyya, now become a perfect courtier, composed panegyrics in honour of his masters (a *Life of Mu'ayyad*, a *Eulogy of al-Malik al-Aghra*). Appointed in 829/1425-6 chief *hāfi* of the Hanafis, he occupied this post for 12 consecutive years. In 846/1442-3, he even succeeded in obtaining the offices of *mudarris*, inspector of pious foundations and chief *hāfi* of the Hanafis, a unique achievement according to his biographers. In addition he was professor at the Mu'ayyad *madrasa*. He lost favour in 853/1449-50 and died two years later (4 Dhū 'l-Hijja 855/28 December 1451). He was buried in the 'Ayniyya *madrasa*, which he had founded and where, later on, another commentator of al-Buḥārī, al-Kaṣṭalānī, also found his resting place.

The life of al-'Aynī affords a most interesting testimony on the relationships of the scholar class with the Mamlūk Sütlūs. This scholar took an active part in the intellectual movement of his century and was in contact, though on rather bad terms, with two of the most outstanding men in Muslim sciences of the period, al-Maḥrī and the Shāyikh al-Islām Ibn Ḥajar al-Asḥkalīnī; he supplanted the former in the office of *mukhtasib*, thus incurring his hatred; he sustained a very lively argument against the latter concerning his commentary on the *Ṣaḥīḥ* of al-Buḥārī.

Al-'Aynī's works are very numerous; some of them are in Turkish, though the majority are in Arabic. The three best known are: (1) his general history called *'Iḥd al-Diyār fī Ta'riḥ al-'Alam al-Zamān* (an extract in *Recueil des historiens des croisades*, *Hist. or.*, II, 183-254); (2) his commentary on the poetical examples cited in four commentaries of the *Alfiyya* of Ibn Mālik, entitled *al-Mahḥid al-Nakhiyya fī Shārh Shāwḥid Shāriḥ al-Afiyya* (printed in the *Ḥaṣṣa* of the Kara-Koyunlu, master of al-Buḥārī, Būlak 1299, 4 volumes); (3) his great commentary on the *Ṣaḥīḥ* of al-Buḥārī, entitled *'Umdat al-Kāfi fī Shārh al-Buḥārī* (printed in Cairo 1308, and Constantinople 1309-1310, 11 volumes); in this last work, al-'Aynī shows proof of a certain method, which contrasts with the usual confused disorder prevalent in the work of Muslim encyclopaedists. In the study of each *ḥadīth* he proceeds in the following order: connection between the *ḥadīth* and the chapter heading; study of the *isnād*, of its peculiarities and its authorities; enumeration of other works or other chapters of the *Ṣaḥīḥ* where the *ḥadīth* occurs; study of the literal sense; study of the juridical or ethical rules which can be deduced from the *ḥadīth*.

**'AYNṬĀB** (Arm. Antep, Lat. Hantab, to-day Antep or Gaziantep since 1921: ethnically 'Aynī and also 'Sasabī, see 1202 *Nights*, Night 864; Cairo edition) important town, chief place of a vilāyet in the south-east of Anatolia, with 50,065 inhabitants (1935). The vilāyet has five *hazas*: Gaziantep, Kilis, Nizip, Ishahiya and Pazarcik.

The town is situated on the upper Sajdır, a tributary of the Euphrates, near the junction of two important roads, one running north-south from Mar'ash to Aleppo, with a fork just south of Mar'ash to Malatya; the other east-west; the latter runs from Diyarbakir, Urfa (Edessa) and Bingöl on the Euphrates, and, after following a short section of the Mar'ash road just outside Gaziantep, branches off towards Adana. Secondary roads also diverge from Gaziantep, one to Besni (Bahasn) to the north-east, the other to the Syrian frontier in the south-east. A new railway line links, through Gaziantep, the Adana-Malaya line to the Bagdad line, thus avoiding the *detour* into Syrian territory via Aleppo. Gaziantep is 55 km. from Bingöl, 45 from the Syrian frontier and 100 from Aleppo.

The region of 'Aynṭāb has always been the hub of important routes, but it was Doliche (Dulūk, now Dülükbaba), a little to the north-east, which in ancient times took the place of 'Aynṭāb, and the latter, which was probably the Diha of Ptolemy, the Tyba of Cicero, was only a dependency of it. It was not until Dülük had been taken by the Byzantines in 331/662 under the Hammadīd Sayf al-Dawla that 'Aynṭāb began to assume the importance lost by Dülük, with which Yāköf wrongly identifies it. On the eve of the First Crusade it was part of the domain of the Armenian Philaretus. It was allotted in fee, with Tell Bishrī, to Joscelin of Courtenay, vassal of Baldwin of Le Bourc, count of Edessa, then to his son Joscelin II. After the capture of Joscelin II by the troops of Nūr al-Dīn in 1150, it was ceded by the Franks, together with the rest of the region, to the Byzantine emperor Manuel Comnenus, but in 1151 the Saljuḳids of Konya, Ma'sūd, annexed it. After his death in 1153, it was taken by Nūr al-Dīn. It was from then on part of the province of Aleppo and was an advance post, first for the Ayyūbids and then the Mamlūks, against the Saljuḳids and the Armenians. It was temporarily occupied by the Mongols in the course of their expeditions against northern Syria in 1271 and 1286. Taken in 1400 by Thaur, it was then annexed by Karā Yusuf of the Turkoman dynasty of the Kara-Koyunlu, master of the two Iraks, and then it passed to the Turkoman dynasty of the Dhū'l-Kadr, who submitted to the Ottomans in the 16th century. It was from then on part of the Ottoman empire, and was only temporarily detached to Egypt in the time of Muhammad 'Alī, between 1832 and 1840. At the end of the First World War, 'Aynṭāb was occupied by the English in 1919, then by the French until 1921.

Before the First World War 'Aynṭāb contained a large proportion of Armenians, nearly a third of its total population. It was also the centre of an American mission which had a college there. The region is also the centre of the preserve or must of grapes called *pehmet*. It was a stronghold with its citadel towering on a great mound of which the ruins are still visible.

Grosset, *Hist. des Croisades*, 1934-6, 49, 399, 402, 296-7, 299 ff., 302 ff., 305-7, 310, 367, 369, 371, 373, 375, 377, 379, 381, 383, 405, 705. For the fighting round 'Aynṭab in 1920, see André, *La vie militaire au Levant*, Paris 1923, — see also the article *Aynṭab* in *LA*, which lists the Turkish monographs on the town.

**AYT**, a Berber word meaning "sons of", the singular of which, *ay* (and *war*, *ay*, and *ayt*, *i*) appears in compounds and before proper nouns. *Ayt* consists of a suffix of number 1, a complementary element *a* and the radical *ayt* sonant *s* palatalised as the second element of a diphthong; it is known to most of the Berber dialects, which use it either in compounds (thus: *ayt-na* "sons of mother = brothers"), or before a proper noun to indicate a tribe (*Ayt Idag*, *Ayt Wargaw*, etc.), in the same conditions as the Arabic *ibn* ("son of") or *Awlad* ("Offspring"); in the more evolved dialects, *ayt* tends to be replaced by these Arabic terms, but it is still very prevalent in the more conservative dialects (particularly in Morocco, where, however, in the Sūs, it is challenged by a composite *id-aw*: *id-aw Samāil*); in the spirant dialects (Rif, Kabylia, etc.), the evolved form *ah*, from which the actual radical has disappeared, has replaced *ayt* (*Ah Imasne*, *Ah Iratou*, etc.). In Touareg, *ayt* is very prevalent in its primary function (see Ch. de Foucauld, *Dict. touareg-français*, Paris 1931, ii, 1440 ff.), but in the names of tribes, although it is known, it disappears before *Kgl* (Ch. de Foucauld, *Dict. abrégé touareg-français des noms propres*, Paris 1940, *passim*).

(CH. PELLIAT)

**AYWALIK** (Greek Kydonia), small town on the Aegean coast of western Anatolia. Situated on a peninsula in the gulf of Edromit, 39° 16' north, 26° 40' east, opposite the island of Mytilene (Midilli). It is the capital of a *haya* of the same name in the *sulṭayt* of Balikesir [q.v.]. In 1945 it had 13,650 inhabitants (V. Cuiet gives the number 20,974—largely Greek Orthodox—for the end of the last century), and the *haya* 24,742. There is a small group of islands in the gulf, called the Yund Adalar. In antiquity known as Helatonnesi. Aywālīk was completely destroyed in the Greco-Turk War of Independence (1919/1921), but soon regained its former prosperity. Following the agreement between Turkey and Greece (30th January 1923) to exchange minorities, the Greek population—which had hitherto formed the greater part of the inhabitants—left, and was replaced by returning Turks from Midilli, Crete and Macedonia. Today the population is exclusively Turkish and Muslim.

**AYWĀN** (see IWĀN).

**AYWAZ**, 'AYWĀD. (1) A term applied to the footman employed in great households in the later

Ottoman Empire. They were generally Armenians of Van, sometimes Kurds. A *hukm-i ghurī* to the *qavushbashi*, dated Rabi' I 1164/January-February 1751, speaks of "the Armenian *ghumms* who have for some little time been employed in the houses of the *ridāfī* *dawlat* 'alīyāye" and who drink wine and steal in their places of employment and evade payment of *ghīyāye*; henceforth Armenian and Greek *ghumms* are not to be present in the houses of the great, but are to be replaced by Muslims (Ahmet Refik, *Hicri on ihinci asrda Istanbul hayati*, Istanbul 1930, 271). To what extent Greeks were in fact so employed is not clear. This order could have had no lasting effect, for an *aywaz* called Serig, an Armenian of Van, is one of the stock figures in the *Isaragū* shadow-plays: in modern Arabic he is known as 'aywāz, and has a wife, Umm Ma'wāza (A. Barthélemy, *Dictionnaire Arabe-Français*, Paris 1935-54, 562, 567).

The duties of the *aywaz* included waiting at table, lighting and stoking the *mangal*, filling and cleaning the lamps, and doing the shopping for the household (*baṣara giden* in the *hukm* quoted above). There is reason to suppose that this last duty was sometimes a source of profit to both servant and tradesman: *aywaz kasap hep bir kasap* ("aywaz and butcher; it all amounts to the same") is still a Turkish saying used of two identical things. A senior *aywaz* who acted as steward was entitled *aywaz khaḡyā* (*kahḡyā*).

The usual dress of an *aywaz* was a purple jacket, waistcoat and trousers, variously coloured woolen stockings and black shoes, with a white towel over the shoulders, a broadstriped apron, and a fez surrounded by a turban.

Pakalā (see Bibliography) states that certain *meu-servants* in government offices were also called *aywaz*, and that there was an *aywaz* in the Foreign Ministry "till recently", whose job was to clean the carpets.

The origin of the word is dubious: it is thought to be a corruption of the Arabic *'awḡad* (so *LA*; see Bibliography); the plural *a'wāḡid* would seem a more likely etymon, on formal grounds, though 'aywāz is the form taken by the Arabic *'awḡad* in the dialect of Gaziantep (Ömer Asım Aksoy, *Gaziantep ağız*, Istanbul 1945-6, iii, 60). Either way, the connexion of ideas is hard to see.

(2) *Ay'waz* ('*aywāḡ* or '*awḡad* *khaḡyā*) is the name of a leading character in the *Kürdū* folktales: he is the son of a butcher (from Georgia, Urfa, or Ösküdar in the several versions), who is kidnapped by *Kürdū* and eventually becomes his most valiant follower (see Pertev Nallı, *Kürdū destanı*, Istanbul 1931, 140001; and Pertev Nallı Boratav, *Halk hikâyeleri ve halk kültürleri*, Ankara 1946, Index s.v. *Ay'waz*).

**Bibliography**: *LA*, article *Ay'waz*, by Sabri East Siyavuşgil, from which the present article is largely drawn, as is the article *Ay'waz* in M. Z. Pakalā, *Osmanlı tarih deyimleri ve terimleri sözlüğü*, Istanbul 1946-56. (G. L. Lewis)

**AYYĀM AL-'ADJŪZ** "the days of the old woman". In the Islamic countries bordering on or near to the Mediterranean, certain days of recurrent bad weather, generally towards the end of winter, are called "days of the old woman". This expression, which is old, is also to be met with in contemporary folklore. It refers to a period of variable duration, from one to ten days, though more frequently of one, five or seven days duration. Its place in the yearly cycle varies according to the country. There is only

one reference mentioning the winter solstice (see R. Basset). It often involves the last four (or three) days of February and the first three (or four) days of March (months of the Julian calendar or their equivalent): this is the case with the Turks, in Syria and the Lebanon and in Egypt. These seven days each have a special name: *Sin*, *Shonah*, *Wahr*, *Āmir*, *Mu'tamir*, *Mu'allil*, *Mu'til* al-*Īḡar* (var. *Mukhl al-ḡāḡ*); if there are five days, the fourth, fifth and sixth names are omitted: the study of these eight names has still to be undertaken (see an interpretation in R. Basset). In the West, this seven day period at the end of February and the beginning of March bears another name, and it is the last day of January or the first of February which is connected with the legends about the "old woman", though it is rarely called "day of the old woman". In point of fact, this appellation, even in the East, has numerous variants based on Arabic, to which must be added, for the West, the Berber variants: 1—"days of the old woman"; or indeed "cold of the old woman" (Turkey, Persia, Syria, Lebanon, Egypt); "the old woman" (Berber Morocco); 2—"the borrowed day or days" (Syria, Lebanon, Kabylia, Northern Morocco); 3—"cold or bad weather or period of the goat" (Egypt, Tunisia, Algeria, Morocco). These various expressions are almost always connected with a legendary commentary in which an old woman is the main actor; an old woman dead from cold, an old woman predicting a cold spell, an old woman killed by the wind when the people of 'Ad were exterminated, in the case of the old texts, and, as regards contemporary folklore, in the majority of cases, a story about the old woman and her call, her goat or her flock, combined with the legend of the borrowed days, explaining why February has only 28 days (hence the expressions 2 and 3 above). This legendary old woman seems to come from remote ages. No doubt this tradition should be linked with those existing in the countries of Europe and which concern certain meteorological phenomena, certain place names and perhaps certain themes of folklore involving an old woman.

**AYYĀM AL-'ARAB**, "Days of the Arabs", is the name which in Arabian legend is applied to those combats (cf. *Lisān*, s.v. *ayyam* viii, 439, 1 according to Ibn al-Sikkī) which the Arabian tribes fought amongst themselves in the pre-Islamic (some-

times also early Islamic) era. The particular days are called for example *Yawm Bu'āḡh* = "Day of Bu'āḡh", or *Yawm Dhī Kār* = "Day of Dhī Kār". Their number is considerable. Many of them however are not commemorative of proper battles like the "Day of Dhī Kār", but only of insignificant skirmishes or frays, in which, instead of the whole tribes, only a few families or individuals opposed one another. The Arabs themselves sometimes noticed this fact. Al-Zuhayr b. Ḥakkar for example, when speaking of the combats between the Aws and *Khazraj* tribes, observes that only on the day of Bu'āḡh a proper battle had been fought, and that the remaining days the fight had been limited to throwing of stones and beating with sticks (*Aḡḡal*, II, 162, l. 12; this passage was evidently derived from Zubayr's account of the combats between the Aws and *Khazraj*, which is mentioned in the *Fihrist* I, 110). The number of these combats, handed down by tradition, has increased but increased by the fact that a great many were called by different names after the settlements, well-springs, hills etc., near which they took place. Consequently one and the same occurrence has been recorded in various places under different names.

The course of events on each individual day follows a somewhat similar pattern. In this respect what has been said by Wellhausen (*Sitzansatz und Vorarbeiten*, iv, 28 ff.) about the particular combats between the Aws and *Khazraj*, applies to the Ayyām in general. At first only a few men come to blows with one another, perhaps in consequence of a border dispute, or some insult offered to the protégés of a man of influence. Then the quarrel of a few grows into the hostility of whole races or even of entire tribes. They meet in battle. Bloodshed is generally followed by the intervention of some neutral family. Peace is soon restored. The tribe which has lost fewer men, pays to the adversary the price of blood for the surplus of dead bodies.

The accounts of the Ayyām, written in good old prose, together with the ancient poems, supply excellent information concerning conditions before Islam. They especially afford us an insight into the chivalrous spirit, by which the old Arabian warriors were inspired. Popular memory kept the recollection of these heroes alive for centuries. Hence similar subject-matter to that found in the Ayyām often occurs in later popular romances, drawn out. It is true, in legendary fashion. One example may suffice: Zīr, a hero of the *Siyar Banī Hāḡl* is none other than Muḡalīl, brother to Kulayb Wa'īl, who acts a leading part in the Basūs war between the Bakr and Taghlib tribes (Muḡalīl is already called al-Zīr = "the visitor of women" in *Aḡḡal* IV, 143, 13).

Tradition affirms (cf. Ibn 'Alād Rabbī, *Fihrist*, Cairo 1302, iii, 61 towards the end), that Muḡalīl's companions already discussed the events of the *Dhāḡhiyya* in their assemblies (*maḡāḡis*). Consequently the Ayyām al-'Arab afforded to an early period a favourite subject of study at the *Aḡḡarīyyān*, i.e. traditionists, who were engaged on the *Aḡḡar al-'Arab*, the old Arabian tales, amongst which the Ayyām are included. In the *Fihrist* (*mabḡis* iii, *ḡam*) several of these authors are mentioned as having written narratives of particular battle-days or of all of them. None of these works on the Ayyām has come down to us in its original form; but considerable extracts by

subsequent writers are extant. Most of these have borrowed from Abū ʿUbayda (d. 210/825). Of his work on our subject only the title is mentioned in the *Fihrist* (i, 53 ff.). Something more concerning him is reported by Ibn Khallikān (ed. Wüstenfeld, no. 741, who is followed by Hādījī Khālifa, i, 499 no. 1513 s.v. *ʿUbayd al-ʿArab*). According to these authorities Abū ʿUbayda wrote two books on the Ayyām, a shorter one describing 75 days, and a more extensive one, in which he treats of 1,200.

The information concerning the Ayyām which later writers have preserved, is partly given in scattered bits, and partly in entire chapters in proper sequence. Instances of the former are found in al-Tibhī's *Ḥawāṣi* commentary on the *Kutāb al-ʿAghāni*, where they are inserted by way of explanation of events alluded to in the ancient verses, in the collections of proverbs, and in the works on geography (al-Bakrī, *Yāqūt*). Examples of the latter are contained in the *ʿIhd al-Farid* of Ibn ʿAbd Rabbihī (iii, 61 ff.), in al-Nuwayrī's encyclopaedia *Nihāyat al-ʿArab fi Funūn al-ʿAdab* (fann v, *ḥim v*, *ḥabā v*), and in al-Bakrī's historical work *al-Kāmil fi Taʾrīkh* (i, 307-327).

The account in the *ʿIhd* was probably based on the minor work of Abū ʿUbayda. It is very concise, often to such an extent as to obscure the meaning, which can only be ascertained by comparison with more detailed accounts by other writers. Al-Nuwayrī has—as apart from details—copied the whole chapter on the Ayyām from the *ʿIhd*. Ibn al-ʿAdīb has tried to arrange the separate "Days" in chronological order, in accordance with the character of his history. His account goes into greater detail than that of the *ʿIhd*. A great deal of it must doubtless be traced back, either directly or indirectly, to the larger version of Abū ʿUbayda's work; much also to other sources all of which cannot be retraced.

Finally, it should also be noted that al-Maydānī treats of the Ayyām al-ʿArab in the 29th chapter of his *Majmaʿ al-ʿAmāl*. His narratives are extremely short, but very useful for quick orientation. He restricts himself as a rule to giving the pronunciation of the name, explaining its meaning and enumerating the tribes which engaged in the battle. In this way 132 pre-Islamic days are dealt with by al-Maydānī. In addition to those, 88 Islamic days are mentioned enumerated in a second section of that chapter. For further bibliography cf. E. Mittwoch, *Prodica Arabum pagorum* (*Ayyām al-ʿArab*) *quomodo litteris tradita sint* (Diss.) Berlin 1899; C. L. Lyall, *Ibn al-Kalbī's account of the First Day of al-Kalāb*, in *Orientalische Studien* (Nöldeke-Festschrift) 127-134; W. Cackel, *Ayyām al-ʿArab*, in *Islamica*, iii, Suppl. (1939), 1-99; I. Lichtenstädter, *Women in the Ayyām al-ʿArab*, London 1935. (E. Mittwoch)

**ʿAYYĀR** (see *ʿayyār*).

**ʿAYYĀR**, literally "casual, tramp, vagabond"; Arabic pl. *ʿayyārān*, Persian pl. *ʿayyārān*. From the 9th to the 12th century it was the name for certain warriors who were grouped together under the leadership (s.v.) in Iraq and Persia, and gradually also in Transoxiana, similar to the *ḥabāḥ* (s.v.) in Syria and Mesopotamia, and by the *rimān* (s.v. *ARM*) in Anatolia. Occasionally, the term is used to mean the same as *ṣayfīn* (v. *FATĀ*). Thus one of their leaders might sometimes be referred to as *ṣar-ʿayyārān*, and sometimes as *ṣar-ṣayfīn*. On occasions they appeared as fighters for the faith in the inner Asian border regions, on others they formed the opposition party in towns and came into power at times of

weakness of the official government, when they indulged in a rule of terror against the wealthy part of the population, as they did, for instance, in Baghdad in the years 1135-44.

It is perhaps of interest, concerning the attitude of the *ʿayyārān*, that in the *Kāshī-nama* (written in 1751/1082), or *Andar-nama*, ed. R. Levy, 122, li. 13-143, l. 4; trans. 248, there is mention of rivalry between the *ʿayyārān* of Marw and those of Kūhistan over the *ḥawāṣi* (*djūmānārdī*) being resolved by virtue of "juridical expedients" (*ḥajal* [s.v.]). In Sūfi literature there is mention of a Sūfi by the name of Nūḥ al-ʿAyyār al-Nisābūrī as a representative of the *ḥawāṣi* (cf. R. Hartmann in *ZDMG* 74, 1918, 157; and *idem*, in *Der Islam*, 8, 1918, 201 ff.; Taeschner in *Der Islam*, 24, 1937, 59 ff.). At any rate, a distinction was made between the *ʿayyārān* and the Sūfis as far as the *ḥawāṣi* was concerned. In this connection, the following remark is of some interest: Hujwiri (d. 465/1072) mentions that this very Nūḥ al-ʿAyyār has said that the *ḥawāṣi* of the *ʿayyārān* consisted in their wearing the *murādā* of the Sūfis, in other words that they behave like Sūfis and keep the holy law, the *ḥajal*, whereas the *ḥawāṣi* of the Sūfis of the Māmalūk persuasion (see *MAĀLAWATIYYA*) consisted not in wearing any external marks, but in keeping the mystical spirit (*ḥabīb*). (The *Kashf al-maḥjūb* . . . by ʿAlī . . . al-Hujwiri, transl. . . . by R. A. Nicholson, Leiden and London 1911, 183; *Kutāb al-Kashf al-maḥjūb*, ed. V. Schukrovskij, Leningrad 1926, 222, lines 10-18; Fackl al-Dīn ʿAtīk, *Tadhkirat al-Ayyār*, ed. R. A. Nicholson, i, 332, lines 9-16). The same Nūḥ al-ʿAyyār defines the difference between the two *ḥawāṣi* by saying that the one of the *ʿayyārān* consists in faithfulness to the spoken word, whilst that of the *ḥawāṣi* to the spirit. This report first appears in Ibn Dīnawarī (13th/11th century) (Fr. Taeschner in: *Documenta Islamica inedita*, *Festschrift R. Hartmann*, Berlin 1932, Sentence No. 79, 113 and 118).

**Bibliography:** Apart from works already mentioned in the article: Compilation of excerpts concerning the *ʿayyārān* (*ʿayyārān*) by Fr. Taeschner in: *Die Welt als Geschichte*, iv, 1938, 390-392; *idem*, in: *Beiträge zur Arabistik, Semiotik und Islamwissenschaft*, ed. R. Hartmann and H. Schell, Leipzig 1934, 348-352; *idem*, in: *Schweizerische Anstalt für Volkskunde* 1950, 132-135. Concerning the rule of the *ʿayyārān* in Baghdad between 1135 and 1144, compare my review of Gerard Salinger's essay, *Was the Futuwa an Oriental form of Chivalry?* in: *Oriens* 5 (1932), 332-336, where the relevant passages are translated.

**AL-ʿAYYĀSHI**, ABD ʿAL-NAṢR MUHAMMAD b. MAʿQID b. MUHAMMAD b. ʿAYYĀSH, a Shīʿite writer of the 3rd/9th century. He was a native of Samarkand, and was said to have been descended from the tribe of Tanīm. Originally a Sunnī, he was converted while still young to Shīʿism, and studied under the disciples of ʿAlī b. al-Ḥasan b. Faḍḍāl (d. 224/839; al-Tūs 93) and of ʿAbd Allāh b. Muḥammad b. ʿIḥd al-Tayāḥī (d. al-Astarābādī, 211). He spent his patrimony of over 300,000 dinars on scholarship and tradition, and his house was a centre of Shīʿite learning. He is credited with the authorship of over 200 books. Though accused of relating traditions on weak authorities, he is often cited by later Shīʿite writers. Muḥammad b. ʿUmar al-Kāshgharī, author of a well-known Shīʿite biographical work, was his pupil.

**Bibliography:** al-Kāshgharī, *Riḍā*, Bombay 1317, 379; al-Tūs, *Fihrist Kutub al-Shīʿa* (Bibl. Ind. no. 60) 317-320; Ibn Shahrāshūb, *Maʿālim al-ʿUlamāʾ*, ed. ʿAbbās Iḥṣā, Tehran 1934, 88-9; al-Nadīshī, *Riḍā*, Bombay 1317, 247-50; al-Astarābādī, *Miḥdāj al-Maḥal*, Tehran 1306, 319-320; Ibn al-Nadīm, *Fihrist* (ed. Flügel) 126-67; Brockelmann, S.I. 794; W. Ivanow, *The Alleged Founder of Ismailism*, Bombay 1946, 15, 95. (R. Lewis)

**AL-ʿAYYĀSHI**, ABD SĀLIM ʿABD ALLĀH b. MUHAMMAD, imam of letters, traditionist, lawyer and Shīʿi scholar, born in the Berber tribe of the Ait (Ayl) ʿAyyāsh of Middle Morocco, died in the east of Shabān 1037/April-May 1724, died of plague in Morocco on 10 Dhū ʿl-Ḥaḍa 1093/13 December 1679. After having travelled through Morocco "in search of knowledge" and obtained an *ijāza* from ʿAbd al-Kādir al-Fāḍ (s.v.), in 1059/1649 he made his first pilgrimage to Mecca going via Touat, Ouargla and Tripoli; then, in 1064/1654 he made a second pilgrimage, on returning from which he wrote the *Ribla*, called *Maʿ al-Masāʿid* (For 1316/1898, 2 vols). This is one of the most important travel accounts for information on the road taken by caravans going from the Maghrib to Mecca, in spite of the fact that the author attaches less importance to describing the countries through which he passed than he does to the enumeration of the celebrated men whom he met, especially scholars and Sūfis; the style of the *Ribla* is fairly simple when al-ʿAyyāshī is not speaking of Sūfism, though it is lacking in colour and vivacity. This work, which enjoys great popularity in the Maghrib, has only been partially translated into French (see A. Berbrugger, *Voyages dans le Sud de l'Algérie . . . in Exploration scient. de l'Algérie*, ix, 1846, and Motylinski, *Études sur Tripoli et l'Égypte*, Algiers 1900). Another travel account, composed in letter form, has been translated into French by M. Lakhdir (*Les étapes du pèlerin de Sidi-Jilma* à la Mecque et Médine, in *4e Congrès Fédér. Soc. sav.*, Algiers 1939, ii, 671-88).

Al-ʿAyyāshī is, moreover, the author of several further works: *Manāṣir al-ḥiṣṣa*, a treatise in verse on sales, with a commentary; 2) *Tanbih al-Dawāʾ ʿl-Himam* al-ʿAlīya ʿala ʿl-Zuhd bi ʿl-Duʿūd al-Fāniya, treatise on Sūfism; 3) a study on the particle *wa*; 4) *al-Ḥum bi ʿl-ʿAdā wa ʿl-ʿImād al-Dār* is ʿl-Kāḍif fi-mā wahaʾa bayn Fuḥaḥ al-Sijil-masā min al-ḥabīb; 5) *Ḥidāʾ al-Aḥṣar baʿd*; *Ḥabīb al-Aḥṣar*, biographical collection; 6) *Tahṣīl al-Ḥifāʾ al-Ḥabīb al-Ḥabīb al-Ḥabīb*, biographies of his masters (these last two works probably forming his *Fakhr*).

(M. Ben Cherem-Ch. Pellat)

**AYYIL**. The word, for which different pronunciations are transmitted (also *ayyāl* and *ʿayyāl*), the latter being considered as the best one, is commonly explained by Arab lexicographers as meaning the

mountain-goat (see *ʿil*). This identification, however, is not fully borne out by the descriptions of the *ayyil* which are given by Muslim zoologists. Here, the properties and ways of behaviour ascribed to the animal only partly apply to the mountain-goat, while, in the main, they rather point to the deer, which is also in keeping with the meaning commonly attributed to corresponding forms in other Semitic languages. This conclusion, moreover, gets supported by a comparison of the terms used in earlier foreign sources and in the respective accounts as transmitted in Arabic zoological literature. However, in pre-Islamic and early Islamic poetry (see, e.g., *Nāḍi's* *Indegwairbuch*, 53, and *Tā*, ii, 121a; against Hommel, 279) *ayyil* may actually mean the mountain-goat, since the deer probably never existed in the Arabian peninsula.

These facts can serve as an illustration of the inconsistencies in medieval zoological terminology, which not infrequently denotes different animals by one name and vice versa. For this reason, too, part of the information given by several writers with regard to the *ayyil* is to be found, e.g., in Karwīn under the heading *bahār al-wahāb*, Comp. also *Djāḥī*, iv, 227 with vii, 30 f. (on *waʿil*). Because of the graphic similarity of *ayyil* and *ibī* both words have sometimes been confused through mistranscription, and the accounts on either animal became transferred to the other.

A considerable part of the information on the *ayyil* contained in Arabic works goes back to foreign sources, such as Aristotle's *Historia Animalium* (quoted, e.g., by *Djāḥī*) and the ancient *Physiologus* literature. The latter, especially, contributed a number of fabulous accounts.

According to Arab pharmacologists certain parts of the *ayyil's* body and in particular its horns can be put to various medicinal uses.

Al-Damīrī does not indicate the rôle of the *ayyil* in the interpretation of dreams, which is pointed out, e.g., in ʿAbd al-Ghānī al-Nābulus's *Taʿrīf al-Aḥām* (s.v.).

**Bibliography:** Abū Ḥayyān al-Tawhīdī, *Imdād*, i, 266, 160, 170, 172, 176, 184, 185 (transl. Kōpfl. *Oriens* iii [1950], 463 [index]); Damīrī, s.v. (transl. (L. Kopp)

**AYYŪB**, the Biblical Job. The name apparently occurs in pre-Islamic Arabia but only as a name derived from the Biblical story. Job is mentioned twice in the *Kurʿān* in lists of those to whom Allāh had given special guidance and inspiration (iv, 163/161; vi, 84), and fragments of his story are given in xxi, 83-84; xxxviii, 41/40-44. Muḥammad being expressly bidden to make mention of him in his preaching, these fragments merely tell of his suffering affliction at the hands of Satan, crying out to God for relief, and being healed, so that his case becomes an admonition for men. In the story of the miraculous spring by which he was healed there seems to be a confusion with the Naaman story of II Kings v, and in the obscure verse about his

taking a bundle in his hand and striking with it, there may be a similar confusion with the story in 11 Kings xiii, 14 ff. (See Bell, *Qur'an*, 454 and *Introduction to the Qur'an*, 162, 163).

Later Muslim writers greatly amplified this meagre Qur'anic account, drawing partly on the Biblical Book of Job, (which Ibn 'As'kir actually quotes), partly on Rabbinic tales from Talmud and Midrash (for which cf. *Encyclopedia Judaica*, s.v. Job) and the Greek Testament of Job, but also exercising pious imagination in developing various details of the story. That Job was a descendant of Abraham through Isaac is generally agreed, though there is great confusion in the names which appear in his genealogy. His mother was a daughter of Lot. His wife, who figures so largely in the story, is generally called Rahma, daughter of one of the sons of Joseph, though some said she was Leah the daughter of Jacob (obviously a confusion of Leah with Dinah, who in Rabbinic sources is said to have been Job's wife). His great wealth is described in detail, and his unparalleled kindness and generosity to the poor, the unfortunate, the poet and the stranger. This piety excited the enmity of Iblis who challenged Allah to let him test Job. The testing is permitted in three stages, appearing at his property, his family and his body, Iblis being assisted in the afflicting of Job by the 'ajirāt under his command. Job is abandoned by all save his faithful wife, who continues to tend him even when he is cast out on the dunghill, and to his bodily afflictions is added that of lack of understanding on the part of his friends. Failing to move Job by these afflictions Iblis attempts to seduce him through his wife as he had formerly seduced Adam through Eve. Job, however, sees through his stratagems and takes an oath that he will beat his wife for having listened to Satan. The exegetes are obviously puzzled by Allah's granting permission for his faithful servant to be so afflicted and so are at pains to suggest a variety of explanations, the favourite being that Job's pride in his piety needed a lesson. Finally Gabriel brings him news of his release from his sufferings by the water of a miraculous spring from which he drinks and in which he bathes and so is restored. His wealth, his property, his children are also restored to him double and he dies at the age of seventy-three in the place where he had lived.

Since he was a prophet (*nabi*) we are told that he came after Joseph in the prophetic series (though Ibn al-Kalbi placed him after Jonah), that he had a *risala* and preached to his own community in the Hawran, being peculiar in that he was a prophet whom no one ever treated as false. Job will appear in the events of the Last Day, for at the Accounting Allah will use him as an example to answer those who seek to excuse their negligence in religion on the ground of their ill health, and he will be the leader of "those who patiently endured" as the various groups make their way to Paradise. Al-Mas'udi, *Murūj*, i, 91 reports that the shrine over his grave was a place of visitation at Nawā near Damascus, where people were still shown the rock on which he sat during his affliction and the spring in which he bathed and was healed (cf. also Yāqūt, ii, 645).

**AYYŪB KHĀN**, the fourth son of Shīr 'Alī, Amir of Afghanistan, and brother of Ya'qūb Khān. Like all rulers of Afghanistan, Shīr 'Alī had trouble with his sons. When, in 1873, he nominated his favourite son 'Abd Allāh Dīn as his heir-apparent, Ayyūb Khān fled to Persia. In 1879, when Ya'qūb Khān succeeded Shīr 'Alī as amir, Ayyūb Khān returned to Afghanistan and was appointed governor of Harāt. Towards the end of the Second Afghan War (1878-80) Lord L. Lytton's government selected a Salafist prince, named Shīr 'Alī, as the wāli of Kandahār. From this position he was ousted by Ayyūb Khān, who also decisively defeated a British army under General Burrows at Maiwand, on 27 July 1880. The situation was retrieved by Sir Frederick (afterwards Lord) Roberts, who marched rapidly from Kābul to Kandahār, routing Ayyūb's troops and forcing him to retire on Harāt. When 'Abd al-Rahmān Khān became Amir of Kābul, his first task was to extend his control over the country. In July, 1885, Ayyūb Khān, who was in possession of Harāt, declared a *ghidā* against 'Abd al-Rahmān because he was a British nominee, and occupied Kandahār. Towards the end of 1885, he was crushingly defeated by 'Abd al-Rahmān, who also expelled him from Harāt and forced him to seek refuge at Mashhad in Persia. Once more, in 1887, during the Ghilzai rebellion, he attempted to regain his position in Afghanistan but was defeated and compelled to flee to India. Here he remained until his death on 6 April 1914.

**AYYŪB SABRĪ PASHA**, Ottoman naval officer and author. A graduate of the naval college, he held various appointments, and served for a while in both the Hijāz and Yemen. He died in Istanbul in 1308/1890. He was the author of a number of historical and descriptive works on Arabia, including an account of Mecca and Medina (*Ma'ālāt al-Madīna*, 3 vols., Istanbul 1301-6), and a history of the Wahhābīs (*Tārīkh al-Wahhābiyya*, Istanbul 1296). Besides these he wrote a biography of the Prophet called *Ma'ān al-Sayr* (Edirne 1287).

(B. LEWIS)

**AYYŪBIDS**. Name of the dynasty founded by Salāh al-Dīn b. Ayyūb, which, at the end of the 6th/12th century and in the first half of the 7th/13th century, ruled Egypt, Muslim Syria-Palestine, the major part of Upper Mesopotamia, and the Yemen.

The eponym of the family, Ayyūb b. Shādhī b. Marwān, born in the village of Ajlūnān near Dvin (Dabul) in Armenia, belonged to the Rawādī clan of the Kurdish tribe of the Hadhānā, and, at the beginning of the 6th/12th century, had been in the service of the Salghūrid dynasty. He was a Kurdish, who had been installed in the government of this region by the Salghūrid Sultan Alp Arslan in the middle of the preceding century. Gradually, however, all the Kurdish princes and lords were eliminated by the Turks, many of them, to avoid losing everything, entering the service of the latter, with whom their Sunnī ardour and taste for war provided a close affinity. When in 524/1130, the Shā-

dhīd lost Dvin, Shādhī entered the service of the Salghūrid military governor of 'Irāk, Būhrā; Būhrā, who held Takrīt as an *ihdā'*, made Shādhī governor of that town, a post in which his son Ayyūb soon succeeded him (V. Minorsky, *Prehistory of Saladin*, in *Studies in Caucasian History*, Cambridge 1953, 107-129). It was in this capacity that Ayyūb earned the gratitude of the master of Mawil and Aleppo, Zankī (Zangī), who after being defeated by the Caliph, was able, with the help of Ayyūb, to cross the Euphrates and withdraw without a disaster. In the country behind himself, Zankī first of all adopted a systematic policy of subduing and then recruiting the Kurds. In 532/1138, Ayyūb entered his service. He was at once used by him in Syria, being appointed governor of Ba'bak, opposite Damascus. On Zankī's death, Ayyūb placed himself under the Bīrid prince of Damascus, who gave him the governorship of that town, whilst his brother Shīrkhū, followed Zankī's son, Nūr al-Dīn, the master of Northern Syria, who gave him Hama as an *ihdā'*. However, the trend of public opinion in Damascus finally led to the unification of Muslim Syria, with a view to the more effective prosecution of the war against the Franks, under the command of the prince with the most power and the greatest enthusiasm for the *ghidā*, Nūr al-Dīn; in the surrender of Damascus the activities of the two brothers, Shīrkhū and Ayyūb played a major rôle, and Ayyūb chose the side of Nūr al-Dīn, the governor of the Syrian capital.

It is impossible to describe the activities of Shīrkhū in Nūr al-Dīn's service in detail here. The family fortunes began, when he was chosen, rather against his will, by Nūr al-Dīn to lead the army to Egypt, which, at the request of the sultan Shāwar, was to intervene in that country against his adversaries. The result of several years of difficult fighting was the assassination of Shāwar and the proclamation of Shīrkhū as his successor to the wazirate. It is true that he died a few weeks later (561/1166), but his nephew, Salāh al-Dīn b. Ayyūb, was with him, and quickly succeeded in getting himself recognised by the occupying troops as his successor.

Salāh al-Dīn (known in Europe as Saladin) is the real founder of the dynasty. Its history can be divided into three periods: that of Salāh al-Dīn himself, a formative period bearing the imprint of his personality, the strongest in the family, to which, however, the policy of his successors was opposed on many points; the period of his early successors, a period of organisation, up to the death of al-Malik al-Kāmil (655/1238); lastly, to the period of long-drawn-out decline. Under the second period it will be convenient to group together the study of several problems of interior organisation, which are common to the whole history of the régime.

The detailed history of the reign of Salāh al-Dīn cannot be given here, but will be given in the article concerning him; an attempt will only be made to reveal those features which are indispensable for the understanding of the following period, which one has especially in mind when speaking of the Ayyūbids.

Although the assumption of power by Shīrkhū and Salāh al-Dīn took place in Egypt with much the same forms as in the case of the preceding *suqat* of the Fātimid régime, by the conferring of a diploma by the Caliph al-'Aḥid, they were none the less the representatives of the orthodox militant tradition inherited from the Salghūrids, more or less common to all the Turkish princes of Muslim Asia at that

time, and especially typified by Nūr al-Dīn. In 566/1171, Salāh al-Dīn considered he was able to suppress the Fātimid Caliphate and proclaim the return of Egypt to the family of states owing allegiance to the 'Abbasid Caliph of Baghdad. For the first time in two centuries, Egypt became officially Sunnī again; in point of fact, the majority of the population had never been won over to the Ima'āliya of the Fātimids, and although those elements which were most strongly attached to the régime, and which were, moreover, partly of foreign origin, attempted to re-establish their position by revolts, the advent of the new régime was received among the masses with the same passivity which they had shown to its predecessor.

Invited by the Fātimid Caliph, then by the 'Abbasid Caliph, and at the same time a vassal of Nūr al-Dīn, Salāh al-Dīn found himself in an equivocal position vis-à-vis the latter, which would doubtless have led to conflicts, had Nūr al-Dīn not died in 569/1174. Disagreements and the weakness of his successors produced the immediate result that the dominant military power in the neighbourhood of the "Latin Orient", which for fifty years had resided in Northern Syria, now passed to Egypt. Whilst Nūr al-Dīn's successors dropped the policy of the holy war, which had given the former his prestige and strength, Salāh al-Dīn adopted the idea, though it is not possible to discern to what extent ambition was combined with undoubtedly sincere conviction. (H. A. R. Gibb, *The Achievement of Saladin*, in *Bull. of the John Rylands Library*, xxv-1, 1952, 46-60). However that may be, the idea led him to claim for himself the unified command of the Muslim armies, to win a large share of public opinion for his cause and, ultimately, to constitute to his own advantage a state, in which the heritage of Nūr al-Dīn, including Egypt, Muslim Syria and a part of the Hijāz, was regrouped and extended, in a more solid manner than that of his predecessor's kingdom, at the time of its brief and final apogee; this was an accomplished fact in 1181. At the same time, relatives of his established themselves in the Yemen and one of his generals, Karakūsh, on the borders of Tunisia.

The power formed in this way enabled Salāh al-Dīn to utilise the internal crisis of the Kingdom of Jerusalem, the difficulties of the Byzantine Empire and the tension which had arisen since 1170 between himself and the Latins, to undertake to drive the latter out of Palestine and Syria. His success was his main title to glory among his contemporaries and posterity; in 583/1187 the Franks were crushed at Hattin, Jerusalem became Muslim again after eighty years, and in the ensuing months, almost all the Christian territories fell, including a large part of the coast, where only Tyre, Tripoli and Antioch still held out against him.

Salāh al-Dīn's power was founded on the strength of the army, and his whole policy required a strong army. This was no longer, with the exception of a few contingents of irregulars, the army of the Fātimids. It was the Kurdo-Turkish army, completely alien to the Egyptian population, inherited from Nūr al-Dīn and developed by Salāh al-Dīn by means of the resources of Egypt. In 577/1181, the Egyptian army amounted to 111,000; 6,976 *ṭawāgh* (cavalrymen with full equipment) and 1,153 *ḥazāghlām* (second grade cavalrymen), without mentioning the Arab frontiersmen, unfit for foreign campaigns (H. A. R. Gibb, *The armies of Saladin*, in *Cahiers d'Histoire Égyptienne*, iii/4, 1951, 304-320). To this

army must be added the Syro-Djazzir contingent, including those of Mawālī, which the treaty subsequent to the hostilities of 1174-1183 allowed Salāh al-Dīn to call together in case of need: a little over 6,000 men in all. It was with almost his entire forces, some 12,000 horsemen, that Salāh al-Dīn won the victory at Hattin and his later successes. But, as was the case with the European armies, such an assembly of troops could not normally be kept on campaign for a protracted period, owing to the re-equipment requirements of the soldiers (cf. *infra*). And considerable efforts and conviction would be required to maintain the indispensable effective strength over the whole of the time which the struggle against the Third Crusade lasted. Campaign and siege equipment, which had probably increased in quantity and quality, was also the object of attention, as is shown by the treatise on gun-making of Muḥd (or Maḥd) b. 'Alī, which has come down to us (cf. J. Cahen, in *Et. Or.*, xii, 1948, 108-113).

In the first years of his rule, Salāh al-Dīn had been threatened by the Byzantine, Norman and Italian fleets, using the bases in the Latin Orient. He made a great effort to reconstitute the Mediterranean navy of the Fātimids, which had deteriorated in the 6th/12th century as the result of internal troubles and the progress of the Crusaders and the Italians. By this means he was even able to carry out offensive operations against the nearest Frankish ports. The possibility cannot be excluded that the expansion of Karakūsh along the African coast had as its aim, at the same time as providing an outlet for turbulent Turkomans, the control of the shores along which Muslim vessels were able to range, and a closer approach to the source of supplies of wood and sailors. The Crusade put an end to this effort, which was weakened by Egypt's inferiority in these last two respects, and it does not seem to have been repeated by his successors (A. S. Ehrenkreutz, *The place of Saladin in the naval history etc.*, in *JAOS*, LXXV-2, 1953, 109-110).

There is no doubt that it was partly the need to procure the raw materials required by his armament on land and sea, and not only preoccupation with commercial interests, that led Salāh al-Dīn, very soon after he came to power, to renew and increase the connections which had existed under the Fātimids with the Italian trading cities, including Pisa, which had gone furthest in encouraging the Franks to attack Egypt. Pisans, Genoese and Venetians flocked to Alexandria, where the Venetians found, more than at Acre, compensation for the impossibility of trading at Constantinople, a situation in which the Byzantine government placed them from 1171 to 1184 (J. Cahen, *Orient Latin et commerce du Levant*, in *Bull. de la Fac. des Lettres de Strasbourg*, 1951-2, 1951, 352). Salāh al-Dīn could boast in his letters to the Caliph that Frankish themselves were delivering arms to him which were destined to be used against other Franks (Abū Shāma, i, 243).

Salāh al-Dīn also took advantage of political developments in Byzantium and Cyprus to negotiate, unbeknown to them, with their princes against the Franks. When he felt the approach of the European menace, he attempted, after having won, via Karakūsh, the ally of the Almohad, Banū Ghāniya of the Balearic Islands against the Normans and the Almohads, to draw near to the latter to form an alliance, mainly maritime, against the Crusaders; this attempt, however, met with no success (cf. Godefroy-Demombynes, in *Mélanges René Bassot II*, and Sa'di Zaghāl 'Abd al-Hamid,

in *Bull. Fac. Arts Univ. Alexandria*, vi-vii, 1952-3, 24-100). The same reasons explain his negotiations with the Saljūqids of Asia Minor.

A war policy, naturally, was expensive and all the evidence goes to show that Salāh al-Dīn was a bad financial administrator, always on the point of going bankrupt. In necessary conformity with the religious ideal with which he infused all his propaganda, he everywhere suppressed the taxes deemed by *shīkh* to be illegal. Similarly, his desire to eliminate all traces of the Fātimid régime, led him to replace the coinage by a new one, of variable weight, in the case of both gold dinars and dirhams, which could no longer be obtained at a fixed value; but the burden of expenditure, the decline in income, especially to begin with, as the result of disorders, the exhaustion of Egyptian gold, the precariousness of the routes towards Sudanese gold, which were controlled by the Almohads, even caused instability in the standard of the dinar, the minting of dirhams containing variable quantities of alloy in addition to the legal Egyptian dirham, (which contained 20 % silver, worth 1/40th of a dinar), and, as a natural consequence, the disappearance of sound coinage. Salāh al-Dīn, and after him, al-'Aziz, lived on loans from the merchants and amirs, which were never repaid. Of course, it could be maintained that the profits derived from the war would make it possible, in the long run, to restore financial stability. But this calculation, if ever made, turned out to be wrong, as the result of the Third Crusade (cf. A. S. Ehrenkreutz, *Contribution to the knowledge of the fiscal administration of Egypt* . . ., in *BSOAS*, xv-3, 1953 and xv-3, 1954; *The standard of fineness of gold coins in Egypt* . . . in *JAOS*, LXXIV-3, 1954; *The crisis of the dinar in the Egypt of Saladin*, *ibid.*, LXXIV-3, 1955).

One of the results of Salāh al-Dīn's policy was the formation of a coalition, for the salvation of the Latin Orient, of the western forces, which were even joined by the Italian towns, adversely affected by the loss of the Syrian ports. In the end, even if the Franks did not retake Jerusalem, at least they recovered the major part of the Syro-Palestinian coast; moreover, they laid hands on Cyprus, which henceforth provided a secure naval base and a position to which they could withdraw. Salāh al-Dīn was by no means defeated. But the formidable effort which he had had to sustain for two years, convinced him that it was fruitless to wish to expel the Franks, and made a period of *diplomatie* and recovery a matter of urgency. It is impossible to know what Salāh al-Dīn might have done, for he died a few months after the conclusion of peace (589/1193).

II. The period of the reigns of al-Malik al-'Adil and al-Malik al-Kāmil (died in 615/1218) appears essentially as one of *diplomatie* and organisation after the disorders which followed the death of Salāh al-Dīn.

The first eight years which followed the disappearance of the founder of the dynasty put to the test the conception of family unity which he had entertained as regards his monarchy and succession. He had granted, either in the form of fiefs during his lifetime or as shares in his inheritance, in addition to the Yemen, where two of his brothers reigned in succession, Central and Southern Syria to his son al-Aḥdā, Egypt to his other son al-'Aziz, Aleppo to a third son, al-Zāhir Ghāzī, whilst Hamā passed to his nephew Ṭāqī al-Dīn 'Umar, Hims to his cousin, Shīrkūh's grandson, al-Muḥdīd, and lastly the Djazira to his brother al-'Adil Abū Bakr. The

latter, who had played an important rôle during the reign of Salāh al-Dīn as a diplomat and administrator, was now the eldest member of the family and indisputably the most eminent of its surviving members. The sons of Salāh al-Dīn, who were incapable of doing anything but amuse themselves or wrangle among themselves, upon several occasions solicited his alliance or his arbitration. Whether or not al-'Adil was an ambitious man, it was becoming clear that the security of the Ayyūbid monarchy required him to take over its destinies. In 597/1200, he had himself proclaimed Sultān in Syria, distributed the governments of Damascus and Djazira among his sons, and after the last hostilities in 1201, of the other former princes, he only permitted those of Aleppo, Hims and Hamā, who were forced to do homage to him, to continue to exist. Naturally, after al-'Adil's death, similar problems again arose. The presence at that moment (615/1217) of a Crusade at Damietta maintained solidarity for a time around his eldest son, al-Kāmil, who, like him, governed Egypt, and was moreover an imposing personality. Once the Frankish danger was removed, the agreement between him and his brother al-Mu'azzam of Damascus, who died in 625/1228, and then the latter's son and successor, al-Nāṣir Ḍa'ūd, was disrupted. Al-Kāmil was helped by the loyalty of his other brother al-Ashraf, to whom he gave Damascus in exchange for Diyar Mudar, whilst Ḍa'ūd was relegated to Karak. Then, for a few years, al-Kāmil was the undisputed head of the family; however, a coolness was making itself increasingly felt between al-Ashraf and himself, when the former died (635/1237); al-Kāmil then took Damascus away from the other brother, al-Sāḥib Ismā'īl, whom al-Ashraf had designated as his successor, but he himself died at the beginning of the year when he was the last Ayyūbid who might have been able to unite the whole Ayyūbid family behind him. One should not be misled by the disagreements; up till then there had always been a majority of members of the family willing to place solidarity in the face of their common enemies above their individual interests, and in one way or another, solidarity had always been restored for half a century or so; after the death of al-Kāmil the situation changed.

Ayyūbid rivalries with neighbouring princes, however, interfered with their dissensions among themselves. In 604/1207, the troubles at Aḥlāt provided al-Aḥwad, the son of al-'Adil and at that time governor of Diyar Bakr, with the possibility of annexing to Ayyūbid territory the inheritance of the Shāh-Armin (upon al-Aḥwad's death, he was succeeded there by al-Ashraf). Other annexations were carried out in Diyar Bakr and Diyar Rabi'a, and lastly, in 611/1233, that of Amid and Hims Kayfā; only a single branch of the old Artukid dynasty subsisted, that of Mardin. Thus it was that the Ayyūbids emerged from these wars with a stature.

However, from about 1225, Mesopotamian-Iranian politics were dominated by the approach of Ḥajjāl al-Dīn Manguberti, who at the head of his Khwārizmians fleeing before the Mongol invasion, was putting Iran and its borders to fire and sword. Al-Mu'azzam and the Djazirani opponents of al-Ashraf and al-Kāmil offered him, and he was even enabled to take Aḥlāt, which was pillaged in terrible fashion (1229). The Khwārizmshāh then invaded Asia Minor, where the Saljūqid Sultān was reinforced by al-Ashraf: this time the invader was crushed near Erzinjān (628/1230).

There were more lasting causes of friction between

the Saljūqid and the Ayyūbids. The interests of the two dynasties had already clashed at Diyar Bakr in the time of Salāh al-Dīn, and in the 13th century the development of the Saljūqid power made conflicts inevitable. The Saljūqid sought to spread from their mountains over the Arab plain, from Northern Syria to Diyar Bakr. According to circumstances, they achieved this either by attacking the Ayyūbid territories or by posing as the sovereign-protectors of the Aleppo branch against their Egyptian cousins. Al-Ashraf's expedition to the assistance of Kaykubād gave al-Kāmil the impression that the conquest of the Eastern part of the Saljūqid territory would be an easy matter: in 1231, a coalition of all the Ayyūbid forces invaded it. Ignorance of the country and the lack of enthusiasm of some of those taking part led to failure of the enterprise. Later, the Saljūqid army took Amid from al-Kāmil's successors (1241). It had already taken the ruins of Aḥlāt from the lieutenants of al-Ashraf.

Finally, there were the Christian enemies: the Georgians, whom it had been necessary to fight in the vicinity of this same Aḥlāt, and, naturally, the Franks themselves. In the latter case, the Ayyūbids drew from the Third Crusade a moral diametrically opposed to the policy of Salāh al-Dīn. Their aim was to preserve the peace, by avoiding any hostile action, on the one hand in view of the economic advantages of peaceful relations, and on the other hand to avoid giving any pretext for further Crusades. Further Crusades did in fact take place, but their immediate initiative came entirely from Europe, rather than from the Franks of the East. Naturally the Ayyūbids took every precaution in their power to resist them, and there was no question of military negligence. The fall of Byzantium and the decline of the Almohads deprived them of the possible allies which Salāh al-Dīn had endeavoured to obtain, and, having relinquished the maintenance of a large and vulnerable fleet, they afforded Egypt protection by the land army, by fortifications, sometimes by destroying coastal installations (Tinnis), and by espionage. However, with the Crusaders, even al-'Adil and al-Kāmil had tried as far as possible to replace the costly chances of war by diplomacy.

In accordance with the tendencies of this policy, in 1204 al-'Adil restored to the Franks the coastal places which he was occupying, which reconstituted the continuity of the Frankish territories, with the exception of the enclaves of Lajdhūya, which belonged to the principality of Aleppo. At the time of the Fifth Crusade, his successor al-Kāmil, whilst calling his brothers in Asia to his assistance, offered to restore Jerusalem to the Franks, who refused it, in exchange for the evacuation of Damietta, and took care to avoid any real battle. It was especially at the time of the Crusade of Frederick II that this attitude was disclosed in a manner most calculated to affect public opinion. Al-Kāmil's desire for peace with the Franks was then strengthened by the menace of al-Mu'azzam, the ally of the Khwārizmians. Aware of circumstances which predisposed the Emperor for his part to negotiations, he finally granted him Jerusalem, with the reservation that it should not be fortified and freedom of worship should be maintained; pious Muslims and pious Christians were equally scandalised. A real friendship arose between the two sovereigns, which was to continue even between their successors.

The principality of Aleppo was confronted by slightly different local problems. These princes,

disturbed at being the only direct descendants of Saladin to confront the family of al-'Adil, sought both to ally themselves with them by marriage and to guard themselves against the masters of Egypt, sometimes through the Ayyūbids of Ḍiḡira, Hims and Hamā, and at other times through the Saljūqids of Rīm, and naturally also, at times, with the ones against the others who had encroached too far. The ambitions of the Armenian kingdom of Cilicia also troubled them, and their several times intervened, with the Saljūqids against it, giving assistance to the Frankish princes of Antioch, who were weaker.

A normal and intended consequence of the peace policy adopted towards the Franks was the resumption and intensification of commercial relations with the Italians (and now, to a lesser extent the Southern French and the Catalans). Even before formal treaties had been concluded once more, as is shown by the private documents in the Venetian and Genoan archives, Genoan, Pisan and Venetian ships, after the Third Crusade, were once again going to Alexandria, and, to a lesser extent to Tunis. Under al-'Adil, a series of agreements confirmed their rights, a reduction in customs' dues and administrative and judicial facilities. Furthermore, the accessibility of the principality of Aleppo to the sea had the result that even in Syria, Italian merchants were to be seen no longer confining themselves to Frankish ports, but were also disembarking at Laḍḍikiya and regularly visiting the markets of Aleppo and Damascus. An incident in the personage of Genoa, William Spinola, seems at one time to have enjoyed al-'Adil's special favour, accompanying him on his journeys through his estates (this can be seen from a comparison between the *Annals of Genoa* used by Schaube, *Handels-geschichte der Mittelmeer-Romane* 121, and Ibn Naṭīf, cited in Asari, *Bibliotheca arabico-sinica*, II, Appendix, 25, which was unknown to Schaube). Egypt sold to Europe, besides the products of the Indian Ocean which passed through its territory in transit, native resources, the chief of which at this time seems to have been alum. Naturally the Crusades, or the fear of surprise attacks, were liable to provoke crises, as for instance the day in 1215 when three thousand merchants assembled at Alexandria were temporarily arrested. But even after the Damietta Crusade, relations were resumed (as is shown among other things by a document of immunity in Arabic from al-Kāmil to the Venetians which is to be published by Suhbi Labib) and lasted in the main without undue interruption until the middle of the century.

But, though the Italians were the masters in the Mediterranean, and Egypt played a purely passive rôle in trading with them, only making a profit from the taxes and commissions, they were prevented from access to the Red Sea, and the commerce of the Indian Ocean remained exclusively in the hands of the subjects of Muslim (or Hindu) states. We are not in a position to determine exactly what rôle the Egyptians played, or that of the Yemenites or other more easterly peoples. The exact nature of the merchants called Kirmīn, specialists at Aden and in Egypt in the trade in products brought from the Indian Ocean and especially spices, still remains obscure; they appear to have existed since Fātimid times, but it is in the Ayyūbid period that they really make their appearance in the rôle which was to be more especially theirs in the following century (cf. the elucidations of Goitein and Fischel in the

press for the *Journal of the Economic and Social History of the Orient*, 1958, and G. Wint, *Les marchands d'Épices . . . in Cahiers d'Histoire Égyptienne*, 1955). The occupation of the Yemen may have had as its primary motive the humbling of the supporters of a Fātimid restoration or the formation there of an eventual refuge for the Ayyūbids; but its object was doubtless also the improvement, which in any case occurred, of commercial relations, of primary importance for both parties, between the Yemen and Egypt, with whom Yemenite currencies and some measures were aligned (Ibn al-Muḍāwir, ed. Lefgren, 118 ff.).

The almost complete internal peace which Egypt enjoyed, and the relatively long periods of peace from which Syria profited, certainly had a favourable influence, though it is difficult to give precise indications, on their economy, which was also stimulated by the possibilities of trade and which the Ayyūbids deliberately strove to promote, even though only for their fiscal interests. For Syria and the Ḍiḡira we are able to gain a certain idea of their resources through the *Al-'Adil* of Ibn Shaddād, who describes the situation on the eve of the Mongol assault; more precisely, for the crafts of Damascus, much information is to be found in the treatise on *ḡibā* composed about 600/1200 by 'Abd al-Rahmān b. Naṣr al-Shayzārī (ed. 'Aḥlī, Cairo 1946, trans. Benhauser, *Les institutions de police* etc. in *J.A.*, 1866, where the author is called Nabrawī), apparently the prototype of all successive treatises of this kind in Syria and Egypt. For Egypt, besides the information preserved by al-Makrīzī, many indications are to be found in the treatises of Ibn al-Mammātī and al-Nābulusī (cf. *infra*); the latter especially attests al-Kāmil's interest in the maintenance of forests, irrigation works, state cultivation of sugar cane etc. In general, Egypt, in contradistinction to the other Ayyūbid states, remained, as always, the country *par excellence* with a partly nationalised economy, especially for mining and forest production, trade in metals and wood, certain means of transport and tools, arms etc. The *Law* of al-Nābulusī, a pamphlet composed after the disorders which followed al-Kāmil's death, stresses the harm done by the interference of private undertakings with those of the State, and by the frauds perpetrated by officials at the first relaxation of control.

Under al-'Adil and al-Kāmil, in addition to the attention paid to economic matters, a strict financial policy was maintained. Al-'Adil's great minister, Ibn Shukr, made himself famous by his competence combined with intractable behaviour towards everyone, including his own sovereign. After him, al-Kāmil maintained an equally energetic control over expenditure and resources (including the *ḡibā* of the amirs) and on his death left a treasure almost equivalent to a year's budget. For Egypt, the inquiry carried out by al-Nābulusī in the Fayyūm, although relating only to 642, shows the minuteness of the cadastral survey and accounts (cf. Cl. Cahen, *Le régime des impôts dans le Fayyūm ayyūbide*, in *Arabica* 181, 1916). For the northern states, Ibn Shaddād has left us lists of taxes for the towns of Aleppo, Manḡbiḡ, Sarḡil and Bāḡis. The care taken with the finances and the economy also made possible the resumption of the large-scale minting of dinars at the standard normal before Salāh al-Dīn. Nevertheless, it seems to have been difficult to check the flight of silver coinage before that of copper (De Boiard, *L'évolution monétaire de l'Égypte médiévale*, in *L'Égypte Contemporaine*, 1939).

The internal history of the Ayyūbid states has been the subject of few studies. Yet it is essential that it should be known, especially for Egypt, since it is at this period, by means of a partial break with the Fātimid past and the introduction of Saljūqid and Zankid traditions from further Asia, but also inevitably with some retention of the Egyptian heritage and with innovations of local administration, that the foundations were laid of the régime which, to a large extent, the Mamlūks, for two centuries, simply prolonged and completed in detail. Naturally only a few rather incidental allusions can be made here.

The Ayyūbid régime, approximately up to the late years of al-Kāmil, was a semi-feudal family federation, as, for example, had been that of the Ḥiyūḍid and, to a lesser extent, of the Saljūqids and Zankids. Under a sovereign to whom all owed allegiance, a certain number of territories were distributed to vassal "princes of the blood" who, apart from the limitations imposed by their primary military allegiance to the ruler, enjoyed complete autonomy in administering them (cf. for example, the diploma of investiture of a prince of Hamā by al-Kāmil preserved at the end of the Chronicle of Ibn Abī 'I-Dam, Oxford Bodl. Marsh 60). Within these great appanages, there were lesser ones, likewise distributed to princes of the blood of second rank or to a great few officers, whose loyalty was to the vassal prince, and whose effective independence was naturally more restricted. It was only slightly lower down the scale that the military *ḡibā* properly so-called, of which we shall speak later, were to be found. However, towards the end of al-Kāmil's reign, this régime began to undergo certain modifications; the aggravation of family conflicts obliged the Sultān, who during his absence in Egypt had himself represented by a *ḡibā*, sometimes belonging to his family and sometimes not, to replace the princes in the Asiatic provinces also by governors, taken from among their domestic attendants, as for example at Diyar Bakr, Shams al-Dīn Sawāb, either standing beside a young prince or not, and whose title of *ḡibā* also stressed his dependence better than any other title would have done. The conditions in which, after al-Kāmil, al-Sāliḡ al-Dīn reconstituted the Ayyūbid unity, led to the triumph of this centralist conception; moreover, in Egypt, there had never been autonomous appanages, except as a quite exceptional and temporary measure (for example in Fayyūm). In Asia, on the other hand, all the autonomous princes, like the sovereign in Egypt, now bore the title of Sultān, which Salāh al-Dīn himself never officially made use of, perhaps because of its connexion, in the Fātimid heritage, with that of *waṣir*; and even the subordinate Ayyūbids bore that of *malik*.

The organisation of the Ayyūbid states, as a natural result of the preceding considerations, was never unified. In general, leaving aside the Yemen, there can be distinguished on the one hand the territories of Asia, which perpetuated Zankid institutions without any great modifications, and on the other, Egypt, where newer institutions were introduced, or at least newer as regards Egypt. As is normal, the central organs of government there were transformed to a greater extent, in relationship to the Egyptian past, than the subordinate and the rules of local administration. An attempt to adjust matters was made, once the initial troubles were over, during the lifetime of Salāh al-Dīn himself, as is shown by the description of Fātimid institutions

Encyclopædia of Islam

composed for the new régime by Ibn al-Tuwayr (extracts in al-Makrīzī and Ibn al-Furāt), the treatise of the *ḡibā* Abū 'I-Ḥasan on *ḡibā* (extracts in al-Makrīzī) and the famous *Kawāṭib al-Dawāṭir* of Ibn al-Mammātī, which have been preserved; others could be added, as, for example, a little later the more literary work of Ibn Shīḡ al-Kurḡil on the *ḡibā*. As the counterpart of and a contrast to these methodical accounts, there appeared at the end of the Ayyūbid régime the various treatises, preserved or known only through quotations, of 'Uḡḡma b. Ibrāhīm al-Nābulusī, which are a vivid witness of his concrete experience.

The central government was naturally directed, more or less effectively according to temperament, by the Prince himself; most of the princes holding appanages had a *waṣir*, that is to say, an official who ensured in the Prince's name the unity of direction of the whole administration. But the institution was less usual in Egypt; whatever prestige the *ḡibā* al-Fāḡil may have enjoyed in Salāh al-Dīn's eyes, he certainly never, despite what has been said, bore the title or fulfilled the functions of *waṣir*, first because this sovereign himself performed the functions of government, and second because it was as *waṣir* that he had originally come to power in Egypt in accordance with the late Fātimid practice endowing the *waṣir* with plenary authority. For quite a long time his brother al-'Adil had the redoubtable Ibn Shukr as his *waṣir*, whom he had learned to value as his associate in directing Salāh al-Dīn's navy; al-Kāmil took him back for a time, but then subsequently assumed the direction of the administration himself, with the help of high officials, to whom he sometimes, but not always, gave the title of *ḡibā* of the *waṣir*. After him, al-Sāliḡ Ayyūb had as his *waṣir* one of the "Sons of the Shaykh" of whom we shall speak again later. Princes who were minors and orphans had an *shah* (q.n.). The *waṣir* al-Fāḡil, a kind of intendant of the Sovereign's "Household", played an important political rôle.

Below the prince and the *waṣir*, the central administration was divided between the *ḡibā*s, the names and attributions of which no longer exactly corresponded to those of the Fātimid period. It was essentially the army for which the régime still operated, hence the importance of the *ḡibā* al-*ḡibā*, a section of which dealt with the *ḡibā* and, in this respect, possessed a competency which in part coincided with that of the *ḡibā* of Finance; on this latter were dependent all questions of taxation, income and expenditure, and the Treasury, with a section devoted to the finances of the *ḡibā* itself; it is described in detail, with the exclusion of the others, in the treatise of Ibn al-Mammātī. The third great *ḡibā*, which in certain respects was pre-eminent among those just mentioned, was the *ḡibā* al-*ḡibā*, the Chancery, entrusted with correspondence and the composition of diplomas; of this the director enjoying the greatest reputation was al-Fāḡil, who had been taken over from the Fātimid régime ('Imād al-Dīn al-ḡibā, who emulated him in belles-lettres, was private secretary to Salāh al-Dīn). Finally, marginal, though of no less importance, was the *ḡibā* of the *ḡibā*, indicated by al-Nābulusī, which naturally enjoyed complete autonomy as against those just mentioned. The Ayyūbids adopted the Saljūqid *ḡibā*, which they distorted (Cl. Cahen, in *BSOAS*, xiv/1, 42). The work of these offices involved large numbers of documents and employees supervising

one another. The most striking institution of the Ayyūbid régime seems to have been the *ghadd*, the office of the *mushāhid*. The administration was dependent, naturally, on a native personnel, frequently Copts, who alone possessed the requisite traditional training; but either because it did not inspire sufficient confidence or because on its own it had insufficient power to make its decisions effective against powerful, especially military officials, there was attached to each *Diwān* and also, perhaps, to the *Diwāns* as a whole, a *mushāhid*, that is to say an amir entrusted with the supervision of the ordinary civil administration, which he supported with his own military contingents.

The army seems to have had contingents at least equal to those of Salāh al-Dīn's time and, in case of need, it could of course be temporarily augmented by the distribution of new provisional *thihs*. Though pay or direct distribution did not entirely disappear, the *thihā*, however, was the main source of revenue for the army, or at least for the amirs. The Ayyūbid *thihā* was connected with both the Fātimid and Saljūkid traditions, but, especially in Egypt, did not exactly correspond to either of these models. It was freer, economically, than the Fātimid *thihā*, in the sense that it was no longer subject to tithes; but, compared with the Zankid *thihā*, which conferred on the holder a kind of seigniorial autonomy over his territory, it was much more closely incorporated in the State administration: although the *mushāhid* was responsible for some items of expenditure, in reality he possessed no actual administrative rights, being merely the assignee of a definite revenue, the composition of which did not depend on him, and which could be withdrawn from him or transferred elsewhere at any time. This revenue was calculated according to an estimate, *ʿibra*, in a unit of account, the *ḍinar ḡayyātī*, which was made up of a specific combination of payments in cash and in kind from the crops; however, generally speaking, it was the interested party who, at the time of the harvest, was obliged to go and supervise the levying of the tax due to him (hence the difficulty of maintaining an army in the field for any considerable time). The *thihā* of the great amirs were, generally speaking, made up of parcels of land at a distance from one another. The number of men, which the *mushāhid* could and had to maintain on them, was stated precisely (likewise in the Ayyūbid territories in Syria), and it became the custom, unknown until then, to speak of amirs of *n* men, *200 men* etc. (Cf. C. Cahen, *L'évolution de l'ihā*, in *Annales ESC*, 1953).

One of the weaknesses of this army lay in the fact that the various corps of which it was constituted were lacking in unity and were mutually jealous. A few traces of ethnic hostility can be found between Kurds and Turks. It does not appear to be attributable to any great extent to the fact that the former were apparently free men and the latter, at least prior to their promotion to the amirate, slaves. The most seriously significant factor was that each ruler tended to form a body of troops of his own, acquired by him individually and therefore personally devoted to his cause; the disappearance of a ruler, however, did not entail that of the body or bodies of troops formed by him, within which there prevailed a vigilant solidarity, arising out of fear of the new bodies of troops. The rivalries between *anadīyya* (from *ʿAsad al-Dīn Shīrkūh*), *ḡalabīyya*, *ʿāḍīyya*, *ḡalabīyya*, *ḡalabīyya* etc. play a great part in the quarrels between Ayyūbid pretenders.

The military policy of the Ayyūbids was completed by the construction of impressive fortresses both urban (Aleppo, Cairo etc.) and rural, which they matched especially against those of the Crusaders.

At times there has been speculation as to the extent to which certain characteristics of the Ayyūbids can be attributed to their 'Kurdish'. Considerations of this kind too often derive from gratuitous prejudices and falsified information. It does not seem that the presence of Turks beside Kurds in the Ayyūbid régime differed profoundly from that of Kurds beside the Turks in the Zankid régime, and both institutionally and intellectually the two régimes are related, allowance being made for the consequences of environmental conditions. Yet it is probably not a matter of chance that the Ayyūbids sought to expand to Dīyar Bakr and Aḥlāt, that is to say towards their country of origin, or at least into Kurdish territory, so as to ensure the continuity of Kurdish recruitment. However, within the actual dynasty, in the course of successive generations, Turkish and Kurdish blood was mixed; and we shall see that in its last days the régime indeed lost itself of its Kurdish aspect.

The Ayyūbids in any case, like the Zankids and their other contemporaries, were staunch Sunni Muslims, working under the aegis of the sovereign, to promote Orthodox Islam against heresy. This attitude was first of all revealed by the reintroduction of Egypt into the 'Abbasid family, and more durably, at a time when the Caliph al-Nāṣir had restored a certain prestige to the Caliphate, it was manifested by an expression of respect, of a concordance of opinions which, whilst naturally not diminishing the autonomy of the Ayyūbids, were not however purely verbal, authorising, for example, in the settlement of disputes, the frequently effective mediation of such caliphal ambassadors as Ibn al-Dīawī. Furthermore, the Ayyūbids, like other rulers of their times, who tried to take in hand the lower classes of Baghdad and at the same time consolidate his administration and reassert his moral authority among the aristocracy; he hoped to associate the princes with himself in this undertaking, both in order to attach them to himself and to enable them to conduct a similar line of action among their own people (cf. the latest assessment of this question by Fr. Taeschner, *Die Palastine*, in *Schweizerisches Archiv für Volkskunde*, tiii, 1956).

The orthodox attitude of the Ayyūbids is also shown in the concrete encouragement which they and their high dignitaries gave, after the Saljūkids and Zankids, to increasing the numbers of *madrasas* in Syria and the *Diwāra*, and to their introduction into Egypt. Al-Sāḥib Ayyūb appears to have been the initiator of a new form, the *madrasa* for the four rites including in its buildings the tomb of the founder. On the other hand, the Ayyūbids welcomed the mystical orders, often originating in the East, for whom they founded various *ḡhawāsh*, more generally evident is the fact that quite a few immigrants of recent or remote Iranian origin are to be found surrounding them, as with the Saljūkids and Zankids, especially in the controlling spheres of intellectuality; there seems also have been a tendency for them to associate the kids and religious circles more extensively with the government. Especially remarkable under their rule was the so-called family of the Soos of the *Shaykh* of Khurāsānī origin (see AWLAD AL-SHAYKH), who,

contrary to the almost universal particularisation between the military, religio-legal and administrative castes, succeeded in being eminently represented in all three, especially in the case of the *waṣīr* Maʿīn al-Dīn and his brother the amir Fakhr al-Dīn who, for a short time before his death in the battle of Maṣīra, acted as regent of the realm.

Nevertheless, if one compares the behaviour of the Ayyūbids with that of the Great Saljūks, a greater flexibility is certainly to be observed. This is doubtless connected with the general aim of relaxing tension which we have noted, moreover, in the policy adopted towards the Franks. But it must also be said that the heretics of Syria had been sufficiently weakened by the Zankids for it to be no longer really necessary to fight them, and that in Egypt Ismaʿīlism seems hardly to have left any regrets. At Aleppo, however, the government of al-Zāhir ḡhāṣ was stained by the blood of the Iranian mystic Suhrawardī Maḡṣūl, executed during the lifetime of Salāh al-Dīn; but it must be said that this was a very special individual case, and that this measure was taken on the basis of Aleppo. The majority of the Ayyūbids were ḡhāṣīs, in contradistinction to the Turks who were Hanafīs; and although doctrinally this does not impute to the latter a stronger degree of intolerance, the result may nevertheless have been that the Ayyūbids had a less intimate contact with the pietists, devoted to the militant spiritual mission of the Saljūkids. However, al-Muʿazzam and his son Daʿūd were Hanafīs, and this perhaps partly explains their conflicts with al-Kāmil; they certainly appear, for example, at the time of the dealings with Frederick II, doctrinally to represent the intransigent party.

Christians and Jews, generally speaking, likewise appear to have had no grounds for complaint against the dynasty. As is almost always the case, when an exception occurs, the motive is political and not confessional. There is no doubt that the Ayyūbid occupation impaired the exceptionally favourable conditions enjoyed by the Armenians under the last Fātimids (see ARMÉNIENS). But it was the Copts who profited from these confiscations and not the Muslims. Similarly, when Salāh al-Dīn retook Jerusalem, he favoured such of the native Christian communities there as could not be suspected of co-operation with the Franks (cf. *inter alia* C. Cahen, *Indigènes et Croisés, un médecin d'Amaury et de Saladin*, in Syria 1934, and E. Cerulli, *Etiopi in Palestina*, in Rome 1943). The Ayyūbid period in Egypt was one of vitality for the Coptic Church. When moments of tension arose, it was generally as a counter effect of Crusades, in so far as collision might be feared, for example, between Mulkites and Latins. That it was not considered necessary, however, in normal circumstances, to prohibit intercourse between indigenous and Latin Christians is shown by the permission accorded by the Ayyūbids for Dominican and Franciscan missionaries to enter their kingdom, provided that no attempt was made to convert Muslims. It is true that the traditional discriminatory measures in respect of non-Muslims were from time to time revived, always with the same ineffectiveness. The Jews were also passably well treated, even being invited to return to reconquered Jerusalem, and refugees from Spain, such as Maimonides, were favourably received (see E. Ashtor-Strauss, *Saladin and the Jews*, in *Hebrew Union College Annual*, 1956, 305-26).

The climate certainly offers a partial explanation for the intensity of cultural life in the Ayyūbid domains. Syria in the 13th century was truly the heart of Muslim culture in the Arabic language. Egypt was soon to rival her, but had not as yet quite achieved a synthesis between the survivals from her own past and the imported elements favoured by the Ayyūbids. All the credit for this flowering cannot indeed be claimed by the Ayyūbids, but it would be unjust to deny any credit to princes who were themselves frequently men of letters and scholars, and who in general sought to protect and attract the representatives of all disciplines compatible with orthodoxy. The economic progress and the general advance of Muslim recovery in the area which the Crusades had involved most directly in the struggle, must have accomplished the rest. There is little object in giving a list of names of men of letters and scholars. The names of the historians and geographers will be found in the bibliography of sources; Ibn al-Kifṭī (*waṣīr* of Aleppo) and Ibn Abī 'Usayb'a, biographers of scholars and physicians, draw our attention to the importance of the support given to these latter in the hospitals; among the poets (some of whom were studied by Rūkāb, *La Poésie profane sous les Ayyūbides*, 1949), the historian will perhaps more especially note al-Amjad Bahārūghāh, himself an Ayyūbid, or a man of the *sāḥ* such as Ibn al-Dīawī (cited in the *Maḡṣūb* of Ibn Saʿūd). Furthermore, emphasis should be laid on the many Spanish refugees who established themselves in the Ayyūbid domains, men as diverse as the historian-geographer Ibn Saʿūd, the grammarian Ibn Mālik, the botanist Ibn al-Bayṭar and the mystic Ibn al-'Arabī.

It is not possible to speak at length here of the Ayyūbid principality of the Yemen; Ayyūbid intervention here certainly had the same importance for the country as was the case in Egypt. Ayyūbid rule to a certain extent restricted the quarrels of sects and princelings who divided the country among themselves, and brought about a political unity which was to survive them; although, from 629/1232, the Ayyūbids were supplanted by the Ruṣūlids, the latter had their origins in their officer ranks, and continued their traditions. The Ayyūbid régime reintroduced Sunni Islam to the Yemen and linked it more closely to Egypt, politically, economically and institutionally. The persistence of religious divisions in the population may have been the origin of the strange attempt on the part of the third Ayyūbid to pass himself off as an autonomous Unṣayyāli Caliph; after his overthrow, al-'Adil and al-Kāmil stressed their intention of not allowing the Yemen to escape from their hands by sending one of the sons of the latter to take over the succession. Al-Kāmil, however, was unable to prevent the accession of the Ruṣūlids, but the latter were at pains to show themselves, at least at the outset, as allies of the Ayyūbids; later there arose conflicts of influence between them at Mecca; commercial relations, however, seem never to have been broken off.

III. The death of al-Kāmil marks the end of the true Ayyūbid régime, with the reservation that the resulting degradation was, in a large measure, implicit in its very constitution. Al-Kāmil had relegated his eldest son, al-Sāḥib Ayyūb, to the government of Hīn-Kayfa and designated his youngest son al-'Adil to succeed him; al-'Adil made himself disliked and his opponents appealed to al-Sāḥib. The latter, in the course of fierce struggles, accompanied by

many reverses, conquered his throne and restored the unity of command of the Ayyūbid states (a unity rendered ephemeral by his death), not only at the expense of his younger brother, but also of the majority of the Ayyūbids of Syria, especially al-Sāliḥ Ismāʿīl, who had become master of Damascus. It is true that there had already been a coalition between Ayyūbids and Khwārizmians, did not prevent the latter from being protagonists from the first place, receiving the territories which they governed from the Sultān, the head of the family, or family solidarity from keeping the harmful effects of these conflicts within definite limits. This time, the adversaries viewed one another as usurpers, and it was naked strength which gave the victory to al-Sāliḥ. Nevertheless, this strength was no longer derived from the old Kurdo-Turkish army; it was derived from the Turkish mercenaries who had been due to the fact that, as his father's lieutenant in Egypt, in his district of the Kurds, he had carried out a large scale recruitment exclusively of Turkish slaves. The army which he organised on becoming master of Egypt was exclusively Turkish. But, in the meantime, his successes had been due to an even more disquieting element: the Khwārizmians who, after the defeat and death of Qāṣid al-Dīn, had been driven back from Asia Minor where for a time they had served the Ayyūbids, and were seeking an employer and a territory. He invested them with Diyār Muḍar and summoned them to fight against his enemies in the Djaḍra and in Syria; it was partly due to them that these wars were of so devastating and ruthless a character, until at last al-Sāliḥ, having no further need of them, caused them to be annihilated by his cousins of southern Syria. Furthermore, though the former Ayyūbids had kept the peace with the Franks, and at that time the al-Kāmil had even entertained an alliance with Frederick II against his brothers, such plans had never been actually realised. This time, the Franks appeared in alliance with al-Sāliḥ Ismāʿīl and with al-Nāṣir Ḍaʿūd of Karak, himself against al-Sāliḥ Ayyūb and the Khwārizmians, which resulted in an irreparable disaster for both of the former. This marks the appearance in al-Sāliḥ of a warlike spirit against the Franks, a spirit which was unknown to his father, and the orders of St. Louis, at the beginning of which the Ayyūbid ruler died.

In effect, he was the last Ayyubid. His son Tûrânshâh was massacred after a few months by his troops, and even though several child puppets still carried on the name of the Ayyubid dynasty for a time, it was in fact from 647/1249 that the establishment of the new so-called Mamlûk régime dated. Al-Sûlî was the real creator of this régime. The well-knit and well-disciplined army of Turkish slaves, called the Bahriyya from the name of the barracks on an island in the river (Bahr), was the real arbiter of the situation; neither al-Sûlî nor Tûrânshâh were military leaders. The dynasty might have lasted longer if the latter had not been unbalanced; it was inevitable that the Bahriyya would supplant him by a leader promoted from themselves, which they in fact did when, on the death of Tûrânshâh, they raised the Turkomân 'Izz al-Din Ayyub to power, first as *atâbeg* and then as sultan. The 'Kurdish' dynasty was succeeded by the 'Turkish' régime, in the words of contemporaries.

The Northern Ayyūbids continued for a little while longer, but without further success. Their

lives were spent under the shadow of the terror caused by the approach of the Mongols. They hesitated between submission which they feared might be annihilation, and armed resistance of which they despaired in advance. However, Nāṣir of Aleppo, with the aid of the Mamlik Sultan, had become the standard-bearer of the Ḥamīyah cause, and it required the mediation of the Caliph in face of the Mongol danger to bring about an agreement that all Syria belonged to him, the Mamlik Sultan being satisfied with Egypt. But in 1258 Baghdad fell and, in 1260, Aleppo, Damascus and Mayyāfīdīn were either captured or abandoned. The invader, who seemed to be invincible. The unfortunate al-Nāṣir, who unlike others did not dare to seek refuge in Egypt, was finally captured by the Mongols and, well treated at first, paid with his life when news arrived of the defeat of the Mongols by the Mamliks at 'Ayn Jalūt (i.e. in Syria) at the end of the year 1260. The capture of Syria by the Mamlik Sultan Baybars, the principality of Karak (which moreover had been lost to the family of Dā'ūd in 1248), which was of great strategic importance, was subjugated; the principalities of Aleppo and Hims had disappeared of their own volition; that of Ḥamāh alone, made illustrious by its aristocratic 'Aḥl al-'Idā', was restored, and existed (with one interval) until 1322, by reason of its absolute docility.

There was however another branch which survived for more than two centuries under the Mongols and their successors, in the vicinity of Hısn Kayta; reduced to the level of a local seignior, it returned in a rather odd way to its origins, in that it drew a large part of its strength from the Kurdish tribes who had become powerful in the region and among whom it attempted to play an ever-repeated rôle as arbiter. It succeeded in surviving the Turkish catastrophe, preserving a centre of power in the region, but in the end succumbed to the invasions of the Kurds, but not before the remnants of the Kayta, the Kayvânî, and the Kaykhanî of its members regained a minor local importance at the time of the Ottoman conquest (cf. Claude Cahen, *Contribution à l'Histoire de l'Émirat Rûm au XIV<sup>e</sup> siècle*, in J.A. 1955).

**Bibliography:** A. Sources. A number of archival documents of the Ayyubid period have been preserved; official documents, reported in Sinal (A. S. Atiya, *The Arabic MSS. of Mi. Sinal*, Baltimore 1935), or discovered in the Italian archives and published (M. Amari, *Storia della Sicilia Normanna*, Palermo 1854; Tafel and Thomas, *Urkunden zur älteren Handelsgeschichte Venedigs*, 3 vols. 1856-7); etc. Also Subhi Labib cited above; private documents, in the collections of papers of Cairo, Vienna, etc. (cf. for example A. Dietrich, *Die Ewerhande aus der Ayyubidenzeit*, in *Dioctylism*, ed., Berlin Akad. Wiss. 1925). There are also partial collections of documents, such as the correspondence of the Kādī al-Faḍl (on whom see A. N. Helbig, *Der Kādī al-Faḍl*, 1909), inadequate, of the Ayyubid al-Nāṣir Dā'ūd (Broekmann, I, 318, and C. Cohen, *REL*, 1936, 341), and of al-Aḥdāḍ al-wazīr, Dīwā al-Dīn b. al-Aḥlī (analyses of MSS. by Margoliouth in *Xth Congress of Orientalists*, Rabat, 1930; in *Macbrigg xxxvii*, 1939); and the correspondence of al-Gāṣi al-Ghāṣi (1504-5), the first also cited in Abū Shāma cited infra; various Jewish documents in the collections of the Cairo Geniza.

On the whole, the essential sources for us continue to be the narrative sources, on which several comprehensive studies are to be found in the Introductions of Cl. Cahen, *La Syrie du Nord à l'époque des Croisades*, 1940, and H. Gottschalk, *al-Malik al-Kāmil* (in the press); for the times of Salāḥ al-Dīn, H. A. R. Gibb, *The Arabic Sources for the Life of Saladin*, in *Speculum*, xxvii, 1950. For this first period, the main sources are 'Imād al-Dīn al-'Iṣṭahānī, *al-Bār al-Shāhīn*, of which only two fragments exist, at Oxford (cf. H. A. R. Gibb, in *WZKM*, LII, 1953), but of which more or less complete summaries are given in all the subsequent literature and especially in Abū Shāma, *al-Rawdaḥayn*, Cairo ed. 1287/1272, 2 vols. (the first part of a new critical edition by Hilmy M. Aḥmad appeared in Cairo in 1956; it goes as far as 538/1233); extracts in *Hist. Or. Crois.*, iv and v; it should be completed by *al-Fath al-Kawī*, idem, ed. C. Landberg, devoted to the events of 1187 (cf. J. Kraemer, *Der Sturz des Königsrichs Jerusalem in der Darstellung des —*, Wiesbaden 1952). The other important Arabic sources are Ibn Ḥaddād, *Life of Saladin*, in *Hist. Or. Crois.* III; Ibn Abī Tayyib quoted in Abū Shāma, *op. cit.*; the *Itinerary of Ḥamīd*, ed. Cl. Cahen, in *BEO*, Damascus 1937, and the Christian Abū Sālīb the Armenian, *Churches*, etc., ed. Evetts. For the beginning of the 7th/13th century, the *Kāmil* of Ibn al-Aṭīr becomes the main Arab source, to which must be added the last pages of Ibn Abī Ḍamm (Oxford MS. Marsh 360), Ibn Naṭīf (MS. Leningrad IM 159 ed. in preparation by H. Gottschalk); a few extracts in Amari, *Bibliotheca Arabo-Sicula*, II, Appendices; occasionally uttered in Ibn al-Furāt, *infra*, the extracts from the Memoirs of 'Abd al-Latif preserved in the *Ta'rikh al-Idm* of Ḥabīb al-Dīn and the authors quoted for the following period. For the 7th/13th century of the Ayyūbids as a whole and especially from about 1220, the fundamental source is the *Mafarid al-Karāh* of Ibn Wāṣil (ed. undertaken by al-Shayyāṭ, who so far has published the first two volumes stopping at the death of Salāḥ; extracts quoted in the *Bibliothèque des Croisades* of Michaud, IV (by Reinaud) and in the comments on the translation of Makrīzī by Blochet in *ROL*, ix-33); this work and the *Mir'at al-Zamān* of Sibt Ibn al-Jawādī (facsimile ed. Jerebt, on which is based that of Hayyārābādī, II, 1952, Moscow, ed. *Arab. 1957/2* review by Cl. Cahen), especially important for Damascus, are the two sources used almost exclusively for the whole of subsequent historiography; the overrated Abu 'I-Fida' in the main only reproduces the work of his less noble compatriot for this period; Ibn Wāṣil had previously written a more concise *Ta'rikh al-Salāḥ*, of which different sources of information (unpublished). To these authors must be added especially Abū Shāma, *Ḍayl 'ala 'l-Rawdaḥayn*, Cairo ed. 1366/1947; the Christian al-Maklūb, *al-'Amd* (edition in *BEO*, 1958, by Cl. Cahen), the *History of the Patriarchs of Alexandria* (this part unpublished, quotations, among others, in Blochet-Makrīzī *loc. cit.*), the extracts of Sa'ad al-Dīn Cl. Cahen, *Une source pour l'Histoire des Croisades*, in *Les Mémoires de —*, in *Bull. Fac. Lettres Strasbourg*, xxviii-7, 1950; for Northern Syria, the *Zuhd* of Kamāl al-Dīn Ibn al-'Adīm (ed. undertaken by Sami Dahīb; meanwhile, Blochet trans. in *ROL*, iv-vi) and the *Ḥaḡyā* by the same author

(unpublished), and 'Izz al-Dīn Ḥaddād, *cf. infra*; in *Corpus Script.*, or, II, 14-15). The 'Iṣṭahānī point of view is to be found in Ibn al-Fuwaṭī, *al-Hawādith*, etc., ed. Must. Ḍawād; the Khawāzimian in Nasawī, *Vie de Ḍiḡāl al-dīn*, ed. trans. Houdas; the Salḡūdī (of Rūm) in Ibn Rībī, ed. Houtsma (somewhat abbreviated; in Persian). See also the historians of the Mughals and the first Mamlūks. Among later Arab historians who have preserved some original materials, Ḍiḡālī (Cl. Cahen, in *Oriens*, LVII, 1951, 151-3), Ḥabīb al-Dīn (ed. in preparation), Nuwayrī (Cairo ed.), Ibn al-Furāt (this part unpublished), Makrīzī (Sa'ad al-Dīn), Must. Ḍiḡālī, *Ḥabīb al-Dīn*, ed. and, for the beginning, ed. Wiet, the only good edition; the Yemen under the Ayyūbids, better than the celebrated Khawārijī (ed. trans. Gibb *Mem. Ser.*), of late composition, the contemporary Ibn Muḡāwir (ed. Löfgren) and Hamdānī (Brooklyn, I 323, unpublished). For the principality of Hīn Kayfā, the anonymous Vienna manuscript studied in Cl. Cahen, *Contributions* etc. cited above. A general history of the whole Ayyūbīd family was composed at the beginning of the 13th century by an anonymous Syrian (Brit. Mus. Add. 7111, unpublished). On the whole, too many important sources are still in manuscript form and their publication (at least photographically) is a pressing desideratum. Translated extracts from the Arabic literature will be found in F. Gabrieli, *Storia arabi delle Crociate*, Rome 1937, and J. Östrop, *Arabische Krieger in Kortages Perioden*, Copenhagen 1906.

To the historians must be added the biographers, not only Ibn Khallikān, but also Ibn al-Kūfī (ed. Lippert) and Ibn al-'Uṣaybī'a (ed. Aug. Müller), and the geographers, Yāqūt, Ibn Sa'ūd (unpublished), and especially 'Izz al-Dīn B. Ḥaddād (Northern Syria, ed. Ledit in *Muehriq*, 1935; Aleppo, ed. Sourdel, Damascus 1948; Damascus, ed. Dahīb 1957; Ḍiḡālī, analysis by Cl. Cahen in *REL*, 1934; further extracts by Sobehānī in *Centenaire de Amari*, II, (Ba'ṭān) and in the *Corpus Inscriptionum Arab.* (Ba'ṭān), historical and administrative, to be completed by Sibt Ibn al-'Adīm, *Les Trésors d'Or*, analysis and trans. Sauvaget, 1950, and 'Ulaymī, *Description de Damas*, ed. Sauvāire, in *JA*, 1894.

As administrative treatises must be cited (besides the extracts preserved by Makrīzī) Ibn al-Manamūlī, *Kawāṣim al-Dawān* (ed. Atiya, 1943), Ibn Shīr al-Kurḡī, *Ma'āṣim al-Kubā*, ed. Khāṭir Kustānīn Paṣhā, 1913; and the tracts of Nābulusī, *Akhḡār al-Fayyūm*, ed. R. Moritz, *cf. Cl. Cahen, Les Impôts*, etc., quoted above, and *Lam' al-Kawānīn*, ed. Cl. Cahen to appear shortly, extracts by C. Owen in *JNES*, 1935; finally the *Nihāyat al-Kubā* of al-Shayyāṭ and the technical treatise on the treatise on gun-making, and the monetary treatise of Ibn Ba'ra analysed by Ehrenkreutz in *Contributions* etc. quoted above; I do not know the *Ta'rikh* fi 'l-'Uyūl al-Harbiyya dedicated by 'Alī al-'Iṣṭahānī to al-Zāhir Ḥabīb (Recher in *MFOB*, 9, 1912, 495 ed. in preparation by J. Sourdel-Thomine). The *dhinās* of the poets should not be neglected.

Naturally non-Arab and non-Muslim literature must also be consulted, which cannot be given in detail here: especially the Latin and French historians of the Crusades and of the Latin Orient, and Syriac literature (Michael the Syrian, ed. and trans. Chabot; Bar-Hebraeus, ed. and trans.

Budge; *Chronique anonyme syriaque*, ed. Chabot, in *Corpus Script.*, or, II, 14-15).

The epigraphical material has been collected in the *RCEA*, VII-X; the inscriptions of Salāḥ al-Dīn studied by Wiet in *Syria*, II. To the numismatic material provided by the usual catalogues, should be added the recent studies of Balog, Minost and Jungfleisch in *MIE* since 1950.

B. Modern Works. There is no complete general study on the Ayyūbids. The two best general accounts, though short, are those of G. Wiet in the *Histoire de la Nation Egyptienne* edited by Houtsma, IV, and of H. A. R. Gibb in *History of the Crusades* (Philadelphia, 1951) and, II (The Ayyūbids after Salāḥ) in the press. There is not even a serious biography of Salāḥ; the latest is that of A. Champredon, Paris 1956, and the least bad still that of Lane-Poole, New York 1898. Of the rest of the Ayyūbids, al-Kāmil alone has just been the subject of an important work, by H. Gottschalk (in the press); the same author has given notice of his article on Ayyūbīd Yemen). The studies on various special problems have been quoted in the article. For trade, hardly anything new has been added from our point of view to the two old classical works of W. Heyd, *Histoire du Commerce du Levant*, I, 1882, and of Schaube, *Handelsgeschichte der Mittelmeerromane*, 1906, which view matters from the Western point of view. Some information on institutions is contained in W. Björkman, *Beiträge zur Geschichte der Staatsverwaltung im islamischen Ägypten*, Hamburg 1929. See also the general histories on the Crusades and the Latin Orient; P. Butcher, *The history of the church of Egypt, 1897*, and *supra* and *infra* the articles devoted to the individual rulers, as well as the section on *madrasa* in the article *Madrasa*. (CL. CAHEN)

AL-'AYYŪK [see *نور*].

'AZAB. An Arabic word meaning "an unmarried man or woman", "a virgin", applied to several types of fighting men under the Ottoman and other Turkish régimes between the 13th and the 16th centuries. The soldiers of various Ottoman formations, notably all those recruited by *devşirme* [g.n.], were forbidden to marry before retirement; and it may be assumed that the earliest 'azabs we read of—those employed as marine troops by the Ayḍīn Oghullar in the 13th century—were bachelors recruited from coastal villages. The term was probably used likewise for marines both in the Salḡūdī state of Konya and in those of its smaller successor states that were possessed of seaboard.

Presumably because the men concerned were again unmarried, the term 'azab was also applied from early Ottoman times to the light archers, recruited *ad hoc* for campaigns in whatever numbers were considered necessary, whose office in battle it was immediately to fire the crossbow, or to stand in front of the artillery and the Janissaries and to open the fight with a hail of arrows. These 'azabs were drawn one from every twenty or thirty "khānes" in the provinces, and supported whilst on service from the contributions of those khānes, which stood in lieu of tax payments (cf. *Awākīp*).

From the middle of the 14th century, further, there were 'azabs employed in the garrisons of Ottoman fortresses. These *haḡe 'asabkārī*, as they were called, were organised more or less like the Janissary and other *odjaks* recruited by *devşirme* (though not so recruited themselves) and paid in cash by the Treasury. Though they may all have

started their service as bachelors, these men must have been permitted eventually to marry, since places in these corps were heritable by competent sons. After the 16th century the *haḡe 'asabkārī* were sometimes employed as bridge-builders and sappers (*ḡāḡḡḡḡḡḡ*). It is perhaps these 'azabs of whom O'Glosson states (*Tableau*, VII, 399) that they were charged with the care of munitious and were incorporated in the corps of the *ḡḡḡḡḡḡḡḡ*, and again (*Tableau*, VII, 363) that though really *ḡḡḡḡḡḡḡḡ*, they were often called 'azabs, particularly in Egypt. This "incorporation" presumably took place after the *ḡḡḡḡḡḡḡḡ* ceased being recruited by *devşirme*. Another late reference to "frontier" 'azabs is made by Juchereau de Saint-Denis (*Révolutions*, I, 90). Writing of the second decade of the 9th century (between the collapse of the *Nīḡmī* *ḡḡḡḡḡḡḡḡ* and the abolition of the Janissaries), he lists the 'azabs, under *Serbadd Kullārī*, as elite infantry stationed on the frontiers.

Finally, the Ottomans continued the tradition of the Ayḍīn Oghullar in employing 'azabs at sea, as Treasury-paid musketeers, organised in companies under officers (*re'īs*) who might rise either to the command of galleys or to some of the chief posts at the Admiralty (next to which there was an 'azab barracks), as for instance its *ḡḡḡḡḡḡḡḡ*. The men of the Admiralty *odjak* were indeed also known as 'azabs, who, like those employed at sea, were Treasury-paid. Their duty was to guard war-ships whilst in dock.

ĀZĀD, ABU'L-KALĀM [see Supplement].

ĀZĀD, MUHAMMAD ḤUSAYN, an Indian Muslim writer and poet, who wrote in Urdu and is noted for the unique charm of his agreeable and picturesque style and for the important rôle he played in the field of literature and education. He was born in Delhi about 1854, being the son of Mawlawī Muḡammad Bākīr, himself a pioneer of journalism in Northern India. After the political upheaval of 1857, he left Delhi and after several years' wandering arrived in Lahore in 1864. He spent the rest of his life there in the service of the education department of the Government of the Panḡjāb, writing most of his subject-matter but also of its Urdu and Persian languages. He also made journeys to Persia and Central Asia. He died at Lahore in 1910.

His principal works are: *Āḡā Hayāt*, a history of Urdu poetry, with an introduction on the history of the Urdu language; it is his greatest and best-known work, which is celebrated and highly prized not only for its subject-matter but also for its vivid and graphic style; *Subḡān-i Pārs*, on Persian philology and the development of Persian prose style; *Nīḡāristān-i Pārs*, dealing with Persian poets of India and Persia; *Nayrang-i Khayāl*, a collection of allegorical essays, translated or adapted from the English; *Darbār-i Akbarī*, which deals with the reign of the Mogul Emperor Akbar the Great and his brilliant court, and *Khawāḡ-i Hind*, or stories from Indian history. He also collected and edited the poetical compositions of his master, Muḡammad Ibrahim Ḍhawāḡ.

He used Āzād as his pen-name; and along with Altaf Ḥusayn Hālī [g.n.] he is regarded as a pioneer

of the new school of Urdu poetry, which is characterised by naturalness and greater breadth of subject and treatment and also by increased attention paid to thought and matter as opposed to language and form.

(SH. INAYATULAH)

**AZAD BILGRAMI**, Mir Ghu'las 'Ali b. Ndr al-Husayni al-Wakfi, b. at Bilgram on 25 Safar 1146/29 June 1704; he received his early education from Mir Tulay Muhammad Bilgrami (*Subhat al-Mardjān* 99-4) and later studied with Mir 'Abd al-Djalil Bilgrami (*Ma'āthir al-Kirdm*, I, 257-77). In 1151/1758 he performed the pilgrimage to Mecca and Medina and learnt *hadith* from Shaykh Muhammad Hayat Sindhi al-Madani and 'Abd al-Wahhāb Tanfisi (*Ma'āthir al-Kirdm*, I, 162). He returned to India in 1152/1759, and settled at Awaraghabad where he died in 1200/1786; he was buried at Khuldābād (Deccan) (T. W. Haig, *Historical Landmarks of the Deccan*, Allahabad 1907, 58).

When his friend Samāsh al-Dawla Shāh Nawaz Khān (q.v.), *diwan* of Haydarābād, was murdered and his house plundered (1171/1758), Azad recovered most of the dispersed fragments of the unfinished MS. of the latter's *Ma'āthir al-Umarā'*, which he re-arranged and edited. The works of Azad himself cover *hadith*, belles-lettres, history, biography and poetry. His Arabic *hasid'at* in praise of the Prophet have earned him the title of Ḥasan al-Hind, after the Prophet's panegyrist Ḥasan b. Thābit (q.v.).

His notable works are: In Arabic: (1) *Subhat al-Mardjān fī Aḥādīḥ Hindustān* (lith. Bombay 1303/1886), incorporating two independent works by the author: *Shamūnat al-'Anār* and *Talqīn fī-Faḥḥ*, the former containing references to India in *Ḥurū'īn* commentaries and *hadith* and the latter on biographies of Indian scholars and 'ulamā', the chapter on rhetorical figures was later translated into Persian by the author himself under the title of *Ghulān al-Hind* (MSS. Asāliyya, I, 169; Etal., 2135; Berlin 1951); (2) *Diwan* in 3 vols. (Haydarābād 1300/1882-3) containing more than 2000 verses; a selection from his seven other *diwāns* entitled *al-Sab' al-Sayyira* was published at Lucknow, 1328/1910; (3) *Daw' al-Dawā'ir Sharāḥ Sahih al-Bukhārī*, an incomplete commentary on al-Bukhārī (MS. Nadwat al-'Ulumā', Lucknow, 99); In Persian: (4) *Khāṣina-i 'Amira*, alphabetically arranged notices of some 135 ancient and modern Persian poets with a brief history of the Marathas, (Campaner 1871, 1900); (5) *Ma'āthir al-Kirdm*, on the pious and learned men of Bilgram (lith. Agra 1910); (6) *Sar-i Asād*, biographies of 143 Persian and Urdu poets of India (Lahore 1913); (7) *Yad-i Hayyā'*, alphabetically arranged lives of 532 poets, originally compiled at Siwaṣṭin (i.e. Siwān, in Sind, where he was *naḥb* *Wahā'ī-nigār*) in 1145/1732 (MS. Asāliyya, I, 162; Ind. Lit. Off. 3966 b); (8) *Rasād al-Awṣi'*, a short compendium on the saints of Deccan (lith. Awaraghabād 1310/1892). For a detailed list of his works see *GJASB* (L), 1936, 119-30; Shams Allāh Kādirī, *Kāmus al-'A'ā'im* I, 32-5; Storey, II, 855-66.

**Bibliography:** Autobiography in *Subhat al-Mardjān* 118-23, *Khāṣina-i 'Amira* 123-45, *Ma'āthir al-Kirdm* 161-64, 303-11; Siddiq Hasan

Khān, *Ithāf al-Nuhalā'*, 530; idem, *Abjad al-'Ulum*, 920; *Hadd'ih al-Iḥanafiyya*, 454; *Tadhkira 'Ulamā'-i Hind* 134; Wadīh al-Dīn Ashraf, *Bahr-i Zabāh* (MS), fol. 315; Kien, *Pers. (A. S. BAZRER ANSARI)

**AZAK**, Russian Azov, called Tana by the Italians after the ancient Tanais (the Old-Tana of Jos. Barbaro) is first found on an Italian map of 1306. The Turkish name Azāk has appeared on coins since 717/1317. First the Genoese around 1316, then the Venetians in 1332, established trade remained essentially a Muslim-Tatar city which was administered by Tatar governors such as Muhammad Khāḍja about 1334, Sici-beg in 1347 and 1349, Tokobeg about 1358. A mint of the khāns was active there as late as 1441. An emporium of the East-West trade in the 14th century, Azāk declined perhaps more from the competition of the Genoese Caffa than from Tatar-bek's hostile policy toward the Italian colonies (1345-1358) or Timur's depredations (September 1396). Conquered by the Ottomans in 1473, Azāk is described as a *hadd* of the *sandjak* of Caffa in the *defter* of 1543. The town consisted of three parts: 1. Venedik-kafesi (in Ewliya Celebi, *Frēnk-hisrī*) with 198 Muslim families including garrison; 2. Djeneviz-kafesi (later Orta-bisrī) with 109 Muslim families including garrison; 3. Toprak-kafesi with 300 Tatar akhōjī and 104 families of fishermen and 57 Greek families. Extensive fisheries and large production of caviar as well as slave-trade were the chief economic resources in this period. Later when the Cossacks, Cerkas and Russians began threatening it Azāk was transformed into the main Ottoman bastion in the North. The first serious siege was attempted by Dimitrash, a chief of the Cossacks, in 1559. They eventually captured it in 1637, but had to abandon it in 1642. As the attacks were renewed in subsequent years especially in 1656 and 1659, the Ottomans made it stronger than ever (In 1666 Ewliya Celebi saw a garrison of 13 thousand men and numerous cannons in it) and later erected new fortifications around it such as Sedd-i Islām. After an unsuccessful attack in 1695, Peter the Great captured Azak on August 6, 1696. Compelled to surrender it at the treaty of the Prut (1711), he only evacuated it two years later. The Russians recaptured it in 1736.

**AZAL** [see KIDAN.]

**AZALAY** (current orthography: azalad), a term for the great caravans made up of several thousand camels (or to be more precise, dromedaries, which in the spring and autumn carry the salt from the salt deposits of the Southern Sahara to the tropical

regions of the Sahel and the Sudan. This salt, which used to be exchanged by the Blacks against its weight in gold, if one is to believe al-Bakid (trans. de Slane, 2nd ed., 327), is exchanged today for food-stuffs: rice, millet, sugar, tea, etc. The salt from Igdl, to the West, which has perhaps been known since the 6th century A.D. (Anonymus of Ravenna), is collected by manumitted slaves of the Kounta (Moors) of Chinguiti and transported by the Moors to the markets of the Western Sudan. The salt deposits of Taoudeni have replaced those of Teghena, a source of wealth for the kings of Mali and of Gao (14th-15th centuries), and have been worked since 1585; the salt, after being collected by sedentary miners, is taken to Timbuctoo by the Kounta and by a few small Touareg caravans; it is distributed throughout the whole of the Central Sudan and the Upper Volta. To the East, the salt deposits of Bilma, Segouine and Fachi are worked by the Kanouri and the salt transported by azalay by the Touareg of Air and Damergou; it is sold in Nigeria and in the Niger Colony. The salt of Borkon (Faya) and of Ennedi furnishes supplies to the blacks of the plains of French Equatorial Africa. As regards the salt of Amador, to the North of Tammarasset, this is collected and transported by the Kol Ahaggar and the Kol Ahaggar.

The azalay is the only type of great caravan which has survived. The salt trade has always been a source of wealth to the nomads of the Southern Sahara. It persists, in spite of the competition from salt from Europe and of the sea salt deposits of Kaolak.

**Bibliography:** Capot-Rey, *Le Sahara français*, Paris 2 ed. 1959 (with bibl.). (J. DIESSEN)

**AZALI**, name given to those Bibis [q.v.] who followed Mirza Yalvā, called Subh-i Azal [q.v.], after the death of the Bāb.

**A'ZAMGARH**, town and head-quarters of the district of the same name in the province of Uttar Pradesh (India), situated in 26° 5' N. and 85° 12' E. on the river Tōs, notorious for its frequent and devastating floods; it was founded in 1026/1616-17 by A'zam Khān I, a scion of an influential Rājput family, whose head Abhinav Singh, embraced Islam during the reign of Dīshangir (1014/1605-1037/1627) and was named Dawlat Khān. Population in 1951: 26,632; district: 2, 102, 425. A series of battles between the successors of A'zam Khān I and the Nawābs of Awadh for political supremacy culminated in the battle of Pargana in 1752/1764-5, which resulted in the death of both the Rājās of A'zamgarh and the 'Amid (revenue collector) of Nizāmābād (Awadh). A'zamgarh was then occupied by Fadl-i 'Alī Khān, ruler of Ghāziyūr. On the defeat of Shudhā'i al-Dawla at Buxar in 1178/1764-5 at the hands of the British, A'zam Khān II returned to his ancestral estate. On his death in 1185/1771-2, his entire estate was annexed to the kingdom of Awadh. In 1216/1801-2 it was ceded by Sa'adat 'Alī Khān, Nawāb of Awadh, to the East India Company. The town was badly disturbed during the Mutiny of 1857 when the local prison was stormed and the inmates were set free.

The dilapidated fort built by A'zam Khān I and a temple erected towards the close of the 13th century are the only buildings of note. A'zamgarh has been frequently visited by serious floods causing widespread damage. The floods of 1871, 1894, 1896, 1898 and 1956 were particularly heavy. It has earned a bad name for Hindu-Muslim riots, which frequently took place.

A'zamgarh is now famous as a centre of cultural

activity, being the seat of the Dār al-Muṣannifin (Shibli Academy) and its Urdu organ the "Ma'drif".

**AZAMMUR** (Fr. Azemmour, Span. and Port. Azamor), town on the Atlantic coast of Morocco, about 75 km. South-West of Casablanca and 10 km. North-East of Mazagan, on the left bank and some 5 km. from the mouth of the Wādī Umm al-Rabī' (Oum er-Rbia). It possessed approximately 15,000 inhabitants in 1955, mostly Muslims, with a small Jewish minority (*mellah*) and a very small number of Europeans. The name is connected with the Berber *azammur* (wild olive tree). The town is famous for sand fishing, which is one of the population's principal means of livelihood and takes place each year from December to March. Its patron saint is a *sayyid* who lived at the time of the Mu'niyin dynasty: Mīlīy Bishā'ī (- Mīlīy Abū Shā'ayn).

The history of Azammur remains obscure until the time of its contacts with the Spanish and Portuguese. The former, setting out from the maritime coast of Lower Andalusia, appear to have made several incursions, between a date which it has not been possible to fix and the ratification at Toledo in 1486 of the Hispano-Portuguese treaty of Alcaz, which abandoned the Atlantic part of Morocco to Portugal. In 1486, the town appears under the sovereignty of the King of Portugal, who was then John II (1481-1495). Twenty years later, doubtless at the instigation of a party formed among the local chieftains, the Portuguese wished to occupy it effectively; in August 1506, during the reign of Manuel the Fortunate (1495-1520), they made an unsuccessful attempt to carry this out; they repeated their efforts at the beginning of September 1513, under the command of the Duke of Braganza, and this time their efforts were completely successful. As in their other places in Morocco, the Portuguese built strong fortifications at Azammur the whole of which still exists. When their positions in Southern Morocco were shaken by the fall of Santa Cruz do Cabo de Gué in March 1547 (see art. AGADIR), King John III (1521-7) decided to concentrate all his forces at Mazagan, and had Azammur evacuated at the same time as Safi, towards the end of October 1547 (see art. AGADIR). Azammur, which thus became a centre of the holy war, from then onwards lived in a state of permanent hostility with Mazagan, until the Portuguese abandoned the latter place in 1769. Azammur was first occupied by French troops in 1908 and was incorporated into the French Protectorate in 1912.

Azammur is probably the home of Estebanico de Azamor, a Moroccan negro, celebrated in the history of the exploration of the American continent, who took part in 1482-1486 in the great trek of the Spaniard Cabrera de Vaca across the southern part of the present-day United States.

part is rather uncertain), and Ch. Le Coeur, *Le rite de l'oudi*, Paris 1939. (R. RICARDO)

**AZAR**, the commonly accepted name of Abraham's father, based on Kur'an, vi, 74 "When Abraham said to his father, Azar: 'Dost thou take idols as gods?'; where Azar is taken as a proper name, in apposition to 'father', though some of the commentators, aware that the name of this father was Terah, explain Azar as an exclamation of disgust, an abusive epithet, or the name of an idol. The majority opinion, however, is that it is the name of Abraham's father, either a second name for Terah, as Israel was for Jacob, or a title. In any case it was recognised as a foreign name and is listed among the *mu'arrabi* of the Kur'an. There can be little doubt that it is a deformation of the Hebrew Eleazar, the name of Abraham's faithful servant in the Genesis story which, as that story came to Muhammad, was mistaken for the name of his father. (Cf. also *mu'arrabi*).

**AZARIKA**, One of the main branches of the Khiridites [?]. The name is derived from that of its leader Nāfi' b. al-Arak al-Hanafi al-Hanzali, who, according to al-Ash'ari, was the first to cause disputes among the Khiridites by supporting the thesis according to which all adversaries should be put to death together with their women and children (*ist'radh*). As regards the man himself, it is known that he was the son of a manumitted blacksmith of Greek origin and that in 61/683 he came to the aid of 'Abd Allāh b. al-Zubayr, besieged in Mecca by the troops of the Syrian general Husein b. Nuwayr al-Sakini. Once the siege was raised, Nāfi' with other Khiridite leaders, including Naḡibā b. 'Amir and 'Abd Allāh b. Iḥād, returned to Basra, where he at once took advantage of the disturbances which had broken out on the announcement of the death of Yazid b. Mu'awiyā. It was the Khiridites under his orders who assassinated the governor nominated by 'Ubayd Allāh b. Zayd, Ma'ūd b. 'Amr al-'Akkā, and who subsequently refused to recognise the governor sent by 'Abd Allāh b. al-Zubayr, 'Umar b. 'Ubayd Allāh, so that the latter was obliged to use force to gain possession of the town; in this he was helped by the inhabitants, who found it difficult to tolerate the Khiridites' importunities. Expelled from Basra, Nāfi' occupied at the gates of the town and, after collecting reinforcements, succeeded in defeating 'Umar b. 'Ubayd Allāh in the course of fierce fighting and in retaking the town. To re-establish the situation, Ibn al-Zubayr dispatched an army under the command of the general Muslim b. 'Ubayy. It is probable that it was on this occasion that the opposition between the moderate elements and the extremist elements arose in Basra which led to the division of the Khiridites into Iḥādites and Azārika, an event placed by tradition in that year (63/684-5). Whilst the former, less courageous, preferred not to fight Muslim and remained in Basra, the latter, resolved to fight to the end, left the town and under the leadership of Nāfi' withdrew to Khiristān (al-Ahwāz). Muslim caught up with them at Dūlāb: in the severe fighting which ensued,

both Nāfi' and the Zubayrid general met their deaths (63/685). The Azārika, however, reorganised themselves under the command of 'Ubayd Allāh b. al-Māhiz and continued the struggle until the enemy troops, exhausted and discouraged, withdrew to Basra. For several months the region between Basra and al-Ahwāz was the scene of massacres, looting and arson, the Azārika massacring all who refused to recognise their sect. The population of Basra in alarm called upon al-Muḥallab b. Abi Sufra, who agreed to lead the struggle against the Azārika. After dislodging them from the Tigris, he inflicted a severe defeat on them near Sillānā to the east of Dūdjayl, (66/686), following which they withdrew into Fārs. 'Ubayd Allāh b. al-Māhiz was killed in the fighting and the command passed to his brother Zubayr, who, having reorganised his supporters within a short space of time, again set out on a campaign. Descending once more into 'Irāk, he advanced as far as al-Maddān, which he sacked, massacred, he turned about and attacked Iṣfahān, which was governed by 'Attab b. Warkā'. In an engagement near the town, the Azārika suffered a reverse and, on the death of Zubayr b. al-Māhiz, they fled in complete disorder into Fārs and thence into the mountains of Kirmān (68/687-8). It was a warrior from Luristān, Katarī b. al-Fuḡā'ā, who, combining fierce energy with exceptional gifts as an orator and a poet, succeeded in rekindling their enthusiasm and reorganising their ranks. After a period of time, he became active and, having occupied al-Ahwāz, descended once again into 'Irāk and advanced towards Basra. The new governor of the town, Muṣ'ab b. al-Zubayr, convinced that only al-Muḥallab would be capable of opposing the Azārika, recalled him from Mawēl, where he had sent him as governor, and entrusted him with the direction of the campaign. But, although al-Muḥallab succeeded in launching a wide offensive against the Araki condottiere, the latter succeeded in keeping him in check for a long time and in holding his position on the left bank of the Dūdjayl, even after 'Irāk had fallen into the hands of 'Abd al-Malik following the defeat of Muṣ'ab at Mādin (71/690). The situation did not change until al-Ḥajjāj b. Yūsuf, having completed the pacification of Western Arabia, took over the government of 'Irāk (75/694). The latter confirmed al-Muḥallab in his command of the operations and ordered him to go over to the attack at once. Then it was that there started a long series of campaigns, conducted by al-Muḥallab against the Azārika, which led to their being increasingly relegated to the periphery of the Empire. For, in spite of their fierce resistance, they were compelled to abandon Dūdjayl, retreat to Kābirān and finally to evacuate Fārs and withdraw into Kirmān. Having established their headquarters in the town of Dīfūrī, they managed to hold their positions for a few years until the divergencies which arose in their army between Arabs and *masall* led to a split. Whilst Katarī with the Arabs was compelled to abandon the town and to take refuge in Tabaristān, the *masall* continued to hold Dīfūrī under the command of 'Abd Rabbih al-Kabir (in addition to whom the sources speak of an 'Abd Rabbih al-Ṣaḡīr, who is supposed to have commanded a second group of dissidents). Whilst al-Muḥallab was easily able to deal with the Azārika remaining in Kirmān and massacred them all, the Kabli general Sufyān b. al-Abrad, who had joined the governor of Tabaristān, caught up with Katarī in the mountains of this region and inflicted a

decisive defeat on him. The brave condottiere, having fallen from his horse and been abandoned by his own men, was discovered and killed (78-79/698-99). His head was taken to Damascus to be shown to the Caliph. The remnants of the Azārika who, under the leadership of 'Abdā b. Hāḥā, had barricaded themselves in at Saḡhawwar, near Kūmis, after a prolonged siege were exterminated in an attempted sortie. In this manner the revolt, which of all the Khiridite disturbances was undoubtedly the most dangerous to the unity of the Muslim Empire and the most terrible by reason of its savage fanaticism, came to an end.

**Docrine**: The principal religious theses which separate the Azārika from the other Khiridites are, according to al-Ash'ari: 1. The exclusion from Islam (*harā'a*) of the quietists (*al-ha'ada*); 2. The examination (*miḥal*) of all who wished to join their army; 3. Regarding as infidels (*kufr*) those Muslims who did not make the *hajra* to them; 4. The slaughter of the women and children of their adversaries (*ist'radh*); 5. The exclusion from Islam (*harā'a*) of those who recognised *lakhya* either in word or deed; 6. The children of the *mughribin* are in Hell, as are their parents. Further, according to al-Shahrastāni and al-Baḡhdādī: 7. Suppression of the stoning of adulterers which is not prescribed by the Kur'an; 8. The possibility of God's sending a Prophet, whom He knows will be叔osity because impious or who was so before his mission; further, according to Ibn Hāzim: 9. Amputation of the thief's hand, i.e. arm, from the humerus; 10. Women during the menses must perform the prayers and observe ritual fasting; 11. Ban on killing those who are non-believers; 12. Those who were Jews, Christians or Zoroastrians (evidently because they enjoyed the *dhimma*).

**AZARQUEL** [see AL-ZARKĀL].  
**'AZĀZIL**, fallen angel or *ḍinn* in the legendary tradition of Islam (does not occur in the Kur'an). He gets his name from the biblical 'Azazel (Leviticus xvi, 8, 26), perhaps demon of the desert (see L. Koehler, *Lexicon in Veteris Testamenti Libros*,

693). In point of fact the Muslim tradition extends and develops that of some of the Apocrypha (Enoch and the Apocrypha of Abraham) and of Jewish texts, in which 'Azazel is more or less connected with the fallen angels 'Uzza and 'Azā'el (in Muslim tradition, Hārūt and Mārūt, [?];) the *badhth*, however, would appear to innovate in considering 'Azā'el as the name of Iblīs [?]. In his fall, a tradition which is traced back to Ibn 'Abbas and which is even repeated in *al-Uṣūl al-Kāmil* of al-Dīlī.

**AZD** (by assimilation from Aed, both spellings are current), name of two ancient Arab tribal groupings in the highlands of 'Asir (Asr Sarāt) and in 'Uman (Aed 'Uman), which united in Basra and Khurānā in Islamic times. Hence the later reports that the Aed were a tribe in Yaman, of whom part migrated to the north and part to the east, after the breach of the Ma'rib dam. One cannot, however, prove any basic relationship between these two tribes of the same-named. In the genealogical system (al-Ard b. al-Ghawr b. Nāfi' b. Mālik b. Zayd b. Kahlān b. Saba', where al-Ard is the surname of the tribal ancestor Dīr'Darrā' b. al-Ghawr) there is a fusion not only of the Ard Sarāt and the Aed 'Uman, but also the Ḥassān, Khurā'ā, al-Aws and Khazraj appear as part of the Aed in it. The name Aed, however, can only be applied to those tribes who derive from Nāfi' b. al-Ard (in Sarāt and 'Uman), to the Kārik and Shaḡr (Sarāt), derived from 'Adī b. Hārīḡha b. 'Amr Muza'ykiyā', to the al-'Atik and al-Ḥajr ('Uman), derived from 'Imrān b. 'Amr Muza'ykiyā', and to the tribes of al-Haw b. al-Ard, Karm b. 'Abd Allāh b. al-Ard, 'Arman, Almad' and Hiddina b. 'Amr b. al-Ard (Sarāt). The Aed Sarāt, who were well known as weavers, were largely settled, hence their homes remained essentially static. The tribes of Daws (Sulaym b. Fahm, Tarīf b. Fahm, Munshib b. Daws) and the Banū Māsiḡha were the ones furthest north, parts of them as far as north-east of Tā'if, most of them on the upper Wādī Dawra. To the east and south-east of them were the tribes of Zahrān (Salḥān, Kahlān, 'Ubayd b. 'Ibra); further east, in the Sarāt Ḥamūd were the Namir b. 'Uṭṭam, al-Ghātālī, Zāra, Aḡḡāb, Lihb, Ṭumālā, Ḥamūd, Karm b. Abḡjan and others. Their area reached from the upper Wādī Kanawā eastwards. These tribes were separated from their relatives living further east by the Khāṭṭān. To the east of the Khāṭṭān were the al-Bakām (from Hawlā b. al-Haw) in Turāb, the Banū Shaḡr (Banū Walān) were to the north-west and the Karm b. 'Abd Allāh to the south of Tabāla. Further south, still in the Sarāt al-Ḥajr, were the numerous branches of al-Ḥajr b. al-Haw (the most important were the Banū Shaḡr with the Bal-Ansar) who were in the area round Halāb in the north and reached as far as the areas south of the Wādī Tanāma/Wādī

Bal-Azmar. Their main centres were: Balabā, al-Khāḍir, Nimā, Tandma. Some few lived further south still, towards the Wādī Ḥil, as neighbours of the 'Az̄. The Bārk lived in the area of the Wādī Bārk to the west, enclosing the Khāḍ'am enclave from the south. On the whole they lived in the valleys, whilst the Khāḍ'am inhabited the highlands. A few groups of the Azd (Amu', Yarfā b. al-Hinw and parts of the al-Haḍ'r b. al-Hinw) were settled as neighbours of the Kinnāna on the coast around Ḥall. Originally, the Azd Sarāt had been much further south, and only in comparatively recent times did they penetrate to their later region, after continuous battles against the Khāḍ'am. Remnants were still living under the Banū Ma'ā'il in Islamic times, south-west of Ta'izz, and under the Banū Awd in the Daḥlās. The frequent term Shān'a remains obscure. As the name appears as a war-cry in a poem by the poet Ḥāḍir b. 'Awf, one may suppose that it is a genealogical rather than a geographic term. The current explanation (Shān'a = al-Ḥāḍir b. Ka'b b. 'Abd Allāh b. Mālik b. Naṣr b. al-Azd) is obviously erroneous; which individual tribes belonged to the Shān'a can no longer be ascertained.

The Azd 'Uman consisted of those tribes which derived from Mālik b. Fahm in genealogy (Ḥumā'a, Farāḥid, Dīḥādīm, Nawā, Karādīs, Dīrāmīz, 'Ukū'a, Kasimīl, Sulaymī, Aḥṣāḥī, some descended from Naṣr b. Zahrān (Yaḥmad, Ḥudān, Ma'ā'il) and those descended from Ḥurān b. 'Amr Muṣayyī, that is, the al-'Atik and al-Ḥaḍ'r b. 'Uman. It is probable that the link with 'Uman, which made them brother tribes of the Ansār, was postulated in honour of the Muḥallabids; the true link was preserved in the genealogy al-'Atik b. al-Azd b. 'Uman. There is little information concerning the sites on which the individual tribes lived. The Ma'ā'il were in and around Suhār; the Yaḥmad and the Humā'a in the neighbouring coastal areas. The Humayn (from Ma'n b. Mālik b. Fahm) were in Nawat; al-'Atik in Dabā and al-Ḥaḍ'r nearby; the Ḥudān were in the hinterland of the Pirate Coast. In between, there were some non-Azd tribes, particularly the Sāma b. Lu'ayy, who were later collectively known as the Nizār. The Banū Dīḥādīm (from Aḥṣāḥī) advanced in Islamic times to the west as far as Zuḥr Ḥadramawt, where they captured the sea-port of Rayḥīf after battles against the Maḥra. Even in pre-Islamic times, parts of the Azd 'Uman, such as the Sāma b. Mālik b. Fahm, migrated to the islands in the Persian Gulf and to Kirmān. As fishermen, sea-farers and merchants, the Azd 'Uman did not enjoy a good reputation among the other Arabs. The term Muṣayy, occasionally applied to them, seems to have been a nickname. It may be supposed that they immigrated from the north and imposed themselves on the previously settled non-Arab inhabitants. The tradition which identifies them with the Asad (a), [g.e.] mentioned in inscriptions, and which makes them the allies of the Tanūḥ, is erroneous.

Little is known of the Azd Sarāt in pre-Islamic times, as there are hardly any poetic writings; the only well-known poet was Ḥāḍir b. 'Awf (Banū Sāliḥ mān). There is mention of battles against Khāḍ'am and Kinnāna, and fights by some tribes against the powerful clan of the Al Ghifri (in the Wādī Kanawān) at the beginning of the 7th century. Members of that clan are said to have been the keepers of the shrine of Manāt in Kudayd. It is possible that the name Ghifri in the genealogical lists of Medina from

came that quarter. The following are mentioned as deities of the Azd Sarāt: Dhu 'l-Sharā, Dhu 'l-Khalasa (shrine in Tabāla), Dhu 'l-Kalfayn and 'A'ām. Still less is known of the early history of the Azd 'Uman. Apart from mythical fights against Persians and Maḥra, there is mention of one against the 'Abd al-Kays. Ḥāḍir/Nāḍir is mentioned as their deity.

The Azd Sarāt accepted Islam in 10/63. Small risings during the *ridā* were quickly put down in 11/63 by 'Uḡmān b. al-'As, the governor of Ta'if. As early as 13/64, there were a few Azd in the contingent which 'Umar sent to the Euphrates. Some Azd Sarāt were amongst the first settlers in Basra and Kufa and some went to Egypt. On the whole, however, there was little emigration. Islam had already entered 'Uman a few years before. This was due to a difficult situation into which the brothers Dīḥayr and 'Abd-heads of the ruling group, the al-Dīḥādīm (from Banū Ma'ā'il in Suhār)—had got themselves in relation to al-'Atik and other tribes of the inland regions under the leadership of Laḥit b. Mālik al-'Atik. 'Amr b. al-'As was sent to Suhār in the year 8/62, and with his assistance, the brothers managed to recover their power completely. Laḥit tried his luck once more during the *ridā* and 'Amr had to flee, but in the year 11/63 the rising was finally put down by 'Ikrima b. Abī Dīḥāt. The Banū 'Uman remained practically complete rulers in 'Uman for many years. 'Abdād b. 'Abd b. al-Dīḥādīm took over the rule in the time of 'Uḡmān. He was killed in battle against the Khawāridj of the Yamāma in 97/68. His sons Sa'ūd and Sulaymān succeeded him. It was not until the time of al-Ḥaḍirījī that the two brothers could finally be ousted from 'Uman, and the territory re-incorporated. A great number of Azd 'Uman had emigrated to Basra in 60-61/ 679-680. In the process, some of them remained in eastern Arabia, where an Azd emirate was founded in the 3rd/9th century. They united themselves with the Azd Sarāt who were already settled in Basra, made an alliance with the Rab'a and thereby became the opponents of the Tamīm. As early as 38/58, the Azd Sarāt of Basra had protected the governor Ziyād b. Abīhā against the Tamīm. Similarly, 'Ubayd Allāh b. Ziyād got assistance from the Azd, when, after the death of Yazīd I (64/68) the Tamīm rose against him. The subsequent tribal warfare, in the course of which Ma'ā'id b. 'Amr al-'Atik, the leader of the united Azd and Rab'a was killed, with be settled by al-Aḥmad, the leader of the Tamīm. The enmity, however, remained and spread to Khurāsān, especially when the Azd there (again in league with the Rab'a) became the leading tribe under the Muḥallabids after 85/69. They were greatly offended at the removal of the Muḥallabids and were largely responsible for the events which led to the defeat and death of Kutayba b. Muslim in 96/75. The Azd remained the leading group up to the beginning of the reign of Yazīd II in 101/720. The subsequent systematic extermination of the Muḥallabids brought for them a time of subjugation by Kayṣid governors. Their enmity against these continued up to the fall of the Umayyads.

During the troubled times at the end of the reign of the Umayyads, the Azd—apart from a few short-lived alliances—remained in opposition to the governor Naṣr b. Sayyār, a fact which considerably facilitated the advance of Abū Muslim. In Basra too, the Azd followed the 'Abbasids, having risen against Umayyad rule and having been beaten by Tamīm and Syrian troops. Ḥāḍir teaching, brought

over from Basra, began to be accepted in 'Uman at about the same time. In 132/749, al-Dīḥādīm b. Ma'ūd, a member of the old ruling house of the Banū 'Uman, was elected the first Imam. He was killed in 132/751, fighting against Khāḍim b. Khurayma, general of Abū 'l-'Abbās. The subsequent years were very troubled ones for the country. Nominally, it was under an 'Abbasid governor, but there were constant battles, usually between the Banū 'Uman—who were trying to re-establish their former rule—and the Ḥabībīs. It was not until 177/793 that the latter gained the upper hand and elected a new, rightful Imam. Henceforth, Naṣrā became the seat of the Ḥabībī Imāms, who were, almost without exception, of the Yaḥmad tribe. After 230/844 troubles broke out again. In addition to the activities of the Banū 'Uman, there was tribal warfare between the Azd and the Nizār. The Banū Sāma b. Lu'ayy applied for assistance to the caliph al-Ma'ā'id in 277/899, to help them against the Ḥabībīs. The last independent Imam, 'Azāla b. Tamīm fell in 280/893, fighting against Muḥammad b. Nūr, the 'Abbasid governor of Bahrayn. After 282/875, there were again Ḥabībī Imāms in Naṣra, but their powers remained limited.

**AL-AZDI**, Abū Zakariyyā? Yazīd b. Muḥ. b. Iyās b. al-Kaḥm, historian of the 10th c. who lived in 94/95-6. While the work on Mosul by Ṭaḥḥim b. Muḥ. b. Yazīd al-Mawṣilī, who lived a generation before Al-Azdi, appears to have been concerned only with the biographies of religious scholars, al-Azdi wrote both on the "Classes of Mosul *ḥadīth* Scholars" and on the political history of Mosul, either in one combined or in two separate works. His treatment of *ḥadīth* scholars is known only from quotations and seems to have been restricted to the limited information usually found in *riḍā* works. The political annalistic history of the city, the first work on this particular subject, is preserved for the years 101/719-20—224/838-9. It treats the history of Mosul in the framework of general contemporary history and is a highly creditable achievement of early Muslim historiography.

**AZEMMÜR** [see AZAMMÜR].

**AZERBAYDĀN** [see AĞHABAYDĀN].

**AZERI** [see AZHARI].

**AZFARI**, MUHAMMAD ZAḤIR AL-DĪN MIRZĀ 'AḌI BAKIR ḤABIBUZZ GĀNGAST, a lineal descendant of Averanzī and a grandson of 'Shāh 'Alī Begum (daughter of Muḥammad Mu'izz al-Dīn Pādshāh (i.e. Dīḥādīm Shāh), son of Shāh 'Alīm (Bahlūd Shāh I), was born in the Red Fort at Delhi in 1172/1758 and educated within the fort. Like other princes of the line of Tanfir, Azfarī was in receipt of an allowance from the East India Company. Azfarī decided in 1201/1789 to escape from the fort. Passing through Dīḥaypur and Dīḥdīpur, Azfarī reached Lucknow where he was received with open arms by Āṣaf al-Dawla, the ruler of Awadh. For seven years he stayed there and then left for Patna en route to Maḥsūdābād, (an old name for Murshidābād [g.e.]) where he arrived in 1211/1797. After a stay of some ten years he left for Madras, where he stayed until his death in 1234/1818.

Azfarī was polyglot and spoke Arabic, Persian, Turkish and Urdu fluently; during the closing years of his life he also learned a little English. He was well-versed in different sciences such as medicine, astrology, prosody, geomancy and metrics, but was more attracted by poetry. In addition to an Urdu *divān* he left behind a large collection of verses in Persian and Turkish. These Persian and Turkish collections as well as some of his works enumerated at the end of his memoirs (a *Caḡatay* grammar, *Tenḥari-Tār*—a Turkish-Hindi compilation) are, however, lost.

His chief work is the *Wāḥidī-ā Azfarī* (MSS Berlin 496, Rief. II, 1051 b, Madras, I, 430, 431) completed in Murshidābād in 1211/1797 and completed at Madras in 1221/1806. It is an account of his wanderings and personal experiences in addition to being a valuable historical sketch of the ephemeral rule of Ghulām Kādir Rohilla (g.e.), who captured Delhi in 1203/1798 and blinded the Emperor Shāh 'Alam I. This work is also of great geographical value.

At the end of his above-noted memoirs Azfarī mentions 7 of his works, in addition to an earlier one: (i) *Lughat-i Turkī-ā Caḡatayī* (compiled during his stay in Lucknow); (ii) a Persian translation in rhymed prose of 'Alī Shīr Nawā'ī's (g.e.) Turkish work *Mabāḥī al-Kalab*; (iii) *Nisāḥī Turkī*, (in verse); (iv) *Tenḥari-Tār*, a Turkish-Hindi compilation on the lines of *Kāḥf al-bāḥī*, erroneously ascribed to Anṣār Khurāsān; (v) a Persian metrical translation, from Arabic, of the *Risāla-i Kabiriyya*, a supposed treatise by Hippocrates on the signs of approaching death; (vi) *Nasḥa-i Sānīḥāt*, detailing his experiences and tribulations. It contains 109 anecdotes; (vii) a metrical grammar of *Caḡatay* Turkish (composed at 'Azamshād (Patna) on the request of Rāyṣ 'Alā Rām, a hereditary *bāḥḥī* [g.e.] of his family; (viii) *Fana'īd al-Mabādī*.

**AL-AZHAR** (al-Dīḥārī) AL-AZHARĪ. This great mosque, the "brilliant one" (a possible allusion to Fāṭima al-Zahrā'), although no ancient document

confirms this) is one of the principal mosques of present-day Cairo. This seat of learning, obviously Isma'ili from the time of its Fātimid foundation (4th/9th century), whose light was dimmed by the reaction under the Suni Ayyūbids, regained all its activity—Sunni from now on—during the reign of Sultan Baybars. Its influence is due on the one hand to the geographical and political position which Cairo occupies in the Muslim world (especially since the downfall of the Baghdad 'Abbāsids), attracting scholars and students and accommodating many Maghribī pilgrims on their way; on the other hand it is due to the situation of this capacious mosque itself in that quarter which was to be the birth-centre of the epistote of the town of Cairo. One institution of learning among many others in the Mamlūk era, it benefited from the almost complete disappearance of all the Cairo colleges under Ottoman domination, and became the only stronghold in the capital where the study of the Arabic language and religious learning could be maintained. From the 18th century, in spite of the decadence of its intellectual methods, its organisation, becoming consolidated, gained for it the dignity of a harmonious whole, at once a school and a university; and it can be considered from that time as the principal religious university of the Islamic world. In the 20th century al-Azhar, outgrowing the framework of its mosque, began to acquire a whole network of establishments of Islamic education. With its faculties in Cairo of university status, and with the various primary and secondary institutions in Egypt which are directly connected with it, its strength in 1953 was a total of 30,000 pupils and students, 4,300 of whom were foreigners. Some institutions situated outside Egypt, moreover, function within its orbit. Its work is at present carried out by its teachers, a certain number of whom are sent out to different Muslim countries; it makes its influence felt by its monthly journal and in a special way, through the foreign pupils and students who come to take its courses in Egypt. A few of the latter remain in Cairo, but the majority return to their native lands, thus contributing to the propagation of the knowledge of the Arabic language and Muslim political and religious ideas.

1. Buildings and furnishings. The mosque of al-Azhar was conceived as the place of worship of the capital al-Kāhira, which, the conqueror, Fātimid general Djawhar al-Kātib al-Sikillī established as an entity, and where his master, the Fātimid Caliph Abū Tālim Ma'add al-Mu'izz li-Dīn Allāh, his entourage and his troops, were intended to reside. The construction of the mosque, situated at the South and in the neighbourhood of the palace, began on 24 Djumādā I 359/4 April 970, and lasted for two years. It was inaugurated immediately, on 2 Ramadan 361/22 June 972, cf. the text of an inscription, now disappeared, on the cupola, with the date 360 (in al-Mo'arrif, *Kāhira*, Cairo 1326, iv, 49 ff.). It was frequently referred to as the 'mosque of Cairo', *Djāmi' al-Kāhira*, and indeed played the same rôle in Fātimid Cairo as the mosque of 'Amr at Mīr-Fustāt or that of Ibn Tulūn at al-Kāṭi'. All three of these were the religious centres of their respective quarters, at that time small, independent, neigh-bouring towns; the Friday prayer was conducted in these three mosques, and the Caliph from time to time caused the *khutba* to be read in them. After 380/990 the new al-Djāmi' al-Awsar (al-Hākimī), which was built on the Northern side of Fātimid Cairo, enjoyed the same privileges as al-Azhar. Many Fātimid Caliphs worked for the enhancement

of al-Azhar and enriched it with gifts and endowments. The original roof, which was too low, was soon raised, at an unknown date (*Kāhira*, iv, 53). Al-Aziz Nu'ar (365-67/990-96)—who perhaps added the two (North and South) lateral wings of these bays— and al-Hākim bi-Amr Allāh (380-411/990-1020) made some improvements there. A deed of *wakf* dating from the year 400/1009-10 throws light on the organisation of its personnel and on its apparatus of worship (but none on the teaching; text in *Kāhira*, iv, 49 ff.). From this epoch dates the appearance of the vast central courtyard surrounded by porticoes with Persian arches, as does that of the prayer-hall of five parallel bays on the *hība* wall. The construction is of brick rendered with either plain or chased plaster; the arches of the courtyard, of the prayer-hall and of the lateral *iwān*s are supported by slender columns which have been used for a second time. One must mention the work of the Caliphs al-Mustansir, al-Hāfiz (improvements, rearrangement of the Fātimid *madrasa* *mihrāb* now in the Cairo museum). During the whole of this epoch al-Azhar, by its teaching, played an important rôle in Fātimid propaganda, which explains why it suffered from the Sunni reaction of the Ayyūbids (rulers of Egypt from 567/1171-2 on). Salāh al-Dīn had certain ornaments torn down (silver band from the *mihrāb*), and took to himself the privilege of the *khutba*; the Friday prayers in al-Kāhira took place only in the al-Hākimī mosque. This mosque had been restored to Muslim worship by Salāh al-Dīn after having been used by the Franks as a church. Al-Azhar continued to exist, although on the decline ('Abd al-Latif al-Baghdādī taught medicine there at the end of the 6th/12th century: see Ibn Abī Usayfa, ii, 207), but the buildings were very neglected. With the Mamlūk edifice the situation changed. The amir 'Izz al-Dīn Aydimur al-Hillī, residing in the neighbourhood, was so distressed by the dilapidation of al-Azhar that he financed some works with the help of sultan al-Zahir Baybars, who amongst other things permitted the *khutba* to be read again in 665/1266 (*Corp. Inscr. Arab. Egypt*, i, no. 128).

Some *wakfs* were allocated to provide for Sunni teachers. Once again vigorous life returned to it, never to cease up to the present day. Badly damaged (*tabaka*) by the well-known and disastrous earthquake of 702/1302-3, it was restored by the amir Salār. Marble made its appearance, discreetly, in the updated repairs of the *mihrāb* (beginning of the 14th century), though it was used with magnificent effect in the *mihrāb*s of the three small new erections of fine stone built against the exterior of the mosque, which were later to be incorporated with it: the *madrasa* of the amir Taybars, founded in 709/1309 to the right of the west door; that of the amir Akbugha 'Abd al-Wahid in 740/1339-40 to the left of this door; and the charming *madrasa* founded by the eunuch Djawhar al-Kaukabāzī, who was buried here in 844/1440-1, at the eastern corner of the mosque. In 723/1323 some constructions are recorded, and about 761/1360 the *mihrāb*s were rebuilt, some of them made of stone. Funds for feeding the poor and for teaching were established, e.g., a *sabī* for water, and teaching the Kur'ān to orphans. A minaret which was at a dangerous angle was demolished and then rebuilt on three occasions for the same reason (800, 817, 827/1397-8, 1414-5, 1423-4). On this last date, a cistern (*sabīra*) with a well-basin (*maḍā'a*) was built in the middle of the mosque, and an unsuccessful attempt was made to

establish four trees in the courtyard. The sultan Kāykhāy was responsible for much work: for the west door, which he demolished, he substituted an elegant doorway with minaret attached (873/1469; *Corp. Inscr. Arab.* i, no. 21), had a host of little dwellings, which were excrescences on the terraces, cleared away (881/1476), and ordered a general restoration (901/1496). Kāykhāy al-Jahūr bestowed on al-Azhar another minaret, thanks to which it can today be recognised from afar among the assembly of minarets in Cairo (915/1510). Funds for teaching continued during this period. At the time of the Ottoman conquest the sultan Selīm took, with favour on al-Azhar. The 19th century was, in the history of al-Azhar, as important as the Fātimid era; possessing from that time on the monopoly of religious studies in Egypt, the mosque was considerably enlarged. A chapel for the blind (*Zahyat al-'Uṣṣā*) was built by 'Uṭmān Kathkhudā al-Kanduhī (Kasid Oghlū, who died in 1149/1736). But its greatest benefactor was 'Abd al-Rahmān Kathkhudā or Kihya (died 1190/1776, buried in the mosque), who caused the following constructions, which lack the beauty of the ancient works, to be carried out: demolition of the *hība* wall of the prayer-hall except for the original *mihrāb* which remains, the addition at the rear of four new bays of stone arches or slightly raised ground, a new *mihrāb*, a *miḥrab*, a cistern, and a Kur'ānic school for children. Tombs and gifts in kind were provided for poor students. A new enclosure, with doorway, brought in on the west the two *madrasas* of Taybars and Akbugha, whose façades were rebuilt (1167/1733).

The Azhar, like students of all countries, came out into the streets from time to time. Al-Djabbartī indicates that there were some troubles in the quarter, in which they took part. He makes mention of the rising against the French under Bonaparte who were occupying Cairo (10 Djumādā I 1213/20 October 1798); the immediate repression found in al-Azhar and its neighbourhood the last bastion of resistance. The mosque suffered from the final bombardment, and was profaned by the troops. The restoration of autonomous rule, under Muhammad 'Alī, was scarcely favourable to al-Azhar, whose *wakfs* were misused. Later the Khedives and then the kings of Egypt became its benefactors, reserving to themselves the upper hand in its affairs, and hoping in return for the tranquillity of its *shaykh*, a hope which was generally realised except in a few cases of proud and sudden boldness which even today form a topic of conversation. 'Abī Pasha Mubārak (*Kāhira* *Dr.*, iv, 14-26) gives a minute description of the buildings and of Azhar life about 1875. The great wretchedness and decay of so many mosques in Cairo in this period had not left al-Azhar untouched. The Khedives Tawfiq and 'Abbās Hilmi had important restorations carried out. That of the courtyard and of the portico which surround it date from 1890-2. At the western corner of the mosque, on the site of 'Abd al-Rahmān's Kathkhudā's minaret which was demolished, 'Abbās Hilmi had the *mihrāb* built which bears his name, a vast building with a porch for students and an end-terrace illuminated in 1312/1896. The participation of the Azharis in the risings of 1882 ('Urabi Pasha) and 1919 (against the British) did not entail any material damage to the buildings, but only a temporary suppression of the courses at the time of the second incident. The number of students up to 1925 caused al-Azhar to conduct part of its courses in the neighbouring

mosques, which were used as annexes. In 1930 the separation of the three faculties of higher study had as a necessary consequence the taking over of lay buildings in Cairo, to house these faculties outside the mosque. These places were given up when a new area was built behind al-Azhar (modern installations, classrooms with desks and benches, chemical laboratory, etc.). There were erected in 1935-6 a general administrative building, on the site to the north of al-Azhar, and three more four-storied buildings intended as the primary and secondary institutes, and medical block with boarding infirmary. In 1930, again to the east, a building was constructed for the Aḥl al-Madina with room for 4,000, with a high minaret, and a building for the faculty of *shar'ia* law; in 1931 came the building for the faculty of the Arabic language. In 1955, again on the East, some old houses were pulled down, in order to prepare a site for the future faculty of theology (still housed in the Shubra quarter). At the present time the principal library (of manuscripts, etc.) is housed in Akbugha's *madrasa* (rebuilt by the Khedive Tawfiq). A *cité universitaire* for foreign Azharis is in construction (1956-1957) on the site of the ancient Midān al-Jahār at 'Abbāsīya, in conformity with the social policy of the new Egyptian Republic. This will allow for the rehabilitation of students, who were overcrowded in the precincts of the mosque itself, or were sleeping in the town in properties belonging to the trustees of the *wakfs*, or with private families. The courtyard and the prayer-hall of the mosque are still used for certain courses for foreigners, and for exceptional private lessons. Some young Azharis do come here to go over their books again; walking up and down, or even seated on the ground, they still keep up the old tradition and thus help to maintain the ever busy appearance of the mosque. In addition, the Azharis have modern installations everywhere; likewise in the provinces, the local institutions have special buildings outside the mosques.

*Bibliography.* Texts, among which the most important are those of Maḥmūd (*Kāhira*, iv, 49-56, 60-2, 223-4), Djabbartī, 'Abī Pasha Mubārak, and for the modern period Van Berchem and Flury, are collected with references in Creswell, *The Muslim Architecture of Egypt*, i, Oxford 1932, 36-64, with plates and plan. See also Hauteccor and Wiet, *Les mosquées de Cairo*, Paris 1932, a vol.; Hassan 'Abd al-Wahhīb, 'Taḥqīq al-Masājid al-Aḥarīya', i, Cairo 1946. See also *E.P.*, article *Azhar* 1.

II. Al-Azhar as a sanctuary and house of the people. Like all mosques, al-Azhar had this dual function. The regular prayers were said here, as well as those on exceptional occasions. Its history from this point of view is linked with that of Egypt: people collected here in times of catastrophe (such as epidemic, famine, or war) to call upon God, and to hear special readings from the Kur'ān or from al-Bulghārī; it was also a place of refuge for fugitives (see Ibn Iyās, ii, 177, 264, iii, 106, 132, 167). In modern times also, some events of national significance have been organised there. The spaciousness of its buildings, and the constant presence of students, were appropriate for large meetings, e.g., that of 1919 (see *Madjallat al-Azhar*, xviii, 396-400). Here they exalted the *Mudjāhidīn* or combatants during the Palestine war (1948), and at the time of the guerrilla warfare against the British in the Suez Canal in 1957-8. Al-Azhar is, moreover, a 'people's house' for those poor men who, since its

foundation, have found there either a temporary or a permanent shelter: many have spent the night there, as al-Makrizi points out with regard to the intervention of the amir Ṣubḡī, *ṣāḥib* of al-Azhar, who in 1181/1186 wished to free the mosque of all who were dwelling therein, whether students or otherwise. Its intervention was the occasion for pillage, and opinion turned against him. Some inhabitants of Cairo, even the well-to-do, would pass the night here, especially in Ramadan, at the beginning of the 13th century (*Kh̲itāt*, iv, 54-5). At the present time, among the poor pilgrims coming on foot from as far as North Africa and the African dominions (1891-1932), many stay at al-Azhar during the month of Ramadan before setting off for the Ḥijāz. Many Azharī students give them moral and material help (in the middle ages the Maghribī pilgrims camped at Ibn Tulūn—*Kh̲itāt*, iv, 40). Countless gifts have been made by rich Muslims at all times for the poor of al-Azhar. In the middle ages al-Azhar was open to Sūfīs also, although its tendencies were predominantly juridical. 'ʿAnar b. al-Fārid chose to live there towards the end of his life (Ibn Lūʾs, i, 82, 3). One text mentions the *ḡh̲ib̲r̲* which took place there (*Kh̲itāt*, iv, 54). Aḡbughā's *madrasa* is also said to have had a permanent group of Sūfīs (*ibid.*, iv, 225). The mosque of al-Azhar was above all a "people's house" for the teachers and the pupils whom it housed under its arcades, and its history here again is inseparable from that of Islamic teaching in Egypt (see Ibn Ḥalīm al-Salām, *L'environnement islamique en Égypte*, Cairo 1939). Teachers found within it peace and adequate quarters; sometimes, however, their position there was not official: at times we hear of passing scholars supported by a sovereign during their stay. There were above all the *ṣaḥ̲b̲* maintaining what could be described as chairs of learning, and others again for the maintenance of certain categories of students.

III. Teaching in the mediaeval and post-mediaeval periods. Information on the situation in early times is both fragmentary and incomplete. Under the Fātimids in 365/975 the great official propagandist 'Alī son of al-Kādī al-Nu'mān taught Ismā'īlī law at al-Azhar, and dictated the *Makhlās*, a work of his father's (*Kh̲itāt*, iv, 156; Brocardmann, II, 323). After having been named *ṣaḥ̲b̲*, Ya'qūb b. Kilīs held in his own home meetings of *literateurs*, poets, jurists and men of the *kalām* (theologians), to whom he gave a pension, and who thereafter taught the Ismā'īlī doctrine in the mosque of 'Amr. al-Azhar profited by this trend. In 378/988-9 al-'Azīz assigned to 35 jurists a house near to al-Azhar, with provision for their support. On Fridays, between midday and the *ṣaḥ̲r* prayers, they held meetings, and their chief, Abū Ya'qūb Kādī al-Kh̲aw̲ṣ̲ar, was responsible for the teaching. (*Kh̲itāt*, iv, 49; al-Kalkāshandī, III, 307). Al-Makrizī, writing of the al-Anwar (al-Hākim) mosque only recently inaugurated, notes that in Ramadan 380/991 'groups of listeners followed courses there given by the teachers who instructed in the mosque of Cairo, that is to say, al-Azhar' (*Kh̲itāt*, iv, 55), which implies that it must have already had a large reputation. It is known, moreover, that Ibn al-Haytham elected to live at al-Azhar (Ibn Abī Usayb'a, i, 90-91). But the remarkable effort of the Fātimids in both sacred and secular culture is specially evident in the *Dār al-ḥikma* founded by al-Hākim in 393/1003, which became the real cultural centre of Cairo at this period (*Kh̲itāt*, iv, 158). Under the Ayyūbids the Shī'ite teaching was swept away. Al-Azhar had

always opened its doors to scholars (e.g., for 'Abd al-Latif al-Baḡdādī), but it was supplanted by the official *Sunna madrasas* recently created. Under the Mamlūks al-Azhar regained its position.

In 603/1206 the amir Ḥubbak al-Ḥ̲ish̲mīdār installed a vast *maḥ̲ṣ̲a* and provided it with a fund in order that a group (*dj̲um̲h̲a*) of jurists might teach Shāfi'ī law there. He appointed a teacher of *ḥadīth* and spiritual doctrine (*ḥak̲ā*ḥ), seven people to 'read' the *Kur'ān*, and a tutor (*muḥ̲ṣ̲i*) (*Kh̲itāt*, iv, 52). In 760/1359-60 a course of Ḥanafī law was started, at the same time as a *Kur'ān* school for orphans. In 784/1382 a decree of Sultān Barḳūk provided that students should inherit their property of those of their friends who died without heir (see Trümpel, *Education* 123, for a discussion of arrangements of this kind). Al-Makrizī, on the events of 818/1415-6, mentions 750 provincial or foreign inhabitants, ranging from Maghribīs to Persians, as residing in the mosque, grouped according to strict rules. They read the *Kur'ān* and studied it. They devoted themselves to law (*fiqh*), to tradition (*ḥadīth*), to commentaries on the *Kur'ān*, to grammar (*nahw*), to meetings devoted to preaching and to *ḥik̲ā*ḥ (*Kh̲itāt*, iv, 53-4). It is often said nowadays that al-Azhar was always the Egyptian Muslim university *par excellence*: in fact, in the Cairo of the Mamlūks, bursting with life, it was an important centre of learning, but its centre among many others (see Masgrat). Al-Makrizī, writing in the 13th century, makes mention of more than 70 *madrasas* in Cairo (*Kh̲itāt*, iv, 191-258). He points out the intellectual activity within the mosques: in that of 'Amr, before the great plague of 749/1348, he mentions forty-old courses or *ḥalḥa* (*ibid.*, iv, 21); in that of Ibn Tulūn, at the beginning of the 14th century, courses in the law, of the four schools and a course in medicine (*ibid.*, iv, 40-1); in that of al-Hākim, in the same period, law courses in the four schools (*ibid.*, iv, 57). There was moreover still *ṣaḥ̲r* teaching in the convents or *ḥ̲ish̲mīyās*. Ibn Ḥalūdūn, for example, from the time of his arrival in Cairo in 784/1385, taught at al-Azhar, which he later left in order to teach elsewhere (Ibn Kh̲alūdūn, *Ta'wīl*, 248). The Ottoman *ṣaḥ̲b̲* of a time of decadence for learning in Cairo, Ibrahim Ṣalām, *L'environnement*, 111-121, has enumerated the causes of this: economic unrest, the impoverishment of Egypt, the devaluation of the *ṣaḥ̲r* or the perversion of these latter to other purposes (the Ḥanafī law administered by the Ottomans permitted a judge to modify the provisions of a *ṣaḥ̲r*), and finally the triumph of the Sūfī *ḥ̲ish̲mīyās* in tending to replace the *madrasas*. All that obtained of non-mystical teaching activity was concentrated in al-Azhar. One could name the titles of a good thousand works preserved in this era in the library of al-Azhar and those of the neighbouring mosques, from Ḥādījī Khālifa, ed. Flügel, vii, 2-22. A catalogue of more than 2000 works belonging to the *ṣaḥ̲r* of the Syrians', probably at al-Azhar, exists in a manuscript of the 18th century (no. 4476, Slane. Bibl. Nat. de Paris). On the Ottoman period see further H. A. R. Gibb and Harold Bowen, *Islamic Society and the West*, 1/2, London 1957, index).

But henceforward, and up to the end of the 19th century, scholarship consisted of learning by heart a traditional corpus of material, encumbered by all that successive generations had added to it. Instead of the direct study of those great texts which were capable of engendering noble thoughts, there were substituted the studies of manuals, of commentaries (*ḡh̲ar̲k*), of marginalia on the commentaries (*ḥam̲sh̲ih̲*),

and sub-commentaries on those glosses (*ṭaḥ̲ṣ̲ir*). All the energy of the students was absorbed by the effort of memory necessary to retain by heart this complicated learning, which was presented with no pedagogical method whatever. General culture was non-existent. Arithmetical studies were limited to that elementary technique necessary for apportioning an inheritance, and astronomy to that which allowed the times for prayer, or the beginning of the lunar months (*al-m̲ih̲āl*), to be determined. But one should not judge the mediaeval intellectual activity of Cairo by this period of post-mediaeval decadence.

In the middle ages, the office of superintendent (*nāzir*) of al-Azhar was held by a person of high rank. Moreover, each *ṣaḥ̲r*, a group analogous to the 'nations' of the mediaeval universities of Europe, as well as each faculty, had its own head (*ḡh̲ay̲ḥ*, *nāḥib*). From Ottoman times al-Azhar had its rector (*ḡh̲ay̲ḥ al-ḥ̲ish̲ar*), who remained in office until his resignation, dismissal or death. The *ḡh̲ay̲ḥ*s of the different departments were subordinate to him, and he was directly responsible to the government. Al-Dj̲ah̲artī gives us a partial roll of these from the beginning of the 18th century (see § V, below).

All Pasha Muḥ̲ārak has described (*Kh̲itāt* *ḡh̲*, iv, 26-30) life at al-Azhar as it was in 1875 at the dawn of the modern reforms. This picture gives an idea of the ancient customs the students were grouped in the ancient circles (*ḥalḥa*, literally 'circle', extended to mean 'course'), seated on the mats (*ḡh̲ay̲ḥ*) of the mosque around the teacher, who himself was seated Turkish-fashion on a low wide armchair placed at the foot of a pillar, each pillar having its own accredited holder and being, moreover, up to 1872 the undivided property of one juridical school. Morning lectures were reserved for the most important subjects, that is to say successively *taḥ̲ṣ̲ir*, *ḥadīth*, *fiqh*, then at noon the Arabic language; other subjects were kept over for the afternoon. At the end of each class the students kissed the hand of their teacher. The Azharī lived meagrely on the regular issues of food (*ḡh̲ay̲ḥ*), supplemented by that which came from his family, and would often work in order to earn a little more, by giving readings from the *Kur'ān*, copying manuscripts, etc. He lived in the mosque or in the town. There was no examination at the end of the course of study. Many of the students were well advanced in years. Those who left al-Azhar obtained an *ijāza* or licence to teach; this was a certificate given by the teacher under whom the student had followed courses, testifying to the student's diligence and proficiency. Teacher-pupil relationships had a rather patriarchal aspect, disturbed only by rather rare rebellions. Quarrels between rival cliques of students were more frequent. A proctor (*dj̲um̲d*) was responsible for the administration of the rules, for the care of the books, and for distributing the provisions in kind; he had a staff of some size under his command. In 1293/1876 the distribution of the 361 teachers and 10,780 students according to schools was: Shāfi'īs: 147 teachers, 5,651 students; Mālikīs: 99 teachers, 3,826 students; Hanafīs: 76 teachers, 1,278 students. The Hanafīs were poorly represented: 3 teachers, 45 students. There was in addition some non-registered students. The students were grouped into 15 *ḡh̲ay̲ḥ* and 38 *ṣaḥ̲r*s (*Kh̲itāt* *ḡh̲*, iv, 28).

The Hanafīs were poorly represented: 3 teachers, 45 students. There was in addition some non-registered students. The students were grouped into 15 *ḡh̲ay̲ḥ* and 38 *ṣaḥ̲r*s (*Kh̲itāt* *ḡh̲*, iv, 28). There were numerous foreign students (see list of *ṣaḥ̲r*s, EP, s.v. Azhar, § II, VI). The vacation began in the month of Rabi' al-awwal and ended in mid-Shawwāl; there was in addition the twenty days leave for the great Bayrām (festival of sacrifices), the same for the

Encyclopaedia of Islam

*maḥ̲ṣ̲* of the saint of Tanṭā, Aḥmad Badawī, etc. . . . (*Kh̲itāt* *ḡh̲*, iv, 28).

IV. The reform of al-Azhar. The shock that Bonaparte's expedition gave to Egypt, and the efforts of Muhammad 'Alī and his successors to modernise the country, left al-Azhar indifferent or hostile. There were individual sympathisers, but they were immobilised by the unshakable apathy of the majority. Al-Azhar rightly feared the influence of certain European ideas; but very few understood how to draw the line between the contributions which were acceptable to Islam and those which were inadmissible. Others became abdicant in passive resistance. It was, however, from among the Azharīs (there was no other intellectual group at that time) that the activist element of the new Egypt was recruited. (Educational mission of Egyptians sent to Paris with Riṭā'a al-Taḥ̲ṣ̲īl in 1825-31; journey of Muḥ̲. 'Ayyūd al-Tanṭāwī to Russia; later Sa'ūd Zaghlūl, Muḥ̲ammad 'Abduh, and others. But these people were always at cross purposes with the conservative element of al-Azhar, since they emerged and acted in a way which was not that of the traditionalists. Al-Azhar at the beginning of the 19th century could well have been called a religious university; what it was not was a complete university giving instruction in those modern disciplines essential to the awakening of the country. However, it seems that the conservative section of al-Azhar did not appreciate at the time either the necessity of creating new academic branches (in al-Azhar or outside it) or that of reforming the organisation and programmes of religious teaching in al-Azhar. The fear of being contaminated by imitating Europe paralysed every thing.

Al-Azhar had nevertheless to take the path of reform. The interference of the government in its affairs, an everyday phenomenon which was sometimes suffered with some resentment, proved decisive at this juncture. When authority had opposed reform (for example during the last years of Muḥ̲. 'Abduh) the conservative forces, having no counterweight, passed unanalysed everything. Nothing less than the full Kh̲edival (later the royal) power was necessary to impose reform. The principal stages of reform were these: in 1288/1872, a decree instituting a diploma at the end of the course of study; a maximum of six students would each year sit for a long and exacting examination in eleven subjects. Success would obtain for them the title of *ṣālim* (1st, 2nd or 3rd class, according to their ability), would assure them material advantages, and would give them the right to teach in al-Azhar. This measure was still clearly inadequate (*Kh̲itāt* *ḡh̲*, iv, 27-8; the newspaper *Wādī al-Nīl*, 26 Feb. 1872).—In 1872, the creation of the higher school of *Dār al-ṣulām* where a certain number of Azharīs could specialise and prepare themselves for teaching in the new schools. (Muḥ̲. 'Abd al-Dj̲awād, *Taḥ̲ṣ̲ir Dār al-Ṣulām*, Cairo 1952; résumé in *MIDEO*, I, 160-2).—In 1312/1895 the Kh̲edive 'Abbās instituted an advisory council (*maḥ̲ṣ̲ idār al-Azhar*) consisting of members outside al-Azhar as well as others from al-Azhar itself. This institution, demanded by Muḥ̲. 'Abduh (1883), was the prelude to the reform of 1896. Muḥ̲. 'Abduh, as a member of the council, was its inspiration.—In 1312/1895 the institutes of Tanṭā, Damietta and Daḡlīk became affiliated to al-Azhar.—A decree on the salaries of teachers, some of whom had only very meagre salaries.—A law of 20 Muḥ̲arram 1314/1 July 1896, inspired by Muḥ̲. 'Abduh, decreed that the council of al-Azhar should

consist of three 'ulamā from al-Azhar and two official 'ulamā from the government; it fixed the minimum age for the admission of pupils at 15; declared that conditions of admission were to be able to read and write, and to know half the *Kur'ān* by heart; it recognised the programmes, *forāshah* (for the older ones, Two examinations held, either after a minimum of 8 years study, to the diploma of *al-'ilm*, or after 12 years, to the diploma of *al-'ilm* (with three honour classes). Modern subjects were introduced, either obligatory (such as elements of arithmetic, algebra) or optional (such as the history of Islam, composition, elements of geography, etc.). The length of the vacations (summer, Ramadan, festival of sacrifice) was fixed. A medical officer was appointed to be in charge of health and hygiene. A list of prescribed texts for the syllabus was drawn up. The implementation of this law came up against fierce resistance, which was likewise expressed in the press.

—In 1903 came the foundation of the institute of Alexandria, affiliated to al-Azhar.—In Muharram 1323/Feb.-March 1907 came a law instituting the *hāshimī* school (for the *shar'ī* tribunals) within the orbit of al-Azhar.—The law of 2 Safar 1326/6 March 1908 set out the studies in three standards, primary, secondary and higher, each of four years' duration with a certificate given after each final examination. The optional subjects of 1896 were made compulsory. This law was regarded as a blow to the autonomy of al-Azhar, and provoked an outcry. There was a serious student revolt in Cairo, and in Tahtā (quickly put down), but nowhere else. It was decided to apply this law only gradually.—In December 1908 came the foundation of the Free University of Cairo, the embryo of the four present State universities, and of the western type. This was the origin of a competition that was painful for al-Azhar.—The law of the 14 Dhu'l-Hijja 1329/13 May 1911 harked back to that of 1908; it laid down that the rector was to be nominated by the Khedive, enlarged the advisory council (the rector, the *shaykh* of the four schools, the director-general of the *waqf*, and three members nominated by the decision of the council of ministers), created the tribunal of the 30 chief 'ulamā who were incumbents of the 30 special chairs, from among whom the rector was to be elected. In the conditions of entry for pupils, the age limit was from 10-17 years; other provisions were as in 1908. Modern studies were slightly augmented, etc. This law was still the subject of opposition. One interesting problem arose, in that the graduates of the *Dār al-'ulūm* and of the school of the *hāshimī* obtained situations more easily than the Azharis, and earned more.—In 1921 the conditions for entry required the knowledge of the whole of the *Kur'ān*, no longer just half.—In the law of 13 Muharram 1342/26 August 1923 the highest standard was renamed 'specialisation' (*taḥḥīṣ*) and comprised many branches. The school of the *hāshimī*, which since 1907 had been banded about between different ministries, was at last affiliated to al-Azhar and abolished as such, becoming simply a branch of specialisation (1923-5). In this period several missions from al-Azhar were sent to study in Europe before returning to teach at al-Azhar.—In 1925 the State University of Cairo (Fu'ād al-Awwal University) replaced the Free University.—A law of the 24 Dhu'l-Hijja 1346/16 November 1930 laid down that the Tribunal of the chief 'ulamā was competent to judge whether any 'ālim was guilty of any act not in conformity with his dignity. It enlarged the

advisory council of al-Azhar (Grand *mufti*; the *shaykh* of the three faculties instead of the *shaykh* of the four schools, etc.), and stipulated that students should be under 16 years of age on admission (18 in the case of foreigners, who were exempted from knowing the whole *Kur'ān* by heart). The primary course was 4 years, the secondary 5 years, the higher 4 years, in one of the three faculties constituted by this law (Islamic law or *shar'ī*, theology or *uṣūl al-dīn*, the Arabic language or *luḡa 'arabiyya*), and in appropriate cases more specialisation or *taḥḥīṣ*, in those faculties which existed only in Cairo, was allowed. The programme of the higher specialisation, 2 years. The regulations concerning the subjects to be taught (these were to be still more detailed in the individual syllabuses printed later) make this law the real charter of present-day teaching. Apart from the traditional subjects, the following should be noted: English, French language (compulsory for the *uṣūl al-dīn* faculty, optional for the two others); rudiments of philosophy, history of philosophy, etc., for the *uṣūl al-dīn* and *luḡa 'arabiyya* faculties; common international law, and comparative law, in the *shar'ī* faculty. Certain branches of *taḥḥīṣ* had in addition a compulsory Oriental language (section of *waqf* was *irḡād*), or the elements of Hebrew and Syriac (sections of *naḥw* and *balāgha*), the history of religions, etc. The normal programme (*muṣṣal*) of the secondary course had as modern subjects the rudiments of logic and the art of rhetoric, of medicine (with the use of the microscope), of chemistry, zoology, botany, history and geography. The primary course comprised history, geography, arithmetic, algebra (up to simple equations with one unknown), and hygiene. The *ḥisāb al-bi-ṣiṭa*, reserved for foreigners who were unable to follow the normal courses, comprised 12 years' study divided into three courses of four years, with an annual syllabus. Of modern subjects they had only arithmetic, history, geography and logic. It must not be forgotten that all these modern subjects take a secondary place in the teaching, and that little time is given to them.—In 1945 the *dār al-'ulūm* was affiliated to the University of Cairo, with the status of Faculty. In 1952 the *dār al-'ulūm* ceased to be reserved for Azharis, and admitted candidates coming from Government schools. A women's section was opened in 1954.—About 1954 there was a slight alteration of the programmes at al-Azhar; a foreign language became compulsory in the faculty of *luḡa 'arabiyya*. The retirement age for teachers was fixed at 65; this applied equally to the chief 'ulamā, who previously had been appointed for life.—In 1955 came the abolition of the *shar'ī* tribunals, thus doing away with the chief outlet for the Azharis of the *shar'ī* faculty. There was talk of opening a women's section at al-Azhar; by the end of 1957, everything was ready, only budgetary credit was lacking.

In 1953, the faculties comprised respectively 1,603 *shar'ī* students, 1,655 for *luḡa 'arabiyya*, 707 for *uṣūl al-dīn*. The institutes had 15,328 primary students, 6,339 secondary, and 3,703 in the attached

sections; the free institutes had 2,458. At the end of 1955 there were in Egypt some institutions directly affiliated to al-Azhar (*muṣṣal*) in the following towns: (a) primary and secondary, Cairo, Tahtā, Mansūra, Ṣiḥān, al-Kaḥ, Rām, Suhāg, Gharā (Dijrāh), Asyūt, Minya, Fayyūm, Mamlūḥ, Samannūd, Zakāzīk, Dāsūk, Damietta (Dumyāt), Alexandria, Damanhūr; (b) primary only, Bani Suwayf, Banāḥ, Kafr al-Shaykh; (c) free institutes supervised (*ḥāḍir*) by al-Azhar, primary only, Tahtā, Balafūra, Bani 'Adī, Mallāwī, Abū Kurkūḥ, Abū Kabīr, Fāḥis, Minghāwī, Cairo (Uḡmīn Māhīr). In 1955 the number of foreign students was as follows: Sudan, 2,534; Nigeria, Gambia, Senegal, 141; Abyssinia, Eritrea, Somaliland, Zanzibar, 209; French Sudan, 37; Uganda and South Africa, 37; India and Pakistan, 46; China, 8; Java and Sumatra, 80; Afghanistan, 13; Kuwait, 6; Iraq, Bahrain, Iran (*ruṣṣ* al-Aḥdā) 21; Turkey, Albania, Yugoslavia (*ruṣṣ* al-Aḥdā), 206; Syria, Lebanon, Jordan, Palestine (*ruṣṣ* al-Shawmī), 724; Yemen, 20; North Africa and Libya (*ruṣṣ* al-Maḡāribī), 207; Hijāz, 17; total, 4,586.

In 1953 the group of 'ulamā at al-Azhar had 112 teachers or preachers on missions in the following countries: Iraq, 2; Kuwait, 16; Sudan (the Umm Darḥmīn Institute), 23; the Muslim School of the Philippines, 2; Eritrea (the Asmara Institute), 7; Malasia, 3; Burma, 3; Gambia, 1; Hijāz, 40; Lebanon, 5; the Islamic Cultural Centre, London, 1; the Islamic Cultural Centre, Washington, 1; Equatorial Africa, 1; Syria, 3; the School of Dīrbāḥ, 3. (1953 statistics from al-Sidqī al-ḥakīmī *sanad* 1953, Cairo 1955; 473-4; Sāḥ al-Huṣṣī, *ḥawāṣṣ al-ḥakīmī* al-'arabiyya, iv, Cairo 1954, 301).

Until the Law no. 15 of 1927 was promulgated, al-Azhar was directly responsible to the King. The Council of Ministers had until then to consider his opinion in the matter of appointing rectors, etc. Its budget was submitted for Government approval, and increased continually (£E 136,000 in 1919; in 1934, £E 1,617,200, of which only £E 94,380 was provided by the *waqf*, the rest furnished by the Ministry of Finance). All the scholars and students benefited from the gratuity, and received a grant for food, and a lodging allowance, if they found no room in the official quarters. For the primary and secondary grades this was about 50 piastres per month in 1935, plus school books and gifts from Egyptian charitable societies. There was a minimum of £E 2½ for foreigners in lodgings. For students of the faculties, help was available, and could be earned £E 5. The Sudanese, who were favoured, received in all £E 8. Certain countries added a supplementary lodging allowance for their nationals. The Islamic Congress, dating from 1953, has aided certain Azharis (MIDEO, iii, 471-8). The *Dār al-'ulūm*, likewise, gave help to students (discontinued for those who entered after 1953). These material advantages made al-Azhar, and still makes it, the only place for higher studies open to poor families (except for the bursaries of the State University). There is now a medical service for Azharis.

The well-organised library of the mosque contains upward of 20,000 manuscripts, and has a printed catalogue. The libraries of some *rishāh* have interesting manuscripts, but still uncatalogued in 1955. Each establishment has in addition a library for its students. Since 1949/1930 al-Azhar has had its monthly review, the official organ of its teachers, and whose title *Nūr al-Islām* was changed to *Maḡallāt al-Azhar* at the end of its sixth year. A

second monthly review, the organ of the *waqf* or *irḡād* section, has retained the name of *Nūr al-Islām*. In addition, certain courses are printed, and many Azharis contribute to the literary productions of present-day Egypt. To answer numerous juridical questions addressed to al-Azhar, a commission, *Lajnat al-faḥḥ*, was set up in 1354/1935 (having a president and 11 other members, at the rate of 1 per school); this is not to be confused with the *Dār al-'ilāhī*, dependant on the Grand Mufti of Egypt.

V. List of Rectors. The chronicle of al-Dīrbāḥ has preserved for us the names of the *shaykh* al-*muḥallī* (*muḥallī*) of al-Azhar since the year 1700 A.H. The rectors (*muḥallī*) was a coveted post which was occupied by the most prominent scholars, and which gave rise to long disputes between the schools. The rectors came from the most varied social strata: there were members of the landed aristocracy, as well as simple men who had done copying to earn a living at the beginning of their careers. Most of them, in the 18th and 19th centuries, composed commentaries or other works, as their biographers have noted. In 1954 the budget of al-Azhar provided £E 2,000 for the rector per annum (see list and references in al-Dīrbāḥī, *al-Azhar fi al-'im*, Cairo 1374, i, 147-96). It is, incidentally, with regard to the biographical notice of a third party, that al-Dīrbāḥ mentions the name of a rector, the earliest that is known to us, 1. Muḥ. b. 'Abd Allāh al-Kharrāḥī, d. 1104/1690; 2. Muḥ. al-Naḡrāḥī, d. 1220; 3. 'Abd al-Bāḥ al-Kallīd, whose nomination was the occasion of a battle, and some firing, within the mosque; 4. Muḥ. Ṣhannan, one of the richest men of his time, d. 1233; 5. Ibrāhīm b. Mūsā al-Fayyūmī, d. 1137; 6. 'Abd Allāh al-Shahrāwī, poet and wit, frequented and defended the *Sūfīs*, d. 1171; 7. Muḥ. b. Sālim al-Hinnāwī al-Khalawātī, Sūfī and jurist, author of glosses, d. 1181, perhaps poisoned by the *awāḥ*; his tomb became an object of veneration (Brockelmann, II, 323; S II, 443); 8. 'Abd al-Ra'f al-Saḡīnī, d. 1182; 9. Aḥmad b. 'Abd al-Mun'im al-Damanhūrī, d. 1192; 10. 'Abd al-Rahmān al-'Arīḡī, of the Hanafī school, who had been initiated into Sūfism by the *Shaykh* al-Hinnāwī, and was rapidly dismissed under *Shaykh* pressure; 11. Aḥmad al-'Arīḡī, Sūfī and commentator, d. 1208; 12. 'Abd Allāh al-Sharkāwī, whose rectorship saw the expedition of Bonaparte, a scholar whose works were very widely read in their time, d. 1227/1812; 13. Muḥ. al-Shanāwī, who supplanted a rival, al-Mahdī, who was rector only in name, d. 1233; 14. Muḥ. al-'Arīḡī, d. 1245; 15. Aḥmad b. 'Alī al-Damīḡī, d. 1246; 16. Ḥasan b. Muḥ. al-'Atīr (q.v.) who had associated with Bonaparte's French and had been a supporter of the reforms, d. 1250; 17. Ḥasan al-Kuwayyī, d. 1254; 18. Aḥmad al-Sāḥ al-Saḡī, d. 1265; 19. Ibrāhīm b. Muḥ. al-Bāḡī, d. 1277, known as a theologian (Brockelmann, II, 487; S II, 741); 19a. an interregnum of four years during which a committee of four *awāḥ* conducted al-Azhar's affairs; 20. Muḥ. al-'Arīḡī (to 1287/1870-1), paved the way for the reforms which his successor introduced; 21. Muḥ. al-'Abhād al-Mahdī al-Hanafī, temporarily replaced by Muḥ. b. Muḥ. al-Anḥādī during the uprising of 'Urābī Paḡhā (1899/1882), ceded his place in 1304/1886; 22. Muḥ. al-'Abhādī, a scholar but opposed to all innovations, who had to be pressed for a long time before his retirement in 1313/1895 (Brockelmann, S II, 742); 23. Ḥasūna al-Nawawī, a man of character, admired by the Egyptians, had had in the law school an influence on his disciples, who played an im-

Azhari enjoyed great renown in his time. Al-Suyūṭī is reckoned as one of his pupils.

 (C. BROCKELMANN\*)

**AL-AZHARĪ**, Abū MANṢŪR MUHAMMAD b. AHMAD b. AL-AZHAR, Arab lexicographer born in 282/895 at Harāt, died in the same town in 370/980. Al-Azhari was a pupil of al-Ḥafṣ al-Mundhirī, the lexicographer Muhammad b. Ḥaṣṣar al-Mundhirī (370/980), who was himself a disciple of Ḥaṣṣar al-Mundhirī and al-Mubarrad (d. 311) (see Yāqūt, *Iḥṣāʾ*, vi, 464 = Cairo ed., xviii, 99 ff.), and seems to have come to Ḥarāk whilst still fairly young. At Baghdad he received instruction in grammar from Nifṣawayh, according to Yāqūt, but came only slightly under the influence of al-Zajidī and Ibn Durayd. If one relies on the lists of Shāfiʿī jurists, given by Yāqūt, who are supposed to have been al-Azhari's masters, he must have had a thorough knowledge of Shāfiʿī law. In 312/924, he was returning from Mecca to Kūfa with the pilgrim caravan, when they were attacked by the Karāmita (d. 311) at al-Habla and partly massacred or taken prisoner. Al-Azhari spent two years as a prisoner of the Bedouins of Bahrayn who were converted to Carmathianism. In a passage cited by Yāqūt and Ibn Khallikān, he describes how he took advantage of his sojourn among these nomads to study their language, which according to him, was very pure. The rest of his life remains a mystery for us and seems to have been spent in his birthplace in study and retirement.

Al-Azhari's work is known to us by a list containing fourteen titles provided by Yāqūt and Ibn Khallikān (reproduced in part by al-Suyūṭī, *Dughayṭ al-Waṣīl*, 8), with the exception of his commentaries on the *Muṣallabāt* and the *Diwān* of Abū Tammām, these are lexicographical studies. Among these works, a dictionary has come down to us (ten volumes in Ibn Khallikān's time) entitled *Tahḍīb al-Lughah*. The work is still not edited; there are MSS. of it in London, Istanbul and in India; see list in Brockelmann. This is a compilation made by means of the materials, which al-Azhari received from his master al-Mundhirī; Yāqūt, *Iḥṣāʾ*, loc. cit., even speaks of a *risāʾa* of a dictionary of al-Mundhirī. The essential feature of the work is that it continues the tradition initiated by Khallīl in his *Kiṭāb al-Ayn*; the roots are not arranged in the usual alphabetical order, but in accordance with a phonetic classification, commencing with the "vocalic" and ending with the labials. The *Tahḍīb* was copiously used by Ibn Manẓūr in his *Lisān al-'Arab*.

*Bibliography*: Yāqūt, *Iḥṣāʾ*, vi, 197-9 = Cairo ed., xvii, 164-7; Ibn Khallikān, *Cairo* ed., 1310, i, 501 = ed. Muḥyī ḥ-Dīn, *Cairo*, 1900, 1:108; 458-62; Zetterstéen, in *MO*, xiv, 191; Brockelmann, I, 129, S. 1, 302.

**'AZĪM ALLĀH KHĀN**, said to have been the brain of the political upheaval (known as the Mutiny) of 1857 in India, came of a poor Pathān family which had settled in Cawnpore long before the famine of 1837-8 (George Dunbar, *A History of India from the Earliest Times to the Present Day*, London 1917, II, 483). An orphan, saved from starvation by a Christian missionary, he began life as a *khidmatgār* in an Anglo-Indian family of Cawnpore (Mowbray Thompson, *The Story of Cawnpore*, London 1859, 54; G. O. Trevelyan, *Cawnpore*, London 1907, 58), who sent him to school, where he learnt English and French, and acquired high proficiency in both. Soon after com-

pleting his education he joined the same school as a teacher. On the request of Nānā Shāhī, adopted son of Bājī Rāo II, the chief of the Peshwās, he entered his service as a private tutor and English secretary. He soon found favour with Nānā who appointed him as his political adviser. Following the death of him as Bājī Rāo II in 1851, Nānā Shāhī succeeded to his title, pension and estate but the Governor-General of India, Lord Dalhousie, discontinued his pension and refused to recognise him. Thereupon 'Azīm Allāh Khān prepared a memorial for his master in which was submitted to the British authority in 1852. It was, however, rejected by the Court of Directors of the East India Company. In 1853 'Azīm Allāh Khān left for England to plead Nānā's case personally. Here he failed in his mission but through the charm of his personality he won the heart of many ladies who continued to write him scores of letters even after his return to India in 1855. These letters were later published in two vols., *The Indian Prince and the English Princess* (Trevelyan, 59). On his way back from England, 'Azīm Allāh Khān visited Paris, Constantinople, Sebastopol and the theatre of war in the Crimea (Russell, *My Diary in India*, London 1860, 165-7).

A frustrated and disillusioned man, having spent £50,000 on his fruitless mission to England, anxious to continue in the favour of his master, 'Azīm Allāh Khān suggested to Nānā the overthrow of the British power in India through a military coup d'état. With this aim in view he visited, early in 1857, along with Nānā, military stations in northern India but met with little success. Some Indian princes falsely promised help to Nānā's emissaries sent out at the instance of 'Azīm Allāh Khān, who himself took part in many of the lost battles against the British. On the fall of Bithūr, Nānā's stronghold near Cawnpore in 1857, he disappeared from the scene, never to be heard of again. He is said to have died in Raibāt I-II 1276/October, 1859 at Bhitwal (Népal) where he had fled along with other leaders of the Revolt. His end, however, like his origin, still remains shrouded in mystery.

(A. S. BARNES ANSARI)  
**'AZĪMA** (A.), literally: "determination, resolution, fixed purpose"; thence:

1. In religious law, an ordinance as interpreted strictly, the opposite of *rukḥṣa*, an exemption or dispensation (e.g. the dispensation from observing the dietary laws, if there is danger to health or life). 'Abd al-Wahhāb al-Shāfiʿī, in his *Kiṭāb al-Miṣnā al-Kubrā*, consistently explains the divergent opinions of the several schools of religious law as expressing these two complementary tendencies. Cf. Goldziher, in ZDMG, 1884, 676 f.; idem, *Die Zāhirīen*, Leipzig 1884, 68 f.

2. In magic, an adjuration, or the application of a formula of which magical effects are expected. Cf. Goldziher, in *Orientalische Studien Theodor Noldeke*, ... *Gesamtheit*, Gießen 1906, I, 307.

(I. GOLDZIEHER\*)

**AZIMECH** [see MUDJĪCH].

**AL-'AZĪMĪ** (Muh. b. 'Alī b. Muh. Abū 'Abd Allāh al-Tanūkhī), called — (483/1090-post 556/1161), chronicler of Aleppo. A full but dry universal history—mainly Syrian—by him, which extends to the year 538/1143-44 (published by me—from the year 455/1063—in *JA*, 1938, 353-448), has come down to us, but in addition, he composed above all a great *History of Aleppo* which was copied especially by Kamāl al-Dīn b. al-'Azīm and Ibn Abī Tappī (the latter up to 556/1161). The interest of the portions of al-'Azīm's work which have been preserved does not reside in their intrinsic value but rather in the fact that they are the only texts which escaped the destruction of North Syrian historiography between the middle of the 310th century and that of the 6th/12th century; they thus enable us, to a certain extent, to complete or criticise the great works of the following century, on which we are dependent for the history of this period, by bringing us closer to their sources: a necessary text in view of the changes which had taken place in the meantime in the Syrian moral and social climate.

*Bibliography*: Mukrimis Halil (Yinanç), *XII asir tarihçileri ve muvverrihi Azimi, in İbnici Türk Tarih Kongresi* Nergizay, 1937; Cf. Cahen, preface to the edition cited above, and *Le Syrie du Nord à l'époque des Croisades*, 1940, 42-3.

**AZIMUT** [see AL-SAMT].

**AL-'AZĪZ** [see AYYŪBIDS].

**AL-'AZĪZ BĪLLĀH NĪRĀN Abū MANṢŪR**, fifth Fatimid Caliph and the first whose reign began in Egypt. He was born on 14 Muharrar 344/16 May 955 and had been designated as his successor by his father al-Mu'izz after the death of his brother 'Abd Allāh in 364/974. He succeeded his father on 11 Raḥb I-II 365/18 December 975 (or 14 Raḥb I-II 21 December) after the latter had died in recognition as his successor by his family and dignitaries on the preceding day. The official proclamation, however, only took place on 10 12ḥu 365/9 August 976.

The sources describe him as tall, with red hair and blue eyes, generous, brave, fond of horses and hunting and very humane and tolerant in disposition. He was an excellent administrator, subjected the State finances to a rigorous supervision, introduced the system of fixed salaries for officials, whom he forbade to accept bribes and presents, and issued an order that no payments should be made except on the production of written documents. He was the first to assign fixed rates of pay to his troops and palace personnel. He was, moreover, the first of the Fatimid Caliphs to employ Turks in the army, a practice which was later to be fraught with serious consequences.

He was well supported by his minister Ya'qūb b. Killis, the director of taxation, to whom in 368/979 he gave the title of *waiz*, previously unknown to the Fatimids, and who remained *waiz* until his death in 380/991, with two short periods in disgrace, one because he was accused of having had the Turk Alptakin (Alptigin; see below) poisoned in 367/978, and the other in 373/984 when he was imprisoned and had his possessions confiscated, perhaps because of the famine which broke out in that year, but two months later he recovered his liberty, possessions and office. It was to Ibn Killis that al-'Aziz's finances owed their prosperity. He also played an important literary rôle, according to pensions to the most of letters, lawyers and poets whom he gathered round himself, and composed a book of Isma'īlī Law based on pronouncements by al-Mu'izz and al-'Aziz.

The *waiz* who succeeded him did not remain as long in office. These were 'Alī b. 'Umar al-'Addās, Abu 'l-Fadl 12ḥu 381/ al-Furāt in 381/992, al-Buṣayr b. al-Ḥasan al-Bāṣiy, Abū Muhammad b. 'Ammār, al-Fadl b. Šāhī, who had been a collaborator of Ibn Killis, and lastly in 385-386/995-996, the Christian 'Isā b. Nestorius, formerly Secretary for Finance. Another important officer of al-'Aziz was the Jew Manasheh (Manasseh), Secretary for Syria.

The employment of a Christian and a Jew in high offices was in keeping with the spirit of toleration of the Fatimids in matters of religion and race. Al-'Aziz was still further inclined to toleration, being influenced by his Christian wife, the mother of his son and successor al-Ḥākim. This Princess's two brothers were indebted to his influence and to the Caliph's recommendation for being appointed, the one, Orestes, Patriarch of Jerusalem, and the other, Arsenius, Metropolitan of Mīr and Cairo in 375/986. The Christians, throughout his reign, enjoyed great freedom. The Coptic Patriarch Ephraim, in spite of strong Muslim opposition, obtained permission to rebuild the Church of Abū 'l Sayfayn (St. Mercurius) near al-Fustāt. The Caliph looked favourably on the controversies between the Bishop of Agnūmayn, Severus b. al-Makaffā' and the kadi Ibn al-Nu'mān, president of the Court of *Mazālīm*. He refused to take action against a Muslim who had become a Christian convert. This policy was bound to cause considerable discontent among the Muslims, and tracts were circulated against Manasseh and Ibn Nestorius. To appease the Muslims, the Caliph had the Jew and the Christian imprisoned, but as it was difficult to do without their services, they were re-established their position. In 386/996, this discontent provoked a popular movement against the Christians, following the burning of the fleet, of which some merchants from Anafī were accused; the latter were massacred and several churches were looted.

Though al-'Aziz was tolerant towards Christians and Jews, he was less so towards the Sunnī Muslims. He followed a strict Isma'īlī policy (defamatory inscriptions for the companions of the Prophet; suppression of the *palāt al-tarāwīḥ* of Ramaḍān in 372/982; the punishment in 381/991 of a man who had in his possession the *Mawṣiṭā'* of Mālikī). In 366/976, he inaugurated in Cairo the mourning ceremonies on the feast of the 'Ashūrā'. On the other hand, however, the holding of solemn processions on the Fridays in Ramaḍān and the distributions of sweetmeats at the feast ending the fast (*Uṭra*) are due merely to his love of display.

The reign of al-'Aziz was in fact a period of luxury. His fondness for precious stones, cut glass

no. 772) shows him with a white beard. Among the poets his contemporaries who used the *nom de plume* ‘Aziz he was the most famous.

All his biographers hold it noteworthy that, in contrast to the works of most of the other poets of his time, his poetry was inspired not by boys, but by women. This reputation seems to have derived from his most famous poem, a *ghazal* on the courtesan of Istanbul, entitled *Rengin-nâm*, which is remarkable for its lively style and bold use of idiomatic expressions and proverbs; each of the 49 beauties is described, in a set of three couplets, with images befitting her name or nickname. Other poems by him are found scattered in *tefekkür* and anthologies.

**Bibliography:** Gibb, *Ottoman poetry*, iii, 179-86 (1904), with English translation of 32 stanzas of the *ghazal*; Saadeddin Nüzhet Ergin, *Türk şairleri*, ii, 632-37 (about 1938), containing passages on ‘Aziz from various *tefekkür*, several of his scattered poems; Istanbul Üniversitesi Kutuphanesi, Turkish MSS. no. 9499, is a complete copy (dated 1304/1886-87) of the *Rengin-nâm*; article in *IA*. (A. Tietze)

‘AZİZİ [see KARAFERİDİ-ZADE].

‘AZİZ, *coitus interruptus*. According to the *hadith* this practice was not unknown to the ancient Arabs, and the Messenger of God did not declare it to be *haram*. The doctors of the Law agree that the master can practise it with his slave concubine unconditionally, and the husband with his wife in the latter case, however, there is controversy on the question whether the wife's permission is necessary. According to al-Ghazālī, although *‘azl* is not in conformity with the general spirit of marriage, it is not forbidden, and is at the most only mildly reprehensible: it may also be practised with a view to ensuring, for example, that the consequences of a confinement do not imperil the husband's “continued enjoyment of marital rights”; with greater justification, and although it is preferable to leave the matter trustfully in God's hands, “the fear of incurring great financial hardship on account of the size of one's family” renders this contraceptive practice admissible.

(G. H. BOUQUET)

‘AZİZİ, dismissal (see SUPPLEMENT).

‘AZMİ-ZADE MUSTAFA, Ottoman poet and stylist, as a poet known under the name of Hâletî. Born in the so-called *laylat al-berit* in Istanbul on 15 Sha‘bân 977/23 Jan. 1570. He was the son of ‘Amîd-Efendi, who was the well-known and well-respected tutor of Murâd IV as well as a poet, writer, and translator (died 990/1582). As a pupil of Sa‘d al-Din [q.v.] who became famous as a historian, he studied law, and to him he owed his special love for historical investigation. He became *muderris* at the *madrasa* of Hâdîdî-Khân in Istanbul, but in 1601/1602-3 he was transferred to Damascus as a

judge. Two years later he went to Cairo in the same capacity. When Dimâd Ibrahim-Paşa (cf. Hammer-Purgstall, iv, 139 ff.) the governor of Egypt, who had occasionally represented him, was dismissed because of his lack of prudence, and soon afterwards (1015/1606-7) he was moved as Mulla to Bursa. As a reward for his good services in the fight against the ‘Alid rebel Kalender-oglu, he became Mullah of Adrianople in 1020/1611-2. His behaviour when a judge was punished for wrongdoings led to his transfer to Damascus where, however, he remained only until 1027/1618, to go from there to Istanbul as a judge. This important office he held for four years. Subsequently he was sent to the provinces once again, this time to Cairo. In Rabi‘ II 1030/Feb.-March 1621, he next became a military judge in Anatolia and in Rabi‘ I 1037/Nov. 1627, in Rumelia, after he had again been without office (mu‘azzil) since [Ibn ‘I-Kâdî 1034/Sept. 1623. This last post, too, he held only for a short time. He was dismissed in Ramadân 1038/April-May 1629, and moved to the school attached to the Sulaymânîya mosque (*dar al-hadith*) in Istanbul. He died soon afterwards (26 Sha‘bân 1040/30 March 1631, and is buried in the courtyard of his school, not far from his house in Sofalar Carhusu.

As the poet Hâletî, ‘Azmi-zade achieved fame because of his *divân*, his *5481-nâm*, and his quatrains (*rubâ‘i*), and he was known as the Turkish ‘Umar Khayyâm by his successors. He was very widely read and left a library of manuscripts of some 4000 volumes, all of which are annotated in his own hand. The library was dispersed. None of his works has yet been printed, and his poetry deserves a further critical appreciation. ‘Azmi-zade's *Sulaymân-nâm* would appear to have nothing to do with the sultan Sulaymân the Magnificent; the contents stands in need of an examination (there is a manuscript in the Es‘ad-Efendi library in Istanbul [No. 2284, cf. GOW, 76]). The best example of his skill in prose is his *Munshâ‘ât*, of which there is a manuscript in the Hamidiyya library in Istanbul (No. 699). There is another one in London, (No. 169), and in the British Museum (No. 1649, cf. Kien, 961), with a reference to a further manuscript in Vienna (Nationalbibliothek) containing only 13 letters (cf. G. Flügel, catalogue I, 265), cf. also Hammer-Purgstall, i (1828), viii.

**Bibliography:** New‘i-zâde ‘Alî‘î, *Hadîqah al-Habâ‘ih*, Istanbul 1268, 750ff.; Sâdî‘î ‘Oğmedî, *Habâ‘ih*, Istanbul 1268, 750ff.; *Farâid*, ii, Istanbul 8, 103 f.; Hâdîdî Khâfî, *Farâid*, ii, Istanbul 1, 1267, 135; J. v. Hammer, *GOW*, iii (1837), 214 ff.; Gibb, *Ottoman Poetry*, ii, 221 ff.; Brissâh Mehmed Tahîr, *Oğmedî (Mudîrîyâ)*, ii (1333), 311 f. Brief notices in Hammer-Purgstall, iv (1829), 629, based on ‘Alî‘î.

(F. BAERINGER)

AL-AZRAKÎ ABU ‘L-WALID MUHAMMAD B. ‘ABD ALLÂH B. AHMAD, historian of Mecca and of its sanctuary. The ancestor of the family was a Byzantine (*Rûmî*) slave of Kalâda or al-Hârith b. Kalâda in al-‘Irâq, called al-Azrak on account of his blue eyes. According to Ibn ‘Abd al-Barr (*Al-fih*, s.v. Sumayya), he married Sumayya, the mother of Ziyâd b. Abih. During the siege of al-‘Irâq in 8/630 al-Azrak went over to Muhammad, was freed, and settled at Mecca. His descendants rose to power and influence and married into the Umayyad aristocracy. In order to obliterate their humble origin they pretended to belong to the clan of ‘Ikab of the Banû Taghlab (Ibn Sa‘d, iii, 176) but later, when the antagonisms between Kays and Yaman

became prominent, they were persuaded by the Khawâra to join the Yamanite camp by maintaining that al-Azrak was the son of ‘Asar b. al-Hârith b. Abi Shâmir and hence a member of the royal family of the Ghassânids (Ibn Sa‘d, l.c.; see also al-Azrakî 438, and 460).

A great-great-grandson of al-Azrak was Ahmad b. Muḥ. b. al-Walid b. ‘Ukba, d. 222/837 (Ibn Sa‘d v, 367; al-Suhbi, *Tabakhât al-Shâfi‘iyya*, i, 222; Ibn Hajar, *Tabakh*, i, 79). He was interested in the history of Meccah and its sanctuary and gathered from Sufyân b. ‘Uyayna, the *muḥ* Sa‘d b. Sâlim, the *fakh* al-Zandî, Dâwūd b. ‘Abd al-Rahmân al-‘Aḥrî and other Meccans a huge mass of relevant information. His materials were utilised and considerably enlarged by his grandson Abu ‘L-Walid, the author of *Al-habîs Makka*. The traditions collected in this book go back in the main to the so-called school of Ibn ‘Abbās and represent its doctrines and Qur’anic exegesis. With regard to the legendary history of Mecca in pre-Islamic times Ibn Ishâq, al-Kalbi and Wabī b. Munabbih are also quoted. The topographical description is in the main the work of Abū ‘L-Walid. Abu ‘L-Walid transmitted the book to the “reader” Abū Muhammad Ishâq b. Ahmad al-Khuz‘î (a descendant of ‘Umar’s governor of Mecca Nâfi’ b. ‘Abd al-Hârith) d. 308/921, who made many additions, especially about the renovations of the Ka‘ba in 281/894-7, and transmitted the book to his grand-nephew Abu ‘L-Hasan Muhammad b. Nâfi’ al-Khuz‘î, d. after 350/961 (who made only three additions). This is the text that was printed by Wüstenfeld, *Die Chroniken der Stadt Mekka*, i, Leipzig 1858.

Azrakî's book was plagiarised c. 272/885-6 by Muhammad b. Ishâq al-Fâkîhî (see Wüstenfeld, *op. cit.*, i, xxiv-xxix and ii, i). It was also utilised by Sa‘d al-Din Sa‘d Allâh b. ‘Umar al-Isfahâni c. 762/1361 in his *Zuhd* al-‘Amal (see Rieu, *Supplement*, nr. 575). Al-Kirmânî wrote in 821/1418 a *Muḥarrar Ta’rîkh Makka* (autograph in Berlin, Ahlwardt no. 6752).

**Bibliography:** For Azrak see also Ibn Kutayba, *Handbook*, 131; Tabarî, iii, 2315, 2 and *Taba* s.v. al-Azrak and Sumayya Umm ‘Ammâr. For Abu ‘L-Walid al-Azrakî see Fihrist, 112; San‘îd 281; Brockelmann, S.I, 209, J. W. Fück, *Der Abū al-Azrakî (Shâfi‘î Orientalisten in onore di G. Levi Della Vida)*, i, 336-40. (J. W. FÜCK)

AZRAKÎ, ZAYN AL-DIN ABU BAKR B. ISMÂ‘ÎL AL-WARRÂK, Persian poet who, according to Ethé, died in 527/1132-13 or in 524/1130; but Mirzâ Muhammad Kazwîni has shown (*Caḥr Mahabâ*, 173 ff.) that he died certainly before 463/1072-3. He wrote a *Diwân* among other poems, contains panegyrics on Tughlughân b. Alp Arslân, the governor of Harât (not, as is often stated, of Nishâpûr), and on Amirîngshâh, the son of Kâwurd [q.v.], the first Saljuqid sultan of Kirmân. His verses comprise outstanding *basîdas* and *hîfâs*; he excels in descriptive poetry but is sometimes exaggerated in his praise, and he is not free from far-fetched and affected comparisons. It seems improbable that he is also, as Hâdîdî Khâlîfa and others assert, the author of the *Sindbad-nâm* and of an obscure book entitled *Alfiyya wa-Shafiiyya*.

**Bibliography:** ‘Awf, *Lubâb*, ii, 86 ff.; Dawlat-shâh, 72 ff.; Iḥsânî-‘Arîdî, *Caḥr Mahabâ* (ed. Kazwîni), 44, 170 ff. (trans. Browne, 123-125 and index); [Iḥsânî] *Ḥakâidîn*, chapters vii, (trans. Mas‘ûd, 172); Houtsma, *Revue*, i, 14 ff.; Ethé, *Gr. I. Phil.*, ii, 258; Browne, ii, 323. (H. MAS‘ûd)

AZRAKITES [see AZARIKA].

AZULEJO [see KHARAJ].

AZURDA, SAYYID AHMAD B. LUTFI ALLÂH, Indian writer of Kashmiri extraction, was born in Delhi in 1204/1789. He learnt the traditional sciences from Shâh ‘Abd al-‘Azîz and Shâh ‘Abd al-Kâdir [q.v.], and the rational sciences from Faḍl-i Imâm of Khayrâbâd, whom he succeeded in 1243/1827 as the last grand *mufti* and *sadr al-udayn* of Imperial Delhi. In addition to his proficiency in various branches of knowledge he was a great authority on the Urdu language, and celebrated poets like Ghâlib and Mu‘în often invited his opinion on their compositions. Before the Mutiny his house in Matyâ Mahall, Delhi, was the favourite meeting-place of scholars and poets. (He was the first to prescribe the *diwân* of al-Mutanabbî as one of the courses of study in India.) Suspected of complicity in the Mutiny of 1857, he was exiled. His property, including his large private library, was confiscated and auctioned. After his release his property, but not his library, was restored to him. He had many pupils. Before his appointment as *sadr al-udayn* he served as a tutor to Yûsuf ‘Alî Khân, ruler of Rampur (1855-65). His principal pupils included: Siddîk Hasan Khân [q.v.]; Fakîr Muhammad Lâhûrî, author of *Hadâ‘ih al-Hanafîyya*, and Abu ‘L-Khayr, father of Abu ‘L-Kalâm Azâd. He was struck with paralysis in 1862 and died six years later on 24th Rabi‘ I 1285/15th July, 1868 and was buried in Delhi.

Among his works, some of which perished during the Mutiny, are two treatises in Arabic: *Munshâ‘at Maḥabî fi Shârh Hadîth li Taḥḥud al-Rikâi*, in refutation of the arguments of Ibn Taymiyya and others to prove that visits to the shrines of saints and divines are unlawful; *al-Durr al-Mandâf fi Ḥukm Inmâ‘ al-Maḥabî*. He is also the author of a short biographical work on Urdu poets entitled *Tadhkirat Muḥabbas dar Ilâlat Raddîngiyân-i Hind* (Rome, *Suppl.*, 304). Some of his poems were reproduced by (Sir) Sayyid Ahmad Khân in the *Albâr al-Sanâidiyya*, Delhi 1846, 72-114.

**Bibliography:** Fakîr Muhammad Lâhûrî, *Hadâ‘ih al-Hanafîyya*, Lucknow 1906, 93-4; Siddîk Hasan Khân, *Abjad al-Ulûm*, Bhopal 1295, 917; Muḥabbat Husayn ‘Sâhî’, *Râi-Rauzshah*, Bhopal 1297, 70-1; Rahmân ‘Alî Tadhkirat al-Khawâra’, Lucknow 1914, 93-4; Muḥabbat Khân Shifî’a, *Gulshar-i-Bahâr*, Delhi 1846, 10-1; Ghawth Muhammad Khân, *Sayr-i Muḥabbat*, Delhi 1851, 247-8; Nûr al-Hasan Khân, *Tadhkirat-i Tûr-i Kalim*, Agra 1908, 6; ‘Abd al-Ghaffâr Khân “Naasidh”, *Saḥḥat al-Shawâri*, Lucknow 1291, 23; Intiqiyya ‘Alî “Arshî”, *Makāshif al-Ghâlib*, Bombay 1917, 62; Ghulîsî Raḥîl Maḥabî, *Ghâlib*, Lahore 1947, 278-83; ‘Abd al-Hayy Laḥqanwâl, *Nushah al-Khawâir* (MS), vii, s.v.; idem, *Gul-i Ra‘nâ*, A‘zamgarh 1364, 327-8; A. Sprenger, *Oudh Cat.*, s.v. *Azard*; *Survey*, iv, 922; Kâdir Baksh Shâbir, *Gulistan-i Saḥḥat*, (MS.), s.v.; Karim al-Din and Fallon, *Tabakhât al-Shawâri*, Delhi 1848, 446-8; Muhammad b. Yûsuf al-Tibrat, *al-Yam‘ al-Diyat fi Anshad al-Shaykh ‘Abd al-Ghaffâr*, lith. on the margin of *al-Aḥdân Rijâl Ma‘nî al-‘Abd*, Deoband 1344, 77; Sir Râm, *Khawâsh-i-Diyad*, Lahore 1908, i, 53-61; Asad Allâh Khân “Ghâlib”, *Kulliyat Naṭh Ghâlib*, Cawnpore 1871, 101, 123; Siddîk Hasan Khân, *Ilbâl al-Nababâ’ al-‘ashq*, 1288, 260; Al-Husayn ‘Hâfî’, *Bayân-i-Diyad*, Delhi 1909, i, 29, ii, 253, 380; Faḍl-i Husayn, *al-Bayân ba‘d al-Mamâd*, Agra 1908, 44;

until a party of men entered the outer archway to try to break down the door behind the inner archway. At a signal, given by men looking through the slits in the vault, the portcullis would be released and missiles, molten lead, or boiling oil dropped on the storming party trapped below. It was impossible for a storming party to approach the door without exposing themselves to be fatally trapped in this fashion.

The finest gateways of the 3th/11th century are the three Fātimid gates of Cairo, the Bāb al-Nār, Bāb al-Futūḥ (Plate XXX) and Bāb Zuwayla, built by

Fig. 2. ALEPPO: Entrance of the Citadel.  
(From Herzfeld).

Badr al-Djamālī in 480-83/1087-92, but they are "straight through" and not bent entrances. In each case the gateway proper is set back in an arched recess between two round-fronted towers, and at the back of the arch is a slit whereby missiles could be dropped from the platform above on a storming party attacking the door with a battering ram.

But the wars of the Crusades in the two following centuries and the great military experience gained by both sides soon resulted in the bent entrance coming into general use. It was invariably employed by Salāh al-Dīn, e.g. at Kal'at Djindī in Sīnāi, about

578/1182, in the three gateways of the Northern Enclosure of the Citadel of Cairo, 572-9/1176-84, and likewise the gateways in that part of the Wall of Cairo due to him (Plate XXXI). So thoroughly were the advantages of the bent entrance appreciated that it had even reached the Far West of Islam before the end of the 6th/12th century, e.g. the gateway of the Kaḥba of the Oudāya at Rabāṭ in Morocco.

For the 7th/13th century three typical examples of it may be cited: Kal'at al-Nadīm on the Euphrates, 605-12/1208-15; and two at Baghdad, the Tālisman Gate (blown up by the retreating Turks in 1918) and the Bāb al-Wustānī.

The supreme example of a bent entrance is al-Malik al-Zāhir's gateway in the Citadel of Aleppo finished according to Ibn Shaddād in 611/1214. Here there are no less than five right-angled turns in the passage-way (Plate XXXII and Fig. 2).

(K. A. C. CRESWELL)

**BÄB**, a term applied in early Shī'ism to the senior authorised disciple of the Imām. The bagographical literature of the Twelver Shī'a usually names the *bābs* of the Imāms. Among the Ismā'īliyya [g.v.] *bāb* was a rank in the hierarchy. The term was already in use in pre-Fātimid times, though its significance is uncertain (cf. W. Ivanow, *The Alleged Founder of Isma'ilism*, Bombay 1946, 123 n. 2, citing al-Kashshāf, *Ridā*, 321; idem, *Notes sur l'Ummu al-Kutub*, in *RIE*, 1932, 455; idem, *Studies in early Persian Isma'ilism*, Bombay 1955, 19 ff.). Under the Fātimids in Egypt the *bāb* comes immediately after the *Imām*, from whom he receives instruction directly. He in turn instructs the *hujjaj*, who conduct the *da'wa*. The term thus appears to denote the head of the hierarchy of the *da'wa*, and to be the equivalent in Ismā'īlī terminology of the expression *dā'ī al-da'wā*, which is used in the general historical literature but rarely appears in Ismā'īlī texts. Thus, for example, al-Mu'ayyid fi 'l-Dīn al-Shīrāzī, who is described in Ismā'īlī writings as the *bāb* of al-Mustansir, is called his *dā'ī 'l-da'wā* by the historians (e.g. Ibn Muyassar, 10) and is actually named as such by al-Mustansir in a *sigh* of Ramadan 461/July 1069 addressed to the Sulaymānī ruler of the Yaman (*Al-Sighat al-Mustansiriyya*, ed. 'Abd al-Man'im Maḥjūd, Cairo 1954, 200). Some indications of the status and functions of the *bāb* in Fātimid Ismā'īlism will be found in Hamid al-Dīn al-Kirmānī, *Rihāt al-'Abb*, ed. M. Kāmil Husayn and M. Muṭafā Hilmī, Cairo 1953, index; cf. R. Strothmann, *Gnostische Texte der Isma'iliten*, Göttingen 1943, index, espec. 82, 102, 173; W. Ivanow, *Studies*, 20-23). In the post-Fātimid *da'wa* the office dwindled in importance and seems eventually to have disappeared. In the description of the *da'wa* organisation at Alamūt given by Naṣir al-Dīn al-Ṭūsī, (*Tasawwurat*, ed. W. Ivanow, 97, introduction xliii), there is only a *bāb-i ḥāṭin*, who ranks with the *dā'ī*, and in later Ismā'īlī writings the term seems to drop out altogether.

In the system of the Nusayriyya [g.v.] the *bāb* comes after the *imam* and is identified with Salīmān [g.v.]. The *bāb* is personified in each cycle. (Lists of Nusayri *bābs* are given in R. Strothmann, *Morgenländische Geheimnisten in Abendländischer Forschung*, Berlin 1953 (Abhandlungen der deutschen Akademie der Wissenschaften zu Berlin, Klasse für Sprachen, Literatur und Kunst, Jahrgang 1952 Nr. 5) 34-5; L. Massigson, *Nusayriyya*, in *EP*, for a similar Ismā'īlī list see *Taj' al-Yar* b. Maṣūr al-Yaman, *Kutub al-Kaḥf*, ed. R. Strothmann, 1952, 14).

**BĀB**, an appellation [see the preceding art.] made especially famous by Sayyid 'Alī Muhammad of Shīrāz, the founder of the new religion of the Bābīs [g.s.], and, according to the Bābā'īs [g.s.], the precursor of the new prophet Bahā' Allāh [g.s.]. He is also called by his disciples *Nuḥṣā-i-āḥ* ('the first point') or *Haḍrat-i a'ḥ* ('the supreme presence').

Sayyid 'Alī Muhammad was born at Shīrāz, of a merchant family, on 1 Muḥarrar 1233/20 October 1819 (but according to other sources, exactly a year later, 9 October 1820); becoming an orphan at an early age, he was placed under the tutelage of his maternal uncle Āghā Sayyid 'Alī. At the age of about 19 or 20 he was sent to Iḥṣābāh, on the Persian Gulf, to trade there; here, at the same time, he gave himself up to earnest religious meditations, as he had done before since his childhood. When on a pilgrimage to Karbalā', he made the acquaintance of Sayyid Kāzīm Raḥīf [g.s.], the head of the religious movement of the Shāykhīs, who showed a high and unusual regard for him. Sayyid Kāzīm died at the end of 1259/December 1843; before his death he had sent disciples into all parts of Persia in search of the awaited *Mahdī*, the *Sahib al-aman*, who, according to his prophecies, would not be long before manifesting himself. One of the disciples of the *sayyid*, Mullā Husayn of Buḥrūya, who had arrived at Shīrāz and had been strongly affected by the fascination of the young 'Alī Muhammad, was the first to recognise him as the 'gateway' to Truth, the initiator of a new prophetic cycle. During the night of 5 Djuḥādā I 1260/23 May 1844, he had replied in a satisfactory way to all his questions, and had written in his presence, with extreme rapidity and all the time intoning what he was writing in a very melodious voice, a long commentary on the *sūra* of Yūsuf; this commentary is known to the Bābīs by the name of *Kayyūm al-āmin*, and considered as the first 'revealed' work of the Bāb. The rapidity with which he wrote and the indescribable charm of his voice seem to have been the characteristics which have most impressed Muslim as well as Bābī writers. In the summer of 1844, the Bāb, who had been making drastic attacks on corrupt Shī'ite *madāris* and *muftahids* with his own weapons, quickly collected a number of disciples, among whom were 18 called by him the *Hurūd al-Hayy* ('The Letters of the Living'). Mullā Husayn is also known among the Bābīs by the title of *awwal man āmana* ('the first believer'), and by that of *Bāb al-Bāb*, which the Bāb himself later gave him. In the autumn, after the 'Letters of the Living' had been despatched to proclaim his mission in the various provinces of Persia, the Bāb set out on a pilgrimage to Mecca. The journey left a bad impression on him. This is reflected in several passages in the *Hayyān*, where he speaks of the dirt and promiscuity of the boats and of the low moral character of the quarrelsome and violent pilgrims. Either during a stay in the port of Muscat or in the heart of the holy city of Mecca, the Bāb, according to the sources, must have declared more openly his mission as *mahdī*, but to no purpose. In the spring of 1261/1845 the Bāb returned to Shīrāz, where his preachings and public declarations (for during the journey he had written another book, *Sahā'at bayn al-Haramayn* ('book [written] between the two Holy Places') in which he lays down the purport of his mission) caused some trouble; the Bāb's missionaries who, on his order, had dared to add to the *adḥān* [g.s.], the phrase 'and I confess that 'Alī before Nabī (the

Bāb) is the mirror of the breath of God', were arrested, brought before the Governor of Shīrāz, Mirzā Husayn Khān Āghāḥān-Bāgh, severely punished, and expelled from the city. A representative of the reigning sovereign (Muhammad Shāh), Sayyid Yahyā-i Dārūd, sent to conduct an enquiry, was won over by the charm of the Bāb, and became converted to the new doctrine. Whilst all this was going on, Mirzā Nūrī (the future Bahā' Allāh) and his brother Mirzā Yahyā Nūrī (the future *Sahib-i Aḥd*) at Tehran resented in the new faith, after a meeting with Mullā Husayn. At Shīrāz an epidemic of cholera broke out, and everyone from the Governor down prayed for deliverance. The Bāb remained at Iṣfahān, where he was protected by the governor, the Georgian Manūčīhr Khān Muḥammad al-Dawī. On the death of the latter the Bāb was called to Tehran by order of the minister Ḥādīqī Mirzā Āghā, but shortly before arriving in the city he was arrested and sent as a prisoner to the fortress of Māhūk in the trackless mountains of Ādharbāyḍjān (summer of 1263/1847). In 1264/April 1848, following more serious disorders which had broken out in different parts of Iran on account of Bābī propaganda (see *Nāṣir*), the Bāb, whose powerful religious influence had converted the governor of the fortress of Māhūk, 'Alī Khān, was transferred to a more rigorous prison, the remote castle of Chīrk. Shortly afterwards, in July, he was removed to Tabriz to be questioned by a committee of *muftahids*; it was decided to condemn him forthwith. The powerful minister Mirzā Taqī Khān, who had succeeded Ḥādīqī Mirzā Āghā after the latter's dismissal by the new sovereign Nāṣir al-Dīn Shāh (1848), considered that the death of its founder would break up this dangerous movement which was continuing to attract new adherents. In the spring of 1266/1850 the news of the execution of the seven martyrs of Tehran (see *Bābīs*), among whom was his uncle and well-beloved tutor, reached the Bāb in the fortress of Chīrk where he had been re-imprisoned, and greatly distressed him. He prophesied that his end was near. He was taken at the end of the month of Shā'abān 1266/July 1850 to Tabriz, and was condemned to be shot at the same time as two of his disciples, Mullā Muhammad 'Alī of Yazd and Āghā Sayyid Husayn. The second, during the doleful procession of the three condemned men through the streets of Tabriz, under insults and blows, made pretence of abjuring the Bābī faith, and was released; he had previously been charged by the Bāb to carry out his last wishes and to deposit some of his personal belongings and writings in a safe place. (He was, however, killed at Tehran shortly after having carried out this mission.) The Bāb was secured with the same ropes as his disciples to a pillar in the courtyard of the barracks at Tabriz, and the Christian regiment of the Bahādūrān, commanded by Sām Khān, fired. The first shot, according to the descriptions even in Muslim sources and others hostile to the reformer, merely severed the ropes, leaving the Bāb completely free. Sām Khān, terrified, refused to re-open fire, and consequently another firing-squad was detailed. On 9 July 1850, about midday, the Bāb paid for preaching his doctrine with his life. The mangled body was thrown into a ditch in the town and after many vicissitudes (disinterred by the Bābīs, hidden for several years at Tehran), it was removed on the order of Bahā' Allāh [g.s.] to 'Akkā, where it now rests in a large mausoleum on the slopes of mount Carmel.

century (*Hudūd al-'Ālam*, 411). The principal source of information about them is an anonymous 11th century *Ta'riḫ al-Bāb*, which is quoted by Ahmad b. Lutf Allāh Munajjidim (Minorsky) *Bāb-i* (17th century) in his *Ḥizmi al-Damāl*. This source also adds considerably to our knowledge of the movements of the *Bāb*, e.g. it mentions that in 423/1032 the *ghāzīs* of al-Bāb caught and destroyed a party of Russian raiders in a defile of the Caucasus (Minorsky, *Studies in Caucasian History*, 77).

The period of Turkish predominance at al-Bāb, in common with the neighbouring provinces, begins in the time of the Saljuqs (cf. A. Zeki Velidi Toğan, *Umsat Türk tarihine* 201, 1, 199, 413). Under the Mongols al-Bāb figures as the starting point of Saratā northwards through the Caucasus (1222). Timur and Djaba (Jebe) campaigned more than once in the neighbourhood. The general effect of the Mongol period was to confirm the Turkification of the N.-W. provinces of what had formerly been the Caliphate.

The most detailed account of Bāb al-Ahwāb comes from al-Kawānī (674/1275), who describes the place as a thriving Muslim town, built of stone, its wall washed by the waters of the Caspian. In length it was about 2½ of a *farṣakh* and in breadth a bow-shot. There were towers on the city-wall, at each of which was a mosque, to serve the neighbourhood and those occupied with the religious sciences. Guards were constantly maintained upon the wall, and a beacon-fire on an adjoining peak was kept in readiness against the danger of invasion from the N. Al-Kawānī mentions what he calls talismanic set sculpture from the pre-Muslim period. He speaks of a cistern outside the city with steps descending to the water. Outside the city also was a mosque, said to contain the sword of Maslama b. 'Abd al-Malik.

Already when al-Kawānī wrote al-Bāb had ceased to be the frontier of an empire. Its history henceforward resembles that of other semi-independent Caucasian principalities, sometimes enjoying independence, at other times annexed to a more powerful neighbour. Having previously belonged to Persia, it became Russian in 1806. Since last century its population has shown a slight increase, but evidently it is of much less relative importance than formerly.

**BĀB-I 'ĀLĪ** (modern orthography *Bāb al-Ālī*), less frequently *Bāb-i 'Ālī*, (the Ottoman) Sublime Porte, former ministerial department of the Grand Vizier, originally called *Paṣṣa* (for *Paṣṣa Kāḥṣa*). The custom of calling the palace, court or government of a ruler "porte" or "doorstep" was very prevalent in ancient times (Iran of the Sāsānids, Egypt of the Pharaohs, Israel, Arabs, Japan). The term returned to Istanbul in the more Turkish form of *'Ālī Kapu* (Chardin).

The "Porte", which at the same time was the

personal dwelling of the Grand Vizier and at the outset tended to be rather modest, gradually lost the character of a semi-private residence and became finally established, under what was henceforth to be its official name, from 1718, when the Grand Vizier Nevşehirli İbrahim Paṣṣa returned with his father-in-law, Sultan Ahmad III, from Adrianople to Istanbul, after the peace of Passarowitz (*Sigidi-i 'Oṭhmanī*, iv, 755). Prior to this time the term *Bāb-i 'Ālī* denoted rather the palace of the Sultan or the Imperial *darbā*. The same confusion arises in Byzantine and European usage with the terms *Porta*, *Porte*, *Porte*, *Porte*, which moreover corresponded to the Turkish *Kapı* (Löwenhaus alias Louclavus and Dulcas, in the 9th/15th and 10th/16th centuries, etc.).

Up till the end of the Empire, the Sublime Porte also housed the Ministry of the Interior (*Dihābiyye Nizāret*), the former offices of the *Kethidā* (*Kahya*, *Kehaya*, *Kihaya*) Bey, the Ministry of Foreign Affairs (*Khāridiyye Nizāret*), the former department of the *Reis al-bāḥā* (*Reis-bāṣa*), literally "Chief of the Secretaries", the Council of State (*Shāryi Dīvān*), without counting two more modern commissions which were suppressed by the Young Turks.

Five days after the abolition of the Sublime Porte (1 November 1922), the premises, prior to becoming the seat of the *wāḳay* of Istanbul, served as the offices of the Delegation of the Government of Ankara (Reis Paṣṣa, soon replaced by Rauf Bey and Adnan Bey Adıvar, all three of whom later belonged to the opposition).

The road formerly called *Bāb-i 'Ālī dīddesi*, which climbs northwards from the station of Sirkeci and circles round the enclosure (which also contains a mosque), has been renamed *Anbara dīddesi* (*cadde*). It is lined with bookshops and runs into the Souk Cehme road, passing between this enclosure and that of the Top Kapı Saray. It is in this latter road that the main entrance is to be found, opposite the gate of the Saray, which is called the Souk Cehme gate; at a short distance from this is to be found a huge belvedere, called *Alay hāḡḡā*, incorporated in the same wall, which was built by Mahmūd II in 1235/1819-20, so that he could be present at official "processions".

**BĀB-I HUMĀYUN**, the "Imperial Gate", the principal entrance in the outer wall of the Sultan's New Serail or *Topkapı Sarayı* [g.s.] at Istanbul. Situated behind the Aya Sofya mosque, the massive rectangular building gives access to the first court of the Serail through a high, double-arched portal. On either side of the passage between the outer and the inner door are the rooms of the *Kapudis* who guarded the gate. In or near the deep niches in the façade the heads of political detainees used to be exposed. Over the doorway is a beautiful Kufic inscription and, below it, an Arabic inscription referring to the erection of the Serail wall by Sultan Mehmed II in Kanādān 883/Nov.-Dec. 1478. The *taghras* of Mahmūd II and 'Abd al-'Āziz on the gate commemorate some of its later restorations. Originally the gateway was surmounted by an upper storey (destroyed in the last century). At one time

the effects of those who died without known heirs were deposited here; at others it served as archives of the Treasury or for other purposes.

Many European writers, especially in the 19th century, ignoring Hammer (*Staatsverfassung*, II, 95) and D'Ossun (*Tahsilat*, vii, 138), asserted that *Bāb-i Humāyūn* meant "Sublime Porte" (the Western name for the Ottoman Government), while in fact the latter denoted the Grand Vizier's residence [see *BĀB-I 'ĀLĪ*]. There is even no reason to assume that the term "Porte", which until the 18th century signified the Sultan's Court, originated from this gate, as some travellers (e.g., Tournet, *Voyage du Levant*, Paris 1717, I, 496) believed (cf. DEGEN, *KAPU*).

**BĀB AL-LĀN** (BĀB ALLĀN), 'Gate of the Alans', Persian Darī Aḡar, mod. Darīd (Darūd), a pass in the middle Caucasus, E. of Mt. Karabek and S. of Vladikavkas. It is described as a magnificent gorge through which the Terek rushes between granite cliffs rising to heights of from 4,000 to 5,000 ft., and was apparently known to the ancients as the Caucasian Gates (cf. Pausanias, *XXII*, I, col. 323). It was in the territory of the Alans, in the early days of Islam and later a national group of handy mountaineers, distinct from and usually independent of their neighbours N. and S. of the Caucasus. Their present-day representatives, the Ossetes, live athwart the pass.

Bāb al-Lān was scarcely reached by the first wave of Muslim conquest. It is mentioned in 105/724, when al-Djarrāb b. 'Abd al-Bāb al-Ḥamīd invaded Khazaria by this route. Next year al-Djarrāb is said to have received the *dīyasa* and *khazāra* from the Alans (*Djāhābī, Ta'riḫ al-Islām*, ed. Cairo, iv, 88), but Maslama b. 'Abd al-Malik in 109/727 had to occupy Darīd (Ya'qūt, II, 395). It was perhaps at this time that Maslama placed an Arab garrison, mentioned by al-Mas'ūdī (*Murūdī*, II, 44), in the fortress which dominated the pass. This fortress was built on a massive rock overlooking a bridge across the ravine and was, says al-Mas'ūdī, one of the most famous in the world. Yet in 112/730 the Khazars marched through the pass, defeated al-Djarrāb in a pitched battle and captured Ardābil, before retiring with their booty (Tabarī, II, 1539-1541). In the operation of 112/730 Maslama fought against Khazaria in 119/737, he himself advanced through the Darīd pass to a rendez-vous with Abū Yazīd al-Sulamī advancing from Bāb al-Ahwāb. This was the beginning of a highly successful campaign north of the Caucasus, but Marwān did not attempt any permanent occupation. The Arabs made sporadic attempts to hold Darīd, e.g., again under Yazīd b. Ismā'īl al-Sulamī circa 117/738 (Balādhurī, 209-210). But no great fortress-city developed here as at Bāb al-Ahwāb [g.s.]. Al-Mas'ūdī states that in his time (4th/10th century) there was still in the pass an Arab garrison, provisioned from Tiflis, at five days' distance through infidel country (*ibid.*). The

Darīd pass is mentioned repeatedly in the Mongol period, and later retained its importance.

**Bibliography:** Mas'ūdī, *Murūdī*, II, 43-45; *Hudūd al-'Ālam*, 446; D. M. Dunlop, *History of the Jewish Khazars*, Princeton 1954, index. (D. M. DUNLOP)

**BĀB AL-MANDĀB**, the straits between the Red Sea and the Gulf of Aden. They are divided by the volcanic island of Mayyūn [g.s.], called Perim by Westerners, into Large Strait, c. 14 km. wide, and Small Strait, c. 2.5 km. wide, the former being generally used by large vessels. Water runs out of the Red Sea during the south-west monsoon from June to September and into it during the north-east monsoon from November to April, causing currents which make the passage dangerous for sailing craft. The hill of al-Manḥāl (270 m.) on the Arabian shore rises east of Small Strait, and just north of this strait is the site of al-Shayḡh Sa'īd [g.s.], from which, as from Mayyūn, entrance into the Red Sea can be controlled.

Arab tradition holds that Asia and Africa were joined together until Iḥn I-Karnayā split them asunder here and created the Red Sea. Yāqūt associates the origin of the name al-Mandāb ("place of lamentation for the dead") with a crossing of the Abyssinians over the sea to the Yaman, and al-Ḥamīdī applies it to a not clearly identified portion of the southern Yaman coast, which lay within the territory of Banī Maḡdīl and Farāḡin. Ambar (called *hāḡḡā* al-habir) used to be collected in al-Mandāb.

Two Sabaeen inscriptions of the early 6th Christian century (Ry 507 and 508) mention *sāḡ* (or *sāḡ*) *mdān* (= *sāḡ* al-Mandāb) in connexion with the conflict between Yūsuf As'ar [ḡh] Nuwās and the Abyssinians; this may have been a chain stretched across the very narrow and shallow mouth of the inlet at al-Shayḡh Sa'īd, if al-Mandāb lay as far south as that, as its appearance in the name of the straits would suggest. Such a barrier may well have been the source of the implausible tradition of a chain across the straits themselves.

The variant Bāb al-Mandām, probably to be explained by no more than the not unusual substitution of *m* for *b*, is especially current among seafaring Arabs, who often refer to the straits simply as al-Bāb.

**BĀB-I MASHIKHAT**, (also SHAYKH AL-ISLĀM KAPU, BĀB-I FETWĀ and FETWĀKĀRĀNE), a name which became common in the Ottoman Empire during the 19th century for the office or department of the Shaykh al-Islām [g.s.], the Chief Mufti of Istanbul. Until 1241/1826, the Chief Mufti had functioned and issued their rulings from their own residences or, if these were too distant, from rented quarters. In that year, after the destruction of the Janissaries, Sultan Mahmūd II gave the former

residence of the Ağha of the Janissaries, near the Süleymaniye Mosque, to the Chief Mufti, who thus acquired a permanent establishment. This step, taken simultaneously with the creation of an Inspectorate of *uşak* to centralise the supervision and control of *uşak* revenues, prepared the way for the bureaucratisation of the *‘ulama*, depriving of both their financial and their administrative autonomy. The *‘ulama* were gravely weakened as against the sovereign power, and were unable to resist effectively successive diminutions of their competence, authority, and status. In the course of the 19th century, they lost control of education and justice to the new Councils and Ministries created for these matters, and even the drafting of *ahkâm* was entrusted to a committee of legal specialists in the Chief Mufti's office. The Chief Mufti himself became a government office-holder, a minister or head of department and a member of the cabinet. Eventually a point was reached when his term of office ended automatically with the fall of the cabinet. Unlike the other ministers, he was appointed by the Sultan and not by the Grand Vizier, with whom he was theoretically equal (cf. Art. 27 of the 1876 constitution). The office however declined steadily in influence and importance, especially after the Revolution of 1908. Finally, on 3rd March 1924, the day the Caliphate was ended, the office of Şeyhül-İslâm, which had lapsed with the Sultanate in 1922, was replaced by a department of religious affairs attached to the office of the Prime Minister in Ankara. The head of this department (*Davlat İleri Rüşdi*) is the chief religious functionary of the Turkish Republic, with responsibility for mosques and mosque personnel, but not for *uşak*, law, or education.

**BÂBÂ SER'ÂSKERİ** or Ser'ÂSKER KÂPÎD, the name of the War Department in the Ottoman Empire during the 19th century. After the destruction of the Janissaries in 1241/1526, the Ağha of the Janissaries was replaced by a new commanding officer, the Ser'Âskeri (q.v.). The title was an old one given to army commanders in former times. As applied by Mahmûd II, it came to connote an officer who combined the functions of commander-in-chief and minister of war, with special responsibility for the new style army. In addition, he inherited from the Ağha of the Janissaries the responsibility for public security, police, fire-fighting, etc. in the capital. In a period of growing centralisation and enforced change, the police function came to be of increasing importance and the maintenance and extension of the police system one of the chief duties of the Ser'Âskeri. In 1262/1845 the police were taken from the jurisdiction of the Ser'Âskeri and placed under a separate department called *Zâbirîye* (see MATHNÎYA, MASHIKHAT).

Mahmûd II at first lodged the Ser'Âskeri at the old Saray, from which a few remaining parts of the Imperial Household were transferred to the new Saray. Later, in 1284/1865, new buildings were provided for the Ser'Âskeri and his staff. For a short time in 1297/1879-90, and then permanently in 1321/1908, the old Saray of Ser'Âskeri was replaced by Ministry of War (*Harbîyye*). These buildings

remained the seat of the Ministry until the time of the transfer of the capital to Ankara, when they were handed over to the University of Istanbul. **Bibliography:** Mehmed Es'ad, *Usû-i Zâfer*, Istanbul 1243, 192 ff. Serasker. (B. LEWIS)

**BABA**, (Turkish and also Persian) "father"; in East Turkish it also denotes "grandfather" (Vambéry, *Çagat. Sprachstudien*, 240; Süleyman Elendi, *Lughat-i dîvânîyya*, 66). Baba, put after the name, is used in various ways as an honorific for older men, and in Turkey it is used as a form of address even today. As part of a name, it is best known from the story of "Ali Baba and the 40 thieves" in *The Thousand and One Nights*. As a cognomen, it was used particularly in Dervish circles (e.g. Geyikî Baba, who is said to have accompanied Orîşân Beg in the siege of Bursa), and there particularly with the Bektaşî. Akhî Bâbâ (q.v.), in corrupt form also Akhî Baba and similar forms) was the title of Akhî Ervîn's (q.v.) successor in his Tekke in Kırsehir (Anatolia) and master of the leather guilds (tanners, saddlers, and shoemakers), in which he held the privilege of inducting apprentices into the guild. There was a movement of dervishes who called themselves Bâbâ's (q.v.) after the Kûm Salâğık Sultân Kaykhusraw II. The epithet Baba also occurs with non-religious civil servants in the ancient Ottoman Empire, e.g. Ağha Bâbâel (Barbier de Meynard, *Supplément*, i, 257), the leader of the 40 guardians (*hâfîdî*) of the imperial harem, who were white eunuchs. In Iran the epithet Baba precedes the name, again frequently in the case of dervishes (e.g. the dialect poet Bâbâ Tâhir 'Gryin [see BÂBÂ-TÂHİR]). Occasionally, Bâbâ appears in its own right, e.g. a member of the Bîst family Gîrîy on the Crimea, Bâbî Gîrîy, son of Muhammed Gîrîy, who, after the death of his father, succeeded him as Kalgha, but was murdered six months later (929/1522); as also the Özbek prince Bâbâ Beg (q.v.).

As part of a place name, Bâbâ indicates that the place had dervish associations. Thus, for example, Bâbâ Daghlî (see BÂBÂ-DAGHLÎ) in the Debendû, where the tomb of the famous saint Saif Salîk Baba is; there is another Bâbâ Daghlî near Denizli in Anatolia, and foothills called Bâbâ Burnu (formerly Asos) in western Anatolia, a part of mount Ida in Thrac, at the foot of which lies the harbour Baba Liman. In eastern Thrace there is a small town called Bâbâsâhî (q.v.).

**BÂBÂ AFDAL** AL-DÎN MUHAMMAD B. HUSAYN KÂSĀNĪ (or KâşĀnî), generally called Bâbâ Afdal, a Persian thinker and the author of poems in quatrain, born in Mîrak near Kîshûr, where he is also buried. His dates are still rather uncertain. According to Sa'îd Naffî he was born around 582/1186-7, or 592/1193-6, and died after 654/1256 or 664/1265-6; the date given as the date of his death by Brockelmann, II, 280, viz. Rajab 666/March-April 1268, is near to this. According to M. Minovi, Bâbâ Afdal died considerably earlier, at the beginning of the 7th/13th century; the date of death given by

E. G. Browne and others, 702/1307-8, is certainly incorrect. There is scant information on his life, and that of little importance. Thus, for example, the relationship between Bâbâ Afdal and Nasir al-Din Tûst (q.v.), which has been accepted by some, proves on closer examination to have been impossible. Admittedly Nasir al-Din Tûst had a teacher named Kamâl al-Din Muhammad Hâshî, who had been a pupil of Bâbâ Afdal and the two quatrains in praise of "Afdal" ascribed to Nasir al-Din Tûst, one is not definitely his whilst the other is in self-praise. The assertion that Nasir al-Din had protected Khâshân from Hâshî to please Bâbâ Afdal is a fiction. It is hardly possible that there was ever a meeting between Bâbâ Afdal and Sa'îdî. Bâbâ Afdal's thought was influenced by the Bâṭiniyya and Avicenna, whom he resembles also in his attempts to substitute Persian technical terms for Arabic ones. His writings comprise 16 treatises, a posthumous book of questions and answers, some 40 short essays, 6 letters, a collection of quatrains, some *ghazals*, and *hiṣṣ*. These figures, especially where the short essays and letters are concerned, must not be regarded as final, because—though most of his treatises had already been printed individually before—scientific and systematic research into his works has only recently commenced. He wrote chiefly in Persian, though occasionally also in Arabic (cf. primarily the *Madrûdî al-Kamâl*, which he later translated into Persian by request). His prose works are concerned with philosophy, theology, ethics, and logic; they are partly original, partly editions or translations, and are distinguished by their simple, clear and readily intelligible style, which follows that of the ancients closely. M. Bâhâr regards his translation of the *Kûsh al-Nâṣ* of Aristotle as exemplary. Bâbâ Afdal's logic *al-Minhâj al-Mabîn* is based on *al-'Ilm wa 'l-Nuṣṣ* of Aristotle though it is not identical with its model, but has independent developments of its own. Bâbâ Afdal's *Caḥr 'Uṣṣûn* gives a selection from *ghazal*'s *Kimây-i Sa'âdat*, which consists partly of selected pieces from the Persian text of *ghazal*, partly of translations of the Arabic parts of the book, which *ghazal* had not included in the Persian version. Bâbâ Afdal's quatrains are extremely attractive, and their occasionally shrill note has already been remarked on by E. H. Whinfield. It is no wonder that several of them have achieved currency as works attributed to 'Umar Khayyâm.

**Bibliography:** Muhammad Takî Dâhî, *puṣṭh* lists all of Bâbâ Afdal's prose works so far identified, their manuscripts, all printed and lithographed editions, translations, etc. in his essay *Nuṣṣ-i-kāsh-i Bâbâ Afdal*, in *Mîr* 1331 AH solar, vii, 433-6, 499-502. For special mention here: Muṣṣavvāt-i I. *Madrûdî al-Kamâl* (see above), *Kāsh-i-jam'î-nâmâ*, 581; *Uṣṣûn-i Shâhî*, *Far-nâmâ*, *Risâla-i Ta'vîhî*, *Arṣ-i-nâmâ*, *Ḍiḥ-i-nâmâ*, *Yanbâ' al-Hayvî* (translated by Bâbâ Afdal), ed. Muḥṭabâ Minovî and Yahyâ Mahdawi, Tehran 1331 AH solar (Publications of the University, no. 138, vol. II, including a biography and assessment, indices and vocabulary in preparation). *The Book of the Apple* (*Kûsh al-Ta'vîhî*, *Sh-nâmâ*), ascribed to Aristotle, edited in Persian and English by D. S. Margolouth, in *JRAS* 1892, 187-225 (no attempt being made to identify the Persian translator of this dialogue); *Tarjuma-i Kusvî-ghindî yâ Risâla-i Naf-i Arîstû*, ed. M. Bâhâr *Malik al-Shu'arî*, Tehran 1316 AH solar (Bâbâ Afdal's Persian translation is based on the Arabic

recension by either Abû Zayd Hunayn b. Ishâk 'Ibâdî [who died in 264/877-8] or by his son Ishâk [who died in 298/910-11]; *Rubâ'iyyat-i Bâbâ Afdal-i Kâshânî* (483 items); Tehran 1331 AH solar, with critical biography and survey of the whole work by Sa'îd Naffî (also with a French title on the cover). There is a selection of quatrains with a sensitive prose translation in *Hudayy-Asad, La Roseira du Savoir, Chén de Quatrains mystiques*, Leiden 1908. Concerning Bâbâ Afdal: H. Ethé, *Neupersische Literatur*, Gr. I, Ph., ii, 377; Browne, ii, 110; Brockelmann, S II, 280; J. E. Berzel's, *Avicenna i persiska litteratur*, in *Acta Soc. AN SSSR. **BÂBÂ IŞHÂK** [see BÂBÂ'Î]

**BÂBÂ-TÂHIR**, a mystic and poet who wrote in a Persian dialect. According to Rûdâ Kullî Khân (10th century), who does not give his source, Bâbâ-Tâhir lived in the period of Daylam rule and died in 401/1010. Among his quatrains there is an enigmatical one: "I am that sea (*baḥr*) which entered into a vase; that point which entered into the letter. In each *alif* ("thousand", i.e. of years?) arises an *alif-badd* (a man upright in stature like the letter *alif*). I am the *alif-badd* who has come in this *alif*". Mâbîd Khân in the *JASB* has given an extremely curious interpretation of this quatrain: the letters *alif-bd* have the value 215, the same as the letters of the word *ard* (Persian equivalent of the Arabic *kuhr* "sea") and those of the name of the poet *Tâhir*. If we add *alif-bd* (215) to *alif* (111) we get 326 (the same value by the way as the Persian word *kuhr*, "thousand"), if we spell it *bd*, *22*, *alif*, *rd*. In this way the phrase "an *alif-badd* came into the *alif*" would give the date (326) of the birth of Bâbâ-Tâhir who may well have lived till 401.

In spite of the ingenuity of this explanation, it is nevertheless true that the only historical evidence that we possess about Bâbâ-Tâhir is that of the *Kûsh al-Sadîr* (c. 601/1202; GMS, 98-99), the author of which "bad heard" that when the Salâğık Sultân Tughrîl entered Hamadân (in 447/1055), Bâbâ-Tâhir addressed an admonition to him ("O Turk, how are you going to act towards the Muslims?") which much impressed the conqueror. The anecdote suggests for the death of Bâbâ-Tâhir a date later than 447/1055 but it is no way contradictory to the statement that Bâbâ-Tâhir flourished under the Daylams, i.e. under the Buwayhids and their relatives, the Kâkuyids, whose rule in Hamadân lasted till the expedition of Durrâhm Yûzîd in 435/1043-4. Bâbâ-Tâhir may well have been the contemporary of Avicenna (Ibn Sînâ) who died at Hamadân in 428/1037, but the legends which make him a witness of

the execution of the mystic 'Ayn al-Kudāt of Hamadān in 533 and the contemporary of Naṣir al-Dīn Tūsī (d. 672) are pure inventions.

The sources sometimes call Bābā-Tāhir Hamadānī (cf. the Arabic MS. 1903 of the Bibl. Nat. Paris, the *Sarandīb*, etc.), sometimes Lurī (Lūrī). This latter form—in place of Lur [23]—is somewhat puzzling: does it mean some other connexion than that of origin between Bābā-Tāhir and Luristān? It is certainly well to remember that in the 5th/11th century there were very close links between Hamadān and Luristān and the poet may have spent his life between the two places. In Khurram-ābād there is a quarter bearing the name of Bābā-Tāhir (cf. Edmunds, *Geogr. Jour.*, June 1922, 443). The association of Bābā-Tāhir with Luristān in the beliefs of the Ahl-i Haḳk (see below) is also significant. In the quatrains of Bābā-Tāhir (cf. nos. 102, 206, 274 of the *Diwān*), Mount Alwand [q.v.] overshadowing Hamadān is frequently mentioned. The tomb of Bābā-Tāhir lies on a little hill to the north-west of the town in the Bum-i bāzār quarter; beside the tomb of Bābā-Tāhir those of his sons Naḳhl Fāṭima (see below) and Mirzā 'Alī Naḳhl Kawḡarī (19th century); the building is a humble one and of no interest. The tomb is mentioned in Hamīd Allāh Mustawfī, *Nuṣṣa* (740/1340), 75; cf. the photograph in Minorsky, *Matériaux*, Moscow 1911, 31, and Williams Jackson, *A visit to the Tomb of Bābā Tāhir at Hamadān, in A Volume presented to E. G. Browne*, Cambridge 1922, 257-260.

The stories one hears in Māzandarān about Bābā-Tāhir's connexion with that province have no foundation and may have been brought by immigrants from Luristān (the Lāk). Besides, all the nomads of Persia like to claim Bābā-Tāhir as a compatriot.

The language of Bābā-Tāhir. Since all the facts and traditions connect the poet with Hamadān and Luristān, it is reasonable to expect to find in his dialect traces of a dialect of this region of Persia. But as this dialect was very close to Persian and as so many different mouths have been trying to render more comprehensible the verses transmitted orally, there is little hope of re-establishing the text in its dialectic purity. It is not an improbable suggestion that Bābā-Tāhir simply wanted to imitate the dialects of his disciples. In our own day a Kurd Christian claims to have made verses in the Gūrān dialect, quite distinct from his own, in order to "transmit the message" to the Ahl-i Haḳk (Dr. Sa'īd Khān, in *MW*, Jan. 1927, 40).

The country between Hamadān and Khurram-ābād still has many dialects, but that of Bābā-Tāhir is not connected with any definite one and seems to borrow from all. The closeness of the present text of Bābā-Tāhir to literary Persian is undeniable; on the other hand changes like *nām > nām* "name", *dastām > dastām* ("my hand"), *raftām > raftām* ("I have gone"), *dūr > dūr* (cf. Huart, xiv = *Diwān*, no. 82) are typical of the Lur dialects; the stems *ragīl* "to speak", *kar* "to do" are common to the Kurdish and central dialects; the forms *ni-kar-i* "the deed" and *di-yā* "the country" are particularly common in the Gūrān spoken much farther to the west. For certain peculiarities (*dāram > \*dāram*) we only find analogies at Kāzrūn (near Shīrāz).

Hādānk's detailed analysis has plainly proved this mixture of dialects (*Dialektgemisch*) in the quatrains, at least as we know them now. The term "Muḥammadan Pahlavī" proposed by Huart

(1885) for the language of Bābā-Tāhir has not been accepted by scholars.

The metre of the quatrains of Bābā-Tāhir and of his *ghazals* is almost exclusively *hasadī musaddad makhḍūf* | — — — | — — — | — — — which has made the new editor call the quatrains *du-baytī* (distichs) instead of *qatr* (verses) and the last element associated with the metre *hasadī makhḍūf makhḍūr* — — — | — — — | — — — | — — —. The authenticity of some regular *rubā'ī* attributed to Bābā-Tāhir seems doubtful. The metre of Bābā-Tāhir is also found in popular songs (Mirzā Dī'a'far [Korisch], *Gramm. Pers. Yazika*, Moscow 1901, 308).

Bābā-Tāhir—poet. Down to 1927, all that was known of his poems was a rather small number found for the most part in anthologies of the 18th and 19th centuries. Huart's researches produced in 1885, 59 quatrains, and in 1908, found 3 new quatrains (they are moreover very doubtful); Leszczynski (who used the Berlin manuscripts) has translated 80 quatrains and one *ghazal* (a different one from Huart's). Finally Rūṣayn Waḥīd Dasṭgirdī Isfahānī, editor of the Persian version *Armagān*, published in 1906/1927 at Tīhrān a *Diwān* of Bābā-Tāhir containing 296 *du-baytī* and 4 *ghazals* of this poet; as an appendix the editor gives 62 *du-baytī* found in the "different collections" and the 3 *rubā'ī* added by Heron Allen. The quatrains of the *Diwān* are arranged in the alphabetical order of the rhymes. The editor unfortunately gives no details of the manuscript of the *Diwān* reproduced in his edition. The new quatrains several of which mention Tāhir's name, the mountains of Alwand and Maymānd (?) etc., confirm the characteristics already known of Bābā-Tāhir, while making them a little more banal by the inevitable repetitions. The dialectical flavour of most of the quatrains is in favour of their authenticity, although an imitation of the peculiarities of the language of Bābā-Tāhir would really not be a very difficult matter. The question of the authenticity of the quatrains of Bābā-Tāhir certainly arises, as it did in the case of those of 'Umar Khayyām. Żukowski says that quatrains of Bābā-Tāhir are found in the *Diwān* of Mullā Muḥammad Sūfī Māzandarānī (5th/17th cent.). A certain Shīrī Beg Muḥammad, a modern poet of Hamadān, claimed to be the author of several ('Kurdī Pahlavī') quatrains attributed to Bābā-Tāhir (cf. *Diwān*, 21).

The choice of subjects in Bābā-Tāhir is very restricted, but the poet's work bears the stamp of a distinct personality. We give an analysis of the 59 quatrains published by Huart to enable the reader to judge. As usual it is difficult to draw a rigid distinction between the expression of mystical and that of profane love; 34 quatrains are almost equally divided between two categories of lyric poetry. Two quatrains are simple hymns to God. The rest is more individual and characteristic. Bābā-Tāhir often refers to his life as a wandering *dār-i gh-bāndar*, without a roof above his head, sleeping with a stone for a pillow, continually harassed by spiritual anxieties (nos. 7, 21, 28). Care and anxiety are the cause of the "flower of grief" alone flourishes in his heart; even the charms of spring leave him still unhappy (34, 35, 47, 54). Bābā-Tāhir professes the philosophy of the true Sūfī, confesses his sins, implores pardon for them, preaches humility, invokes *airāna* (*fanā*) as the only remedy for his misfortunes (7, 13, 45, 50, 58). One human failing is especially

characteristic of Bābā-Tāhir: his eyes and his heart do not readily detach themselves from the things of this world; his rebellious heart burns within him, leaves him no rest for a moment and the poet cries in anguish: 'Art thou a lion, a panther, O my heart, thou who art continually struggling with me. If thouallest into my hands, I shall spill thy blood to see what colour thou art, O my heart' (3, 8, 9, 26, 36, 42).

Bābā-Tāhir's psychology shows striking contrast to that of 'Umar Khayyām. Bābā-Tāhir shows no trace of the hedonism of the latter (d. 517/1123?) nor of his serenity in face of the changes brought by death, while 'Umar Khayyām lacks the mystic fire of Bābā-Tāhir (cf. Christensen, *Critical Studies in the Kāshīyāt of 'Umar al-Khayyām*, Copenhagen 1917, 44).

What pleases in Bābā-Tāhir is the freshness of his sentiments which Sāfi routine had not yet stereotyped; the spontaneity of his images, the naïveté of his language, with the local tang.

Bābā-Tāhir—mystic. The Persian derives with whom Żukowski talked about Bābā-Tāhir knew that he was the author of 22 metaphysical treatises (cf. also Rīdā Kulī Khān) but it is only from Etché and Blochet that we have learned in Europe of the existence in Oxford and Paris of commentaries on the maxims of Bābā-Tāhir. The complete treatise [al-Kāmilū] [al-Bīr] ("The brief sayings") has now been published in the edition of the *Armagān*. This treatise consists of 368 Arabic maxims divided into 23 *bāb* dealing with the following subjects: knowledge (*ilm*); gnosis (*ma'rifat*); inspiration and penetration (*ilhām*, *firāḍ*); reason and the soul (*nafs*, *nafis*); this world and the beyond (*dunyā*); the musical performance (*awāz*) and the *ghīr*; sincerity and spiritual retreat (*ihkām*, *ṭibāḥ*), etc.

Here are a few specimens of these maxims: no. 86: "Real knowledge is the intuition after the knowledge of certainty has been acquired" [al-bābātū 'l-muḥḥadātū ba'da 'l-ilm 'l-yakīnī]; no. 96: "Ecstasy [wajd] is the loss of the knowledge of existing things and is the existence of lost things"; no. 368: "he who has been the witness of predestination (coming) from God remains without movement and without volition"; no. 300: "he whom ignorance has slain has never lived, he whom the *ghīr* has killed will never die".

The "Brief Sayings" seem to have enjoyed considerable popularity among the Sāfīs. The Persian editor mentions the following commentaries on this treatise: the Arabic commentary attributed to 'Ayn al-Kudāt al-Hamadānī (d. in 533/1138-9 but often associated in legends with Bābā-Tāhir); another Arabic commentary by an unknown author; the Arabic and Persian commentaries by Mullā Sulṭān 'Alī Gūrānī; the Persian commentary was printed in 1325/1906 but is very rare. The editor of the *Armagān* expresses the hope of being one day able to publish the "Brief Sayings" accompanied by one of the commentaries.

The Arabic manuscript 1903 of the Bibl. Nat. contains the first 8 chapters of the maxims of Bābā-Tāhir in an abridged form (fol. 100b-103b), as well as a commentary on them (fol. 74a-100a) entitled *al-Fuḥḍā al-Kabbāniyya fi l-ḡhār al-Hamadāniyya*.

The manuscript seems to be in the hand of the author of the commentary, Dīān Beg al-'Aṣṭāf, who began his work in Shawwāl 889 and ended it on 20th Shā'ban 890/1 September 1485. The

commentary was written at the request of a certain Shaykh Abu 'l-Bakā who had possessed the *Iḡhrāt* of Bābā-Tāhir since 833/1449-50. He had let them fall into the well of Zamzam at Mecca but the manuscript was miraculously recovered. The '*ṣalām*' had dissuaded Abu 'l-Bakā from writing a commentary on the text on account of its profundity and obscurity. Finally Abu 'l-Bakā engaged Dīān Beg to accomplish this task. The commentary deals with the text of the maxims of Bābā-Tāhir word by word.

Bābā-Tāhir—saint. As is the case with the majority of the mystical poets ('Attār, Dīlāl al-Dīn Rūmī, Hāfir), there are numerous legends of the life and miracles of Bābā-Tāhir. It is related that when Bābā-Tāhir had asked the students of the *madrasa* of Hamadān to show him the way to acquire knowledge, the students as a joke told him to spend a winter night in the icy water of a tank. Bābā-Tāhir carried out the advice and next morning found himself enlightened and exclaimed: *Amayra Kardiyān wa-ashabla 'arabiyyan* ("last night I was a Kurd and this morning I have become an Arab"). This story was heard by Żukowski in Tehran and by Heron Allen's informant at Bāghir; it is widely current in Hamadān (cf. the preface to the *Diwān*, 17 and the manuscripts from Hamadān). This Arabic utterance is found in the preface to the *Majma'at* of Dīlāl al-Dīn Rūmī, where however it is referred to an unknown (mystic?) ancestor of Ibn Aḥlī, a Turk of Urmia. In the *Nafahāt al-Uns* of Dīlāl, ed. Nassau Lees, 362-363, the phrase is attributed to Abū 'Abd Allāh Ḥabībūl (a Gūrānī tribe, see Ibn Aḥlī, ix, 247).

Other pious legends represent Bābā-Tāhir as making the snow on Mount Alwand melt by the ardour of his spiritual fire, tracing with the point of his great toe the solution of an astronomical problem which had been put him, etc. (Żukowski, Heron Allen, Leszczynski, preface to the *Diwān*, manuscripts from Hamadān).

Göblenau, *Trois ans en Asie*, Paris 1829, 344, already knew that the adepts of the Ahl-i Haḳk sect were in the habit of "praising exceedingly and giving pride of place to the names of famous Sūfīs, notably of Bābā-Tāhir whose poems in the Lur dialect are highly esteemed, and of his sister Bībī Fāṭima" etc. The discovery of the religious work *Sarandīb* has enabled us to locate Bābā-Tāhir in the theogony of the sect. The Ahl-i Haḳk (q.v.) believed in 7 manifestations of the divinity, each of which was accompanied by a refine of 4 angels, each of whom had special duties. Bābā-Tāhir is regarded as one of the angels of the third period and the incarnation of Arzā'ī and Nuṣayr. The mystic stage to which the period of Bābā Khōshlīn normally corresponds is the *ma'rifat*. The events of this cycle take place in Luristān and Hamadān. The manuscript of the *Sarandīb* mentions the visit of the "King of the World" to Bābā-Tāhir in Hamadān. Bābā Khōshlīn is meant by the "King of the World" but the legend seems to be inspired by memories of the episode of Tuḡhrīl (see above). Bābā-Tāhir and Fāṭima Lāra ("the thin") of the tribe of Bīra Shīrī (in the Gūrān country?), who was in his service, led the whole army of the King with a *ṣār-yāq* of rice. The latter tempts Bābā-Tāhir with all the treasures of the world but he only desires the "beauty of the King". Fāṭima wants to follow the King of the World; she lays her head on his knees and gives up the ghost. The King consoles Bābā-Tāhir for his loss

and promises that on the day of the Last Judgement he will reunite him to Fātima so that they shall be like Laylā and Maḡnūn. 73 poetical fragments (mutilated but in the style of Bābā-Tāhir) are scattered through the text (cf. *Minorsky*, 29-33, 99-103; these texts have been utilized by *Leszczyński*, *op. cit.*, 18-25). Fātima Lārā, who is mentioned in the text is buried beside Bābā-Tāhir. According to the custodians of the tomb of Bābā-Tāhir, she is not to be confused with another Fātima also buried in the same *baḡ'a* (?) Gobiueau and A. V. W. Jackson mention the sister of Bābā-Tāhir, Bībī Fātima or Fātima Laylā. *ʿAzādī* Hamadīnī (*Dīwān*, 16-21) speaks of the tomb of the *diya* "nurse" of Bābā-Tāhir; everyone seems to endeavour to translate into the language of everyday life the mystic relations of Bābā-Tāhir to Fātima.

The quatrain already quoted at the beginning of this article (*lāl, alif-badd*) may reflect some high aspiration of Bābā-Tāhir.

**Bibliography:** The MSS. containing the quatrains of Bābā-Tāhir are as follows: Konya Museum no. 2547 (1848); 2547 K. *Ḳifā*, 8, 8-*baḡ'a* 96; see M. Minorsky, *Madḡalā-yi Dīnāzādā-yi Adabiyāt*, Tehrān, 1922, 1325, 54-9; *ʿAsiā*, Soc. Bengal, Pers. no. 923, Catal. Ivanov, 424 (in *madḡalā*'s of 1900 [1902]; Preuss. Staatsbibl., Catal. Pertsch, 727, no. 697 (written in 1820 and used by *Leszczyński*); 56 quatrains; Bibl. Nat. de Paris, pers. 174, Cat. Blochet, II, 290-292 (collection made by Bahāghī 'Alī Karābāghī, dated 1260 (1844)); 174 quatrains and a *ghazal*. In the library of the mosque of Sīpāshālār in Tehrān, Żukowski found a manuscript, *Ḥikāyat Bābā-Tāhir bi-inḡimā-i aḡḡarāḡ*, but the title does not correspond to the contents of the MS. The MSS. of the mystical treatises of Bābā-Tāhir are as follows: Bibl. Nat. de Paris, Arab 1903 (Blochet, *op. cit.*, II, 291) and the Oxford MS. Etch. *Cat. Pers. MSS. Indian Lib.*, no. 1295, 6d, 102b-103. The anthologies which mention the poet are: 'Alī Kulī Khān Wālī, *Riyāḍ al-Ḥayr*, 1161/1748, ed. *Leszczyński*, 10; Latif 'Alī *baḡ*, *Maḡḡalā*, 1102/1779, Bombay 1277, 247 (25 quatrains); 'Alī Ḥabībīn Khān, *Ṣubḡat Dīrāḡim*, 1205/1791, unique MS. in the Preuss. Staatsbibl., Pertsch, 627, no. 665 (utilised by Żukowski and *Leszczyński*); Rūḡā Kulī Khān, *Madḡalā al-Fuṣṣal*, Tehrān 1295, I, 126 (10 quatrains); *Ḥikāyat al-Ḥayr*, Tehrān 1303, 102 (24 quatrains); 37 quatrains of Bābā-Tāhir were published at Bombay in 1297 and 1308 (with those of 'Umar Khayyām); 32 quatrains (with the *Munāddiyāt* of Anvār) at Bombay 1301; 27 quatrains (with those of Khayyām) at Tehrān 1294; the *ghazal* of Bābā-Tāhir is given in the appendix to the *Dīwān* of Shams al-Maḡribī, Tehrān 1298, 138, in the appendix to the *Munāddiyāt* of Anvār etc. The *Dīwān* of Bābā-Tāhir (cf. text) with the *Kalimat-i ḥayr*, a preface by the editor, a biography by Maḡmūd Ḥafīfā, a description of the tomb of Bābā-Tāhir by ʿAzādī Hamadīnī, etc. were published as a supplement to the 8th year of the magazine *Armāghān*, Tehrān 1306/1927, 1-124.—Huart, *Les quatrains de Bābā-Tāhir*, *Revue de l'Asie Mineure*, 1904, I, series viii, vol. vi, 124-125, 502-543; Żukowski, *Koye do o B. Tāhir* *Gulshā*, Zāp., 1900, xiii, 104-108 (bibliography, 3 anecdotes, 2 new quatrains one of which = no. 146 of the *Dīwān*), cf. also *Zāp.*, II, 12; E. Heron Allen, *The Lament of Bābā-Tāhir*, London 1902 (text of 62 quatrains, transl. by

the editor and verse by Elisabeth Curtis Brenton); Browne, I, 83-87, II, 259-261; Mirzā Mahdī Khān (Kawkah), *The quatrains of Bābā-Tāhir*, in *JASB*, 1904, no. 1, 1-29 (new edition of the quatrains of Heron Allen [+1 quatrain] with important corrections and a very interesting commentary); Huart, *Nouveaux quatrains de Bābā-Tāhir*, in *Spiced Memorial Volume*, ed. J. J. Modi, Bombay 1908, 290-302 (28 quatrains and 1 *ghazal*) completing the collection of 1883 recently discovered: in an extract from the *Kaḡhāḡ al-Faḡhāḡ* of which the original is in the Muḡammadiyya mosque (Fāṭh) of Constantinople, in the *Dīwān* of Maḡribī and in an album (*ḡunḡ*). This second collection of quatrains published by Huart contains sundry pieces, the translation of which is not certain; *Minorsky*, *Material* ("Matériaux pour servir à l'étude des croyances de la secte persane dite les Ahl-i Haḡq ou 'Alī-Ilāhī"), vol. xxxiii, of the *Tradit Larvae*, Institut, Moscow 1911, 29-33 (transl. of the passages from the *Sarāḡdīn*), 99-103 (Persian text of the intercalated poems and notes); G. Leszczyński, *Die Ruḡāyāt des Bābā-Tāhir*, *Urgeschichte der Golestines des Herzens*, aus d. *zeit-medischen* [sic] *Originalen*, Munich 1920 (biographical and bibliographical, verse transl.); K. Hadani, *Die Mundarten v. Khunur*, etc., in *Kurd.-pers. Forsch.*, v, O. Mann, series iii, vol. 1, Leipzig 1926, introduction, xxxvii-iv (complete study of the question of the language of Bābā-Tāhir, bibliography); A. J. Arberry, *Poems of a Persian Sāfī*, being the quatrains of Bābā-Tāhir, Cambridge 1937, (60 *do* *baḡ* transl. into excellent five-lined stanzas in the style of A. E. Houseman). (V. *Minorsky*)

**BABADAGHI**, a town in the Dobruḡa, now part of Rumania. Its Turkish name refers to the semi-legendary dervish (Baba) Sarf Saltik, who is said to have led a number of Anatolian Turcomans to the Dobruḡa in the mid-thirteenth century, and to have settled with them in the neighbourhood of Babadaghi. (On this settlement see Paul Wittek, *Yazıncıgibi 'Alī on the Christian Turks of the Dobruḡa*, in *BSOAS*, 1932 xvi, 639 ff.). There are several tombs of Sarf Saltik in various towns; the most generally accepted is that of Babadaghi. What appears to be the first reference to it occurs in a passage in the travels of Ibn Battūṭa, who mentions 'Bābā Saltik' as the northernmost outpost of the Turks, and briefly describes the saint that is buried there. Though Ibn Battūṭa's 'Bābā Saltik' cannot be located with certainty, it seems likely that it is the place later known as Babadaghi. He passed that way in about 1332-3.

According to Ewliya Celebi, the town was first conquered for the Ottomans by Bayezid I, and was reconquered by Bayezid II as a *sanjak* for Sarf Saltik and his followers. Two documents relating to the *sanjak* of Bayezid, of 1075/1667 and 1117/1699, are listed in the catalogue of the Topkapı Sarayı (*Arşiv Kütahası*, Istanbul 1938, I, 52). The area was no doubt occupied by Bayezid I in the course of his Danubian campaigns; but its final annexation by the Ottomans would seem to date from the year 892/1487-8, (*ʿAḡhıyabnāme*, chapter 73; Negârî, ed. Usat Kırıman, Ankara 1957, II, 534 ff.; *Saḡ* al-Ḳu, I, 284; cf. Osman Turan, *Tariḡ Taḡimîn*, Ankara 1954, 21, 37). The region was settled by Bayezid with Tatar colonists (Hâdîdî Khāḡlā; cf. Hammer-Purgstall, I, 629).

In 945/1538 Sultan Süleyman stayed there for four days, during his Rumanian campaign, and visited

the tomb of Sarf Saltik (*Muḡabāḡime*; Hammer-Purgstall, II, 152). At this time it seems to have been included in the *sanjak* of Silistre, though it was not large enough to be listed as a town (M. Tayyib Gökilgin, *Kanun Sultani Süleyman deri bazarında Rumeli eyaleti, İnebolu, şehir ve kasabaları*, *İstanbul*, 1955, 254-5, 266-7). In the late 16th and early 17th centuries the town and district suffered greatly from the depredations of the Cossacks and even, on occasions, of the Crimean Tatars. As a result many of the Turkish population left and migrated southwards. During the reign of Murād IV the construction of a fortress was begun, under direction of Kökdā Kırān Paḡla, but by the time that Ewliya Celebi wrote (ca. 1652) the fortress was not manned and only the foundation walls and towers were standing. During the 17th century Babadaghi became the concentration point for Ottoman armies marching north, and in war-time served as winter quarters for the Grand Vizier. The town, which from 1001/1593 constituted a *meydanlık* in the *eyalet* of Ozi, was described by Ewliya as a flourishing commercial centre, with 3000 houses, 340 shops, and many gardens (but no closed market—*beziristan*). Its status was that of a *pasha's* appanage (*pasha ḡāḡisi*). Ewliya names three large mosques (*ḡimān*)—"Ulu ḡimān", built by Bayezid II, near the convent of Sarf Saltik; 'Alī Paḡla ḡimān', in the market place; Dervish ḡimān, Paḡla ḡimān, and three *hamāms* including those of Bayezid II and 'Alī Paḡla. (Hâdîdî Khāḡlā reports 5 mosques and only 2 baths). There were also several *madḡis*, three *madrasas*, 20 boys' schools (*mektep shaynī*) 8 Khāns and 11 dervish convents (*tekke*) of which the largest and most prosperous was that of Sarf Saltik. His *ḡimān* was a place of pilgrimage. It was built by Bayezid II (or, according to another version, by the Crimean Khan Mengli Giray). The chief industries, according to Ewliya Celebi, were cloth, bows, and arrows; its specialties were grapes, white bread, yoghurt, and grape-juice.

In 1809, during the Russo-Turkish war, the town was occupied by the Russian general Porokhovskiy. It was returned to Turkey in 1812 but was ceded to Rumania in 1878. At the time of its transfer Babadaghi was a *kaḡā* in the *sanjak* of Tulfa in the *vilāyet* of Tuna.

**BABAESKI** (Bābā-yi 'atik) or Babaschik, a small town in eastern Thrace, situated 50 km. S.E. of Edirne, on the railway line which links Kirkilārdi to the Edirne, Istanbul main line. At the time of the Byzantine empire it was called Bulgarophylon; its present name is derived from the Turkish dervishes (*baba*) who settled there, as at other places, during the Ottoman expansion in the Balkans.

Babeski was a *baḡā* of the *sanjak* of Viza in the 17th century, and was later attached to the *sanjak* of Kirkilārdi (Kirkilārdi). Today it is one of the *baḡas* of the *vilāyet* of Kirkilārdi; its population in 1945 was 5,936. The population of the whole region, numbering 37,607 (1945), is mainly occupied in agriculture.

The town has two mosques, one dating from the time of Mehmed II, and the other built by the architect Sinān in the name of the Grand Vizier 'Alī Paḡla Semiz [s.p.]. A stone bridge, built during the reign of Murād IV on the river Ergene, to the west of the town, also deserves mention as a historic monument.

**BĀBĀ'Ī**, the name of a religious-social movement which disturbed the Turkoman centres of Asia Minor a few years before the Mongol invasion, and which seems to have been of great importance in the general history of the social and cultural development of the Turkish people. It can only be understood by reference to certain general features of the development of the Salḡūkid state of Rūm. By the 7th-13th century, the latter had become a state with a strong administrative and cultural framework, the product of Iranian influence, based on the Muslim and mainly Sunnī population of the towns; the Turkoman element of the rural areas and the frontiers, which had remained far more faithful to the old Turkish traditions and habits, been penetrated to a much greater extent by heterodox doctrines, was thus becoming more and more isolated. At the very moment when the rift between the State and the Turkoman element was widening in this way, the Turkomāns, as the result of the influx of their Turkoman cousins who had been pushed back first by the Khwārizmians, then by the Mongols, received simultaneously reinforcement in numbers and the seeds of future troubles, in the form of doctrines stemming from Central Asia. This was the environment in which shortly before 638/1240 a *baba* (popular preacher), Ishāk, better known under his self-assumed title of vazīdī (Allāhī), who came from the Kafarārdi region on the Syrian border, began preaching to the Turkomāns both of the region south of the eastern Taurus, and of the region of Anapa, and then of all the intervening and surrounding districts. In 638, taking advantage of the fact that the breach between Kay-Khusraw and the Khwārizmians, the remnants of whom, after finding a temporary home in Asia Minor, had taken refuge in Adana, had weakened the régime, Bābā Ishāk raised the standard of revolt. He successfully defeated several large Salḡūkid armies, and was only finally defeated and captured by the employment of 'Frankish' mercenaries; even then the movement was not completely suppressed.

Little is known of the distinctive features of the movement. The adepts wore a red cap (as did, later, the *Akkīshā*), black robes, and sandals. Ishāk called himself a prophet, and allied himself to the extremist forms of Shī'ism which were prevalent in Irano-Turkish popular circles; his precise relations with another Bābā, of Khurāsān origin, Rūyā, and with the *balandars* (ḡhawāḡid) of Asia Minor, are yet to be established. At all events, the movement was fundamentally opposed to the aristocratic movement of ḡiḡāl al-Dīn, Rūmī and the Mawlawīs.

Although so little is known about it, the Bābā'ī movement must have been of great importance, since it is mentioned, apart from the Salḡūkid chronicler Ibn Bībī (phot. MS. ed. 498-502, Houtsma's summarised ed. 227-231), by the contemporary Arab from Damascus Sibī Ibn al-ḡhawī (ed. Jewett 843),

the Franciscan missionary Simon of St. Quentin (in Vincent of Beauvais, *Speculum*, xxxi, 139-40), and, a little later, by the Syriac historian Bar Hebraeus (ed. trans. Budge, 405-6). The basic problem is to establish the connexion between this movement and, on the one hand, the creation of the Karamanid principality of Taurus, and, on the other hand, in the second half of the century, the religious group of Bādhidj Bektāsh; Efkaki (amed Haur's trans., i, 296, following Köprülü, *Orig.* (see bibl. below), 407, explicitly connects the latter, which was destined to have such important developments, with the Bābā'y movement. There are doubtless other popular creeds of the period of the Mongol Protectorate which are worthy of consideration. Although the texts are so vague, there is little doubt that the Bābā'y movement was at the head of currents which the dilapidation of the Saljuqid state later rendered irresistible, and it is this which gives it its importance.

(C. L. CAHEN)

**BĀBĀK**, head of the Khurrami sect (see KHURRAMI); his name is an arabised form of the Iranian Bāpāk. The son of an oil-merchant from al-Madā'in (or, according to some, the descendant of Abū Mas'ūd), he was following an obscure calling in al-Jahārbayḥān when he was noticed by Dāwūd b. b. Sahl, head of the Khurramis, who died shortly afterwards. Bābāk claimed that the spirit of Dāwūd b. b. Sahl had entered into him, and began to stir up the people living in the region of al-Baḥḍā, a place, not extant to-day, situated in the mountainous region of Arrān, not far from the Araxes (see *ARABYAH*, map). He imparted new vigour to this religious and social movement, derived in part from Mazdāhism, and employed particularly violent methods. It appears that his operations date from 201/816-7, and that they were assisted by the rebellious schemes of the governor of Armenia, Hātim b. Harthama, and facilitated by the various difficulties in the eastern province which followed al-Ma'mūn's return to Baghdad.

In 204/819-20, al-Ma'mūn sent against Bābāk Yahya b. Mu'adh, who attacked him without success on several occasions, as did other commanders whose efforts were attended by no better fortune. By the end of al-Ma'mūn's caliphate the revolt had spread as far as the Djabāl, and first concern of al-Ma'mūn was to exterminate the insurgents in this region. In 220/835, he placed al-Aḥḡā (q.v.) in charge of operations against Bābāk. This commander rebuilt the fortresses on the al-Baḥḍā road which Bābāk had destroyed, and, despite the defeat suffered by Bābāk the Elder at Haḡḡid-Sar, succeeded in surprising one of the rebel leaders, Tāḡhīb. Then, reinforced by troops under Dīḡ'ar al-Kharrāṣī and by Abū Dulaf's volunteers, he established in 222/837 a camp, protected by mountain scouts, from which he harassed the fortress of al-Baḥḍā. After an unsuccessful attack by the volunteers, al-Baḥḍā was taken and sacked on 9 Rāmādān 222/15 August

837 as the result of an assault by the troops from Fārgāna. Bābāk fled, and after being handed over to al-Aḥḡā by the Armenian elder Sahl b. Sunhūt, with whom he had taken refuge, was sent to Samarra where he arrived on 3 Šafar 223/4 January 838. Al-Ma'mūn had him paraded on an elephant and executed with extreme cruelty; his body remained hanging on the gallows, which gave its name to a quarter of the town.

The capture and execution of Bābāk did not put an end to the Khurrami movement, which continued to give evidence of its existence during the 3rd/9th century; the devotees of the former rebel, calling themselves Bābākīya, continued in the 5th/11th century, at al-Baḥḍā, to wait for the Mahdi and to practise certain special rites.

**BĀBALYŪN** (Babylon), a town in Egypt. The name Babylon, denoting the mediaeval Egyptian town in the neighbourhood of the modern Cairo, is, according to Casanova, the Graecised form of an ancient Egyptian Bā-Haps-n-On through assimilation to the Asiatic Bāḡḡāwān which was familiar to the Greeks. This etymology is not quite free from objections but there is no doubt that some ancient Egyptian place-name underlies it. By the name is meant the ancient town and fortification of the Greeks which — situated on the borders of Upper and Lower Egypt — commanded the interior. Even to the present day portions of the ancient fortification have survived in the Kaḡr al-Šam'a. Babylon's position was much more favourable, and its importance greater, in ancient times, as the Nile then flowed further to the East. At the time of the conquest of Egypt by 'Amr, the decisive battles were fought here. With the fall of Babylon (21 Rabī' II 20/9 April 641) the fate of Egypt was settled. The Arab military camp which later developed into the city of Fuṣṭāṭ-Misr was then pitched near this place, important from the military point of view, and the remains of the old fortress were used in its construction. As far as we know from papyri, a distinction was still made between Babylon and Fuṣṭāṭ at the end of the 1st/7th century. In Fuṣṭāṭ lived the Muḡāḡirūn whose *ḡḡāḡ* were marked out. In Babylon were the great coin-merchants and the seat of the administration. The arsenal on the island of Rōḡā which is also mentioned in papyri, was closely connected with the fortress. The original distinction between Fuṣṭāṭ and Babylon was naturally soon lost. The name Babylon fell out of use among the Arabs and only survived among the Copts, its application by them being extended, for the Copts occasionally used Babylon to denote the whole area, and great series of towns from Kaḡr al-Šam'a through Fuṣṭāṭ and Cairo to Matariyye-Heliopolis. This usage then spread to western writers. This is why Babylonia, with varying orthography, appears as a name for Cairo in the numerous commercial treaties between

Egypt and Western States, written in Latin and published by Amari. The name may also be found in the contemporary literature of Europe as well as in charters; for example in the works of the traveller Mandeville and of Boccaccio who calls Saladin "Soldano di Babilonia".

**BĀBĀN**, the name of an important family and dynasty of 'Irāḡ Kurdistān. It rose early in the 11th/12th century from an obscure origin in the Pishdār tribe in the person of one Ahmad al-Fakḡh, whose son became a power, and his grandson Sulaymān Beg a major power, in the Šāhrazūr area. They made their home at Kara Coln, which remained the Bābān head-quarters until the foundation of Sulaymāniyya (q.v.) in 1198/1783; and in spite of an unsuccessful invasion of Persia, and chequered fortunes in his own newly-created principality, Sulaymān Beg gained a measure of recognition from the sultan and transmitted a princely position (or at least princely pretensions) to his sons. Under his grandson Bakr Beg, early in the 12th/13th century, Bābān rule, always insecure and unaccompanied by any regular administration, stretched from the Lesser Zab to the Sirwān (Diyālā).

In spite of the violent fall of Bakr Beg and the reassertion of Turkish authority, the Bābān prince of the time (Khāna Paḡḡa) gave important military help to the *waḡl* of Baḡḡād in the struggle against the Persians (1156-1160/1221-1247). Under his nephew Sulaymān Paḡḡa (1167/1254) Bābān rule covered the *waḡḡ* of Koy, Khāḡḡān and wide areas of Western Persia; but it remained precarious, resented by the Turkish authorities in the 'Irāḡi *sulṭān*āt, threatened by rivals in the same family, and weakened by ceaseless intrigues with (and by) Persian supporters of this or that candidate. In these conditions, even valuable services rendered from time to time to the pashas of Baḡḡād could not secure consistency in Turkish policy towards the Kurdistān principality, nor a respectful attitude by the latter; even the greatest of the Bābāns—notably 'Abd al-Rahmān Paḡḡa, in power (with interruptions) from 1204/1789 to 1227/1812—fell victims every few years, or months, to the constant vicissitudes of frontier warfare and intrigue, and the rivalries among their brothers and cousins. The territory was more than once occupied by Persian or Turkish forces.

The final eviction of the Bābān rulers, which was anyhow inevitable under the modernising policy of the Turkish Government after 1246/1830, was the easier since the appearance of signs of Turko-Persian accord—frontier agreements were reached between the two powers in 1219/1823 and 1246/1847—and the destructive ravages of the sons of 'Abd al-Rahmān Paḡḡa. In spite of a brief 'Indian summer' when new weapons and modern military methods were introduced in the Bābān armed forces, the

centralising efforts of the mid-century *waḡl* of 'Irāḡ prevailed finally in 1267/1850, when the last of the Bābān princes left Sulaymāniyya. Numerous descendants of the family survive.

**BĀBAR** [see BĀBER]  
**BĀBBAGHĀ'** (and also *baḡḡā'* «parakeet(s)» «parrot(s)»). The form is the same for both the male and the female, and represents the singular or the collective. Etymologically, according to Djabīb, the name is derived from the bird's cry. It occurs in the languages of Romance origin, for example the Provençal *papagai*, Spanish *papagayo* and Old French *papagai* (and the *papagan* of the *Roman de la Rose*). In the 3rd/9th century, 'Irāḡi who knew those varieties of psittacids which were native to the Indian Archipelago; al-Dandirī mentions in addition to green and red parrots, a white crested species. Poets in the Orient, sometimes describe this gorgeous bird; the silence of their rivals in Spain is noticeable at least until the 5th/11th century.

(R. BLACHÈRE)

**AL-BĀBBAGHĀ'** "the Parrot", the sonneteer under which is celebrated the Arab poet and letter-writer Abū 'l-Farajī 'Abd al-Wāḡid b. Naḡr, born 313/925, died 397/1007. The ethnic appellation al-Maḡḡarīmī which was given to him implies fictitious Arabian descent. A native of Naḡḡān, al-Bābbaghā' seems to have attached himself to the entourage of the Hamdanid amir Sayf al-Dawla, when the latter was established at Aleppo, and therefore after 333/944. He sang the praises of this amir, and achieved prominence in the literary milieu which existed in this town. A fervent admirer of al-Mutanabbī (q.v.), he met the latter again at Baḡḡād; after residing there for a time at Misul, he himself settled at Baḡḡād, where he eventually died.

At the end of the 4th/10th century, the poetical works of al-Bābbaghā', according to Ibn al-Nāḡim, comprised a collection of three hundred pages; of these poems, only the extracts selected by al-Tha'ālibī are known to us. The same anthologist also quotes long and significant passages from his letters. As a panegyrist, al-Bābbaghā' belongs to the neo-classical school, such as is represented by al-Buḡḡarī or al-Mutanabbī. In his elegiac or heroic pieces, on the other hand, al-Bābbaghā' is not without a certain distinctive charm. He is however, chiefly remarkable for the virtuosity and richness of his letters in rhymed and cadenced prose. In this genre, and in his own period, he stands out as a master.

**BĀBIL.** Ancient Arab writers used to give the name "Bābil" to the city of Babylon as well as to the country of Babylonia. The city's ruins lie some 54 miles due south of Baghdad on the Baghdad-Biḥla road. Those writers differed, however, in determining the boundaries of the country. Some of them extended its limits over a vast area, whereas others restricted it to a lesser area. According to Muslim historians and geographers, the original city of Bābil had been devastated long before the Islamic conquest, and there was then in its place a small village which had the name of Bābil. This village is reported to have existed down to the 'Abbasid epoch in the 4th/10th century. For instance, Ibn Hawkal mentions that, in his time, Bābil was a small village. He also remarks that "Its buildings are considered the most ancient ones in 'Irāk and the city itself was founded by the Canaanite kings who adopted it as their state seat, and it was settled by their successors as well. The remains of its imposing buildings speak of its past grandeur".

Abu 'l-Fidā', who cites the above-mentioned account of Bābil by Ibn Hawkal, adds: "It was in it that Ibrahim was thrown into the fire. And in these days it is no more than desolate ruins on which stands a sad village".

In the 7th/13th century, Al-Kāwālī described the ruins of Bābil and mentioned the quarrying of its bricks by people for building their houses—a practice which has continued until recent years—. In this connexion, he states: "Bābil: the name of a village which formerly stood on one of the branches of the Euphrates in 'Irāk. Currently, people carry off the bricks of its ruins, and there exists a well known as 'the Dungeon of Dīnārī' which is visited by Jews and Christians on certain yearly occasions and on holidays. Most of the population hold the opinion that this dungeon was the well of Hārūt and Marūt".

Al-Bakrī refers to the Tower of Bābil, which he designates as *Al-Maḡāl*. He says, following earlier writers, that this tower (identified by modern archaeologists as a zigurat) was built by Nimrod in Bābil and that it rose some 3000 cubits aloft in the sky, and that this building is the authentic tower referred to in the Qur'ān, xvi, 26, the relevant text of which appears hereunder:

"Those before them did indeed devise plans, but Allah demolished their building from the foundations, so the roof fell down on them from above them, and the chastisement came to them from whence they did not perceive".

There has been much controversy among Muslim writers about the history and authenticity of Babylonia. Yāqūt al-Hamawī, however, summarises the various notions and legends prevailing among them on this city. For instance, it is said that Noah was the first to build and settle in this city after the Deluge. The Persians say, as related by Yazdijird b. Mihrān, that it was the king al-Dabbāk who has built this city. Ibn al-Kalbi says that the city's area was 12 x 12 *farsāḡh*, that the Euphrates flowed beneath its walls until Baḥtanzāsar (Nebuchadnezzar) diverted its waters to their present course, as a precaution against the possible collapse of the city walls, and that Bābil continued to prosper until it was destroyed by Alexander the Great.

The information previously possessed on Babylon's history and culture, following its downfall, was in a state of confusion and contrast, as set forth above. Actually, they had no other established reference on this subject but the relevant accounts mentioned in the Old Testament, statements related by some of the ancient Greek historians at the classical period and sagas transmitted by unlearned people.

The real facts about this city were not discovered until the arrival of archaeologists at its ruins early in the 19th century A.D.; they brought to light innumerable relics and artifacts, among which were tablets with cuneiform inscriptions. Upon deciphering these writings, practically all of the facts about this city were set in the right order, thus putting an end to the numerous previous legendary and unfounded accounts; these are now replaced by established facts, which are found in the many works on this city in various European languages.

**BĀBĪS.** Followers of the religion founded by the Bāb (g.c.). The history of the Bābīs has been, and still is, at least in the East, one of persecution. It can be divided into two phases: the first, from the foundation of the new faith (1260/1844) up to the persecutions following the attempt on Nāṣir al-Dīn Shāh (1268 g./1852-3), which seemed as though they would crush the new movement for ever, a period characterised by a frequently violent attitude on the part of the Bābīs themselves; the second, which might be called 'pacified', from that date to the present day, a period which has seen the schism of the Bābīs into two factions of unequal numbers and importance. After the first dissemination of the faith following the declaration of the founder's mission (see BĀB) and the first persecutions, which the Bābīs in various localities resisted with force, the most important event in the history of the community is the convention of Badāghīz (1264/1848), at which the Bābīs, abandoning their initial precautions, openly declared their total secession from Islam and the *sharī'a*; in this a major rôle was played by the famous Bābī heroine, the beautiful and cultured poetess Zarrīn-Tājī, better known by the names of Kurrat al-'Ayn and Dīnābī Tāhira ('H. H. The Pure'), born al-Kāwālī, the daughter of the erudite theologian Mirza Sāhib. There, first among Persian women, she dared to show herself unveiled to her brothers of the Faith, a living example of the abrogation of the Islamic *sharī'a*. After the convention, in which many of the principal Bābīs, among them the future Bābā' Allāh (g.c.), took part, Muḥammad Bāghdādī (see BĀB) encouraged himself with a small troop of Bābīs in the

sanctuary of Shāykh Tabarī near Bārfurūsh, where with another 'Letter of the Living', Muḥammad 'Alī Bārfurūshī called Juddās, he resisted heroically the troops of Nāṣir al-Dīn Shāh (shortly afterwards succeeded by Muḥammad Shāh), even making successful sorties; but eventually Muḥammad Husayn was killed, and Kurrat and the other survivors were spared, though they were in fact vilely and cruelly massacred (Ramādān 1265/July-August 1849). Shortly afterwards, at Nayriz in Fārs, another heroic Bābī insurrection took place, led by one Sayyid Yahyā-i Dārābī, who had been converted by the Bāb at Shirāz (see BĀB) and who had assumed the name of Wahid; the Bābīs, barricaded within the old citadel of the town, defended themselves bravely, with the sympathy of the population, for several days until they were all massacred (January 1850). Almost at the same time there occurred an insurrection of even greater magnitude at Zanḡīn. The Bābīs, under the leadership of Muḥammad 'Alī-i Zanḡīn surnamed Hūdijāt ('the Proof'), barricaded themselves in the citadel called Kū'ā' 'Alī Mardān Khān. After various turns of fortune the Bābīs, who numbered more than 3,000, were cruelly massacred (February 1850). Four months prior to the execution of the Bāb, Tehran also had her heroes, the so-called 'seven martyrs of Tehran', one of whom was the tutor and uncle of the Bāb; their heroic conduct in the face of most horrific punishment is a glorious chapter in the history of the Bābī faith. The unsuccessful attempt on Nāṣir al-Dīn Shāh (28 Shawwāl 1268/16 August 1852) by two Bābīs maddened by the persecutions led to a new reign of terror, to which numerous personalities of the Bābī faith fell victims. Among these was the poetess Kurrat al-'Ayn, strangled after long imprisonment. The principal Bābīs, among whom were Bābā' Allāh (Mirzā Husayn 'Alī Nūrī) and his half-brother Subḥ-i Azāl (Mirzā Yahyā Nūrī) were banished to 'Irāk. The persecutions continued, however, sporadically throughout Persia. The Bābā'ī tradition speaks of about 20,000 martyrs, including those killed in battle. After the declaration of the Convention of Ridwān and, later, that of Adrianople (see BĀB), dissensions arose between those who were henceforth called Bābā'ī (g.c.) and the followers of Subḥ-i Azāl, who adhered to the letter of the *Bayān* and maintained that the Bāb had nominated Mirzā Yahyā as his successor. The Bābā'īs, on the other hand, maintained, and still maintain, that it was a question of only a temporary annulment and *pro forma*, and that, in any case, Subḥ-i Azāl never had the right to oppose 'Him Whom God Shall Manifest, who is', according to them, Mirzā Husayn 'Alī Nūrī, Bābā' Allāh. The Azālīs remained always in the minority, however, and even the number of 50,000 which some authorities have ascribed to them seems in fact to be somewhat exaggerated.

**BĀBUR.** Zahir al-Dīn Muḥammad, soldier of fortune, first of the Muḡal rulers in India, diarist and poet, was descended on his father's side in the fifth generation from Tīmūr and through his mother Kutlūḡ Nigār Khānum in the fifteenth degree from Čingiz Khān. He was born on 6 Muharram 888/14 February 1483 and succeeded his father 'Umar Shāykh as Mirzā of Farghānā in Ramādān 899/June 1494.

Bābur inherited his father's struggle with his kinsmen for the towns and fertile areas of Central Asia. By Rādī I 903/November 1497 he had fended off the attempts by his elder paternal uncle Sulṭān Ahmad Mirzā of Samarkand and by his elder maternal uncle Sulṭān Mahmūd of Taškent to deprive him of his father's position in Farghānā, and using quarrels among his consins had occupied Samarkand. Four months later lack of booty and conspiracy at Andijān, his headquarters, forced him to flee Samarkand too. Andijān he soon recovered and then as soon lost to the Muḡals under Tāmbal who nominally were supporters of his brother Dīshāngīr. In 905/1498-99 Bābur divided Farghānā with his brother, married and was forestalled in a race for Samarkand by Shaybānī Khān, Uzbak (Ordek). Next year he took the city by surprise, only to be starved out by Shaybānī Khān after losing the battle of Sar-i Pul in Ramādān 906/April-May 1501. Bābur, having relinquished Andijān to his brother when he took Samarkand, now became a fugitive nomad, dependent for his personal safety on ties of kinship.

His uncle, grudging hosts, the Khāns of Taškent and northern Muḡalistan, furnished him with troops against Tāmbal and finally marched to his support. Tāmbal however appealed to Shaybānī Khān who routed and executed the Khāns at Artīyān in Dīhu l-Hidjja 908/June 1503.

For nearly a year Bābur wandered with a small following among the nomads of remote Sulḡ and Hūghyār, safe in their hospitality. But Shaybānī Khān's continuing success decided Bābur to seek a headquarters outside the main area of Uzbek interest. In Muharram 910/June 1504 he turned for Kābul, an uncle's possession until 907/1501, but then in Arghūn hands. Joined by other refugees from the Uzbaks, Bābur, with his father, secured Kābul and successfully asserted his claims to tribute from the surrounding Afghān tribes. By 912/1506 Bābur could leave Kābul for Herāt, in response to Sulṭān Husayn Mirzā Bāikarā's appeal for aid against the Uzbaks.

The death of Sulṭān Bāikarā and the ineffectiveness of his sons allowed Shaybānī Khān to conquer most of Khurasān, so that Bābur crossed the Hindū Kūsh empty-handed. In 913/1507 he took Kandahār from the Arghūns, but towards towards India rather than defend it personally when Shaybānī Khān besieged the new acquisition. But Shaybānī Khān came into conflict with Shāh Ismā'īl Safawī,

who defeated and slew him at Marw on 1 Ramadan 916/12 December 1510.

Bābur thereupon occupied Samarkand for the third time, in Rajab 917/October 1511, but as a client of Shāh Ismā'īl, since an outward profession of Shī'ism was probably striking coins in the name of his Šāfi'ī overlord. (The numismatic evidence on this is equivocal. See bibliography). His acceptance of Shī'ism cost him popular support, and when defeated by the Uzbek at Kulā Malik in Safar 918/May 1512, he could not hold the city. On the defeat at Ghujdawiz on 3rd Ramadan 918/12th November 1512 of the brutally intolerant Šāfi'ī general Nađm-i Dīn, whom Bābur had hastily abandoned, Bābur's last attempt to win the city nearest his heart ended.

After two years adventuring in the Kunduz area Bābur returned to Kābul, his centre thenceforth for enterprises to the more promising east and south. Several attempts to retake Kāndahar from the Aghidās ended in its occupation by negotiation in Džumādā II 928/May 1522. Bābur then turned more vigorously towards Hindūstān, probed by minor expeditions since 922/1516.

The victor at Kāndahar was invited into Hindūstān by Dawlat Khān Lodi of Lahore and 'Ālam Khān, uncle of Ibrahim Lodi, sultan of Delhi, to help them against Ibrahim. On his second advance, having dispossessed Dawlat Khān and utilised 'Ālam Khān to attract Akbar's support, Bābur destroyed the forces of Ibrahim Lodi at Pānīpat in Rajab 932/April 1526. He occupied Delhi and Āgra and his forces pressed as far eastwards down the Ganges as Džawnpūr and Ghāzīpūr. Bābur's victory at Khānā over Rānā Samūz of Citor in Džumādā I 933/March 1527 secured the Rājāghāṭhī flank, while victory over the eastern Aghidās in Ša'ban 935/May 1529 at the junction of the Gogra and Ganges extended his paramountcy in Hindūstān up to Bengal. He died on 6 Džumādā I 937/26 December 1530, at Āgra. Several years later his body was moved to its present grave in one of the gardens of Kābul.

Bābur had been born a member of a class of political entrepreneurs, some still semi-nomad, who competed within Central Asia for the power to draw revenue from herdsmen and agriculturalists and from the craftsmen and traders of an area enriched by the caravan traffic between China, India and 'Irāq. His career, like that of his rivals and enemies, was based upon the loyalties and antagonisms of family and clan rather than those of linguistic or national states. His birth gave him entry to the ruling élite; his tournament successes depended upon his attractive personal qualities—resilience and resource, courage, a cheerful and cultivated humanity—and the qualities of his partners. He was a cautious general who learnt much from the great Uzbek commanders, and applied the lessons of organised discipline and the techniques of field defences and entrenchment, musketry and artillery, and of the encircling movement with telling effect in his Indian career. His experience enabled him to hold together small collections of defeated but still personally ambitious Timurids, and the even less reliable Mughals, who had gathered around him in Kābul, until success gave him the undisputed power to command.

(J. B. HARRISON and P. HARTY)

**LITERARY WORKS.** I. *Bāburnāma*. In this famous autobiography, written in Çağhatay Turkish, Bābur tells his story from childhood to the last years of his life, with no attempt to conceal his weaknesses, his mistakes, or his defeats. It is in no sense an *apologia pro vita sua*; indeed, so matter-

of-fact and unemotional is the tone of the work that the casual reader might not recognise it as the memoirs of a skilful and valiant soldier and the founder of a dynasty, which closer study reveals it to be. It cannot be said that Bābur is impartial in his picture of himself, his friends, or his enemies. For example, we can see that his feelings got the better of him in his evident desire to belittle the important and worthy Shaybānī Khān. But despite occasional injustices of this nature, the *Bāburnāma* is far more reliable than the general run of such works. The author's keen powers of observation and his analytical mind are apparent in his descriptions and explanations of works of art, of flora and fauna, of the group-psychology of peoples, and the characters of individuals. As a literary work, the simple and chaste language of the *Bāburnāma*, its natural style, its colourful and lively descriptive passages, are some of the reasons which justify our regarding it as one of the finest examples not only of Çağhatay but of Turkish prose generally.

2. *'Arīd risālati*. It was known that Bābur had written a Çağhatay treatise on prosody, from the *Bāburnāma*, certain copies of his *Divān*, and the *Muntahab al-Tawārīkh* of Badā'ūni (Calcutta 1868, I, 343), but the work did not come to light till 1923, when it was discovered by M. Fuad Köprülü in a Paris manuscript (E. Blochet, *Cal. der MSS. Indes*, Paris, 1924, No. 269, no. 1368). It does not differ greatly from similar works in Persian; its chief importance is that on certain *'arīd* verse-forms used by the Turkish poets its information is fuller than that given by Nawā'ī in his *Miṣnā al-Awsim*. Bābur gives both Persian and Turkish examples of metres in general use, including some from his own poems, but only Turkish examples of metres of his own invention. At the end of his *Divān* he states that the *'Arīd risālati* was finished 2 or 3 years before the completion of the conquest of India; i.e., between 932 and 934/1525-8.

3. *Mubayyan*. A *muṣṣaf* in Ghazlī trimeter catalectic (*fa'āḍun maf'āḍun fa'āḍun*), completed, according to a reference in the *'Arīd risālati*, in 25/1522. It deals with some problems in Hamazī law, together with some matters relating to campaigning. This simple didactic work is of no artistic importance, but it does show that Bābur was interested in *fiḥ* and was a sincere Hanafī. Till recently it was known to Orientalists as *Mubā*; A. S. Beveridge so refers to it, even though she mentions that the Indian historians Abu 'l-Faḍl and Badā'ūni read the title as *Mubayyan* (and the English Springer called it *Fikā-i Bāburī*). *Mubā* is in fact the name of a commentary on this work, written by Bābur's secretary, Shaykh Zayn.

4. Translation of *Risāla-i Walīdiyya*. The author of this work on Šūfī ethics was Khwāja 'Ubayd Allāh Ahrārī, the great Central Asian Šūfī and spiritual leader of the Timurids. At the time, he wrote it at his father's insistence. Bābur's Çağhatay translation was made in 935/1528-9, and forms part of his *Divān*. It is a *muṣṣaf* of 243 lines in *Ramāl* trimeter catalectic (*fa'āḍun fa'āḍun fa'āḍun*). Though pleasantly and simply written, it has no aesthetic merit, but is of interest as showing Bābur's Šūfī leanings.

5. *The Divān*. The bulk of this is in Turkish, but some of the poems are in Persian. The verse-forms represented include the *ghazal*, *muṣṣaf*, *rubā'ī*, *hif'ī*, *tuyūgh*, *mu'ammal*, and *maf'ar*. We find in it the various verses whose composition he mentions in the *Bāburnāma*. The existing copies are not

arranged in the classical *Divān* manner; the poems are set down in no apparent order. In the technique of versification Bābur was not inferior to any of the 15th-century Çağhatay poets, not even Nawā'ī, and he expresses his thoughts and feelings in an unaffected language and style. Side by side with Šūfī songs of love and wine there are poems on everyday themes. Signs of the influence of earlier poets, especially Nawā'ī are not wanting, but there are no slavish imitations. Though Bābur had a taste for literary artifices and poetic *tours de force* (there are 29 of the latter in the *Divān*), and though, in obedience to the fashion prevailing at the time in both Persian and Turkish literature, he wrote numerous *mu'ammals* (the *Divān* includes 52), the greater part of his work is simple, sincere, and natural. He wrote a number of *tuyūghs*, a verse-form peculiarly Turkish, as well as some *rubā'īs* of great beauty. Among his *turkies*, which belong to popular poetry, we find one poem in syllabic metre (cf. *MTM*, I, 27). He was capable of writing Persian poems—there are over 20 in the *Divān*—but his affection for his mother-tongue is evident in the preponderance of Çağhatay. Further, in his poems he often refers to the valour of the Turks, and the fact that he is one of them. In this respect he was following the intellectual and literary trend which had begun with Nawā'ī in the previous century and which prevailed not only in Turkish but also in Persian and Timurid courts. The literary influence of Bābur was responsible for the subsequent rise of poets writing in Çağhatay both among his descendants and among their courtiers. Certainly the literary historian must assign Bābur a leading position among the Çağhatay poets after Nawā'ī.

**Bibliography:** (1) *Bāburnāma*. First printed by N. Binnind, *Bābur-Namā (Diogenes ad fidem codicis Petropolitani)*, Kazan 1857. A facsimile of the Haydarābād MS. forms the basis of A. S. Beveridge's *The Bāburnāma*, GMS 1905. A Persian translation was made at the end of the 16th century by Khān Khānān 'Abd al-Rahīm Mirāz, son-in-law of Bayram Khān [q.v.], and this was translated into French by J. Leyden and W. Erskine, *Memoirs of Zahir-ed-Din Mubayyan, Babur*, London 1826; and into French by Pavet de Courteille, *Mémoires de Babur*, Paris 1871. A. S. Beveridge, *The Memoirs of Bābur; a new translation... incorporating Leyden and Erskine's of A. D. 1826*, London 1912. Idem, *The Bāburnāma in English*, London 1922, a splendid 2-volume translation of the original, with introduction, notes, etc. A second Persian translation was made by Hasan Pāyandā. Badā'ūni states that Shaykh Zayn translated the *Bāburnāma* into Persian, but his *Wāḥid-i Bāburī* is not in fact a translation.

(2) *'Arīd risālati*. Text not yet published. For the information it affords on Turkish verse-forms, see M. Fuad Köprülü, *Türk dili ve edebiyatı hak-kında araştırmalar*, İstanbul 1934, 40-44.

(3) *Mubayyan*. A long extract based on a defective MS is contained in I. N. Berezin, *Turetskaya khrestomatiya*, Kazan 1867. See Köprülü, *op. cit.*, 244-6, for details of a full and accurate MS. of 937/1530-1, in his private collection.

(4) Translation of the *Risāla-i Walīdiyya*. Text, extracted from the Istanbul copy of the *Divān*, published by Köprülü in *MTM*, 4, 113-24.

(5) E. Denison Ross, *Divān-i Bābur Pāidighā*, in *JASB* 1910, contains a facsimile of a neagare Rampur MS, at that time the only one known. A fuller copy discovered some years later (Paris,

Bibl. Nat. Supp. tunc. 1230) formed the basis for A. Samoylovich, *Madjnas' al-Ġib'ra fī al-Falāḡiḡa*, Petrograd 1917. A number of additional poems were published by Köprülü in *MTM* no. 1331/1013 (nos. 2, 3, 4) from a MS. now in Istanbul University Library (no. 3742). Although the end is missing, this MS. has almost twice the content of Samoylovich's edition, including, *inter alia*, 118 *ghazals* and 104 *rubā'īs* in Turkish, and 3 *ghazals* and 18 *rubā'īs* in Persian.

(M. RYAN KÖRÖLCÜ)

**BABYLON**, Egypt [see BĀBYLŪN].

**BABYLON**, Mesopotamia [see BĀBIL].

**BĀD-I HAWĀ**, literally 'wind of the air'; in Ottoman fiscal usage a general term for irregular and occasional revenues from fines, fees, registration charges, and other casual sources of income. The term does not appear in the *Kānūns* of the 9th/15th century, but is found in a *Kānūnname* of Gelibolu of 925/1519, where mutation is made of penalties and fines, bride-tax, fees for the recapture of runaway slaves, and other *bād-i hawā* (Barkan 236). It also appears, in similar terms, in *Kānūn-nāmes* of Ankara (929/1522-Barkan 34), Hamid (935/1528-Barkan 33), Aydın (935/1528-Barkan 14), Malatya (937/1530-Barkan 110), and of the Gypsies of Rumeli (937/1530-Barkan 148). In the two last-named it is included among the *ḡāzāt* (see *ḡĀZĀT*). During the 16th, 17th and 18th centuries it is found in *Kānūns* and registers from all over the Empire. In free timārs (*Serbest timār*) the *bād-i hawā* belonged to the timār-holder. In other timārs it was either shared by the timār-holder with the *ḡāzīs* [q.v.] or, more frequently, reserved entirely to the *ḡāzīs*, in which case it might be either retained as Imperial *ḡāzāt* or granted as *ḡāzāt* to the governor (see *BAYT AL-MĀL*). The name, which seems to convey the same meaning as the English word windfall, may be connected, as Inalcik suggests, with the much disputed Byzantine *avriikon*.

**Bibliography:** *Kānūnname-i Al-ʿUḡayn*, TOKM, Suppl., Istanbul 1329, 38-9; Ömer Lütfi Barkan, *Osmanlı İmparatorluğunda Zorun Ekonomik Hukukları Ve Mali İdaraları*, I, *Kānūnlar*, Istanbul 1933; Halil İnalcik, *Sarı Defter-i Sancak-ı Arşın*, Ankara 1954, xxvii-xxviii, xxxii-xxxiii; (Inalcik mentions a detailed *bānūn* on *bād-i hawā* in a manuscript in the library of the Turkish Historical Society, No. 34, p. 117).

(B. LEWIS)

**BADĀ'** (Ar.), appearance, emergence; in theology: the emergence of new existences, which caused a change in an earlier divine ruling. (Druy, *Essai sur l'Histoire de l'islamisme*, 223, gives the term too wide a meaning, as 'mutabilité de Dieu'). There are three sorts of *badā'* as it refers to the knowledge, the will or the command of God (Shahrastānī, 110). The possibility of *badā'* is, in opposition to the divergent Sunnī doctrine, always treated in the chapter on the divine knowledge in the textbooks of Shīʿite theology, but without reaching a definitive formula. In its extreme form which assumes the mutability of God's will it is taught in the ultra-Shīʿite sects (*Badāʾiyya*); the moderate Imāmīyya school is careful to use words which exclude or at least minimise the possibility of change in God's knowledge (see below). The former could employ the doctrine of the Shīʿite theologian Ḥijābīn b. al-Hakam [q.v.] that God's knowledge does not exist till the object of it exists; what does not yet exist (*maʿfūm*) cannot be known and therefore His knowing follows His not-knowing as soon as things

exist. (ʿAbd al-Kābir al-Baḡhdādī, *Kūṭb al-Farḡ bayn al-Farḡ*, Cairo 1328/1910, 49), subtleties which appear in modern times in the Shīʿite Shaykhī sect (RAM, xi, 415 ff.). This idea allows for a knowledge in God corresponding to fresh phenomena and a change of mind determined by them. Muslim historians of the sects agree that the idea of *badā'* was first suggested by Muḡhīr [q.v.] and then became part of the creed of the Shīʿite Kaysānīyya (*al-Farḡ bayn al-Farḡ*, 36; cf. Ahmad b. Yaḡyā b. al-Murtadā in M. Horten, *Die ḡibels. Probleme der spech. Philosophie in Islam*, Bonn 1910, 124). The origin of this idea is also ascribed to ʿAbd Allāh b. Nawf (Tahart, ii, 732). When Muḡhīr had to fight the decisive battle of his career against the superior force of Maḡʿab b. al-Zubayr, he (or ʿAbd Allāh b. Nawf) announced that God had revealed to him that victory was certain. When the alleged oracle was proved false by his defeat, one of the two said, referring to Sūra xii, 39, that something had intervened (*bādā lahu*) which had made God change His mind.

During the calamities which befell the Shīʿite community this idea was accepted as a convenient explanation of the failure of the hopes and prophecies of the defeated imāms. It had been God's purpose that the deliverance (*farḡ*) and victory of the lawful imamate should take place at a certain moment; He had, however, changed His plan on grounds of expediency. His promises were an encouragement; had the Shīʿa known that victory would come only after one or two thousand years, they would have lost heart. This principle also serves to explain the change in the legitimate succession of the imāms when, in place of the predestined Ismāʿīl, his brother Mūsā al-Kāḡim succeeded. He had to appear as the seventh imām. They ascribe to Ḍiʿāʿfar the words, "God has never been led by a new consideration (to change His mind) as in the case of my son Ismāʿīl" (*maʿfūm bādā fi Ismāʿīl shī*). To many Shīʿite theologians this crass application of *badā'* might have seemed discreditable; so the speech of Ḍiʿāʿfar has been made more tolerable by changing *shī* to *abi*; God's change of mind is hereby transferred from the son to the ancestor of the imām, to Ismāʿīl the son of Abraham, the expected *ḡābī*; God released Abraham from offering the sacrifice which He had originally ordered.

The most important arguments adduced by the Shīʿa in support of *badā'* are: A) passages in the Qurʾān: xiii, 39; xiv, 11; xvi (these are the strongest proofs); iv, 29b; the frequent assertion that God will change His resolve to punish sinners when they repent vii, 152/153; stories like the sparing of the people of Yūnus x, 98; the sacrifice of Ismāʿīl xxxvii, 101/102-107; Moses' talk with God prolonged from 30 to 40 nights, vii, 138/142; B) traditions telling that by the practice of certain virtues (e.g., honouring one's parents) the allotted span of life might be lengthened and the appointed destiny (*al-badāʾ al-muʿallaq*) might be changed; the prayer of ʿUmar that "God might strike his name out of the book of the damned and write it in that of the blessed" Ibn Kutayba, *Taʾwīl minḡhīḡil al-Ḥādīḡ*, Cairo 1326, 7; C) pious legends from which it is plain that misfortunes threatening individuals may be averted by acts pleasing to God; D) the doctrine of the abrogation of divine laws (*naṡḡ*) which is a tenet of Sunnī doctrine; *badā'* is creative cancellation and cancellation is legislative *badā'*.

As Shīʿite theology in general is influenced by Muʿtazilite speculation, so the Muʿtazilite argument based on *al-ʿaṣlāḡ* (the most expedient) is connected with *badā'*, that God in His dealings with men is guided by expediency and the common good. Accordingly, it considers *badā'* from the point of view that divine decrees may change with changes in the demands of the general good (*ṡahīḡ al-ʿamīr tatadabbal bi-tadabbul al-maṡlāḡ*). Moderate Shīʿites had to exercise much ingenuity in evading the theological antinomies which this conception implies in order to reconcile the assumption of the appearance of new determining moments in God's knowledge, as expressed by *badā'*, with His absolute omniscience, in the eternity of His knowledge which is identical with His being, as most Muʿtazilites believed; and to meet the objection of the orthodox to the assumption that God might be ignorant of the end of things (*ṡawḡib al-ʿumūr*) which the admission of *badā'* implies (cf. Ḍiʿārdīn on Ḍiʿī, *Manḡḡḡ*, Leipzig 1948, 346). The effort to meet the objections raised from this angle led them, in spite of their protests against the Jews and Sunnites who denied *badā'*, to devise formulae which would meet these objections and to accuse their Sunnite opponents of crediting them with a false idea of *badā'* which was invented by the Sunnites. Their contention is that the term *badā'* must not be understood in its literal meaning but metaphorically [*maṡḡḡ*]; they reject the view that *badā'* implies a change in divine knowledge or regret for what has happened. God does not will absolutely what He has announced but only so far as it is determined by the common good. In fact, the difference between the Shīʿite and Sunnite theologians is only an idle war of words for they can explain that a future *badā'* is decreed in the eternal foreknowledge of God in the language of particulars (*ʿalā waḡḡ al-ṡafḡ*). A remarkable way of reconciling *badā'* with the doctrine of the Preserved Tablet (*al-ṡaḡḡ al-maḡḡḡ*, Sūra lxxxv, 22) is the assumption of two tables of fate, one on which the unalterable decrees of fate are set out and a *ṡaḡḡ al-maḡḡ* was *ṡ-ḡibḡḡ* (cf. Sūra xiii, 39) which contains those decrees which may be altered by the emergence of new causes (Ḍiʿārdī, *Al-ḡ*, 114 footn.). A view which has also penetrated into Sunnī circles and given rise to esoteric mystic subtleties (*ḡāṡimī*) *ʿadḡḡ* was *asrār ḡāṡimī*, Fakhr al-Dīn al-Rāzī, *Maṡḡḡ al-ḡāṡy*, 5, 310). Therefore two kinds of divine knowledge must be distinguished; *ʿilm maḡḡim*, the unalterable knowledge the details of which God makes known to prophets and angels, and *ʿilm maḡḡim*, the knowledge entrusted by God to no one, which concerns matters in suspense (*ʿumūr maḡḡḡa ʿind allāḡ*) (Kulīnī 65). Thus God knew that He would not punish the people of Yūnus but did not tell him so that he might worship God wholeheartedly while in the fish. A contrary view is that "angels write on *ṡaḡḡ al-maḡḡ* was *ṡ-ḡibḡḡ*".

The Shīʿa lays great stress on the concept of *badā'*; ʿAbd al-Muṡṡalib was the first to teach it; an imām is made to say, "none can serve God better than by acknowledging *badā'*" for repentance, prayer and humbling oneself before God to get forgiveness of sins or change of destiny have no meaning if *badā'* is not real. Yet this doctrine is always the object of attack by opponents. Even Sulaymān b. Ḍiʿārdī, one of the Shīʿite Zaydī sect, reproached the Imāmites with embracing two errors, *ṡabīyya* [q.v.] and *badā'* (Shahrastānī, 119 footn.). The bitterest opponents of *badā'* were the Jews who based their rejection of the abrogation of divine law (*naṡḡ al-ḡarīʿa*) on the fact that this proposition implies the recognition of *badā'* as was

shown by the Jewish theologian Yaḡyā b. Zakariyya al-Kātib al-Tabarānī in his controversy with al-Masʿūdī (*al-Tanḡḡ*, 113, 123; for *ʿadḡḡ* read *ʿadḡḡ*). In the 10th century *badā'* seems to have been one of the problems for testing sagacity and shrewdness because of the difficulties it raised which could only be resolved by hair-splitting. This can be inferred from Ḍiʿārdī, *Tarḡḡ* (ed. Pellat, § 74, 189; however see *ibid.*, index, s.v. Rfḡ).

(I. GOLDTIEHER-[A. S. TRITTON])

**BADAJOZ** [see BATAJAWW].

**BADAKHSHĀN**, also frequently written *BADJA-KHSHĀN* and sometimes in the literary language (with the Arabic plural inflection) *BADAKHSHĀN*, a mountainous region situated on the left bank of the upper reaches of the Amū-Daryā or more accurately of the Panḡḡ, the source of this river; the adjective derived from this noun is *badakhshānī* or *Badakhshī*. J. Marquart (*Erinḡḡḡ*, 279) gives this name the meaning of "region of Badakhsh" or *Balakhsh*, a type of ruby, which, it is said, is only found in Badakhshān, on the Kokča. It is more probable, however, that the word *Balakhsh* (whence the French Balais, the English Balas) is a dialectal form which originally denoted the region and which only later came to be used to denote the type of ruby in question. Yāḡḡḡ (i, 528) gives the form *Badakhshān* as the one most popularly used for the name of the region. Marco Polo also gives the same form. The mines from which the rubies were extracted were situated, as is already asserted by Marco Polo, outside Badakhshān proper—in Shughān on the right bank of the Amū-Daryā; during the historical period, however, the country was usually subject to the same power as Badakhshān. The rubies (Ar. *ḡāḡ*, Pers. *ḡāḡ*) of Badakhshān were famous in the Middle Ages throughout the Muslim world. In Persian poetry, the expression "*ḡāḡ-badakhshī*" or "*ḡāḡ-badakhshānī*" often denotes in a figurative sense wine or the lips of the Beloved. In Central Asia, this expression is today in universal popular use. The region which contains the mines in question is at present a dependency of the territory of Buḡḡārā, which is subject to Soviet rule. Nevertheless the mines are worked with the same primitive methods as before, and still have not acquired any importance for the European precious-stone market.

The Kokča or Kōḡḡḡ, called *ḡḡḡḡ* in the *ḡāḡḡ* al-ʿĪlām (written in 372/982-3), a tributary of the Amū-Daryā, waters Badakhshān. From the economic point of view, the valley of the Kokča and its tributaries alone have always played an important part for the region. In this area were situated the towns of Badakhshān—doubtless near the present capital of Fayḡābād—ḡḡḡḡ and Kīḡḡḡ. The last two, which are mentioned in the earliest Arab documents, have preserved their names to this day. The lapis lazuli of Badakhshān, equally famous in the Middle Ages, came from mines situated on the upper reaches of the Kokča. The trade in these gems is at present a monopoly of the Afghan government,

and they are only exported to India. In addition, Badakhshān possesses iron and copper mines.

The first mention of the name of Badakhshān occurs in the Chinese documents of the 7th and 8th centuries A.D., in Hsiao Ch'ang in the form Po-t'o-t'o-sang-na, the ancient pronunciation of which, according to Schlegel, was Pat-to-t'o-sang-na, in T'ang-shu in the form Po-t'o-shan, in the Encyclopaedia *Che-fu-yen-kuei* in the form Po-t'o-shan. The Chinese described the country as forming part of T'uho-lo (Tukhārīstān). The Arabs also gave two meanings to the word Tukhārīstān; in the strict sense, Tukhārīstān was only the region situated between Balgh and Badakhshān, in the wide sense, it comprised all the regions east of Balgh and on both banks of the Āmū-Daryā. The name clearly derives from the Tukhārīans who made their appearance in the 2nd century A.D. and conquered the Graeco-Bactrian empire. In the 5th century A.D., these same territories were occupied by the Haytāl (the Hephthalites of the Byzantines); in Xavē's Anthology, compiled in the 7th/13th century, we find a story which describes how a king of the Haytāl conferred on his son the domain "of Ījir and Badakhshān" (Barthold, *Turkistan*, I, 91). In the 6th century A.D., the Turks put an end to the empire of the Haytāl; at the time of the first Arab incursions the ruler of Tukhārīstān (in the wide sense) here, according to Arabic and Chinese documents, the Turkish title of Yabghū (g.g.) in Arabic *Yabghūyā*; the princes of every country, including also the prince of Badakhshān, were his vassals. We have no precise information on the date of the conquest of Badakhshān by the Arabs and the manner in which Islam was introduced there. Al-Tabarī only mentions the name of the country once. Among the events of the year 118/736, he describes a campaign against "Kishn in the country of *Yabghūyā*" and against more distant places. According to al-Ya'qūbī (*Buldan*, 288), Ījir in Badakhshān was the city which marked the frontier of Islam on the trade route to Tibet via Walghān. In the same passage, a Turkish prince, otherwise unknown, called Khunir Beg (this is the correct form of the name), is described as "king of Shikīn and Badakhshān". Al-Isfahārī (278) describes Badakhshān as the "father" of Abū 'I-Faḥr; it is doubtless a reference to the prince Abū 'I-Faḥr al-Yaḥṭāl, whose son Abū Naṣr, according to San'ānī (*Barthold, Turkistan*, I, 69) and Yāqūt (II, 1023), fought against Kāsar-Tegh, the lieutenant of the Samānids (cf. 340/952-3, cf. Ibn al-Aḥlī, VIII, 137, 370). Apart from these facts, we know nothing of the political situation of Badakhshān during this period. In the 10th/11th century, the post-Nasirī Khuzaw brought Ismā'īlī doctrine to Badakhshān and preached it with success. His tomb on the upper reaches of the Kokcha is still shown today. His teachings have been preserved to this day in Badakhshān and the frontier regions. In the second half of the 6th/12th century, Tukhārīstān in the wide sense (with Badakhshān) came under the rule of a side branch of the house of Ghāz, who resided at Bāmīyān and which, like the other branches of this dynasty, was dispossessed at the beginning of the 7th/13th century by the Khāzīmī-ghāzī Muhammad.

Badakhshān escaped the fury of the Mongol invasion and remained up to the 9th/15th century in the hands of its national dynasty. The legend which traces the descent of its royal family from Alexander the Great was first quoted by Marco Polo,

and is subsequently frequently mentioned by the Muslim historians. Muhammad Haydar (*Ta'riḥ-i Kaḡhāḡi*, trans. E.D. Ross, 203) attributes to the daughter of the last ruler the statement that her ancestors had been kings of Badakhshān for 3,000 years. Timur himself and his successors only succeeded after hard battles in obtaining recognition of their suzerainty, and the country was only annexed to the Timurid empire by Timur's great-grandson, Abū Sa'īd. The last prince, Shāh Sulaym Muhammad Badakhshī, had previously renounced obedience to the ordanates (*Dastūr al-'Amal*) left by Alexander the Great, in order to compose, under the pseudonym of Isfahārī, a Persian history (*Ta'riḥ-i Kaḡhāḡi*, 147). He submitted without resistance to the army sent by Abū Sa'īd, and went to Harāt; his son fled to Kāshghar; Mirzā Abū Bakr, son of Abū Sa'īd, was named prince of Badakhshān. Shortly afterwards, the prince returned from Kāshghar; Abū Bakr was driven out, and Badakhshān had to be conquered afresh. With this subject, Abū Sa'īd had Shāh Sulaym Muhammad executed in 871/1467 (*Dawlatshāh*, 453). It follows from the inscription discovered in 1885 by the British, according to which this Muhammad constructed a stone bridge in 884/1479-80 (*Ta'riḥ-i Kaḡhāḡi*, 221), the date has doubtless been misread. Abū Bakr was later driven out of Badakhshān by his brother Sulaym Mahmūd, prince of Hīr. Up to the conquest of Hīr by the Ōzbegs (beginning of the 16th century), Badakhshān continued to form part of its territory. A national movement arose in Badakhshān against the Ōzbeg conquerors. At the head of this movement were Mubārak Shāh and Zubayr Rīghī. It is said that they took as their base a fortress situated on the left bank of the Kokcha, which still today bears the name of Kal'at-i Zafar ("Victory Fort") given to it by Mubārak Shāh. The Ōzbegs were driven back; the Timurid Nasir Mirzā (brother of Bābur), whose aid had been invoked by the insurgents, was proclaimed ruler of Badakhshān (end 910/February 1505), but, unable to come to terms with the leaders of the rebellion, was driven out two years later. In 913/1507-8, Sulaym Ways Mirzā, son of Sulaym Mahmūd Mirzā, went to Badakhshān with the consent of Bābur and was received at Kal'at-i Zafar. Shāh Mahmūd Shāh had been killed by his comrade Zubayr. The latter, who tried to keep power in his own hands even after the arrival of the new sovereign, was removed by assassination. Shortly afterwards, Shāh Raḡf al-Dīn, leader of the Ismā'īlīs of Kūhetān, made his appearance in Badakhshān, gathered round him the followers of this sect, and subjugated part of the country. However, he was put to death in the spring of 1506, and his head taken to Kal'at-i Zafar and presented to Mirzā Khān. The latter died in 926/1520 on the throne of Badakhshān. Bābur summoned Sulaymān the son of Mirzā Khān, who was still a minor, and replaced him in Badakhshān by his own son Humāyūn. In 935/1528-9, Humāyūn was recalled by his father and sent to India. After an unsuccessful attempt by Sa'īd Khān, ruler of Kāshghar, to seize possession of the country, Sulaymān was recognised as prince of Badakhshān both by Bābur and by Sa'īd Khān (1530). Sulaymān reigned until 983/1575; driven out in the first half of that year by his grandson Shāhruh, he retired to India and thence to Mecca, but later returned to his own country. In 1584, Badakhshān was conquered by the Ōzbegs under 'Abd Allāh Khān. Sulaymān and Shāhruh were forced to flee to India, but

returned later and made several attempts to repel the conquerors. At the beginning of the 17th century there occurred another insurrection, provoked by Badī' al-Zamān, son of Shāhruh. In 1663, the Timurids occupied both Balgh and Badakhshān, but in the autumn of 1669 the two countries were finally ceded to the Ōzbegs.

The Ōzbeg empire in the 17th century was still divided into several independent states. In Badakhshān, a dynasty was set up founded by Yār Beg, who built the town of Fayḍābād. The representatives of this dynasty also, claimed descent from Alexander the Great, a claim which they still maintained in the 19th century. Like the other Ōzbeg princes in present-day Afghanistan, these princes bore the title of Mir, an abbreviation of Amir. In 1812, Mir Muhammad Shāh was dethroned by Murād Beg, ruler of Kunduz. Mirzā Kalān, a dependant of Murād Beg, was despatched as prince of Badakhshān. After the death of his sovereign, he declared himself independent and even became for a time master of Kunduz. His son and successor, Mir Shāh Nizām al-Dīn, died in 1862. The latter's son Dīkhāndār Shāh, born 1862 onwards, continued for his throne with another prince of the same dynasty, Mahmūd Shāh. In 1869, Dīkhāndār was decisively repulsed and, after one last effort, he withdrew in 1872 to Russian territory, and Ūkurgan in Farghāna was allotted to him as his place of residence. An annual pension of 1500 roubles was assigned to him. In 1875, however, he was assassinated at Ūkurgan by unknown assailants. In 1875, the Afghan government deposed Mahmūd Shāh; he was sent to Kābul, where he remained until his death. His territory was annexed to Afghanistan, and formed part of the province of Turkistān.

From 1725 onwards, there are reports in Russia of the rubies and lapis lazuli of Badakhshān and also of its alleged gold and silver mines. In 1725, "the conquest of the rich country of Badakhshān" is mentioned as one of the aims of Russian policy in Central Asia, but Russian penetration only really began after 1876. In 1883, Post Pāmīrskii was founded on the Murghāb, and in 1892-3, after an armed encounter at Yenghī-Kul, the Russians occupied the whole of eastern Pāmīr, which became the "district of Pāmīr" of the region (oblast') of Farghāna, administered by the leader of the Russian military detachment in Pāmīr.

On 13 March 1895, an exchange of notes between the British and the Russians in London delimited the frontiers of Pāmīr between Afghanistan and the principality of Bulghār under Russian protection; Badakhshān proper was left in the hands of the rulers of Afghanistan, while the territories of western Pāmīr lying north and east of the Panj returned to Bulghār.

The revolution of 1918 abolished the principality of Bulghār, but Soviet power did not become firmly established in Pāmīr until 1925, after four years of fighting between the "White" elements and the *komsolets* (g.s.).

#### Autonomous region of Soviet Gorno-Badakhshān.

On 2 January 1925, the two parts of Pāmīr (east and west) were reunited in a "Special Region of Pāmīr", attached administratively to the Central Executive Committee of the Soviet Socialist Republic of Turkistān (founded on 14 October 1924). In December of the same year its name was changed to the Autonomous Region of Gorno-Badakhshān, forming part of the Autonomous Soviet Socialist

Republic of Tadjikistān (which on 5/12/1929 became the Soviet Socialist Republic of Tadjikistān). Its capital is Khirōgh (*Khorog*).

Gorno-Badakhshān comprises all the territory of Soviet Pāmīr; it is bounded in the north by the Trans-Alai chain, in the east by Chinese Sinkiang, in the south by the Afghan possessions and in the west by the Panj and by the Darwāz and Academy chains. Its area is 61,800 sq. km.—In 1931, the Autonomous Region was divided into 7 districts (*human = "zone"*):

1. Shughnān (administrative centre Khirōgh), comprising the Ghund valley.
2. Ishkshim (administrative centre Ishkshim), comprising the upper valley of the Panj and the former territories of Walghān, Ishkshim and Ghāzār, up-stream from the confluence of the Panj and the Shakh-dara.
3. Roghī-Kal'a (administrative centre Roghī-Kal'a) in the Shakh-dara basin.
4. Rōghān (administrative centre Rōghān) in the Panj valley downstream from Khirōgh.
5. Bartang, comprising the basin of the Bartang river and its tributary the Kudara, as far as Lake Samz.
6. Murghāb (administrative centre Murghāb, the former Post Pāmīrskii) comprising the whole of eastern Pāmīr.
7. Wanē (administrative centre Wanē), comprising the Wanē and Yāghulān valleys.

In 1954, the Bartang district was abolished, and its territory incorporated in the Roghān and Wanē districts.

At the beginning of the 20th century, the total population of Pāmīr (Russian and Bulghār) did not exceed 20,000; since 1925, as the result of improved communications and the introduction of new agricultural techniques, it has increased appreciably. At the 1926 census, there were 25,924 inhabitants, and at the 1939 census, 41,769. In 1956 the total population was in the region of 62,000.

Ethnically, Gorno-Badakhshān comprises two quite distinct regions: 1) the high plains of eastern Pāmīr are inhabited by a small number of Kirghiz nomads. In 1926, there were 3,666 belonging to the Kirghiz tribes, made up of the following clans: Kesh, 1,400; Teit, 800; Kipčak, 300; Naiman, 100. In 1939, their number did not exceed 5,000, or about 11% of the total population of the region. These Kirghiz are nominally Sunnis of the Hanafī rite. 2) In the valleys of western Pāmīr live Iranian peoples whom their Tadjik neighbours call "Ghalak", and the Russians "Gornye tadjiki" (an inaccurate term, which causes confusion with the Tadjik of the mountainous regions of Darwāz, Karategin and Zarafshān), or "Pāmīrskii Narod" ("Peoples of the Pāmīr"). The inhabitants themselves call themselves "tadjik", a term which also leads to confusion, and call their neighbours in Darwāz who speak Tadjik, people who speak Persian (*pārsi-gīr*). Their total number is estimated at more than 50,000 or 85% of the total population of the Autonomous Region. They are for the most part Nisārī Ismā'īlīs (g.s.), apart from a small number of the Bartang, the majority of the Yāghulān, and all the Wanē, who are Hanafī Sunnis.

The people of the Pāmīr constitute several groups: 1. The Shughnān-Kirghiz group, numerically the most important (35-40,000 people), comprising: a) the Shughnān (Hugut), numbering 20-30,000, in the districts of Shughnān (g.s.) and Roghī Kal'a (valleys

of the Ghunid, Pandj and Shāh-dara); b) the Rōshān: about 8,000 in the Rōshān district north of the Shughl (Pānj) valley); c) the Bartang: about 2,000 in the Bartang district (valley of the river Bartang); and d) the Oshgūr: 300 (in 1925). These four peoples speak closely-related dialects.

2. *The Wakhj* (Wakhj, Wakhsh) [g.c.], numbering 6-7,000, living in the district of Ishkakhūm situated in the southern part of Soviet Pāmīr, the high valleys of the Pandj and the Wakhsh-Daryā (a similar number of Wakhj live in Afghanistan).

3. *The Yāzghulami* (Yuzdom, Zgamik), whose number does not exceed 2,000, distributed among 13 villages situated in the valley of the river Yāzghulām (Wānē district).

4. *The Ishkakhūm* (Ishkakhūm), numbering 400 in Soviet Badakhshān (1,200-2,000 of their brothers, who speak the Zhabāi and Sangūi dialects, live in Afghanistan), living in one village only, Rym, on the upper Pandj (Ishkakhūm district).

Finally, in the extreme north of the Autonomous Region, in the valley of the river Wānē, live the Wānē, who are completely Tajikised and whose language has not been in use for more than a century.

The peoples of the Pāmīr belong to the eastern Iranian linguistic group; none of the languages is fixed by writing, despite an abortive attempt by the Soviet authorities in 1911 to give the Shughl a Latin alphabet and make it a literary language (in 1913 a Shughl primer for children was published in Stalinalā (A. Djakov). *Xugoni alifba Kudaken*), and in 1936 Tajikistan State Publications published the first works in Shughl: cf. *Revoliutsia i Nazionalizmi*, No. 4/1936, 92).

Tajikī is the language of civilisation (administration, courts, schools, the Press), and biluzghulām (local dialect of Tajikī) is general. Some languages, such as Ishkakhūm, are fast disappearing and only survive as 'domestic languages'; others (Bartang, Rōshān, ...) are strongly Tajikised; on the other hand Yāzghulām, which is extremely isolated, and Wakhj are putting up a more effective resistance.

In 1934, Gorno-Badakhshān possessed seven newspapers; two of these were regional organs appearing at Kāhōrgh: *Krasnyi Badakhshān* (in Russian) and *Kāhōrgh* (in Tajikī); four were local papers in Tajikī, namely the *Rōshān-i Surkh* (at Rōshān); *Jahān-i Wānē* (at Wānē) and the *Dayrāz-i Surkh* and a Kirghiz paper at Murgūb.

Tajikī influence was also exerted through teaching. In 1934, there were in the region some 200 schools, of which 11 were secondary (decennial) schools, and a teaching institute at Kāhōrgh with a total of 12,000 pupils.

Formerly extremely isolated, Gorno-Badakhshān has since 1924 been connected with the Farghāna valley by a motor road (the Osh-Murgūb-Kāhōrgh road, 740 km. in length), completed in 1920 by the Kāhōrgh-Stalinalā road which follows the Pandj valley. The economy of the region nevertheless is still of a traditional type: nomadic stock-breeding (ovine, caprine), terrace horticulture, and silk production in the western part of the region. The country is rich in deposits, some of which have been exploited for a very long time: lapis lazuli and malachite in the Shāh-dara valley, precious stones, gold and copper (near Porshin).

The capital of the region, Kāhōrgh (927 inhabitants in 1926, 2-3,000 in 1954) has a few small industrial undertakings.

*Bibliography*: Cf. especially *Ta'rikh-i Rōshān*, trans. E. D. Ross, ed. N. Elias, London 1893; and *Bihār-nāma*, ed. Beveridge, in *Gibb Memorial Series* I, London and Leiden 1905; the passages dealing with Badakhshān are indicated in the index. Of the MS. works, the *Ma'ālī al-Salāyān* of 'Abd al-Razzāk al-Samarikandī [g.c.], is especially useful. On the Ghūrid empire, cf. *The Tabakhī Nāsi* of Abo-ʿOmār ... al-Jawāhidī, Calcutta 1864; Raverty, *The Tabakhī Nāsi*, London 1881. Information concerning the regions situated on the upper reaches of the Oxus in the 19th century has been collected with the greatest care, based on the accounts of English travellers, by J. Minajew, *Sopredelnaja o granicah to vershokom Amu Daryi*, St. Petersburg 1879. Barthold was in addition able to consult the narratives of two Russian travellers of the year 1878, which are not generally available. On the state of these regions, on the eve of the Revolution, cf. especially Count A. Bobrinski, *Gortay vershokom Pāmīra*, Moscow 1908, partly based on R. Leitner, *Duridan* in 1866, (1889 and 1891), and idem, *Excursion in 1866*, (1889 and 1891). Academy of the sciences of the Tajik SSR published an excellent work by A. M. Mandel'shtam: *Materyal k istoriko-geograficheskomu opisu Pāmīra i pripiamirskoi oblasti*, Stalinalā 1937 (vol. III of the proceedings of the Inst. of hist., arch. and ethnology of the Acad. Sci. Tajik SSR), containing the descriptions of the Pāmīr by Greek, Chinese and Arab historians and geographers to the 10th century.

(W. BARTHOLOMÆ [A. HENNINGSEN and H. CARRÉRE-D'ENCAUSSE])

**BADAL** (Turk. *Bedel*: plural *beddeli*), a term used under the Ottoman régime to denote a contribution made by a taxpayer in lieu of his performing some service for the government or furnishing it with some commodity. Certain categories of the sultan's subjects were excused payment of dues and taxes on condition of their discharging such duties. If they failed to fulfil their obligations, however, or if the government forwent its rights in this regard, instead of again becoming liable to original taxation, they were required to make special 'substitute' contributions; and it may have been in description of these that the term *bedel* first came into use.

From the end of the 16th century, when the Ottoman central treasury was frequently short of funds and generally pursued short-sighted policies, harassed *Defterdār*s were often tempted to forgo services or supplies from those bound to render or furnish them—even though these might later have to be bought at equal cost—in order to exact such cash contributions in lieu. By the middle of the 17th century quite half the cash revenues accruing to the *Miri* were obtained from *beddeli* of many different kinds (see the 'budget' of Tarikhundā Ahmed Paşa in the *Ta'rikh-i Kanûnî* of 'Abd al-Rahmān Wefk, i, 227 ff., and the *'Omamîl Ta'rihi* of Ahmed Râsîm, ii, 214 ff., notes). Of these one of the best known, from its being of wide-spread application, was the *bedel-i mûsil*, apparently exacted in lieu of the supplies and accommodation with which, according to an original arrangement, inhabitants of places through which travelling officers and officials passed were obliged to furnish them free. This became so general a contribution that it is linked in some accounts with the *'avârîd* [g.c.].

Two or three other 'old-regime' *bedels* may be mentioned as of particular interest. One is the *bedel-i dîrye* paid by the Hospodars of the Danubian principalities and the republic of Ragusa. This was a contribution assessed in lieu of any service, but of the payment of *dîrye* [g.c.] by the individual Dhimmiis [g.c.] of those territories. A second was called *bedel-i timar*. It was first exacted in 1606/1659—apparently from *timar*-holders who were no longer performing the military duties in return for which they held their fiefs, to the extent of as much as half their revenues, and even if it did not involve any permanent increase was still in force five years later. Another levy on fief-holders was first imposed somewhat later and long continued, viz. the *bedel-i dîrbeli*, which, as its name indicates, was paid by those of them whose revenues exceeded a certain sum, originally 40,000 *akças* a year, in lieu of their maintaining and appearing in the field accompanied by one or more armed and mounted retainers.

Although many ancient usages were abandoned under the new régime of Mahmūd II and his successors, recourse was still had to *bedels* in several connexions during the second half of the 19th century. Thus in 1822/1856 what was later usually referred to as the *bedel-i askerî* was instituted under the name of *'âsme-i sekerye*. By the famous *Kavâ'id* of that year (see art. 'Akan al-Magfir') the Ottoman reformers sought to abolish all legal distinctions between the sultan's Muslim and

his Dhimmi subjects, and to this end both abrogated the collection of *dîrye* from the Dhimmiis and declared them now for the first time liable for military service. In practice, however, the Porte did not wish to employ Dhimmiis as soldiers, any more than the Dhimmiis wished so to be employed themselves; and it was decided that the Dhimmiis should instead pay this *bedel*, which thus became to all intents a substitute for the *dîrye*. At first collected by government agents from individuals, its collection was later delegated, until its abolition in 1907, to the leaders of each religious community concerned.

Two other late contributions of this kind were alike called *bedel-i nahil*, 'cash payment in lieu'. The first was instituted by a decree of 1302/1886, from which date it might be paid by men conscripted by lot for military service by way of exemption either from serving altogether or else from serving more than a shortened term. The sum payable for total exemption was then fixed at 50 Ottoman gold pieces. By another decree of 1332/1914 those paying this *bedel* (vill of the same amount) were obliged to perform six months' service and were then relegated to the reserve. The practice of selling exemption was even continued under the republican régime, a decree of 1346/1927 fixing the payment for a shortened term of service at 600 liras.

The second *bedel-i nahil* was a payment accepted from persons in the provinces who were obliged by law to maintain roads in their area in lieu of this service.

**BADAL** (see *ARDAL* and *MAHW*).

**BADAN** (see *BAIDAN*).

**BADĀHĀYA** (see *BADĀHĀ*).

**BADĀ'ĀN** (Berdā'ān or Badā'āwān), an ancient town, about a mile east of the river Indus, and headquarters of the district of the same name in India, situated in 28° 2' N. and 79° 7' E.; it is variously spelt by native historians as BĒDĀMA'ĀN, BĒDĀ'ĀN and BĀDĀWĀN. Population (1951) was 53,521.

Little authentic is known about the town before the advent of the Muslims towards the end of the 6th/7th century when Koth al-Dīn Aybak [g.c.], the sultan 'ahd of Mu'izz al-Dīn b. Shāh in India, invaded and captured it in 594/1197-8 (Fakhri Madhabir, ed. Ross, 24). Tradition, however, ascribes its fall in 421/1030 to the pseudo-historical figure, Ghāfīr Mas'ūd Sālār [g.c.], said to be a nephew of Mahmūd of Ghazna. Tāj al-Dīn Yildiz, after his defeat by Hūtimsh near Lahore in 612/1215, was sent to Badā'ān as a captive where he died in 628/1230. It served as a military station during the Khaljī period. In 690/1291 Dāhlī al-Dīn Khaljī came to Badā'ān with a large army in order to quell the revolt of Malik Kaḍḍī. Muḥammad b. Tughlakh, however, did not favour the idea of retaining it as an army base. Consequently the refractory tribes all round rose in revolt. First Tughlakh marched down to Badā'ān in 757/1355, crushed the revolt, appointed Kabūl Khān Shīrwānī as the military governor and retired. 'Alā' al-Dīn, the

last king of the Sayyid dynasty, abdicated from the throne of Delhi in 855/1451 (Ahmad Yādgar, *Ta'riḥ-i-Shāhi*, Bibl. I ad. 257, 10) and passed the rest of his life in Badā'ūn where he died in 883/1478.

Under Akbar the town was formed into a *shahr* of the *suba* of Delhi in 964/1556; and a mint was established where only copper-coins were struck. In 979/1571 a great fire broke out, consuming the entire town, in which a large number of the residents perished.

The town lost its importance during the reign of Shāh-jahān when the *shāhirs* of Badā'ūn and Samball were amalgamated under the name of Kātehr with head-quarters at Bareilly. With the decline of the Mughal power the town lapsed to the Rohillas. After the rout of the Rohillas under 'Alī Muhammad Khān, it was possessed by the Nawābs of Awadh in 1192/1778 from whom it was wrested by the British in 1216/1801. During the Mutiny of 1857 the town was seriously disturbed; the central prison was raided and the European quarter burnt. Badā'ūn is the birth-place of the historian 'Abd al-Kādir Badā'ūnī [s.v.] and the famous Indian divine Nizām al-Dīn Awliya' [s.v.]. Raḍī al-Dīn Ḥasan al-Saghānī [s.v.] is also said to have been born here but this statement is debatable. The old town contains several buildings of archaeological interest: the old fort, now in ruins, Masjid Kutbī, the Dīwānī Masjid Shāmī, built by Itimād-ūl-Daulah in 620/1223 and, various other mosques and tombs, including the mausoleum of 'Alī' al-Dīn, the runaway Sayyid king of Delhi.

(A. S. DARMER ANSARI)

**BADĀ'UNĪ**, 'Abd al-Kādir, scholar and historian at the court of Akbar the Mughal. Born at Tōdā (in the old princely state of Dīyāpur) in 947/1540, Badā'ūnī spent his early life at Baswār about 18 miles to the north east of Tōdā, being taken to Samball in 960/1553 to pursue his studies under Shāykh Ḥatīm Samball and Shāykh Abū 'I-Faḍl. In 966/1558-9, Badā'ūnī went with his father Muḥib

Shāh to Āgra and continued his education there under Shāykh Muḥibak Nāgawī, father of Abū 'I-Faḍl and Faydī. He also read Ḥanafī jurisprudence under Kāfī Abū 'I-Ma'ālī. After the death of his father in 969/1562, Badā'ūnī moved to Badā'ūn and thence, in 971/1565-6 to Pāṭiyā where he entered the service of Husayn Khān as the latter's *adeb*. In 971 remained with Husayn Khān for 9 years, moving with him to Lucknow and Glat u Gōla. In 981/1574 they quarrelled and parted. During the intervening years Badā'ūnī continued his religious education by visiting such saints as Shāykh Nizām al-Dīn of Amethī, Shāykh Aban of Aumraha, Shāykh Allāh Badā'ūlī of Garmucsar and Shāykh Muḥammad Iḥṣān of Sūkandara.

In 981/1574 Badā'ūnī was presented to Akbar through the good offices of Djalāl al-Dīn Kūrchī a *manushīr* of 500 and Ḥakīm 'Ayn al-Mulk a court physician. Impressed by Badā'ūnī's ability as a controversialist, in 982/1574-5 Akbar appointed him an imām and ordered him to bring horses to the brand as a *manushīr* of 20. Badā'ūnī's failure to match Abū 'I-Faḍl's efforts in this sphere, the latter had come to court about the same time as Badā'ūnī embittered him and led him to accept a *madad-i mu'āḥ* of 1,000 *higāḥ*s (originally at Baswār but transferred in 997/1588-9 to Badā'ūn). Badā'ūnī's failure after this error of judgment to gain the preferment he considered he deserved, undoubtedly influenced his view of events at Akbar's court and derived from the religious activities in which Abū 'I-Faḍl was prominent. For absconding himself from attendance on Akbar, Badā'ūnī nearly forfeited his grant, being saved largely by the good offices of Khwāja Nizām al-Dīn Ahmad, author of the *Tahabāt-i Akbari*, whom he had met at Āgra in 967/1559. Akbar continued however to employ Badā'ūnī on literary work from 982/1574 onwards. His date of death is variously given, (see Storey, I, 437) but as Storey points out (ib. 1390)/1624/1625 must be nearest to the truth, if the reference to the death of "Zuhūrī" and "Malik" Kumūlī is not a later insertion in the notice of "Zuhūrī" in the *Muntakhab al-Ta'wārīkh*, ib. 269.

Badā'ūnī's literary work comprised: (1) *Kutb al-Hadīth*, now lost, a collection of 40 traditions on the merits of wearing holy war, presented to Akbar in 986/1574; (2) *Nāma-yi Khayr-at-tā*, a translation of the *Song's hāsan battāl*, a collection of 32 tales about Rājā Bīkramādīti of Māwa, ordered by Akbar in 982/1574; (3) *Ruzm-nāma*, a translation of the *Mahabharata*, undertaken at Akbar's request in 990/1582; (4) A translation of the *Rāmāyana* begun at Akbar's command in 992/1584 and submitted to him in 997/1589; (5) *Part of Ta'riḥ-i Aḥlī*, a general history of Islam down to the thousandth year, commissioned by Akbar in 993/1585 the first two volumes of which were revised by Badā'ūnī in 1000/1591-2; (6) *Nadīāt al-Raḥīd*, a work on Sūfism, ethics and the Mahdawi movement of Badā'ūnī's day; (7) A rewriting and abridgement of a translation by Muḥib Shāh Muḥammad Shāhīdī of a history of Kashmir probably the *Kāḡa-karṣan*; (8) A part of a translation into Persian of Yāqūt's *Ma'āḥ al-Buldān*; (9) A translation in epitome of Raḥīd al-Bīdān's *Qimāt al-Ta'wārīkh*, requested by Akbar in 1000/1591-2; (10) The completion of *Diwān al-Aḥmad*, a translation into Persian of a Sanskrit tale, apparently the *Kāḡaḥarī-sūtra*, made earlier for Sultān Zayn al-Aḥmad of Kaḡmīr. Akbar ordered this task in 1003/1595; (11) *Muntakhab al-Ta'wārīkh*, a general history of the Muslims in Hindūstān from

Subāktiga to 1004/1593-6, commenced in 999/1590, followed by biographies of shāykh's, scholars, physicians and poets. Until 1002/1593, the *Muntakhab al-Ta'wārīkh* is based largely on Khwāja Nizām al-Dīn Ahmad's *Tahabāt-i Akbari*, with characteristic asides by Badā'ūnī. The work is noted for its hostile comments on Akbar's religious activities. Its existence was apparently kept secret until at least the tenth year of Djalālud-dīn's reign, (Muḥib 'Abd al-Bāḡī Naḥāwādī, author of *Ma'āḥir-i Rahīmī*, did not know of it when he completed his work in 1025/1616). According to the *Mīr'at al-Ālam*, by Shāykh Muḥammad Bakā Sabāḥanpūrī, composed in 1087/1667, Badā'ūnī's children asserted to Djalālud-dīn that they did not know of the existence of the work (*British Museum Add. MS. 7557*, folio 452 a-b). Badā'ūnī himself hints at an intention to conceal the work (*M. al-T.*, III, 398).

**BADAWI** [see AHMAD AL-BADAWI and BADW]

**AL-BADAWIYYA** [see AHMAD AL-BADAWI]  
**BADAWLAT**, a title of the chief Ya'qūb-Beg of Kaḡhghar [s.v.].

**BADGHIS** or **BADIGHIS**, a district in the north-western part of modern Afghanistan, in the province of Harāt; the name is explained as being derived from the Persian *bādghī* "a place where the wind rises" on account of the strong winds prevailing there. By the geographers of the 4th/10th century only the district to the north-west of Harāt, between this town and Sarakhs, is called Badghīs. The author of the *Hudūd al-'Ālam*, probably writing from personal knowledge, describes it as a prosperous and pleasant place of three hundred villages. Later the name was extended to the whole country between the Harīrid and the Murghāb; at any rate it is used in this sense as early as the 4th/13th century by Yāqūt. There have never been any cities in Badghīs and its small towns and fortresses have never been of great importance. At the time of the Arab conquests Badghīs became known as *Harāt*. In the present day it is said that Nizak Tarḡhīn the Haytal (q.v.) retreated there after the loss of Harāt. Yāqūt writes of it as *dār mamlakat al-Hayṭīd*, but this can only refer to the very end of the period of Hephthalite power. Even under the Tāhirids and the Sāmānids Badghīs remained a hosted of sedition.

At the present day Kaḡ'āi Naw is regarded as the chief town. The rivers, including the tributaries of the Murghāb, still contain, as a thousand years ago, only small streams of brackish water; for the irrigation of the cultivated fields the people are dependent on wells and rainfall. The soil is noted for its fertility and the pistachio woods mentioned by the Arabs have survived to a certain extent to the present day. Besides these the excellent pastures of the country are famous; Ferrier (1845-6) describes the pastures of Kaḡ'āi Naw as the best in all Asia. The wars between the Persians and the Mongols of Central Asia in 678/1270 arose out of a dispute for the possession of the pasture grounds of Badghīs. The modern population consists mainly of Tāḡīkīs, Djalālīs and Hazāras, tribes of nomadic origin from the surrounding country who bring their flocks for seasonal grazing.

(W. BARTHOLOMEW, F. R. ALLEN)

**BADĪ** is an Arabic adjectival noun which denotes the idea of originality. In the active sense it means Creator or Originator, hence its use as an Attribute of God. In the passive sense it means "discovered" or "invented", and from this, it became a name for the innovations of the 'Abbasid poets in literary figures, and later for trope in general; *'ilm al-badī* was that branch of rhetorical science which dealt with the beautification of literary style. Some 'Abbasid poets of the 2nd/8th century, like Baḡhārī, Muḥsin b. al-Walīd, and al-'Attābī, tended to depart in certain respects from the established ways of the classics and especially in the use of poetical artifices, such as metaphors and similes, on a scale unprecedented in pre-Islamic poetry. Hence, there arose among some 'Abbasid circles of critics, the idea that this art was a *badī*, an innovation or a new creation. The word began to be used in that wide undefined sense in the critical writings of the 3rd/9th century. It occurs in more than one place in the writings of al-Djāhiz; in one of them the author quotes a line of poetry containing a figurative expression and says: "and this is what *revels* call *badī*" (*al-Bayān wa'l-Tabyīn*, Cairo 1948, I, 57, 16, 53). The first author to attempt a treatment of *badī* as a literary art and to define what he took to be its principal categories, was the caliph-poet Ibn al-Mu'tazz (247-296/861-908). In a book entitled *Kutub al-Badī*, Ibn al-Mu'tazz tried to show—by quoting copious examples from the Kur'ān, the Traditions, speeches of Bedouins, and early classical poetry, that what the moderns called *badī* was not a creation of Baḡhārī and his contemporaries. These merely extended the already known art of literary figures in their poetry until it became widely used, and was given the name *badī*. Then came the poet Abī Tamām (d. 231/850) who was very fond of this art and used it extravagantly with varying results. The author treats of *badī* in five principal categories: metaphor, alliteration, antithesis, conformity of ends with beginnings, and order of discourse. Having explained them and quoted illustrative examples of good and bad in each, Ibn al-Mu'tazz points out that *badī* as a term for literary artifices, is known to poets and critics, but that philologists and scholars of ancient poetry do not use the term. He then asserts that nobody before him had treated the art of *badī*, nor anticipated him in his work, which he completed in the year 247/861. He was, however, aware that the artifices of *badī* could be reduced to less, or extended to more than the above five categories. For this reason, and to increase the instructive value of his book, he went on to add twelve more artifices of the embellishment of speech. *Kutub al-Badī* (275-337/888-968), a contemporary of Ibn al-Mu'tazz and the author of probably the first Arabic book bearing the title of *Nahḍ al-Shi'r*, i.e. "The Criticism of Poetry", dealt with twenty qualities of poetical art, including some of Ibn al-Mu'tazz's categories, without mentioning the technical term *badī*. But a century later another critical writer, Abū Ḥillāl al-'Asḡarī (d. 395/1004) carried the development of *badī* a step further by augmenting the number of its categories to thirty-six, making use of the seventeen of Ibn al-Mu'tazz. In his book *K. al-Sin'atayn*, i.e. "The Two Arts (of Prose and Poetry)", perhaps the first systematic

book on the whole field of Arabic rhetoric, al-'Askari devoted a long section to the explanation of *badī* and the enumeration of its kinds and categories. Al-Rumānī (296-386/908-990), a Ma'tazilī rhetorician, considers *balāgha* (g.e.) or eloquence as one of seven directions in which *kur'ānī* *ḥikma* can be seen, and without mentioning *badī*, he includes some of the figures of speech as categories of *balāgha*. But the Sunnite al-Bakillī (d. 403/1013) in his *Fuḥḥ al-Kur'ān*, devotes a long chapter to the *badī* of speech, maintaining that *badī*<sup>2</sup> could help to appreciate, but could not sufficiently explain *ḥikma*. Ibn Rashīd, the author of al-'Umda, "On the Excellencies and Requirements of Poetry", illustrates in his book more than sixty categories under the heading 'The Invented and the *badī*'. Ibn Khaldūn points out that Ibn Rashīd's 'Umda had a great influence in the Muslim West, in North Africa and Spain, where the use of *badī*<sup>2</sup> was highly appreciated and practised. The turning point however in the history of Arabic rhetoric in general, and of *badī*<sup>2</sup> in particular, as a separate science of stylistics came at the hands of al-Sakkāḥī (555-626/1160-1228), who in his book *Miftāḥ al-'Ulūm* built a logical system for the classification of the instrumental sciences of literature, making use in the section on rhetoric of the solid philosophical foundations laid down earlier by 'Abd al-Kāfir al-Djurdjānī (d. 471/1078). From al-Sakkāḥī's time down to the present, books on Arabic rhetoric have revolved round the compact text of his book, its abbreviations and the long and detailed commentaries on those texts. Notable among the epitomisers and the commentators of the *Miftāḥ* were al-Khaṭīb al-Kawfī (666-739/1267-1338) and al-Taftāzī (722-793/1322-1390). This period was characterised in literature by ingenuity in using ornaments of style and by love for the art of *badī*<sup>2</sup>. Some poets of the period delighted in using all kinds of figures of speech in one and the same poem. Such poems, called *badīyya*, were composed by Sa'ī al-Dīn al-Hillī and others. In that period, the sciences of rhetoric were clearly and rigidly delineated. Thus, aspects of literary structure became the domain of the science of *ma'nī* or "Concepts", while figures such as metaphor and simile, having to do with ways of literary expression, were relegated to the science of *bayān* or "Exposition". The artifices of the ornamentation and embellishment of speech remained the instruments and categories of *badī*<sup>2</sup>.

**AL-BADI<sup>2</sup> AL-ASTURLABI**, HIRAT ALLAH B. AL-HUSAYN B. AHMAD (also YUSUF), ABU 'L-KASIM, illustrious Arab scholar, physician, philosopher, astronomer and poet, who distinguished himself particularly for his knowledge and construction of the astrolabe and other astronomical instruments. The date of his birth is not known. In 520/1126-17, we find him at Isfahan in intimate contact with the Christian physician Amin al-Dawla Ibn al-Timnah. Later he lived in Baghdad, where the exercise of his art, so it is said, brought him a considerable fortune under the Caliph al-Mustashhid. According to Abu 'l-Fidā', astronomical observations were made under his direction in 521/1129 in the palace of the Saljuqid sultans at Baghdad. It is probable that the tables of Mahmud composed by him and dedicated to the Sultan Abu 'l-Kasim Mahmud b. Muhammad (1118-31) are the result of these observations. He died at Baghdad in 534/1139-40 and it is said (Abu 'l-Faraj) is the sole source of this tradition) that he was buried in a state of coma. As regards his poetical works, Ibn al-Kifri maintains that they were "beautiful and excellent". Ibn Khaldūn that they reached the limits of lechery and obscenity. Ibn Khaldūn and Ibn Abi Usaybi'a give examples of his best pieces. In addition to a *Diwan* of his own poems, al-Badi<sup>2</sup> al-Asturlabi published a selection of the poems of Ibn Haddadji in one volume, divided into 141 chapters and entitled *Durrat al-Tajid min al-Shi'r*. Ibn Haddadji (Brockelmann, S. I, 130). The praise which the Arab biographers liberally bestow on al-Badi<sup>2</sup> al-Asturlabi, should not lead us to place his merits too high. The historians and biographers of the 7th/13th century possessed too little mathematical and astronomical knowledge to enable them properly to appreciate the really eminent services which the scholars of the 3rd-4th/9th-11th centuries rendered these sciences. They thus frequently fell into the error of extolling to excess the work of scholars closer to them in time, to the detriment of the works which mark the zenith of Arab science. Nowhere are the praises of al-Battānī, Abu 'l-Walid<sup>2</sup> and al-Birūnī sung so eloquently as those of al-Badi<sup>2</sup> al-Asturlabi, though the former are scholars of much greater distinction than the latter.

**BADI<sup>2</sup> AL-DĪN**, surnamed Kutb al-Madār (axis of the Universe) and popularly known as Shāh Madār, is the Methuseleh of Indian hagiological literature and one of the most celebrated saints of India. He is said to have been born at Aleppo in 250/864, and to have been descended from Abū Hurayra (g.e.), one of the companions of the Prophet. The statement in the *Mir'at al-Madār* that he was a Jew and embraced Islam at al-Madina is not supported by other authorities. Like his descent, his date of birth is also controversial, the *Tadhkirat al-Muttahin* gives it as 2 Shawwāl 442/6 Febr. 1057; the *Mir'at al-Madār* has 715/1315, which is most probable. According to the *Kutub al-Arḥa* and *Mir'at*

*Djashnabih* his father Sayyid 'Alī was a descendant of Muhammad al-Bakr (g.e.).

Among his numerous spiritual mentors was Tayfur al-Dīn, a Syrian mystic. He received a good education but was specially well-versed in various occult sciences such as alchemy and natural magic. A widely-travelled person, Shāh Madār performed the pilgrimage to Mecca several times, once in the company of Ashraf Djahingir al-Simnī (g.e.). During his travels he visited al-Madina, Baghdad, Najaf and Kārimayn before sailing for India where he met with a shipwreck. In India he travelled from place to place and ultimately settled at Makanpur, a village 40 miles from Cawnpore, where he died on 1 Rabi' al-Thani, 842/ October, 1440.

In spite of the bitter controversy that *badī* Shāh al-Dīn Dawlatābādī (g.e.) carried on with him, Shāh Madār was held in great esteem by Ibrahim Shāh Sharfī (804/1401-848/1444), the sultan of Djaunpur, patron of the *badī*.

He was a person of great beauty and kept his face veiled for fear that people, dazzled by his appearance, would prostrate themselves before him. To this day his imposing mausoleum built by Ibrahim Sharfī, attracts a very large number of people who, from all parts of India, march to Makanpur, on the occasion of his 'urs, carrying tall bamboos draped with colourful bunting and rags called "Shāh Madār ki Carīyan". Strange and supernatural feats, are ascribed both to the saint and his followers, known as Madāris, who are generally seen performing in the streets and lanes of every city and village in the Indo-Pakistan sub-continent. A Madārī now, in common parlance, has come to mean a street-performer.

**BĀDIS**, a town (now in ruins) and anchorage on the Mediterranean coast of Morocco. It is 68½ m. (170 km.) south-east of Tetuan, between the territory of the Ghunāra (g.e.) and the Rif (g.e.) properly so-called. It is situated on the territory of the Banū Yafūfāt (judg.) near the mouth of a torrent named Talān-Bādīs (omg.) Tālenbādīs. An attempt has been made to identify it with the *Paridina* of the Itinerary of Antoninus; but this ancient place-name could equally well refer to the more sheltered cove of Yalligh (= Iris on our maps) which is only 7 km. to the south-west.

The town of Bādīs and its port formed part of the kingdom of Nukūr, and later of the *Idrid* principality of the Banū 'Umayr, The Almoravids, the Almohads and the Marinids used it as a naval base and devoted their energies to fortifying it.

The author of the *Makad* (end of the 7th/13th century) and especially Leo Africanus (beginning of the 16th/16th century), describe Bādīs as a township of two households. Under the Marīnī Abū Sa'īd (700-3/1310-31), it paid 1000 *dinārs* in taxes, as did Melou and Larache. The port possessed an arsenal where boats and other kinds of galleys were built of cedar-wood from the neighbouring mountains; it was frequented by Venetian merchantmen, and was the terminus of the shortest routes from Fez to the Mediterranean, via the mountain of the Banū Khālid. The population devoted themselves to trade, fishing (sardines) and also to piracy on the coasts of Spain. The governor of the Rif had his residence there; his authority extended over the coastal towns from Yalligh to Wādī Nukūr, and also over certain tribes of the interior: Bukhūya, Banū Manṣūr, Banū Khālid, Banū Yadir.

Less than 100 metres out to sea there were two small rocky islands, the larger of which was called Hadjar Bādīs, the Peñon de Velez of the Spanish. In 1505 the latter, in order to put an end to the activities of the pirates, occupied it and fortified it. In 1520, however, they lost it as the result of treachery. In 1546, the Wattīd sultan Abū Hassān, deposed by his brother, received as an appanage the Rif, with his seat at Bādīs, whence he acquired his surname of al-Bādīlī (g.e.). Abū 'Alī In 1554, he ceded the town and the Peñon to his Turkish allies from Algiers; the latter made it a base for corsairs operating in the region of the Straits of Gibraltar. The Sa'īd sultan 'Abd Allāh al-Ghālīb bi'llāh was alarmed by this activity, and feared that the Turks might use Bādīs as a base from which to undertake the conquest of Morocco. In 1564, he forced the Moroccans to evacuate the town and the Peñon, which he handed over to the Spanish. The Moroccan population retired into the interior, to the *hajra* of Snāda.

The old town of Bādīs is now in ruins. After the Rif war (1927), the Spanish attempted, without much success, to establish nearby a small settlement called *Villa Jordana*. The Peñon still belongs to Spain and constitutes a sovereign territory: Peñon de Velez de la Gomer. The Spanish corruption of the name of the town, Velez, perhaps has its origin in the existence, opposite, on the European coast, of a town called Velez (de) Malaga (Ar. Bāliḡ).

Bādīs in Morocco must not be confused with Bādīs in Algeria, no longer extant, which lay to the south of Aweria (g.).

**BĀDIS B. HABŪS** [see ZIBIDIS OF SPAIN].  
**BĀDIS B. AL-MAṢṢĪR** b. HULWĪN b. ZIĀF, alias **ABU MANAD** BĀDIS NAṢIR AL-DĀWLA, third Zīdī of Ifrīqiya, enthroned on 16 Rabi' I 488/8 April 996. Entrusting eastern Ifrīqiya to a devoted Arab vizier, anir, he set about containing a powerful Zanātan offensive which, from 386/996 onwards, pushed forward from Tūret to Tripoli. In 390/999, he faced the anir of the Maghrawa, Zīf b. 'Atīya, who had as allies Fulḥ b. Sa'īd, chief of the Zanāta, and his own great-uncles. He finally defeated them (397/1000), his triumph being mainly due to his great-uncle Hammād b. Bulukhūn. From 395/1001 onwards, the latter repelled a new Zanātan offensive. From 399 to 406/999-1016, the Zīdī also fought in Tripolitania against Fātimid intervention and against Yāns, Fulḥ b. Sa'īd and Warrā b. Sa'īd. While the Zanātan menace gradually abated in the south-east, in the west he had to suppress the revolt of Hammād, founder of Ka'f in 398/1007-8. In the course of this campaign, which commenced at the end of 405/May 1013, after having won a decisive victory at Chelīf (1 June/1014 406/7 October 1013), but failed to take Ka'f, he had been besieged for six months, Bādis died on 30 Dhu 'l-Ka'da 406/10 May 1016. The creation of the Hammādīd state had begun, and the anti-Shī'ite disturbances at Tunis (406/105-6) portended the break with the Fātimids which occurred under his son and successor al-Mu'izz b. Bādis.

(H. R. LHOÏE)

**AL-BĀDISI**, ethnic adjective referring to the town of Bādis (q.v.), and borne by three notable Moroccan personalities:

1. Abū Ya'qūb Yūsuf al-Zuhaylī al-Bādisī, saint and saviour of the 8th/14th century, who is buried outside the town. The author of the *Makāsīd* (cf. infra, 2) devoted a notice to him. Cf. trans. 146 and 218. Ibn Khaldūn regarded him as the last of the great Moroccan saints (cf. *Prolegomena*, trans. ii, 199; *Histoire des Berbères*, i, 430). Leo Africanus (ed. Schefer, ii, 273; ed. Epaulard, Paris 1956, 274) speaks of his shrine which is still venerated: Sidi Bū Ya'qūb.

2. 'Abd al-Hakk al-Bādisī, still living in 724/1322. He is the author of a collection of the lives of the saints of the Rif entitled *al-Maḥabib al-Sharīf fi Qisṣ al-Shūba' al-Rif*, which has come down to us in two editions which differ appreciably from the point of view of vocabulary; annotated trans. by G. S. Collis in *Archives marocaines*, vol. 26 (1960).

3. 'Alī, son of Muhammad al-Shaykh al-Wattāsī,

His normal kunya was Abū 'l-Ḥasan, but he is known by the hypocoristic name of Abū Ḥassān. His father, while still young, was entrusted with the government of the Rif, with his residence at Bādis, and, when he was deposed, he received the same province as an appanage. He lived there from 1326 to 1349; hence his surname al-Bādisī, and title 'king of Velez' given to him by European chroniclers.

**Bibliography:** See the article WATTĀSIS.

(G. S. COLLIS)

**BĀDIYA** [see Supplement].

**BĀDJ**, the Arabicised form given to the Persian *bāgh* in the Islamic period (al-Sayyid Addī Shīr, *Kitāb al-Adfā' al-Fārisiyya al-Mu'arraba*, Beirut 1908). From the 10th to the 14th century *bādj* is more common; thus it is the usual form in the *Shāh-nāma* (though *bagh* occurs too), and the phrase *bagh-i shah* is not infrequent, while the expression *bādj-i rām* is used there with reference to the tribute and indemnity paid to the victorious Persians by the rulers of the Eastern Roman empire (Fritz Wolff, *Glossar zu Pindus Schahname*, Berlin 1935). The 'ghazawid poet Bahārūn uses *bagh*, whereas the 15th-century poet Rūbā Fighānī uses *bādj* (see Annān Ahmad Rāfi, *Haft Itilāf*, *Dihl*, India, Calcutta 1939, i, 207), and it was in the latter term that the latter entered Turkish. After the Ottoman occupation of the Balkans the word was borrowed by the Bulgars and Serbs (Karl Lokotsch, *Etymolog. Wörterbuch*, Heidelberg 1927), and it is used in Armenian with the same form and meaning (Horn, *Grundriss der Neupersischen Etymologie*, Strassburg 1893, 34).

Asadi, in his dictionary (*Lughat-i Farsi*, ed. P. Horn, Berlin 1894), defines the word simply as *gharāj*. 'Abd al-Kādir Baghdādī (*Abjad al-Digāh*, *Lexicon Sabānīnam*, ed. Salemann, St. Petersburg 1895) explains it as meaning 'customs-dues, tithe, and tax'; the words *bāghān*, *bāghānā* and *bāghār* he explains as 'desiring toll, customs-officer', and *bāghānā* as 'place where customs-dues are levied' (all four words occur in the *Shāh-nāma*). In the Turkish translation of the *Shāh-nāma*, in addition to the meanings 'tithes, tax, customs-dues', it is stated that the word was also applied to money and gifts received by auzars from vassal rulers. In Turkish texts generally, as in Persian, the meaning is 'tax'. The word became current as a fiscal technical term among the Turks, because a number of Turkish states were founded in the Persian area, beginning with the Ghaznavids and Seljuks, and because the Saljuq administration preserved Sāmānid and Ghaznavid traditions. It will also be recalled that Persian was the official language of Asia Minor under both Saljuks and Ilkhanids. A study of the available documents shows that as well as being used for 'tax' in general, the word was applied to various forms of tax. The poet Nāṣir-i Khusrav, describing Aleppo in his *Safat al-Shar* (ed. C. Schefer, Paris 1881, 10), says that it was a *bādjgāh* (i.e., customs-post) between the cities of Syria, Rām, Diyārḥakr, Egypt, and 'Irāk. Naṣir al-Dīn Tūsī, in a *risāla* containing his views on politics and finance, presented to the Ilkhanid Abūkhā (Shāhrukh Yaltkaya, *Ilkhanidleri idari idarete bādjgāhları Nāṣiruddin Tūsīnin fikirleri*, in *Türk İktisadi ve Siyasal Tarih mecm.*, ii, 33; M. Münevver and Y. Münir, *Yeni Türk Tarih-i Milliye*, in *RSOS* 5, 3, 191-2, 765), uses it in the general sense; Yaltkaya translates it as 'customs-dues' in this somewhat ambiguous passage, but as customs-dues had been levied from ancient times it is certain that there would be nothing shameful in a ruler's

exacting them. As the context indicates, and as Münevver rightly shows, the *bādj* here referred to must be the *rāddārī* ('traveller's protection tax') levied in the Ilkhanid dominions in return for maintaining peace and security on caravan-routes and lakes. The historian of the Ilkhanid period, Rashīd al-Dīn (*Tārīkh-i Mubārak-i Ghāzīnī*, ed. Karl Jahn, GMS, London 1940, 280-81), when describing measures taken to safeguard the great caravan routes in Ghāzān's time, speaks of *bādj* taken from travellers at certain specified places, according to a fixed scale. He also uses the word of a tax of one-third, when discussing Ghāzān's agricultural reforms. A century later, the historian Sharaf al-Dīn Yazdī uses *bādj* together with *shah*, *gharāj*, and *ghirya*, i.e., loosely in the sense of 'tax, impost' (*Shāh-nāma*, *Dihl*, India, Calcutta 1888, ii, 378). At the end of that century the historian Khwāndamīr (*Dastūr al-Wazārī*, ed. Sa'īd Nāfī, Tehran 1317/1938-9, 463) mentions *bādj* along with the *tamgha* taken from merchants, *shah*, and *gharāj*, but apparently as a general term only, for he gives no information about its nature. The early Safawid historian Hasan Rūmhū states that some neighbouring tribes had long paid *bādj* to the rulers of Harāt (Akbar al-Tawārīkh, ed. C. N. Seddon, Baroda 1931, i, 337).

To establish the sense of such a word, legislative texts are clearly of more use than historical texts, but the oldest relevant ones, those of the Ak Koyūnlū, have not come down to us in their original forms. Thanks however to the tenacity of tradition, the common in medieval Turkish and Muslim bureaucratic texts, we find Ak Koyūnlū laws surviving, at most slightly altered, in Ottoman *kānūns* (as is expressly stated in the Ottoman fiscal *kānūns* for the eastern Anatolian wilāyets, formerly subject to the Ak Koyūnlū), and in them the word *bādj* occurs frequently (cf. W. Hinz, *Die Steuerwesen Anatoliens* in 15. und 16. Jahrhundert, in *ZDMG*, 1930, 177-201). These laws were first discussed by I. H. Uzunçarsılı (*Osmanlı devleti teşkilatına medallı*, İstanbul 1941, 213, 276, 302), who sets out to explain such expressions as *bādj-i tamgha* and *bādj-i shah*. He states, on the basis of the *Farhang-i Shāhī* and the *Shāh-nāma*, that the *tamgha* was branded on animals and that *bādj* was a tax peculiar to land revenues, and notes that *bādj-i buzurg* was the name of two taxes, one levied on subject rulers and princes, the other on commercial goods in transit and articles brought from village to city. He explains *bādjār* as 'a guardian of roads, taking money from caravans in return for maintaining the security of the roads, in the Ilkhanid period'. But in this he is incorrect: *bādjār* was a tax collector, in the Ilkhanid and Ilkhanid periods, who collected tolls at certain places, according to a tariff fixed by the central government (this tariff is mentioned in Italian sources for oriental trade in the Ilkhanid period: see G. I. Bratiann, *Recherches sur le commerce grec dans la Mer Noire au XIII<sup>e</sup> siècle*, Paris 1929, 184, 186). The 'guardian of roads' was quite distinct; he was the *infādar* (Persian *rāddār*), paid by the central government and under the orders of a senior military commander. At times when the central government was weak, however, lawless men assumed this title and took protection-money arbitrarily from caravans, thus combining the functions of *rāddār* and *bādjār*. The

L. H. Uzunçarsılı's explanation of the term *bādj-i tamgha* and *bādj-i buzurg* is due to his reliance on dictionaries rather than on *kānūns*. It is possible to get a clearer and more accurate picture from a

set of *kānūns* of the Ak Koyūnlū period, published by Ömer Lütfi Barkan (*Osmanlı devrinde Akkoyunlu hükümdarı Usun Hasan Beye ait kanunlar*, in *Türk teshkilatı* i, no. 2, 91-105; no. 3, 184-97). These *kānūns*, termed *yasa* under the influence of the Ilkhanid administrative tradition, relate to the regions of Diyarḥakr, Mardin, Erbil, al-Ruhā ('Ural, Erzinğān, Kharput (Harput), Gernik, and 'Arāblar, and are mainly of the time of Usun Hasan. From a study of them the following facts emerge: *bādj* is generally used for 'tax', as in the expression *bādj-i tamgha*. The meaning of *tamgha* is quite plain; it is the tax levied on all kinds of goods bought and sold in cities, on woven stuffs and slaughtered animals, and is normally referred to as 'black tamgha' (*tamgha-i siyah*). *Bādj-i buzurg* was the customs-duty levied on goods in transit through or imported into the country; such goods, when sold in the market, were also liable to 'stamp duty' (*bādj-i tamgha*). It is expressly stated in the *kānūns* of Erbil that *tamgha* was levied on the buying and selling of immovable property; i.e., the word is here used in the general sense of 'tax'. It is apparent that *bādj* in these *kānūns* is not a technical term.

This observation is confirmed by the use of the word in Ottoman literary texts. Sa'īd al-Dīn uses it in the general sense when he says that the *bādj* and *gharāj* in 14th-century Rūm were not onerous as they were in Persia (*Tārīkh al-Tawārīkh*, i, 214). So too a number of Ottoman poets use it as synonymous with *gharāj* in the phrase *bādj-i w gharāj*. On the other hand, the word is used as a technical term in some historical texts and above all in the early *kānūn-nāmes*. 'Ashīkpashazāde (*Tārīkh* 19; ed. F. Giese, 21), remarking that in the time of 'Oghlūn (*ghāh* *bādj* to the amount of 2 *akās* was levied on every load of goods sold in the market of Karadāghar, explains that this was in the nature of a municipal tax peculiar to large towns; it was in fact identical with the *tamgha* which, as we have seen, was levied under the Ilkhanids and in the various states which carried on their fiscal tradition. In the *kānūn-nāme* of the Conqueror, apart from the non-technical use, we find *bādj* applied to a sales-tax confined to large towns. This *kānūn-nāme* lays down that *bādj* is not levied on immovable property such as land, houses, shops, and mills, but on goods sold in markets; not however on anything sold in villages. It specifies the amount of *bādj* to be levied on the sale of all sorts of goods, including slaves (who in the eyes of Islamic law are movable property), and makes it clear that sometimes only one party is liable to pay, sometimes both. It also prescribes the amount of *bādj*—generally 20%—to be levied on goods from abroad (i.e., from 'Frank' and 'Dobrovnik' = Dubrovnik = Ragusa), but there is a clause which states that this will depend on the terms of contracts made with these countries. The text however is a little doubtful and corrupt, so no positive conclusions can be drawn (F. Kretzitz, *Kanunname Sultan Mehmedin des Eroberers*, in *MGO*, Vienna 1927, i, 26, 30 ff.). But it is safe to say that the reference here is not to customs-duty levied on goods coming across the frontier, for the term *gümruk* occurs in numerous official documents of the period, and customs-duties seem not to be described as *bādj* (idem, *Osmannische Urkunden der Kaiserin Sultane*, Vienna 1922, no. 2, 4). It may therefore be conjectured that when goods entered the Ottoman dominions they paid customs-duty (*gümruk*), and when they were brought to a city and sold, they paid a separate *bādj*.

The word is used in the *hishinnāme* of Sulaymān just as it was during the 15th century; indeed, some paragraphs concerning *bādj* are found unaltered from the *hishinnāme* of the Conqueror (cf. *Kishinnāme-i-Āl-i-ʿOghma*, Supplement to TOEM, Istanbul 1959, 21 ff., with the *hishinnāme* of the Conqueror, 30 ff.), though there are some additional ordinations too. It is clear from these two *hishinnāmes* that *bādj* meant both a specific municipal tax (*shīsh resm*) and 'tax' in general: the latter meaning being seen in such expressions as *bādj-i-bādr*, *bādj-i-aghām*, *bādj-i-tamgha*.

It is still in use among the Turkish people of eastern Turkestan in the general sense (cf. F. Grenard, *Le Turkestan et Le Tibet*, Paris 1868, 361, 265). In the dialects of Kāshghar and Yarkand the meaning is 'customs-duty' (G. Raquet, *Étude-Turki Dictionnaire*, Lund-Lespris 1927, 24, 119).

**Bibliography:** Sources have been shown in the text, in addition to a full study of the word. Osman Nuri, when dealing with the *shīsh* taxes (*Medjellet-i-Umūr-i-Beddiyye*, Istanbul 1922, i, 364-70) confines himself to quoting relevant passages from *ʿĀshikpaṣharāde*, *Neshrī*, the *hishinnāme* of Sulaymān, and another *hishinnāme* of unspecified date. (M. FRAK KÖRÜCÜ.)

**BĀDJ**, the birthplace of Firdawsī, a small village in the vicinity of Tūs. The name is not found in any of the Arab geographers, and is mentioned only by ʿArāḍī-Samarqandī (*Caṣṣir Maḥala*, ed. Mirzā Muḥammad Karīmī, GMS i, 47, 199).

(M. FRAK KÖRÜCÜ.)

**BĀDJA**, a town and district of Muslim Spain, modern Beja in S. Portugal, the classical Pax Julia. The Roman origin of Bādjā is referred to by the geographer al-Rāzī (q.v.), who speaks of its fine wide streets. Abundant honey was obtained there, and its water was specially suitable for tanning (E. Lévi-Provençal, 'La Description de l'Espagne', *Étude d'Al-Andalus*, XVIII, 1953, 87). Bādjā is frequently mentioned from the time of the Arab conquest. When Seville fell, its defenders withdrew to Bādjā, whence they later returned and gained a temporary advantage (*Aḥḥab Maḥmūdā*, 16, 18). Bādjā became an important strategic centre for the Arab *amīr* al-Ḥarawī, against that Maʿbad b. al-ʿAbbās b. Abd al-Malik, the cousin of the Prophet, died there, and that his tomb is to be found in the meadow (*maḥḥab*) of the town. al-Yaʿqūbī, who visited Irīkīya in the 3rd/9th century, tells us that "the population of Bādjā is descended from the soldiers of the old ʿAbbāsids away and from non-Arab autochthonous elements". al-Kalābādhī, quoting an ancient source, notes that the tribe of the Banū Saʿd, among whom the Prophet was brought up, had been scattered across many lands, and that in his own time there only remained a small group of them, who lived at Bādjā in Irīkīya alongside the ʿAbbāsids troops.

Under Aghlabid dominion, the city became the important capital of the whole North-Western district of Tunisia. Powerful officials, belonging to the family of the *zawā*, the Banū Ḥumayr, relations and allies of the andalus, succeeded one another as heads of its government, and strove to preserve it as a rich and lucrative fief; kādīs, chosen from among the most famous jurists of the capital, were nominated to this high office; experienced generals assumed command of the militia and the Aghlabid allies. And there is reason to think that the veterans of this

**BĀDJA** (ancient Vaga; modern orthography: Bēja), important town in Irīkīya, situated about 100 km. west of Tunis. Its population at the present time is nearly 25,000. Resting against the fertile slopes of the valley of the Mēdjēra, it constitutes "the most considerable town of the region, which existed in ancient times and has continued to exist down to our time . . . its strategic position, of supreme importance, on the road from Tunis to Algeria, was constantly emphasised throughout the Muslim period" (R. Brunschwig, *Baḥāfide*, i, 300).

Capital of the province richest in cereal crops, it was for this reason called the "granary (*biṣr*) of Irīkīya", just as it was called *thamā*, throughout the Middle Ages, Bādjat al-Kamh ("Bādjā of the corn") to distinguish it from the other towns, in Africa and Spain, which bore the same name (see below).

The celebrated geographer al-Bakrī gives an exact and detailed description of the town which is still valid today, apart from certain changes in place names which took place at a later date. "Bādjā", he says, "is three days' journey from al-Kayrawān. A large town, encircled by several streets, and built on a high oval-shaped hill named 'Ayn Shams ("the spring of the sun")". This spring still feeds the town and bears the same name. The other important monuments which he mentions are: the ramparts, which were later augmented by a second, exterior wall enclosing new quarters of the town; the citadel (still to-day al-Kasaba) "an ancient building, solidly built of great blocks of stone" (a Byzantine fortress, built by Count Paulus at the time of Justinian, as is indicated by a Latin inscription of that period. It was frequently repaired during the Hafsid, Turkish and Husaynid periods); and the Great Mosque which, "solidly built, has the city walls for its *hība*". The town also possessed "five baths (*hammām*), a large number of caravanserais (*funduq*), and three open spaces (*ribāb*) where food markets were held". The environs of the city were, he says, "full of magnificent gardens watered by streams".

At the time of the siege of Carthage by Hasān b. al-Nuʿmān, about 76/695 part of the Byzantine garrison took refuge at Bādjā and entrenched itself there. After its capture by the above-mentioned Unayyad general, Bādjā subsequently became an important strategic centre for the Arab *amīr* al-Ḥarawī against that Maʿbad b. al-ʿAbbās b. Abd al-Malik, the cousin of the Prophet, died there, and that his tomb is to be found in the meadow (*maḥḥab*) of the town.

al-Yaʿqūbī, who visited Irīkīya in the 3rd/9th century, tells us that "the population of Bādjā is descended from the soldiers of the old ʿAbbāsids away and from non-Arab autochthonous elements". al-Kalābādhī, quoting an ancient source, notes that the tribe of the Banū Saʿd, among whom the Prophet was brought up, had been scattered across many lands, and that in his own time there only remained a small group of them, who lived at Bādjā in Irīkīya alongside the ʿAbbāsids troops.

Under Aghlabid dominion, the city became the important capital of the whole North-Western district of Tunisia. Powerful officials, belonging to the family of the *zawā*, the Banū Ḥumayr, relations and allies of the andalus, succeeded one another as heads of its government, and strove to preserve it as a rich and lucrative fief; kādīs, chosen from among the most famous jurists of the capital, were nominated to this high office; experienced generals assumed command of the militia and the Aghlabid allies. And there is reason to think that the veterans of this

militia, who continued to dwell in this region, gave the name of their tribe, Kudāʾ, to an important commune (*ḥayyā*) of Bādjā, which retains this name to the present day.

During the Fatimid period, the town was sacked, pillaged and partly burnt by the Berber troops of Abū Yaʿzīd (q.v.), "the man with the ass" (i. 335/946). But it quickly recovered its prosperity, by virtue of its agricultural products. At the time of the Hīlālī invasion (5th/11th century), it received groups of the Rīyāhī tribe, which settled in the surrounding countryside, and the town passed successively from the hands of nomad chiefs to the Zirid princes of Bougie (al-Būdjāya). With the advent of the Hafsidis, the town recovered a measure of its former prosperity and frequently served as a refuge for rebels against the government.

During the Turkish period (10th-11th/16th-17th centuries), Bādjā had a garrison of janissaries who left their posterity there. A Husafid mosque was built inside the town. From the time of the Husaynid, Bādjā became once more a large semi-Bedouin agricultural market town, where a governor (*ʿamīl*) represented the authority of the Beys. Certain monuments were built, notably a citadel 1 km. west of the town, called "*Bāde*" after the name of the famous palace of the Beys on the outskirts of Tunis. Bādjā was the birthplace of a number of scholars, jurists, poets, and local historians. Reference will only be made here to the al-Kalābādhī family, which supplied 3th/13th century Tunisia with seven or eight eminent kādīs and jurists, and to Muḥammad al-Saghir b. Yūsuf, who wrote an eye-witness account of the history of the first four Husaynid Beys (from 1705 to 1768 A.D.).

Serres and Lasram, Tunis 1897.

Two other Tunisian centres were also named Bādjā: BĀDJĀT AL-ZAYT ("Bādjā of the oil"), so called in order to distinguish it from its homonymy in the north. It was a town in the district of Kūfa (the ancient Rūspus of the Romans and Byzantines), situated in the heart of the olive-tree forests of the Tunisian Sahel, on the road from Mahdiyya to al-Djān, 15 km. east of the latter centre. The commune (*ḥayyā*) in which it was located still bears the name of Wādī Bādjā (governorate of Mahdiyya). It seems that it prospered up to the time of the Hīlālī invasion, and then declined and completely disappeared during the Hafsid period. Its site, however, with its numerous ruins, notably of a vast hydraulic installation (*fayṣya*), still exists. It is mentioned several times by al-Mālikī and Yāqūt, who quote passages from Ibn Rāḥīk in his anthology of the poets of al-Kayrawān.

**Bibliography:** Mālikī, *Riyāḍ al-Naḥḥ*, ii, 79, 84 (MS. coll. Abd-El-Wahab); Yāqūt, *Cairo* 1382/1966, ii, 25; Saʿādī, *al-Wāḥī bi-ʿI-Wafayāt*, iii, (Zaytūna MS.).

BĀDJA AL-KADIMA ("the ancient"), a hamlet no longer in existence today, but whose ruins are still visible. It was situated near the present-day town of Mannūba north-west of Tunis. It possessed a mosque, a school (*kutāb*), a market and a certain

number of dwellings. Its chief claim to fame was that it was the birth-place of a great Tunisian mystic (*saḥīb*), Abū Saʿīd Khālafa b. Yahyā al-Tamīmī al-Baḥḥī, born in 551/1156, died 6 Shaʿbān 698 June 1237; the pupil of Abū Madyān Shūʿayb of Tlemcen; he was buried in the village of Djābal al-Manīr, and has since become known from Marsea to Carthage as Sayyid Abū Saʿīd (Sidi Bou Said).

**Bibliography:** Abū ʿI-Ḥasan al-Hawārī, *Mandūb Abū Saʿīd al-Baḥḥī* (MS. coll. Abd-El-Wahab) (H. H. ANNET-WAHAB).

**BĀDJĀDDĀ**, in the Arab middle ages, a small strongly fortified town in Mesopotamia, south of Ḥarrān, a short distance east of Bāḥlīḥ, situated on the road to Raʾa al-Ayn, with famous gardens. It is no longer mentioned by the geographers of the 3rd-4th/9th-10th centuries. The Aramaic name (ܒܕܝܬܐ) denotes "house of fortune"; cf. perhaps, an 'Ayn-gaddā = "source of fortune" in the Damascus and the Gadda of the Tabula Peutingeriana in Syria. See thereon Nöldeke in the *ZDMG*, xlii, 441.

**Bibliography:** Yāqūt, i, 453; Bāḥlīḥ, *Farḥ*, 174, 72, where Bāḥlīḥdā, not Bāḥlīḥdā is to be read; Le Strange, 195. (M. STRECK.)

**BĀDJĀLAN**. Both surviving branches of this formerly larger tribe are now settled in Irāk. The main branch occupies the area of Bin Kudā and Kurāt, north of Ḥānākin. An offshoot, known variously as Bādjān, Bādjāw or Bēdjāw, is to be found in the Ḥabāk [q.v.] area on the left bank of the river Tigris opposite Mawṣil. Although the tribe has always been known as a Kurdish one this is only so in the wide sense that all nomads of the Zagros area, including the Gūrān [q.v.] and the Lurs, are considered by their neighbours to be Kurds. In fact, all Bādjālanis appear to speak a dialect of the (Iranian, but not Kurdish) Gūrān language—a pointer, falling evidence to the contrary, to their Germanic origins.

A great number of Bādjālan nomads paid homage to the Ottoman Grand Vizier at Mawṣil in 1039/1630 (Naʿmā, *Taʾrīkh*, s.a.). For a time the tribe gave its name to a *sandjāq*, Bādjāwān, between the two rivers Zab [Bāḥlīḥ] Khālifa, *Dīḥān-namā*, 435). The present Bēdjāw community may stem from this section. According to their own traditions (Rawlinson, in *Journal of the Royal Geographical Society*, 1839, ix, 107; Minorsky, in *KEP*, s.v. *Lah*) part of the tribe retired from the Mawṣil area in the 12th/18th century to Kurāt (Pāḥā Kūh), where it became assimilated to the Lakkī Kurds. Another group had settled in the plain between Gīlān and Kasr-i Shīrīn, the chieftains residing first in Zubāb and, after its decline, in Ḥānākin. Early in this 14th/20th century the two main sections of the Bādjālan were astride the Turco-Persian frontier, the *Djūmūr* in the Zubāb area and the Kāzādī near Bin Kudā. The Persian sections seem since to have concentrated on the Kurāt area.

(D. N. MacKENZIE.)

**AL-BADJĀLĪ**, AL-ḤASAN B. ʿALĪ B. WAKSAND, founder of a sect among the Berbers of Morocco, whose adherents are called Badjālyāya. Al-Bakrī states that he appeared there before Abū ʿAbd Allāh al-Shīrī [q.v.] came to Irīkīya (before 280/893). Al-Badjāli came from Naḥḥ (Nefza) and found many adherents among the Banū La-

mās. His teaching agreed with that of the Rawāfiḍ, but he asserted that the Imāmate belonged only to the descendants of al-Hasan. So al-Bakrī and Ibn Hazm state, in opposition to Ibn Hawkal (ed. de Goeje, 63), who says that he was a Mīṣawī i.e. he recognized the Imāmate of Mālik b. Ḍaʿfar, a descendant of Husayn. The Badjāliyya were afterwards conquered and exterminated by ʿAbd Allāh b. Yāḥyā.

**Bibliography:** Ibn Hazm, *Mihl wa Nihāl*, iv, 183; Bakrī, *Description de l'Afrique Septentrionale* (ed. de Slane), 201; Friedländer, in *JAOS*, 8:316, 72.

**BĀDJARMĀ**, or **BĀDJARMA**, under the ʿAlshidh Caliphate was the name of a district east of the Tigris between the Lesser Zab in the North and the Ḍjabal Hamrin in the South. The chief town in the middle ages was Kirkūk (Syr. Karḡūḥ de Bēth Sliōh). It formed a district of the province of Mosul (cf. Ibn Khuradādhbih, 97, 7). Bādjarmā is an Arabic rendering of the Aramaic Bēth (Be) Garma while Bādjarmak goes back to some Middle Persian form of the name of the district, like Garmakan. The latter word comes from the Gurmān, a nomadic people mentioned in cuneiform inscriptions, the *Ḳarḡarūt* of Ptolemy.

**Bibliography:** Ibn al-Fakḥ, 35, 21379, 51; Ibn Khuradādhbih, 94; Balādhuri, *Futūḥ*, 265, 333; Yāḳūt, i, 454; G. Hoffmann, *Äussere und innere Arabien*, *Äussere Arabien*, Leipzig 1880, 44, 45, 233; M. Streck, *Art. Garama* in *Piedy-Wissowa*, s.v. (where further references are given). (M. Streck.)

**BĀDJARWĀN**, (1) A town and fortress in Mūḥān (Aḡharbāyḍiān) lying S. of the river Aras (Araxes), between Ardabil and Bārdhaʿa in Arrān. Bādjārwa is mentioned several times in the accounts of the Muslim conquest. Its capture by al-ʿAbbāsī b. Kays al-Kinnī seems to have been the signal for the final collapse of resistance throughout the province (Balādhuri, *Futūḥ*, 326). It was occupied by Saʿīd b. ʿAmr al-Harāḡi during his campaign against the Ḳasās in 122/730 (D. M. Dunlop, *History of the Jewish Khazars*, Princeton 1954, 72-74). After the Umayyad period Bādjārwa is seldom mentioned. It is still named by Ḥamd Allāh Muṣṭafī in the 4th/10th century as a stage on the road to the S.W. frontier, though it was then in ruins. (2) A town of Diyār Muḍar in al-Jazīra, near the R. Balḫ, between Hiss Maslama and al-Raḳqa.

**Bibliography:** Le Strange, *IOS*, 175-176, 230-231. (D. M. Dunlop.)

**BĀDJĀWR**, tract of mountainous country in the Dir, Swāt, and Citral agency of the Peshāwar division, West Fikāistān. It is bounded on the north by Dir; on the east by Dir and Swāt; on the south-east and south by the Utmān Khēl and Mamund territories; and on the west by Aḡhānistān. It has an area of about 5,000 square miles and is intersected by five valleys—the Cahārmung, Bābūkara, Watai, Rūd, and Sūr Kanar. In the absence of any census the population has been estimated at 200,000. Bādjāwr is the home of the Tarkānī Pathāns who claim to be akin to the Yāfāns. They are divided into four sections: the Ismāʿīlī, Isāzai, Salazarai, and Mamunds. The Salazarai and Mamunds are also found across the Durand boundary in Aḡhānistān. Like the tribes of Dir, they are Sunnī Muslims but are unusually susceptible to the influence of their mullahs. The Khān of Nawagai claims to be the hereditary chief of all the Bādjāwī tribes. The history of this area is almost inextricably

interwoven with that of Dir and Swāt. The fort of Bādjāwr was taken by Bābur in 1519 (vide A. S. Beveridge, *Bābur-nāma*, 367-73). Akbar's forces were cut to pieces by the Yūsufzais in 1585. In the reign of Aurangzib they constantly attacked the Mughal frontier outposts. They fought against the British in the Ambeyla campaign of 1848/1893 and during the frontier conflagration of 1314/15 1897.

**BADJĪJĀNA**, (Sp. Pechina), ancient Spanish town which is to-day no more than a small country town. The Rio Andara (Wādī Badjījāna), which descends from the southern watershed of the Sierra Nevada, flows through Badjījāna and discharges itself into the sea 60<sup>1</sup>/<sub>2</sub> m. (10 km.) lower down, near the watch-tower (Mārsayāt Badjījāna), the site of the town which, under the sole name of al-Mariyya (Sp. Almería), became the most active and flourishing Mediterranean port in al-Andalus. The groups of sailors settled between Alicante and Aguilas were in the habit of proceeding in the autumn towards the African coast, where they passed the winter, and of returning in the spring to the Peninsula, with huge cargoes; a number of them settled in the North African ports and founded, *inter alia*, the new Tēnes, in 262/875. The canton of Pechina was then occupied by the Arabs of the Yemen, who had been charged by ʿAbd al-Rahmān II with the task of maintaining a *ḥāḍir* to protect the coast against possible attack by the Badjījān [s.v.]; in return, he had granted them possession of the fertile valley of the Andara. Andalusian sailors returning from Tēnes came to terms with these Arabs in order to found a sort of maritime republic, and made Badjījāna the capital of a small state. A large mosque built by the Arabs, and the ramparts erected by the sailors, made it a town which, as a result of the trade of its fleet, which anchored at Almería, rapidly increased in size and prosperity. But after thirty-seven years of semi-independent existence, during which it was threatened by the Arab league at Elvira, it was incorporated in 310/922 in the Umayyad community; it maintained its prosperity during the first half of the 4th/10th century, until ʿAbd al-Rahmān III, in 344/955, made Almería the capital of the region and put in hand important town-planning schemes there. During the reign of al-Hakīm II, the importance of Badjījāna declined still further, and in the 5th/11th century it was no more than a humble village, while Almería became the capital of one of the kingdoms of the *taifas*.

(A. HUCI MIRANDA)  
**AL-BĀDJĪ**, Abu ʿI-Walīd Sulaymān b. Khālaf, a distinguished theologian and literary figure in 11th-century Spain. Born at 429/1028 of a family from Bātalyas (Badajoz) which had emigrated to Bāḍia, modern Beja in S. Portugal (Ibn Bassām, cited Makkarī, *Analectica*, i, 511), he frequented the schools at Cordova, gained some success as a poet and in 426/1035 travelled to the East. He was absent from Spain for 13 years, three of which he spent at Mecca, in the service of the *hāḍir* Abū Ḍharr al-Harawī, who had been educated at Harāt, Balḫ and other places in Khurāsān, and with whom al-Bādjī now studied

Malikī *fiḥḥ* and *ḥadīth*, accompanying him regularly to his home in al-Sarawāt, i.e., the mountainous country between al-Tihāma, Naḍj and al-Yaman. Later al-Bādjī passed to Baghdād, where for another three years he continued his studies, though so poor that he is said to have been obliged to earn his living as a night-watchman. We hear of him also at Maṣūf, where according to one account (Makkarī, i, 507, cf. Ibn Baḡhluwāl, i, 208, no. 449) for a year he applied himself to the recently-invented *ḥalīm* (scholastic theology), at Aleppo and Damascus, and in Egypt. He returned to Spain in or about 439/1047 as poor as when he left it, but with greatly extended views. About this time, at the invitation of the Spanish *ḥāḍir*, he departed to the island of Majorca with the celebrated Ibn Hazm, who in the sequel withdrew into private life and according to Ibn Saʿīd (*Muḡrib*, ed. Cairo 1953, i, 405) had to suffer the burning of his books. Even after his return al-Bādjī worked at a trade (gold-beating). At other times he acted as notary, or as *ḥāḍir* in provincial towns. His gradually rising reputation established itself, and he died a rich man. His relations with the then holders of power, i.e., since the fall of the Umayyad Caliphate the *Mulūk al-Tawāʾif* ('Party Kings'), attracted comment at the time and appear to have been principally due to al-Bādjī's desire to induce them to unite and live at peace among themselves (Makkarī, i, 51). In his proposals to this end, made in person, was the whole body received except at Saragossa (Saragosa) on the N.E. frontier, where the strength of the Christian kingdoms was fully appreciated. Al-Muktadir b. Ḥid of Saragossa (reigned 1046-1081) sent for al-Bādjī, and evidently he remained with al-Muktadir for a considerable time, since it was at Saragossa that his works appeared. Ibn Khāldūn, *Raḍīʿ*, ed. S. al-Harṭī, 215. Al-Bādjī died at Almería in 474/1081, i.e., in the same year as his patron.

If the main political purpose of his life remained unrealised, al-Bādjī was a prolific author of books, including a Commentary (*ḡharī*) on the *Mawṣafī* of Malik, which especially in its short form, entitled *al-Munṣaf*, enjoyed high estimation. Of his other works there have been printed (1) a *Reply* (*Ḍiḡāʾ*) to the so-called *Letter of the Monk of France* (*Kisālāt al-Rāḥī min Ifrānā*), for which see D. M. Dunlop, *A Christian Mission in Muslim Spain in the 11th Century*, in *Al-Andalus*, xvii, 1952, 259-370. The *Reply* shows much dialectical ability, and repeatedly refers to *ḥalīm*. (2) *The Epistle on Definitions* (*Riḍāʾa fī l-ʿUḍūd*), principally in *fiḥḥ* and *ḥadīth*, edited by Ḍjawda Hīl in *Revista del Instituto Español de Estudios Islámicos en Madrid*, (*Sahīfat al-Maʿhad al-Miṣrī*), Vol. II, Madrid 1954, Arabic section, 1-37.

**Bibliography:** Brockelmann, i, 419, and S I, 743-744; M. Asín Palacios, *Abenahmūd de Córdoba*, Madrid 1927, 200-205. (D. M. Dunlop.)

**BADJĪLA**, an Arab tribe, reckoned along with Khāḍḡān as a subdivision of Annām; the *nishā* is Badjālī. Badjīla is sometimes said to be a woman, but her place in the genealogy is vague (cf. F. Wüstenfeld, *Register zu den genealogischen Tabellen*, 101-3; also *Die Chroniken der Stadt Mekka*, Leipzig 1858, i, 134). Some genealogists hold that Badjīla was a Yemenite tribe; others made Annām the son of Nizār b. Maʿād b. ʿAdnān (Ibn Ḥadjar, *Uṣḍ al-Ghāḍa*, i, 279, art. ʿAdnān b. ʿAbd Allāh); Ibn Durayd, ed. Wüstenfeld, 101 f.). The tribe was sometimes taunted with this uncertainty about their ancestry (al-Masʿūdī, *Murūḡ*, vi, 143). Along with Khāḍḡān,

Tamīm, Bakr and ʿAbd al-Kays they raided ʿIrāk under Shāḥrūr II (c. 310-370), but suffered severely when he counter-attacked. In Muhammad's time they were found in a part of the mountain chain of the Sarāt some distance south of Mecca. As a result of feuds with neighbouring tribes and between the clans of Badjīla (such as Alnās, Kaṣr, Zayd b. al-Ghawḥ, ʿUrayna), the tribe became scattered, and many parts of it had to seek protection (*ḡḍār*) from stronger tribes (cf. *Muḡaddalīyāt*, ed. C. J. Lyaal, i, 115 f.). Towards the end of Muhammad's life Ḍjārī b. ʿAbd Allāh al-Badjālī came to him with 120 men professing Islam, and was sent to destroy the idol Ḍlḡu ʿI-Khāḍa at Tabāla, which was worshipped by Badjīla and Khāḍḡān. Ḍjārī performed various other commissions efficiently, and under Abū Bakr and ʿUmar was an important military leader. He and the men of Badjīla who followed him seem to have been independent allies of the caliph for a time, and by treaty with ʿUmar were to receive a quarter of what was captured, and that, presumably of the lands in the Sawād (al-Badjālī, *Futūḥ*, 251, 267), but three years later they were persuaded to give up their lands and to receive instead a stipend. ʿUmar ordered sections of Badjīla which were under the protection (*ḡḍār*) of other tribes to attach themselves to Ḍjārī (*Muḡaddalīyāt*, l.c.; also *Uṣḍ al-Ghāḍa*, l.c.). It is stated that at this time ʿArḍāḡa b. Ḥarḡāna of Bāḡīk, a part of the Ad, though only a half of Badjīla, was its *sayyid*. Khālīd b. ʿAbd Allāh al-Kaṣrī, who was prominent in the later Umayyad period, belonged to Badjīla, though his adversaries questioned this (cf. I. Goldziher, *Muselmanische Studien*, i, 205).

**Bibliography:** in addition to the sources mentioned in the article, A. P. Caussin de Perceval, *Essai sur l'Histoire des Arabes avant l'Islamisme*, Paris 1847; *Aḡḥnā*, xlii 4 f.; *ZDMG* xxii, 667; Faradzak, *Ḍwān* (ed. Boucher and Hell), nos. 82, 256, 279, 644.

(W. MOSTGOCKERY WATT)

**BADJIMIZĀ** or Bagmizā, in the time of the ʿAbbasid Caliphate, was a village north-east of Baghdād, some 8 miles from Baʿḡūḍa, where the caliph al-Muḡtāḍī bi-Amr Allāh put to flight the troops of the Salḡūḡ Sultan Muhammad II under Alp Ḳuḡh Kīnī Ḳhar in 549/1154.

**Bibliography:** Yāḳūt, i, 497, 706; Ibn al-Aṭhīr, xi, 129; Houtsma, *Revue*, ii, 237 f. (En.)

**BĀDJISRA**, (D. M. Dunlop) was a small town in ʿIrāk, situated some 10 *farsāḡ* to the north-east of Baghdād and a short distance due south of Baʿḡūḍa on the left bank of the Nahrawān river, which attained the name of Tamārā at its arrival at Bāḡīrā. The town is described by the Arab geographers as being a prosperous and pleasant general centre with many date groves and a considerable population, but it was laid waste in the time of Ibn ʿAbd al-Hakī, author of the *Murūḡ*, who died in 739/1338. The name Bādjīra, which is derived from Syrian, means 'house of the bridge' i.e. the location of the bridge.

The modern village named 'Abū Ḍjārī', however, is not the same town. Apparently, the name of this village is inferred from the ancient nomenclature of Bādjīla. Modern Abū Ḍjārī is one of the larger villages in the Mikdādīyya (*Shāhrasān*) *ḡḥā* in the Diyālā *līmā* of ʿIrāk. According to the 1947 census, its inhabitants totalled 768 in number.

There are various references to Bādjīra in the histories. It is mentioned by Ibn al-Aṭhīr in the

annals of the years 68/688, 334/945-6, 439/1047, 488/1095 and 496/1102-3. During the last three of these, the town was subjected to plundering. In the annals of the year 597/1201, Ibn al-Saʿī mentions the death of Muḥib, an attendant of the daughter of the ʿAbīd al-Qāsim al-Mustandjīd, al-Firāḍiyya, who was the administrator of the prefecture of Badjīra. Badjīra is the birth place of a number of poets and men of letters, and some of them are mentioned by Yāqūt.

(G. AWAD)

**BADJKAM** (Abu ʿI-Husayn), properly *ḥakīm* (an Iranian word which passed into Turkish, meaning the tail of a horse or yak, see Denonstein in *Jd*, 1948, 193), name of a Turkish amir who was initially a *ghulām* in the service of Mākin and subsequently in that of another Daylamite, Mardāwī, master of Gilān, Tabaristān and the Dībāl. When Mardāwī's Turkish *ghulāms*, provoked by his bullying, killed their master in 323/935, Badjkam placed himself at their head and fled with them. After offering his services to Ḥasan b. Ḥārūn, the ephemeral governor of the Dībāl appointed by the *waṣī* Ibn Muḥla, he directed his steps towards Baghdād, in the expectation of being taken into the Caliph's army. He was rejected, however, owing to the jealousy of the Hudjār guards. Ibn Rāʾik, who was then governor of Wasīt and Basra, took him into his service with his Turkic, and he was henceforth called Badjkam Rāʾikī. He became the leader of a large band consisting of his *ghulāms* and other Turks and Daylamis who came from the Dībāl at his summons.

When, at the end of 324/beginning of November 936, Ibn Rāʾik was appointed by the Caliph al-Rāḍī to the office of *amir al-umarrāʾ*, Badjkam became his chief lieutenant both in his struggle against the un disciplined guards of the Caliph, Saʿīd and Hudjār, and against the ambitious governor of al-Aḥwāt (Ḥūstān), Abū ʿAbd Allāh al-Barīdī. Upon his arrival in Baghdād, Ibn Rāʾik at once proceeded to take rigorous measures against the *Sāḍīs*; then at the beginning of 325/end of November 936, having gone down to Wasīt with the Caliph, with the effective help of Badjkam he rid himself of the Hudjār who had accompanied the Caliph. Badjkam and Ibn Rāʾik then returned to Baghdād where Badjkam was appointed Prefect of Police and governor of the Eastern provinces (February 937). Ibn Rāʾik had been unable to come to terms with al-Barīdī, whose aim was to seize Lower ʿIrāk and then to take the place of the *amir al-umarrāʾ*, and it was therefore decided to institute military operations against him. Though Ibn Rāʾik suffered defeat and was unable to prevent al-Barīdī's entering Basra, Badjkam enjoyed greater success; after two brilliant victories over al-Barīdī's troops, who considerably outnumbered his own, he took the whole of Ḥūstān and al-Barīdī was obliged to flee to Basra. Then, recalled by Ibn Rāʾik, he rejoined the latter on the Basran front where they were both nearly taken prisoner. Al-Barīdī,

however, had gone to Fārs to ask the help of the Būyid ʿAlī (ʿImād al-Dawla), who sent his brother Ahmad (Muʿizz al-Dawla) to recover Ḥūstān. At the request of Ibn Rāʾik, Badjkam agreed to return thither, provided he might enjoy full sovereignty there. However fortune changed and he had to retreat before the Būyid and return to Wasīt, whilst Ibn Rāʾik left for Baghdād to find the money required by Badjkam to pay his troops (326/beginning 938). Badjkam remained at Wasīt, without attempting to recover Ḥūstān from the Būyid, as was Ibn Rāʾik's wish.

Henceforth it was Badjkam's idea to revolt against Ibn Rāʾik in his place. Perturbed by developments, Ibn Rāʾik had just become reconciled with al-Barīdī. So as to detach the latter from Ibn Rāʾik and make sure of his support, Badjkam now promised that once he became master of the capital, he would give him the governorship of Wasīt which, shortly before, al-Barīdī had unsuccessfully attempted to take from Badjkam by force. An agreement to this effect was concluded. Moreover the former *waṣī* Ibn Muḥla, wishing to revenge himself on Ibn Rāʾik, who had confiscated his property, started to correspond with Badjkam, encouraging him in his resolve, and recommended him to the Caliph al-Rāḍī as a successor to Ibn Rāʾik. Al-Rāḍī adopted Ibn Muḥla's views and secretly encouraged Badjkam, as can be seen from an account given by the historian al-Sūlī, a confidant of the Caliph and of Badjkam (42-44, trans. I, 89-90), though he nevertheless handed Ibn Muḥla over to Ibn Rāʾik. In ʿUlū ʿI-Ḥaʿda 126/September 938, Badjkam, who had marched on the capital on the pretext of coming to ask for the pay for his troops, entered Baghdād, in spite of the efforts of Ibn Rāʾik, who had tried to stop him on the Naḥr Diyālā by flooding it with the waters of the Nabrawān canal and destroying a bridge. At Baghdād, whilst Ibn Rāʾik sought refuge in flight, the Caliph at once appointed Badjkam *amir al-umarrāʾ*.

Badjkam, the *amir al-umarrāʾ*, had to contend with the Hamdanid of Mawṣil, Ḥasan b. ʿAbd Allāh, who was not fulfilling his financial obligations. At the beginning of the year 327/October-November 938, Badjkam marched against him with the Caliph, and entered Mawṣil after having crushed the Hamdanid resistance below the town, but was unable to take Ḥasan, who fled into the Dīzra, where Badjkam pursued him to no avail. Badjkam's troops were unrelentingly harassed at Mawṣil. Thereupon, as Ibn Rāʾik had taken advantage of these circumstances to make a sudden irruption into Baghdād, Badjkam negotiated with the Hamdanid and likewise with Ibn Rāʾik. A treaty was concluded at the end of 938 with the Hamdanid who offered to pay over an initial sum as part of the tribute. Ibn Rāʾik agreed to leave Baghdād and to accept as compensation the governorship of the Turk al-Furāt, the Diyār Mudar, the *ḡimā* of Kinnasir and the *ʿanāḍim* (q.v.). He left Baghdād on the 28th of January 939 and the Caliph and Badjkam returned to the capital at the beginning of February 939.

Badjkam then turned to restore the peace in the Būyids which overshadowed Lower ʿIrāk, and this led to a closer though ephemeral understanding between Badjkam and al-Barīdī. The latter received the governorship of Wasīt and carried out a successful operation against the Būyid in Susiana. He then obtained the office of *waṣī*, but remained at Wasīt, his functions at Baghdād being performed only by a delegate. In 328/939-940, Badjkam married one

of his daughters. The Būyid had not relinquished his ambitions and had obtained the support of another of his brothers, Ḥasan (Rukn al-Dawla), master of the Dībāl. The latter marched on Wasīt and set up his camp on the left bank of the Tigris opposite the town, though he was obliged to withdraw, when the arrival of Badjkam and the Caliph was announced. On the other hand, the army sent against the same Ḥasan in the Dībāl by Badjkam was defeated.

It was not long, however, before dissension arose between Badjkam and al-Barīdī, who did not conceal his intention of becoming *amir al-umarrāʾ* and who was very careful not to support the expedition sent by Badjkam into the Dībāl. At the end of 328/August 940, Badjkam removed him from the office of *waṣī* and decided to carry out an expedition against Wasīt. For some time he had been worried by the behaviour of al-Barīdī and, in July, he abandoned the plan he had formed of going to fight the Būyid in the Dībāl and returned hastily to Baghdād. Then he marched against Wasīt and entered the town abandoned by al-Barīdī. Badjkam remained there until his death. He was, except when the Caliph al-Rāḍī died in Baghdād I, 129/December 940. The Caliph al-Muttaḥī confirmed him in the office of *amir al-umarrāʾ*. In April 941, Badjkam left Wasīt at the request of his lieutenants, who were operating against the forces of al-Barīdī in the region of Maḡḡār to the south-east of Wasīt, and who had suffered a reverse. It was his intention to join them, but upon arriving at Baghdād, he received the news that al-Barīdī had been defeated. He decided to go back. On the way, whilst hunting, he met a party of Kurdish brigands, whom he engaged in combat. He received a blow from the lance of a Kurd who struck him from behind, and died on the 21 Rajab 329/21 April 941.

Badjkam, the Turkish slave, had received his training at the hands of Mākin, to whom he was always very grateful. He understood Arabic, though he hesitated to speak it for fear of making mistakes, and employed an interpreter. He was, however, respected by men of letters, and enjoyed the company of men like al-Sūlī and the physician Sinān b. ʿIḥābī, who have left us invaluable recollections of him and to whom he granted generous pensions. Covetous of power and money, he did not hesitate to resort to intimidation and ruse, corruption and torture to attain his ends; he was at times cruel, though his bravery was legendary, and was more upright in character than Ibn Rāʾik; so it was that the Caliph al-Rāḍī preferred him to Ibn Rāʾik. He was attentive to the well-being of his subjects and had gained the affection of the people of Wasīt, though those of Baghdād held him of less account. He founded a guest-house (*ḍār ḡiyāf*) at Wasīt at a time of famine and a hospital at Baghdād. He offered the Karmīta large sums of money to restore the Black Stone to Mecca, but without success. At the request of the Shīʿīs he had the mosque of Barāḥa, which had been destroyed on al-Mukladī's order, rebuilt. From the time he spent in Iranian lands, he retained the custom of celebrating the Iranian feasts such as the Saʿjshak and the Nawrīz. On the coins struck in his effigy, see al-Masʿūdī, *Murūḡ*, viii, 341.

**BADRŪ** (or BAYDŪR), ISRAHĪM b. MUHAMMAD, a Shāfiʿī scholar and author. Born in 1198/1783 in Badrū, a village in the Mandūṣiyya province of Egypt (ʿAlī Paṣhā Muḥarrak, *al-Qayṣ* *al-Dīdāda*, Bilāḥ 1306, ix, 2), he studied at al-Azhar, became a very successful teacher there, Rector (1893/1878) in 1263/1846, and died in 1276/1860. The most popular items in his very extensive but wholly derivative literary production are: (1) a *Riḍā* fī ʿIm al-Tawḥīd; (2) *al-Mawḍiḥ al-Ladunniyya*, a commentary on the *K*, al-Shamāʾiʿ of al-Tirmidhī; (3) a gloss on the commentary of Muṣannif on the *Burda* of al-Buḥārī; (4) a gloss on the *Faḥ al-Karīm* of Muḥammad b. al-Kāsim al-Ghazālī, a commentary on the *Taḥrīr* of Maḥkākī of Abū Shuḥrāʾ (transl. by E. Sachau, *Muhammedanisches Recht*, Stuttgart and Berlin 1897; cf. C. Snouck Hurgronje, 367 ff.); (5) a commentary on the *ʿAbida* al-*Ṣughra* of ʿUmm al-Burhān of al-Sanūsī; (6) a gloss on a commentary on the *Diwan* of al-Tawḥīd of Ibrahim b. Ibrahim al-Lāḥi; (7) a gloss on the commentary of al-Shīkhawf on the *Uḡḡāḥ* of al-Rabīʿ, known as Ibn al-Mutakkīna (transl. by J. D. Luciani, *Traité des successions musulmanes*, Paris 1890); (8) a gloss on al-Akhḍār's commentary on his own al-Sulām al-Murawwāḥ; (9) a commentary on the *Kifāyāt* al-ʿAṣim of his teacher al-Faḍlī; (10) a commentary on the *Mawḍiḥ* of al-Dardir; (11) a commentary on *al-Tawḥīd* fī ʿIm al-Tawḥīd by ʿAbd al-Rahmān b. ʿAbd al-Murshid; (12) a gloss on a commentary on the *Farāʾid* al-Fawāʾid fī ʿIṣṣāʾa of al-Laylī al-Samarakānī; (13) a commentary on a versification of the *ʿAdjurrāmiyya* of Abū Adjurrūm.

**Bibliography:** Brockelmann, II, 639; S. II, 741; Sarkis, *Masʿūdī* *al-Murūḡ* *al-ʿAṣim*, Cairo 1928, 307 f.; A. von Kremer, *Asyrien*, Leipzig 1861, II, 322 f.; C. Snouck Hurgronje, *Verspreide Geschriften*, II, Bonn and Leipzig 1923, 367 ff., 415 ff. (Th. W. Juvrölt).

**BADR**, or Badr Hunayn, a small town south-west of Medina, a night's journey from the coast, and at the junction of a road from Medina with the caravan route from Mecca to Syria. It lies in a plain, 5 m. (8 km.) long and 2½ m. (4 km.) broad, surrounded by steep hills and sand-dunes, and was a market centre.

Here occurred on 17 (or 19 or 21) Ramaḍān, 2 A.H. (= 13 or 15 or 17 March, 624) the first great battle of Muḥammad's career. Though there is a wealth of detail in the early sources, it is difficult to give a clear account of the battle and the events which led up to it. It is generally held that the earliest and most reliable version is that contained in a letter from ʿUrwā b. al-Zubayr to the caliph ʿAbd al-Malik (preserved in al-Tabarī, I, 1284 ff.), though even this

has some material which seems to be legendary. Muhammad received information that a rich caravan was returning from Syria to Mecca, by Abū Sulaym b. Harb, chief of the clan of Unayya. He collected a force of slightly over 300 men (about 80 Emigrants, the rest Anṣār), and marched to the neighbourhood of Badr in hopes of intercepting the caravan. Abū Sulaym on his side had sent a request to Mecca for a force to protect the caravan while it traversed the region easily accessible from Medina. Since the Meccans are said to have spent over a week on the way from Mecca to Badr, Abū Sulaym must have sent his request some time beforehand, though the sources assert that he only did so after hearing of Muhammad's preparations.

The Meccan force, commanded by Abū Jahl of the clan of Makhriḡ, consisted of about 950 men from all the clans of Quraysh. Before they reached Badr they received a message from Abū Sulaym to say that, by forced marches along a route closer to the coast than the usual one, he had eluded the Muslims. Abū Jahl, however, despite the disapproval of some senior men and the withdrawal of the contingents from the clans of Zuhra and 'Adī decided to go forward to Badr and make a display of strength. He and his supporters doubtless considered that they were so strong that Muhammad would not venture to attack (cf. Kur'ān viii, 47-49).

Muhammad does not appear to have known of the expedition under Abū Jahl until the evening before the battle when some of his men captured a Meccan water-carrier at the wells of Badr. The camp of the Meccans was still out of sight behind a hill. This fortuitous encounter may have made it easier for Muhammad to persuade all his followers to fight, since in the circumstances it would have been dishonourable to withdraw. On the following morning Muhammad moved quickly and seized the wells, filling all with sand except that nearest the enemy, where he stationed his men. The enemy was thus forced to fight for his water supply willy-nilly. All that can be said of the course of the battle is that there appear to have been some single combats followed by a general melee. What is certain is that the Meccans suffered a catastrophic defeat. Nearly seventy of them were killed (including Abū Jahl and a dozen of their leaders) and nearly seventy taken prisoner and later ransomed for considerable sums; only about fifteen Muslims were killed.

This was a disaster for Mecca, but not a crippling one. The loss of many leading men was grave, but perhaps the most serious aspect was the loss of prestige. To recover prestige it was essential that they should punish Muhammad. For the Muslims it seemed a vindication of their faith, brought about for them by God (cf. Kur'ān viii, 17, 42/43); they believed that He had sent his angels to their assistance viii, 9, 12).

Muhammad spent much time in prayer and received assurances that he would be victorious (vii, 7, 9). The Muslims looked on this as the punishment long foretold for the unbelievers. According to a probable suggestion (R. Bell, *The Origin of Islam in its Christian Environment*, London 1926, 118 ff.; *Introduction to the Qur'ān*, Edinburgh 1953, 136-8), the word *furkân* applied to Badr means 'deliverance from judgement' (cf. Kur'ān, viii, 29, 41/42). The Muslims were thus confirmed in their faith and led to exaggerate their own importance and exaggeration which resulted in a spiritual crisis after the reverse at Uhud (Kur'ān vii, 65/66; contrast 66/67). Muhammad himself from this time onward was in a

much stronger position in Medina. The self-confidence induced in the Muslims by their victory, and the prestige they thus acquired, were factors without which Islam could hardly have developed as it did. Those who had fought at Badr as Muslims—the Badriyyūn—came to be regarded as an aristocracy of merit, and in most versions of the *ḥadīth* of 'Umar are said to have constituted the highest class of Muslims.

Muhammad undertook a second expedition to Badr in Sha'bān or Dhū 'l-Ka'da 4 A.H. (= Jan. or April 626) in accordance with a promise given to Abū Sulaym to be retired from Uhud. Both Muhammad and the Meccans had much larger forces, but there was no fighting, though the Muslims did good trade.

Badr is mentioned by the geographers of Arabia; e.g., Yāqūt, i, 524 f.; al-Balāzī, 121 ff.; al-Mukaddasī, 82 f.; al-Mas'ūdī, 237. The traveller J. L. Burckhardt examined the site with the battle in mind (*Reisen in Arabien*, 1850, 614-16).

**BADR** (Pir), **SHAYKH** BADR AL-DIN BADR I 'ĀLAM, a saint of the Dīnawādiyya order, venerated by the people of Bihar and Bengal. In Bengal he enjoys the reputation of sharing with Pīr Fir of Sonargaon the dominion of the waters. While putting to sea the sailors of Bengal utter the invocation: 'Āllāh, Nābī, Pānī Pīr, Badr, Badr.' Pīr Badr originally belonged to Meerut (in Uttar Pradesh) where his great grandfather, Shaykh Faḥr al-Dīn Zuhd (d. 704/1304) had established a great mystic centre. His grandfather, Shaykh Shihāb al-Dīn Hakīm-gō was killed by Muhammad b. Tughlāk (729-732/1325-1351) for criticism of his religious views. Pīr Badr received his spiritual training at the feet of his father, Faḥr al-Dīn II, and the Suhrawardī saint, Sayyid Djalāl al-Dīn Bukhārī. Shaykh Sharaf al-Dīn Yahyā invited him to Bihar but he reached there after the former's death in 782/1380. He first married into a Hindu family of Bihar and later entered into a matrimonial relationship with the ruling house of Dīnāpur. During his travels in East Bengal he converted a large number of Hindu sailors to Islam. He also helped in the establishment of Muslim power at Sonargaon. He sojourned for sometime in Citta-gong where his *ḥabīb*, in the western quarter of Bakshiḡ Bazar, is regarded as the palladium of the city and is visited by Hindu and Muslim sailors alike. Authority over the seas and rivers is considered a special spiritual attribute of his family. Faḥr al-Dīn Zuhd is reported to have rescued a party from sinking into the river Yamunā. It is said that Pīr Badr reached Citta-gong 'floating on a rock'. He died on 27 Raddjāb 844/22 December 1440 in Bihar where his mausoleum is known as Chott Dargah (the mausoleum of Sharaf al-Dīn Yahyā Maner being known as Bari Dargah).

**BADR** a. **HASANWAYH** [see HASANWAYH, BASŪ].

**BADR** AL-DĀWLĀ [see ARTUKIDĒS].

**BADR** AL-DĪN [see 10<sup>th</sup> LU<sup>2</sup>].

**BADR** AL-DĪN b. **KĀDĪ SAMĀWNA**, eminent Ottoman jurist, Sūfī and rebel. Badr al-Dīn Mahmūd b. Kādī Samāwna was born in 760 A.H./3 Dec. 1358 in Samāwna (which corresponds to the former Greek εἰς Ἀμυρδανον near Adrianople). He was the eldest son of the judge Ghāṣṣ al-Bakrī, who was one of the oldest fighters for the faith of his time, and traced his ancestry back to the Sāldjūks. His mother was Greek, and took the name Melek after her conversion to Islam. Badr al-Dīn spent his youth in Adrianople (which had been conquered in religion 1361). He was taught the basis of Islamic belief and law by his father and, later on, by the jurists Yūsuf and Shāhidī. His subsequent studies took him to Bursa, in the company of his friend Mūsā Celebi, better known as Kādīzāde-i Rūmī, a brilliant mathematician and astronomer. Up to 1381, he studied logic and astronomy in Konya under a certain Fayḍ Allāh. After that, Badr al-Dīn went to Jerusalem, where he worked under the otherwise not so judiciously well known, Ibn al-'Askalānī (not the famous Ibn Ḥajar al-'Askalānī), then he went to Cairo, attracted by the teaching of such famous scholars as Muḥarrahgāh al-Manṭiqī, the physician Ḥādīdī Paṣha, the philosopher and lawyer 'Alī b. Muḥammad al-Sayyid al-Sharīf al-Djurdjānī, and a certain 'Abd al-Lāṭif. In about 1383, Badr al-Dīn went on the pilgrimage to Mecca, and returned to Cairo, the Mamlūk sultan Barḳūk appointed him as tutor to his son Farādī, who was to succeed him. By some fateful chance, Badr al-Dīn met the Sūfī Shaykh Ḥusayn Aḡhālāfī at the Mamlūk court, and under his overpowering influence he (a former opponent of the Sūfīs) himself accepted Sūfism. After some years of monastic life in Cairo, Badr al-Dīn travelled to Tabriz in 1405-6. Possibly attracted by the fame of the Safawīya in Ardabil—and there he came to the notice of Tīmūr Lang, who had just returned from Anatolia and attempted to take Badr al-Dīn with him to Central Asia. This he avoided by fleeing. He became Shaykh of his monastery and successor to Ḥusayn Aḡhālāfī (who had died in the meantime), but as a result of differences with his brethren he decided to leave Cairo and undertake a missionary journey to Asia Minor and Rumelia. He succeeded in gaining the sympathy of the princes of Konya and Germiyan, and also in attracting Ḥāmid b. Mūsā al-Kaysarī, a member of the Safawid order and later teacher of Ḥādīdī Bayram Wall [s.c.]. Following the success of his Sūfī convictions, Badr al-Dīn gradually developed into an open heretic: he propagated the idea of common ownership, and developed in a consistent and daring way the ideas of the heretic Muḥyī al-Dīn b. al-'Arabī [s.c.]. The crowds of impoverished people whom he attracted in Asia Minor must have been considerable. Christians, too, came over to him, and it is said that he was in touch with the Genoese ruler of Chios. Finally, Badr al-Dīn landed again in Adrianople, where he retired for seven years to lead a life of solitude and study. Around 1410, and against his will, he was made military judge by the claimant to the Sultanate, Mūsā, but after the victory of Sultan Mehmed II near Camurlu (1413), he was dismissed from his post and

banished to İznik under rather humiliating circumstances. There he wrote and taught, and Ak Shams al-Dīn [s.c.]—who later became famous as Shaykh al-Bayrāmīya—is said to have been one of his pupils for a short time. It was probably there, too, that he became connected (in ways which are not yet clear) with the communist underground movement of a certain Birkūdjī Muṣṭafā, and a certain Torlak Hū Kemāl, which led to the extensive rebellion in 1416, as whose ideological head Badr al-Dīn appears. Whilst on the one hand the biography of Badr al-Dīn (which was written by his grandson Khālīl) asserts his complete innocence in all these events, the official Ottoman historians, on the other hand, accuse him of active participation—even of leadership in the rebellion. At the time when Birkūdjī Muṣṭafā and Torlak Hū Kemāl started their attack in western Asia Minor (where, to begin with, they had considerable success), Badr al-Dīn left İznik and reached Rumelia with the secret help of the discontented prince of Sinope. After the rebellion of Birkūdjī Muṣṭafā and Torlak Hū Kemāl had been most cruelly suppressed, the revolt in Rumelia also collapsed and Badr al-Dīn was caught by troops of the Sultan and dragged to Serres in Macedonia, where Sultan Mehmed II was fighting the 'false Muṣṭafā' (Dīnme Muṣṭafā [s.c.]). After a somewhat questionable trial, Badr al-Dīn was publicly hanged as a traitor in Serres on 28 Dec. 1416. The rôle played by Badr al-Dīn in this rising is still by no means clear. It is certain, however, that his ideology was in sympathy with it, and that his ideas did have an enduring influence. There is documentary evidence that there were followers of the Badr al-Dīn movement in Rumelia even under Süleymān the Magnificent. After the death of their hero, many of them turned to the now politically active Safawīya, whilst others merged into sundry sects, especially the Bektaşīyya. The most famous of Badr al-Dīn's descendants—beside his three sons Ahmad, Ismā'īl and Muṣṭafā—was his grandson Khālīl (the son of Ismā'īl) who was Badr al-Dīn's biographer.

As a writer, Badr al-Dīn was extremely prolific. He wrote close on 50 extensive works, most of them on matters of law. His most important Sūfī works are the *Wāridāt* and the *Nūr al-Kulūb*.

*Bibliography*: F. Babinger, *Scheich Badr al-Dīn, der Sohn der Richter von Simin* in: *Der Islam*, xi (1921), 1 ff., and the supplements in: *Der Islam*, xvii (1928), 100 ff., and *Beiträge zur Frühgeschichte der Türkenherrschaft in Rumelien* (14th-15th century) *Südosteuropäische Arbeiten* No. 34, Brünn-Munich-Vienna 1944, 80 ff.; M. Babinger 1943); idem, *Zur Geschichte des Dorwetschordens der Bayrāmīyye in Südostthracien* xxv (1956) 217 ff. (concerning the connections between Badr al-Dīn and the Safawīya, Khālīwatīyya and Bayrāmīyya). Further matter in the above-mentioned works.

(H. J. KISSLING)

**BADR** AL-DJAMĀLĪ, a Fātimid commander-in-chief and vizier. The formerly brilliant Fātimid empire was on the verge of downfall when the inopacable Caliph Mustansir (427-87/1036-1094). The Sāldjūks were pressing forward into Syria, in EGYPT

the Turkish slave-guards were fighting with the negro-corps, a seven years' famine was exhausting the resources of the country; all state authority had disappeared in the general struggle; hunger and disease were carrying off the people, licence and violence were destroying all prosperity and appearing as if the Fātimid kingdom must disappear in a chaos of anarchy. Then, on the call of the Caliph, the Syrian general Badr al-Djamālī took command of the government as well as of the army and with great though brutal vigour brought order into affairs again and introduced a second period of splendour to the Fātimid empire.

Badr was an Armenian slave of the Syrian amir Djamāl al-Dawla Ibn 'Amālī, whence his name al-Djamālī. He must have been born about the beginning of the 10th century, for at his death in 487/1094 he was over 80 years old. Even before he became vizier he had made a great name for himself in Syria. He was twice appointed Governor of Damascus, but fell into difficulties each time on account of his stringent measures with the pampered troops. He then became commander-in-chief of 'Akkā and in this capacity had to fight against the troops of Malik-shāh. He had an Armenian bodyguard for himself and the soldiers he commanded were also to be relied on. He took them with him on being summoned by the Caliph in 466/1073 to deliver him out of the hands of the despotic Turkish officials. The latter never suspected the reason of Badr's coming to Egypt, fell into the trap prepared for them and were all murdered in one night. Badr thereby became master of the situation. Now followed his appointment as commander-in-chief or *Amir al-Djuyūsh* (in the popular language *Mir-gūsh*), as chief justice, chief preacher and vizier. The most popular of these titles was the first; the *Djāhal al-Djuyūsh* is still a common appellation of the Mubārakīn commanding Cairo on the spur of which Badr built a mosque, a *maḥallā* in which according to popular belief at the present day the Sidi *Djuyūsh* lies buried. After quieting the capital he re-established order to the east then to the west of the Delta. Alexandria had to be taken by storm. The task of conquering Upper Egypt was also difficult as the Arab tribes had set themselves up as independent there. In Syria he was not so successful. Affairs were mismanaged here, and Damascus fell into the hands of the Salḡūks about the end of the year 468/1076. The Fātimids were never to regain it. In the following year the victorious Salḡūk al-Ju'ni Atsā appeared before Cairo itself, but Badr had time to collect his troops and drive back the Salḡūks. In spite of repeated attempts in the years 471/1079-80, 478/1085-6, and 482/1090-91, he was not successful in regaining Damascus and Syria, and at his death only a few towns in the South of Syria were still in the possession of the Fātimids. His strength in Syria was weakened by unrest constantly breaking out in Egypt, inspired by one of his sons.

Of his activity as a governor we know little, but it is praised on all sides. Under his rule the annual revenue of Egypt from taxation was increased from about 2 to about 3 million dinārs. These large receipts enabled him to put into practice the lessons learned from the Salḡūk invasion. Cairo was invested by him with its second wall, and the three strong city gates which are admired to this day, the Bab Zawīya (Zuwayla), the Bab al-Najr and the Bab al-Futūh, were built.

In Rab' I 487/March-April 1094 Badr's active and successful career came to its close, after he had arranged that his son al-Aḥd al-Shāhshāh (q.v.) should succeed him in all his offices. The Caliph Mustansir, who had then been reigning for 60 years, died a few months later.

**BADR AL-KHARSHANĪ**, amir, probably a native of Kh̲arshān in Cappadocia, sometimes designated (through a factitious genealogy) by the name of Badr al-'Amālī al-'Aḥdī ( Chamberlain to the caliph al-Kh̲alīf and in high favour under al-Rāḡ, he followed the amir al-amār Ibn Rāḡ (q.v.). Canard, *Histoire de la dynastie des Hamdānides*, Algiers 1951, 411-24), when the latter was charged with the government of Djazira and Syria-Palestine. Badr became lieutenant of Ibn Rāḡ, received the governorate of the *djund* of Jordan, and resided at Tiberias (beginning of 380/end of 399); about this time he was extolled by the panegyrist al-Mutanabbī (q.v.). During the conflict between Ibn Rāḡ and the Hamdānī amir of Mawṣil Nāḡir al-Dawla, Badr too returned to 'Irāq, won short-lived favour under the caliph al-Muttakkī, but had to flee as the result of intrigues and take refuge at al-Fusṭāṭ, in Egypt, with Muhammad al-Iḥḡhīdī (q.v.). He died there at the end of 399/444.

**BADRA**, a small town of east-central 'Irāq (43° 55' E, 35° 7' N), near the Persian frontier, with a population of 6000, practically all *Shāḡ* Muslims of mixed Arab and Lurish blood. It is the head-quarters of a *liḡā* (with dependent *subḡa* of Zarbāḡīya) in the *liḡā* of Kūt al-'Amāra. Apart from one new official quarter, Badra shows little modern development, with narrow streets, poor houses, and salty water. Grain cultivation and fruit and date gardens are extensive, and the "Badrāyā" date famous; irrigation is from the Gāllā stream, rising in Persia.

The town has continuity with medieval Bādārāyā (that is, Bayt Darāyā, a tribe-name), which is frequently mentioned in Syriac literature and by the Arab geographers; with Bākusāyā it fell in the district of Bandandīḡa, east of the Nahrawān (q.v.) canal-system and on the borders of *Djūlā* province. It had greater medieval than modern development, with considered a seat of learning, and was the

scene of a settlement by Kh̲usraw I Anūshirwān of captives from northern Syria. Mounds near and in modern Badra represent the older city, which was ruined by floods, pestilence or war.

**BADRKĪĀNĪ**, THURAYYĀ (1883-1938) and DJALĀLAT (1893-1951), sons of Amir Anūl 'Alī, eldest son of Badr-kh̲ān (died 1868), Prince of Bōḡhīn (Djāṡrat Ibn 'Imām) of the 'Aḡḡā family, who fought against the Turks for the independence of Kurdistan (1836-1845). The two brothers, born at Maḡtala (Syria) died, the first in Paris and the second, as the result of an accident, in Damascus. Both devoted their lives to the Kurdish national cause, Thurayyā in the sphere of organisation and political propaganda and Djāḡlat mainly in the cultural field.

Thurayyā, after having obtained the Diploma in Aeronautical Engineering at the University of Constantinople, began to lead a turbulent life, in which is mirrored the history of the national struggle of his people. In 1904 he was found guilty of plotting against the security of Turkey and sent to prison. He spent two and a half years in prison in Constantinople. After the Young Turk *revölüt* of 1908, he returned to Constantinople and started his newspaper "Kurdistan" in Kurdish and Turkish. In 1919, the newspaper was suspended and he was again thrown into prison, and condemned to death for having taken part in the preparation of a military revolt. He was pardoned and in 1920 banished. In 1922, however, he returned to the capital, where he organised a secret Kurdish revolutionary committee. He was condemned to death, and for the third time saw the inside of a prison. He made his escape and finally left Turkey in 1931. During the 1914 war, Thurayyā recommended the publication of his newspaper in Cairo, where he also organised a Committee for the Kurdish independence, which played a rôle in the drawing up of the Treaty of Sèvres (1919-20). As this diplomatic instrument, which envisaged an international Kurdish statute, remained a dead letter, Thurayyā resumed his revolutionary activities after the signing of the Treaty of Lusanne (1923), and in 1927, together with his supporters, he joined the National Kurdish League *Kh̲oybān*, which had just come into being. He returned to Syria in 1929, but in 1930 the year of the great Kurdish revolt in Turkey he was prohibited from living in the territories under French mandate and was obliged to expatriate himself to Paris, where he represented the *Kh̲oybān*. Among other things, the Kurdo-Armenian reconciliation dates from this period, and he found in him a convinced and clever architect. In general terms, Amir Thurayyā was the first Kurdish patriot to conduct a campaign in accordance with a programme and with modern political arguments, both by word of mouth and in print. Several pamphlets by him in various foreign languages are known.

Djāḡlat's career was less eventful than that of Thurayyā. He held a master's degree in Law of the University of Constantinople and completed his studies in Munich. In 1927, he was elected the first

president of the *Kh̲oybān*. In 1930, he took part in an attempted Kurdish rising in Turkey, which he entered with Hāḡḡā Ḥāḡḡā. After the failure of this undertaking he settled in Damascus. There he devoted himself to literary work and from 13 May 1932 to 1935, and again in 1947-48, published the review *Haṡḡḡ* (Summons), in French and Kurdish. (Djāḡlat produced a Kurdish alphabet in Latin characters, which began the work of unification of *Kurmāndjī* Kurdish). Furthermore, the review contributed to the rebirth of the popular literature, sought to reconcile the tribal chiefs and the men of letters, whom the former held in suspicion, and prepared educational material, publishing "booklets" (spelling-books, readers and books on religion); in all 12 appeared. During the last war, Djāḡlat also published the review *Rewāḡ* (Light).

**BĀDĀSĒBĀNĪS**, under the 'Abbasid Caliphate a district south-west of Baghdad, the land south of the Naḡl Sarīḡ, a branch of the Euphrates canal Nahr 'Asā (q.v.). The Sarīḡ separates it from the Katrabbul district; the southern part of the western half of Baghdad (the so-called town of al-Manḡir) as well as the suburb of Karḡī were situated within the bounds of the district of Bādāṡyā; the latter formed, like the district of Katrabbul, a subdivision of the circle of Asṡān al-'Alī.

**BĀDĀSĒBĀNĪS** (Παδασβάνης), minor Caspian dynasty, noteworthy for its longevity (45-106/665-159) as well as for that of its princes, some of whom reigned for 50 years. Its power in Tabaristān (Māzandarān) extended to Rustamdar, Rhyān, Nūr and Kōḡḡūr. Its origins are traced to Gāwḡāra who came from Armenia in the time of Yārdīḡud III, who appointed him governor. He had two sons, who appointed him governor. He had two sons, Gīllān and Tabaristān, established respectively in Dāḡbūya and Bādāṡtān, established respectively in Gīllān and Tabaristān, the former being the eponymous ancestor of the Dāḡbūwand dynasty (40-144/660-701), and the latter that of the Bādāṡbānīs. The history of this latter dynasty is given in an excellent résumé by Rabīno (see ARKASVANT), including a genealogical table with some forty names with numbers indicating their order. There exists, furthermore, a *Tarīḡḡā Kayān* (T.R.) by Masḡūda Awḡḡā Alāḡ al-'Amūl, written for Faḡḡūr al-Dawla Shāḡ Ḥāḡḡā B. Ziyār (died 786/1384) which does not cover the whole of the period of the dynasty as described in Rabīno. On the other hand, it contains abundant details on the internal life of the dynasty, so that these two sources, therefore, admirably complement each other. We learn, for example, that two major revolts took place in Tabaristān against the Arab occupation; one in the time of 'Umar b. al-'Alī, was the joint work of the *ishḡḡḡ* Shahrīn Bāwand and Shahrīyār Bādāṡbān

with Wanda' Hormid of the Sūlāhī clan (T.R., 46); the other broke out in Dīlāh (Cālis) and was savagely repressed (T.R., 52). These times appear to have been provoked by the burden of excessive taxation.

In some cases, for example the revolt of Māyār (a.n.), religious movements have served as a pretext. Shī'ism was only imposed as late as the middle of the 9th/15th century by Kaymārth (no. 36 in Rabūn). The resistance opposed by Iranian national feeling to all foreign usurpation is best evinced in respect of the Rūhāns. Their reign is portrayed as a period of well-being (T.R., 122). Nevertheless, the destruction caused by the Mongols (T.R., 130) and by Tīmūr (Rabūn) is not passed over in silence.

The protection of the Sāldūkhids was sought from time to time: Hazīrān sought that of Toghril, for example (T.R., 103). Khā'arim (T.R., 106, 107), the Saffārīds (T.R., 70) and the Sāmānīds (T.R., 74, 76) are mentioned in various epics, the latter for the most part in connection with the 'Alid Sayyids. As for the internal struggles, which are purely of local interest, the Bādūshānids were sometimes in alliance with their neighbours and sovereigns, the Bāwānd, and at other times were against them. After a number of conflicts with the Buwayhids, a *modus vivendi* was found which maintained the peace (nos. 13, 14 in Rabūn).

The Ismā'īlī heretics (*malāhīdā*), are the object of violent diatribes (T.R., 90), but when needed, their help was sought (T.R., 100, 10). Both the Bāwānd (Shams al-Mulūk) and the Bādūshānids (Shahrāshūb b. Nāwāwar) contributed to their final defeat. The period during which Arabian nomadic life developed and crystallised lay between the time of Jesus and that of Muhammad. Four kinds of nomadism are practised in Arabia. In the Dīlāh al-Kāh, in Ḥīfār, on the Indian Ocean, peoples who speak Semitic languages of the Mahri-Socotran group graze hump-backed cattle on grass provided by the abundant rainfall of the summer monsoon. In cultivated regions of southern Iraq special families of herdsmen raise water-buffaloes, pasturing them in reaped and fallow fields. These people live in semi-cylindrical houses of poles and matting, which they move about seasonally over short distances. On the desert fringes, and particularly in the neighbourhood of Kuwait, whole clans and tribes of shepherds mounted on donkeys drive their sheep and goats from pasture to pasture. Out in the middle of the desert the Bedouin proper herd their camels, migrating to the areas of recent rainfall in winter and spring and remaining near sources of permanent water in summer.

These four kinds of nomadism are dependent on the different physiological needs and capacities of the animals herded. Humped cattle need green grass and daily water, water-buffalo streams or irrigation ditches to wallow in. While sheep and goats can graze on drier vegetation part of the year, they move slowly and cannot be kept more than a day or two from water. Camels can go as long as seventeen days without water in 100° F. heat, and can drink 30 gallons at a time. Their ability to withstand the rigours of the desert are due not only to their capacity for holding water but also to their ability to preserve it: a camel can tolerate an increase up to eleven degrees F. over normal body temperature without much water loss through sweating. They also store energy in the form of fat in their humps. The Arabian horse, when it is kept

herding and sowing complex of Western Asia; the ass, domesticated by early Bronze Age times for transport; and the mare, horse and water buffalo, introduced during historic times.

Hunting peoples living off gazelle, oryx, dex, ostrich, bustard, and quail were probably the desert's sole occupants until about 5,000 B.C. As Neolithic cultivators began to settle the edges of the waste, its seasonal wealth of herbage enticed shepherds and goatherds to lead their flocks out to certain districts during the winter and spring. After the camel had been introduced around 1,100 B.C. full-time nomads found it possible to live out on the desert throughout most of the year, summering at wells or on the edges of oases and perennial streams. With the riding horse, introduced after 500 B.C., and perhaps as late as the time of Christ, Arabian camel nomads acquired an animal from whose back they could fight each other efficiently, and the golden age of Arabian life on the desert could begin.

The enormous number of unexplored archaeological sites in the Arabian desert, the advance of desiccation since the introduction of the camel, and historical references in pre-Islamic literary sources indicate that the Arabian nomads for the most part are descended from farmers, traders, and caravan men who took to pastoralism during the early centuries of this era, as both business and the landscape deteriorated, just as cowboys and pastoralists in the United States, Canada, and Australia are descended from agricultural and urban peoples who took advantage of newly opened territories. The period during which Arabian nomadic life developed and crystallised lay between the time of Jesus and that of Muhammad.

Four kinds of nomadism are practised in Arabia. In the Dīlāh al-Kāh, in Ḥīfār, on the Indian Ocean, peoples who speak Semitic languages of the Mahri-Socotran group graze hump-backed cattle on grass provided by the abundant rainfall of the summer monsoon. In cultivated regions of southern Iraq special families of herdsmen raise water-buffaloes, pasturing them in reaped and fallow fields. These people live in semi-cylindrical houses of poles and matting, which they move about seasonally over short distances. On the desert fringes, and particularly in the neighbourhood of Kuwait, whole clans and tribes of shepherds mounted on donkeys drive their sheep and goats from pasture to pasture. Out in the middle of the desert the Bedouin proper herd their camels, migrating to the areas of recent rainfall in winter and spring and remaining near sources of permanent water in summer.

These four kinds of nomadism are dependent on the different physiological needs and capacities of the animals herded. Humped cattle need green grass and daily water, water-buffalo streams or irrigation ditches to wallow in. While sheep and goats can graze on drier vegetation part of the year, they move slowly and cannot be kept more than a day or two from water. Camels can go as long as seventeen days without water in 100° F. heat, and can drink 30 gallons at a time. Their ability to withstand the rigours of the desert are due not only to their capacity for holding water but also to their ability to preserve it: a camel can tolerate an increase up to eleven degrees F. over normal body temperature without much water loss through sweating. They also store energy in the form of fat in their humps. The Arabian horse, when it is kept

on the desert, is watered on transported water, and fed grain, being treated with the same solicitude as human beings. Sheep, goats, cattle, water-buffaloes, and camels all produce milk. Goat hair is used for tents, sheep and camel wool for clothing. All these animals are eaten, except horses. The horse provides nothing but the kinds of transport directly concerned with warfare and prestige. As social status combined with independence is the most important of all considerations to a desert Arab, the horse is honoured accordingly.

The most ancient dwellers on the desert are the Sulāhā (a.n.), probably descended from early hunters, and representing a phenotypically homogeneous desert-adapted Mediterranean racial strain. In northern Arabia they dwell among the noble Bedouin, whom they serve as guides, tinkers, and workers in wool. At times they also hunt. Their women provide entertainment. Second in probable antiquity are the shepherd tribes, as for example the Shārārāt and the Muntafik confederations. These are in the most part dependent on the camel nomads because of their relative immobility and hence defencelessness. Individuals of these tribes serve the camel nomads as hired herdsmen. Members of the noble tribes own camels, drive and ride them on migrations, and guard and defend them while grazing. In the heat of summer they sometimes pick dates in oases, or even go pearl-fishing.

These tribesmen are also served by blacksmiths, mostly negroid, who come out from the settled places, and by Negro slaves. Shopkeepers from the towns sometimes set up special tents in the Bedouin camps to vend their wares, while travelling agents of large camel-purchasing companies buy up young camels which will be collected upon reaching the desired state of maturity. Much of this business takes place at camel markets like that of Burayda in Najd. Members of the noble tribes often visit the cities of Sa'ūdī Arabia, Jordan, Syria, Iraq and Kuwait where some of them maintain town houses. Many have taken to settled life, and some have risen to high offices in the various Arab countries.

The material culture of the Bedouina is designed around mobility. The black tent of goat-hair is loosely woven, to permit circulation of air, yet its fibres swell when wet to keep out the rain; in summer it provides an area of thick-matted shade, open on the sides to the breeze; in winter, with sides and rear closed it is warm. Except for special tents used only as *diwāns*, or reception halls, it is divided by a curtain into a family section, occupied by women and children, and the guest section in which the head of the household receives his male friends. Kitchen utensils are of metal and wood, but each family usually owns a set of small porcelain coffee cups carefully packed in a compartmented wooden box. Arab clothing, loose and flowing, is warm in winter and cool in summer, as it protects the skin both from the cold and from the hot, dry wind; the man's headcloth, and the woman's headress and veil, also help to keep dust and sand out of the eyes, nose, and ears. Most of the Bedouin's outfit is purchased, including the cotton cloth for his under-clothing, his tools, and his containers. So is much of his food, including wheat, rice, dates and coffee. Only milk and meat are produced locally.

Like other Semites, the Bedouins lay great stock in genealogies, and consider kinship of paramount importance in human relations. The preference for staying being with the father's brother's daughter, descent is patrilineal. Divorce is easy, polygamy both serial

and contemporary. Bedouin women, often unveiled, in many cases married more than one, have more freedom than their sisters of the towns and oases. Beyond the immediate family is a group of kin which usually goes out to pasture together; several such groups will spend the hot season together; this is usually the limit of the kin responsible for mutual vengeance. Beyond this is the tribe, finally the confederation. Among the Bedouin proper, also called 'Arab, two main lineages are recognised, those descended from Kahtān, who lived before Abraham, and the 'Arab al-Musta'ribā, descended from Ishmael, son of Abraham and Hagar, who was daughter of a king of Hīdīz. The Bedouin proper include the 'Anazā confederation, of which the Ruwālā is the best known tribe, the Shammar, the Al Murra in and on the borders of the Empty Quarter, the 'Ujīmān, and the Banū Khālid. All of these tribes follow a strict code of chivalry when fighting one another.

Being mobile camel-owners, these aristocrats are concerned chiefly with the use of winter and spring grazing lands, the locations of which vary from year to year with the whim of the rains. In each camp the work is done mostly by dependents — slaves, Sulāhā, hired herdsmen, and blacksmiths, all of whom are considered non-combatants. A Bedouin *shaykh* entertains lavishly in a large tent where food is always available to his followers and guests. The ritual of coffee drinking is highly formalised and nearly always in progress. Members of other tribes fleeing vengeance seek the protection of his "face". Travellers cross his territory under the protection of his guards. In inter-tribal warfare, which most frequently arises over pasture rights, he will often lead his men into battle in person. Bravery, generosity, and good judgment are the qualities traditional in such a leader, who does not inherit his office directly, but is chosen, often after a sharp contest, from the paramount family. Before trucks, buses, railroads and airplanes took over the desert carrying trade, the Bedouins guided, protected, and raided caravans, including the huge pilgrim processions.

The Bedouins are Muslims, characteristically Sunni. Many (especially in Eastern Arabia) follow the Mālikī code, but in the Wahhābīs universally follow the Hanbalī. The Bedouins generally are said to spend less time and effort in religious devotions than townsmen but the conditions are sometimes reversed. In some of their rituals can be seen a survival of veneration for ancestors.

The political situation of the Bedouins varies from period to period. When the central governments to which the tribal territories are officially assigned are weak, the paramount *Shaykh's* rule virtually as kings, and even cities have paid them tribute. At times when the central governments are strong, their authority becomes purely local. At the present time Bedouins are found within the political boundaries of Sa'ūdī Arabia, Yaman, Aden Protectorate, Maskat, Trucial Oman, Kuwait, Iraq, Syria, Lebanon, Jordan, Israel, Egypt and the North African states. For the most part these governments endeavour to keep their nomads at home. In some countries this effort has been implemented by programmes to settle some of them on newly irrigated land, and new water-tanks along the Tāpine are used by a number of tribes, including the Ruwālā.

Part of one tribe, the Dawāsiir, whose home in southern Najd, moved to the Persian Gulf and onto the island of Bahrayn. In 1923 they crossed

back to the mainland, and settled in al-Bihar and Damnam. During the last three decades some of the Dawāsi, having worked for the Arabian American Oil Company, have set up in businesses of their own, including construction and transportation.

Today the Bedouins are in a state of transition. Some still concern themselves with camel breeding for the meat, skin, and wool markets; others are truckers, machinists, and skilled operators of oil producing machinery, and are sending their children to school and college. They are showing themselves just as adaptable to the machine age as they were to life on the desert when an earlier opportunity called them.

## II. THE HISTORY OF THE ORIGIN OF NOMADISM IN ITS GEOGRAPHICAL ASPECT

- Goat and Sheep Nomadism.
- The Nomad on Horseback.
- Bedouin Nomadism in Arabia.
- The Appearance of Camel Nomadism in North Africa.

### (a) Goat and Sheep Nomadism.

The expressions "nomad" and "nomadism" lose their scientific practicality, if they are not used in their restricted meaning: "roaming from place to place for pasture" (*Concise Oxford Dictionary*). Nomadism is unsettled roaming, pasturing herd animals. Roaming gatherers and hunters as well as a population with a shifting agriculture (*ladang*, *milpa*, see Coon) should not be called nomadic. If we follow the succession of "agricultural origins" of the Old World in C. O. Sauer's conception (1952) taken over and elaborated by the authors in two papers (1956, 1957), nomadism in this restricted sense began much later than planting and breeding "household animals", i.e. dog, pig, and fowl. (Sauer distinguishes between household animals and herd animals).

The still hypothetical sequence of creative centres of domestication and cultivation, according to Sauer's interpretation, began along the river banks and coasts of moist tropical forest round the Bay of Bengal, where a rather sedentary fishing folk, which in addition hunted and collected plants and mussels, began to breed these "household animals" (dog, pig, fowl) and to plant tubers and fruit shrubs and trees. (cf. also E. Hahn, Hettner, Menghin, Werth 1950, 1954, Dittmer, Smolla).

Cultivation of seed plants ("millet")—this is a term including the diverse species of small seed cereals—as well as pulse and oil plants) was then added in the winter-dry forest, which is easily burnt down, and in the wooded steppe, at first in India. These plants supply proteins and oil, making man more independent of animal food, especially of fish. In this progressive succession of cultures, in which man became "the lord of creation", the next step seems to have been the breeding of goats and (then) sheep in the mountain areas north-west of India, round the Hindukush. This was probably incited by a near contact between seed-planters and mountain hunters, among whom the wild goat or sheep was a holy animal. A culture thus resulted in which herding was added to seed-planting and hunting. It may be regarded as a primary stage of

farming, as a goat and sheep farming culture ("Kleinstock-Bauerntum"), if we understand the meaning of farming to be a combination of tilling and herding.

Results of the ethnological expedition of A. Friedrich (Jettmar 1957b) strongly support this hypothesis, especially for the goat. In the remote valleys of the Shin of Gilgit, the *marhor*, the wild goat with screw-shaped horns, and the ibex are holy animals, "herded by goddesses". The domestic goat, an offspring of the wild goat of the same region, pastures in this habitat. The economy of the Shin consisted in a scanty growing of millet, but an intensive breeding of goats and an important hunting of the *marhor* and ibex. Jettmar brings several indications for the thesis that the domestication of the goat took place in these regions. The experience of domestication—of this tremendous intervention in the balance of nature—must have entailed a profound religious emotion. Jettmar calls this a religious shock of domestication (cf. E. Hahn).

The growing of the two-rowed barley (*Hordeum spontaneum*) as the first large seed grain ("Halbgetreide") may have already been developed in that region. Probably in this stage, if not earlier, small-scale irrigation was started.

But only the thesis of the following great step, which largely diversified social and economic modes of living, is more or less archaeologically proved up to now: in the highlands and the mountains of Western Asia, somewhere between Western Iran and Syria, cattle were bred and primitive wheat (*emmer*, *Triticum dicoccum*; *emhorr*, *T. monococcum*; possibly spelt, *T. triticea*) was grown as an addition to the basic goat and sheep farming. It was the foundation of a complete farming culture ("Vollbauerntum"), which later became the basis of early civilisation in Mesopotamia and Egypt.

These four main nuclei of creative cultures which reared animals and plants were based on one another, appearing near the Bay of Bengal and progressing finally to the highlands and mountains round Mesopotamia. Each of these four stages sent out waves of dispersion over large parts of the world. In comparison with these creative centres, all other regions seem to have been more or less stagnant or transformed or rejected, according to cultural or climatic circumstances.

The first data we can use for inserting this succession into a frame of absolute time are the radiocarbon dates for the pre-pottery settlements with complete farming near Kal'at Djamir in the hills east of Kirkuk, c. 4750 B.C., a settlement without irrigation (Braidwood), and those of the fortified neolithic settlement of Jericho, in the 7th millennium B.C. W. F. Albright doubts the latter date (oral communication). The emmer grown at Kal'at Djamir was still nearer to the wild form than to the later cultivated form (Hilbek, Schlemmer by letter). This might show that no very long time

had passed since the beginning of emmer cultivation. The oldest strata of oasis settlement known in Jericho are said to go back into the early 7th millennium B.C., but we are not yet informed by Kenyon and Zoumer about the domesticated animals (except the goat) and cultivated seed plants there. The Natufian culture of Palestine (Garrod, Bate) is probably older than the oldest strata of Jericho. Like Sauer and Albright (1949, 129), we

suppose that seed agriculture, probably growing some species of millet, was already carried out during the Natufian stage (cf. Clark, Narr 1956).

On the other hand we now know with considerable certainty that the 9th millennium B.C. was a very cold period globally (glacial advance of "Salpausselkäe" in North or Europe, of "Scleria" in the Alps, of "Mankato" in North America as far as the Great Lakes, of the moraines which the snow line was about 800 metres and more lower than at present (Caldenius, Fribas, Deevy, Gross, Rathien, Butzer). But from about 5500 to 2500 B.C. temperatures were higher all over the globe than they are now, so that the snow line, timber line and potential cereal line were situated about 400 metres above the present ones (Thermal Maximum, *Mittlere Würmerzeit*). It seems improbable to me that a herding culture took its origin in the mountains north-west of India in a time of glacial advance or of very heavy glaciation. I suppose that this happened in the period of glacial retreat, perhaps in its first half. This glacial retreat took place throughout the whole period from 8100 to 5500 B.C. Temperatures rose rather quickly, and the timber line and cereal line climbed up to those high elevations mentioned above. But natural oases in the deserts round the mountain chains of Central Asia always became smaller and scarcer, as they were led by rivers derived from retreating glaciers continually diminishing in size. Towards and during the Thermal Maximum, a sheep breeding culture was able to spread over Tibet, where the climate was much more favourable than. This culture was not purely nomadic (cf. Hermanns, Kussmann). It probably began to grow the six-rowed barley (*Hordeum vulgare*, i.e., *hexastichum*), the wild form of which probably is *Hordeum apiculatum*, which has been found round Lhasa and in Eastern Tibet (Friedleben, Schlemmer 1948, 1951). It seems that the cultivated varieties of six-rowed barley all derive from this form. They spread over China and India; and from India they seem to have taken their way to South Arabia and Abyssinia (which became a secondary centre of variation) and thence to Upper Egypt, where cultivated emmer had entered from Syria and was grown in Upper Egypt beside six-rowed barley in the late 5th millennium B.C. (Caton Thompson and Gardner, Brunton, Libby, Arnold, Kees).

It seems that the route from the Hindukush and Eastern Iran by South Arabia to Africa has been of great importance for the spreading of cultures—and also of tribes (Pösch)—during long periods, and especially during the periods of the spreading of early seed planting as well as of goat and sheep farming. There are no wild goats in Arabia and Abyssinia. But the veneration and ritual hunt of the ibex was also spread in these countries. The idolisation of the ibex was common in South Arabia in the last millennium B.C. The ibex god Ta'ab was protector of goats and sheep (Beeston, Höfner). Up to date, ibex hunting has been a ritual act in Hadramaut (van der Meulen, von Wissmann 177, 4). The ibex seems to have had a similar position in the Badarian and early Nakada cultures of Upper Egypt after 4000 B.C. (Brunton, tables), in the latter beside the bull. We must also mention that Agatharchides (about 730 B.C.; C. Müller, Geogr. Græc. Mss., I, 253) describing the nomadic Troglodytes near the western coast of the Red Sea (known as Illyrienses and Bedj), writes that they call bulls and rams their father, cows and sheep their mother.

The early cultures of goat and sheep farming with millets and of a complete cattle farming with large-seed cereals were more or less restricted to the climates and vegetations from light forest and wooded steppe to semi-desert as well as to the natural and artificial oases. All of these mostly have a light and rich soil, which is easily cultivated (map 1). The wooded steppe is good for both agriculture and pasture. The dry steppe is a rather good pasture. It is arable, but agriculture depending on rainfall is endangered in dry years. The desert steppe or semi-desert is too dry for this kind of agriculture. It can be used, however, as a meadow pasture for goats and sheep, but not for cattle. Good pasture is also found in highlands above the cereal line.

In areas of desert steppe where oases do not exist or are scarce, pastoral folk herding sheep and goats, but not cattle, could branch off from the steppe-farming tribes and become independent nomads. However, such nomadic people breeding

had either to depend on oases or other settled areas or to herd in tillable regions of the Fertile Crescent. On the attitude of the Egyptians towards this roaming population and on their frontier control in the East cf. Kees, 64 ff., 106 f., esp. papyrus Petersburg 1116 A, l. 51 f. "He (the Asiatic) never lives in the same place and his feet are wandering since the time of Horus, he fights and is neither victor, nor is he defeated". The difference between nomads, semi-nomads, partial nomads, steppe farmers and farmers of small oases was much smaller and occupational overlapping was more common than in later periods (see W. F. Albright, 1946, 181 ff., esp. 1949, 239 ff. on the Israelites in the desert, the patriarchs and the 'Apiru or Khabiru). In many of these cases, it is better to speak of pastoralism than of nomadism.

In no part of Asia does there ever seem to have spread any complete cattle nomadism, such as exists in parts of Africa south of the Sahara, except yak nomadism in the highlands above the timber line

Map 1. Oasis and steppe regions of the Dry Belt of the Old World, classified according to their thermal conditions.

1-highland desert; 2-desert, semi-desert; 3-forest; 4-oasis, steppe and wooded steppe; 5-steppe with cool summer and cold winter; 6-oasis and steppe with long, hot summer; 7-steppe, tropical, no frost; 8-mountain chain.

ghanae in the semi-desert must always have lived an impoverished life compared with tribes of nomadic zones or of regions interspersed with oases. In these latter regions, parts of a tribe may have been agricultural, other parts pastoral ("partial nomadism"). Thus a pure nomadism was carried out by a branch of a steppe-farming or even oasis-farming clan or social unit. (This way of living somewhat resembles South-European transhumance.) W. F. Albright (1946 a, b, 1949, 147, 154, 262 f., 257) supposes that the Semitic neighbours of the Sumerians were such pastoral tribes, partly nomadic, when the Sumerians, at the outset of civilisation, began to irrigate Lower Mesopotamia. The western Semites (Amorites) crossed on the Babylonians mainly from 2100 to 1900 B.C. These ancient nomads differed from any modern form of society in Arabia, Bedouin, semi-nomad or Shaib (Shalab). They possessed goats, sheep and donkeys. Hunting and robbing the harvest were important for them. They travelled and attacked on foot. This made a complete crossing of the desert impossible for them, except in spring. They did not dare to move more than a day's journey (30 km.) from a watering place. In summer they

in Tien-shan and Tibet, cattle are not fitted for semi-desert grazing. They also find difficulty in grazing in winter in a steppe with a frozen snow cover, as in West Siberia (cf. Potapov, and Hančar, 1901).

We have recognised that pastoral life has been an essential part of the farming cultures since their origin. We saw that the earliest domestication of herd animals and pasturing was probably developed in the Hindukush area by seed planters surrounded by mountain hunters of ibex and wild goat (and perhaps sheep), and that this was an invention correlated with deep religious emotion, an invention by which these seed planters became steppe farmers. Because of the pastoral branches of their clans, these steppe farmers must have been of greater mobility and more migratory than the seed planters had been. But only in places, where herdsmen of sheep and goats entirely split off from their kinship or group and gave up agriculture, may we speak of complete nomadism.

When an oasis became more extensive and its settlement larger, the population became increasingly sedentary. The new excavations of pre-pottery Jericho show that such irrigating villages were fortified like towns very early, in Jericho perhaps

in the 7th millennium (Kenyon, Zeuser). This may have been the first germ of what became early civilisation in the 4th millennium B.C. in the delta oases of Mesopotamia, where large irrigation schemes needed collaboration, centralisation and the formation of states, where mass labour was required as well as division, specialisation and intensification of labour, and where technical inventions sprang up (wheel, cart, plough). As a result of this development, the intensity of contrast between steppe farming and oasis civilisation was continually growing, while the common offspring is displayed by the Magna Mater and bull idols worshipped in both of them.

Meanwhile steppe farming with all its pastoral traits had spread via Asia Minor to south-eastern Europe and to the light oak forests of Central Europe (Danubian culture, since c. 5000 B.C., according to radiocarbon dates). And since the 3rd millennium it began to infiltrate from the Tripolye culture (west of the Dniester river) into the wooded steppes of Russia and Siberia, which then were occupied by an advanced hunting population (Hančar). All these regions were unfit for oasis economy because of their cool or short summers (map 2).

I think it is a quality of the largely hypothetical sequence of creative centres, which step by step gain and enlarge the domination by man of other organisms, that it corresponds excellently with the succession of cultures presented by several ethnologists, e.g., by Dittmer. It also has the advantage of making parallel inventions largely unnecessary (Sauer).

We cannot treat here the hypothesis of Flor, W. Schmidt, Polihman and others, in which the reindeer represents the earliest domesticated herd animal, so that nomadism begins among hunters breeding the dog, in the boreal conifer forest (taiga, muskox) of Eurasia and spreads to the south. Since lately Jettmar (1952/3) and others have shown that impulses for reindeer domestication came from reindeer herding, the number of adherents of this hypothesis became small. The foundation of Hančar's suggestion that the reindeer was employed as a trailing and riding animal about 5,000 B.C. (547 and table 63) has broken down too. Jettmar (1957a) and Okladnikov show that the finds in the Lena region manifesting the tending of the reindeer are not from the 5th millennium B.C., as Hančar supposed, but from 700-500 B.C. (cf. below).

#### (b) The Nomad on Horseback.

Among the Equines, the African donkey (*Equus asinus*) and the South-West and Central Asiatic onager (*Equus subgen. Hemionus*) were early in use as transport animals. Hančar's opinion is that the find of bones of one onager in Kal'at [Jarmo] (about 4750 B.C.) is important in this connection. According to Hančar, a subordinate breeding of the horse (*Equus subgen. Caballus*), which was wild in the steppes and light forests of the North, can be recognised in the early 3rd millennium B.C. in the Tripolye farming culture in the wooded steppe between the Carpathians and the Dniester river.

A decrease of temperature and probably an increase of precipitation (cf. Tolstov and Butan's different view) since about 2400 B.C. depressed the snow line in Central Asia and thus considerably enlarged the oasis areas of Tūrān, so that farming and herding as well as oasis civilisation could expand in that region (which before had been a desert of greater aridity). At least for some centuries, this desert seems to have lost its function as a strong barrier (Wissmann 1957). The advanced hunters of the North and the farmers and the oasis civilisation of the South came into contact along an extensive border. It seems that by this meeting an amalgamation took place, and a new vital and vigorous culture was growing, in which, since the early 2nd millennium, the horse, the war-chariot (with its origin probably somewhere in the South-West Asiatic highlands and Amnūn), and Indo-European peoples played an important rôle. During

this process, the veneration of the deer, which had had a central position in the religious perceptions and the myths of the northern hunters, was replaced by that of the horse, which was also brought into contact with the old South-west Asiatic chthonic fertility and bull (*bucranium*) worship (Kussmaul 1955b).

If we take this broad cultural process as a whole, we may say that by it civilisation was often relieved from oasis seclusion, where it had been in danger of stagnating and of becoming barren. Here also, we can distinguish steppe-farming and oasis-farming branches. When the Shans, who belonged to this cultural complex (Kussmaul 1955a), occupied China from Central Asia about 1500 B.C. and became its ruling class, they had been mainly oasis farmers (Eberhard, Franko, Bishop, Wissmann and Kussmaul 1956, 1957). The Aryans however, when destroying the Indus civilisation in about the same period, must have been steppe farmers, but cannot be called nomads.

According to excavations, the breeding of the Bactrian camel as a transport animal seems to have been started in Tūrān in the second half or the last quarter of the 3rd millennium B.C. (Waz, and especially Hančar). This is a few centuries earlier than the time in which we know of horse breeding in this region. Even in Mesopotamia, reliable proofs of horse domestication only begin about 2000 B.C. or shortly before (Boessneck, Hančar).

In the northern wooded steppe and marginal light forest with its rich black soil (*chernomel*) from Russia to Siberia, agriculture gradually became important beside hunting and herding. In the middle of the 2nd millennium, even Western Siberia was inhabited by a comparatively dense farming population (*Andronovo culture*). In such a region without oases, pure steppe farming with large herds offers good conditions for a social gradation as well as the formation of clans, of a warlike nobility and of dynastic leadership (Kussmaul). This farming in the black soil belt was then penetrating more and more into the open steppe, where inevitably its pastoral and migratory branch was increased and strengthened (Hančar).

However, the first people to find out that fighting on horseback was of great advantage were probably that kind of farming tribes with a strong pastoral branch, which lived in highlands and mountain basins, where the war chariot must have been of comparatively little use. This perhaps took place in Transcaucasia or even in the Carpathians (Kussmaul, Jettmar). Probably, these tribes still remained what we have called steppe farmers. Hančar considers the northern border of the Tien-shan Mountains and the Altai Mountains as the regions of origin of horse riding (1957). But Jettmar 1957 shows clearly that Hančar's main argument in this question broke down (cf. above). Reindeer riding was begun later than horse riding. In most other questions, Hančar's important basic work remains untouched.

Only when horse-riding spread into the open steppe of the North, that incursive revolution sprang up which we may call equestrian nomadisation. Once aware of the great superiority of fighting on horseback over the older ways of fighting, especially in war chariots, "North Iranian" tribes, probably between the rivers Volga and Irtysh, the Scythians and their neighbours, the Sakians, gave up steppe-farming life entirely and specialised in the breeding of herd animals, especially horses. Perhaps about 900 or 800 B.C. they became the first horse-riding

nomads, the first archers on horseback (Hančar, 390 f.). They were the first to break into the neighbouring countries, disseminating panic among sedentary populations. When we use the word nomad, we usually think of this equestrian type. This disastrous transformation overwhelmed not only the open steppe but also the wooded steppe with its dense farming population. It even attracted hunting tribes of the taiga forest to join the new way of life. The distinct social gradation of the steppe farmers now became the basis for the appearance of leaders of high political and military ability in assembling hordes of growing size. The poorer farmers and hunters were probably forced to join the "aristocracy" of horse-breeders, so that a horde organisation, unknown before, was brought about which grew by raiding, sacking, killing and enslaving other populations, and by winning over vassals, especially other herds of horsemen, owing to admiration or fear. The warm climate and the refined oasis civilisation of the South, known to some returned men through their service as mercenaries, as well as the mild climate and open plains of the West, ending in Roumania and Hungary, attracted invasions.

It is improbable that the predecessors of the Scythians in Southern Russia, the Cimmerians, were completely nomadic already. They seem to have been steppe farmers with a strong pastoral branch and with dangerous mounted warrior bands (Kussmaul 1955a, ii 302, Hančar 1957). Perhaps the early Medes can be mentioned in this connection, at the time when they succeeded the highland farmers of Irān (cf. von der Osten). Even the Achaemenids did not abandon knightly ideals, "horse-riding, archery, and love of truth".

Eastward, through the gap of Dzungaria along the foot of the Altai Mountains, nomadisation worked like a chain-reaction of explosions. The "North Iranians", especially the Scythians, were followed by the Wu-sun, who probably lived in Central and Eastern Tien-shan. We may suppose that in this period herdsmen, hunters and farmers of the open and wooded steppes surrounding Mongolia were forced to take up nomadic life. It is possible that the pressure of the Wu-sun against the population of the oasis chain of Kan-su caused the last invasion of a farming people into China, the Zhung, which led to the breakdown of the dynasty of the Western Chou (770 B.C.). The first nomadism to be traced in Chinese reports is that of the Hsiung-nu from about the 3rd century B.C. These were neither Iranians nor "Proto-Turks". According to Ligeti, their language seems to have been features of the Hsiung-nu language, when both were neighbours. In their habitat between ancient China and the Gobi Desert, the Hsiung-nu had taken over en bloc a considerable group of elements of the culture of the North Iranian nomads. Some of the traits of the life of the Hsiung-nu prove their former dependence on China. Others show their old cultural relationship to the non-nomadic primitive tribes of Manchuria (Kussmaul). During centuries of fierce wars, in which the Chinese defended themselves against the Hsiung-nu and built the Great Wall, again the Chinese took over a part of the cultural elements derived from the North Iranians, e.g. iron, cavalry, trousers, the concept of heaven as a tent. There is an old Chinese proverb: Horseback forms state.

Map 3 shows how the spark of nomadisation caught one tribal organisation after the other along the borderland between forest and desert north-east of China during and after the time of the Hsiung-nu empire, Agrarian and urban China, itself in a country of loess and steppe, counterbalanced or endured the pressure or became vassal or partly subdued or even marginally transformed into pasture, all this during long periods of alternate defence and retreat and of regaining ground for agriculture. As the object of this article is a synopsis of the history of the origin of nomadism, we cannot deal with the growth of more or less short lived nomadic realms and empires, which in their tendencies saw a model in the universalistic and cosmological state doctrine of the Chinese Empire. Nor can we deal with those tremendous migrations and invasions into the West, during which the Dry Belt served as a corridor, through which the invaders broke into the countries of old oasis civilisation in South-west Asia or into the beginnings of forest civilisation in mediaeval Central and Western Europe, where they were one cause of the Migration of Nations (Grousset, Spuler).

All these movements destroyed what had been left of steppe farming in the plains of the open and wooded steppes. The hilly and mountainous regions surrounding Mongolia in the north, however, with a pattern of steppe, meadow and forest, became areas of retreat and regeneration of a population which made its living by hunting, by cattle-breeding, and also by farming (cf. Lattimore). The ruins of a defence wall cutting off the north-eastern corner of the steppes of Mongolia near the Gan and Argun rivers (Flactschke) show that such a farming population must have been quite numerous sometimes. We may trace on map 3 how again and again in such hilly border regions of the forest new nuclei of horde formation sprang up among hunting, herding and farming groups, who led a simple life under hard conditions. In these we find some able man, endowed with the gifts of leadership, organising a heterogeneous horde by raiding, robbing and winning vassals. Sometimes the name of a clan, little known before, became the name of a growing power or even of a vast empire. By some lucky chance, a *Siege History of the Mongols* has been preserved (Haenschel, which is the story of the life of Čingiz Khān and his clan, and of how he founded the Mongol Empire. It was written by a Mongol in A.D. 1240 as a plain first hand report. In the time of his forefathers, the semi-sedentary clan living in the Kentei Mountains owned but a few horses, cattle and sheep. There was some scanty agriculture. Wild vegetables were collected. Hunting on horseback was important. However, the neighbours in the open steppes outside the mountains were true horse-riding nomads with large flocks and herds. Some had become sated with raiding and addicted to the luxuries of civilisation with which they had become familiar during their raids. From hiding places in the valleys and forests of the Kentei hills, the indigent clan of Čingiz Khān robbed among the rich nomads of the plains. The booty consisted of horses, cattle and sheep, women, children and servants. Thus the clan turned entirely nomadic, growing by the acquisition of new vassals, an association taking its name from the leader's clan, growing in strength according to the looting ability of the leader. Finally, well-known tribes and peoples lost their independence as well as their name and merged with the great "Mongol" unit.

Virtually no region on the margin of the dry belt

of Mongolia, which once had been the cradle of such a fast growth of nomadism and then had been thoroughly nomadised, ever repeated the formation of a new nomadic aggregation.

The empty spaces of the Dry Belt were terribly enlarged by the destructive incursions and migrations of the nomadic nomads. Steppe farming was annihilated in Eurasia except in mountainous regions, if we do not include in this term the agriculture of North China and parts of India. Oasis civilisation was disastrously weakened and reduced. It is true that the larger nomadic states contributed to the interchange of materials and ideas across the continent. But this interchange would certainly have been stronger in a peaceful development. Yet we do not know to what extent suffering and decay that were necessary to save from degeneration and decay that which is sound and good in man's mind.

(H. VON WISSMANN und F. KUSSMAUL)

#### (c) Bedouin Nomadism in Arabia.

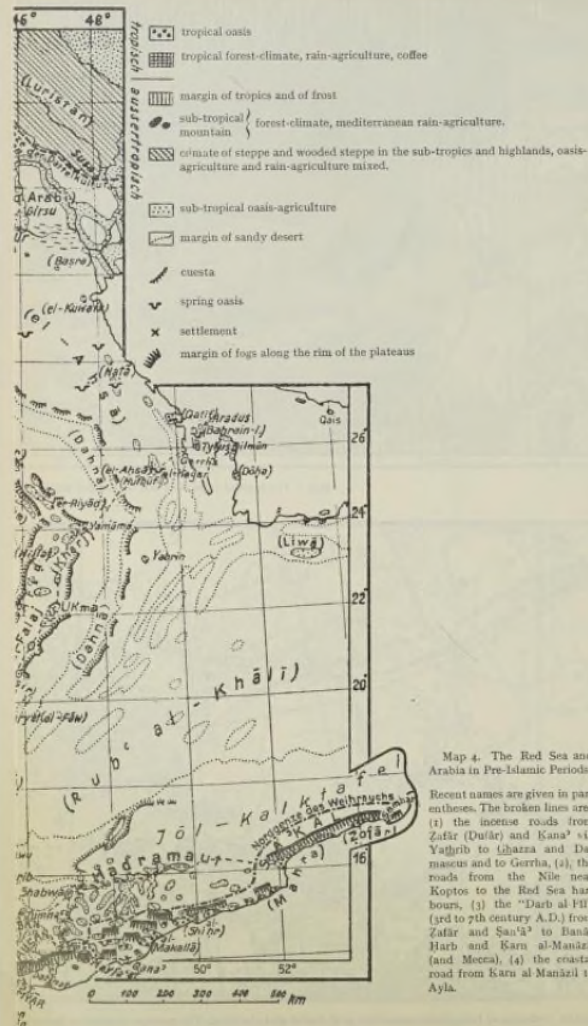

There are indications that the wild one-humped camel (the wild dromedary) lived in North Africa and the Near East until the 3rd millennium B.C., and that it became extinct later on except in Arabia. We do not know when this process of extermination ended in North Africa.

A cord made of camel hair has been found from the 3rd dynasty in Egypt. An Egyptian relief published by James (1955) shows the dromedary among wild animals. Judging from its style, it belongs to the New Kingdom. The camel was domesticated neither in the valley of the Nile, where the local climate is detrimental for its health, nor in any desert region of North Africa. This question is treated thoroughly by Walz (1957).

Agatharchides (in two versions, cf. C. Müller, *Geogr. Graec. Minor*, 1, 179) and Artemidorus (Strabo XVI, 4, 18) give reports of the Red Sea coast of Arabia which inspire confidence. In these reports they also write that, in the hinterland of the coast of present Northern Hedjaz, there are herds of wild animals, of "cattle", camels (ὄνων ἄγριων), ἡμιότρος ἀγρίος, ἡμιότρον καὶ βοῶν), wild camels (καμήλων ἄγριων), deer and gazelles, and also numerous lions, "panthers" and wolves. All three descriptions were probably taken over from one original perhaps of Aristeo, c. 280 B.C. (cf. Tarn, *op. cit.* report, later, 14). Müll (1926, 302 ff.) believes that these camels probably were not really wild ones. (He mistakes camels, "half asses", for mules, and is right in saying that mules cannot be wild.) Littmann

Map 4. The Red Sea and Arabia in Pre-Islamic Periods.

Recent names are given in parentheses. The broken lines are: (1) the incense roads from Zafar (Dufār) and Kana' via Yathrib to Ghazza and Damascus and to Gerra, (2), the roads from the Nile near Koptos to the Red Sea harbours, (3) the 'Dart al-Hi' (rd to 7th century A.D.) from Zafar and San'ā to Banāt Harb and Karm al-Manzil (and Mecca), (4) the coastal road from Karm al-Manzil to Ayla.

(1948, 3) has demonstrated that the rock-drawings which are found in connexion with Thamūdean (cf. below) graffiti show—besides domesticated animals: camels, horses and dogs—hunted animals in great quantities: gazelles, "wild cattle" (oryx), ibexes, wild boars, hares, ostriches, lions, wolves, hyenas. Only once is a goat shown. No sheep and no domesticated cattle are drawn. The nomads between Midian and the Hawran must have been fervent hunters, but not much interested in sketching their *ghanam* (goats and sheep). Also Xenophon (*Anabasis*, I, 3, 1 ff.) speaks of onagers, wild cattle (oryx), ostriches and burzards, and he describes the hunting of onagers on horseback. So perhaps there still were also wild dromedaries in desert Arabia in the 3rd century B.C.

We cannot tell where in Arabia the one-humped camel was first domesticated. Albright supposes that this was done in South Arabia, somewhere round the great southern desert (1938, note 5). Nothing is known about the dromedary as a domesticated herd animal before the 11th century B.C. (Albright, *Waltz* 1931, 1936, against Dussaud 1907). Judges, 6-8 says that Midianites, Amalekites, and the sons of the east made incursions on camel's back into Palestine across the Jordan river. This was about in the first half of the 11th century B.C., and, according to Albright and Waltz, is the earliest date for a mention of the domesticated dromedary. It is the time when iron was introduced into Palestine. Albright (*Arch.* 1933, 227, note 1) is of the opinion that the dromedary was effectively domesticated in Arabia between the 10th/15th and the 13th/12th centuries B.C. The spreading of Semites to South Arabia goes probably back to a still earlier time: the reliefs of the Punt expedition of Hatshepsut (about 1495 B.C.) show that the Oriental sub-race of the Mediterranean races, (Mediterranean *sensu stricto*—Oriental—Iranian—Indic—Gondic; cf. von Eickstedt, Biasutti, Coon, Field 1956, Pösch), which must have been a very old race among the North Arabian Semites (Muscatti), was already represented then in South Arabia, at least among the reigning class (Dr. Heffa Pösch, oral comm.). This agrees with the supposition of Conti Rossini (1912, cf. 47) that the names of the chiefs of Punt mentioned by Hatshepsut and by Ramses II were Semitic (Paribu—farib; Nahas—nahhā; cf. Brunner-Traut, 307; Wissmann 1957). That Punt was located at least partly on the Arabian side of the sea also becomes probable, I think, when we draw conclusions from the somatic features of people of Punt in Egyptian reliefs as early as the 5th dynasty (Salurū, cf. Kees, 59). These features are similar to those of the Egyptians (cf. Pösch 1937).

W. F. Albright estimates that, in the desert climate along the interior foot of the highlands of Yemen, civilisation was beginning about the 15th century B.C. He assumes that this was due to an immigration from the north. His dating is partly based on the fact that the excavation in Hadjar b. Hunayd (cf. below) has shown that 4-5 metres of probably agricultural (irrigational) silt had been deposited before the foundation of that settlement. This foundation took place c. 1000 B.C. While 8 metres of silt were deposited during the existence of the settlement from c. 1000 B.C. to c. 200 A.D., the lower 4-5 metres may represent about half a millennium (R. Le Baron Bowen, 67, 117; Albright 1938).

It is peculiar that camel-riding and horse-riding both seem to have begun to spread in the second half of the 2nd millennium B.C., camel-riding from Arabia, horse-riding probably from the mountains of Transcaucasia. Hanfār suggests that an increasing

demand for sumpter animals for the transport of metals may have been a stimulus to the intensification of horse breeding in mountain regions (1937). Also the breeding of the one-humped camel in Arabia must have been accelerated in connexion with a growing demand for transport between South Arabia on one side, the Mediterranean lands and Mesopotamia on the other, a transport of frankincense, myrrh, precious stones and gold from South Arabia, of Indian and East African goods from the South and of cloth, products of civilisation and *objets d'art* (Segall 1937) and perhaps iron wares from the north. The introduction of waterproof plaster for irrigation works and cisterns in South Arabia, which had spread before in Syria since about 1200 B.C., must have impelled agricultural development "probably not before the 10th century B.C." (Albright 1938).

While the excavations of N. Glueck in Erion-Geber (Smithson. Inst., Ann. Rep. 1941, Publ. 361, 1942) prove that the reports of the navigation of Solomon and Hiram to the gold land of Ofir refer to historical facts, the story of the queen of Saba' (Sheba), which is told in relation with the Ofir expeditions in 1 Kings 9-10, must also have some historical background (cf. Albright 1938, 3). At least it shows that camel caravans were travelling between South Arabia and Palestine in the 10th century B.C. Saba', Ofir and Hawila are named one after the other as brothers in Genesis 10 (9th or 8th century, cf. Albright, *Arch.* 1933, 327), beside Hasarāweth, among the sons of Yoktan, son of 'Eber. I can support the hypothesis that the gold-land of Ofir (1 Kings 9-10, 22<sup>nd</sup>; 1 Chron. 29<sup>th</sup>; 2 Chron. 4<sup>th</sup>, 9<sup>th</sup>; Job 22<sup>nd</sup>, 28<sup>th</sup>; Psalms 42<sup>nd</sup>, Isaiah 13<sup>th</sup>) was in south-west Arabia on the Red Sea coast: in 'Aḥr round Uḥabāhā (Spengler, Moritz, Delbrück 12, Wissmann 1957, 1959; cf. Glaser 337-384, Albright *Arch.* 1933, 212, note 14). In Somaliland, where some authors put Ofir, the outcrop of crystalline rock and of its dikes, the matrix of gold, is much smaller than in 'Aḥr (cf. *Carte géol. Afr.* 1952). On Saba' sending gold cf. 1 Kings 10, Isaiah 60<sup>th</sup>, Ezech. 27<sup>th</sup>, Psalm 72<sup>nd</sup> (but cf. J. Ryckmans 1938).

The most plausible identification of the gold-land of Hawila of Gen. 21<sup>st</sup>, 10<sup>th</sup>, 10<sup>th</sup>, 25<sup>th</sup>, 1. Sam. 15<sup>th</sup> is in my opinion as well as that of Niebuhr, C. Ritter, Sprenger, Moritz and others, is that with Khawilān. This name is known from inscriptions, from al-Hamadān, and is still used today. North Khawilān bordered on Ofir, South Khawilān adjoined Saba'. That North Khawilān was highly renowned in Greece for its rich gold mines, probably at about 400 B.C., is explicitly stated by Agatharchides (C. Müller, *Geogr. Graec. Minor.*, 184 f; Wissmann 1957, esp. 1959).

In the genealogy of Genesis 10, the South Arabians are considered as being descendants of both Kūsh and 'Eber. The descendants of 'Eber and his son Yoktan were settled as far as 'Sefār, the mountain towards the East'. Commonly, this Sefār is thought to be Zafār, the capital of the Himyar in Yemen. But this town was probably founded about 100 B.C. (cf. below), when the Himyar had occupied this region. It lay on a hill in the highlands of south-west Yemen and is not "a mountain towards the east". Frensdorff, C. Ritter, Rödiger, Thack and others suppose—and I believe they are right—that Sefār was Zafār (or Dufār), a town and region east of Hadramawt and Maḥra-Land, which, however, is not known by this name in pre-Islamic inscriptions or literature, but only since the early Arab geographers. It is the best frankincense region of South Arabia. The eastern

mountain promontory and cape of this region is really the last region from which in antiquity ships left the coast to use the monsoon in the direction of India (Schoff, Frisk, *l.c.* later). It is also the last area of South Arabia towards the East with a settled, non-nomadic population. East of it, the great desert touches the sea as far as 'Uman (cf. Lagarde 6, note); Vahur, *Zürcher*, *J.* 4599, 22, 223 f. The camel, which that Sefar of Gen. 10 is to be identified with Sefar in Bahrain. But this "balad" [Yāḩūṯ 5, 96, citing Ibn al-Fakhr] was neither frontier place nor mountain.

I think one may conclude that the "Table of Peoples" (Yahwat) means by the "sons of Yōḩān" the agricultural peoples of South Arabia (map 4), and I suppose that in Gen. 25<sup>th</sup>, the camel nomads of central and north-west Arabia were comprehended as the sons of Yighma'el, and in Gen. 32<sup>nd</sup>, 28 and Judges 8<sup>th</sup> as Yishma'elites. Gen. 25<sup>th</sup>: "And they (the sons of Yighma'el) lived from Hawāla as far as Shūr, which is east of Egypt, on the way to Ashūr". They lived, it seems, in the triangle of desert-steppe between the agricultural countries of South Arabia (Khawlan), Egypt and Assyria (cf. Skinner, *Internal Crit. Comment.*, and Kautsch-Bertholet).

Certainly, troops mounted on an animal so well adapted to the desert, capable of enduring thirst so well and of travelling long distances so quickly, as is the camel, must have enjoyed great superiority when fighting against war-chariots drawn by horses. Albright says (*Sinaitic Age* 1936, 120; *Excavations* 1933, 97): "Arab nomadism is conditioned by the domestication of the camel, which makes it possible for Bedu to live entirely on their herds of camels, drinking their milk, eating camel curds and camel flesh, wandering through regions, where only the camel can subsist, and making rapid journeys of several days, if need be, through waterless deserts. The camel eats desert shrubs and bushes, which even sheeps and goats will not touch".—Over long distances a riding camel is three times as quick as a horse. It can cover 300 km. in one day. The load of a caravan camel may weigh as much as 200 kg., that of a horse up to 150 kg. Arabia has not only bred races of transport camels and of riding camels of the lowlands but also stocks of mountain camels capable of going on fairly steep paths, as in 'Asir (Tamsier II, 37, 47, 197) or in 'Awālik country and Hadramawt (own experience). When coming from the plains to an 'abaka (pass) of the mountains, the camels of a caravan must be changed near the foot of the 'abaka from one breed to another. In Arabia, only the western slope of the Yaman highlands seems to be too moist for camel breeding. We must consider that, before the time of camel domestication, the donkey (and perhaps the onager) was the only transport animal in Arabia (cf. above). It is peculiar that the Bactrian camel, which had been domesticated in Tūran about a millennium earlier than the time when the domestication of the camier dromedary must have taken place in Arabia, never became important for riding but only for transport.

It looks as if the domestication of the dromedary went hand in hand with its employment for riding. This cannot be said of any other animal. Since excavations in Arabia did not go down to strata of early periods, our knowledge is based only on historical data. We are not yet able to see the source of an impulse for the domestication. Walz (1936) opposing Wiesner (1935) insists on the statement that the domestication of the one-humped camel was totally independent of the breeding of the Bactrian

camel and the horse. It seems, however, that parallel inventions are rare in prehistory and history (Sauer *l.c.*, 2). The horse was in use in Mesopotamia since at least about 2000 B.C.; but troops riding on horseback are not mentioned there before 1230 (Nebuchadnezzar I of Babylonia; Thomson in Pauly-Wissowa, VII, 109 ff.). As the Bactrian camel was bred in southern Tūran since at least about 2100 B.C., it is improbable that it was not brought to Mesopotamia and farther south now and then in those turbulent periods of the early and middle 2nd millennium B.C. This may have given an impulse for the domestication of the one-humped camel.

A camel's head, part of a pottery jar found in the excavation of Hadjar b. Humayd in Bayḩān (ancient Katabān) in South Arabia by W. F. Albright, was approximately dated by him to belong to the 8th (or 7th) century B.C. (van Beek 1952, 17, Walz 1956, footnote 54, Albright, letter 1957). The publication of a radiocarbon date for a low stratum of Hadjar b. Humayd (van Beek 1956) shows that Albright's preliminary palaeogeographical dating of a monogram found during this excavation is not too early but may be perhaps even a century late.

A relief of a dromedary rider from Tell Halaf is from the 9th century (Walz). The first cuneiform records of camel-riding nomads seem to be the "Aramesen Bedouins" fighting against a vassal of Assur Nasirpal in 880 B.C. A little later, 854 B.C., "Gidlibu the Arab" (from an Arbil district, fought against Salmansar III, leading a troop of thousands camels. The article al-'Arab 11) by A. Grohmann contains a summary on the Arabi country and the Arabs in the 9th to 7th centuries B.C. from cuneiform data. In this period, Arbil is the northernmost part of Arabia between Syria and Mesopotamia, including the Palmyrene and Wādī Sirhān. The Arabs are its nomadic and oasis inhabitants. The central oasis Adummatu is, according to Grohmann and Musil (1927 531 f.), Dūmat al-Djandal in the Djawf. The "kings" are chiefs partly of oasis settlements, partly of nomadic tribes. This state of affairs is also meant in Jeremiah 25<sup>th</sup>: "The kings of Arabia and all the kings of the Arabs who live in the desert". (The first mention of 'Arab in the Bible is in Isaiah in the late 8th century B.C.). D. H. Müller, against Assaraddon undertook a long expedition in 676 B.C., as, according to Weidner's latest discoveries, in Eastern Arabia, in the hinterland of Dilmān (Bahrain), not as Musil (1927, 482 f.) thought, in Wādī Sirhān (Albright, letter).

It is evident that the caravan roads, especially the "incense road" from Ghazat on the Mediterranean and from Damascus by Ma'in (Musil 1926, 241), Dayḩān (al-'Uḩā) and Yathrib (al-Madīna) to Ragmat (Nadīrān), Ma'in and Sabā' (cf. Albright 1953, Wissmann 1957, Segal 1957) played an important political rôle, e.g., when in 732 B.C. Queen Samas of Arbil joined a great coalition including the state of Sabā', the king of Damascus, the important oasis of Taymā' and the oases of Taynā' and Dayḩān against Tiglath-Pileser III. The first sovereign of Sabā' named in cuneiform inscriptions, probably a *nuharib* (priest-king), brings tribute to Sargon II in 715 B.C. (cf. Albright, in *BASOR* 743, 1956, 10; idem, 1958; Wissmann 1957). The tributes received by Assyrian kings in this period from different queens and kings of the northern half of Arabia show that long-distance caravan traffic must have been considerable. Cattle, gold, silver, lead, iron, elephant skins, ivory and cloth were transported. (Cassell 1954).

It must be emphasised that South Arabia, which was represented by Sabā' since at least the 10th century (cf. Albright, in *BASOR*, 1952, note 26, 1958), was a country with a numerous and farming population and with little and unimportant nomadism, a country producing aromatic goods, especially frankincense (Exodus 30<sup>th</sup>, 1 Kings 10, Isaiah 60<sup>th</sup>, Jer. 6<sup>th</sup>, cf. J. Ryckmans 1958). South Arabia certainly introduced Indian and East African wares to its ports, and it must have already monopolised the traffic on the "incense roads" to the north-west and by central Arabia to the north-east (map 1) in this period to some degree. (On the strength of Sabā' in the 8th to 6th centuries, cf. von Wissmann 1957). Perhaps the Chaldeans lived in 'Uman in those periods and mediated between Sabā' and Mesopotamia (and India?), before they occupied Mesopotamia, when Chaldeans signs begin in 625 B.C. (cf. Albright, in *BASOR*, 1952).

Albright suggests (cf. van Beek 1952) that no time was more opportune for the commercial expansion of Sabā' westwards into Ethiopia than about the 10th century B.C. "Egypt, which previously enjoyed exclusive trading rights in Ethiopia and Punt by land and by sea, was unable to maintain its commercial relations with the south after the fall of the New Empire." According to Albright, *boustrophedon* Sabaeen inscriptions in the temple 'Awa' or modern Yehā on the plateau of northern Ethiopia east of Aksum (Littmann 1913, No. 27-32 and D. H. Müller, *Epigraph. Denkschrift*, Yeha 5) palaeographically belong to the 5th century (letter from W. F. Albright, March 1937, cf. Conti Bessini 1952). An inscription on the base of a rather archaic statue recently found in Makallā (Caquot and Drewes) seems to be somewhat earlier. So, even in the new chronologies of A. F. L. Beeston (in *BSOAS* 1954) and Pirenne (1956 b), who emphasise a "rejuvenation" of the early South Arabian chronology, the 5th century B.C. would not be too early. Sabaeen colonisation was already firmly established in this region at that time. The probable name of the temple of modern Yehā, 'Awa', was also the name of the great oval temple of the state god of Sabā' near Mārib. In a remarkable *boustrophedon* inscription on an incense altar of Makallā in Abyssinia (Caquot and Drewes, 50-51), a "nuharib of Daḩān" (place near later Aden) and Sabā' dedicates (the altar?) to Almakah, which was the main state god of South Arabian Sabā'. J. Ryckmans suggests that, in a period before the first known Sabaeen inscriptions of Mārib and Sirwāb (which probably date, from the 8th century B.C.; Wissmann 1957), the centre of Sabā' was in the mountains and highlands of present northern Yaman, round Djabal Ba'dān and Djabal Humaym (= Djabl Ba'dān and Lḩāt Humaym were the most important sun goddesses of Sabā'—), and that the region of Mārib in the north-east as well as North Abyssinia in the West were both colonised from this area (J. Ryckmans 1958; cf. Albright 1958).

Glaser (187 ff.) and von Wissmann-Höfner suppose that a Kanān and 'Eden, the most natural ports of South Arabia on the Indian Ocean, are named as Kanān and 'Eden in Ezekiel 27<sup>th</sup> (early 6th cent. B.C.). Ezekiel says: "Hārān and Kanān and 'Eden" (M): "merchants of Shebā" or (S): "they were thy merchants". Mostly all three places are identified in Northern Mesopotamia, where an ancient Hārān is well known (cf. Cooke, *Int. Crit. Comment.*, Isaiah 37<sup>th</sup> and 2 Kings 19<sup>th</sup> mention this northern Hārān along with the Bēnā 'Eden: "Gozan, Hārān, Resef

(in Palmyrene) and Bēnā 'Eden in Tel'assar". But al-Idrīsī mentions Hārān al-Karīm in South Arabia between North Khawlan and "Bihāt Bu'ayn", (which name is a mistake for Bayḩān; Grohmann II, 1913, 131). The location is in the Tihāma lowlands north of the present northern frontier of Yaman, somewhere near present Abū 'Arīsh. Ritter (*Arabien* I, 186, 193) and Büsching suppose that this is the Hārān mentioned in Ezekiel. The difficulty is that Kūḩāna and Bihāt Bu'ayn do not mention the place of the "incense roads" to the north-west (Abū 'Arīsh) instead, I suspect that there is some mistake in al-Idrīsī's text. But there are different places named Hārān in Ancient South Arabian inscriptions: Hārān near Ka'taba north of 'Aden, Hārān south-west of Ma'in and Hārān north of ḩamīr (on the last cf. W. B. Harris, 272 ff.). Perhaps the Septuagint (S) translators changed the text from "merchants of Shebā" into "they were thy merchants", because they knew the northern, but not the southern Hārān and 'Eden and therefore could not understand the meaning. In connexion with "merchants of Shebā", one should consider that Sabā' (Shebā) was a state, not a town, and that the three places mentioned may have belonged to this state.

Ezekiel 38<sup>th</sup>: "Shebā, Dedān, merchants of Tarshish" (Tartessos or Sardinia) shows opposite outposts of Ezekiel's *terra cognita*. (Dedān is the Dayḩān of South Arabian inscriptions.)

Considering this important position of South Arabia in this period and its central place in the oldest seafaring area, that of the Indian Ocean, we must keep in view that the North and Central Arabian home of camel nomadism was surrounded by civilised agrarian countries, on all sides where it was not touched by the sea.

The difficulties of crossing the desert with long distances between watering-places could only be mastered after the domestication of the camel. The desert routes of greatest importance for traffic were those between Mesopotamia and Syria. But also the difficulties in crossing Arabia from Mesopotamia and from the Mediterranean coasts to the fertile highlands of South Arabia could more easily be overcome by camel caravans. The springs and wells of the northern part of Arabia became important as resting places of caravans and as commercial and political centres. As the nomads were breeding the camels needed for the caravans, their tribes were interested in a peaceful traffic and it was expedient for them to join coalitions among each other and with the oasis town kingdoms on the main routes.

Since Tiglath-Pileser III (748-725), north-western Arabia, including the northern part of the incense road from Dayḩān to Ghazat may have become more tightly bound to Assyria, and later to Neo-Babylonia, after each conquest. It seems to be of great importance for the cultural and religious development of the "Arabs", that Nabūna'id (Nabonidus) of Babylonia conquered Taymā' in 550 B.C. and that he reigned there for eight years and made an expedition as far as Yathrib. He built a palace and temple in Taymā' and made this place the centre of an archaic religion and cult round the Aramesean moon god Sin, perhaps with the sun disc rising in the crescent as the main symbol of this religion (Musil, 1928, 224 ff., Moortgat, Segal). There should be investigations on the close resemblances between this cult and that of South Arabia and Ethiopia. SYN was the state god of Hadramawt since the earliest inscriptions of this state. (Albright

1952, note 8, brings reasons for an early introduction of this god into Hadramawt). 'Ezānā of Abyssinia changed the crescent and disc for the cross on his coins when he turned to Christianity (4th cent. A.D.) (Littmann 1913, i, 60).

The exceptional temporary position of Tayna? may have stimulated the other town states of the oases of Arabia Deserta to partial to some degree in the civilisations of the surrounding countries in the north-east, the north-west and the south, while trying to preserve or to re-establish always again a certain amount of independence. Different scripts were used and developed. Even the clansmen of the nomadic tribes knew how to write. Nevertheless, pure camel nomadism was common. Agatharchides and Artemidoros (Diosc. in C. Müller, *Geogr. Graec. Minor*, 184; Strabo xvi, 4, 16) in their accounts on the tribe of the Debal in the lowlands (Thibama) of 'Asir write: "They live merely from their camels. From these they fight, on these they travel. Their food is camel milk and camel meat".

The scripts of the rock graffiti of the nomads of Arabia Deserta, which are spread far and near, the Safaitic area south of Damascus and from the Sinai peninsula to the borders of Najd in South Arabia, form a unit though with strong regional (and probably temporal) variations. They have been classified as Thamudic scripts, although but a part of these graffiti have been written by the tribe of Ḥamūd in its area round Daryūn (Littmann 1946, van den Branden 1950; Ryckmans 1955). In many respects these scripts are (and remained?) more archaic than the scripts of the settled populations, which were altered by their adaptation for monumental inscriptions (cf. J. Pirenne 1955, 44 ff.). Related graffiti are even found in South Arabia especially along the desert margins (cf. Höfner, and Jammé 1955). That all "Thamudic" inscriptions seem to have been written by nomads shows that the nomadic tribes must have had some awareness of interdependence and a certain spirit of solidarity and that their life was separated and rather independent from the oasis town states.

It is evident that this situation of camel nomadism in Arabia was very different from what we know of horse-riding nomadism in the northern steppes of Eurasia. One main reason for the strong difference certainly is that the long and hard winters of the north do not permit more than one extensive crop and hinder the development of oases, although humidity is greater. Where the sub-tropical desert is dotted with oases of restricted size as in many parts of Arabia north of the line from Wādī Barsh to Najd and to the Rub' al Khālī, it seems that a balance of power could result there to some degree between the nomadic tribes on the one hand and the merchant town states on the other, while probably the farmers of the oases had often to live in bondage to townsmen or to nomads.

The history of nomadism in Arabia is closely connected with the word 'A'rāb. In Semitic languages and pre-Islamic times, this word was only used for inhabitants of the Bedouin and oasis regions north of the Rub' al Khālī. It especially meant the camel nomads but also included the oasis dwellers. Even Muhammad used the word 'A'rāb only for Bedouin. Only the Greeks have transmitted this name to the whole peninsula, probably already after the expedition of Darius (Scylax). Theophrastus (372-328) calls Arabia τῶν Ἀράβων γῆγενήτης (*Hist. Plant.*, in, ch. 2, § 2). Eratosthenes (late 3rd century B.C., Strabo XV, 4, 2) gives its division into Arabia

Eudaimōnē and Arabia Eritrēnē (Arabia Felix and Arabia Deserta of the Roman period). But already Euripides mentions "Arabia eudaimōnē" in his *Bacchae* (16-18), and Aristophanes (*Aves* 144 f.) a "polis eudaimōnē on the Erythraean Sea", both in the late 5th century B.C. The South Arabians never called themselves 'A'rāb.

We have no knowledge about the pre-Islamic history of the nomadic tribes south of the Rub' al Khālī, north and east of Hadramawt and west of 'Uman. To day, they are genuine camel nomads possessing some *ghannam*, just as those of the North. They still have holy rocks and holy places near wells, where they bury their dead (van der Meulen, own experience, Thebes). But they do not live in tents. They have tropical clothing and south-Semitic dialects. In mountain regions they use caves for shelter. They do not possess horses. Unlike the northern *ba'di* they have stayed outside of known coalitions.

The fate of camel nomadism in Arabia was closely connected with that of caravan trade. So the decline of this trade must have been of great importance for the nomad. This decline slowly set in in the 4th or 3rd century B.C., when the tolls, which had to be paid on the road were constantly increased because of the political division of South Arabia into different states (Pliny xii, 14, 65). It became stronger when, from round 215 B.C., the straits of Bān al-Mandab were opened for direct traffic from Egypt to India. The overland commerce traffic almost vanished, when this oversea traffic from the Roman Empire to India became important from about 48 B.C. (Strabo, ii, 5, 12, *ibid.*, xvii, 1, 13, Pliny, vi, 23, 104). This must have been a hard blow for the kingdoms of South Arabia and even more for the Bedouins who took part in the overland traffic and sold camels for this.

The name Arrahbātī ('A'rāb) was used by the great Abyssinian (Aksum) king who erected the Monumentum Adulitannū (cf. below, section d), of which we know the Greek version, probably before the middle 2nd century A.D. This is in his account of the submission of the Ḥijāz and 'Asir north of the Sabaeen and south of the Roman frontiers. Here "Arrahbātī" means to signify the population of the hinterland of the Kinādīdopolitai who, according to Cl. Ptolemy, lived on the coast of Ḥijāz and of 'Asir.

'A'rāb Bedouins had begun to interfere in the conflicts in South Arabia towards the 2nd cent. A.D. (J. Ryckmans 1951, 215 f., 1956). In the inscription Nāni 71 to 73, 'A'rāb and Khaymā are mentioned together several times. Perhaps Khaymā-yā (Khunayyā?), probably derived from khunna means the regular army (M. Höfner, letter), while 'A'rāb means contingents of northern Bedouins on camels and on horseback. The inscription Nāni 71 to 73 belongs to the third century A.D. (king Abīnā Nabīlā; cf. Mordtmann-Mittwoch 218-220). The inscription "Ryckmans 512", belonging to the same period, shows that camels and horses were used in the South Arabian armies (G. Ryckmans, in *Muséon*, 1936, 154 f.; on the chronology of this period, cf. v. Wissmann 1957). It should be investigated if there are earlier convincing indications of camel troops in South Arabia (cf. v. Wissmann-Höfner, 10, 46). The inscription "Ingrānāt 17" does not point to such conditions. The preliminary translation we used in v. Wissmann-Höfner, 333, was wrong; cf. Drewes).

In 328 A.D., the inscription of al-Namira, east of

Djāhal Hawrān, in the Syrian desert (*RES* 483), tells us: "This is the grave of Imra' al-Kays (mr' Kys) b. 'Amr, the king of al the 'A'rāb, who . . . and advanced successfully (?) to the siege of Najdān, the capital of Ḥammar" (Lidzbarski). We see that Imra' al-Kays calls himself king of all 'A'rāb, although he is not in possession of Najdān on the north-eastern margin of agricultural South Arabia, but perhaps king of most of those Bedouin tribes who live in tents, i.e. 'A'rāb. Najdān is at that time a town of "Ḥammar", probably Ḥammar Yūfar'ish (cf. Pirenne 1956, Jammé 1957, J. Ryckmans 1957, 22, note, Pirenne 1957, 59, note 4), who assumed the title of "King of Saba" and Dhū Raydān and of Hadramawt and of Yamnat" (Dhū Raydān stands for the Ḥimyar, Yamnat probably is a name of the coastal region south of Hadramawt; Wissmann 1959). This title means that Ḥammar was or claimed to be king of the entire agricultural country of South Arabia.

In the early 3rd century, when great parts of Northern Arabia belonged to the domain of the South Arabian king Abīkarīb As'ad, who according to tradition undertook a campaign into Persian territory, the title was enlarged and now was worded as follows: "King of Saba" and Dhū Raydān and Hadramawt and Yamnat and of their (*Ḥawāḥ* *maḥāḥ*) 'A'rāb in the highlands (Central Arabia) and the Thibama (lowlands of Ḥijāz and 'Asir). Again inhabitants of Desert Arabia are meant by 'A'rāb (cf. map 4).

The constant war between Rome and Persia and between Ethiopia and Saba' and the economic decline of the Mediterranean regions, the rising competition of sea traffic—from which South Arabia had become disinterested—against overland traffic and trade, the decay of feudalised South Arabia and its interdecade feudal and religious wars in the 3rd to 6th centuries A.D. gave rise to great insecurity in Arabia (cf. Beeston 1954, Sidney Smith, J. Ryckmans 1956 b). In the regions of steppe climate in the fertile crescent, nomadic tribes intruded into country of rural agriculture. Even oasis areas decayed or were given up entirely, especially in South Arabia along the borders of the desert, and in Hadramawt (cf. v. Wissmann-Höfner, 121 f., Le Baron Bowen), where camel nomadism penetrated from the north by invasions as well as by gradual infiltration.

A renowned example is the neglect, bursting and dilapidation of the dam of Ma'rib, the old capital Saba', and the total breakdown of this town and its oasis. In Yaman and 'Uman, the strong feudalisation of the highland farmers, the *ḥabāḥ*, in their fortified castle-like dwellings, led to an extreme dissipation of power and even to anarchy, as well as to tribal organisation and to feuds similar to those of the barbarised camel nomads. Gradually the nomadic population became more and more migratory over long distances in Arabia. Such migrations of entire tribes were mainly directed from South to North. In the South a part of the farming population became nomadic, while in the north the wars between Rome and Persia probably attracted such nomads, as could not sell their camels for the declining caravan trade, to serve in camel troops on the side of one of the two opponents. The Arab proverb: "Al-Yaman is the womb (the cradle) of the Arabs, and al-'Irāk is their grave", already suits this period. Nevertheless there have also been migrations in the opposite direction, like that of the Kindites into Hadramawt in the 6th century A.D. which according to al-Ḥamdān amounted to

more than 30,000 men (Forrer, 134 ff.). With the decline of power of the surrounding states, which were based on agriculture and had a much higher population density, Bedouin influence was rising. Cashed (1955) demonstrates that, before this period of barbarisation, the social and economic way of living, which we call Bedouin, did not fully obtain the character familiar to us by the descriptions of Doughty, v. Oppenheim and Lawrence. Writing now disappeared among the nomads, but oral tradition flourished.

It would be interesting to know when the combined use, during a phase, of the camel for the riding over long distances and of the horse for final attack, was employed for the first time, a skillful practice which was still carried out by 'Abd al-'Azīz b. Sa'ūd. King Ma'chus (Malik) II of the Nabataeans (al-Anbāt) sent 1000 horses and 3000 foals for the assistance of Titus in his attack on Jerusalem about 70 A.D. (111ff., 68). The rock-drawings accompanying the Safaitic inscriptions in the Hara south-east of Damascus (2nd to 4th centuries or longer; cf. Littmann 1940) show that these true Bedouins made their razzias combining horse and camel. We also hear from Ammianus Marcellinus (4th cent. A.D.) that the Nummies made their raids in that way (xiv, 4, 3).

In South Arabia, the horse seems to have been always of smaller importance than in the north. Nevertheless we hear that among the presents sent by Yith'amar of Saba' to Sargon in 715 B.C. there were horses. The Periplus Maris Erythraei (until 80 A.D.) tells that horses were shipped from Egypt to Moura (Mausid); cf. Wissmann 1959) by the Greek merchants. Strabo (XVI, 4, 2 and 26), when giving a short but good report on the agriculture of South Arabia, says that horses were lacking, and that their functions were carried out by camels. We have but few presentations of horses from South Arabia, which seem to be importations or copies from the north or to belong to late periods. Probably the horse only became of greater importance in South Arabia since Bedouin troops were used, i.e., since at least the 3rd century A.D. The inscription G. Ryckmans 535 (in *Muséon*, 1956, 240 ff.) from the late 3rd century A.D. tells us that horses and camels were used in South Arabian armies, and that there were horsemen beside the regular troops.

d) *The Appearance of Camel Nomadism in North Africa*.

It is surprising that the state and civilisation of the great river oasis of Egypt blocked for so long a period the spread of camel breeding and camel nomadism. It exercised a strong frontier control and showed an aversion against the Asiatic nomad. There is no specifically Egyptian word for "camel" (Albright 1950; cf. Præaux).

It has been supposed that the Sabaeans introduced the camel into the lowlands of North Ethiopia, where they colonised this country, perhaps some time in the beginning of the last millennium B.C., bringing with them the plough, terracing, and artificial irrigation. We have mentioned above that the colony was finally established and probably old in the 5th century B.C. Even Conti Rossini supposed such an early introduction of the camel (193, 196). Yet he did not find any proof. There is no mention of the camel in the "Sabaeans" inscriptions of Ethiopia (cf. above); but this again does not mean much, as the number of these inscriptions is still small. However, we may not forget that even today the camel has not been introduced into the highlands of Ethiopia, but has only spread in the lowlands and on the lower slopes. Near the harbours of northern Ethiopia, this area is a narrow strip of land, just as in Western Yaman.

There is one piece of information and one linguistic fact from which we may probably conclude that the Sabaeans did not introduce the camel to the African side of the Red Sea: Agatharchides (perhaps about 130 B.C.) gives a good and detailed description of the nomadic Troglodytes behind the Arabian coast of the Red Sea north of Ethiopia (the later Blemmyes or Bedja). He does not mention any breeding of camels but only of cattle and goats (Diodor., cf. C. Müller, *Geogr. Graec. Minor*, I, 153). Probably Agatharchides has taken over his story from a much earlier description (cf. von Wissmann 1957).

The linguistic fact is that the name of the camel in the Ge'ez language as well as in all the Semitic languages of Ethiopia is *camel* as in the North Semitic languages and in Egypt, while ancient South Arabia merely used the word "dhil" for it (Höfner by letter). It is only in one single inscription of the 3rd century A.D. (cf. Ryckmans, Nr. 535) and then in the 6th century A.D. (Yusuf Ibn Nuwayr, G. Ryckmans, Nr. 407) that the word "dhil" turns up in South Arabian inscriptions. The first known mention of the camel in the Ethiopic language is in the 4th century A.D. in Littmann, *Aksum* 9 (1913).

We do not hear anything of the presence of the camel from hieroglyphs or from Greek or Roman authors or any sculpture or rock drawing either in Egypt or in any part of North Africa in the Hellenistic period. There is one exception, however: When Ptolemy II Philadelphus (283-246) repaired the old roads from Koptos on the Nile to the Red Sea (173 km.) and opened a longer road from the same place to his new harbour town Bereniké Troglodytiké (580 km.) by founding eleven stations, he did this not only for foot passengers but also for merchants travelling on camels (Strabo XVI, 1, 24, XVIII, 1, 45-65, Pliny, h.n. VI, 102, 168; Bereniké Troglodytiké in 23° 5' in the Bay of Sighat Bandar al-Kabir). Strabo says that Koptos became a town belonging to Arabs as well as Egyptians, and that Arabs worked in the mines between Koptos and Myos Hormos. Pliny also mentions Arab tribes in the

region of Bereniké. Philadelphus had reopened the canal between the Nile and the Red Sea. He founded naval bases along the western coast of the Red Sea (cf. below). It is probable that the caravan camels and their Arab owners were introduced by Philadelphus and were transported by him to Philotera, to Myos Hormos and to Bereniké Troglodytiké over sea from the coast of Northern Hijāz (Ritter II, 703). Ptolemy II seems to have put this coast of Northern Hijāz under his influence by establishing friendly relations with Daydān on the incense road, thus being able to divert the incense traffic which until that time had followed the road from Saba' and Ma'in to Ghazat on the Mediterranean, from Daydān to a new harbour on the Red Sea (Tab-y-t 2) and then by boat to Egypt (cf. Tarn, appendix by Sidney Smith; Delbriech). As Daydān was a colony of the kingdom of Ma'in, which had developed north of Saba', the sarcophagus inscription of an incense trader of Ma'in, living in Memphis, probably of 264 B.C. (Albright 1953, note 12), confirms this connection. This trader brought myrrh and other wares to Egypt on his own ships, and he brought byssos clothes to Arabia (Rhodokanakis, Kortenbeutel). As Ptolemy II and his successors were able to transport elephants on large boats on the Red Sea, they were easily able to transport camels. The Arabs who were brought to Egypt with their camels probably knew how to write the so-called Thamudic script of northern Hijāz. Numerous Thamudic inscriptions have been found in the eastern desert of Egypt, especially along the roads (Littmann 1949, 3, Green, J. Pirenne by letter).

We now may ask again, how the camel was brought to Ethiopia. There are two possibilities, I think. It was introduced either by Ptolemy II or his successors, or by the kings of the Habashat, of Aksum, in about the 2nd century A.D.

Ptolemy II founded the fortified town of Ptolemais Thérōn on the northernmost part of the Ethiopian coast (cf. the stele of Piliem in Egypt). One of the stiles found in Adulis south of modern Massawa by Cosmas Indicopleustes (Winsted) reported that Ptolemy III Evergetes (246-221) and his father hunted elephants in that region. We do not know when *Bereniké dhilata Sabas* (Strabo xvi, 4, 10, Bereniké Epitaphic of Pliny VI, 29, 170; Conti Rossini against Kortenbeutel) was founded near modern 'Assab, and when this southern Bereniké was replaced by a colony called Arsinoë (Conti Rossini 60 ff., map, Strabo xvi, 4, 10, Ptolemaios, Arsinoë, Pausanias-Wissowa). We only recognise that the Ptolemies put the whole African coast of the Red Sea more and more under their naval influence and power. Ptolemaic shipping and trade were under strict state control. Before this time, Saba' may have had still influence in its old Ethiopian colony, especially on the coast, in spite of its difficult position in South Arabia between the new strong states of Ma'in in the North and Katabān in the South, Katabān reaching as far as Aden and the Bāb al-Mandab straits. There was a Sabaiton Stōma south of Ptolemais Thérōn (Artemiduros according to Strabo), there was a place called Sabat (Sabat I) opposite the island of Massawa (Strabo, Pliny, Cl. Ptolemy), and there was "the wealthy town of Sabat", probably in the bay of modern 'Assab (Strabo xvi, 4, 8-10, cf. Conti Rossini, Map pl. 16). On account of the intercourse wares in South Arabia, the Ptolemies may have found it rather easy to interfere on the Ethiopian coast. As they

d) *The Appearance of Camel Nomadism in North Africa*.

It is surprising that the state and civilisation of the great river oasis of Egypt blocked for so long a period the spread of camel breeding and camel nomadism. It exercised a strong frontier control and showed an aversion against the Asiatic nomad. There is no specifically Egyptian word for "camel" (Albright 1950; cf. Præaux).

It has been supposed that the Sabaeans introduced the camel into the lowlands of North Ethiopia, where they colonised this country, perhaps some time in the beginning of the last millennium B.C., bringing with them the plough, terracing, and artificial irrigation. We have mentioned above that the colony was finally established and probably old in the 5th century B.C. Even Conti Rossini supposed such an early introduction of the camel (193, 196). Yet he did not find any proof. There is no mention of the camel in the "Sabaean" inscriptions of Ethiopia (cf. above); but this again does not mean much, as the number of these inscriptions is still small. However, we may not forget that even today the camel has not been introduced into the highlands of Ethiopia, but has only spread in the lowlands and on the lower slopes. Near the harbours of northern Ethiopia, this area is a narrow strip of land, just as in Western Yaman.

There is one piece of information and one linguistic fact from which we may probably conclude that the Sabaeans did not introduce the camel to the African side of the Red Sea: Agatharchides (perhaps about 130 B.C.) gives a good and detailed description of the somatic Troglodytes behind the Arabian coast of the Red Sea north of Ethiopia (the later Blemmyes or Bedja). He does not mention any breeding of camels but only of cattle and goats (Diodor., cf. C. Müller, *Geogr. Graec. Minor*, I, 153). Probably Agatharchides has taken over his story from a much earlier description (cf. von Wissmann 1957).

The linguistic fact is that the name of the camel in the Ge'ez language as well as in all the Semitic languages of Ethiopia is *camel* as in the North Semitic languages and in Egypt, while ancient South Arabia merely used the word "dhil" for it (Höfner by letter). It is only in one single inscription of the 3rd century A.D. (cf. Ryckmans, Nr. 535) and then in the 6th century A.D. (Yusef [Ibn] Nuwayd, G. Ryckmans, Nr. 407) that the word "dhamr" turns up in South Arabian inscriptions. The first known mention of the camel in the Ethiopic language is in the 4th century A.D. in Littmann, *Aksum* 9 (1913).

We do not hear anything of the presence of the camel from hieroglyphs or from Greek or Roman authors or any sculpture or rock drawing either in Egypt or in any part of North Africa in the Hellenistic period. There is one exception, however: When Ptolemy II Philadelphus (283-246) repaired the old roads from Koptos on the Nile to the Red Sea (173 km.) and opened a longer road from the same place to his new harbour town Bereniké Troglodytiké (580 km.) by founding eleven stations, he did this not only for foot passengers but also for merchants travelling on camels (Strabo XVI, 1, 24, XVIII, 1, 45-65; Pliny, h.n. VI, 102, 168; Bereniké Troglodytiké in 23° 5' in the Bay of Sighat Bandar al-Kabir). Strabo says that Koptos became a town belonging to Arabs as well as Egyptians, and that Arabs worked in the mines between Koptos and Myos Hormos. Pliny also mentions Arab tribes in the

region of Bereniké. Philadelphus had reopened the canal between the Nile and the Red Sea. He founded naval bases along the western coast of the Red Sea (cf. below). It is probable that the caravan camels and their Arab owners were introduced by Philadelphus and were transported by him to Philotera, to Myos Hormos and to Bereniké Troglodytiké over sea from the coast of Northern Hijāz (Ritter II, 703). Ptolemy II seems to have put this coast of Northern Hijāz under his influence by establishing friendly relations with Daydān on the incense road, thus being able to divert the incense traffic which until that time had followed the road from Saba' and Ma'in to Ghazat on the Mediterranean, from Daydān to a new harbour on the Red Sea (Tab-y-t 2) and then by boat to Egypt (cf. Tarn, appendix by Sidney Smith; Delbosc). As Daydān was a colony of the kingdom of Ma'in, which had developed north of Saba', the sarcophagus inscription of an incense trader of Ma'in, living in Memphis, probably of 264 B.C. (Albright 1953, note 12), confirms this connection. This trader brought myrrh and other wares to Egypt on his own ships, and he brought byssos clothes to Arabia (Rhodokanakis, Kortenbeutel). As Ptolemy II and his successors were able to transport elephants on large boats on the Red Sea, they were easily able to transport camels. The Arabs who were brought to Egypt with their camels probably knew how to write the so-called Thamūdian script of northern Hijāz. Numerous Thamūdian inscriptions have been found in the eastern desert of Egypt, especially along the roads (Littmann 1949, 3, Green, J. Pirenne by letter).

We now may ask again, how the camel was brought to Ethiopia. There are two possibilities, I think. It was introduced either by Ptolemy II or his successors, or by the kings of the Habashat, of Aksum, in about the 2nd century A.D.

Ptolemy II founded the fortified town of Ptolemais Thērōn on the northernmost part of the Ethiopian coast (cf. the stèle of Piliem in Egypt). One of the stèles found in Adulis south of modern Massawa by Cosmas Indicopleustes (Winsted) reported that Ptolemy III Evergetes (246-221) and his father hunted elephants in that region. We do not know when *Bereniké al-haba Saba* (Strabo xvi, 4, 10, Bereniké Epitaphi of Pliny VI, 29, 170; Conti Rossini against Kortenbeutel) was founded near modern 'Assab, and when this southern Bereniké was replaced by a colony called Arsinoë (Conti Rossini 60 ff., map, Strabo xvi, 4, 10, Ptolemaios, Arsinoë, Pausanias-Wissowa). We only recognise that the Ptolemies put the whole African coast of the Red Sea more and more under their naval influence and power. Ptolemaic shipping and trade were under strict state control. Before this time, Saba' may have had still influence in its old Ethiopian colony, especially on the coast, in spite of its difficult position in South Arabia between the new strong states of Ma'in in the North and Katabān in the South, Katabān reaching as far as Aden and the Bāb al-Mandab straits. There was a Sabaiton Stōma south of Ptolemais Thērōn (Artemiduros according to Strabo), there was a place called Sabat (Sabat I) opposite the island of Massawa (Strabo, Pliny, Cl. Ptolemy), and there was "the wealthy town of Sabat", probably in the bay of modern 'Assab (Strabo xvi, 4, 8-10, cf. Conti Rossini, Map pl. 16). On account of the intercourse wares in South Arabia, the Ptolemies may have found it rather easy to interfere on the Ethiopian coast. As they

transported elephants in large boats from this coast to Egypt, they may have brought camels to the inhabitants of this coast from Northern Hijla. Before about 175 B.C., the Katabanian harbour of 'Aden was an important place of trans-shipment, where freights came from Egypt and India (cf. von Wissmann 1957). When at that time the new state of Himyar replaced Katabania in 'Aden and 'Aden was destroyed, Ptolemaic ships were more and more successful in sailing directly to India.

It seems that the kingdom of Aksum (Ethiopia), which is for the first time mentioned in the Periplus of the Erythraean Sea (about 82-96 A.D.), was a powerful state already at that time and learned much from Graeco-Roman navigation in the Red Sea. Then a king of Aksum, who probably lived in the mid and century A.D. (Winstedt; Moussier, *Revue de l'Égypte* 1936, V, 199; Mordtmann-Mittwoch 6) according to the Mousmouni Adulthan, which he erected, built a great empire from the frontiers of Egypt to Somalia (cf. Dittenberger, 287-296; Littmann 1913, I, 42 ff.). He conquered the coast of Arabia and its hinterland from Leuké Kiont in Northern Hijla as far south as the frontier of the Sabaeen kingdom (Wadi Dargh in southern 'Asir; Wissmann *loc. cit.*, 1939). He considered that he used a navy for this conquest. His name is not known. The Mousmouni shows that Aksum had become a sea power at that time, perhaps supported by Rome. The Mousmouni was written in the Greek language and script. Already in the first century A.D. (I. 191a) Aksum had cultivated the Greek language. So it may also have been the king of the Mousmouni Adulthan, who introduced the camel to Ethiopia from his colony in Northern Hijla. That period must have been a time of quickly rising national consciousness in Ethiopia, in which an official Ethiopian script was probably developed, based on the monumental and cursive Sabaeen scripts and influenced by the Greek (left to right, unrotated) and the "Thamudean" script (cf. J. Ryckmans 1955, Ulmsdorf, Dnawi). In the third century, the South of the Red Sea seems to have been under Ethiopian supremacy, while direct trade between the Roman Empire and India had become reduced (Sir M. Wheeler, Wissmann 1957).

The first African people who became camel breeders after those Arab tribes, which had been probably introduced to Bessal, Trigh-el-gad and Nyas Horns by Phloemy II, seem to have been the Blemmyes or Bejjā (Pany-Wissowa, "Blemmyes", by Sethe). According to Strabo xvii, 786, 879, and Ethiopian inscriptions, they lived south-east of Syene between the Nile and the Red Sea. In Strabo's time they were "not very numerous or wealthy" (xvii, 1, 23), breeding sheep, goats and cattle. They were no danger for the Empire then. In the following centuries, however, they must have learned camel breeding from their Arab neighbours to such a degree that they became real, and "excellent", riding camel nomads. Under Decius (249-251 A.D.), their camel razias became difficult for the Roman Empire. Twenty years later, they were already completely masters of the roads between the Nile and the Red Sea. The trade from Egypt to India on that route had become totally dependent on the good will of the Blemmyes (cf. Bensch, 264 f.). Under Probus (276-284) the Blemmyes temporarily occupied Koptos and Philae. Dioctletian had to pay tributes to them in 296 on the frontier near to Syene. This emperor had called the "Nobatai" (Nobades, i.e. Nabataei ?) for help against the Blem-

myes and had given them the Dodekaskhoas as a base of settlement (Procopius, Persia War XIX, Pany-Wissowa, xv, "Nabatai").

In the fourth century A.D., the Blemmyes and the Arab tribes of Egypt with their camels and now also horses became always more dangerous to the Empire by their raids (Ammian, Marcellin, xiv, 4, 3). The Empire had to draw up troops of camel riders against them. At the time of emperor Valens (d. 378), new Arab tribes migrated across the Isthmus of Suez and occupied the northern part of the "Arabian" Desert east of the Nile, probably as far as the latitude of Thebes. They must have reinforced camel nomadism and fighting on camel's back in the regions round Egypt.

On the rock drawings he discovered in the "Arabian" Desert east of the Nile, H. A. Winkler recognized a "Blemmyan" group, in age between that of cattle breeders and that of the Islamic era. That this group must be dated in this period seems to be certain (Greek and Coptic letters, Hellenistic inscriptions, typical brands). It mostly shows armed people (with bow, spear, sword and rectangular shield) riding on camels or also on horseback. Here, the camel is the main livestock, shown beside horse, donkey and cattle. Winkler says (1938, 411: "In all the former rock drawings peacocks prevail. In the pictures of the camel-owners all is war. And war they brought, wherever they went").

The author of this article is not qualified to describe the development of nomadism in the dry belts of Africa. When taking the rock drawings as a basis, it looks as if there has been an early period of cattle-breeding, not only in the steppes of the Sudd and East Africa, but also in the regions of the Sahel. Even if we admit that the climate may have periodically been a little moister than at present, it may be doubted whether horned cattle were the main livestock in those desert regions, for which they are not well fitted, although it may be that cattle were introduced earlier than sheep and goats. It seems probable to me that, when nomadic life was completely installed, cattle as holy animals were represented on the rocks although they were of secondary importance in the nomadic economy compared with the goats and the sheep. We may remember that the "Thamudean" rock drawings in Western Arabia show the hunted animals and the camel, but very little of goats and sheep, although we can be sure that the nomads of those regions then possessed flocks of these animals.

According to Lhote 1935, rock drawings show that in the area of Ghadames, Fezzan, Taallil and Ahaggar, the horse and a war chariot were introduced in an early period, according to Lhote's hypothesis about 1200 B.C. by "Sea Peoples" from the Aegean region. Among those war chariot people riding was developed at some time later on without rein and saddle, just in the way ancient authors describe horse riding of the North African nomads of their own time (Strabo, Polybios, Silius Italicus). In the middle of the 3rd century B.C. riding had fully replaced the use of the war chariot in North African wars. Nomadic razias were carried out on horseback.

It is curious that we know nothing about the way the camel was introduced into West-North Africa and the Sahel. In literature the camel appears for the first time in Caesar's *De bellis Africanis* (cf. lxxiii, 4) for the year 46 B.C., when 22 camels were among the booty taken from king Juba. But Juba was a man with wide and varied scientific, especially geographical, interests, and a collector in

the Hellenistic style. It seems probable that he had imported these animals to try out their usefulness in North Africa. Only in Cyrenaica the camel may have been bred in greater numbers in that period: It is shown on coins of the mint of L. Lollus, a commander in Cyrenaica under Pompey. Then there is a hiatus. From the 2nd or perhaps 3rd century, a statuette of a camel rider and a relief showing a hippodrome with a race of chariots drawn by camels were found in the necropolis of Hadrumetum (Sousse, Tunisia). The next indication in literature, however, is for the year 363 A.D. The Roman census of the province of Africa demands camel transport camels from the inhabitants of Lepis Magna on the Syrtis (Ammian, Marcellin, xxviii, c. 6, 5, xxxix, 5, 55). About 400 A.D. there is the report of Synesius that herds of camels and horses then formed the wealth of the inhabitants of Cyrenaica. In the 5th century reports on camel breeding become always more abundant in North Africa, mainly in the regions round the Syrtis.

Most authors, especially Gaumer (190 ff.), Geil and others have concluded from these rather meagre sources that the camel was eventually introduced to North Africa across the Mediterranean Sea. When, however, we consider the position of the Blemmyes in Upper Egypt in the 3rd century A.D. (cf. above), the chain of oases west of Egypt also seems to be a probable route. Indeed, we must not forget that any way south of the Libyan Desert remained outside the area of which we have historical reports.

Perhaps future linguistic research as well as excavations may give us help in solving these questions. In the language of the Bejjā (Blemmyes) the main name of the camel is *šim* (*šam*), in northern Nubia it is *šam* (*šamm*) (Professor Dr. O. Rösel by letter). The Tibbu call the camel *šōm*, and this name seems to have been spread by them far over the eastern part of the Sudd, where Tibbu are said to have introduced the camel (Bensch 171 according to Barth). So in the Mandara Mountains (northern Cameroons) the camel is called *šōm*, the male camel *šōm šōm* (Barth, II, 334, footnote). Even the Massi call the camel *se-šōm* (Naufr, *Le Tombe*). In the Berber languages including that of the Tawarik, a main designation of the camel is *alghem* or *alem*. From *alghem* the Hausa name *rahumi* and the Nupé name *rahum* are certainly derived (O. Rösel). All these names do not seem to be derived from Arab names, but there are other names showing such an etymology.

(H. VON WISEMANN)

### III. PRE-ISLAMIC ARABIA

- Sources.
- History.
- Political Relationships.
- Moral Outlook.
- Religion.

(a) Sources. Our knowledge of the Bedouin in pre-Islamic Arabia is derived mainly from two sources. Firstly, there has been preserved a certain amount of pre-Islamic poetry. Secondly, there are commentaries on this poetry and on old Arab proverbs, composed by Muslim scholars of the second Islamic century and later, and containing much traditional material about events in pre-Islamic times; this

material was also collected by other scholars in special works. The authenticity of pre-Islamic poetry has been denied by modern scholars, notably by D. S. Margoliouth and Taha Husayn, but their theories have not been accepted by the majority of scholars who, while admitting some falsifications, consider that on the whole pre-Islamic poetry has been faithfully transmitted (cf. A. J. Arberry, *The Seven Odes*, London 1937, 228-43). Similarly, the historical traditions, though once regarded by Western scholars as worthless, are now mostly held to have some factual basis and to reflect the conditions of life in the *Ujāhiliyya*, even though they are insufficient for a proper history. In certain points this traditional material is confirmed by statements of the Kur'ān or inferences from these, and is both confirmed and supplemented by the numerous inscriptions found in Arabia by modern archaeologists.

(b) *History*. From the dawn of history nomads from the Arabian steppe have been pressing on the surrounding lands of settled civilisation. At some periods the pressure has been greater and the penetration of the settled lands deeper, and the nomads have been said to come in 'waves'. In pre-Christian times Hebrews, Arameans, Arabs and Nabataeans entered Syria and 'Irāk, while in the six centuries before the Hijra there was further pressure from Arabs and Palmyrenes. The nomads would come first of all to raid, but frequently they would themselves settle (e.g. the Tanūkh in 'Irāk about 225 A.D.). Close relations between settled nomads and those still in the desert facilitated trade. Only nomads could conduct caravans of merchandise across deserts, and only strong bodies of nomads could guarantee the safe transit of such caravans. Thus in the history of the Byzantine and Sāsānian empires the nomads appear in the two rôles of raider and trader.

The two empires tried in various ways to defend themselves from the hostile and predatory incursions of nomads. The most effective way was found to be the employment of semi-nomadic rulers on the imperial frontiers to ward off from the settled lands raiding parties from the heart of the steppes. In 'Irāk this rôle was played by the Lakhmid kings of al-Hira from about 300 A.D. to the end of the dynasty in 602. On the Byzantine frontier the corresponding rôle was played by the Ghassanids, but they were later in attaining importance (it was in 520 that Justinian granted certain titles to the Ghassanid king), and apparently had only a camp for capital, not possessing any city comparable to al-Hira. This system of defence was altered shortly before the Muslim invasions. In al-Hira a Persian resident controlled the Arab chief who succeeded the Lakhmids, while the Byzantine subsidies to the Ghassanids seem to have ceased with the Persian invasion (613-629) and not to have been restored afterwards.

While it is clear that the nomads of Arabia were extensively involved in commerce, the details have not yet been closely studied. The nomads were in contact not only with the Persian and Roman empires, but also with the Hīmayrīte kingdom in South Arabia (until it was overthrown by the Abyssinians about 525). The prosperity of South Arabian civilisation was dependent on trade, and with a decline in its trade (perhaps through the loss of control of the Red Sea) the civilisation declined. Arab tradition speaks of the bursting of the dam of Ma'rib as marking the break up of South Arabian culture,

but archaeological discoveries point to a series of breakdowns of the irrigation system, and the presumption is that these are symptoms of the decline of South Arabia and not its cause. Arab tradition further connects with the bursting of the dam of Ma'rib the northward movement of many nomadic tribes (together with their abandonment of a settled life, it would seem). At the same time overland trade by camel caravan between the Yemen, Syria and 'Irāk began to flourish, and by 600 A.D. this was largely under the control of the Kurayh of Mecca. The Kurayh themselves had the city of Mecca as headquarters and to this extent were no longer nomads, but their commerce required alliances and other relationships with many nomadic tribes. The conveying and guaranteeing of caravans thus made important contributions to the livelihood of the nomads, and the fairs at which the merchandise brought by the caravans changed hands enabled the nomads to obtain many goods not produced in the steppe. Altogether the nomadic economy of pre-Islamic Arabia was far from being insulated and autarkic.

(c) *Political Relationships*. The social and political units among the Arabian nomads were groups of varying sizes. Western writers usually refer to these as 'tribes' or, in the case of the smaller groups and subdivisions, 'sub-tribes' and 'clans', but these terms do not correspond exactly to Arabic terms. There are a number of words in Arabic for such social and political units, but the commonest usage is to refer to a tribe or clan simply as *Banū Fulān* ('the sons of so-and-so').

The structure of these pre-Islamic tribes has not yet been adequately studied in the light of recent advances in social anthropology. They are presented in Arab tradition as being primarily constituted by kinship in the male line, though there are certain exceptions to this. A person not related to a group by blood (not a *qāhīl* or *amīm*) could enjoy some of the privileges of membership, above all protection. He might do so as an 'ally' (*ḥalf*), a 'protected neighbour' (*ḍiḍr*), or a 'client' (*mawālī*). The parties to an 'alliance' (*ḥilf*) were formally equal, but when a single individual lived as an ally among a tribe or clan, he tended to fall into a subordinate or dependent position. 'Neighbourly protection' (*ḍiḍr*), on the other hand, implied some superiority, at least of a temporary kind, in the person granting it; it could be either temporary or permanent. The status of 'client' was acquired by a slave on his emancipation. Attached to the tribe were slaves; male Arabs could become slaves through being captured in raids when children; and there were also Abyssinian slaves. A man could be expelled from his tribe for killing a kinsman or for conduct harmful to the tribe, and might wander alone (as a *raḥīl*) or else attach himself to another tribe as *ḍiḍr*, etc.

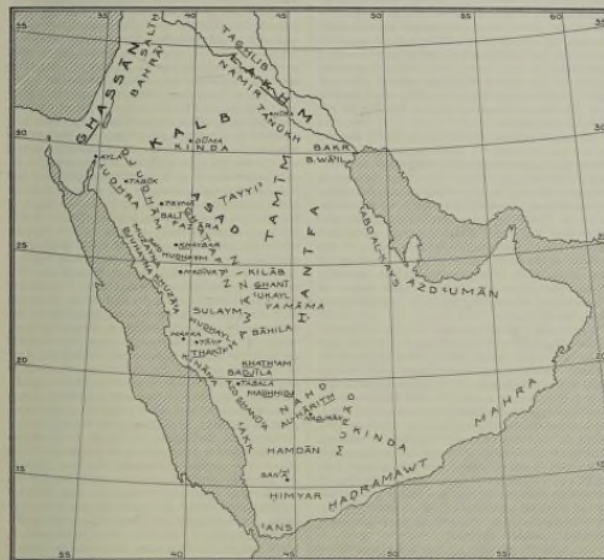

There are strong reasons, however, for thinking that the traditional view that the members of the tribe or clan in the strict sense were patrilineally related is not a complete account of the matter, even though some tribes were so constituted. Firstly, there are numerous traces of matrilineal descent among certain Arab tribes in Muhammad's time, and also some facts which suggest that it was being superseded by patrilineal. Though it is uncertain how extensive matrilineal was and what it involved in practice, there is sufficient evidence to cast doubts on the value of the purely patrilineal genealogies found in the works of the later Muslim scholars. It seems possible that, in some cases where matrilineal prevailed, the later

scholars, finding no patrilineal genealogy for a member of the group, argued that he must have been a *ḥalf*; perhaps this is how to explain the fact that the head of the clan of Zuhra at Mecca was a *ḥalf* (al-Aḥmad b. Ḥanbal).

Secondly, it has been argued that some of the tribal names were originally the names of groups with a local or political basis, and did not indicate common descent (cf. Nallino, *Raccolta di Scritti*, ii, 72-79). This has probably happened in some cases, and it is then the later genealogists who have transformed group names into eponymous ancestors; but

Some of the weaker tribes near Mecca had thus become largely dependent on Kurayh. Some still weaker ones had banded themselves together and were known as the Abāḥib, probably meaning 'mixed multitudes' (the view of Lammens that the Abāḥib were Abyssinian slaves contradicts statements in Ibn al-Hiṣṣān, 245, and Ibn Sa'd, i, 81, and has little to recommend it; cf. Montgomery Watt, *Muhammad at Mecca*, 81 and M. Hamidullah in *Studi Orientalistici in Onore di Giorgio Levi della Vida*, i, 434-47).

The affairs of a tribe were usually settled in an

TRIBAL ARABIA

Prepared by P. Cachia

it would be hazardous to explain all genealogies in this way. What may be taken as certain is that the structure of desert tribes was constantly changing. Some tribes would prosper, would become too numerous to function effectively as a unit, and would split up into two or more sub-tribes. This is probably the explanation of the fact that the Arabs of Muhammad's time had names for certain groups consisting of several tribes (cf. Nallino, *op. cit.*, 76). On the other hand, where a tribe did not prosper, it dwindled in number, and then had a choice between becoming dependent on some stronger tribe, allying itself with other weak tribes or simply disappearing.

assembly or meeting (*maḥfil*) of all the members. All might speak, but most weight attached to the words of men of recognised authority. The leader or chief of the tribe, the *sayyid*, was appointed by acclamation in the assembly. He usually came from the family considered most honourable, but there was no law of primogeniture. In the harsh conditions of the desert it was essential that one chief should himself be able to lead effectively and a minor could not have done this. The *sayyid* had certain duties, especially in respect of the relations of the tribe (or clan) to other tribes (or clans). He could make treaties which bound the tribe, and was responsible

for ransoming prisoners and for seeing that blood-wit was paid. He usually also claimed the right of entertaining strangers, and he was expected to help the poor of his tribe. In return for these duties he had the priviège of receiving a fourth part of any spoils taken in raids. Disputes between members of a group would normally be referred to their *sayyid*. Disputes between members of groups which had no common *sayyid* often led to fighting, but sometimes were referred to an arbiter (*šāḥim*); there were one or two men in different parts of Arabia who were outstanding for their wisdom and impartiality, and these were frequently asked to arbitrate. Apart from such voluntary submission to the decision of an arbiter and from membership of an alliance of tribes, each main tribe was an independent political unit. Occasionally the *sayyid* of a strong tribe through the force of his personality and through military prowess, established his ascendancy over a number of other tribes, so that they entered into alliance with him and carried out his orders; but this was resented, and the alliance broke up on the removal of the forceful personality.

(d) *Moral Outlook*. The life of the Badw was set in natural conditions of great harshness. At most times the means of sustenance were barely sufficient for the population. There was therefore a constant tendency for the strong to seize the means of sustenance, especially the camels, of the weak. This led to the organisation of the nomads into tribes and clans with a high degree of group solidarity. The larger groups were stronger, but the need to scatter at certain times to find pasturage for the camels made it difficult for groups beyond a certain size to act effectively as units. Hence, as noted above, the tendency of large and prosperous tribes to split up.

The *razzia* (*ghana*, *gharwa*) or raid to capture camels was almost a sport with the Badw, and bloodshed was avoided. When hostility deepened, however, raiding changed its character; adult males were killed, and women and children captured and then held to ransom or sold as slaves. The *les talionis* was universally recognised, and served to check wanton and irresponsible killing, since it was a matter of honour for a tribe to protect or avenge its members and those attached to it. In the older days a life had to be avenged by a life, but in Muhammad's time there was a tendency, which he tried to develop, of substituting for the life the payment of a blood-wit (*diya*), normally a hundred camels for an adult male. It was sometimes felt, however, to be unfairly thus 'to substitute milk for blood'.

The qualities admired by the Badw were those required for success in the hard life of the steppe. Loyalty to the kinship-group had a high place, and involved readiness to help one's kinsman against a stranger on any occasion. With this was coupled fortitude or manliness (*hamiyya*), which denoted 'bravery in battle, patience in misfortune, persistence in revenge, protection of the weak and defiance of the strong' (R. A. Nicholson, *A Literary History of the Arabs*, Cambridge 1930, 79).

The poets played an important rôle in the life of the pre-Islamic Arabs. The ode (*basida*) usually contained either *maḥabbah*, boasts, that is, praise of one's own tribe for its fortitude and other virtues, or *maḥabbah*, revilings (also *higay*), satire, that is, disparage of one's enemies. It was held that human excellence or the lack of it was to a large extent inherited. A hero's deeds showed the heroic qualities of his family, clan and tribe. Great store was thus

set on the reputation of the group. The power of the poet to convince his tribe of its own worth and to lower the morale of the enemy was very great. Poets had probably more power in pre-Islamic Arabia than the press in modern times. The Arabs felt there was something supernatural or magical about them.

Although descent counted for so much, it is not clear (as noted above) to what extent this was reckoned patrilineally and to what extent matrilineally. Four types of pre-Islamic marriage are described by al-Buḥārī (57, 37, 1; translated in Montgomery Watt, *Muhammad at Medina*, 378); two of these, though provision for determining paternity is described by al-Buḥārī, seem to belong to a primarily matrilineal system. The sources, moreover, suggest that al-Buḥārī's account is not exhaustive. Certainly it was common for the woman to live with her kinsmen, and for her husband merely to 'visit' her for short periods—for example, when their tribes happened to be camped close to one another.

(e) *Religion*. Pre-Islamic poetry suggests that for the nomadic tribes a quasi-religious dynamic was produced by a belief in the human excellence of the tribal stock. Regard for honour or reputation (*ḥaḥd*) was the driving force in much of their activity. In this sense it may be said that the real religion of the Badw was a tribal humanism. The widespread belief in fate among the Arabs was not so much a religious belief as a factual belief, viz. a belief that the world was so constituted that, as often as not, human efforts to avert disaster would be thwarted by circumstances. Fate was not worshipped as a deity. Apart from this there were a number of cults observed by the Arabs, each centred at a particular shrine (see arts. AL-LAT, MANAT, etc.). Some of these were of social importance, since round the shrines was a sacred area (*ḥarama*), while the institution of the sacred month was administered from the Ka'ba at Mecca. Such sacred times and places, in which blood feuds temporarily ceased, made it possible for many Badw to come together for trade and other purposes. On the whole, however, these cults seem to have little religious importance, properly speaking, in the life of the Badw.

Christianity had spread widely in Arabia when Muhammad began to preach, and some nomadic groups were at least nominally Christian. Judaism was also found, and some of these called 'Jews' in the records were probably Arabs who had adopted Judaism; but, though they had close relations with Badw, none of them appears to have been nomadic.

BAEZA (see BAYYARA).

BAGGARA (see BAKKARA).

BAGH (see DUSTAR).

AL-BAGHAWI, ABŪ MUHAMMAD AL-HUSAYN B. MAS'ŪD B. MUḤ. AL-FARRĀ' (or IBN AL-FARRĀ'), a doctor of the Shāfi' school, traditionalist, and commentator on the Qur'ān. His *Isālah* were Rūn al-Dīn and Muḥyī l-Sunna. He came from the village of Bagh or Baghbūr near Harāt (cf. al-Sam'ānī, f. 86a). Al-Farrā' (furrier) comes from his father's occupation. He studied fiqh under the ḥafīd al-Husayn b. Muḥammad al-Marw al-Rūdhī, becoming his favourite pupil; and heard traditions from a number of traditionalists. He was noted for piety and asceticism, and observed ceremonial purity in his teaching. Although he wrote on various subjects, the work for which he is most famous is his *Maṣābiḥ al-Sunna* (or *al-Duḡā*), which consists of a collection of traditions arranged according to their subject-matter. In each chapter he first gives traditions which are sound (*ṣaḥīḥ*) meaning by these traditions from the Ṣaḥīḥ of al-Buḥārī, then traditions which are good (*ḥasan*), meaning traditions which he has taken from the books of Abū Dā'ūd, al-Tirmidhī, and other *isnads*. In many chapters he also includes traditions which have only one authority at some stage of the *isnad* (*gharīb*), and even traditions which are weak (*da'if*). But he claims that he includes none which are rejected (*marḥūq*), or spurious (*maḥdūf*). The *isnads* are dispensed with, but the arrangement according to the degree of authority is a sufficient guide to what is accepted. Al-Baghawi declares that his purpose was to provide material for religious people which would help them to live a life pleasing to God. Editions have been published in Bālek, 1294, and Cairo, 1318. This work has been very popular, especially in the edition arranged by Wall al-Dīn (d. 743/1342) with the title *Miḥḥab al-Maṣābiḥ*. It has frequently been printed; an English translation was published by A. N. Matthews (Calcutta 1809-10), and another, with some arrangement of the text, by Maulana Fazlul Karim with the Arabic and English in parallel columns (Calcutta 1938-9). Al-Baghawi's other extant works are listed in Brockelmann. He died in Marw al-Rūdhī in 516/1122, but Ibn Khallikān mentions also 510/1117. Al-Djāhizī says he may have been eighty years of age, but al-Suhdī suggests that he may have been nearly ninety.

BAGHBŪR (see FARRĀ').

BAGHCE SARAY (Turkish: 'Garden Palace'), in Russian orthography: Багъет-Сарай, the capital of the Krim Tatars. It was the seat of the entire (including the dependent) rule of the Giray dynasty (c. 1500) from about 1423 to 1783, lies in lat. 44° 45' N. and long. 33° 35' E., 32 km. south-west of Simferopol', in a narrow, 7 km. long, gorge of the Çürük Su ('Foul Water'). Baghce Saray arose between the old administrative centre of the Crimea, Eski Yurt, in the west, where the Krim Khāns were buried until the 16th/17th century and the ancient Karaites settlement, Cufut Ka'be ('fort of the Jews') in the east (in Karaites: Kırk Yer, '40 Places'); it developed from an extensive burial ground that the most important of the Krim Khāns, Mengli Giray (c. 1500) began in 1503-1504 (909 A.H.), according to an

inscription) with the building of a 'Garden Palace', completed in 1519. Around this palace there developed gradually a new settlement which was named after it Baghce Saray and was constructed in a loose and haphazard fashion, a characteristic that has remained true of the site even down to the present time. The remains of older Christian buildings are said to have been used for the construction of a stone mosque and a dervish cloister. The Zindgiri ('Chains') madrasa, established at that time, has survived even until today (*Krym Medjmu'atı*, Istanbul 1918, no. 1, 16-19 and no. x, 188 ff.; Bodanitskiy, 19 ff.; Seydmet, 36-40). Thereafter the two neighbouring settlements fell gradually into decay. Yet the name Kırk Yer was still retained on the colony; only from 1644 does the name Baghce Saray appear on coins, that town continuing to be thereafter the sole mint in the land. A peace was concluded at Baghce Saray in 1692/1691 between the Krim Tatars, the Turks and the Russians, the Dnieper being recognised as the frontier between their respective dominions. By this peace the Krim Tatars and the Turks at last agreed to the incorporation of the Ukraine territories on the left bank of the river and the Cossack lands into the Muscovite state.

When Baghce Saray was devastated in the course of a Russian incursion (1736), a quarter of the town, including the palace, the chief mosque and the precious library that Solim Giray I (four times Khan between 1671 and 1704) had founded, suffered destruction. Only 124 bound volumes of documents survived; they were later deposited at St. Petersburg by V. D. Smimov (cf. K. Iosadancev, in *Zapiski Vost. otd. Arkh.* 46-48, vol. xviii, p. XVIII). The town was rebuilt, however, in the following years, during a period of renewed cultural efflorescence in the Crimea. The palace arose once more and was extended (1737-1743); it is now surrounded on three sides by a wall surmounted with various buildings. A new Council Hall (*Divan*) was erected in 1743, adorned with rich decoration, sculptures, arcades and paintings. The library was revived with the aid of bequests from Istanbul.

As a consequence of the peace of Küçük Kaynarğa (c. 1774) the numerous Greek-Orthodox and Armenian elements in the population of the town (about one third of the inhabitants) were resettled in 1779, against the wish of the Tatars, on territories already at that time under Russian rule, i.e., northward on the Sea of Azov and in the region of Rostov on the Don (New Nakhichevan, Nakhichevan, in Russian). The result was that Baghce Saray became an almost exclusively Tatar town and this distinctive character was expressly confirmed after the incorporation of the Crimea into Russia by Catherine II in 1783. Baghce Saray, in 1789, numbered 5,776 inhabitants (3,166 of them, men; the women, as it would seem, being in part passed over in silence in the census) living in 1,261 dwelling-houses; there were also 31 stone mosques, one Orthodox and one Armenian-Georgian church, two synagogues, two baths and 16 caravanserais. 110 wells were fed, through underground canals, from 32 springs in the mountains. In 1794 Cufut Ka'be still had 1162 Karaites, with two synagogues and a school; only in the 19th cent. did this town become almost wholly deserted. Baghce Saray, in 1881, numbered 13,377 inhabitants, amongst whom were 697 Karaites and 210 Rabbaniite Jews, together with a very small number of Greeks, Armenians and Gipsies; the population had fallen by 1897 to 12,935. The town retained its importance even in the

19th century. It developed a great craft activity (soaped morocco leather in red and yellow, candles, soap, agricultural implements, shoes, treatment of sheepskin, and, in the 20th cent., essential oils). Baghġe Sarāy was, moreover, the centre of national and cultural aspirations in the Crimea. Here, from 1888, the notable Russo-Turkish pioneer Ismā'il Bey Gasprali (Russian: Gaspinskiy, 1851-1914) published the important paper *Tarǧūmān* ("Interpreter"), the language of which was intended to form a compromise between the various Turkish dialects and thus to further co-operation between those who spoke them; in actual fact the language of the paper was very largely Ottoman (cf. G. Burtbe, *Die Sprache Ismā'il Bey Gasprali's*, Thübingen 1930 (typescript); G. von Mende, *Der nationale Kampf der Russland-türken*, Berlin 1936 (Index); Cafer Seydmet, *Gasprali Ismail Bey*, Istanbul 1934). In the following year Gasprali founded at Baghġe Sarāy a model school which became, until 1905, the pattern for some 3000 Muslim primary schools in Russia. The palace of the Khāns, on the occasion of a visit of Catherine II, had already been restored by G. Ye. Potyomkin and was thereafter maintained, on archaeological grounds, as the "sole great example of Tatar building within the Russian state".

Baghġe Sarāy became once more an administrative centre in the time of Crimean independence (1918-1920). During the German occupation of 1941-1944 it attained, however, no political importance. None the less, Baghġe Sarāy suffered heavily, when Soviet troops retook the town in April 1944; the palace of the Khāns was damaged, but was not restored (in part) and serves both as an Oriental museum and (since 1950) as a monument in honour of the Russian general Suworov, who had his headquarters here. As a result of the forcible "re-settlement" of the Krim Tatars (1944-1945) Baghġe Sarāy has wholly lost its former character. The present number and composition of the inhabitants are no longer given in the *Boʻlʻgʻaya Sovyetskaya Ensiklopediya*, iv (1950), 333; nor are details to be found there on the other conditions now prevailing in the town.

**BAGHDĀD.** Baghdad is situated on both banks of the Tigris, at 33° 26' 18" Lat. N. and 44° 23' 9" Long. E., respectively. Founded in the 8th century A.D. it continued to be the centre of the 'Abbāsid Caliphate till its fall, and the cultural metropolis of the Muslim world for centuries. After 1258 it became a provincial centre and remained under the Ottomans the centre of the Baghdad wilāyat. In 1921 it became the capital of modern 'Irāk.

#### History.

The name Baghdad is pre-Islamic, related to previous settlements on the site. Arab authors realise this and as usual look for Persian origins (cf. Makdisi, *al-Baḡdād*, iv, 101; Ibn Rusta, 108). They give different hypothetical explanations, the most common of which is "given by God" or "Gift of God" (or the like). (see Khāṭib, i, 38-9 (Cairo); Yāqūt, i, 678-9; Abū al-Faḡh, i, 227; Ibn al-Djawzi, *Manāhib*, 6; Bakrī, i, 169; Ibn al-Fakhri, *Baghdād MS*, f. 29 ff.) Modern writers generally tend to favour this Persian derivation (cf. Salmon, *Introduction*, 23-4; Le Strange, *Baghdād*, 10-11; Streck, *Landchaft*, i, 49-50; Herzfeld, *Pailuh*, 133; W. Budge, *By Nile and Tigris*, i, 178; JRLA, i, 46-9). Others tend to give the name an Aramaic origin meaning "the home or enclosure of sheep" (V. Ghardina and A. Karmal in *Lughat al-'Arab*, iv, 27; v, 748. Note Tabari's reference to Sūk al-Bakar, "the cow market", on the site of Baghdad (iii, 277). Dehirsch favours an Aramaic origin without explaining the meaning (Dehirsch, *Paradies*, 206, 238).

A legal document of the time of Hannurabi (1800 B.C.) mentions the city of Bagdad (Schorr, *Altbabylonische Rechtsurkunden No. 197*, l. 17). This indicates that the name was in use before Hannurabi and definitely before any possible Persian influence. Bag and Hu are rendered by the same sign. However a boundary stone from the time of the Kassite King Nazimaruttal (1341-1316 B.C.) mentions the city Pīlari on the bank of "Nah, Sham" in the district of Bagdad (De Morgan, *Délivrance en Perse*, i, 86-92). This with the mention of Bagdatha several times in the Talmud makes Bag the more acceptable reading (Obereyner, *Landchaft Babylonien*, 1929, 147 ff.; Jewish Encyc., *Baghdad*). Another boundary stone of the reign of the Babylonian king Marduk-apal-iddin (1208-1193 B.C.) mentions the city Bagdad (*Délivrance en Perse*, ii, 32-30).

Adad-nirari II (911-891 B.C.) plundered places amongst which was Bagdad (du) (*Synchronistic History*, iii L. 12 = K BI, 200). In the 8th century B.C. Bagdad became an Aramaean settlement. Tiglath-pileser III (745-727 B.C.) mentions Bagdad in connexion with an Aramaean tribe (Dehirsch, *Paradies*, 238).

From this it is only fair to admit that the origins of the name are not clear. The fact that Bag was adopted by the Iranians about the 8th century B.C. to denote "God", and that it figured in personal names does not change the situation (*Reallexikon*, i, 341).

Al-Manṣūr called his city Madīnat al-Salm (city of peace), in reference to paradise (Kur'ān, vi, 127; x, 26). This was the official name on documents,

coins, weights etc. Variations of the name, esp. Baghdad and appellations such as Madīnat Abū Dja'far, Madīnat al-Manṣūr, Madīnat al-Khulafā' and Al-Zawra' were used (Ibn al-Fakhri, f. 296; Yāqūt, i, 678; Ibn Kusta, 108). Zawra' seems to be an old name of the *Faḡhri* states (al-Faḡhri, 145; cf. Mustawfi, *Nazk*, 41). For later explanations see Mas'ūdī, *al-Tanbih* (Cairo, 314; Yāqūt, ii, 934). Arab authors state that al-Manṣūr built his city where many pre-Islamic settlements existed, the most important of which was the village of Baghdād, (see Tabari, ii, 277; and i, 2067; Ibn Dja'wzi, *Manāhib*, 7; Ya'qūt, *Buldān*, 237), on the west bank of the Tigris north of Sarāt (Tabari, iii, 277). Some consider it of Badīryā and refer to its ancestral fair (Khāṭib, i, 25-7; Ibn Dja'wzi, *Manāhib*, 6; Ya'qūt, *Buldān*, 275) and this would help to explain why Karḡh was later the quarter for merchants. A number of old settlements, chiefly Aramaean, were on the western side in the vicinity of Karḡh. Among these is Khātābiyya (by Bāb al-Shām), Sharafīniyya, and north of it Warḡhiyya which became within al-Harbiyya quarter, Sūniyya near the junction of Sarāt with the Tigris (later 'Atfika) Kaṭāfā at the corner where the Rūfayl canal flows into the Tigris, and Barātha where the Karḡhāya canal branches from the 'Isā canal. Three small settlements were between the Karḡhāya canal and Sarāt, i.e. Sūl, Warḡhā and the Khāṭibā quarter and Banāwra. Karḡh itself (Aramaic *karḡh* meaning a fortified town) takes its name from an earlier village, which Persian traditions attribute to Shūpūr II (309-379 A.D.) (Mustawfi, 40; see Tabari, iii, 278 9; Khāṭib, 27, 33. Ibn al-Aḡfir, ii, 342-3; Yāqūt, iii, 613 and Ibn al-Dja'wzi, *Manāhib*, 7).

According to Xenoophon the Achaemenids possessed vast parks in the district of Bagdad (at Suttāb). Arab authors refer to two such gardens (cf. Khāṭib, 28; Mustawfi, 40). Near the mouth of the 'Isā canal, there was a Sassanian Palace (*baḡr Sābār*) where al-Manṣūr later built a bridge. The old Kanāra (*al-banāra al-'atfika*) across the Sarāt canal, south-west of the Kūfa gate, was Sassanian. On the eastern side, Sūk al-Thalāṭhī and Khayrānā cemetery were pre-Islamic. There were some manasteries in the area which are pre-Islamic like Dayr Mīrāthiḥ (al-Dayr al-'Atkī) where al-Khulūd palace was built, Dayr Bustān al-Kuss, and Dayr al-Djāṭhāliḥ near which Shaykh Ma'rif was buried. (Tabari, iii, 274, 277; Ibn al-Fakhri, f. 36-37a; Khāṭib, 46, 28; Mas'ūdī, *al-Tanbih*, 312; *Udhābi*, *Duwal*, i, 76; Mustawfi, 40). None of these ancient settlements attained any political or commercial importance, so that the city of al-Manṣūr may be regarded as a new foundation. Baghdad is very often confused with Babylon by European travellers in the middle ages and sometimes with Seleucia, and appears in their accounts as Babel, Babilonia, etc. The erroneous application of the latter name to Baghdad is likewise common in the Talmudic exegetic literature of the Babylonian Geonim (in the 'Abbāsid period) as well as in later Jewish authors. Pietro della Valle who was in Baghdad (1616-7) was the first to refer to this error, widely spread in his time. Down to the 17th century the name Baghdad was generally known in the West in the corrupted form Baldach (Baldacco) which might be derived from the Chinese form of the name (cf. Dehirsch, *Medieval Researches*, i, 135; ii, 124; Travels of Marco Polo, ed. Franpton, 29, 126).

The 'Abbāsids turned to the east and looked for a new capital to symbolise their *dawla*. The first caliph, al-Saffah, moved from Kūfa to Anbār. Al-

Manṣūr moved to Hāshimīniyya near Kūfa, but he soon realised that the turbulent pro-'Alid Kūfa was a bad influence on his army, while Hāshimīniyya was vulnerable as was proved by the Rāwandīya rising (cf. Yāqūt, i, 680-1; Tabari, iii, 271-2; *Faḡhri* (Cairo), 143). He looked, therefore, for a strategic site.

After careful exploration, he chose the site of Bagdad for military, economic and climatic considerations. It stood on a fertile plain where cultivation was good on both sides of the river. It was on the Khurāsān road and was a meeting place of caravan routes, and monthly fairs were held there, and thus provisions could be plentiful for army and people. There was a net of canals which served cultivation and could be ramparts for the city. It was in the middle of Mesopotamia, and enjoyed a temperate and healthy climate and was fairly safe from mosquitoes (Ya'qūt, 235-8; Tabari, iii, 271-5; Yāqūt, i, 679-80; *Manāhib*, 7-8; Muḥaddadī, *Aḡḡan al-Tahṭīm*, 119-120; Ibn al-Aḡfir, v, 426-7; Ibn al-Dja'wzi, 7; Ya'qūt, ii, 449; *Faḡhri*, 143-5). Apocryphal stories about its merits and al-Manṣūr's destiny to build it found circulation later (cf. Ya'qūt, *Buldān*, 237; *Faḡhri*, 144; Tabari, *Faraj*, v, 234-5; Ibn al-Dja'wzi, *Manāhib*, 7-8).

Baghdad was to succeed Babylon, Seleucia and Ctesiphon and to outshine them all.

Ya'qūt (278-89), and Ibn al-Fakhri (290/903), give early detailed descriptions of Baghdad by quarters, while Suhābī (c. 900 A.D.) describes the net of canals in the area. The city with its fortifications and its inner plan looks like a big fortress. There was a deep ditch, 40 *dhira'* (= 20.27 m.) wide, surrounding the city, then a quay of bricks, then the first wall 18 *dhira'* (= 9 m.), at the base, followed by a space 56.9 metres in width (= 200 *dhira'*, see for measures Rayyis, *Khawāṭir*) left empty for defensive purposes. Then came the main wall of sun-burnt bricks—34.74 metres high, 30.2 metres wide at the bottom and 14.22 metres at the top—with great towers numbering 28 between each two gates except those between the Kūfa and Basra gates which numbered 29. On each of the gates a dome was built to overlook the city, with quarters below for the guards. Then came a space 170.70 metres wide where houses were built. Only officers and loyal followers (*muawid*) were allowed to build here, and yet each road had two strong gates which could be locked. Then came a simple third wall enclosing the large inner space where only the caliph's palace (Bāb al-Djāḥab), the great mosque, the *diwāns*, houses of the sons of the caliph, and two *shāḥīs*, one for the chief of the guard and the other for the chief of police, were built. To ensure control of the city and to facilitate communications internally and with caravan routes externally, the city was divided into four equal parts divided by two roads running from its equidistant gates. The Khurāsān gate (also called Bāb al-Dawla) was to the N.E., the Basra gate to the S.W., the Syria gate to the N.W. and the Kūfa gate to the S.E. To get to the inner circle, one had to cross the ditch and to pass five doors, two at the outer wall, two huge doors at the great wall and one door at the inner wall (see Ya'qūt, *Buldān*, i, 238-242; Tabari, iii, 322-3; Ibn al-Dja'wzi, *Manāhib*, 9-10; Khāṭib, 9-12; Ibn al-Aḡfir, v, 427-8, 439; Ya'qūt, ii, 449; Ibn al-Fakhri, MS, f. 33a).

Ancient imperial traditions are also noticeable in the plan. The seclusion of the caliph from his people, the grandiose plan of the palace and the mosque to show the greatness of the new *dawla*, the division of the people in separate quarters which could be

locked and guarded at night—all testify to that. Al-Manṣūr granted some devoted followers and captains tracts of land by the gates outside the city, and gave his soldiers the outskirts (*arḥāb*) to build and granted some of his kinsfolk outlying places (*al-ḥirā*) (Ya'qūbī, ii, 449-50; cf. Ibn Hawkal, i, 240).

The glory of the Round City was the Green Dome, 48.36 metres high, towering over the palace with a mounted lion on top. It fell in 329/941 on a stormy night, probably struck by a thunderbolt (Sūfī, *Rāḍī*, 229; Ibn al-Djawrī, *Muṣṭafā*, vi, 337-38; *Manāḥib*, 12; Abu T-Mahāsīn, iii, 270; Khātib, 15). However its walls lasted much longer, and they finally crumbled in 653/1255 A.D. (Ibn al-Fuwatī, 30), Sibt Ibn al-Djawrī, *Mir'āt al-Zamīn*, vii, 67). Marble and stone were used in the building of the Bāb al-Dhahab, and gold decorated its gate. It continued to be the official residence for about half a century, and though Raḥīd neglected it, Amīn added a new wing to it and built a "maydan" around it. During the siege of Baghdad in 198/814 it suffered much damage. Then it ceased to be the official residence and was neglected (cf. Ibn al-Fuwatī, 30).

The mosque (Djāmi' al-Manṣūr) was built on the palace and this was slightly deviated from the Kibla (cf. Tabarī, Cairo, vi, 269; Ibn al-Aḡrī, v, 439). In 191/807 Raḥīd demolished it, and rebuilt it with bricks. It was enlarged in 260-1/875 and finally in 280/893. Mu'taḍid added another court to it and renewed parts of it (*Muṣṭafā*, v, 21, 243). The mosque had a minaret (Khātib, v, 123) which was burnt in 303/915 (*Muṣṭafā*, vii, 284) but was rebuilt again (cf. Ibn al-Djawrī, *Muṣṭafā*, vii, 284). It continued to be the great mosque of Baghdad during the period of the caliphate. It was flooded in 653/1255 and survived this and the Mongol invasion.

The plan of Baghdad reflects social ideas. Each quarter had a responsible personage, and generally had a homogeneous group, ethnically (Persian, Arab, Khwārizmian), or by vocation. Soldiers had their homes outside the walls, generally north and west of the city, while merchants and craftsmen had their centres south of the Sarāt in Karḡh (see Ibn al-Fakih, MS, f. 37b; 33b, 29b).

Markets play a prominent part in the plan of Baghdad. Initially, along each of the four ways from the great wall to the inner wall were high arched rooms (*kūhī*) where shops were put, thus constituting four markets (cf. Tabarī, iii, 322). Besides, the Caliph ordered that each of the four sections outside the wall should have ample space for markets, so that each section should have a great market (Ya'qūbī, *Buldān*, 242). Fiscal considerations prompted al-Manṣūr in 127/771 to order the removal of markets from the Round City to Karḡh. He wanted to keep the turbulent populace away from the city and to ensure that gates of quarters are not left open at night for the markets, and to guard against possible spies infiltrating into the city. He drew a plan for the markets to be built between the Sarāt and 'Isā canal (Tabarī, iii, 324-5; Ibn al-Djawrī, *Manāḥib*, 124; Yāqūt, iv, 234).

Each craft or trade had its separate market or road (*darb*). Among the markets of Karḡh, were the fruit market, the cloth market, the food market, the money-changers' market, the market of book-shops, the sheep market (Ya'qūbī, *Buldān*, 241, 245, 246, 253; Istahḥīrī, 84; Ibn Hawkal, 242; Khātib, 22, 31, 67; Ibn al-Djawrī, *Manāḥib*, 26-28). With the growth of the city we hear of merchants from Khurāsān and Transoxania, Marw, Balḥ, Bukhārā,

Khwārizm, and they had their markets at Harbiyya quarters and each group of these merchants had a leader and a chief (Ya'qūbī, *Buldān*, 246-248). It seems that each craft had its chief chosen by the government (see Dürī, *Ta'riḥ al-'Irāq al-ḥijāzī*, 81).

There is a tradition that al-Manṣūr wanted to pull down a part of the white Palace in Ctesiphon to use the bricks in his buildings, but that he stopped because expenditure did not justify the operation. Another report attributes to al-Manṣūr the idea of repairing that palace, but says that he did not have the time to carry it through. Both traditions are reminiscent of the Shu'biyya controversy. The city was built mainly of sun-burnt bricks.

Ya'qūbī reports that the plan was drawn in 141/755 (Ya'qūbī, *Buldān*, 238) but work started on 1 Dhu'l-ḥijja 143/2 Aug. 762 (Khwārizmī's report in Khātib 2; cf. Wiet, Ya'qūbī, ix, n. 4). Four architects worked on the plan of the city, Hadjīdīd b. Artāt was the architect of the mosque (Tabarī, Cairo, vi, 265, 237; Ya'qūbī, 241). Al-Manṣūr assembled 200,000 workers and craftsmen to work in the construction (Yāqūt, 238; Tabarī, iii, 277). A canal was drawn from Karḡhāb canal to the site to provide water for drinking and for building operations (Ya'qūbī, 238). It seems that in 146/763 the palace, mosque and diwāns at least were completed and al-Manṣūr moved to Baghdad (Tabarī, iii, 313; Khātib, 2). By 149/766 the Round City was completed (Tabarī, iii, 335; Khātib, 243).

The Round City of al-Manṣūr is a remarkable example of town planning. It was circular so that the centre was equidistant from the different parts and could be easily controlled or defended. Arab traditions consider this design unique (Ya'qūbī, 238; Ibn al-Fakih, f. 33b; Khātib, 67; Dhahabī, *Duwal*, i, 76). However, the circular plan is not unfamiliar in the Near East. The plan of Uruk is almost circular (V. Christian, *Akkadianische*, ii, table 13). Assyrian military camps are circular enclosures. Crewell enumerates eleven cities that were oval or circular, amongst which are Harrān, Agbatana, Hatra and Dūrābīrdī. Dūrābīrdī bears a remarkable resemblance to the city of Manṣūr in its plan (Crewell, *Early Muslim Arch.* (short), 171-3; Molesher, *Babylonian and Assyrian*, i, table 161).

It is likely that the architects of the Round City knew of such plans. Ibn al-Fakih indicates that the choice of the plan was between the square and the circle and that the latter is more perfect (*Buldān*, MS, f. 33b). It is however more probable that the idea of the circular fort was responsible for the plan. Tabarī states 'al-Manṣūr made four gates (for the city) on the line of military camps' (Tabarī, Cairo, vi, 265).

There are different reports on the dimensions of the city of al-Manṣūr. A report makes the distance from the Khurāsān gate to the Kūfa gate 800 *dhira'* (= 405.12 metres) and from the Syrian gate to the Baḡra gate 600 *dhira'* (= 303.12 metres) (Khātib, 9-11; Ibn al-Fakih, MS, f. 33b). Another report from Waki' makes the distance between each two gates 1200 *dhira'* (= 608.28 m.) (Khātib, 11). Both reports underestimate the size of the city. A third report given by Raḥīb, one of the builders of the city, gives the measurement as one mile between each two gates (or 4000 *dhira'* *muṣalla* or 1848 metres: D. Rayyis, 278; Khātib, 5. This estimate is given in Ibn al-Djawrī, *Manāḥib*, 9; Yāqūt, i, 435; Abu T-Mahāsīn, i, 341; Irḥūlī, *Tahr.*, 54). This is confirmed by the measurement carried by the orders of Mu'taḍid and reported

by Badr al-Mu'taḍidī (Khātib, 5; Abu T-Mahāsīn, i, 341). This makes the diameter of the city 2352 metres. Ya'qūbī's estimate of the distance between each pair of gates outside the *khandaḥ* as 5000 black *dhira'* (or 2554.5 metres) becomes probable in this light (*Buldān*, 238-9).

Various reports are given of al-Manṣūr's expenditure on the city. One report makes the cost 18 million, understood to mean dinars (Khātib, 15; Ibn al-Djawrī, *Manāḥib* 34; Yāqūt, i, 183; Irḥūlī, *Tahr.*, 543). A second puts it at a hundred million dirhams (Abu T-Mahāsīn, i, 341). However the official report based on caliphal archives states that al-Manṣūr spent on the Round City four million, eight hundred and eighty three dirhams (Tabarī, iii, 326; Mukaddasī, *Aḥsan al-Tahāzīb*, 121; Khātib, 5-6; see also Ibn al-Aḡrī, v, 419; Ibn al-Djawrī, *Manāḥib*, 34). This is understandable if we take into account the low cost of labour and provisions and the strictness of al-Manṣūr in supervising his accounts.

In 157/773 al-Manṣūr built a palace on the Tigris below the Khurāsān gate, with spacious gardens, and called it al-Kūhī. The place was full of mosquitoes and noted for the freshness of its water. The name was reminiscent of paradise (Tabarī, iii, 379; Khātib, 14; Yāqūt, i, 783; Ibn al-Djawrī, *Manāḥib*, 12; Ibn al-Aḡrī, vi, 71; Ibn al-Fakih, f. 37b).

Strategic considerations, al-Manṣūr's policy of dividing the army, and lack of space soon led the caliph to build a camp for his heir al-Mahdī on the East side of the Tigris. The central part of the camp of al-Mahdī (later called Rusfā) after a palace built by al-Raḥīd, where his palace and the mosque were built, surrounded by the houses of officers and followers. The commercial side was soon expressed in the famous *sūq* of Bāb al-Tāh. The military side is shown by a wall and a ditch surrounding the camp of al-Mahdī. Work started in 157/768 and ended in 157/773. Rusfā was almost opposite the city of al-Manṣūr (Ya'qūbī, *Buldān*, 251-3; Istahḥīrī, 83-4; Khātib, 23-5; Ibn al-Djawrī, *Manāḥib*, 12-13; Mukaddasī, 121; Abu T-Mahāsīn, ii, 16; Yāqūt, i, 78).

Baghdād expanded rapidly in buildings, commercial activities, wealth and population. People crowded into east Baghdad, attracted by al-Mahdī's gifts, and later by the Barmakids who had a special quarter at the Shammasiyya gate (Ya'qūbī, *Buldān*, 251; *Aḡhānī* (Būlak), vi, 78, v, 8; Ibn Khallikān (Būlak), ii, 311). Yab'yā the Barmakid built a magnificent palace and gave it the modest name Kaṣr al-Tin (*Aḡhānī*, v, 8). Dīn'far built a great luxurious palace below eastern Baghdad, which was given later to al-Mu'taḍid. At the time of al-Raḥīd, the eastern side extended from the Shammasiyya gate (opposite the Kātrabul gate) to Mukharrin (its southern limit is the modern Ma'mūn bridge) (Ya'qūbī, *Buldān*, 251-4). On the other side al-Amin returned from the Khūld palace, where al-Raḥīd resided, to Bāb al-Dhahab, renewed it and added a wing to it and surrounded it by a square (cf. Dhahabī, *Duwal*, Cairo 1938, 193; Ibn al-Aḡrī, vi, 152). Queen Zubayda built a mosque on the Tigris (called after her) near the Royal palaces and another splendid mosque at her Kaṣr'ān north of the city (Yāqūt, iv, 211; Ibn Khallikān, 188; *Mustafā* (Būlak), i, 289). She also built a palace called al-Karār near al-Khūld (cf. Khātib, i, 87).

The western side expanded between the Kātrabul gate in the north and the Karḡhāb quarter, which in turn extended as far as great 'Isā canal (this flowed into the Tigris at the present Tūlī Khagham al-Dawra); to the west it almost reached Muhawwal (*Maghrīb*, 1934, 89; cf. poem in Yāqūt, i, 686;

Mas'ūdī, vi, 454; Tabarī, iii, 874, 876). Poets extol the beauty of Baghdad and call it "paradise on earth". Its wonderful gardens, green countryside, its splendid high palaces with sumptuous decorations on the gates and in the halls, and their exquisite rich furniture were famous (cf. Tabarī, iii, 873, 874; Kāll, *Amālī*, ii, 237; Yāqūt, i, 686).

Baghdād suffered a severe blow during the conflict between al-Amin and al-Ma'mūn. War was brought to the city when it was besieged for fourteen months (Mas'ūdī, vi, 456). Exasperated by the stubbornness of the defence, Tāhir ordered the destruction of the houses of the defenders, and many quarters "between the Tigris, Dār al-Rakīk, (north of the Khurāsān gate), the Syrian gate, the Kūfa gate up to Sarīf, the Karḡhābā canal and Kūmar" were devastated (Tabarī, iii, 887). The work of destruction was completed by the rabble and the lawless volunteers and the *bayyirān*, The Khūld palace, other palaces, Karḡh, and some quarters on the east side suffered heavily. "Destruction and ruin raged until the splendour of Baghdad was gone", as Tabarī and Mas'ūdī put it (see Tabarī, iii, 876-879, 925-6; Mas'ūdī, vi, 454-459; Ibn al-Aḡrī, vi, 188 ff.). Chaos and trouble continued in Baghdad until the return of al-Ma'mūn from Marw in 204/819. Al-Ma'mūn stayed at his palace, enlarged it considerably to add a race-course, a zoo, and quarters for his devoted followers (Yāqūt, i, 807). Then he gave this palace to al-Hasan b. Sahl to become al-Hasan palace—where bequeathed it to his daughter Barīd. Baghdad revived again under al-Ma'mūn. Al-Ma'mūn built a palace on the eastern side (Ya'qūbī, 245; cf. Khātib 47). Then he decided to look for a new capital for his new Turkish army. Baghdad was too crowded for his troops and both the people and the old divisions of the army were antagonistic to his Turks and he feared trouble. During the period of Sāmarrā (895-89) Baghdad missed the immediate attention of the caliphs (cf. Ya'qūbī, ii, 208; Irḥūlī, 161) but it remained the great centre of commerce and of cultural activities.

Baghdād also suffered from Turkish disorders, when al-Musta'in moved there from Sāmarrā and was besieged by the forces of al-Mu'ta'iz, throughout the year 251/865-6. At this period, Rusfā extended to Sāh al-Jahāliyya<sup>3</sup> (up to modern Samarra-<sup>3</sup>ist.). Al-Musta'in ordered the fortification of Baghdad; the wall on the eastern side was extended from the Shammasiyya gate to Sūk al-Jahāliyya<sup>3</sup>, and on the western side from Kāṭi'at Umm Dīn'far around the quarters up to Sarīf, and the famous Tāhir Trench was dug around it (Tabarī, iii, 1851). During the siege, houses, shops and gardens outside the eastern wall were devastated as a defensive measure (Tabarī, iii, 157) and the eastern quarters of Shammasiyya, Rusfā and Mukharrin suffered heavily.

In 278/892 al-Mu'tamid finally returned to Baghdad. He had asked Dūrān for the Husan palace, but she renewed it, furnished it to suit a caliph and handed it to him (cf. Ibn al-Djawrī, *Muṣṭafā*, v, 144). Then in 286/899, al-Mu'tamid rebuilt the palace, enlarged its grounds and added new buildings to it, and built prisons on its grounds (*muṭawīn*). He added a race-course and then surrounded the area with a special wall. It was to be Dār al-Khilāfa and remained, with additions, the official residence (Khātib, 53; Ibn al-Djawrī, *Muṣṭafā*, vi, 23; *Manāḥib*, 15; Tanūḥī, *Nuḥḥ*, viii, 12; Abu T-Mahāsīn, iii, 85; Irḥūlī, 171). Then he laid the foundations of the Taḍj palace on the Tigris north, but later saw much smoke from the city. He decided to build another palace, two miles to the north-east. He built the magnificent and

lofty al-Ṭurayyā, linked it with an underground passage to the Kaṣr (al-Ḥasall), surrounded it with gardens, and brought water to it from the Miṣāḥ canal (see the description of Ibn al-Muʿtazz, *Dīwān* (Berlin ed. 1913), 138-9). He also ordered, in order to keep the air pure, that no rice and palm trees be cultivated around Baghdad (see Ibn al-Djawlī, *Mundāqim*, v, 142). The Ṭurayyā lasted in good condition till 409/1073-4 when it was swept by the flood and ruined (Ibn al-Djawlī, *Manāhib*, 15; Vākūfī, i, 80). The ruin of the Round City started now. Al-Muʿtazz ordered the demolition of the City wall, but when a small section was pulled down, the Ḥishmīsīs complained, as it showed 'Abbasid glory, so al-Muʿtazz stopped. People however gradually extended their houses at the expense of the wall and this led ultimately to the demolition of the wall and the ruin of the City (Tanūkhī, *Niḡmūr*, i, 74-5).

Al-Muktaḍī (289-295/997-999) built the Taḡī with halls and domes, and a quay on the Tigris. He built a high semi-circular dome on its grounds, so that he could reach its top mounted on a donkey. (Khatīb, 48; Irbillī, 175; Vākūfī, i, 80; Ibn al-Djawlī, *Mundāqim*, v, 144). In 290/997 al-Muktaḍī pulled down the palace prisons and built a Friday mosque (Ḍiḡām al-Kaṣr) which became the third Friday mosque, until the time of al-Muktaḍī (Ibn al-Djawlī, *Mundāqim*, vi, 3; Khatīb, 62).

Al-Muktaḍī (295-320/983-932) added new buildings to the Royal palaces and beautified them fabulously; he paid special attention to the zoo (*bayr al-ṣubḥ*) (cf. Khatīb, 48, 53). Khatīb's detailed description for the year 305/917-18 is striking. The strong wall surrounding the palaces and the secret passage from the audience hall of al-Muktaḍī to one of the gates were necessary defensive measures (see Khatīb, 51). Among the wonders was *dir al-ḥudayra*, a tree of silver, in a large pond with 18 branches and multiple twists, with silver or gilt birds and sparrows which whistled at times. On both sides of the pond were 15 statues of mounted horsemen which moved in one direction as if chasing each other (54). There was a mercury pond 30 × 20 *ḡirā'* with four gilt boats and around it was a fabulous garden. The zoo had all sorts of animals. There was a lion-house with a hundred lions. There was the Firāwās palace with its remarkable arms. Twenty three palaces were counted within the Royal precincts (cf. Khatīb, 53-55; Ibn al-Djawlī, *Mundāqim*, vi, 144).

Baghdād reached its height in the 3rd/9th century. The eastern side extended five miles (1 mile = 2848 m.) from Shammāsiyya to Dīr al-Khūḍā in the 4th/10th century (Istakhṛī, 83). Tayfur (d. 893) reports that al-Muwaffak ordered the measurement of Baghdad before 278/892; its area was found to be 43,750 *ḡirā'* of which 46,250 *ḡirā'* were in east Baghdad and 17,500 *ḡirā'* in west Baghdad (Ibn al-Fakhī, i, 448; cf. Ibn Hawkal, i, 243). Another version of Tayfur makes eastern Baghdad at the time of al-Muwaffak 16,250 *ḡirā'* (1 *ḡirā'* = 1366 sq.m.) and western Baghdad 27,000 *ḡirā'*; this is more probable, as west Baghdad was still more important then. Another version puts the area at 33,750 *ḡirā'*, of which 26,750 *ḡirā'* were east and 27,000 *ḡirā'* west (Khatīb, 74). It is more likely that the latter figure represents the period of al-Muktaḍī when much expansion took place in east Baghdad. In all these reports the length of Baghdad on both sides was almost the same. For the first figure, considering the length of Baghdad as stated by Istakhṛī and by Tayfur, Baghdad was, in 279/892, about 7½ km. in length and 6½ km. in width, while under al-Muktaḍī

(320/932) it was about 8½ km. in length and 7¼ km. in width.

Baghdād's geographical position, its active people (cf. Dīḡhī, *Baghdād*, 39; Tanūkhī, *Furūd*, i, 11), the encouragement of the state to trade (cf. Yaʿqūbī, 590) and the prestige of the caliphate, soon made Baghdad the great centre of commerce (see Dīrī, *Taʾrīkh al-ʿIrāq al-Ḥisnī*, 143-157). Markets became an essential feature of its life, in Ruṣāfa and esp. in Karḫ. Each trade had its market, and among these were the fruit market, the cloth market, the cotton market, the market of booksellers which had more than a hundred shops, the money-changers' market and the *ʿaṭfīrīn* market in Karḫ. Markets for foreign merchants were at Sūk Bāb al-Shām. On the eastern side, there was a variety of markets including Sūk al-Tib for flowers, a food market, the goldsmiths' market, the sheep market, a booksellers' market, and a market for Chinese merchandise (Yaʿqūbī, *Buldān*, 241, 246, 248, 254; Istakhṛī, 48; Khatīb, 22, 65 ff., 36, 69; Ibn al-Djawlī, *Manāhib*, 26, 27-8; Ibn Hawkal, 242). Since the time of al-Manṣūr a *muhāsib* was appointed to watch over markets, to prevent cheating and to check on measures and weights (cf. Khatīb, 20; Ṣābi, *Rasāʾid*, 124, 141-2; Mawūdī, 141-2). The *muhāsib* also supervised baths and *ṣunūʿ* watched over mosques (Khatīb, 78). He also prevented subversive activities.

Each market or craft had a chief appointed by the government. In a craft there were the *ṣānīʿ* and the *ʿUṣāḡ* (cf. *Ḥiṣn al-Safā*, i, 255; cf. Essays of Dīḡhī (ed. Sandhöft), 126). Baghdad exported cotton stuffs and silk textiles esp. kerchiefs, aprons, turbans, crystals turned into lathes, glass-ware, and various cups, pots and ewers (*Buldān* al-Ḥām, 132; Mukaddasī, 128). Baghdad manufactured shirts of different colours, turbans of thin texture and celebrated towels (Dīnawarī, *Taḡīra*, 26). Its thin white cotton shirts were peerless (Ibn al-Fakhī, 254). The *ṣāḥāfīn* (silk stuff), the *muḥām* and *ʿaṭfīrīn* (silk and cotton) of Baghdad were famous (*Buldān* al-Ḥām, 38; Newberry, i, 36). Abu'l-Kāsim, 35; Mukaddasī, 32; Ibn Hawkal, 261). Excellent swords were made at Bāb al-Tāḡ (ʿArb, 50). It was famous for its leather manufacture and for the manufacture of paper (cf. Ibn al-Fakhī, 251).

A great incentive to commerce and industry was the development of the banking system in Baghdad, as shown in the activities of the *ṣarāfīs* and *ḡhāḡhīs*. The *ṣarāfīs* had their main exp. in Karḫ (cf. Dīḡhī, *Baghdād*, 228) and primarily served the people, while *ḡhāḡhīs* served mainly the government and its officials.

Baghdād grew international in population. Its inhabitants were a mixture of different nations, colours and creeds, who came for work, trade, as recruits for the army, slave, and for other careers. It is noticeable that the populace began to play an important part in its life (see Ibn al-Aḡḡir, vii, 85-6; Miskawayh, i, 74-5; Istakhṛī, *Taʾrīkh* (Berlin), 130). On their revolt against the rise in prices in 307/919, and their efforts to keep order in 201/816 during the confusion which followed the murder of al-Aḡḡir (see Tabarī, ii, 1009-1010; Ibn al-Aḡḡir, vi, 228-9 and vi, 13-14). The activities of the *ṣarāfīs* and *ḡhāḡhīs* began at this period (see Tabarī, iii, 1008, 1386; MacGill, vi, 457; 461 ff.).

It is difficult to give an estimate of the population of Baghdad. Estimates of mosques and baths are obviously exaggerated (300,000 mosques and 60,000 baths under al-Muwaffak, 27,000 baths under al-Muktaḍī, 17,000 baths under Muʿizz al-Dawla,

5,000 under Aḡḡ al-Dawla, 3,000 baths under Bahāʾ al-Dawla; Khatīb, 74-6; Ibn al-Fakhī, i, 59b; Hāḡ al-Ṣābi, *Rasāʾid* *Dār al-Khūḍā*, MS. 27-30). Baths were counted in 383/993 and found to number 1500. Traditions stress that each bath serves about 200 houses (Ibn al-Fakhī, i, 59b, 60a; Hāḡ al-Ṣābi, MS. 20). If the average number in a house was five, then the population of Baghdad was about one million and a half. Al-Muktaḍī ordered Sīnān b. Ḥabīb to examine doctors and to give licences only to those qualified, and the result was that 860 doctors were given licences (Ibn al-Aḡḡir, vii, 85; Ibn Abī Usaybā, i, 221 f., 224, 310; al-Kūfī, MS. 20). If we add doctors serving in government hospitals and those who did not have licences, the number would probably reach a thousand. The number of people who prayed on the last Friday of the month at the mosque of Manṣūr and that of Ruṣāfa were judged by measuring the area for prayer to be 64,000 (Ibn al-Fakhī, i, 62a; see also Tabarī, iii, 1730). The number of boats about the end of the 3rd/9th century was calculated to be 30,000 (Ibn al-Djawlī, *Manāhib*, 24). From these figures and the area of Baghdad we can estimate the population of Baghdad in the 4th/10th century at a million and a half. If this, a contemporary, gives this estimate too.

There were aristocratic quarters such as Zāhīr, Shammāsiyya, al-Mahāsīn, al-Dār al-Awṣā, and there were poor quarters like Kaṭṭāf al-Kilāb, and Nahr al-Daḡḡī (Abu'l-Kāsim al-Baghdādī, 23, 106). Homes were of two stories, and those of the common people were of one story. Those of the rich had baths and were usually divided into three quarters surrounded by a wall—the ladies' quarters, the reception rooms, and the servants' quarters. Special attention was paid to gardens (*Ḍiḡhī*, ii, 73; iii, 31; ix, 144, v, 38, xvii, 120; Hāḡ al-Ṣābi, *Rasāʾid*, 32). Carpets, divans, curtains and pillows were noted items of furniture (Abu'l-Kāsim, 36). Fans and specially cooled houses and *ṣarāḡīs* were used in summer (see Dī. Mawūdī, *Madīra al-Islām*, 117, 30). Inscriptions and drawings of animals and plants or human faces decorated entrances (*ibid.*, 29; Abu'l-Kāsim, 7, 36).

A special feature of the life of Baghdad is the vast number of mosques and baths as indicated.

Baghdād was the great centre of culture. It was the home of Hanafī and Hanbalī schools of law. It was the centre of translations, in Bayt al-Hikma and outside, and of some scientific experimentation. Its mosques, especially Dīḡhī al-Manṣūr, were great centres of learning. The large number of bookshops which were sometimes literary salons, indicates the extent of cultural activities. Its poets, historians, and scholars are too numerous to mention. One can refer to the History of Baghdad by Khatīb to see the vast number of scholars, in one field, connected with Baghdad. Not only scholars, but also the *ḡhāḡhīs* and *ṣarāfīs* gave every encouragement to learning. The creative period of Islamic culture is associated with Baghdad. Later in this period, public libraries as centres of study and learning were founded, the most famous being the Dār al-ʿIlm of Abū Naṣr Ṣābūr b. Ardāzīr. When the *madrasa* appeared, Baghdad took the lead with its Niḡmāsiyya and Mustansiriyya and influenced the *madrasa* system both in programme and architecture.

Much attention was paid to hospitals, especially in the 3rd/9th and 4th/10th centuries. Of these, the Bīmārīstān al-Sayyida (306/918), al-Bīmārīstān al-Muktaḍirī (306/918) and al-Bīmārīstān al-ʿAdudī (372/

982) were famous. Ministers and others also founded hospitals. Doctors were at times subject to supervision (see above).

Under al-Raḡḡib there were three bridges in Baghdad (Yaʿqūbī, ii, 510). The two famous ones were by Bāb al-Khūḍān, and at Karḫ (cf. Yaʿqūbī, ii, 542; Dīḡhī, *Baghdād*, 254; Tabarī, iii, 1212). Al-Raḡḡib built two bridges at Shammāsiyya, but they were destroyed during the first siege (Ibn al-Djawlī, *Manāhib*, 20; Ibn al-Fakhī, i, 42a). The three bridges continued to the end of 3rd/9th century (Ibn al-Fakhī, i, 42a). It seems that the northern bridge was destroyed and Istakhṛī talks of two bridges only (Ibn al-Djawlī, *Manāhib*, 20; Istakhṛī, 83). In 389/999 Bahāʾ al-Dawla built a bridge at Sūk al-Thalāḡhā (Niḡmāsiyya al-Kaṭṭānīn) to become the third bridge. This indicates a shift of emphasis from N. Baghdad to Sūk al-Thalāḡhā (Ibn al-Djawlī, *Mundāqim*, vii, 171; cf. Ibn al-Djawlī, *Manāhib*, 20; Khatīb, 71-2).

Life in Baghdad was stable until al-Aḡḡir. The first siege brought out turbulent elements in the *ḡhāḡhīs*. Flood and fire also began to play their rôle from the last quarter of the 3rd/9th century. Flood in 270/883 ruined 7,000 houses in Karḫ. In 292/994 and 328/929 Baghdad suffered considerably from flood (Tabarī, iii, 2005; Ibn al-Aḡḡir, vii, 371; Abu'l-Mahāsīn, iii, 157 and 266). In 327/983 flood swept beyond the Kūfa gate and entered the city (Sūfī, *Rāḡh*, 278; Khatīb, 16). The neglect of canals, especially during the *ʿAmīr al-Uṣayr* period (324-334/935-945), was responsible for floods and for the ruin of the Bāḡḡrāy district (Miskawayh, i, 2; Sūfī, *Rāḡh*, 106, 225, 137-8). Consequently, whereas scarcities and plague were rare before 320/932 they were recurrent after that (cf. Ibn al-Aḡḡir, vii, 377, 387, 398). The scarcity of 307/919 was a result of monopoly and was quickly overcome. Scarcities occurred in 321/934, 326/937, 329/940 (with plague), 330/941, 331/942 (with plague), 332/943, 337/948 and life became unbearable (Sūfī, *Rāḡh*, 61, 104, 236, 251; Ibn al-Aḡḡir, vii, 282, 311; Istakhṛī, *Taʾrīkh*, 125; Abu'l-Mahāsīn, iii, 290, 274).

In 308/940 and 309/911 Karḫ suffered considerably from fire (Ibn al-Aḡḡir, vii, 39, 29). In 323/944 the fire of Karḫ swept over the quarters of the *ʿaṭfīrīn* (the drug sellers), the oilment sellers, jewelers and others and its traces could be seen years after (Sūfī, *Rāḡh*, 68).

The Buwayhid period was rather hard for Baghdad. Muʿizz al-Dawla (in 325/940) first repaired some canals at Bāḡḡrāy and this improved living conditions (Miskawayh, i, 163). A period of neglect followed and many canals which irrigated west Baghdad were in ruins. Aḡḡ al-Dawla (377-378/977-982) had them cleared up, and rebuilt bridges and locks (Miskawayh, ii, 406; iii, 69; Ibn al-Aḡḡir, vii, 518). Then we hear no more of such activities.

Building activities were limited. In 350/961 Muʿizz al-Dawla built a great palace at the Shammāsiyya gate with a large Maydīn, a quay, and beautiful gardens. For this palace he took the seven iron doors of the Round City and spent about a million *ḡhāḡhīs* (11 million dirhams). However, it was pulled down in 418/1027 (Tanūkhī, *Niḡmūr*, i, 70-1; Ibn al-Aḡḡir, vii, 207-8; iii, 256). Aḡḡ al-Dawla rebuilt the house of Sabuktaynī, chamberlain of Muʿizz al-Dawla, at upper Mukharrim, added spacious gardens to it, and brought water to it by canals from Nahr al-Khūḍān at great expense. It became the Dār al-Imāra or official residence of the Buwayhids (Khatīb, 58-9; Ibn al-Djawlī, *Mundāqim*, vii, 27-8; cf. Miskawayh, iii, 124).

'Adud al-Dawla found Baghdad in bad shape. He ordered that its houses and markets be renewed and spent much money in rebuilding its Friday mosque; he repaired quays by the Tigris, and ordered the wealthy to repair their houses on the Tigris and to cultivate gardens in ruined places which had no owners. He found the central bridge narrow and decayed and had it renewed and heightened. (Ibn al-Athir, viii, 558; Ibn al-Djawzi, *Muntazam*, vii, 114; Miskawayh, ii, 404-406). In 372/982 he built the 'Adudī Hospital, appointed doctors, supervisors, storekeepers to it, and provided it with plenty of medicines, potions, instruments and furniture. *Wahā's* were allotted to it for its upkeep. (Ibn al-Djawzi, *Muntazam*, vii, 112-114).

However, Baghdad declined under the Buyayids (Tanūkhī, *Naghar*, i, 66 makes it in 345/956 one tenth of its size under al-Muktadir). The city of al-Manṣūr was neglected and had no life then (Mukaddasī, 120). Most of the quarters of W. Baghdad were in bad shape and had shrunk. The most flourishing section of W. Baghdad was Karḥ, where the merchants had their places of business. Thus the western side is called Karḥ (Ibn Hawkal, i, 241-2; Mukaddasī, 120).

The eastern side of the city was more flourishing, and dignitaries generally resided there (cf. Ibn Hawkal, 240). Here, the bright spots were the Bāb al-Tākh where the great market was, the Dār al-Imra at Muḥarrir and the caliph's palaces at the southern end (cf. Mukaddasī, 120; Ibn Hawkal, i, 240-1; Tanūkhī, 84). On Karḥ, the eastern side, Ibn Hawkal saw four Friday mosques: the mosque of al-Manṣūr, the Ruṣāfa mosque, the Barāḥā mosque, and the mosque of Dār al-Sultān (241). Then in 379/989 and 383/993, the Kaṭī'a mosque and the Harbiyya mosque became Friday mosques (Ibn al-Djawzi, *Muntazam*, vii, 671; Khattib, 53-4. Ibn al-Djawzi, *Manāḥib*, 21-2; Ibn al-Athir, ix, 48).

Ibn Hawkal saw two bridges, one out of order (cf. 241). It seems there were three bridges at the time of Mu'izz al-Dawla (one at the Shamusiyya gate (near his palace), the other at Bāb al-Tākh and the third at Sūk al-Thalāḥā). The first was transferred to Bāb al-Tākh, making two there, then one went out of order (cf. Ibn al-Djawzi, *Manāḥib*, 20).

Baghdad suffered much from the turbulence of the *Shimma*, from sectarian differences encouraged by the Buyayids, and from the *ṣayyārān*. Our sources talk much of the ignorance of the *Shimma*, their readiness to follow any call, their good nature and their lawlessness (cf. Maṣ'ūdī, v, 81, 82-3, 85-7; Ghazālī, *Fadā'ik*, 53; Ibn al-Djawzi, *Manāḥib*, 31-2; Baghdadī, *Firak*, 141). In 279/892 al-Mu'tadī forbade *ḥaps* and fortune-tellers to sit in the streets or markets, and forbade people to congregate around them or to indulge in controversies (Ibn al-Djawzi, *Muntazam*, v, 122, 121). Before the Buyayids, the Hanbalis were the source of trouble. They tried at times to improve morals by force (cf. Ibn al-Athir, vii, 229-30, 84-3, 157-8; Sūfi, *Risāla*, 198). At this period, sectarian troubles multiplied and caused much loss in property and people. The Buyayids made the 10th of Muḥarram a day of public mourning, ordered the closing of markets, and encouraged the populace to make processions with women beating their faces (cf. Ibn al-Djawzi, vii, 15). On the other hand, the Ghadir on 28 Dhū'l-Hijja was made a day of celebrations. This led the Sunnis to choose two different days, each eight days after the ones mentioned (cf. Ibn al-Athir, ix, 120). Conflicts between the Shī'ites and the Sunnis became usual occurrences at this period, starting from 338/949

when Karḥ was pillaged (Ibn al-Djawzi, *Muntazam*, vi, 361). In 345/959, fights between the two groups led to destruction and fire at Bāb al-Tākh (ibid., 390). In 361/971 troubles in Karḥ led to its burning and 17,000 people perished, 300 shops, many houses and 33 mosques were burnt down (Ibn al-Athir, vii, 207; cf. Ibn al-Djawzi, *Muntazam*, vii, 60). In 363/973 fire burnt much of Karḥ (Ibn al-Athir, vii, 207). In 364/974 troubles broke out and fire recurred in many quarters (Ibn al-Athir, ix, 31). In 1016 the Nahr Ṭākh, Bāb al-Kutn and much of the Bāb al-Basra quarters were burnt (Ibn al-Athir, ix, 102; see also vii, 184, ix, 25-6, 32, 58). In 422/1030 many markets were ruined during the troubles (Ibn al-Djawzi, *Muntazam*, viii, 35). More damage and confusion was caused by the *ṣayyārān* who were especially active throughout the last quarter of the 4th/10th cent. to the end of this period (on their activities during the two stages of Baghdad see Tabari, ii, 877, 1002-1008, 1552, 1556-7; Maṣ'ūdī, vi, 450 ff.). Historians misunderstand their activities and show them as robbers and thieves. But their movement is a product of their living conditions. Much of political chaos, the rise was against the wealthy and the rulers, and this explains why their activities were directed primarily against the rich, the markets, the police and the dignitaries (cf. Tanūkhī, *Faraj*, ii, 106, 107-8; Ibn al-Djawzi, *Muntazam*, vii, 174, 220; Ibn al-Athir, ix, 115). They had moral principles such as honour, and help to the poor and to women, co-operation, patience and endurance. The *ṣayyārān* were not so much related to their movement (cf. Ibn al-Djawzi, *Talāḥ*, 181, 392; Kuzayrī, *Risāla*, 113-4; Ibn al-Djawzi, *Muntazam*, viii, 77; Tanūkhī, *Faraj*, ii, 180). In the 4th/10th century they were organised, and among the titles of their chiefs were al-Mutakaddim, al-Kā'id, and al-Amīr, and they had special ceremonies for initiation (see *Muntazam*, viii, 49, 151-78; Miskawayh, ii, 306; Kuzayrī, *op. cit.*, 113; Tanūkhī, *Faraj*, ii, 190). However they were divided into Shī'ite and Sunnite (Ibn al-Djawzi, *Muntazam*, viii, 78-9).

The *ṣayyārān* kept people in constant terror for life and property. They levied tolls on markets and roads or robbed wayfarers and constantly broke into houses at night. They spread havoc by sword and fire and burnt many quarters (Ibn al-Djawzi, *Muntazam*, viii, 78-9; Ibn al-Athir, ix, 115). In east Baghdad and Karḥ, as those were the quarters of the wealthy. People had to lock the gates of their streets, and merchants kept vigil at night. Disorder and pillage made prices high (Ibn al-Djawzi, *Muntazam*, viii, 151, 220, viii, 21-2, 44, 47-50, 54-5, 60, 72-3, 79, 82, 141, 161). A preacher travelled in 431/1040 'O God! Save the state from the populace and the rabble' (Ibn al-Djawzi, *Muntazam*, viii, 44). Burjūmī, a notorious *ṣayyār* leader, practically ruled Baghdad for four years 422-423/1030-1033, and spread havoc (ibid., 75-6). The government was powerless (cf. 49) and they were left to levy taxes and tolls to avoid their terror (ibid., 78). Many people left their quarters and departed for safety (ibid., 142). The terror continued till the advent of the Saljūqs (ibid., 161).

In 447/1055 Tughril Bey entered Baghdad, and the Saljūqs reversed Buyayid policy and encouraged the Sunnis (cf. Abu'l-Mahsin, v, 59). In 450/1058 Basāḥirī, a rebel, seized Baghdad in the name of the Fātimids (cf. Abu'l-Fida', ii, 186; Ibn al-Kalidī, 87). He was defeated and killed by the Saljūqs forces in 451/1059 (Abu'l-Fida', ii, 187-8).

During this period Baghdad assumed a shape which thereafter changed but little.

In 448/1056 Tughril Bey enlarged the area of Dār

al-Imra, pulled down many houses and shops, rebuilt it and surrounded it with a wall (Ibn al-Djawzi, viii, 160). In 450/1058 it was burnt down and rebuilt again (Ibn al-Djawzi, *Muntazam*, viii, 778). It became known as Dār al-Mamlaka. It was rebuilt in 509/1115, but was accidentally burnt in 515/1121 and a new palace was built (Ibn al-Djawzi, *Manāḥib*, 16; *Muntazam*, ix, 253). Muḥibbān enlarged and rebuilt the mosque of Muḥibbān, which was near the palace, in 484/1091 and was hence called Dīnānī al-Sultān. It was repaired in 502/1108 (Ibn al-Djawzi, *Muntazam*, ix, 159), and was finally completed in 524/1129 (Abu'l-Fida', ii, 211; Ibn al-Djawzi, *Manāḥib*; 23; Abu'l-Mahsin, v, 135).

Life centered in E. Baghdad around the caliphal palaces. Al-Muḥibbān (469-487/1072-1094) encouraged building; and the quarters around the palaces—such as Baḥaliyya, Kaṭī'a, Halaba, Adjama, etc. flourished. He also built the Riverain-palace (Dār Shāṭiyya) by the old Tāḡ palace (Ibn al-Djawzi, *Muntazam*, viii, 203; Ibn al-Athir, x, 150; cf. Le Strange, 253; cf. Ibn al-Fuwatī, 21). In 524/1129 the Tāḡ palace was pulled down and rebuilt (Ibn al-Djawzi, *Muntazam*, x, 41). These quarters were not walled and they suffered much from the flood in 1070. In 488/1095 al-Mustazhir built a wall around the so called Harim quarters. Then in 517/1123 al-Mustashir rebuilt it with four gates and made it 22 *dhira'* in width. The flood of 554/1159 surrounded the wall, made a breach in it, and ruined many quarters. The breach in it was mended and a dyke was begun, and completed later around the wall (cf. Ibn al-Djawzi, *Manāḥib*, 34; ibid., *Muntazam*, x, 189-190). Other attempts to rebuild the wall or repair it took place under al-Nāṣir and al-Mustansir (Ibn Fuwatī, 16, 111). This wall set the limits of East Baghdad till the end of Ottoman period.

Baghdad is in decline during this period and lived on its past glory. From the end of the 5th/11th century, there were many changes in its topography. Many quarters in western Baghdad were ruined, and waste land replaced previous gardens or houses (cf. Khattib, 67 and Tanūkhī, *Naghar*, i, 74-5). This probably explains the increase in the number of Friday mosques. The old quarters of Shamusiyya, Ruṣāfa and Muḥibbān were neglected (cf. Ibn Hawkal, 241).

Benjamin of Tudela, who visited Baghdad around 567/1171, talks of the greatness of the caliphal palace, with its wall, gardens, a zoo and a lake. He speaks highly of the 'Adudī Hospital with its sixty doctors, and a sanatorium for the mad. He found 40,000 Jews in Baghdad with schools for them (*Itinerary*, ed. and tr. A. Asher, New York, 1869-2, i, text 34-64, tr. 93-105; Arabic tr. by E. H. Haddad, Baghdad 1915, 131-8). Ibn Dūbayr described Baghdad in 581/1185. He noticed the general decline, and criticised the arrogance of its people (218). Much of the eastern side was ruined, yet it had seventeen separate quarters, all with two, three or eight baths (218). The caliph's quarters, with its magnificent palaces and gardens, occupied about a quarter or more of the area (226-7). This side was well populated and had excellent markets (228). Kurayya was the largest quarter, (very likely between the modern al-Ahrās bridge and Kaṭī'a al-Karāya and near it the suburb (*raḥā*) of Murābba'a (probably by Sayyid Sultān 'Alī now). It had three Friday mosques, Dīnānī al-Sultān, north of the wall, and the Ruṣāfa mosque, about a mile north of the latter (228-9) and Dīnānī al-Khalifa. There were about thirty *madrāsas* (colleges), all housed in excellent buildings with

plenty of *wahf* and endowments for their upkeep and for the students' expenses. The most famous *madrāsa* was the Nizāmiyya which was rebuilt in 1120 (229).

He describes the wall, built by al-Mustashir, surrounding Shārkīyya as having four gates—1. Bāb al-Sultān to the north (later called Bāb al-Mu'azzam), 2. Bāb al-Zafarīyya (N.E.), later, Bāb al-Wastānī, 3. Bāb al-Halaba (S.), later Bāb al-Talāḥīn, 4. Bāb al-Baḥaliyya (S.), later al-Bāb al-Shārkī. The wall surrounded Shārkīyya in a semi-circle reaching the Tigris at both ends (229). He talks of the populous quarter of Abū Hanifa, while the old quarters of Ruṣāfa, Shamusiyya, and most of Muḥibbān were ruined (cf. 226; Ibn Hawkal, 241). In western Baghdad ruin spread everywhere. Of quarters here, he mentions Karḥ as a walled city, and the Bāb al-Basra quarter which contained the great mosque of al-Manṣūr and what remained of the old city (225). By the Tigris was the Shārkī quarter which constituted with Karḥ, Bāb al-Basra and Kurayya the largest quarters of Baghdad (225). Between al-Shārkī and the Bāb al-Basra was the quarter of Sūk al-Marṭin, a small city, with the famous 'Adudī hospital, which was well staffed and provisioned (225-6). Of other quarters he noticed the Harbiyya quarter as the northernmost, and the 'Attābiyya, famous for its silk-cotton (*ṭālib*) cloth (226). Ibn Dūbayr (229) talks of 2000 baths and eleven Friday mosques in Baghdad.

At the time of al-Mustashir (512-59/1118-1134) there was one bridge near the 'Isā canal, later moved to Bāb al-Kurayya. During the period of al-Mustashir (566-575/1170-1179) a new bridge was made at Bāb al-Kurayya, and the old one was returned to its place by the 'Isā canal. Ibn Dūbayr saw the first bridge only, but confirms that there were usually two bridges and Ibn al-Djawzi, who wrote just before the fall of Baghdad, confirms this (Ibn al-Djawzi, *Manāḥib*, 20; Ibn Dūbayr, 225).

Half a century later, Yāqūt (621/1226) gave some useful data. He shows western Baghdad as a series of isolated quarters each with a wall and separated by waste land of ruins. Harbiyya, al-Harim al-Tāhirī in the north, Caḥr Sūḡ with Naṣriyya, 'Attābiyyin and Dār al-Kazz south-west, Muḥawwal to the west, Karḥ to the east, and Kurayya and Karḥ in the south are the noted quarters. In East Baghdad, life centered in the quarters around Harim Dār al-Khalifa which occupy about a third of the area enclosed in the walls. Of the large flourishing quarters were Bāb al-'Araḍi with its markets, al-Maḥiniyya next to it, Sūk al-Thalāḥā, Nahr al-Muḥalla and Kurayya (Yāqūt, i, 232, 441, 444, 534, 635, ii, 88, 167, 234, 459, 532, 783, 917, 918, 919, 927, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985).

Friday mosques increased in Ghariyya (W. Baghdad) at this period, indicating the semi-independent status of quarters. Ibn al-Djawzi mentions six between 530/1135 and 572/1176 in addition to Dīnānī al-Manṣūr (Ibn al-Djawzi, *Manāḥib*, 23, 225). Ibn al-Fuwatī. The mosques of Karḥ were repaired by Mustansir (Ibn al-Fuwatī, 15), and Dīnānī al-Kar was renewed in 475/1082, and again by al-Mustansir in 673/1273 (Ibn al-Djawzi, *Muntazam*, ix, 3; Le Strange, 269). The Kanariyya mosque (still present) was built in 626/1228 (Ibn al-Fuwatī, 41).

The strength of Sūfi is shown by the large number of *Risāla* [e.g.] built during the last century of the caliphate. They were built by the caliphs or their relatives (cf. Ibn al-Fuwatī, 2, 74, 75, 79, 80, 87, 112, 261; Ibn al-Djawzi, *Muntazam*, ix, 11, Ibn al-Athir, xi, 77, 33, xii, 27, 67-8).

finances), and a *Khid*. A garrison was stationed in Baghdad with the janissaries as its backbone.

Few buildings were erected during the following period. In 978/1570 Murad Pasha built the Muradîya mosque in the Maydan quarter. The Gilâni mosque was rebuilt. Çiğazade built a famous inn, a coffee house and a *marîfât*. He also built *Dişânî* al-Sağîr or *Dişânî* al-Khaffîffî, and rebuilt the *Mawlawî tekke*, known now as the *Asâfiyya* mosque (ʿAzizîwî, iv, 116, 128-132; cf. Alûsî, *Masâidid*, 30-1, 62-4). Hasan Pasha built the mosque known after him, also called *Dişânî* al-Waṣîr (*Gulshan-i Khusûfî* 66; Ewliya Celebi, iv, 49). He also made a rampart and a ditch around Karğî to protect it from Bedouins.

Europeans travellers begin to visit Baghdad at this period. They speak of it as a meeting place of caravans, and a great centre of commerce for Arabia, Persia and Turkey. Caesar Frederigo (1563) saw many foreign merchants in the city. Sir Anthony Sherley (1590) saw "excellent goods of all sorts and very cheap" (Parchas, viii, 384). It had a bridge of boats tied by a great chain of iron, and when boats passed up or down the river, some of the boats of the bridge were removed until the traffic had passed (Ralph Fitch in 1583, Hakluyt, iii, 282-3). Rauwolf (1574) saw streets narrow and houses miserably built. Many buildings were in ruins. Some public buildings like the Pasha's residence and the great bazaar or exchange were good. Its baths were of low quality. The eastern side was well fortified with a wall, and a ditch, while the western side was open and low like a great village (Rauwolf, *Travels*, in Kay's collection, London 1605, i, 179 ff.). The city walls were built of bricks and had subsidiary works including four bastions on which heavy bronze guns in good conditions were mounted (Tessiera, *Travels*, Hakluyt ed., 31). The circuit of the walls is given as two to three miles. John Ilford (1585) noticed that three languages were spoken in Baghdad, Arabic, Turkish, and Persian (Hakluyt, iii, 325). Ralph Fitch (1583) found Baghdad not very great but very populous. The Portuguese traveller Pedro Tessiera (1604) estimated houses in east Baghdad at twenty to thirty thousand. There was a mint in Baghdad in which gold, silver and copper coins were struck. There was a school of archery and another of musketry maintained by the government (*Travels*, Hakluyt ed., 31).

Following the insurrection of Bakr the Sabahî, Shâh ʿAbbâs I conquered Baghdad in 1032/1623. School buildings and Sunnî shrines, including the mosques of Gilâni and Abû Hanîfa, suffered destruction. Thousands were killed or sold as slaves and others were tortured (Kâtib Celebi, *Faḡhâḡa*, ii, 30; *Kûlûb al-ʿAdhîr*, i, 383; ʿAzizîwî, iv, 278-182). In this period the Sarây (government house) was built by Sâḡ Kullî Khân, the Persian governor. Baghdad was regained by the Ottomans in 1048/1638 under the personal command of Sultân Murâd IV. He had the shrines, especially the tombs of Abû Hanîfa and Gilâni, rebuilt. On his departure, the Rîb al-Tîllîsîn was walled up and continued thus until it was blown up by the retreating Turks in 1917. His Grand Vizier put the Kalʿa (castle) in good repair.

Further information comes from travellers of this period, like Tavernier (1652), Ewliya Celebi (1655) and Thevenot (1663). The wall around east Baghdad was almost circular in shape. It was 60 *dhîrâʿ* high and 10-15 *dhîrâʿ* broad, with holes for guns. It had large towers at the principal angles, of which four were famous at this period—and smaller towers at short distances from each other. On the

large towers brass cannons were planted. The wall was completed on the river side for proper defence (the map of Naḡib al-Sîhîl drawn for Sultan Sulaymân in 1537 already shows this wall. A. Souts, *Atlas of Baghdad*, 12). There were 118 towers in the wall on the land side and 45 on the river side (Hadjjî Khalfâ, 1657). *Dişânî-nisâwî*, 437 ff.; Ker Porter (1819) reports 117 towers of which 12 were large (*Travels*, 263); cf. Buckingham, *Travels*, 372). The wall had three gates on the land side, (as the Tîllîsîn gate was walled up): Bab al-Imâm al-ʿAṣam in the north at 700 *dhîrâʿ* from the Tigris, Karanîlî Kapu (Bâb Kalwâḡhâl) or the dark gate in the south at 50 *dhîrâʿ* from the Tigris, and Ak Kapu (al-Bâb al-Waṣîl) or the white gate in the east. The fourth gate was at the bridge. Ewliya Celebi measured the length of the wall and found it 28,800 paces in slow walking or seven miles (1 mile = 4,000 paces), while Hadjji Khalfâ makes its length 12,200 *dhîrâʿ* or two miles (Niebuhr and Olivier consider the length of East Baghdad two miles). Wellsted thought the circuit of the wall 7 miles. Felix Jones, who surveyed Baghdad in 1853, gives the circuit of the walls of East Baghdad including the river face as 10,600 yards or about 6 miles (Olivier, *Voyage*, ii, 579-80; Wellsted, *Travels*, i, 255; Felix Jones, 318; cf. Rousseau, 5 and Tavernier, 84).

The wall was surrounded by a ditch, sixty *dhîrâʿ* in width, with water drawn from the Tigris. At the north-western corner of the wall stood the Kalʿa (inner castle), from the Rîb al-Muṣṣarraf to the Tigris; it was encompassed by a single wall with little towers upon which cannon were planted. Barracks, stores of ammunition and provisions as well as the treasury and the mint were there. The Sarây, where the Pasha resided, stood below the castle; it had spacious gardens and fair kiosks. On the other end of the bridge at Karğî stood a castle called Kughlar Kalʿat or Bird's castle, with a gate on the bridge (Ewliya Celebi, iv, 416; Hadjji Khalfâ, *Dişânî-Nisâwî*, 437-50; Tavernier, 64; Thevenot, *Voyage*, ii, 211). Ewliya Celebi refers to the numerous mosques of Baghdad and mentions nine important mosques. Of the schools, two were the largest, the Marjânîyya and Madrasat al-Khulafâʾ (Mustansiriyya). Of the money houses two were good. He mentions eight churches and three synagogues, and gives exaggerated figures for *tekkes* (700) and *hamâmîs* (500). The bridge of boats had 37-40 boats according to the height of the river, and some boats in the middle could be removed either for safety at night, or for river traffic, or as a military precaution. The main languages spoken in the city were Arabic, Turkish and Persian. Baghdad had the best carrier-pigeons.

However Baghdad was still in decline; its population was at the low figure of 15,000 (Tavernier, *Travels*, London 1678, 85-6; Ewliya Celebi, *Siyâhat*, iv, 420 ff.; Thevenot, *Voyage*, ii, 211).

Baghdad was governed by 24 pashas between 1048/1638-1116/1704 and there was no room for real improvement. The pashas were semi-autonomous, and the power of the janissaries was great. The power of the tribes rose and gradually became a threat to the life of the city.

Little was done beyond repairs to the city walls or mosques. Kûlûk Hasan Pasha (1642) built three towers near Burj al-ʿAdjâm. Khâṣakî Muhammad Pasha rebuilt Tabayrat al-Fâḡh and repaired the walls after the flood of 1657. Ahmad Bughnâk repaired the towers especially Burj al-Dîwânîh (Caḡhah) and built Burj al-Sûbûnî (1687). Mosques received some attention. Delî Husayn Pasha (1644) rebuilt the

Kamariyya mosque. Khâṣakî Muhammad (1657) built the Khâṣakî mosque at Ra's al-Karya. Shûbârî Husayn Pasha (1671) rebuilt al-Fadl mosque which became known as *Dişânî* Husayn Pasha and surrounded the shrine of ʿUmar Sulaymânî by a wall and brought water to it by a canal. ʿAbd al-Rahmân Pasha (1674) repaired the *Dişânî* Shaykh Ma'rûf and completed the dam started by his predecessor to protect ʿAzamiyya from flood. Kadiri Mustafâ (1676) rebuilt *Dişânî* al-Shaykh al-Kadiri which became known as *Dişânî* al-Kapli-niyya. ʿUmar Pasha (1678) repaired the mosque of Abû Hanîfa and allotted new *waḡḡs* to it. Ibrahim Pasha (1681) renewed *Dişânî* Sayyid Sulṭân ʿAlî, and *Dişânî* al-Sarây, Ismâʿîlî Pasha (1698) rebuilt *Dişânî* al-Khaffîffîn (ʿAzizîwî, iv, 27, 64, 109, 116, 143, *Gulshan-i Khusûfî*, 102, 103, 105, 106, Alûsî, *Masâidid*, 37, 57-8). Ahmad Bughnâk (1678) built the famous Khân Bânî Sa'd, while Shûbârî Husayn Pasha built a new bazaar near the Mustansiriyya.

The beginning of the 18th century saw the *ayak* of Baghdad terribly disorganised, the janissaries masters of the city, the Arab tribes holding the surrounding country, and peace or security for trade non-existent. The appointment of Hasan Pasha in 1704, followed by his son Ahmad, inaugurated a new period for Baghdad. They introduced the *Mamlûks* (*Kidwân*) to check the janissaries and laid the foundation for Mamlûk supremacy which lasted till 1831. The janissaries and Arab tribes were controlled, order was restored and the Persian threat averted. Hasan Pasha rebuilt the Sarây Mosque (Hadjji Hasan Pasha). He abolished taxes on firewood and on foodstuffs, and relieved *quṣṣars* from excessive levies. Most (Gardiner, *The Persian Gulf*, vol. i, pt. 1, 1193-4; Sulaymân, *Fâḡh*, *Harâb al-Firâsiyyîn*, MS. i, 18-19; idem, *Ta'riḡh al-Mamlûk*, MS. i, 4; *Hadikat al-Zawâd* (abridged), MS. 9; *Gulshan-i Khusûfî*, 225). Ahmad Pasha continued on the lines of his father and enhanced greatly the prestige of Baghdad. Nâdir Shâh besieged Baghdad twice, in 1737 and 1743, and though the city suffered much in the first siege, Ahmad Pasha held out and saved the city. When Ahmad Pasha died in 1747, Constantinople tried to reimpose its authority on Baghdad but failed, because of Mamlûk opposition. In 1749 Sulaymân Pasha was the first Mamlûk to be made governor of Baghdad. He was the real founder of Mamlûk rule in ʿIrâq. Henceforth the sultans had to recognise their position and generally to confirm their nominees to the governorship. Hasan Pasha, who was brought up at the Ottoman court (slave household), wanted to follow its example; he established houses and initiated the training of Circassian and Georgian Mamlûks and sons of local magnates in them. Sulaymân now expanded this and there were always about 200 receiving training in the school to prepare officers and officials. They are given a literary education and training in the use of arms, the art of chivalry and sports, and finally some palace education, to create an élite for government (Sulaymân Fâḡh, *Ta'riḡh al-Mamlûk*; *Dauhat al-Wuzarâʾ*, 8). A governing class was formed, trained, energetic, and compact. But their weakness came from jealousy and intrigues. Sulaymân Pasha subdued the tribes and assured order and security, and encouraged trade. ʿAlî Pasha followed in 1753/1762 and ʿUmar Pasha in 1771/1764 (*Ta'riḡh-i Dîwânîh*, i, 339-40). In 1766 the establishment of a British residency in Baghdad was sanctioned by Bombay (*Gazetteer*, i, 1223). In 1816/1772 a terrible plague befell Baghdad and

lasted six months; thousands died, others migrated, and commercial activities came to a standstill (*Gazetteer*, i, 324).

Security made Baghdad a great commercial centre. An eye-witness wrote in 1772, "this is the grand mart for the produce of India and Persia, Constantinople, Aleppo and Damascus; in short it is the grand oriental depository" (*Gazetteer*, i, 1243).

Disension and weak leadership among the Mamlûks led to a period of troubles, of tribal chaos, and the Persian conquest of Basra. It ended when Sulaymân Pasha the Great became governor (1793/1779) and combined Baghdad, Shahrîr and Basra. The tribes were checked, peace was restored and Mamlûk power revived (*Ta'riḡh-i Dîwânîh*, ii, 146, 157, 158; Sûfi, *Ta'riḡh al-Mamlûk*, 19 ff., 34 ff., S. Fâḡh, *Ta'riḡh al-Mamlûk*, i, 16-7).

Sulaymân Pasha repaired the walls of east Baghdad, and built a wall around Karğî and surrounded it with a ditch. He rebuilt the Sarây. He also built the Sulaymânîyya school and renewed the Kaplaniyya, Fadl and Khulafâʾ mosques. In addition, he built the Sûk al-Sarrâḡlîn. His *kahya* started building the Ahmadiyya mosque (*Dişânî* al-Maydan) to be completed by the *kahya*'s brother (ʿUḡmûn b. Sanad, (abridged, ed.), 70-73, 76-7). His last year (1800) saw a plague in Baghdad (*Gazetteer*, i, 1285; Vâḡf Elendî, *ḡḡḡ*, *ḡḡḡ* al-ʿAdhîr, 64). Kûlûk Sulaymân (1808) abolished execution except when religious courts decided it, and forbade confiscations and cancelled dues to courts, and allotted salaries to judges (S. Fâḡh, *Ta'riḡh al-Mamlûk*, i, 16; *Dauhat al-Wuzarâʾ*, 250).

Dâwîd Pasha came (1816) after a troubled period. He controlled the tribes and restored order and security. He cleared up some irrigation canals, established cloth and arms factories, and encouraged local industry. He built three large mosques, the most important being the Haydar-Khâna mosque. He founded three *madrasas*. He also built a *sâb* by the bridge. He organised an army of about 20,000 and had a French officer to train it. His energetic and intelligent administration brought prosperity to the city. However, he had to impose heavy taxes in Baghdad, Dâwîd's fall and the end of the Mamlûks came about as a result of Mahmûd II's centralising and reforming policy, aided by a terrible plague, scarcity, and flood, which affected most of the city population (1247/1831) (*Hadikat al-Zawâd* (abridged, ed.), MS. i, 43-44, 53, 55-58; A. R. Surwayyî, *Nisâwî al-Uḡḡ*, MS. i, 41-42; *Misʿad al-Zawâd*, 59; S. Fâḡh, *Ta'riḡh al-Mamlûk*, MS. i, 39-42; *Gazetteer*, i, 1316; Fraser, *Travels*, i, 224-5; *Handbook of Mesopotamia*, i, 80-1).

The administrative system of Baghdad was copied on a small scale from that of Constantinople. The Pasha held supreme military and administrative power. As the head of the administration was the *kutbkhâ* (or *kahya*) who was like a minister. He was assisted by the *dettârâr*, who was director of finances, and by the *divân* *endişîs* or chief of the chancellery. There was the commander of the palace guards and the aghâ of the janissaries. There was the *kâdî* as the head of the judiciary. The Pasha called the *divân* which included the *kahya*, the *dettârâr*, the *kâdî*, the commander and other important personages, to discuss important issues. In the palace there were houses, with teachers and instructors (*âllâl*) to educate the Mamlûks (*Dîwânîh*, ii, 287, iii, 204, ʿUḡmûn b. Sanad, 31-2, 56, 39; Rousseau, 25 ff.). The Mamlûk army was of 12,300 and in case of need it could be raised to

30,000 by local levies and contingents from other parts of the *vilāyat* (S. Fā'ih, *Mamālīk*, I, 51-2).

European travellers of this period give some data on Baghdad. Some notice that the walls were constructed and repaired at many different times, the old portions being the best (Buchingham, *Travels* (1827), 332; see Felix Jones, *Memoir*, 309). The enclosed area within the walls (cent) according to Felix Jones' measurement was 593 acres (cf. Dr. Ives, *Journey*, London 1778, 20; Rousseau, *Description*, 5). The wall on the river seems to have been neglected and houses were built on the bank (Olivier, *Voyage* (1804), II, 379). A large part of the city within the walls, particularly in the eastern side, was not occupied. The section near the river was well populated but even there gardens abounded so that it appeared like a city arising from amid a grove of palms (Niebuhr, II, 239; Buckingham, 373; Wellsted, *Travels* (1840), I, 253). The Sarāy was spacious, enclosing beautiful gardens, and was richly furnished (Rousseau, 6; Kor Porter, 263).

The western side Karḡh, was like a suburb with numerous gardens. It was defenceless at first, (Rousseau, 5; Ives, 28), until Sulaymān Paḡhā the Great built its wall. It had four gates—Bāb al-Kāsim (N.), Bāb al-Shaykh Ma'rūf (W.), Bāb al-Hilla (S.W.), and Bāb al-Karmāt (S.). The walls were 5,800 yards long, enclosing an area of 246 acres (F. Jones, 309). (Kor Porter (1818) found it well furnished with shops along numerous and extensive streets (Kor Porter, II, 253; al-Munḡhī al-Baghdādī, *Rikāʾa*, 37). Moreover it was not so populated as the eastern side, and generally inhabited by the common people (Niebuhr, II, 244; Rousseau, 4). The bridge of boats was 6 ft. wide and people use it or use "guffs" to cross the river (Kor Porter, II, 255; Niebuhr, II, 243; al-Munḡhī al-Baghdādī, 243).

The population gradually increased in this period. Rousseau (c. 1800) estimates it at 45,000, Olivier at 60,000, while the inhabitants put the figure at 100,000 (Rousseau, 8; Olivier, II, 385). Buckingham (1836) made the estimate 80,000 (*Travels*, II, 380). Kor Porter (1818) puts the figure at 100,000 (*Travels*, 265). Al-Munḡhī al-Baghdādī echoes local views in saying that there were 100,000 houses in Baghdad of which 1,500 were Jewish and 800 were Christian (*Rikāʾa*, 24). By 1830 the estimate was brought to 120,000-150,000 (Frazer, I, 224-5; and Wellsted). There was a mixture of races and creeds. The official class was Turkish (or Mamlik), the merchants primarily Arab, and there were Persians, Kurds and some Indians (Buckingham, 387; Niebuhr, II, 250; Kor Porter, II, 265; Wellsted, I, 251). There were numerous bazaars in Baghdad especially near the bridge, and the grand ones were vaulted with bricks, while the others were covered with palm trees. There were many *hāḡins*, 24 *hammāms*, five great *madrasas*, and twenty large mosques and many small ones (Buckingham, 378-9; Ives, 273; al-Munḡhī al-Baghdādī, 31; Niebuhr, II, 239; Wellsted, I, 257; Olivier, II, 382).

The streets were narrow, and some had gates closed at night for protection. Houses were high, with few windows on the streets. The interior consisted of ranges of rooms opening into a square interior court usually with a garden. *Sardābs* were used to avoid heat in summer, while open terraces were convenient for the late afternoon. In summer people slept on the roof (cf. Buckingham, 386). Baghdad had some industries especially tanneries and the fabrication of cotton, silk and woolen textiles (Rousseau, 9-10).

From 1831 to the end of the Ottoman period,

Baghdad was directly under Constantinople. Some governors tried to introduce reforms. Mehmed Raḡhd Paḡhā (1847) was the first to try to improve economic conditions. He formed a company to buy two ships for transport between Baghdad and Basra, the success of which led to the corresponding British project. Nāḡim Paḡhā (1853) founded the *damir-ḡhāna* which could repair ships (Chiba, 24, 38-9; *Gazetteer*, I, 1360, 1363-6, 1372). Midhat Paḡhā (1869-1872) introduced the modern *wilāyat* system. The *wālī* had a *ma'dūn*, or assistant, a *madīr* for foreign affairs, and a *ma'nūn* or secretary. The *wilāyat* was divided into seven *sandjaks* headed by *mutasarrifs*, Baghdad being one of them (*Gazetteer*, I, 1442, 1447-8). He abolished some obnoxious taxes—the *ḡhāḡ* (octroi duty) on all produce brought in the city walls for sale, the *ḡhāḡiyya*, a tax on river crafts, *ḡhāḡi katab*, or 20% on fuel, and *rūs ḡhāḡ*, a tax on irrigation wheels for cultivation, and replaced it by a *ḡhāḡ* on agricultural produce (*Gazetteer*, I, 1442). In 1870 Midhat founded a tramway linking Baghdad with Rikāḡimayn, and it continued for 70 years ('All Haydar Midhat, *Life*, 21). He established (1869) an early publishing house, the *ḡhāḡ* printing press in Baghdad, and founded al-Zawra', the first newspaper to appear in 'Irāk as the official organ of the provincial government; it continued until March 1917 as a weekly paper ('Azizī, vii, 241; 'All Haydar Midhat, *The Life of Midhat Paḡhā*, London 1903, 47-8; Tarrākī, *Arabic Press*, I, 78; *Handbook of Mesopotamia*, I, 81). With the exception of a few French Missionary schools, there were no modern schools in Baghdad. Between 1869-1872, Midhat established modern schools, a technical school, a junior (*Ruḡhd*) and a secondary (*Fāḡid*) military schools, and a junior and secondary civil (*Ma'dū*) schools (*Zawra'* No. 182; 'Azizī, viii, 21; *Silsilatu'l-Baghdādī* (1900), 454; Chiba, 100-102). Midhat pulled down the city walls as a step towards its modernisation. He completed the Saray building started by Nāḡim Paḡhā (Chiba, 66).

The education movement started by Midhat continued after him. The first junior girls' school was opened in 1899 (*Silsilatu'l-Baghdādī*, 1218). Four primary schools were opened in 1890, and a primary teachers' school in 1900 (*Silsilatu'l-Baghdādī*, Istanbul 1900; S. Fayyāḡ, *Nidāḡ*, 28-9). By 1913 there were 193 schools in 'Irāk 17 primary, 29 junior, (*Ruḡhd*), 5 secondary and one college, the law college (*Lughat al-'Arab*, 1913, 335). Five printing presses were founded between 1884-1907. Newspapers appeared in Baghdad after 1908 and by 1915, 45 papers were issued by different people.

Walls followed Midhat in quick succession and little was achieved. In 1886 conscription was established (for Muslims only). In 1879 the hospital built by Midhat was finally opened (*Zawra'* No. 810). By 1902, a new bridge of boats, wide enough for vehicles to pass, and with a cafe on the south side, was constructed (Alūsī, 25; *Handbook*, II, 374). In 1908 Baghdad sent three representatives to the Ottoman Parliament ('Azizī, viii, 165). In 1910 Nāḡim Paḡhā constructed a band surrounding east Baghdad to protect it from floods ('Azizī, viii, 200-1). He was the last energetic *wālī*.

Administration was headed by the *wālī* assisted by a council, about half of which consisted of elected members, and the rest were appointed (*ex-officio*). About two of the elected members were non-Muslims. The *wālī* was assisted by a *ḡhāḡ* *mukīm* (*Zawra'* No. 1369). *Silsilatu'l-Baghdādī* (A.H.). Among important officers were the *Ma'sūf* directorate, the *Taḡa* directorate, the registration office, and the civil

courts (*Silsilatu'l-Baghdādī* (1900), 82-96). Until 1868, Baghdad was the centre of the three *ḡhāḡs* of Mawsil, Basra and Baghdad. In 1861, Mawsil became separate and in 1884 Basra was separated and Baghdad became the centre of three *Mutasarrifliks* (Chiba, *Province*, 83).

The plague and flood of 1831 left terrible marks on Baghdad. Most of the houses of East Baghdad were ruined and two thirds of the space within the walls was vacant, while most Karḡh was ruined. The walls on both sides had great gaps opened by the flood. The city was in a miserable state compared to the days of Dāwūd Paḡhā (Frazer, *Travels*, I, 269, 233-4, 252). Southgate (1897) noticed that the city was slowly recovering from the calamity, and put the population at 40,000. But he saw the *madrasas* neglected and their allowances not properly used (Southgate, *Narrative*, 2 vols. 1851, II, 180, 165-6; *Handbook of Mesopotamia*, I, 80-1).

When Felix Jones surveyed Baghdad (1853-4) things had improved. He mentions 65 quarters in East Baghdad, 25 quarters in Karḡh, most of which still retain their names (*Memoir*, 339; cf. Frazer, 233-4).

The population of the city increased steadily after the middle of the 19th century. In 1851 they were about 60,000 (Felix Jones, 315, 320). In 1867, the male population of Baghdad is given as 67,273 (*Lughat al-'Arab*, 1913). In 1877 they were all estimated at 70 to 80 thousand (*Persian Gulf Gazetteer*, 8; Geary, *Through Asiatic Turkey*, 1878, I, 121). In the 1890s the estimate was 80 to a 100 thousand (Harris, *From Istanbul to Baghdad*, 209; Cowper, *Through Asiatic Turkey*, 270). In 1900 they were put at 100,000 (Chiba, *Province*, 165; see *Silsilatu'l-Baghdādī* (1900), 454; Chiba, 100-102).

Another estimate for 1904 is given at 140,000 (*Handbook of Mesopotamia*, I, 80). By 1915, the population is given as 200,000 (*Handbook*, II, 334; Alūsī, *Aḡḡāḡ Baghdad*, 280-1; cf. R. Coke for the figure 185,000 in 1918, *Baghdād*, 298). Travellers were impressed with the great admixture of races, the diversity of speech and the rare freedom enjoyed by non-Muslims and the great toleration among the masses (Jones, 339; Ives, II, 385-9). This mixture left its imprint on the dialect of Baghdad ('Abd al-Latif, *Kāḡimāt Lahjati Baghdad MSS.*).

However, Arabic was the common language. The Arab population was increased by the advent of tribal elements (Geary, *op. cit.* I, 136, 214). Usually people of one creed or race congregated in a particular quarter (cf. F. Jones, *Memoir*, 339). The Turks generally occupied the northern quarters of the city, while Jews and Christians lived in their ancient quarters north and west of Sūk al-ḡhāḡ respectively. Most of the Persians lived on the west side but Karḡh was mainly Arab (F. Jones, 339; *Persian Gulf*, 9, 79-80; *Handbook*, II, 381; Southgate, II, 182). Though people of the three religions spoke Arabic their dialects differed (*Lughat al-'Arab*, 1913, 69-71).

At the turn of the century there were still some industries. Among the textiles of Baghdad were silk stuffs, cotton fabrics, stuffs of wool-silk mixture, striped cotton pieces, and coarse cotton cloth for head-scarves and cloaks, sheets and women outer garments. The silk fabrics of Baghdad were famous for their colour and workmanship. An excellent dyeing industry existed. Tanning was one of the principal industries, and there were about 40 tanneries at Ma'azam. Carpentry and the manufacture of swords were advanced. There was a military factory for textiles (*Handbook*, I, 231; *Silsilatu'l-Baghdādī* (1900), 79, 136).

The Baghdad bazaars were covered, or uncovered like Sūk al-ḡhāḡ. At the eastern bridgehead was the chief place for trade in the bazaars of the Sarāy, Maydīn, Shorḡā and the cloth bazaar rebuilt by Dāwūd Paḡhā. Some bazaars had crafts with their own guilds and usually the bazaar was named after it, such as Sūk al-Sāḡīr (coppersmiths) Sūk al-Sarrāḡīn (saddlery), Sūk al-Sāḡhā, (silversmiths), Sūk al-ḡhāḡiḡāḡ (shoemakers), etc. (Ewliya Celebi, IV, 22; *M.G.T.B.*, I, 22-3).

There were two important streets, one from the North Gate to near the bridge, and the other from the South Gate to the end of the main bazaar. In 1915 the North Gate was connected with the South Gate by a road, now known as Raḡhd street (*Handbook*, I, 377; *Silsilatu'l-Baghdādī* (1918 A.H.), 599-600).

In 1922 Nāḡim Paḡhā tried to repair some of the streets (*Silsilatu'l-Baghdādī* (1918 A.H.), 60). In 1907/1899 Sirri Paḡhā transferred the Maydīn to an open square with a garden (see *Silsilatu'l-Baghdādī* (1917), 76).

In 1895/1869 Midhat formed a municipal council by election and orders were issued to clear the streets. In 1879 municipalities were formed and orders were issued for achieving cleanliness and drainage (*Zawra'* No. 231, No. 878, No. 817, No. 1774, *Lughat al-'Arab*, I, 17; *Silsilatu'l-Baghdādī* (1900), 136). Lighting with kerosene lamps was adopted and given to a contractor, but in fact only streets with notable residents lit (*Zawra'* No. 490, no. 837) (see further BALADHYA).

At the beginning of the 20th century the city of Baghdad covered an area of about four sq. m. The remains of the city wall on the East side demolished by Midhat formed with the river a rough parallelogram about 2 miles long with an average width of over a mile. About a third of this area was empty or occupied by graveyards or ruins, and towards the south much space was covered by date groves. Karḡh began further upstream than East Baghdad but it was much smaller in length and depth (*Handbook*, II, 276). In 1882 there were 26,305 houses, 600 inns, 21 baths, 46 large mosques (*ḡhāḡ*) and 36 small mosques (*maḡḡ*), 34 children's *maḡḡ* and 21 religious schools, 184 coffee-shops and 3,244 shops (*Silsilatu'l-Baghdādī* (1900), 136). In 1884 the figures were: 16,426 houses, 205 inns, 39 baths, 93 *ḡhāḡ* and 44 *maḡḡ* and 36 children's *maḡḡ* (*Silsilatu'l-Baghdādī* (1900), 335).

In 1903 Baghdad had 4,000 shops, 285 coffee-shops, 135 orchards, 145 *ḡhāḡ*, 6 primary schools, 8 schools for non-Muslims and 20 convents (*ḡhāḡ*), 12 bookshops, one public library, 20 *maḡḡ* for boys, 8 churches, 9 tanneries, one soap factory, 129 workshops for weaving, 22 textile factories (*Silsilatu'l-Baghdādī* (1921), 179). By 1909 houses reached 90,000 in number. There were 5 private printing presses, 6 churches and 6 synagogues (*Silsilatu'l-Baghdādī* (1924), 231). Shukri al-Aḡḡī described 44 mosques in East Baghdad and 18 in Karḡh (Alūsī, *Maḡḡid*; Massigun, *Mission*, II, 63-5).

The temperature in Baghdad ranged from 114° to 121° F. in summer, and from about 26° to 31° F. in winter, but it sometimes rose to 125° F. in summer and fell to 20° F. in winter.

Baghdad produced some distinguished poets during the Ottoman period, like Fuḡḡī (p. 8). ḡhīnī (p. 8). Akḡḡā and 'Abd al-Bakī al-'Uḡḡā; historians like Murtadā, ḡhāḡḡ and M. Shukri Alūsī; jurists like 'Abd Allāh Suwaydī and Abu 'l-ḡhāḡ al-Aḡḡī (see Alūsī, *al-Miḡḡ al-ḡhāḡ*, Baghdad 1930).

Modern Baghdad has changed considerably, especially since the thirties. It has expanded to link

up with A'ramiyya and Kāzimayn to the north, with the eastern bend to the east, with the great bend of the Tigris to the south, and with the al-Maṭār al-Madīn and with nearby suburbs like Maṣūr and Ma'nūn cities. There are 76 quarters in Karbā and Ruṣāfa, 8 in A'ramiyya, 4 in Karrādī Shāriyya and 6 in Kāzimayn (Sousa, *Atlas Baghdad*, 21-5). The population of the Baghdad municipality in 1947 was 466,733; it had mounted to 735,000 by 1957. Traditional styles of building gave way to houses, built on western lines, in areas beyond the old city, while the old sections are being gradually transformed. The bridge of boats is gone, and four permanent bridges have been constructed.

The process of modernisation, both material and social, is too rapid to be recorded here.

**Bibliography:** The sources have been mentioned in the article. In addition to the major works of historians like Tabarī, Ma'sūdi, Ya'qūbī, Ibn al-Athīr, geographers like Ibn Rusūd, Ibn al-Fakīh (Baghdad MSS.), Ibn Hawkal, Ya'qūbī, Muḥaddadī, Yāqūt, *Marāsid al-Iḥṣā'*, *Ḥudūd al-'Alam* and Mustawfī, and travellers like Ibn Dīnawarī, Ibn Battūta and Benjamin of Tudela, the following should also be mentioned: Ibn al-Sā'ī, *al-Djāmi' al-Maḥḥadīn*, ed. Mustafa Dīwānī, Baghdad 1921; Ibn al-Djāwī, *Manāḥib Baghdad*, Baghdad 1921; idem, *al-Mustaqim*, Haydarābād, Deccan, 1357-9 A.H.; Miskawayh, *Tadhkirat al-'Ummān*, vols i-vii (ed. and transl. by Amédor and Margoliouth, 1920-1; Suhayb, *Adjā'ib al-Akhbar al-Salāḥ*, ed. **BAGHDĀD KHĀTUN**, daughter of the amīr al-umara' Amīr Cāḥān, niece of the Bīghūd ruler of Persia Abū Sa'īd (regn. 717-726/1317-1333) (her mother was Abū Sa'īd's sister), and wife of Anīr Hasan the Dīlāwīd, commonly known as Shāykh Hasan Buzurg, whom she married in 725/1323. In 1325 A.D. Abū Sa'īd, quoting as precedent the *yās* of Čingiz Khān, attempted to force Shāykh Hasan to divorce Baghdad Khātūn in order that he might marry her himself, but was frustrated by Amīr Cāḥān. In October or November 1327 A.D. Anīr Cāḥān was treacherously put to death at Harāt by Ghīyāth al-Dīn the Kurt at the instigation of Abū Sa'īd, who was then able to carry out his design and marry Baghdad Khātūn. Baghdad Khātūn attained a position of great influence, and was given the *isāb* of Khudawandīqār ('sovereign'). In 732/1331-2 Shāykh Hasan was accused of conspiring with his former wife Baghdad Khātūn to murder Abū Sa'īd. This caused an estrangement between Abū Sa'īd and Baghdad Khātūn, but the following year, when the accusation was proved to have been false, he restored her to favour. In 734/1334 Abū Sa'īd married Baghdad Khātūn's niece Dīlshād Khātūn, and promoted her above his other wives. This aroused the jealousy of Baghdad Khātūn, and, when Abū Sa'īd died suddenly on 13 Rabi' II 736/30 November 1335, Baghdad Khātūn was suspected of having poisoned him, and was put to death by the amīr. Another version is that she was put to death because she had corresponded with Özbek, khān of the Golden Horde, and had invited him to invade Persia.

**AL-BAGHDĀDĪ**, 'ABD AL-KĀRIM b. TĀHIR, ARḌ MAṢRĪ AL-SĪYAFĪ, d. 429/1037. His father took him to Nishāpūr for his education and there he made his home. Most of the scholars of Khurāsān were his pupils and he could teach 17 subjects, especially law, principles, arithmetic, *la-fa*, jurisprudence and theology. He left Nishāpūr because of rioting by Turks and went to Isfārā'īn where he soon after died. He was learned in literature as well as in law, was rich, helped other scholars and his books on law, arithmetic (one survives) and the law of inheritance were highly praised. He wrote several books on theology; *Kutāb al-Mīlāl* or *l-Nihāl* is lost; *Uyāl al-Dīn*, a systematic treatise, beginning with the nature of knowledge, creation, how the Creator is known, His attributes, etc. is rather like *al-muḥasab* of Muḥammad b. 'Unar al-Rāzī, but gives the views of the sects on each subject. It cannot be identified with any of the books named by al-Subkī. The tone throughout is objective, unlike that of his other book *al-Farḥ bayn al-Firāq*. This takes each sect separately, judges all from the standpoint of orthodoxy and condemns all which deviate from the strait path. It is not a plain tale of facts, like Shahrastānī's *Kutāb al-Mīlāl* or *l-Nihāl*, but a polemic. In spite of a chapter heading "Socrates and Plato" it deals only with Islam though it brands some aberrations as unworthy of the name. It ends with an exposition of orthodox belief. Two books, which presumably went into greater detail, *The Errors of Abu 'l-Hudhayl* and *The Errors of Ibn Karrām*, are lost. It is fair to say that he draws from doctrines, which he condemns, conclusions never envisaged by their authors.

**AL-BAGHDĀDĪ**, AL-KHĀṬUN [see AL-KHĀṬUN, AL-BAGHDĀDĪ].

**BAGHL**, mule (pl. *baghl*, fem. *baghla*; but some think that *baghl* denotes the hybrid without distinction of sex, and that *baghla* is a singulative form which applies both to the male and female); the same word denotes both the hybrid, the offspring of a stallion and a she-ass (cf. however *kawdar* in al-Mas'ūdī, ii, 408; *contra*: al-Djāhiz, *Baghl* 120; al-Damiri, s.v. cf. al-Djāhiz, *Tarīḥ*, ed. Pellat, index, s.v.), and the mule, the offspring of a he-ass and a mare, the morphological characteristics of the two varieties being midway between those of the he-ass and those of the stallion, with however a tendency to be influenced by the mother's side. Kūrān (Korah; see al-Damiri) or Tahmīrāth (see al-Tabarī/Bal'sand, trans. Zotenberg, i, 101) was the first to bring about this cross-breeding, but the Kūrān (xvi, 8) naturally attributed the creation of the mule to God. Muḥammad himself possessed mules (notably Duldul, which lived up to the time of Mu'āwiyah), so that although the *ḥadīth* forbidding the consumption of the flesh of the mule (like that

of the ass) may be authentic, those concerning the interdict on the mating of asses and mares have less chance of being so; at all events, it was not observed, and the mule industry did not suffer by reason of it. The postal service used these animals, and eminent men and women of noble birth did not disdain to ride on them, in spite of their stubbornness and obstinacy, because their even gait and surefootedness made them valued mounts.

Men of an inquiring mind have been especially interested in this hybrid and its sterility; the Arab zoologists, however, thought that the she-mule was by nature fertile, but that it could not retain the male (*la taḥib*), or that it was too small-boned to give birth without losing its life; in order to prevent accidents of this sort it was sometimes "sewn up" (*maṭṭaba*). But al-Damiri relates that in 444/1052 a she-mule gave birth to a black filly and a white mule.

The size of its head and penis, its longevity (due to continence), its sterility, its obstinacy and other characteristic traits of the mule are proverbial, and the words *baghl* and *baghla* enter into a large number of everyday expressions (for an account of the she-mule of Abū Dulāma, which became proverbial by reason of its defects, see M. Ben Cheneb, *Abū Dulāma*, Algiers 1922; al-Djāhiz, *Baghl*, 100 ff.). Certain parts of the body of the mule, notably its teeth, hair, hooves, and blood, were used in the preparation both of drugs, and of charms and amulets. To see a mule in a dream was interpreted as a sign of a voyage, or of longevity, degeneracy, sterility, etc.

In addition to the other meanings collected by the Arabic dictionaries and Dozy, it is worth noting that the word *baghla* (pl. *baghlāt*) denoted in Egypt female slaves born of unions between Saklība and another race (see al-Djāhiz, *Baghl*, 66).

**Bibliography:** In addition to the usual works on zoology (in this category the dictionary of Damiri is a fundamental work), pharmacopoeia, necromancy, etc. (see for example the bibliography of the article *arṣ*), which give a certain amount of information, particular attention is drawn to the fact that mules, doubtless because of their curious origin, prompted Djāhiz to write a special study, *al-Kawf fi 'l-Baghl* (ed. Ch. Pellat, Cairo 1375/1955), which is a sort of supplement to the *K. al-Hayawān*, and in which the author quotes chiefly anecdotes and verses illustrating the character and usefulness of these animals.

(Ch. PELLAT)

**BAGHLI** [see DIRHAN].

**BAGHRĀS**, the ancient Pagrae, guarded the Syrian end of the Baylīn pass on the road from Antioch to Alexandretta across the Amanus, and was thus a place of transit and a strategic position of importance. This region, which had been laid waste at the time of the first wars between the Arabs and the Byzantines, was furnished with colonists by Maslama; this initiated a recovery, and Hishām built a small fort there; it was naturally included in the region of the 'awāsim (g.v.) organised by Hārūn al-Rashīd behind the Syro-Cilician *thughūr*, and there existed there at the time of al-Bāghlī a hospice for travellers, which is said to have been founded by Zubayda. The actual fortification of Baghrās was the work of Niroporus Phocas who had reconquered Cilicia and was planning the reconquest of Antioch (337-8/968), and Michael Bourizes set out from Baghrās when the following year he in fact occupied Antioch. Baghrās was occupied, without striking a blow, by Sulaymān b. Kūtlunigh and then by the

Crusaders. About the middle of the 6th/12th century it was captured by the Templars, but in 1188 was seized for a short time by Ṣāḥib al-Dīn, in 1191 was taken by the Armeno-Gilician Leo, and was only surrendered by the latter to the Templars in 1216. The Templars evacuated the town in 1268 following the capture of Antioch by the Mamlūk sultan Baybars. From then onwards Baghrās protected the frontier of the Mamlūk state against the Armeno-Gilician kingdom, as long as the latter continued to exist, and formed a special military command depending on the province of Aleppo. Baghrās is still mentioned incidentally in the operations conducted by the Mamlūk sultans for the protection of their northern frontier up to the time of the Ottoman conquest, after which it fell into ruins. Only a small village exists there to-day. The fortress, which has never been the object of a proper archaeological investigation, was of average importance, and seems to have been the work of the Byzantines and Mamlūks rather than of the Templars or Armenians.

**BAGIRMI**, name in the 19th century of a negro Muslim State, situated on the right bank of the Shari, S.E. of Lake Chad. In Barth's time (1852) the capital was Massenya. There were a certain number of tributary regions within its orbit, lying between 10° and 12° N. and 15° and 18° E. This historical name is no longer in official use to-day; only a district of Massenya exists, the other tributary regions having been either attached to the district of Bouso or to that of Melé.

The regions which once bore the name Bagirmi form a vast plain at an elevation of 1,000 ft., sloping gently away towards Lake Chad. The level exposure of alluvial soil is only broken by barren dunes and in the East, in the canton of Bekakire, by isolated rocks. These regions are situated at the extreme limits of the Sahel and Sudan savannah zones. The year is divided into two seasons, a dry season, cold in winter, very hot in the spring and autumn, and the other, the summer, hot and damp. Rainfall fluctuates around 700 mm. (28 ins.), but there is excessive evaporation. The Shari is the only permanent river; the others (Bahr Erguig, Bahr Nara) only flow from August to December.

The region's economy is based on cultivation and stock breeding. The main crop is millet (bush millet and guinea-corn), which forms the basic food; maize, cultivated around the oases, provides a complementary crop in the intervening periods. In addition, peas, manioc, gombo, sesame and peanuts are also grown. Cotton growing has been introduced in the S.E. part of the region, along the river Shari. Pasturage, though of mediocre quality, makes possible the breeding of cattle, sheep and goats.

The population is made up of very diverse elements: negroes (Bagirmese, Bornuise, Sara, Massa), Arabs

(Yessé, Dekakiré, Ouled Moussa), Fulani and Bororo Fulani. In 1936, the total number of the inhabitants of the region amounted to 70,500 with a population density of 6.4 per sq. m.

The sedentary negroes (with the exception of the Massa, cattle herdsman) live by crop raising, food gathering and fishing. The nomadic Fulani migrate as far as the Logone and Lake Chad, the Bororo Fulani as far as the Ati and Monoro districts. The semi-nomadic Arabs and nomads, between their villages where in the rainy season they cultivate the ground, and the banks of the Shari, to which they resort at the end of the dry season.

With the exception of the Massa and the Sara, who have remained animists, these peoples were converted to Islam three hundred and fifty years ago under the influence of Fulani missionaries and Hausa merchants. Islam, however, has only made a somewhat superficial impression.

The state of Bagirmi, founded in the 16th century, at the outset enjoyed considerable prosperity; then, at the beginning of the 19th century, as the result of wars with the Wadai, it began to decline. In 1870 the Sultan of the Wadai took Massena and expelled the Sultan, Abū Salim. The latter's successor, Gaourang, threatened by Rabah (see *Bornu*), placed himself under the protection of France (1897), which resulted firstly for the Bagirmi in the terrible reprisals of Rabah, then, when the latter had been defeated and killed at Kousséri (22 April 1900), in the final pacification under French administration. The Sultan was retained for outward appearance, but his authority limited to the Massenya canton. Massenya, the capital, was an important town in Barth's time, enclosed by walls 7 miles in circumference. It was partly destroyed in 1870 and then abandoned at the time of Rabah's invasion. It was rebuilt once more 20 km. (12½ m.) to the S.E. It is, however, no more than a large village with a population of 1,700 inhabitants. Indeed the whole district lies remote from the main currents of trade. Only a small proportion of the local produce—groundnuts, butter, skins—, is taken to the markets at Bongor, Bokoro and Fort Lamy.

**BĀH**, one of a number of terms in the Arabic language denoting coitus. *Fikh*, in the main, uses the term *waḥ*. In principle, *bāh* is *harām* (as well as sexual indulgences of a minor character) if the partners are not married to each other, or united by the bond of ownership (master and slave-concubine); if this is not the case, the penal law intervenes to punish and—most commonly by death (see *BĀD*, *ZINĀ*, *MUḤSĀN*), at least in theory. On the other hand, according to a celebrated *hadīth*, *waḥ* performed in a legal manner is an "adms" in the eyes of God. *Fikh* considers most practices permissible for the married couple, with perhaps a restriction regarding *waḥ* *fi dūbarkā*. *Bāh* is, in principle, permitted at all times, except in certain circumstances of a ritual character (by day

during the month of Ramaḍān, or when one is in *ḥajj* during the *ḥajj*) [q.v.]. On the other hand, a well-known text of the Qur'ān says: "Your wives are a tilth for you, so go to your tilth as you will" (ii, 231), and the Qur'ānic prohibition (ii, 230) of intimate relations during the menstrual period is not enforced by penalties, at least not in this world. *Fikh* does not forbid the sight of the partner's nakedness, but on the other hand, according to traditional Muslim belief in the matter of *waḥ*, behaved with the greatest modesty, both in this respect and in others. As regards the legality of contraceptive practices, see the article 'AZL. *Fikh* does not place any interdiction on relations with a partner who has not reached the age of puberty provided that the act is physically possible. The schools are not in agreement on the question whether the wife can demand the performance of the conjugal duty; in the Maliki school, the forsaken wife has the right to claim a divorce. On the other hand, the husband can always require his wife to be at his service, because *waḥ* constitutes the very essence of *nikāḥ* [q.v.]; *fikh* is here in agreement with etymology (*nikāḥ*=marriage, and *niḥ*=sex).

**BĀHĀ' GHĀBĪ:** See bibliography to the article 'AZL; add: O. Pesle, *La femme musulmane*.

(G. H. BOUTCHERT)

**BĀHĀ' ALLĀH.** — Founder of the new religion which took the name of Bahā' from his own name (literally, 'Glory, Splendour, of God'). In Persian it is known commonly as *Amr-i Bahā'ī*, 'Bahā' Cause', or *Amr Allāh*, 'Cause of God'; the adjective *amr* is used of publications, matters, and facts pertaining to the Cause, e.g., *naghrīyāt-i amr* 'religious publications', etc. Bahā' Allāh is generally called by his disciples *Qjamāl-i Muḥarrab*, 'The Blessed Beauty' and *Qjamāl-i Kidām*, 'The Ancient Beauty'. His name was originally Mirzā Husayn 'Alī Nūrī from Nūr, in Mazandaran, the place of origin of his family. He was born at Tehran on 3 Muḥarram 1253/2 November 1817 of a noble family which had given several ministers to the Persian court. According to the Bahā'ī tradition, and to what he himself declares in his writings, he never attended any school. His was a profoundly religious personality, and he relates in one of his works (*Laws-i Ra'ya*) how, right from his infancy, he was moved to religious thinking after a performance of puppets which, after the show with all its ostentation was over and they had been redispersed in their box, suggested to him the thought of the fallibility and the vanity of human power. After the declaration of the Mission of the Bāb [q.v.] in 1260/1844, he was one of his first disciples, and shared the fate of the Bābīs. Bahā' Allāh never knew the Bāb personally, and judge by a phrase in the *Kitāb al-Shaykh*, 122, he had never even read the *Bayān*, which he knew by heart. In 1853, after the attempt on Naṣir al-Dīn Shāh, he was arrested and thrown into the prison at Tehran known as *Siyāḥ Cāi* ('the black hole'), where he stayed from August of that year until 12 June 1855. In his work *Kitāb al-Shaykh* [q.v.] of the *Shaykh* [q.v.], known also as *Laws-i Iḥsān*, 126, 'Epistle of the Son of the Wolf' he narrates the story of his journey, fettered, from Niyawārān to Tehran, and his interesting mystical experience in the prison in the long nights he passed without sleep on account of the heavy chains which fastened his neck, hands and feet. It seemed to him, he tells us, that he heard a voice which cried to him, 'Truly, We shall succour Thee, by the names of Thee Thyself and Thy pen. Be not afraid . . . Thou art in

security. Soon God will raise up the treasures of the earth, namely those men who shall succour Thee for love of Thee and Thy name, by which God shall bring to life the hearts of the Sages'. At other times it seemed to him that a great torrent of water was running from the top of his head to his chest 'like a powerful river pouring itself out on the earth from the summit of a lofty mountain'. The Bahā'īs consider this experience as the first beginnings of the prophetic mission of their founder. Baniished with all his family to 'Irāq after all his possessions had been confiscated, he dwelt at Baghdād, where his spiritual influence over the Bābīs exiles continued to increase, whereas that of his half-brother Mirzā Yahyā—known by the name of Subḥ-i Aẓāl, which the Bāb had given him [v.s.v.], BĀH—was on the decline. From 1854 to 1856 Bahā' Allāh took himself to Kurdistan, where he lived as a nomadic dervish on the outskirts of Sulaymāniyya. When he returned to Baghdād, his growing influence, and the numerous visitors he received even from Persia, caused the Persian consul to request his immediate exile to Constantinople. A short while before his departure on 21 April 1863, in the garden of Naḡībī Pāshā near Baghdād—called by the Bahā'īs *bigḡ-i rafīqah*—Bahā' Allāh declared himself, to a select number of his followers, to be He Whom God Shall Manifest (*man yushiruh* 'Ilāh) as predicted by the Bāb. The exiles arrived at Constantinople in August, and after some months were sent to Edirne where they arrived in December. At Edirne Bahā' Allāh openly declared his prophetic mission, sending letters (known, like all Bahā' Allāh's letters, by the name of *lawḥ*, pl. *awḥā*, 'tablets') to various sovereigns, inviting them to support his Cause. At this time the great majority of Bābīs came out in his favour. The dissensions with the minority, who followed Subḥ-i Aẓāl, gave rise to some incidents, which impelled the Ottoman government to banish those who henceforth called themselves Bahā'īs to Acre ('Akka'), and the others to Cyprus. In August 1868 Bahā' Allāh and his family arrived at 'Akka. A stricter imprisonment in the fortress lasted until 1877, after which Bahā' Allāh was authorised to transfer himself to a country house which he had rented at Maṣra'a. From 1888/1871 to 1290/1874 Bahā' Allāh was engaged on writing the fundamental book of his religion, *Kitāb al-Aḥdās*, the 'Most Holy Book'. About 1880 he was allowed to transfer to the neighbourhood of Bahdīl, not far from 'Akka, where he died, after an illness lasting some days, on 29 May 1892. In 1890 he had received at Bahdīl Professor E. G. Browne, the only European who met him personally and on whom Bahā' Allāh made a deep impression. For the doctrine of Bahā' Allāh see BĀHĀ'.

**Bibliography:** Principal works of Bahā' Allāh: *Kitāb al-Aḥdās*, in Arabic, ed. and Russian tr. by A. Tumanzi in *Zapiski Imp. Akad. Nauk*, Hist.-Phil. Class, series VIII, Vol. vi, St. Petersburg 1899; *Kitāb-i Iḥsān*, in Persian, Tehran n.d.; Fr. trans. by I. Dreyfus, *Le Livre de la Certitude*, Paris 1904, Eng. trans. by Shoghi Effendi, *The Book of Certitude*, Wilmette 1913; *Lawḥ Wādī* ('The Seven Valleys'), in Persian, *al-Kalimat al-Mahmūna* ('The Hidden Words') in Persian and Arabic, *Mathnawī* (Persian), Cairo 1332/1914 (containing also the *Qahār Wādī* 'Four Valleys'), Fr. trans. I. Dreyfus, *Les Sept Vallées*, Paris 1905, Eng. trans. 'All Kull Ḥikmah, *The Seven Valleys*, Wilmette 1907; Shoghi Effendi, *The Hidden Words*, London 1944, Germ. Tr. Brann, *Die verborgenen Worte*,

Stuttgart 1926; *Madmūn's Mathnawī 'Al-shūhā* *Mubāraka* *Hadrat-i Bahā' Allāh*, Cairo 1338/1920 (containing important short works of Bahā' Allāh); *Kutub al-Shaykh*, Cairo 1338/1920; *Kutub Bahā' Allāh* *al-Salāt Nāṣir al-Dīn Shāh*, Cairo 1339/1921; *Sūrat Madh*, n.p., n.d.; *Adh-yayn al-Hudayr*, Mahabūl, Cairo 1339/1921. Various prayers written by Bahā' Allāh, including the Obligatory Prayers. English anthologies: Shoghi Effendi (tr.), *Gleanings from the writings of Bahā' Allāh*, New York 1935; idem, *Prayers and meditations*, New York 1938. Selected Writings of Bahā' Allāh, Wilmette 1942; idem, *Bahā' Allāh's World Faith*, Wilmette 1945 (contains a translation of numerous minor works of Bahā' Allāh and 'Abd al-Bahā'). On his life in 1853: Nabli Zarrandi, *Ta'rikh-i Nabli*, Eng. trans. by Shoghi Effendi, *The Dawn-Breakers. History of the early days of the Bahā' Revolution*, New York 1932; for the following years, Shoghi Effendi, *God passes by*, Wilmette 1945. The death of Bahā' Allāh is described in Nabli Zarrandi, *Ta'rikh-i Shāhid-i Bahā' Allāh*, Cairo 1342/1924 (with a *Madmūn* of the same author on the Bahā' history; containing also Bahā' Allāh's testament, *Kutub 'Abd*).

(A. BAUBANI)

BAHĀ' AL-DAWLĀ (see BUDWAYHĪS).

BAHĀ' AL-DĪN 'AMĪLĪ (see AL-'AMĪLĪ).

BAHĀ' AL-DĪN ZAKARIYYĀ, commonly known as Bahā' al-Hakīm, a saint of the Sufi order, was born at Kot Karor (near Multān) in 578/1182-83 according to Firdāsi. He was one of the most distinguished *khāṭis* of Shaykh Shihāb al-Dīn Suhrawardī (q.v.) and is the founder of the Suhrawardī order in India. After completing his study of the Qur'ān according to its seven methods of recitation at Kot Karor, he visited the great centres of Muslim learning in Khirāsān, at Bīrdjār and Medina, and in Palestine—in order to complete his study of the traditional sciences. While in Medina he learnt *ḥadīth* with an eminent traditionalist, Shaykh Kamāl al-Dīn Yamālī, and spent several years in religious devotions at the mausoleum of the Prophet. After visiting the graves of the Isra'īlī prophets in Palestine, he reached Baghdad and became a disciple of Shaykh Shihāb al-Dīn Suhrawardī. At this time he was, as his master said, 'dry wood ready to catch fire', and so after seventeen days' instruction, the latter appointed him his successor and ordered him to set up a Suhrawardī *khāṭkhān* in Multān. He lived and worked in Multān for more than half a century and his *khāṭkhān*—a magnificent building where separate accommodation was provided for all inmates and visitors—developed into a great centre of mystic discipline in medieval India. He died in Multān on 7 Šafar 662/22 December 1262.

Shaykh Bahā' al-Dīn's order flourished most vigorously in Sind and the Panjāb, though he had attracted some disciples from Harāt, Hamadān and Baghdad. As a mystic teacher he was known for his *maḥfāz gīra* [intuitive intelligence] which helped him in apprehending and controlling the minds of his disciples. He differed from contemporary Cīghī mystics in several matters: (i) He did not allow all sorts of people to throw round him. The *Qalandars* and *Kalandars* seldom obtained access to him. 'I have nothing to do with the generality of the public', he is reported to have remarked. (ii) He lived in an aristocratic way and had granaries and treasuries in his *khāṭkhān*. (iii) He did not observe continuous fasts but ate and drank in the normal manner.

(iv) While among the Cīghīs the custom of *samā-i-bāz* prevailed, he never permitted anybody to bow before him. (v) He believed in keeping close contact with the rulers and the bureaucracy. (vi) He did not believe in mystic songs (*samā*).

Bahā' al-Dīn exercised great influence on mediaeval politics. He helped Iltutmish (607-632/1210-1235) in establishing his hold over Multān and accepted from him the honorary title of *Shaykh al-Jalāl*. In 642/1246 when the Mongols besieged Multān and the ruler of Harāt joined them, the Shaykh offered 100,000 *ḍinārs* to the invaders and persuaded them to raise the siege.

The Shaykh lies buried in Multān in an imposing tomb, surmounted by a hemispherical dome and decorated with fine enamelled tiles.

**Bibliography:** No Suhrawardī accounts of Shaykh Bahā' al-Dīn Zakariyyā were available even in the early 16th century when Shaykh Dīnādī brought into his *Siyar al-Arifin*, Delhi 1311 A.H. all he could get from the Cīghī sources. For originals see, Hasan Sīdīqī, *Fawā'id al-Fuḍā*, Newal Kishore 1302 A.H. 5, 6, 30, 29 ff.; Hamid Kalandar, *Khayr al-Madghāl* (ed. K. A. Nizami), Aligarh 1936, 115, 137, 281; Mir Khudr, *Siyar al-Awliyā*, Delhi 1302 A.H., 77, 95, 158; Sayf b. BAHĀ' AL-DĪN ZUHAYR, أَبُو 'L-FADL B. MUHAMMAD B. 'ALĪ AL-MUHAMMARI AL-AZŪF (generally known by the name of AL-BAHĀ' ZUHAYR), celebrated Arab poet of the Ayyūbīd period, born 5 Dhū'l-Hijja 581/27 February 1186 in Mecca. Whilst still very young, he went to Egypt, where at Kūs (Upper Egypt) he studied the Qur'ān and letters, finally settling at Cairo towards 625/1227. Al-Bahā' Zuhayr was in the service of al-Sāikh Ayyūb, son of the sultan al-Kāmil, and in 627/1232 accompanied him on an expedition to Syria and returned upon Neopotamia. In 632/1239, whilst returning to Egypt after his father's death, al-Sāikh was betrayed by his troops at Nābulus and handed over to his cousin al-Nāṣir Dāwūd, who imprisoned him. The poet remained faithful to his master in adversity and spent sometime at Nābulus. When al-Sāikh ascended the throne of Egypt, he appointed him *waṣī* and showered honours upon him. In 646/1248, he is to be found at al-Manṣūra at the side of his sovereign, who was fighting against the seventh Crusade (St. Louis). As the result of a misunderstanding, the poet fell into disgrace, and, in the death of his master, went to Syria, where he addressed his best elegiacs to the sovereign of Damascus, al-Nāṣir Muḥammad, but without success. He returned to Cairo a disappointed man; there he experienced solitude and poverty, and died in 656/1258.

His *Dīwān*, preserved in Paris (MS 3173 of the B.N.) and elsewhere, and edited in Cairo (1314), is known. Palmer produced a fine edition with an English translation. In this *Dīwān* he is shown as being a poet very often sincere and a true *muḥamm* clan in verse. His choice of words, of form, measure and metre, the effects of rhythm and harmony,

everything shows a very mature taste. Without rejecting the poetics of his time or his rhetoric with its numerous figures, the poet in him scarcely allows a glimpse of the rhetorician.

BAHĀ' AL-HAKK (see BAHĀ' AL-DĪN ZAKARIYYĀ).

BAHĀDÜR. A word common to the Altaic languages, equally well represented in Turkish, Mongol and Tungus dialects. Its adjectival meaning is 'courageous, brave', but it is universally used as a substantive with the meaning 'hero'. It also frequently occurs as a surname and an honorary title. The earliest occurrence is in the Chinese history of the Sui Dynasty, written in the early 7th century.

The Chinese transcription 莫賀咄 *mo-ho-to* suggests a trisyllabic *\*baryatar* which, transcribed *ḥaytarōḥ*, was in use also among the Proto-Bulgars in the 4th century. An Uyghur romance, as it is called, exists in the 8th-10th centuries has *batur* and it is this barytic form which is general in Turkish dialects, e.g. Osmanlı *batur*, Karakak, Bashkir *batur*, Özbek *batur*, Tuvin *mādur*, Chuvash *patūr*, etc. Some Turkish dialects have the trisyllabic form, e.g. Coman *baryatar*, but it is possible to see in them borrowings from Mongol. Beside the form already mentioned, Özbek has also *hapdur*. The word is attested in the earliest Mongol documents (13th century), always in the trisyllabic form, though the Chinese sources of the Mongol epoch usually transcribe 拔都 *pa-tu* for *bādur*.

Classical Mongol has *baryatar*, and variants exist probably in all the dialects. e.g. Kalenjuk *bātūr*, modern literary Khakha *batatur*, Monchur *bātūr*. Among Tungus forms one could mention Manchu *baturu*, Evenki *baturu*, Even *bagūr* and *bakūli*. It is impossible to state the directions in which borrowings were made, but it seems probable that either the Turkish or the Mongol trisyllabic forms were original, and that the Tungus forms are, originally, Mongol loan-words. In borrowings within the same group must have been frequent.

*Bahādur* is, clearly, a word of civilisation. It travelled far into the north and can be met in various Samoyedic and Finno-Ugric languages, in Siberia as well as in Europe, e.g. Ostiak *matur*, Hungarian *bátor* (18th century). These, and some of the Slavonic forms, e.g. Russian *bagatir* are borrowings from Turkish or Mongol. Persian *bahādur*, borrowed from Mongol, had a wide-spread use as a title or a surname among Muslim dynasties. As it was also used by the Great Mughals, it penetrated into Anglo-Indian, in the sense of a 'haughty or pompous personage, exercising his brief authority with a strong sense of his own importance' (Yule, *Hobson-Jobson*).

The word found its way into Western European sources. Roger, Canon of Vézard, writing in 1244, gives *Bachator* as the name of one of the Mongol generals taking part in the campaign against Hun-

gary. The Portuguese ambassador to Tiflir, Clavijo (1404), has *Bahadur*, (D. Storer).

BAHĀDÜR KHĀN (see FĀRŪĠĪ).

BAHĀDÜR SHĀH (see NIZĀM ḡAṢḤĀ).

BAHĀDÜR SHĀH I. Muḥammad Ma'azzam was the second son of the Emperor Awrangzib 'Alamgir by his second wife Rahmat al-Nisā'. Nawāb Bāṭ, daughter of Rājā Rājā of Radwān in Kashmir, She was also the mother of Prince Muḥammad Sultān, who died in prison, 1087/1676, and Badr al-Nisā' Begum (1647-1670), who was a *Ḥafiz*. She died in 1691. Ma'azzam was born at Burhānpur in the Deccan on 30 Rājāb 1031/14 October 1643. His full titles were: *Alb Nār Sayyid Kutb al-Dīn Muḥammad Shāh 'Alam Bahādur Shāh Rājāghar*. From the time of his elder brother's defection to Shāh Shujā' in 1068/1658 he was the prospective heir apparent, and was regarded as such on Muḥammad Sultān's death in 1087/1676. In Shāhāb 1086/October 1675 he received the title of Shāh 'Alam.

From 1663 he was actively employed by his father in the Deccan and against the Kingdom of Bidjāpur. In 1093/1683-4 he led an army through the Konkan to Goa, then being besieged by the Maratha rājā Shambhaji. But having fallen out with the Portuguese, he found his supplies cut off and made a disastrous retreat. He was then employed against Bidjāpur and the Kutb Shāhī dynasty of Golkonda. Awrangzib, already suspicious of Prince Ma'azzam's lack of rancour against his rebel son Akbar, interpreted an attempted mediation between his father and Abu 'l-Hasan of Golkonda as a plot against himself. Ma'azzam, now known as Shāh 'Alam, was arrested with his sons on 4 March 1687. At first treated with great rigour, the Prince found the severity of his treatment gradually relaxed, until in April 1693 he was released and appointed *Subādar* of Agra. In 1699 he became governor of Kābil province which he held at the time of his father's death, his eldest sons holding Tāttha and Multān.

On receiving the news of his father's death on 18 Dhū 'l-Hijja 1118, 22 March 1707, Prince Ma'azzam moved with great speed. He proclaimed himself by the title of Bahādur Shāh when near Lahore, offered to honour his father's will by leaving his brother A'zam Shāh the Deccan provinces, and arrived near Agra on June 12. On 18 Rāb' I 1119/18 June 1707, A'zam Shāh and his son Bidr Bakht were killed in a great battle near Jalau and Bahādur Shāh was master of the empire. Kim Bahāsh, the youngest son of Awrangzib, was defeated and killed near Haydarābād, Deccan, on 5 Dhū 'l-Kāda 1120/13 January 1709.

The short reign of Bahādur Shāh was occupied by three problems, the Marathas, the Rājputs and the Sikhs. On the advice of Dhū 'l-Fikr Khān, Shāh, the grandson of Shihwājī, was released and sent back to Mīhrāchrāṭ with a *Mughal manāsh* of 7000. His arrival there provoked a civil war between his supporters and those of Tāza Bāf, the regent widow of his uncle Rājā Rām.

In the cold weather of 1707-8 Bahādur Shāh regulated the succession of Amber and reduced the Rājput Rājā of Jodhpur to submission. But while campaigning against Kim Bahāsh the revolt flared up again. On his return in 1710 the emperor found himself confronted with a Sikh rebellion and had to make a compromise settlement with the Rājputs. The last Sikh *gūrā*, Govind Singh, was a supporter of Bahādur Shāh, but was murdered in the Deccan in 1708. The Sikh revolt in the north was then

revived by a man known as Banda who killed Wazir Khān, seized Sirhind and terrorised the east Panjab. Bahādur Shāh stormed Lahore and defeated but did not capture Banda in 1710-11. The last few months of his life were spent in Lahore where he died on 20 Muharram 1147/27 February 1712. The throne was immediately disputed between his four sons, Mu'izz al-Dīn Dīshādūr Shāh, 'Asim al-Shāh, Rafī al-Shāh and Dīshādūr Shāh, the first of whom was successful.

Irvine describes Bahādur Shāh as "although not a great sovereign . . . a fairly successful one". He was courteous, learned, pious, brave, capable and capable in temper. He was generous and found it difficult to refuse a request, a trait which earned him the nickname of *Shāh-e-Bahādur* or 'heedless one'. Not much is known of Bahādur Shāh's family life, but the names of three wives have survived: Mīr al-Nisā Begum, who accompanied her husband's body to Delhi, 'Aziz al-Nisā Khānum and Nūr al-Nisā Begum.

(T. G. P. SPEAR)

**BAHĀDUR SHĀH II**, the last Mughal Emperor of India. He reigned as titular sovereign from 1253/1274 to 1274/1857. He was in fact, a pensionary of the East India Company, his actual authority being restricted to the limits of the Red Fort or *Kasaba* in Delhi. Bahādur Shāh, by virtue of which the British held Bengal from 1765, was never formally disowned by them, but the Charter Act of 1853 asserted British sovereignty over British held territories in India. On May 11, 1857, Delhi was seized by mutinous troops from Meerut who compelled the unwilling Bahādur Shāh, then nearly 82, to accept nominal leadership of the revolt. After four months of unenthusiastic headship he retired to Humāyūn's Tomb on the assault of Delhi by the British in September. With his favourite wife Zinat Mahāl and their son Mirzā Dīwān Bahkt he surrendered to Lieut. Hodson on a promise of his life. After much indignity and a trial of doubtful legality he was exiled by the British Government to Rangoon in Burma, where he died on 11 Jumādā I 1279/7 November 1862. Descendants of his are still to be found there.

Bahādur Shāh was born on 27 Shā'abān 1189/24 October 1775. He was the second son of Akbar

Shāh II (1221-1255/1806-1837) and Lāl Bāi. He was eleventh in direct succession from the emperor Bābur. In 1827 he was described as "the most respectable, the most accomplished of the Princes" by Charles Metcalfe, then Resident of Delhi. He had a tall spare figure, a dark complexion with strongly marked aquiline features. Like his grandfather Shāh 'Alam, he was a poet of some note, using the pen-name of Zafar. The poet Dhawak was his literary preceptor and Ghālīb attended his Court. His plaintive *ghazals* were long current in Delhi. He was also a calligrapher and musician of merit, and showed taste in repairing buildings and laying out gardens. His full title was *Abū'l-Muzaffar Sa'ad al-Dīn Muhammad Bahādur Shāh*.

**BAHĀDUR SHĀH GUDJARĀTĪ**, sultan of Gujjarāt 932/1526-943/1537. Second son of Muza'far Shāh II (917/1511-932/1526). Bahādur Shāh, on bad terms with his elder brother Sikandar, left Gujjarāt in 931/1525 and, travelling via Citor and Merut, to the court of Ibrahim Lodi was present, as an onlooker, at the battle of Panipat between the sultan of Dhilli and the Mughal Bābur.

Hearing of the death of his father and the accession of Sikandar, Bahādur Shāh hastened towards Gujjarāt to be greeted at Citor with the news of the assassination of Sikandar by Khwāhā Kadam. 'Imād al-Mulk. Rapidly gaining support from the Gujjarātī Muslim nobles, Bahādur Shāh assumed the insignia of the sultanate at Anahāwār-Patan on 20th Ramadān, 932/6th July 1526.

Bahādur Shāh was the last vigorous sultan of independent Gujjarāt. In 935/1528 he attacked Burhān Nizām Shāh Ahmadnagar in alliance with Muhammad II of Khondesh and 'Alā al-Dīn 'Imād al-Mulk of Berar occupying Ahmadnagar in 936/1529. The Nizām Shāh appears to have accepted the overlordship of Gujjarāt until 938-9/1532 at least, but statements in the Arabic and Persian histories that he read the *khutba* and struck coins in the name of the Gujjarāt sultan have not found corroboration in the discovery of such coins.

In 937/1533 Bahādur Shāh attacked Mahmūd II of Malwa, occupying Mandl. In 938/1532-3 he captured the Rājapūt strongholds of Ujjāin, Bilāsa and Rābhū together with their chief Silhādī. In Ramadān 941/March 1535 Gujjarātī forces, at the second attempt, captured Citor.

Meanwhile, however, in the autumn of 942/1534 war had broken out between Bahādur Shāh and the Mughal Humāyūn; Bahādur Shāh had given refuge to the Lodi Afghāns and to Muhammad Zānān Mirzā son-in-law to Bābur, who had escaped from confinement by Humāyūn in the fort of Bayāna.

Defeated by the Mughals at Mandasor and Mandl, and with much of his treasure captured by Humāyūn at the fall of Candahar in Safar 942/August 1535, Bahādur Shāh turned to the Portuguese for help.

In 937/1537, the Portuguese, under Nuno da Cunha, governor of Goa, had been defeated in their attempt to capture Diu. In Jumādā II 941/

December 1534, however, in return for a promise to aid Bahādur Shāh against the Mughals, the Portuguese obtained Basra and in Rab' II/October 1535 the right to build a fort at Diu where Bahādur Shāh himself had taken refuge. The nominal Portuguese assistance to the Gujjarāt sultan did not prevent Humāyūn from capturing Bahādur Shāh's capital of Ahmadābād.

Humāyūn's withdrawal from Gujjarāt in 942/1536 to face the threat from Sher Khān enabled Bahādur Shāh to recover most of his dominions from the now disunited, dispersed and disaffected Mughal forces.

Bahādur Shāh then turned to recover the rights surrendered to the Portuguese at Diu. In an atmosphere fraught with mutual suspicion of bad faith, Bahādur Shāh, who visited Nuno da Cunha on his flagship at Diu and, hurriedly returning to the shore after sensing treachery, was slain by the following Portuguese forces. His death occurred on 3 Ramadān 943/13 February 1537.

(P. HARVEY)

**BAHĀT MEHMED EFENDI**, Ottoman jurist and theologian. Born in Istanbul in 1084/1696-6, he was the son of 'Abd al-'Aziz Efendi, a Kādī 'adler of Rumelia, and the grandson of the historian Sa'ad al-Dīn. Entering upon the *curriculum honorum* of the religious institution, he became *mudarris* and *molla* and was appointed kādī first in Salónica and then, in 1093/1685-4, in Aleppo. A heavy smoker, he was reported by the Beylerbey Ahmed Paşa, with whom he was on bad terms, and in 1094/1685-5 was dismissed and exiled to Cyprus as a punishment for what was then regarded as a serious offence. Towards the end of 1095 (early 1686) he was pardoned and in Muh. 1098/May-June 1678 appointed Molla of Syria; in Safar 1094/1644 he was transferred to Edirne, and in Rab. I 1095/May 1645 became Kādī of Istanbul. After his arrest as Kādī-Sacker of Anatolia and of Rumelia, he was appointed Shāhī al-Idān for the first time in Rajab 1099/July-Aug. 1649. According to the pre-

judiced evidence of his rival Karakösbizade, he was chosen because he was so endeared by excessive indulgence in narcotics that the Grand Vezir and the Sultān Walide thought they would be able to do as they pleased with him. His subsequent vigour, and his firmness in resisting certain of their demands, gave the lie to this accusation. The favour which he showed to the Mewlewī and Khāwālwi orders soon brought him into conflict with the orthodox religious party, which also objected to his approval of tobacco and coffee and his toleration of the dervish use of music and dancing. His fall, however, was due not to their efforts but to other causes. In Jum. I 1094/April-May 1681, in the course of a dispute which arose out of a question of jurisdiction involving the British Consul and the Kādī of Izmir, Bahāt Efendi placed the British ambassador in Istanbul under house arrest. For this breach of diplomatic usage he was dismissed and exiled to Midilli. He remained, however, at Gelibolu and Lampasa, and was reinstated in Ram. 1092/Aug. 1683; he continued in office until his death, of a quinsy, on 13 Safar 1094/Jun. 1684. He was buried in Fethi.

Bahāt was known both as a poet and as a scholar, and left a number of poems and fetwas. His best-known ruling was that in which he pronounced smoking lawful, thus ending the prohibitions and repressions of the early 17th century. He was himself a heavy smoker, and his contemporary Hādī Khāfī remarks of him that had it not been for his self-indulgence he might have become one of the most eminent scholars of the country. Bahāt's authorisation of smoking, however, was due, according to Hādī Khāfī, not to his own addiction but to a concern for what was best suited to the condition of the people, and to a belief in the legal principle that the basic rule of law is licitness (*ibāha ahlīyya*).

(B. LEWIS)

AL-BAHĀT [see AL-'AMMIL]

**BAHĀT**, adherents of the new religion which was founded by Bahā' Allāh [q.v.], and of which the forerunner, according to Bahā' doctrine, was the Bāb [q.v.]. The foremost authority on the Bahā' religion, and its disseminator in Europe and America, was 'Abbas Efendi, the eldest son of the founder, better known among the Bahā'is as 'Abd al-Bahā' (Servant of Bahā'). Born on 23 May 1844 at Tehran, he accompanied his father on his journeys and in his exile, and at his death was recognised by the great majority of the Bahā'is as the authorised exponent and interpreter of his father's writings. Centre of the Covenant and "Model of Bahā' Life", in accordance with Bahā' Allāh's will (*Kutub-i-Ahādī*); this will, however, was contested by 'Abd al-Bahā's brother Muhammad 'Alī, who set up a rival group within the Bahā' organisation and contrived to compromise his brother with the Ottoman authorities, who were hostile to the Bahā'is. He was released from prison in 1908 under the amnesty granted by

the new Ottoman Government of the Young Turks, and in 1910 began his three great missionary journeys. The first was to Egypt (1910), the second to Europe (Paris and London, 1911), and the third to America and Europe (1912-13). From New York he made his way across the entire United States in eight months to Los Angeles and San Francisco, stopping in the main towns and preaching in evangelical churches, synagogues, masonic halls, etc. In September 1913 he returned to Europe and from England went again to Paris, then to Germany, Austria and Hungary. Finally at the end of 1913 he returned from Paris to Palestine. The first Bahá'í group in America had formed as early as 1894, and on 10 December 1908 the first American Bahá'í pilgrims arrived at Acre. 'Abd al-Bahá's journey, one of the objects of which had been to counter the propaganda of his brother's supporters, also notably strengthened the community of American adherents. In addition to this he formed Bahá'í groups in the European countries he passed through. In 1920 the British Government appointed him Knight of the Order of the British Empire. He died on 28 November at Hayfa and was buried beside the Báb, in the great mausoleum which was completed in 1937. In his will he had appointed Shoghi Effendi (Shaykh Effendi) Rabihá, the eldest of his grandsons (the eldest son of his eldest daughter) as "Guardian of the Cause of God" (*Wá'il-yi Amr Alláh*). Shoghi Effendi, who died on 3 Nov., was born at Hayfa in the last years of the last century. He studied at Oxford and in 1936 married the American Mary Maxwell, who took the name Rihyiyé Khánum. From 1923 onwards he lived in Hayfa in Israel, the world administrative centre of the faith.

The Bahá'í religion, while it claims to be "scientific" and opposed to dogma, has more clearly defined theological, philosophical, and social doctrines and forms of worship than some Orientalists have thought. I give them briefly below on the basis of the sources cited in the bibliography.

**Religious doctrine.** 1. God. A completely transcendent and unknowable entity. "Every road to Him is barred". The Bahá'ís are opposed to mystic pantheism. Mystics have only given form to their own imaginations. "Even the loftiest souls and the purest hearts, however high they may fly in the realms of science and mysticism, can never pass beyond that which has been created inside themselves" (*ma khiláfa bi anfa'isih bi-anfusihim*) (*Laws-i Salmá*).

2. Creation. The unknowable essence of God makes itself manifest and creates that which is not God. The Bahá'í idea of the beginning of things falls between that of creation and that of emanation. We could speak of *eternal creation*, seeing that the Bahá'í texts tend to keep the term *khálq* (creation), but at the same time maintain that since the attribute of *khálq* (creator) is co-eternal with God, there has never been a time when the world did not exist. Thus the world is eternal (*Laws-i Hikmah*).

3. A special form of the manifestation of God is that which features in the Prophets (The Bahá'í technical term is *ma'rifat-i iláhiyya*, divine manifestations, rather than *rasul* or *anbiya*). Thus the concept of *khálq* (incarnation) in the full sense of the word is not accepted. In this connection the letter of Bahá'í Alláh to Násir al-Dín Sháh (Laws-i Salmá) is particularly interesting, as is the *Kutub al-Shaykh*, in which he describes his own mystic experience in the prison of Siyáh Cal at Tehran.

The Prophet has two differing conditions: he is a man, but also a very clear mirror in which God is reflected. Thus in a certain sense it is not wrong to call him God, by way of abbreviation. The status of such a being as could be called "prophetic" is radically different from that of man; it falls between man's status and that of God. According to Bahá'í doctrine no man, however perfect he may become, will be able to attain prophetic status for better, that of "manifestation", just as no animal, perfect as it may be of its kind, can aspire to human status. The manifestation of God through the Prophets never ceases. The manifestations of the Divine are successive. The first prophet is Adam, then come the traditional prophets of Judaism, Christianity and Islam. Zoroaster also is considered a true prophet, though the Buddha and Confucius are seen rather as great masters of the spiritual life. After Muhammad came the Báb (considered by the Bahá'ís as a true independent manifestation of God whose specific mission lasted only nine years), and Bahá'í Alláh. The Bahá'ís allow that other prophets better adapted to advanced stages of human progress may come after him, but "not before a thousand years" (*Ádás*). The prophetic periods are grouped together in larger cycles; with the Báb the cycle begun by Adam ends and the Bahá'í cycle begins. The latter is destined, according to doctrine, to last at least 500,000 years. It is thus incorrect to consider the Bahá'í religion as syncretistic. Although it accepts all the prophetic religions as essentially true, it claims that it is the one best adapted to the present time, and that it includes in itself all its predecessors.

4. Man. Bahá'í psychology is somewhat complex. 'Abd al-Bahá' (*Mu'awwidat*) distinguishes five types of "spirit": animal spirit, vegetable spirit, human spirit, the spirit of faith, and the Holy Spirit. The spirit of faith is given by God, and alone confers true "eternal life" on the human spirit (we are thus far a long way from a purely philosophical conception of the immortality of the soul). "Faith" is essential to Bahá'í spiritual life. The text of the first verse of the *Ádás* runs as follows: "The first commandment of God to his servants is knowledge of the Dawn of His revelation, and the Dayspring of His Decree (i.e., of the Prophet), who is his appointed Representative in the created world (*fi 'álam al-amr 'a'l-khálq*). He who has attained this knowledge has attained all good. He who knows it not is of the world of error, even though he performs all [good] works". Faith in God (which, God being by definition unknowable, can only be faith in His manifestation, the Prophet) confers immortality on the believer, who continues in the world beyond his eternal journey towards the unknowable Essence of God (expressive interest in these worlds on the part of Bahá'ís is discouraged; they are explicitly forbidden to take part in spiritualist meetings). Paradise and Hell are symbols, the first of which stands for the true believer's journey towards God, and the second the fruitless path towards annihilation of him who knowingly rejects the Faith and performs evil works. In the context of this progressive view of the world beyond Bahá'ís are allowed, and advised, to pray for the dead. Equally, the idea of reincarnation in this world is firmly rejected.

On the phenomenon of man Bahá'í doctrine accepts the theory of evolution, not, however, as propounded by Darwin, but rather in the traditional mystic sense already present in the *ma'rifat* of Mawlána Djalál al-Dín Rúmí (p. 2). "Man was always man throughout his evolution", even though

he may have passed through a series of stages of development.

**Moral and social principles.** The Bahá'ís accept the ancient formula attributed to 'All: "All private matters belong to the human sphere, all concerns of society to the divine". Hence the great emphasis in Bahá'í doctrine on the improvement of society, a task which is the change of the Bahá'í world administration (see below).

The moral and social tenets of the Bahá'ís are classified by 'Abd al-Bahá' under the following twelve headings: 1. Unity of the human race. 2. Need for an independent search for Truth. 3. Essential unity of all religions. 4. Need for religion to promote unity. 5. Need for science and religion to be in harmony. 6. Equal rights and duties for the sexes. 7. Opposition to all kinds of prejudice: national, religious, political, economic, etc. 8. Attainment of world peace. 9. Obligation to provide universal education, accessible to all. 10. Solution on a religious basis of the social problem, with the abolition of the extremes of excessive wealth and degrading poverty. 11. Use of an auxiliary international language. 12. Constitution of an International Tribunal.

The forms of administration and organisation which we now describe in brief conduce according to the Bahá'ís to the realisation of these aims:

The Bahá'í religion has no public ritual, nor any sacraments or private rites of a sacred character. The only religious duties of the Bahá'ís are: 1. To assemble every 19 days on the first day of each Bábí month (the Báb's calendar was adhered to by Bahá'í Alláh) for a communal celebration, called by the Western Bahá'ís the "19th day's Feast", and by the Persians *fiyá'at-i ráis-i náda'um*. It consists of readings of prayers and sacred texts (and even of passages from the Bible, the Qur'an, and other sacred texts if desired), followed by deliberations more properly administrative in character, when the community's financial affairs are reviewed, important announcements are made, etc. A small meal is then taken together, "even if nothing more than a glass of water", in accordance with the Báb's decree. 2. To fast 19 days, i.e., the entire Bábí month of 'Alá, from 2 to 21 March, the Bahá'í New Year's Day. The fast is of Islamic type, requiring abstinence from all food and drink, etc., from dawn till sunset. 3. To practise complete abstinence from all alcoholic drink. 4. To pray three times a day, morning noon, and evening, according to short, set formulas. The obligatory prayers (written in Arabic by Bahá'í Alláh) may be recited in any language. Some are preceded by ablutions, which are much simpler than Islamic ablutions, consisting only of washing the face and hands and reciting two very short prayers.

Apart from this the *Ádás* lays down precise rules for the division of inheritances (a portion of which falls to the teachers), levies a tax of 10 per cent on revenues, and prescribes numerous other rules and penal, civil and religious laws, which are followed in part only by the community Bahá'ís. Marriage is monogamous: although the *Ádás* allows bigamy, the provision was cancelled by 'Abd al-Bahá' ("Model of Bahá'í Life", on the basis of an explicit declaration by Bahá'í Alláh). For a marriage to be valid the consent of the couple's parents is required. Divorce is allowed, but discouraged.

The controlling bodies of the Bahá'í community are of two kinds, administrative and instructional, the first being made up of elected councils and the second of persons and associations appointed from above. The two types come together at the summit

of organisation in the person of the Guardian (*Wá'il-yi Amr Alláh*). The administrative bodies are as follows: 1. The local spiritual assembly (*Bayt al-'Adá-i Mu'allif*). These are formed wherever there are at least nine Bahá'ís. They are of nine members elected by universal suffrage. Election is considered as an act of worship, and the Bahá'í concept, unlike that underlying the electoral system of the parliamentary democracies, does not imply responsibility of the elected towards their electors, since the latter are merely instruments of the will of God. Elections are held each year during the period from 21 April to 2 May (Khidwá festival). At the present time there are local assemblies in more than 200 countries throughout the world. 2. Where there is a sufficient number of local assemblies a "Convention" of 19 members elected by universal suffrage elects a national spiritual assembly (*Bayt al-'Adá-i Milli* or *Markazi*) also of nine members, not necessarily from among its own members but from all adherents of the faith. There are at the present time more than twenty of these. 3. When sufficient national assemblies have been formed their members will elect a universal spiritual assembly (not necessarily from among themselves but from all adherents).

This assembly will be called *Bayt al-'Adá-i 'Umi*, Universal House of Justice. Its president will be the Guardian, by virtue of his office, and for the term of his life. The task of the Universal House of Justice will be to function as supreme administrative body and court, and in addition to frame in accordance with the needs of the time laws not laid down by the *Ádás* or the other writings of the Founder; these laws it will have the power to abrogate should need arise.

The jurisdiction of the different Assemblies is absolute within their sphere of competence and falls binding on all believing Bahá'ís, who should in theory bring before their Assembly even their private affairs and differences (in the first instance the local Assembly would be concerned, subsequently the national if the question proved insoluble).

Alongside these elected administrative systems, which are graded from the bottom up, is the instructional system, graded from the top down and made up of appointed members. At its head is the Guardian, whose powers, however, are interpretative only and not legislative. He has legislative powers only as a lawful member of the Universal House of Justice, on the same basis as the other members. The Guardian's position is hereditary, but his eldest son is not necessarily appointed his successor. He names his successor in his life-time from among the members of his family. Immediately below the Guardian in the instructional order come the "Hands of the Cause of God" (*Áyad-i-yi Amr Alláh*), of whom he appoints a varying number. The "Hands of the Cause" elect among themselves a Council of nine members whose duty is to assist the Guardian and confirm his choice of successor. The Hands of the Cause appoint their own subsidiaries in their turn, who assist them in their work of instruction and dissemination of the doctrine and spirit of the Faith ("Auxiliary Boards").

The Bahá'ís consider such a complex administrative system as of divine origin. The system is outlined in the *Ádás*, with additions and improvements by 'Abd al-Bahá', and by the present Guardian, Shoghi Effendi, in the matter of appointing assistants for the Hands of the Cause. For the Bahá'ís such a system is not merely a means of internal administration of the Community's affairs, but the

Mayyān, mother of Yazīd I. His nomad clan lived to the south of the ancient Palmyra, whither Mayyān afterwards brought the young Yazīd, and where the Umayyads remained after the congress of Džābiya and the battle of Marj Rāhit. Bahdal was thus the founder of the great prosperity of the Kalbites while the Umayyad dynasty lasted, though he did not himself take an active part in politics. As one of his sons was accused of being a Christian under the caliphate of Yazīd I, Bahdal must have died a Christian, probably before the battle of Siffin, in which one of his sons commanded the *Kuḥḥā* of Damascus, and at an advanced age. His sons succeeded him and became the first persons in the state; in consequence the partisans of the Umayyads were called Bahdalīya. His grandson Ḥassān, guardian of the sons of Yazīd I, after the death of Muʿāwīya II even dared to cherish the project of succeeding him. The undue preponderance of the Bahdalites and the Kalbites contributed largely to the division of the Arabs into two parties, that of Kays and that of Yemen, after the battle of Marj Rāhit.

**BAHDINĀN**, Bāhḍān, the Kurdish territory to the north and north-west of Mawṣil plain. From the latter years of the ʿAbbāsid Caliphate, circa 600/1200, until the middle of the 13th/19th century the area was a principality ruled from ʿAmādiya (q.v.), Kurdish *ʿAmādi*. It included ʿAkra (Kurd. *Ākrā*), Zāḥlā, and the Zāḥlā lands on the Great Zāḥl river to the east and Dahūk, and occasionally Zāḥlā, to the west. The principalities of Bāhḍān and Ḥakārī founded it in the north, and that of Sūrān in the south.

The eponymous Bāhāʾ al-Dīn family came originally from Ḥams al-Dīnā (Kurd. *Ḥamḍīnā*, [q.v.]). Sharaf al-Dīn Bihā, *Sharaf-nāma*, i, 100 ff., relates the history of the principality for two centuries from the time of the Timurid Shāhruḥ to 1396/1396. The Amir Ḥasan, and the agent of Shāh Ismāʿīl Sāfawī, extended his rule to Bahā and the Sūdā, area north of Zāḥlā. His son Sulṭān Husayn was confirmed in authority by Sulṭān Sulaymān the Magnificent. Husayn's son Kubāḍ was deposed and killed by a Mizziri tribal force, but his son Saydī Khān regained power with Turkish help. At the beginning of the 11th/17th century the ruler of Ardalān, under Shāh ʿAbbās, placed a governor in ʿAmādiya for a short time. There is then little record of the state for another century. Under Ottoman suzerainty the family appears to have reached its zenith with the reign of Bahārām Paṣhā the Great, 1138-81/1726-67. Bahārām's son Ismāʿīl Paṣhā, 1181-1213/1767-97, had to cope with his rebellious brothers, who established themselves at various times in Zāḥlā and ʿAkra. Murād Khān, son of Ismāʿīl, was driven from ʿAmādiya by his cousin Kubāḍ, with the help of the Bāhān paṣhā of Sulaymāniya. Once again the Mizziri tribe rose to bring about the downfall of a Kubāḍ in 1219/1804 and ʿAdil Paṣhā, son of Ismāʿīl, was confirmed in power by the Dīlādī paṣhā of Mawṣil. He was succeeded in 1243/1828 by his brother Zubayr. In 1249/1833 Muḥammad Paṣhā Kāzım, the ʿHūd Paṣhā, of Rawandiz, captured ʿAkra and ʿAmādiya, deposing the ruler Saʿīd Paṣhā, and proceeded to take Zāḥlā.

Although his sway only lasted a few years the Bahdalīn family never fully recovered its power and in 1254/1838 the area was finally incorporated in the *sandžik* of Mawṣil.

The name Bahdalīn is still applied to the area occupied by the following great Kurdish tribes: Barwārī, Dōkālī, Gullī, Mizziri, Raykānī, Silāyānī, Sindī, and Zāḥlā.

(D. N. MACKENZIE)

**BÄHILA**. A settled and semi-settled tribe in ancient Arabia. The centre of their territory, Sūd Bāḥilā (Saud?) "corrected" in Hamādī by an unimproved copyist into Sawdā, extended on both sides of the direct route (described by Philby in *The Heart of Arabia*, vol. II) from Riyāḍ to Mecca. It is sufficiently well defined by the localities al-Kuwayf, Džazāla = Juzaila, al-Hufayr = Hufaira and the mountains al-Ratid = al-Djidd and (Ibn) Shāmāni = Idhnain Shamāl. The clan Dīʿiwa (Djawa) lived further westward at the western foot of the Ḥijāz in Dhālan and in the south-east corner of the later Hīmā Dārīya near the Ghāt, another group further to the south in the oasis of Bihja. To this group may have belonged the Banū Ummāma, guardians of the sanctuary of Dhu ʿl-Khalasa near the neighbouring Taḥlā. An old verse (ʿAmir b. al-Tufayl, *Sapp*, 162) runs: "... I will not visit the fair, even though Jaṣr and Bāḥilā journey thereto to sell their wares" (Jaṣr also in the oasis of Bihja). What kind of wares? Pottery? — clay was rare in Arabia.

The genealogy of the tribe is somewhat complicated. Bāḥilā is the mother of one son of Mālik b. Aʿsur and, through *niḥāl al-māt* with the other son, Maʿā by name, the mother of two of the latter's sons and foster-mother of two other sons. These other sons stem from two different mothers. Such artifices are familiar to the genealogists. Here only their accumulation is remarkable. This accumulation points indeed to the local separation of the groups of the Bāḥilā and also to a political opposition between the two greatest of their clans, the Kutayba and the Wāḥil. The connexion with Aʿsur makes of the Bāḥilā, who are also called *mawṣil*, Bāḥilā b. Aʿsur, brothers of the Ghāt. As we have seen above, they were in fact neighbours, of the Ghāt. Unfortunately, the period when the sobriquet Bāḥilā Dughlā for both these tribes originated is not certain. The Bāḥilā stood partly under the protection of the Kilāb and partly under that of the Kaʿb branch of the ʿAmir b. Saʿsaʿa. Only one warrior from amongst them is known, al-Mustajir, and this one because Aʿshā Bāḥilā (no. 4) made an elegy over him. We know of another episode from al-Nabigha *al-Dīʿādī*, no. 1x. Both instances lie shortly before the rise of Islam. Two documents of the Prophet have been handed down in Ibn Saʿdī, i, 11, 33, the first for the Bihilites in Bihja, the second for a chieftain of the Wāḥil.

The history of the tribe becomes clear for the first time under Ismān. Their exodus from Arabia was directed predominantly towards Syria (even the Bāḥilā in Khurāsān came there mainly with troops from Syria) and, for the rest, towards Basra. Bāḥilā (and Ghānī) tribesmen had a substantial share in the war of revenge fought by the Kays against the Kaḥ after the battle of Marj Rāhit. Wellmann, *Das arabische Reich und sein Sturz*, 176). The Bāḥilā also developed an abundance of talents of

all kinds. The most important are the philologist al-Asmaʿī and the general Kutayba b. Muslim. A second exodus of the Bāḥilā from Arabia is to be distinguished from that of the *muhājirīn* — an exodus which brought a part of those who had remained behind in Arabia to the lower Euphrates, firstly towards al-Hufayr a short distance before Basra; from there they penetrated in the sandy tract of al-Tāfi, which was situated over against the Raḥāb, and after the Zafī had settled [in the Raḥāb] in 837, they began to infiltrate into the Raḥāb. In 871 the Bāḥilā there suffered punishment from troops which were on the march to meet the Zangī. The result was that the Bāḥilā took the side of the Zangī. Nothing more is known about them. Hamādī (p. 164) is the last who mentions the Bāḥilā in their native territory; yet this passage is hardly earlier than the parallel passage about Sūd (Saud) Bāḥilā (ibid., 147 ff.), the original source of which is set by de Goeje in about the year 250/864. Before that time there occurred the over-running of central Arabia by the Numayr. Only vague traces of a change of dwellings of the Bāḥilā in central Arabia are found in the literature.

**BAHDJAT MUSTAFAʾ EFENDI**, Ottoman scholar and physician, grandson of the Grand Vizir Khayrullah Efendi and son of Khʿāḍja Meḥmed Emīn Shukhī. Born in 1188/1774, he entered upon the ladder of the religious institution, becoming a *muftaris* in 1206/1791-2. Specialising in medicine, he rose rapidly, and in 1218/1803 became chief physician to the Sultan (Ḥakīmbaḡhī or, more formally, *Raʿīṣ al-ʿIlmiyya al-Sultānī*). In 1222/1807 he was dismissed from this office, but was reappointed in 1232/1817. In 1237/1821 he was disgraced and banished, but was reinstated in the same year. In 1241/1826, after the destruction of the janissaries, he served as a member of the palace council presided over by Mehmed II. Besides these he held a series of important religious and legal appointments, including those of *Molla* of Ismīr (1221/1806) and of Egypt (1236/1820-1), *Kādīʿasker* of Anatolia (1237/1821-2) and of Rumelia (1247/1831-2). He died in Dhu ʿl-Kaʿda 1249/March-April 1834 and was buried at Ōskūdār.

Bahdjat Efendi was one of the last physicians of the old school, who combined the study of medicine with those of theology and law, and its practice with an ʿilmīy career. At the same time he was one of the pioneers of the new medicine, of European type, in Turkey. It was under his supervision, and that of his brother the Ḥakīmbaḡhī ʿAbd al-Hakk Malla, that a new hospital and also a new medical school were opened, with imported European teachers. He is said to have studied European languages under the chief dragoman Yahyā Efendi, and although his own medical work, as exemplified in his *Ḥizir Asār*, remained largely traditional, he was responsible for a number of important translations of Western medical and scientific books, including Jenner's booklet on vaccination, Buffon's *Natural History*, and other works on chemistry, syphilis, and milk-scurvy. His interest in the West was also shown by his Turkish translation of the history of the French occupation of Egypt by Al-Djabbartī.

**AL-BÄHİLĪ**, ʿAbd al-Rahmān b. Rabʿa, i.e. of the Bāḥilā tribe, Arab general, called Dhu ʿl-Nūr (Tabarī, i, 2663) or, according to Ibn al-Aḡfir (Kāmil, ed. Cairo, A.H. 1303, iii, 50), Dhu ʿl-Nūr, from the name of his sword. He commanded the van of Surkha b. ʿAmr, who was directed to Darband (Bāb al-Aḥwāb) by ʿUmar in 22/642 (Tabarī, *loc. cit.*). The main incident reported in the proceedings of the Muslims, now in force at the Caucasus for the first time, was an interview between ʿAbd al-Rahmān b. Rabʿa al-Bāḥilī and the Persian commandant at Darband, who made his submission (Tabarī, i, 2663-2664; cf. 2667, 2669-2671). A treaty granted to him, together with "the inhabitants of Armenia and the Armenians", witnessed by ʿAbd al-Rahmān and Salmān b. Rabʿa al-Bāḥilī, his younger brother (Ibn ʿAbd al-Barr, *Idrāʾ*, 400), is cited by Tabarī (i, 2665-2666). On the death of Surkha in the same year ʿAbd al-Rahmān succeeded to the chief command and revived instructions from ʿUmar to proceed northward against the Khazars. He advanced through the passes at the east end of the Caucasus as far as Balandjār, which seems to have been raided repeatedly within the next few years (Tabarī, i, 2667-2668; 2690). In 32/652 he was again in Khazaria, besieging Balandjār (Tabarī, i, 2869 ff.; also 2668 ff.). After sharp engagements round the city, the Khazars made a sortie and were joined by their other forces. The ensuing battle was a total Muslim defeat. ʿAbd al-Rahmān was struck down as he tried to rally his men. His brother Salmān b. Rabʿa took up the standard and managed to lead off some of the survivors to Bāb al-Aḥwāb. The Khazars are said to have preserved the body of ʿAbd al-Rahmān and made use of it in prayers for rain (Tabarī, i, 2669, 2869). His defeat and death mark the end of the first Arab Khazar war. According to some (Ḥakīmbaḡhī, *Futūḥ*, 304; Ibn Kutayba, *Maʿārif*, ed. Wüstenfeld, 221) Salmān b. Rabʿa al-Bāḥilī and the Arab general killed at Balandjār.

**AL-BÄHİLĪ**, Abū Naṣr Aḥmad b. Ḥātim al-Bāḥilī, Arab philologist and author, a pupil of al-Asmaʿī, Abū ʿUbayda and Abū Zayd, belonging to the school of Basra, lived first in Bagdad, then in Isfahān and finally settled in Bagdad again where he died in 230/835. As a rule he followed in his works the footsteps of his predecessors and like them wrote a book on trees and plants, camels, cereals and palm-trees, horses, birds and locusts, of which latter he was the first to treat. His works on proverbs, on proper names, and on the errors in the language of the common people, must also have contained many notes of great value to us, but unfortunately like all his other writings they have perished.

AL-BĀHILĪ, AL-HUSAYN [see AL-HUSAYN AL-BĀHILĪ].

BAHRĀ [see DUBAYRĀ].

BAHRĀ, a she-camel or a ewe with slit ears. The Kur'an and ancient poetry (cf. Ibn Hishām, 58) show that the ancient Arabs used to carry out certain religious ceremonies with respect to their cattle, which consisted firstly in letting the animal go alone without making any use of it whatever, and secondly in limiting to males permission to eat its flesh (after it had died). In the various cases the animals bore special names (*Bakira*, *Sā'iba*, *Wayla*, *Hāma*); on these names cf. Wellhausen, as cited below). The lexicographers are not quite agreed on the point in which cases a camel or sheep had its ear slit. According to some, it was after it had borne ten young ones, according to others when its fifth young one was female etc.—The Kur'an abolished these customs and stigmatised them as arbitrary inventions, Sūra v, 102: "God has made neither *bahrā* nor *u'ayla*, nor *wa'ila*, nor *hāma*; but the unbelievers have invented lies against God, and the greater part of them do not understand"; Sūra v, 139: "and they say: these cattle and fruits of the earth are sacred; none shall eat thereof but whom we wish (so they said); and [then are] cattle on whose backs it is forbidden [to ride etc.];" verse 140: "and they say: that which is in the bellies of these animals, is only for our men and forbidden to our wives; but it is born dead, then both partake of it, and He will reward them for their attributing [these things to him] for He is wise and knowing".

**Bibliography:** The commentaries on the Kur'anic passages quoted above: *Lisān al-'Arab*, v, 105 ff.; Freitag, *Einleitung i. d. Studium d. arab. Sprache*, 238 ff.; Wellhausen, *Reste arab. Heidentums*, 112 ff.; Rasmussen, *Addenda*, 66 of the Arab. text, 60 trans. (A. J. Wessiers).

BAHRĀ, the name of a Christian Monk. Ibn Sa'ūd and Ibn Hishām offer two parallel traditions, confirmed by al-Tabarī (i, 113 ff.), according to which Muhammad, when either nine or twelve years old, whilst accompanying the Meccans' caravan to Syria, in the company of Abū Bakr or Abū Tālib, found himself in the presence of a Christian monk or hermit, who is said to have revealed the young man's prophetic destiny, either by finding on him the stigma of prophecy, or by noting the miraculous movement of a cloud, or the behaviour of a branch, which persisted in affording him shade, irrespective of the course of the sun. The reclusive acquaintance Abū Bakr (or Abū Tālib) with these marvels, according to him, preserved the child from the malice of the Jews (Ibn Sa'ūd), from the violence of the Rāhm (al-Tabarī, third tradition, 2123). The monk, says Ibn Sa'ūd, was called Bahrā (Aram. *Baḥrā*, the elect). Though Ibn Sa'ūd, coinciding with al-Tabarī, declares that the monk knew Muhammad because he had found the announcement of his coming in the unadulterated (*isāhid*) Christian books, which he possessed, and in which is another later form in the Pseudo-Wāḥidī, *Kiṭāb Fataḥ al-Shām*, Cairo 1934, 16, 1. 9-12, the *Maḥdīth al-Ḥayy al-Rāḥ* (iv, 436, 1. 30 ff.) says, commenting on the word *ḥāḍira*, (Kur'an v, 82), that it meant the "chiefs of the Christians" and that according to "Urwā b. Zubayr, it was one of these who remained in the authentic tradition of the Gospels, despite of the corruption introduced into them by the other Christians, by effacing the announcement of Mu-

hammad's mission (cf. the long polemic on the word *farāḥ*). In 831, in his *Kiṭāb al-Fitḥ al-Radd ala 'l-Naṣīra*, Djabīr (cf. Pellat, in *RSO*, 1952, 57-8) stresses (Finkel, *Three Essays*, Cairo 1924, 14, 1. 17) that the Christians, of whom the passage of the Kur'an (v, 82) speaks with benevolence, are not members of the Byzantine Church, either Jacobite or Melkite, but merely those of the type of Bahrā or of "the mission who served Bahrā al-Farāḥ". The outcome of all this was that, both at the end of the 2nd/3rd century and in the first part of the 3rd/4th century, the tradition, as it then stood, concurred in recognising in the monk Bahrā, the witness, chosen at the heart of the most important scriptural religion, of the authenticity of the Prophet's mission. Thus Islam provided a remedy for the absence of a textual promise concerning its founder, and this point, as is known, formed one of the essential arguments of the Christian polemic.

The tradition assumed a material form to the extent that the town of Boḥrā, where the meeting is said to have taken place, at a very early date showed the "monastery of Bahrā", and still continues to do so (al-Hariri, *Guide des lieux de l'Islam*, 1902, ed. J. Sourdel-Thomine, Damascus 1955, 17; (transl. 43) H. C. Butler, *Ancient Architecture in Syria*, Boḥra, 265-270).

Djabīr's attitude shows that, for a Muslim of the 3rd/4th century, Bahrā was a historical personage, in spite of all the objections raised (Sprenger, *ZDMG*, xii, 248-249). The age at which the monk lived, this witness, 12 years of age, is the same as that of Jesus at the time of his first supernatural undertaking, the discussion with the doctors (Luke ii, 42-49), and here can be seen an attempt at polemical influence.

Whilst Bahrā is a witness and a guarantor in the Muslim tradition, for the Christian polemic against Islam, both in Arabic and in Greek, he is the heretical monk, whom Muhammad met at the beginning of his career, and who became his inspire and involuntary accomplice (*Ann. contre Makomē*, in *Par. Graec.*, civ, 1449b) in the composition of the Kur'an, this "false Scripture". The name given him varies according to the authors' sources of information and according to their allegiance. 'Abd al-Maṣḥī b. Ishāq al-Kinādi calls him Sergius and says that he subsequently had himself called Nestorius (ed. Anton Tien, 76-77). Further on, in what appears to be an interpolation of the primitive "apologia", this personage is duplicated: "Sergius surnamed Nestorius and John surnamed Bahrā". It must be noted that al-Maṣḥī (*Murūḡi*, i, 146) on the other hand, makes a synthesis of the two names Sergius and Bahrā. The Byzantine polemicists after the 3rd/4th century knew the name Bahrā, which they wrote *Basira* or *Pakhryas* (Bart. d'Edesse, in *P.G.*, cv, 1429 ff.). Whilst for 'Abd al-Maṣḥī b. Ishāq al-Kinādi he is a Nestorian, he is an iconoclast *Abd. de l'Int. de Philologie et Hist. Or.*, Brussels, iii, 1933, 9) in the famous "Apocalypse of Bahrā" (R. Gotthelf, *A Christian Bahrā Legend*, in *ZA*, 1928 1929). As a heretic, he is referred to both as a Jacobite (Anonymus, in *P.G.*, cv, 1440) and as an Arian (Const. Porphyry, *De Adm. Imp.*, in *P.G.*, cviii, 192 = Euth. Zigab., *P.G.*, cxxx, 1333 c). Sometimes his allegiance is not specified (Theophanes, in *P.G.*, cviii, 685, b-c = Codex, *P.G.*, cxxi, 809 a-b). For all the Christian authors, his work coincides with what is veracious in the Kur'an, whilst all the erroneous statements derive from subsequent compilers, such as 'Uḡaynā (Barth. of Edessa, in *P.G.*, civ, 1428-32) or even

contemporaries, perverse Jews ('Abd al-Maṣḥī, ed. A. Tien, 77-8, cf. *ZDMG*, xii, 699-708).

The Apocalypse of Bahrā, which exists in Syriac and Arabic, the textual history of which still remains to be established, and the chronology of which is disputed (cf. G. Levi della Vida and J. Bignami-Oddier, (see bibl.), 132, no. 3 and 133 no. 3, and A. Abel, *Ann. Inst. Phil. de Bruxelles*, 1935, 60, 7-9, and *Studia Islamica*, ii, 1054, 29 and 30), places the monk in the centre of a pamphlet, which assembles the indications of the ancient Danielic apocryphal of the Pseudo-Methodius (Knoke, in *Byzantion*, 1931, 273-296), and cleverly combines them with the Christian arguments on the apocryphal origin of the Kur'an and with the various aspects of the doctrine of the Bahadī (*Grail. Gesch. der Arab. Christ. Lit.*, *Shadi e Testi*, Roma, 133, 147-9). This work met with success in the Christian circles of the Orient, and up till the period of the Crusades, which even resulted in its being translated into Latin (Levi della Vida and Bignami-Oddier, *op. cit.*, 132-3 and 139-48, M.-T. d'Alverny and G. Vajda, in *al-Farabi*, xvi, 1952, 1, 128, 120 ff.). But even before the Crusades, the main theme of the false prophet inspired by a "wise man" was known in the West, as is attested by the work in verse, directed against Islam, under the name of *Historia Machometi*, attributed to Hildebert (Guy Cambier, *Embricon de Mayence (1010-1077) est-il l'auteur de la Vita Machometi*, *Paris, Lat.*, cxviii, 1341-1346, Latomus, 3, Brussels 1952 and 5). The *Monument de Villard, Le Studio dell' Islam in Europa nel xii e xiii secolo, Studi e Testi*, 110, 34-5).

(A. ABEL)

BAHISHĪ [see DĪANNA].

BAHIZAT AL-BADIYA [see MALIK HIRNĪ NĀSIR].

BAHLŪL (Amīr), the name of three notable Kurdish figures, according to M. E. Zakī (*Maḥāḥir*, 1441): 1. A member of the Salaymāniyya family, amir of the Mayyāfarīn branch, son of Alwand Bey b. Shāykh Alwand. He was for a long period in the service of Iskandar Pasha, the *vallī* of Diyarbakr. Subsequently, he was for a time in command of the fortress al-Iṣkandariyya (between al-Hilla and Baghdad), and after that the sultan Yawuz Selim entrusted to him the stronghold of Mayyāfarīn. A man of great personal bravery, he perished in a fight with Shāhshūr Bey, a Son of Amir Zangid, chief of the Dunbuli tribe and resident at Turis. Died in 756/1359. 3. Son of Amir Farīdūn, also a chief of the Dunbuli, governor of Tabaristān and Diḡistān. A contemporary of Shāykh Haydar

Safawī, and one of his most loyal supporters, he fell in the battle between Haydar and Shāh Khālī Ak Koyunlu in 880/1475-6.—There is also a Bahāḥī Faḡha who was the Turkish governor at Bāyazid up to 1236/1821. He was dismissed in that year, and died four years later. Wagner (ii, 297 ff.) devotes several pages to him in a commentary vein.

(B. NIKITINE)

BAHLŪL LŌDĪ [see DELHI SULTANATE].

BAHMANIS. A line of eighteen Muslim sultans who ruled, or claimed to rule, in the Deccan from 748-933/1347-1527, after a group of Muslim nobles led by Ismā'īl Muḥib had successfully rebelled against the sultan of Dīblī, Muhammad b. Tughluq. The more vigorous Hasan Gangū supplanted Ismā'īl and was proclaimed Sultān 'Alā al-Dīn Hasan Bahman Shāh. (On the latter's origin see Major W. H. Hale, *Some Notes on the Bahmanī Dynasty*, *ASB LXXIII*, Pt. 1, (Extra No.) 1904, 463; *Proceedings of Indian History Congress*, 1938, 304-8; H. K. Sherwani, *Gangū Bahmanī*, in *Journal of Indian History*, xx, Pt. 1, April 1942, 95 ff.).

**Table of the Bahmanī sultans.**

(a) Sultāns with their capital at Ahsanābād-Gulbarga:	
'Alā' al-Dīn Hasan Bahman Shāh	748/1347
Muhammad I	759/1358
'Alā' al-Dīn Muḥajjid	770/1375
Dāwūd I	779/1378
Muhammad II	780/1378
Ghiyāth al-Dīn Tahamtan	799/1397
Shams al-Dīn Dāwūd II	799/1397
Tāj al-Dīn Firūz	800/1397

(b) Sultans with their capital at Muhammadābād-Bidār:	
Shihāb al-Dīn Ahmad I	825/1422
'Alā' al-Dīn Ahmad II	839/1436
'Alā' al-Dīn Humāyūn	862/1458
Nizām al-Dīn Ahmad III	865/1461
Shams al-Dīn Muhammad III	867/1461
Shihāb al-Dīn Māhūd	885/1484
Ahmad IV	924/1515
'Alā' al-Dīn	927-1521
Wālī Allāh	929/1523
Kālm Allāh	934/1526

[Coins and inscriptions suggest the last named roi *faislān* may have lingered in exile claiming the throne until 943/1536-7. See E. E. Speight, *Coins of the Bahmanī Kings of the Deccan*, in *IC*, ix, 1935, 168 ff.; and *Inscriptions of Bijāpūr*, *Mem. Arch. Sur. of India*, No. 49].

During most of its history the Bahmanī Kingdom was limited to the table-land of the Deccan. Geographically, the Vindhya range may be said to be the northern edge of Southern India with the Narbada river flowing almost parallel to it. But the country south of this quasi-barrier may be divided into three distinctive parts: (i) Malwa, with its general slope towards the West; (ii) the Deccan table-land proper which, along with Berar, forms the pivot of the lavas present where the ancient undisturbed rock begins to extend over the centre of the peninsula; and (iii) what is called "South India" which extends from the northern edge of the Mysore plateau and the line of the Tungabhadra southwards. The lavas uplands end abruptly in the Western Ghāts which

AL-BĀHLĪ, AL-BUSAYN [see AL-BUSAYN AL-BĀHLĪ].

**BAḤĪRĀ**, a she-camel or a ewe with slit ears. The Kur'ān and ancient poetry (cf. Ibn Hishām, 58) show that the ancient Arabs used to carry out certain religious ceremonies with respect to their cattle, which consisted firstly in letting the animals go about the house without making any use of it whatever, and secondly in limiting to males permission to eat its flesh (after it had died). In the various cases the animals bore special names (*Bahira*, *Sa'iba*, *Waṣila*, *Ḥāmi*); on these names cf. Wellhausen as cited below). The lexicographers are not quite agreed on the point in which cases a camel or sheep had its ear slit. According to some, it was after it had borne ten young ones, according to others when its fifth young one was female etc.—The Kur'ān abolished these customs and stigmatised them as arbitrary inventions, Sūra v, 102: "God has made neither *bahira* nor *sa'iba*, nor *waṣila*, nor *ḥāmi*; but the unbelievers have invented lies against God, and the greater part of them do not understand"; Sūra vi, 139: "and they say: these cattle and fruits of the earth are sacred; none shall eat thereof but whom we wish (so they say); and [these are] cattle on whose backs it is forbidden [to ride] etc."; verse 140: "and they say: that which is in the bellies of these animals, is only for our men and forbidden to our wives; but if it be born dead then both parts of it. He will reward them for their attributing [these things to him] for He is wise and knowing".

**BAḤĪRĀ**, the name of a Christian Monk. Ibn Sa'd and Ibn Hishām offer two parallel traditions, confirmed by al-Tabarī (i, 1123 ff.), according to which Muhammad, when either nine or twelve years old, whilst accompanying the Meccans' caravan to Syria, in the company of Abū Bakr or Abū Ṭālib, found himself in the presence of a Christian monk or hermit, who is said to have revealed the young man's prophetic destiny, either by finding on him the stigma of prophecy, or by noting the miraculous movement of a cloud, or the behaviour of a branch, which persisted in affording him shade, irrespective of the course of the sun. The recluse acquainted Abū Bakr (or Abū Ṭālib) with these marvels, admonishing him to preserve the child from the malice of the Jews (Ibn Sa'd) or from the violence of the Rīm (al-Tabarī, third tradition, 1123). The monk, says Ibn Sa'd, was called Bahīrā (Aram. *baḥīra*, the elect). Though Ibn Sa'd, coinciding with al-Tabarī, declares that the monk knew Muhammad because he had found the announcement of his coming in the unadulterated (*ṣābiḥ*) Christian books, which he possessed (this may be in another later form in the Pseudo-Wāḥidī, *Kitāb Futūḥ al-Shām*, Cairo 1954, 16, i 9-12), the *Maṭṭah al-Ghayy* of al-Rāfi (iv, 436, i 30 ff.) says, commenting on the word *Kasīdīn*, (Kur'ān v, 82), that it meant the "chiefs of the Christians" and that according to 'Urwā b. Zubayr, it was one of those who remained in the authentic tradition of the Gospels, despite of the corruption introduced into them by the other Christians, by effacing the announcement of Mu-

hammad's mission (cf. the long polemic on the word *farāḥīn*), In 851, in his *Riḥla* 19-*Radd 'ala 'U-Nasabī*, Ḍābiq (cf. Pellat, in *RSO*, 1952, 57-8) stresses (Finkel, *Three Essays*, Cairo 1924, 74, r. 17) that the Christians, of whom the passage of the Kur'ān (v, 82) speaks with benevolence, are not members of the Byzantine Church, either Jacobite or Melkite, but merely those of the type of Bahīrā or of "the monks who served Salma al-Farīd". The outcome of all this was that, both at the end of the 2nd/8th century and in the first part of the 3rd/9th century, the tradition, as it then stood, concurred in recognising in the monk Bahīrā, the witness, chosen at the heart of the most important scriptural religion, of the authenticity of the Prophet's mission. Thus Islam provided a remedy for the absence of a textual promise concerning its founder, and this point, as is known, formed one of the essential arguments of the Christian polemic.

The tradition assumed a material form to the extent that the town of Bōrā, where the meeting is said to have taken place, at a very early date showed the "monastery of Bahīrā", and still continues to do so (al-Farīdī, *Guide des lieux de l'islam*, ed. J. Sourdel-Thomine, Damascus 1952, 17; (transl. 43) H. C. Butler, *Ancient Architecture in Syria*, Raqqa, 265-270).

Ḍābiq's attitude shows that, for a Muslim of the 3rd/9th century, Bahīrā was a historical personage, in spite of all the objections raised (Sprenger, *ZDMG*, xii, 238-249). The age at which Muhammad met this witness, 12 years of age, is the same as that of Jesus at the time of his first supernatural undertaking, the discussion with the doctors (Luke ii, 42-49), and here can be seen an attempt at polemical influence.

Whilst Bahīrā is a witness and a guarantor in the Muslim tradition, for the Christian polemic against Islam, both in Arabic and in Greek, he is the heretical monk, whom Muhammad met at the beginning of his career, and who became his inspirer and involuntary accomplice (*Ann. contre Mahomet*, in *Pañr, Græc.*, civ, 1449 ff.) in the composition of the Kur'ān, "false Scripture". The name given him varies according to the authors' sources of information and according to their allegiance. 'Abd al-Mas'ih b. Ishāq al-Kinānī calls him Sergius and says that he subsequently had himself called Nestorius (cf. Aston Tien, 76-77). Further on, in what appears to be an interpolation of the primitive "apologia", this personage is duplicated: "Sergius surnamed Nestorius and John surnamed Bahīrā". It must be noted that al-Mas'udī (*Murājī*, i, 146) on the other hand, makes a synthesis of the two names Sergius and Bahīrā. The Byzantine polemic after the 3rd/9th century knew the name Bahīrā, which they wrote *Bacira* or *Pakhyras* (Bart. d'Edesse, in *P.G.*, civ, 1429 ff.). Whilst for 'Abd al-Mas'ih b. Ishāq al-Kinānī he is a Nestorian, he is an iconoclast (*Ann. de l'inst. de Philologie et Hist. Or.*, Brussels, iii, 1935, 9), in the famous "Apocalypse of Bahīrā" (R. Gotthelf, *A Christian Bahira Legend*, in *JA*, 1898-1899). As a heretic, he is referred to both as a Jacobite (Anonymus, in *P.G.*, civ, 1440) and as an Arian (Const. Porphyrt, *De An. Imp.*, in *P.G.*, cviii, 192 = Euth. Zigab., *P.G.*, cxxx, 1333 c. Sometimes his allegiance is not specified (Theophanes, in *P.G.*, cvi, 685, b-c = Codexus, *P.G.*, cxxi, 809 a-b). For all the Christian authors, his work coincides with what is veracious in the Kur'ān, whilst all the erroneous statements derive from subsequent compilers, such as 'Ughīn (Barth. of Edessa, in *P.G.*, cvi, 1428-32) or even

contemporaries, perverse Jews ('Abd al-Mas'ih, ed. A. Tien, 77-8, cf. *ZDMG*, xii, 699-708).

The Apocalypse of Bahīrā, which exists in Syriac and Arabic, the textual history of which still remains to be established, and the chronology of which is disputed (cf. G. Levi della Vida and J. Nigamni-Odier, (see bibl.), 132, no. 3 and 133 no. 1, with A. Abel, *Ann. Inst. Phil. et Hist. Or.*, Brussels 1925, 60, 79 and *Studia Islamica*, ii, 1954, 29) and which places the monk in the centre of a pamphlet, which assembles the indications of the ancient Dantesque apocalypse of the Pseudo-Methodius (Knoke, in *Byzantion*, 1931, 273-296), and cleverly combines them with the Christian arguments on the apocryphal origin of the Kur'ān and with the various aspects of the doctrine of the Mahādī (*Græc. Græc. der Arab. Christ. Lit.*, *Shadi e Testi*, Roma, 133, 147-9). This work met with success in the Christian circles of the Orient, and up till the period of the Crusades, which even resulted in its being translated into Latin (Levi della Vida and Nigamni-Odier, *op. cit.*, 132-3 and 139-46, M. T. d'Alverny and G. Valjda, in *al-Andalus*, xix, 1952, 1, 128, 129 ff.). But even before the Crusades, the main theme of the false prophet inspired by a "wise man" was known in the West, as is attested by the work in verse, directed against Islam, under the name of *Historia Machometi*, attributed to Hildebert (Guy Cambier, *Embric de Mayence (1010-1077) est-il l'auteur de la Falsa Machometi*, *Paris, Lat.*, cxvii, 1341-1366, Latomus, 2, Brussels 1952, 177, Monument de Villard, *Le Studio dell' Islam in Europa nel xii e xiii secolo*, *Studi e Testi*, t. 170, 34-5).

**BAHIZAT** AL-BADIYA [see MALIK HIRSI NĀSIR].

**BAHLŪL** (Amr), the name of three notable Kurdish figures, according to M. E. Zaki (*Maḥabbat*, 144) i. a member of the Sulaymāniyya family, amir of the Mayyāfarīnī branch, son of Alwand Bey b. Shāykh Ahmad. He was for a long period in the service of Iskandar Pasha, the sultan of Diyarbakr. Subsequently, he was for a time in command of the fortress al-Ikandariyya (between al-Hilla and Baghdād), and after that the sultan Yawuz Selim entrusted to him the stronghold of Mayyāfarīnī. A man of great personal bravery, he perished in a fight with Shāykh Bey. 2. Son of Amir Djamshīd, chief of the Dunbuli, tribe and resident at Turis. Died in 756/1359. 3. Son of Amir Farīdān, also a chief of the Dunbuli, governor of Tabaristān and Diḡistān. A contemporary of Shāykh Haydar

Safawi, and one of his most loyal supporters, he fell in the battle between Haydar and Shāh Khālī Ak Koyunlu in 880/1475-6.—There is also a Bahlūl Paghā who was the Turkish governor at Bāyazid up to 1236/1821. He was dismissed in that year, and died four years later. Wagner (ii, 297 ff.) devotes several pages to him in a commendatory vein. **Bibliography:** M. E. **BAHMANIS**. A line of eighteen Muslim sultans who ruled, or claimed to rule, in the Deccan from 748-933/1347-1527, after a group of Muslim nobles led by Ismā'īl Muḥib had successfully rebelled against the sultan of Dīhlī, Muhammad b. Tughlāk. The more vigorous Hasan Gangū supplanted Ismā'īl and was proclaimed Sultān 'Alā al-Dīn Hasan Bahman Shāh. (On the latter's origin see Major W. Hild, *Some Notes on the Bahman Dynasty*, *ASB LXXIII* Pt. 1 (Extra No.) 1904, 463; *Proceedings of Indian History Congress*, 1938, 304-8; H. K. Sherwani, *Gangū Bahmanī*, in *Journal of Indian History*, xx, Pt. 1, April 1941, 95 ff.)

*Table of the Bahman sultans.*

(a) Sultāns with their capital at Aḥsanābād-Gulbarga:

'Alā' al-Dīn Hasan Bahman Shāh	748/1347
Muhammad I	750/1348
'Alā' al-Dīn Muḥammad II	776/1375
Dāwūd I	779/1378
Muhammad II	780/1378
Ghiyāth al-Dīn Tahanman	799/1397
Shams al-Dīn Dāwūd II	799/1397
Tāj al-Dīn Firuz	800/1397

(b) Sultāns with their capital at Muḥammadābād-Bāḥr:

Shāhāb al-Dīn Ahmad I	825/1422
'Alā' al-Dīn Ahmad II	839/1436
'Alā' al-Dīn Ḥumayūn	862/1458
Nizām al-Dīn Ahmad III	865/1461
Shams al-Dīn Muhammad III	867/1465
Shāhāb al-Dīn Māhmid	887/1484
'Alā' al-Dīn	924/1518
Wālī Aḥmad	929/1523
Kāḥm Aḥmad	932/1526

[Coins and inscriptions suggest the last named roi *faïdant* may have lingered in exile claiming the throne until 943/1536-7. See E. E. Speight, *Coins of the Bahman Kings of the Deccan*, in *JC*, ix, 1935, 168 ff.; and *Inscriptions of Bijāpūr*, *Mem. Arch. Sur. of India*, No. 49].

During most of its history the Bahmanī Kingdom was limited to the table-land of the Deccan. Geographically, the Vindhya range may be said to be the northern edge of Southern India with the Nārbanda river flowing almost parallel to it. But the country south of this quasi-barrier may be divided into three distinctive parts: (i) Malwa, with its general slope towards the West; (ii) the Deccan table-land proper which, along with Berar, forms the base of the lavas present where the ancient undisturbed rock begins to extend over the centre of the peninsula; and (iii) what is called "South India" which extends from the northern edge of the Mysore plateau and the line of the Tungabhadra southwards. The lavas uplands end abruptly in the Western Ghāts which

have always tended to form a natural limit to the ambitions of the rulers of the Deccan table-land. Although the Bahmanis early managed to reach the sea at Dabul and Cowl they could never rule the coastal plain beyond the Ghâts effectively, and the south-western extremity of this lavaic country, Goa, had to be conquered and reconquered a number of times. While the table-land has a sheer fall of nearly 4,000 feet in the West, it has a very gentle slope eastward, and it takes more than 300 miles to reach the same level as the eastern coast line. It may be mentioned here that the importance of Golconda, which played such an important part during the later medieval period of Deccan history, and with it, of Hyderabad, lies in the fact that Golconda and a part of Greater Hyderabad stand on the last prominent spur of the table-land before the undulating plain begins. The effective southern limit of the Bahmani kingdom was the river Tungabhadra, the natural geographical limit of the Deccan, but it should be remembered that the Krishna—Tungabhadra Doab was always a bone of contention between the Bahmanis and their southern neighbours, the Rājās of Vijayanagar in much the same way as it had been a bone of contention between the Western Chalukyas and Rashtrakutas, and between the Yādavas and Hoysalas in ancient times.

The Bahmani sultans continually struggled to extend the area of their military and revenue paramountcy, and this involved them in wars against the sultanates of Malwa and Gujjarāt in the north and Vijayanagar in the south and in efforts, complicated by the intervention of Vijayanagar and the Hindu chiefs of Orissa, to assert their suzerainty in Telangana, south and east of the Godavari.

In the north, a successful war between Shāh al-Dīn Ahmad I and Hushang Shāh of Malwa over Kherla in 832/1425 followed in 834/1430-31 by an unsuccessful war against Gujjarāt in alliance with the Rājās of Jhalawar ended in stalemate. In 866/1461-2, Mahmūd Khaldī of Malwa, in alliance with the Gadiyapuri Rājās of Orissa, Kapildhara, succeeded in occupying Bidar itself; the Bahmanis were saved by the intervention of Mahmūd Shāh Bāgda of Gujjarāt. War again occurred in 871/1466 over Mahār and Ellichpur, but although Kherla was temporarily occupied by the Bahmani forces, a peace, which proved to be lasting, restored the *status quo ante*, between Malwa and the Bahmanis.

In the south, conflict over the fertile Krishna-Tungabhadra Doab with Vijayanagar was endemic. War occurred in 799/1399, 755/1354, 767/1365, 806/1398, 808/1406, 823/1420, 825/1422, 847/1443 and 886/1481 with varying fortunes, and the Doab region remaining a no-man's-land between the two powers, until after the accession of the Vijayanagar ruler, Krishna Deva Rāya in 935/1559, when the region was virtually incorporated into the Vijayanagar dominions.

In the west, despite Bahmani claims to Dabul and Cowl, the Bahmanis were unable to control the coastal region west of the Ghâts and were impotent to prevent continuing depredations by the Rājās of Khelna and Sangameswar, until the *waṣir*, Mahmūd Gāwān, succeeded in occupying Sangameswar and Goa in 876/1471 and 876/1472.

To the east, the Bahmanis raided Telangana successfully in the reign of Muhammad I and again in 826/1427 and 827/1428 when Warangal was captured, and a Bahmani governor established, but the local Hindu chiefs could usually rely upon help

from Orissa. The Orissan general Hanvira captured Warangal in 864/1460, but succession troubles in Orissa enabled the Bahmanis in campaigns between 882/1477-8 and in 885/1480, to extend their hegemony, though briefly, to the Bay of Bengal. Telangana was then divided into two provinces centring on Warangal and Rajahmundry.

While 'Alā' al-Dīn Hasan Bahman Shāh was the founder of the dynasty it was Muhammad I who organised it. The central Government was divided into three main departments dealing with civil, military and judicial matters respectively. The civil department was centred in the *waṣṣāṭ* *sultānat* or Prime minister who was assisted by *waṣirs* or ministers and *adibis* or secretaries. In the same way the judiciary consisted of the *kādīs* or judges and the *mufṭis* or interpreters of law, while peace and security of the cities was kept by the *khatāi* or Commissioner of Police and *mushāṭir* or the censor of public morals. On the military side the Commander-in-Chief had a number of subordinate officers at headquarters such as the officer at the head of *barbādār* who mobilised irregular forces in times of emergency, the *kāshidār* or the paymaster, the officer in charge of the *khāṣṣa ḥāṭī* or the body-guard of the sultan, a well-equipped and well-drilled force of 4,000 soldiers, and the officer in charge of 200 *yakha-giswān* or *sīlāḥdār* who handled the sultan's personal arms.

The whole kingdom was divided into four *atāf* or provinces and each *atāf* or province was placed under a *tarāṭīr* or governor. The *tarāṭīr* was originally responsible both for the civil and the military administration of the province and the *khāṣṣa* or commanders of the forts were placed under him. The four provinces of the Kingdom were centred round Dawlatābād, Berār, Ahsanābād—Gulbarga and Muhammadābād—Bidār (which included the small part of Telangana which was under the Bahmanis in the beginning). Out of these the province of Gulbarga, which was centred round the capital of the state, was naturally regarded as the most important and its *tarāṭīr* was generally one who enjoyed the fullest confidence of the ruler.

The century which followed the establishment of the dynasty saw a great expansion of the kingdom which finally extended from sea to sea and Mahmūd Gāwān, who was now *waṣir*, set to work not only on the redivision of the kingdom but also on the reform of the whole provincial administration. Firstly he redivided the kingdom into eight in place of four *atāf*. Berār was divided into two charges, namely Gāwāl and Mahār, part of the area surrounding Junnar was removed from Dawlatābād province and formed into a separate *atāf*, Radjmandrī was created a province distinct from the rest of Telangana and Bidjāpur was carved out of the old province of Gulbarga. The power of the *tarāṭīr* was also greatly curtailed. A *tarāṭīr* was previously supreme in both civil and military affairs of his province and could not only appoint *khāṣṣa* but also increase or decrease the number of soldiers on permanent duty according to his will and thus spend or save as much money as he liked out of the *dijār* set aside for military expenses. Mahmūd Gāwān curtailed the power of the *tarāṭīr* considerably. It was decreed that in future *khāṣṣa* would be appointed by the central government and a *tarāṭīr* was entitled to have only one fort and his direct command. Moreover every person who was responsible for the payment of salaries of soldiers was made accountable for the money he drew

from the *dijār* or *manṣab* as the case may be.

Another method by which the sultan was brought in direct relationship with the work of the provinces was that under which a large tract of land was set aside in every province as the royal demesne. Orders were also issued for a systematic measurement of land, fixation of boundaries all over the state and a good enquiry about the record of rights and assessment of revenue.

All these schemes however, proved to be still-born when Mahmūd Gāwān was murdered. Another attempt in the same direction was made twenty years later in 901/1495-96 by the minister Kāsīm Barīd, the progenitor of the Barīd-shāhs of Bidār [q.v.]. Under these reforms the smaller *manṣabs* were ordered to enrol themselves in the royal bodyguard and were henceforth called *sarāḥdār* or *kasulāḥdār*. This was only a half-hearted measure and affected only the small *dijār*dār and *manṣab*dār while the great nobles were left untouched. The great power and authority which the *tarāṭīr* were left to enjoy after the nullification of earlier reforms was one of the causes of the disintegration of the Kingdom and its resolution into five succession states, namely Bidjāpur, Ahmadnagar, Golconda, Berār and Bidār [q.v.].

The large influx of Persians and others from overseas created a peculiar political problem in the Deccan, for it divided the Muslim population of the State into two contending groups, viz. the *dāḥabīs* or the older colonists and the *djābīs* (sometimes called the *gharb al-diyār*) or the new settlers.

Their struggles were largely responsible for the downfall of the Bahmani Kingdom.

**MONUMENTS.** 'Alā' al-Dīn Hasan Bahman Shāh's new kingdom at Gulbarga was open to attack from all sides, by the Rājās of Vijayanagara, Telangana and Orissa, by the Gonds, and by the rival sultans of Khanderābād, Malwa and Gujjarāt; the first buildings of the new régime are consequently entirely military, surrounding the kingdom: to the north, Ellīpur, Gāwālgarh, Narālā (Bahmani inscriptions, T. W. Haig, *ETM* 1907-8, 17) in Berār, also Mahār; on the west, Parenda, Naldurg, Panhāl and Gulbarga itself; in the centre, Bidār, Golkonda and Warangal; on the south-west, Mudgal and Bāḥār. Many of these were existing Hindu, often Gonds, fortifications hastily occupied and modified; some were rebuilt later by Ahmad Shāh Wālī al-Bahmani after his transformation of Bidār [q.v.] fort, and during the reign of Muhammad III in consequence of Mahmūd Gāwān's policies. (References in Firāqīya, *passim*).

Gulbarga. The fortifications are well preserved, with double walls 10 m. thick, surrounded by a moat often 30 m. wide, well provided with bastions—many with barbettes added later for the use of artillery—and hornworks, large and compound crenellations, machicolations and barbicans. The one

major structure standing intact within the walls is the Dīāmī Masjīd, built 769/1367 by a hereditary Persian architect, Rāfi b. Shāms b. Manṣūr al-Karwīn (inscr., Haig, *ETM* 1907-8, 2), of a type unknown elsewhere in India, without open *jaḥs* but completely roofed over forming a pillared hall whose only illumination comes from the open side aisles and the clerestory of the central dome. The side aisles are characterised by their very wide span with unusually low imposts, an arch pattern used elsewhere in Gulbarga. Two mosques of nearly the same period at Delhi [q.v.] are partially covered; but this type was not imitated, presumably since the *ḥaṣṣa* and *minbar* were obstructed from the view of most of the congregation. The other Bahmani monuments at Gulbarga are the two groups of tombs. The first, near the south gate of the fort, includes those of 'Alā' al-Dīn (759/1358), Muhammad II, to whom the Shāh Bāzār Masjīd, an unpretentious building in the contemporary Tughlukian style of Delhi, is attributed (776/1375), and Muhammad II (799/1397); the first two of these show the battering walls and weak semicircular dome of the Delhi Tughlukian style; that of Muhammad II shows a similar dome, stilted below the haunch, to that of the Dīāmī Masjīd. To the east of the city is the *Ḥaṭṭ* Ganjīdār, including the tombs of Muḥammad and Dā'ūd c. 781/1380, Ghayyāth al-Dīn (c. 799/1397) and Firz (c. 823/1420); some of these are two adjacent domed chambers on a single plinth. That of Ghayyāth al-Dīn shows some Hindu influence in the *mihrāb*, and that of Firz in the carved polished black stone exterior pilasters, the dripstones and brackets; the interior of the latter is quasi-Persian in its paint and plaster decoration similar to the contemporary Sayyid and Lodi tombs at Delhi. Of other buildings, the *ḥaṣṣa* of Banda Nawāz (Kandahar *Desur*), c. 816/1413, shows the characteristic wide arch with low imposts.

Bidār. The Bahmani tombs at Aḥṣūr, 2½ miles east of the town, are on a larger scale, with loftier and sometimes more bulbous domes, than those at Gulbarga. None of these has battered walls, and none is double. The finest, that of Ahmad Shāh Wālī (c. 839/1436), shows the characteristic later Bahmani arch, stilted above the haunch, and is of great importance on account of its superb calligraphic decoration which includes two *ghazals* of the saint Ni'mat Allāh al-Kirmānī [q.v.]. That of 'Alā' al-Dīn II (862/1458) has striking encaustic tile-work and, unusually, some arches struck from four centres. That of Mahmūd, 924/1518, has its walls decorated with arched niches one above the other, more characteristic of post-Bahmani architecture. The Dīāmī Masjīd, called also Solah Khamba (= 'sixteen pillar') *masjīd* and Zānāl *masjīd* (827/1423-4), of the reign of Ahmad I but erected during Prince Muhammad's viceregency before the transfer of the capital—the earliest Muslim building at Bidār—and the royal palaces (Takht Mahal, etc.; cf. Sayyid 'Alī Tabṭabā, *Burhānī Ma'āthir*, Persian MSS. Soc. ed., 70-1), and the *madrasa* of Mahmūd Gāwān, all works executed under the Bahmanis, are in view of their subsequent redecoration and rebuilding by the Barīdis [q.v.], described under Bidār [q.v.]. The *Ḥaṣṣa minār* at Dawlatābād [q.v.], dated from the time of 'Alā' al-Dīn, and it may be observed that the earliest 'Adil Shāhī building at Bidjāpur [q.v.], *Asen Beg's masjīd* (918/1512-3) bears an inscription indicating Mahmūd Shāh Bahmani as ruler—presumably still acknowledged as paramount in spite of Yūsuf's recent independence.

The walls of Bidar fort are Bahmani; those of the town date from the Bārd Shāhā.

(J. BURTON-PAGE)

**BAHMANYĀR**, ABD 'L-HASAN BAHMANYĀR B. AL-MAKRUZĀN, a famous pupil of Avicenna, died in 485/1092. Avicenna's *K. al-Mabshūrat* has some of the philosophical questions raised by Bahmanyār and answered by the master. Since he was a Zoroastrian, Bahmanyār's acquaintance with Arabic was imperfect. His *Mā ba'd al-Taḥā* and *K. fi-Mawāḍiḥ al-Waḍūḥ* were published in Leipzig in 1851 (and in Cairo in 1329 A.H.). His comprehensive interpretation of Avicenna's philosophy called *K. al-Taḥā* (or *al-Tahāḍī*) and consisting of logic, metaphysics and physics plus cosmology, was also published in Cairo in 1329 A.H. An extract (*ḡaṣṣ*) also exists (see Brockelmann, SI, 828) from his work on the existence of souls and active intelligences. Bayhaḡī (*Tatimmat*, 91) also mentions a *K. al-Zina* on logic by him, a work on ultimate happiness, and one on music, and adds that he wrote many other treatises.

**Bibliography:** Besides references given in this article, see also Nīrānī Samarqandī, *Caḥr Maḥāla* (ed. Karwānī), 252, and Ibn Abī Usayb'a, 'Uyūn al-Aḥbā' (F. RAHMĀN) -

**AL-BAHNĀSĀ**, a famous town in mediaeval times, in Middle Egypt, situated between the Baḥr Yūsuf and the foothills of the Libyā range, 13 km. west of Bant Mazr, a railway station 198 km. south of Cairo. It is the ancient Oxyrhynchus, in Coptic Pemdje.

During the Byzantine period it was a flourishing city, renowned for its churches and numerous monasteries. According to a Coptic legend, the Virgin and the Child Jesus are supposed to have stayed there during the Flight from Egypt. Certain Muslim exegetes have found a verse of the Qur'ān (XXIII, 52), to corroborate this tradition, which is of Christian origin.

At the time of the Arab invasion, it was a fortified place with thick walls; the Greek garrison seemed to have exhibited dauntless courage in its defence, which was long remembered, since their resistance inspired a popular romance, the *Conquest of Bahnāsā*.

At first the capital of a pagarchy (*bāra*), the place enjoyed an astonishing prosperity in the

Middle Ages, Bahnāsā gave its name to a province at the time of the administrative reorganisation carried out at the behest of the Fatimids *waṣir* Badr al-Djamālī at the end of the 5th/11th century. Ibn Baṭṭūṭa describes it as a great city surrounded by numerous gardens. Khālīl Zahrī still speaks of it as a large town, but it is already suggestive to note that Ibn al-Ḥafṣ who knew the province, passes the town over in silence. Henceforth it was never anything more than an insignificant township, which, in the 19th century was included in the province of Bant Suḥf (Suwayf), before belonging to that of Minya. The sands had covered it; about the year 1860, debris of all kinds, granite columns, fragments of capitals, of sculpture, pottery and bricks could be seen lying on the ground there; it is now no more than a confused heap of ruins, according to a recently published guide-book.

This lamentable situation may well be the result of the progressive deforestation of the region. Under the Fatimids and the Ayyūbids, the forests, classed as domain, were exploited by a State administration, for funds for naval construction. Makrīzī is here relying on an account by Ibn Mamūṭī, but adds: "This has all completely disappeared and one no longer hears anyone speak of this organisation, as private persons have had the trees cut down."

The town's prosperity was above all assured by its woven products. All kinds of cloths were manufactured there, from the most precious fabrics, such as silks litigated with gold, down to the most ordinary wares: curtains, tent coverings, ships' sails. Fabrics of great size were woven there in wool, linen and cotton, with pictures in fast colours, portraying all kinds of beasts, "from the insect to the elephant". According to Idrīsī, fabrics originating from Bahnāsā bore the name of the town and it is a fact that in the Museum of Muslim Art in Cairo there is preserved a piece of multi-coloured wool, with pictures of small hares framing a human head on which the name of Bahnāsā can be read. Ibn Baṭṭūṭa still praises its excellent woollen cloth in the middle of the 8th/14th century.

**BAHR** (see 'ARḌ).

**BAHR** (Ar.), sea and also large perennial river. — The articles which follow treat of the principal seas known to the Arabs, but it is convenient to note here that in Islamic cosmology, on the basis of a conception generally related to the authority of Ka'b al-Aḥbār (q.v.), the mountain Kūf (q.v.), which encircles the terrestrial sphere, is itself surrounded by seven concentric intercommunicating seas; these seas bear respectively the following names: Nīlas (or Bayṭāḥ), Kaynas (or Kabayn), al-Aḡnam, al-Sākin, al-Muḡallīb (or al-Murūl), al-Mu'annīs (or Marmīs) and finally al-Bāḥ. But it is probable that these names correspond to geographical realities;

in fact Nīlas (and its variant form) is an orthographic corruption of Buntus (= πόντος = the Black Sea); and Kaynas (and its variant) derives from Ukiyānūs (= ὠκεανός = the [Atlantic] Ocean); for the other names, a tentative identification will be found in P. Anastase-Marie de St. Élie, *Nuḡḡ al-Jazīra al-'Arabīya*, Cairo 1928, 83-4, and al-Ḥafṣ, *Taḥī* (ed. Pellat), s.v. *Buntus*.

**Bibliography:** Karwīnī, *Comog*, 104; Kīāḥ, *Kīyā al-Aḥbā'*, Leiden 1922-3, 9; see also the bibliography to the article ḡAF. (E.O.)

**AL-BAHR AL-ABYAD** (see BAHĀ AL-RUM).

**BAHR ADRIYAS**, name of the Adriatic in Arabic geographical works. (E.O.)

**AL-BAHR AL-ASWAD** (see BAHĀ BUNTUS, KARA DEMIZ).

**BAHR AL-BANĀT** i.e., "the Maidens' Sea", a name given by the Arabs to the Archipelago off the west coast of the Persian Gulf. Idrīsī calls it Baḥr al-Kīḥr.

**Bibliography:** Ritter, *Erkunde*, XII, 390, 569ff.

**BAHR BUNTUS**, the Pontus Euxinus, or Black Sea, in which the STRAS (NITAS) is a stereotyped error (name ductus of letters with different pointing and vocalisation). From the names of adjacent peoples or cities it was also called Baḥr al-Khazar or Sea of the Khazars (Ibn Khurādādhbih, 105, perhaps by confusion with the Caspian, Baḥr al-Khazar, (q.v.)), Baḥr al-Rūs (Sea of the Russians), Baḥr al-Burghān or Baḥr al-Burghān (Sea of the Bulgars), Baḥr al-Tarīq (Sea of Tarīq), Baḥr al-Bāḥ al-Armanī (the Armenian Pontus), Baḥr al-Kustānīfīyā (Sea of Constantinople) and Daryā-yi Gurziyān or Sea of the Georgians (only in *Hudūd al-'Ālam*). The name al-Baḥr al-Aswad (Black Sea) appears only in later times.

According to Mas'ūdī (*Tanbih*, 66-67), writing in 343/956, it extends from Lāzika (Greek Larikē) in the E. to Constantinople, a distance of 1300 miles, with a breadth of 300 miles. It is connected with the lake or sea of Māyūtīs (Sea of Azov, [see BAHĀ MĀYUTIS]). Among the rivers which flow into it are the Tanāḥīs (Don) and the Danube. From Baḥr Buntus issues Khālīḡ al-Kustānīfīyā (Strait of Constantinople), i.e., Bosporus, Sea of Marmara and the Dardanelles, which issues in Baḥr al-Rūm or Sea of the Greeks (Mediterranean). The length of the strait is 350 miles. In a parallel account written earlier (*Murādī*, I, 260-262) Mas'ūdī gives the length of Baḥr Buntus as 1100 miles and the course of the Don as about 300 *ṣārah*. The same general account is found in Ibn Rustā, 85-86 (about 290/900). It was thought by some, e.g., Ibn Khurādādhbih (103) that Baḥr Buntus issued from Baḥr al-Khazar (Caspian). Mas'ūdī denies this (*Murādī*, I, 273), saying simply that the two seas are connected (*Tanbih*, 67). According to *Murādī*, II, 18 ff., the route from Baḥr Buntus to Baḥr al-Khazar was via Khālīḡ Nītas (Strait of Kerch), the Don and the Volga, using the Don-Volga portage, i.e., the route called elsewhere the 'Khazarian Way'. Mas'ūdī himself, who shows much greater interest in Baḥr Buntus than geographers of the Balkh-Iṣṭakhī school, speculated on a direct connexion between the Black Sea and the Atlantic. This view was later held by al-Iḥrīqī (Karwīnī, *Ṣāḡīḡ*, 104).

As time passed new place-names on Baḥr Buntus appear, e.g., after the Seldūḡ conquest of Asia (Minor) the cities, formerly Greek, Sinūh (Sinope) and Sīnōn (Amisus) mentioned by Abu 'l-Fiḍā'. Similarly Nuwayrī can mention the Kīpḥāk cities, Sūḡāk and Kīnīn, the first of which, built in the

7th/13th century, for a time gave its name to the sea (Baḥr Sūḡāk). For Ottoman times, see KARA DEMIZ.

**Bibliography:** In addition to the references in the article, Yāḡūtī, I, 306-307, 401, 499, 746; Abu 'l-Fiḍā', *Tahwīm*, 13, 391-393; Nuwayrī, *Nihāyat al-'Arāb*, I, 246-247; *Hudūd al-'Ālam*, 32, 181-183. (D. M. DUNLOP)

**BAHR FĀRIS**, the Persian Gulf, in which Mas'ūdī includes the Gulf of 'Uḡmā; Iṣṭakhī and Ibn Hawkal apply the name to the whole Indian Ocean (Baḥr al-Hind). The *Hudūd al-'Ālam* distinguishes the Khālīḡ 'Irāq, the Persian Gulf, from the Khālīḡ Fīr, the Gulf of 'Uḡmā and the Arabian Sea. Mas'ūdī gives its width at the narrowest place as 150 *mil*; the Strait of Hormuz is actually some 29 miles across. In the Muslim geographers the modern al-Aḥsā' was called Bahrayn, the name Uḡl being given to one of the islands now called Bahrayn, Hindarābī was Ahrīn, Kīḡm was Lāḡ, Jazīra Bant Kīwān, or Barkawān, and Shāykh Shā'ayb was Lāwīn, Lān or Lān.

Mas'ūdī relates that one 'Abd al-Maṣhī, aged 350, told Khālīḡ b. al-Walīd that he had seen al-Nadīf covered by the sea, and ships sailing to the mouth of the Euphrates below al-Hīra. Mas'ūdī evidently believed the geographical fact if not the story. Most scholars have assumed that silt brought down by the rivers has been gradually filling up the Baḥr Fāris. The history of 'Abdān seems to support this. Mukaddasī and the *Hudūd al-'Ālam* speak of it as on the coast, Nāḥir-i Khurāsān as a league from the sea at low tide, and Ibn Baṭṭūṭa as 3 miles from the sea; it is now over 30. It has, however, been claimed (G. M. Lees and N. Falcon, *The Geological History of the Mesopotamian Plains*, Gf, 1932) that, though the level of the land has risen locally and though rivers have changed their courses, (see DIBLĀ, FUKAR, KĀRĀḤ), the area between the Arabian massif and the Persian mountains is one of tectonic subsidence, mitigated but not counteracted by the deposit of silt. The Tigris and Euphrates leave most of their silt in the marshes above al-Kūrna and the Baḥr Fāris, is materially affected only by the silt carried by the Kāḡrīn. There is no geological evidence that the head of the Baḥr Fāris has been N.W. of its present position since the Pliocene Age; it is even possible that it has been further to the S.E. in historical times. (See also correspondence in *Gf*, 1934).

The position of the Baḥr Fāris has been great but varying importance. Its history is very imperfectly known. A number of local chronicles are still in MS. and the story of the competition of the alternative trade routes through the Red Sea and across Central Asia has yet to be studied. Only the salient facts are given here; for further details see the articles on individual ports. Commerce was flourishing before the Arab conquest and Persians were already engaged in trade with China. The identification of the "Po sea" of Chinese records with Persians has been questioned, as the name can also refer to a Malayan people. It is, however, established by a reference (*Chou T'ang Shu*, VII, 19) to a Po ssu embassy of 103-4/722, which brought lions as a gift; the lion is not found in Malaya. The revolt of Huang Ch'ao and his sack of Canton (264-5/878) derailed the trade. Voyages from Persia to China appear to have ceased in the 4th/10th century. There is no indisputable evidence that Chinese ships came to the Baḥr Fāris before the Ming voyages of the early 9th/15th century. In early Muslim times the chief port was Sīrāf, near Tāhīr. It declined under the

later Būyids and hegemony passed to the Arab Banū Kayṣar of Kays (originally Kijl, Kib), afterwards subject to the Salghūrid Atabegs of Fars. In 1237/1239 the ruler of Hormuz, a vassal of Kirmān, captured Kays. The Banū Kayṣar then came to an end and in the next century the primacy of Hormuz was unchallenged. Following an attack by Čagatay bands in 699/700, the capital was moved from the mainland to the island of Dījīrū. Thus, as the commercial importance of 'Irāk al-Baharī declined, the trading centre of the Bahr Fāris was displaced to the south.

The importance of Hormuz, which was visited by Odoric of Pordenone and Marco Polo, among many others, was well known in mediaeval Europe. About 803/4/1488-9 it was visited by Covilha, the agent of the King of Portugal, who was collecting information about the trade routes of Asia. It is not known whether his report reached Lisbon (see BAHR al-KUTĀM). The Portuguese were more successful in the Bah Fāris than in the Red Sea, partly because it was nearer to their base in India, and partly because neither Persia nor the Ottoman empire controlled its coasts effectively. Even Basra was often semi-independent under Muntafik ṣayyikh. Albuquerque received the submission of Hormuz in 931/1507, but the disaffection of his captives forced him to withdraw. He established effective control in 927/1515 when he murdered the powerful *asir*, Ra'ib Hāmid, and built a strong fort. The Portuguese intermittently held Bahrayn and intervened in the affairs of Basra. After the Ottoman capture of Baghdad (942/1534) Turkish influence began to be felt in al-Basra, especially at al-Kut. Abbas I encouraged potential rivals to the Portuguese, and English and Dutch factories were founded during his reign. In 1037/1622 he constrained an East India Company fleet to assist him in taking Hormuz. The *Shāh* then founded Bandar 'Abbās, known to Europeans as Gombron, and Hormuz decayed rapidly. The Portuguese still visited Basra and for a time held a fort at Dījīrū (Ra'ib al-Khayma), but they practically disappeared from the Bahr Fāris when they lost their foothold in 'Uman in the middle of the century. At this time the Dutch enjoyed commercial supremacy which they began to lose to the English under the last Safawids. In the anarchy of Husayn's reign the 'Umanis captured Bahrayn and Kijlūn from which the *Shāh* expelled them; his own intervention in 'Uman ended in disaster (1157/1744). In 1179/1766 the pirate chief of Bandar Kig captured the last Dutch stronghold in the Bahr Fāris, Khārak. Towards the end of the century Arab dynasties, the Āl Khāḍifa and Āl Sabāḥ respectively, established themselves in Bahrayn and Kuwait; the latter profited commercially from the Persian occupation of Basra (1790/1779-1793/1779). The influence of the French, now the only rivals of the British, was eliminated when they lost Mauritius (1225/1810).

British intervention in the politics of the Bahr Fāris, aimed at suppressing the slave trade and the piracy which became better organised with the extension of Wahābī influence. The principal pirates were Rāḥma b. Dīḥir of Kuwait, and Sa'īd b. Sa'īd of the Kawāsim (Djāwāsim); this tribe held what came to be called the Pirate Coast. The pirate fleet came to include 63 large ships and was able to threaten Būḥayr, which had now displaced Bandar 'Abbās as the chief port of the Bahr Fāris. In 1224/1809 the Indian Government sent a force which comprehended Ra'ib al-Khayma and drove the Kawāsim inland. They returned about a year later and resumed

their depredations. In 1235/1819 a strong force from Bombay, joined by an 'Umanī contingent, again captured Ra'ib al-Khayma, and destroyed the forts and shipping along the coast. The chiefs and the *Shaykh* of Bahrayn then (1235/1820) signed a treaty renouncing piracy and slave-raiding. This was followed by supplementary treaties and in 1269/1853 they accepted maritime peace in perpetuity under British protection. At first the most important state was the Kawāsim principality of Ra'ib al-Khayma with which al-*Shārkā* (Sharqā) was closely connected and at times united. In the half century after the permanent treaty the dominant personality on the coast was Zayd b. Khāḍifa, the Banū Yās *Shaykh* of Abū Zāḍ; commercially the most prosperous was the emirate of Dubayy, belonging to the cognate Āl Bū Fahsā. The other states were 'Ajmān, Umm al-Kuwayn, and after 1285/1868 Qatar. Kalbā and Fudjāyra on the coast of the Gulf of 'Uman were for a short time recognised as having separate status; the former was incorporated in al-*Shārkā* in 1951. In recent years the presence, or suspected presence of oil on land or under the sea bed has given significance to frontiers which have rarely been defined with precision.

**Bibliography:** The bibliography of the Bahr Fāris is very large and cannot be given in detail. To the Muslim geographers summarised by le Strange and Schwarz, *Iran*, should be added the *Hudūd al-'Alam*. On sources for the mediaeval history of the Bahr Fāris, W. Hinz, *Quellenstudien zur Geschichte der Timuriden*, in *ZDMG*, 1935, 361-1, 379-81; J. Aubin, *Les Princes d'Ormus au XVI<sup>e</sup> siècle*, in *J.*, 1953, with many further references and some extracts from the *Madīna al-Anṣab* of Muḥammad Ṣabāḥ-kirā'. The principal European travellers are mentioned in A. T. Wilson, *The Persian Gulf*, Oxford 1928, which summarises, rather inaccurately, the modern history of the region. For trade and navigation, G. Ferrand, *L'Élément persan dans les textes nautiques arabes*, *JA*, 1924; *Instructions nautiques et routières arabes et portugaises*; Hadi Hasan, *History of Persian Navigation*; G. F. Hourani, *Arab Seafaring*. The chief Portuguese sources are Barros, Couto, Castanheira, Correa, Barbosa, the letters of Albuquerque, the *Comentarios* of Albuquerque the younger, Teófilo Prius, and (written in Spanish) Teixeira and Faria y Souza. On the Dutch, H. Terpstra, *De Ophond der Westerkustvaren van de Oost-Indische Compagnie*; H. Dunlop, *Bronnen tot de Geschiedenis der Oostindische Compagnie in Persië*. On pearling and modern sailing conditions, A. Villiers, *Sons of Sindbad*. For general description in modern times, see S. R. Miles, *Countries and Tribes of the Persian Gulf*, and Wilson, *op. cit.* On the first English traders, Sir W. Foster, *England's Quest of Eastern Trade*, and much source material in *The English Factories in India*. On the period of British power two valuable sources which have been somewhat neglected are *Selections from the Records of the Bombay Government*, New Series, no. xxiv, and the *Annual Report on the Administration of the Persian Gulf Political Residency and Muscat Political Agency*; the published reports cover the years 1874/5-1904/5. Subsequent reports were not made available to the public. For laws and treaties, C. U. Atchison, *A Collection of Treaties, Engagements and Sanads relating to India and neighbouring countries*, vol. xii, 137-186; *Persian Gazette*, vol. 1 no. 1, supp. no. 1, Oct., 1953. Some further geographical books in the Bibl. of AL-

'ARAB, DĪJĪRĀT. Cf. RA'ib AL-KHAYMA, AL-SHĀRKĀ, DUBAYY, and ZARĪ (C. F. DECKINGHUIS).

**BAHR AL-GHAZĀL:** (1) A tributary of the Bahr al-Djāḥal (upper White Nile) forming an outlet-channel for an extensive swampy area. The swamps are fed by numerous rivers (e.g. Tondj, Dīrī) originating in the Nile-Congo divide, and by the Bahr al-Arab which forms the southern limit of the *Bahāra* (p. 92), nomadism. The Bahr al-Ghazāl channel extends 244 miles from Maṣṣāra' al-Rik (the name is variously spelt and derived) to its confluence with the Bahr al-Djāḥal at Lake No, which it enters from the west at lat. 9° 29' N.

(2) The region formed by the basin of the streams which ultimately supply the Bahr al-Ghazāl channel. This is a rough triangle bounded on the north by the Bahr al-Arab, on the south-west by the Nile-Congo divide and on the south-east by the river Rohl or Na'im. The permanent swamp (Ar. *sadd*) in the lower courses of these streams (as in the Bahr al-Ghazāl channel and the Bahr al-Djāḥal) forms a barrier, as the Arabic implies, which long sealed the region from access by the Nile. The western part of the region consists of ironstone plateaus, between which and the *sadd* lies an area of flood-plain. The indigenous pagan negroes are, in the north and east, mainly semi-nomadic, cattle-herding Dinka. Tribes of the plateau include, in its northern portion (Dār Farī), the Farīkī and the Kreish; further south and now divided by the frontier of the Belgian Congo are the Azande (Niam-Niam; see Niam-Niam).

(3) A province of the Republic of the Sudan, approximating to the above region, with an area of 82,530 sq. miles and a population of 997,022. It is divided into four districts and has its capital at Wau. *History of the region:* Burckhardt (1814) mentions Dār Farī as an area supplying the Dār Fūr slave-trade. Penetration of the Bahr al-Ghazāl from the Nile began after the expeditions of Salim Khādīdīn to the Bahr al-Djāḥal (1839-42). Traders, including Europeans, entered the Bahr al-Ghazāl from the Nile in the 1850s seeking ivory, but as this became difficult to obtain, slave-raiding proved a profitable alternative. The penetration of ivory-traders into Dār Farī helped the slave-traders (*dallāla*) from Kordofān and Dār Fūr. The latter, after 1880, when the Europeans sold their claims to the 'Arab' assistants. These men, Sa'īdīs, Copts, and others, who came by the Nile (al-Bahr) were known as *Bahāra*. They had armed retainers, usually Danāḳla recruited in the north or slave-troops (*bāzīnār*), and fortified stations (*zārīnār*). They were virtually sovereign in the areas where they held a monopoly of trade.

The leading figure in the western Bahr al-Ghazāl was the Sudanese, al-Zubayr Rāḥma Maṣṣūr. Setting up as an independent trader in 1858, he moved westwards into unexploited country, ultimately reaching the Niam-Niam, where he formed a private army. Expelled from their territory, he established his rule over Dār Farī (1865). In 1866 he made an agreement with the Rīzaykāt Bahākira in the north which opened the trade-route to Dār Fūr via Shakkā. Khedīve Ismā'īl was now seeking to suppress the slave trade and to bring both the Bahr al-Djāḥal and the Bahr al-Ghazāl under Egyptian control. In 1869 the administration at Khartoum authorised an expedition under an adventurer from Dār Fūr named Muḥammad al-Baḥrī (or al-Hāḥī), who was assisted by al-Zubayr. His prestige grew and the importance of the north-western outlet which he controlled increased as a result of Sir Samuel Baker's expedition

to the Bahr al-Djāḥal (1869-73). However, while al-Zubayr was fighting the Niam-Niam (1872), the Rīzaykāt attacked traders on the Shakkā route, al-Zubayr's consequent hostilities against the Rīzaykāt led to an embroilment with their suzerain, Sultān Ibrāhīm of Dār Fūr. Al-Zubayr thereupon concerted plans with the Egyptian authorities to attack Dār Fūr. He was appointed governor of the Bahr al-Ghazāl and Shakkā. In 1874 Dār Fūr was conquered.

The next year al-Zubayr went to Cairo, where he was detained by the Khedīve. His son, Sulaymān, remained in the Bahr al-Ghazāl, where Egyptian authority was ineffective. In 1877 C. G. Gordon, the governor-general, appointed Sulaymān governor of the Bahr al-Ghazāl. A quarrel with a rival resulted in Sulaymān's revolt. He was defeated and killed in 1879 by Gordon's Italian assistant, R. Gessi, who succeeded him as governor and strove to pacify the province until his recall in 1880. Gessi's successor, the Englishman, F. M. Lupton, was confronted with the repercussions of the Mahdist revolt. After the Mahdī's capture of al-Ubayyīd and victory at Shaykīn (1883), he was cut off from assistance. Many of his officers were northern Sudanese who sympathised with the Mahdī. In April 1884 Lupton surrendered the provincial headquarters, Dayn al-Zubayr, to a Mahdist force under Karām Allāh Kurkūṣāwī. No effective Mahdist administration was established and Karām Allāh withdrew his army to Dār Fūr in 1886.

The Bahr al-Ghazāl then became an object of European imperial expansion. Two expeditions from the Congo Free State entered Dār Farī in 1894 and the chief of the Farīkī tribe accepted Congolese protection. Thereupon the Mahdist governor of Dār Fūr, Maḥmūd Ahmad, sent al-Muḥtātīm Mūsā to expel the Europeans, who had however already withdrawn since the Franco-Congolese agreement of August 1894 brought the Bahr al-Ghazāl within the French sphere of expansion. A French expedition under J.-B. Marchand crossed the region and reached the White Nile at Fashoda in July 1898, whence they withdrew in December in consequence of the Anglo-Egyptian reconquest of the Sudan. An Anglo-French agreement (21 March 1899) marked the relinquishment of French claims to the Bahr al-Ghazāl, the Congo-Nile watershed being the dividing-line between the two spheres of influence. The frontier was defined finally in 1924.

The re-establishment of administration began with the arrival of an expedition under W. S. Sparkes at Maḥḥāra' al-Rik in December 1900. The following years saw the opening of communication as the *sadd* was cleared and roads made. Patrols for exploration and pacification were sent out and government posts established. Roman Catholic missionary activity began in the western Bahr al-Ghazāl in 1903; the Anglicans started work in the eastern areas in 1905. The missions laid the foundations of an educational system, which has been increasingly subject to governmental control since 1925. Sporadic tribal troubles occurred for many years, otherwise the recent history of the Bahr al-Ghazāl has been uneventful.

**Bibliography:** See R. L. Hill, *A Bibliography of the Anglo-Egyptian Sudan*, London, for material to 1937, and *A Biographical-Dictionary of the Anglo-Egyptian Sudan*, Oxford, 1937, for short notices of leading personalities. There are numerous articles, especially on tribes, in *Sudan Notes and Records*, Khartoum, 1918 —, *Annual*

bibliographies appear in this periodical from 1948. Al-Zuhayr's life in Naṣim Shukayr, *Ta'rikh al-Sūdān*, Cairo 1903, iii, 40-48, has been translated and annotated by M. Thilo, *Es-Zihir Rahmud Paschas Autobiographie, ein Beitrag zur Geschichte des Sudan*, Bonn and Leipzig, 1921. On the Belgian penetration, see L. Lotar, 'La Grande Chronique du Boma', *Memories, Section des Sciences Morales et Politiques, Institut Royal Colonial Belge*, Brussels, and A. Abel, *Traduction de documents arabes concernant le Bahir-el-Ghazal*, Bull. de l'Acad. royale des Sci. coloniales, xxv, 1954, 1385-1409. A useful general work is M. F. Shukayr, *The Khedive Ismail and Slavery in the Sudan*, Cairo 1938.

**BAHR AL-HIND** is the usual name amongst the Arabs for the Indian Ocean, which is also called *Bahr al-Zandj* from its W. shores or—the part for the whole—the *Bahr al-Mahaghl*. The expression *Bahr Fāris* also sometimes includes the whole ocean.

According to Ibn Rustā, 87, its E. shores begin at Tiz Mukrān, its W. at 'Adan. Abu'l-Fidā', *Tahmil*, transl. ii, 27 = text, 22, gives *Bahr al-Sin* as its E. boundary, al-Hind as the N. and al-Yaman as the W., while the S. is unknown.

The various parts of the ocean bear special names derived from various lands and islands. If we neglect the N. arns, *Bahr al-Kulzum* and *Bahr Fāris* in the narrower sense, which are dealt with in separate articles, we have first *Bahr al-Yaman* stretching along the S. coast of Arabia with the *Khuryān Murayān* (Kuria Muria) islands and Sukutā. On the African coast we have, beginning at the strait of Bab al-Mandab, first the land of Barbarā, i.e. Somaliland to the harbour of Marka, then the land of the *Zandj* [see *BAHR AL-ZANDJ*] with the towns of Barawa, Malinda, Mumbasa and the island of Zanibar, i.e. roughly Kenya and Tanganyika Territory as far as the island of Kanbālī. Sūfā is joined to Kanbālī, and finally at an uncertain distance is al-Wākūq (Madagascar).

It once sets out from *Bahr Fāris* at Tiz Mukrān, one comes to the coast of al-Sind with the delta of the Indus (Mubān) and the commercial town of al-Daybul. On the shores of *Bahr Lāwā* (i.e. the sea of Lā or Gurgān) on the W. coast of India lie the towns of Kanbāva (Cambay), Sūbāra, Saymūr and Sindūbāra (Goa). The archipelago of al-Hindū (the Laccadives and Maldives) separates *Bahr Lāwā* from *Bahr Harkand* (Bay of Bengal with the waters to the S.). 'Harkand' has been explained as a miswriting in Arabic for Tanarāpti (Reinaud) or Harikē (Marquet, cf. *Ḥudūd al-'Ālam*, 211). Idrisi simply notes that the name is Indian (Jaubert, i, 63).

The last port on the Malabar coast is Kilām Mall (Kulam), the outermost of its islands is Sarandib (Ceylon). The route to the E. Indies appears to have lain straight across *Bahr Harkand* to the island of al-Rāmmī which is washed by the waters of *Bahr Harkand* and the *Bahr Shālhit*, al-Rāmmī (al-Rāmī, al-Rāmī = al-Lāmī, whence the sea there is called *Bahr al-Lāmī*) is Sumatra, to be more accurate N. W. Sumatra (cf. J. Sauvaget, *Relation de la Chine et de l'Inde*, 31), while *Shālhit* is S. Malacca. Voyagers sailing to China must have kept somewhat further N., for they touched at the islands of Lankalāhūt or Langlāhūt (the Nicobars) to the N. of which are placed the Andāman islands, and from there reached Kalāh Bār (Kodah) on the Malay peninsula. The strait of Malacca is therefore called *Bahr Kalah* (Kalāh Bār), while *Bahr Shālhit*,

when it is distinguished from it, appears to be the sea adjoining it on the S. We have now reached the land of the Mahārāj, the centre of which is the land of al-Zābāḡ. This name originally denoted Central and S. Sumatra, where Sribuza (Ferrand's reading) = Palenbang is to be sought for, then its use was extended to include Java (Djāba) and in its political application it includes a series of smaller islands to the coast of Malacca. Beyond these islands is *Bahr Karāḡin* or *Karāḡan*, the Gulf of Siam, which is continued on the coast of Kīnār (Khmer = Cambodia) in *Bahr Saif* (Champa), the sea of Annam and the waters adjoining it on the S. Passing the island of Sundurūlāt (?Hainan), we reach the *Bahr Sākhay* (China Sea), where *Khāfū* (Hsiao-Chia, Canton) is the great emporium for the trade with the West. The knowledge of the Arabs concerning al-Sūfā, al-Sūfā (Korea) and the Wākūq islands (Japan) was vague and limited.

The notions of the Arabs of the 10th century concerning *Bahr al-Hind* become more and more vague as one goes to the E. and S. and the interpretation of their statements more uncertain. In many cases they have merely copied the statements of predecessors. They have in addition utilised the accounts of their own voyages. Details from different sources were never properly assimilated to form a uniform picture. Sometimes *Bahr al-Hind* appears to pass into the 'Sea of Darkness', in which mariners driven out of their course are said to be tossed about for ever. Sometimes it is believed that it joins the 'Black Sea' or 'Sea of Pitch' (al-Bahr al-Zift) on the N. of Asia. Sometimes again E. Asia and S. Africa appear to be connected, as the use of the name al-Wākūq [g.r.] for Japan (or Sumatra, cf. *Ḥudūd al-'Ālam*, 228) as well as for Madagascar shows. This idea is supported by Idrisi, according to whom the Zābāḡ islands are opposite to the land of the Zandj.

The voyages of the Persians and Arabs, who availed themselves of the monsoons, had as their starting-place the Persian Gulf, Strīd and Shūhr are important harbours there. The most important commercial centres appear to have been the land of the Zandj, to which merchants sailed even from al-Zābāḡ—Madagascar was ultimately colonised from the Malay island, the whole of al-Hindū had relations with China. The commerce of the Muslims with China came to a standstill in 264/878 after the sack of Canton in the course of a rebellion (Abū Zayd al-Ḥasan al-Sirāfi in G. Ferrand, *Voyage du marchand arabe Sulaymān*, 75 ff.; cf. Mac'ūdī, *Murūdī*, i, 302-308). But trade relations seem to have recovered to some extent, and became active again when the Mongols, as Ibn Batṭā'a's account of his voyage shows.

#### BAHR KHAWĀRIZM (see ARAL SEA).

**BAHR AL-KHĀZAR**, 'the Sea of the Khazars', the common Arabic designation for the Caspian, which was also called al-Bahr al-Khazārī, 'the Khazar Sea', and has had a number of other names, al-Bahr al-Khurasānī, 'the Khurasānian Sea'; *Bahr Džurdjān*, 'Sea of Džurdjān'; *Bahr Tabaristān*, 'Sea of Tabaristān', etc., local names often being applied to the whole (cf. al-Mas'ūdī, *Murūdī*, i, 263). Al-Dimashqī mentions that in his time (circa 723/1320) the Turks called it *Bahr Kurram*, 'Beaver River' (ed. Mehren, 147), hence as we learn from *Abū Ḥabīb Mustawfī* (*Nizka*, 239, transl. 231) some people nicknamed the *Bahr al-Kulzum*, which properly signifies the Red Sea (Sea of Clysma). Al-Mukaddas refers to the Caspian simply as al-Buḥayra, 'the Lake' (*Digā*, II, 353, 361), perhaps identifying it with the Aral Sea (see below). The prevailing designation, *Bahr al-Khazar*, refers to the kingdom of the Khazars, who in the early Middle Ages occupied the shores of the sea N. of the Caucasus to the mouth of the Atīl (Volga) and yet further N. and E. Geographers of the school of al-Balḡhī devote the greater part of their account of *Bahr al-Khazar* to a description of the Khazar kingdom.

Under the Caliphate the Muslim possessions on *Bahr al-Khazar* never extended beyond the Caucasus in the W. and *Džurdjān* in the E. and included, as one travelled S. then E. from Bāb al-Aḥwāb (g.r.), Shirwān, Adharbaydjan with Mukān, Džilān (Djil), Tabaristān (later called Māzandarān) and *Džurdjān*, the N. of the Atrak which marked the frontiers of the last-named province far the desert of the Ghuzz Turks, and beyond that again, perhaps on the other side of the Ust' Ust' plateau, were the lands of the Khazars.

The principal rivers entering *Bahr al-Khazar* were the Džām (Djinn, Emba) and *Džaykh* (Ural) in the N., the Atīl (Volga) in the N.-W., and the combined stream of the Kur (Cyrus) and Aras (Araxes) in the W., with the *Džurdjān* and Atrak in the S.-E. corner. It is a remarkable fact, apparently well established (cf. Le Strange, 455-8), that from the time of the Mongol invasion of Khawārizm in 617/1220 for several centuries the main stream of the *Džaybūn* (Oxus, Amu Darya), which till then had flowed into the Aral Sea, passed to the Caspian. The river thus resumed its ancient course, known from accounts of the campaigns of Alexander the Great. Since some time in the 16th century it has changed course once again, and now flows into the Aral Sea as formerly.

The principal islands of the sea, as given by Ibn Hawkal and the *Ḥudūd al-'Ālam*, were Siyākhūh or Siyākhūya, usually taken as present-day Mangishlak, and the island of Bāb al-Aḥwāb, which can now be identified with certainty (cf. *Ḥudūd al-'Ālam*, 235). With the exception of its S. and part of its W. shores the coast-line of *Bahr al-Khazar* is generally

low. The ranges of the Great Balḡhī and Little Balḡhī E. of Krasnovodsk, though not very high, are a conspicuous feature on the landward side. A modern estimate of the length of the Caspian is 760 miles. Al-Mas'ūdī gives 800 miles in length, in breadth 600 miles or more (al-Tamhīl, 60), but the latter figure is greatly exaggerated. Al-Mas'ūdī is well aware of the fact that *Bahr al-Khazar* is unconnected with *Bahr Mayūtis* (Sea of Azov) and *Bahr Nīlas* (Black Sea) (*Murūdī*, i, 273-4).

For a long time the Khazars served as middlemen between the peoples of the North and the inhabitants of the lands of Islam. There is plenty of evidence of mercantile activity in both directions, for which the waterway was the Atīl (Volga) and *Bahr al-Khazar* itself. Eventually Russian warriors began to make the descent of the Atīl through Khazar territory to the Caspian, and the presence of these marauders is a feature of the history of this part of the world for a considerable period from before A.D. 900. The Mongol invasions brought about the rise of new Muslim dynasties N. as well as S. of the Caspian. It is long since the Russian advance put an end to the power of the Khānates of the steppe, and at present Russia controls more of the coastline of the sea than did the Khazars at the zenith of their power.

**BAHR AL-KULZUM**, formerly much the commonest Arabic name for the Red Sea, from *Kulzum* [g.r.], the ancient Clysma, near Suēz; the article is usually omitted when the name of the town is written alone, but retained when the sea is mentioned. It was also called *Bahr al-Hidjaz*, a common name which survived to modern times, al-Khālidi al-'Arabī, and, in Turkish, Şibb denizi (Şap denizi), 'the Coral Sea'. The names *Khālidi Ayla*, strictly the Gulf of 'Akaba, and *Bahr al-Yaman*, properly applicable to the southern part of the Red Sea or, were at times used for the whole sea. It was sometimes considered to end at the strait of Bāb al-Mandab, and sometimes, as by Yāqūt, to include the Gulf of Aden, known as *Khālidi Barbarā* or al-Khālidi al-Barbarī. Owing to European influence it is now almost always called al-Bahr al-Aḥmar or an equivalent (Kilfi Deniz, etc.).

The *Bahr al-Kulzum* presents great difficulties to the navigator because of contrary winds, currents and submerged reefs. The northern part was considered more dangerous than the southern, the neighbourhood of Ra's Muḥammad, the southern tip of the Sinai peninsula, being especially feared because of the meeting of winds from the Gulfs of Suēz and 'Akaba. It has always been customary for local shipping to sail close to the shore and anchor at night. Because of these difficulties and the consequent risk of missing the monsoon that would take them home, ships from India rarely ventured as far

north as Suez, but generally unloaded their goods at Aden, Djidda or, in the 17th/18th century, at Muḡha. It was the caravan trade with Djidda that gave Mecca its commercial importance in the 9th/15th century. Much merchandise, however, was merely transhipped to smaller vessels; according to Abū Zayd the local craft used for this at Djidda were known as Kulzum ships. Arab navigators thus had wide experience of the Bahr al-Kulzum and their nautical treatises show sound practical knowledge; Ferrand considered the relevant sailing directions in Ibn Maḡīd's *Kitāb al-faṣl* to be unsurpassed, except for their errors of latitude, by any European directions for sailing ships for the area. The Muslim geographers give the length of the Bahr al-Kulzum as 30 days' sail, or as from 1400 to 1500 mi; this figure is fairly accurate, but their estimate of the maximum breadth, 700 mi, is more than three times too great.

The whole area within the strait of Bāb al-Mandab was thought to have once been a fertile country, until a certain king cut a channel through which the ocean could flow and destroy his enemy's territory. Another legend connected with the Bahr al-Kulzum is that there is a magnetic mountain south of Kulzum, because of which local ships had to be constructed without any iron parts. This is perhaps a fanciful explanation of the fact that the local craft of the Bahr al-Kulzum and the western part of the Indian Ocean used to be made of planks, sewn, not nailed, together; this practice is now confined to small craft in the more remote places. The Bahr al-Kulzum was also believed to contain an island inhabited by al-Ḥassas, "the spy", a creature which collected information for al-Djādīdīl. The sea in which Pharaoh and his army were drowned was assumed to have been some part of the Bahr al-Kulzum. According to Yāqūt the incident took place at Kulzum, according to others, including Kalkasandī, at Birkat al-ḡharandāl, on the coast between Kulzum and al-Tūr, known as Surandala or Arandara to mediaeval Christian pilgrims.

In spite of difficulties to navigation, the lack of good harbours and the aridity of the littoral, the position of the Bahr al-Kulzum ensured its commercial importance. It must have been crossed in the south by the Semitic invaders of northern Abyssinia and again, some centuries later and in the reverse direction, by the Abyssinian invaders of S.W. Arabia. In early Muslim times piracy was rife in this region. Under the Banū Ziyād of Zabīd, according to Maḡdī, there was constant trade between the Arabian and African shores and there were Muslim settlements in Africa paying tribute to native rulers. Communication between the Bahr al-Kulzum and the Nile valley and the Mediterranean was at one time facilitated by a canal, sometimes called the Pharaonic, or Trajan's canal, known to the Arabs as Khaldīl Amir al-Maḡnūn, which entered the sea at Kulzum. Part of this canal, the Wādī Tīmīlī, had once been a natural branch of the Nile extending to Lake Tīmīsh; as the level of the land rose it became useless for navigation. It was cleared several times in antiquity and again by 'Amr b. al-'Ās, who used it to send corn ships to al-Djār, then the port of al-Madīna, in the time of 'Umar b. al-Khaṭṭāb. The Khaldīl is said to have refused to let 'Amr dig a canal from Lake Tīmīsh to the Mediterranean, lest it should enable Byzantine ships to enter the Bahr al-Kulzum. 'Amr's canal was navigable only when the Nile was high; it was again

cleared in the time of al-Mahdī, but fell into disuse soon after, though water sometimes flowed along it when there was an exceptional flood.

The trade of the Bahr al-Kulzum benefited from the increased power of Egypt under the Fāṭimids and the corresponding decline of 'Irāk. The Crusades, stimulated the demand for oriental products in Europe, and this transit trade became a factor of great importance to Egyptian prosperity. In its 378-9/1182-3 Renaud de Châtillon conveyed prefabricated ships from the Mediterranean coast to Ayla where they were assembled and launched to carry this commerce. The Franks attacked 'Aydhāb [g.c.] but were defeated at sea by Ḥusām al-Dīn Laḡūn and those who contrived to land in the Ḥaldīl wāḡ were annihilated. According to Abū Ḥāshim, Salāh al-Dīn ordered that no prisoner should be allowed to survive, so that there should be no one who could give information about the passage of the Bahr al-Kulzum. Later, attempts were made in Europe to ruin this trade by an embargo, but in spite of Papal injunctions, it was never applied effectively. In the early 8th/14th century Guillaume Adam advocated that a Christian naval force should occupy Sybura, (g.c.) and blockade the entrance to the Bahr al-Kulzum. About 893/1488 Pero da Covilhā, who sailed from al-Tūr to Aden and later visited Mecca and al-Madīna, collected information about the trade route for the King of Portugal; he was himself detained in Abyssinia and it is not known whether his report ever reached Lisbon. Having reached India by sea in 903/1498, the Portuguese attempted forcibly to divert the entire transit trade of the Bahr al-Kulzum and the Persian Gulf to the Cape route for their own profit. In the ensuing war against first the Egyptians and then the Ottoman Turks they secured naval supremacy in the Indian Ocean. In 919/1513 Albuquerque, who hoped to join the Abyssinians in an attack on Mecca, unsuccessfully besieged the city. His fleet was becalmed at Kamarin and suffered very heavy casualties. His successor had the same experience and, although in 947-8/1541 D. Estevão da Gama sailed within sight of Suez and landed a small force at Maḡawa' (Massawa) to assist the Abyssinians against the Somali invaders, Ahmad Grāh, the Portuguese never seriously challenged Turkish domination within the strait of Bāb al-Mandab. After the middle of the 10th/16th century Portuguese ships did not often visit the Bahr al-Kulzum and Portuguese travellers, mostly missionaries going to Abyssinia, usually sailed in disguise on native ships. Early in the 17th/18th century English (1028/1609) and Dutch (1025/1606) ships began to trade at Muḡha; they did not often sail further north. Though Muḡha [g.c.] attained temporary importance as an outlet for the coffee of al-Yaman (see KAHWA) the Indian and Far Eastern trade now mostly followed the Cape route. In the next century the need for rapid communication between London and Paris and the growing European possessions in India resulted in renewed interest in the Bahr al-Kulzum route, of which a very early example is the journey of Daniel. A general realisation of its strategic and commercial significance may be said to date from Napoleon's Egyptian campaign and to have culminated in the opening of the Suez Canal (1286/1869).

Foster, *The Red Sea and adjacent countries at the close of the seventeenth century*, Hakluyt Soc., 1949.

**BAHR LŪṬ**, "Lot's Sea", is the modern Arab name for the Dead Sea which is usually called by the Arab Geographers *al-buḡayra al-mayyita* "the Dead Sea", *al-buḡayra al-muntina* "the stinking Sea", *al-buḡayra al-maliḡba* "the overturned Sea" (because it is situated in *al-ard al-maliḡba*, "the land that has been overturned"), the *ard haṣm Lūt*, *buḡayrat Sogkar* (Zogkar) "the Sea of Zogkar", also "the Sea of Sodom and Gomorrah". The Persian Nāḡiri Khuraw (15th/17th century) appears to be the first geographer to know the name *buḡayrat Lūt*.

The name Bahr Lūt refers to the story in Genesis xix which is often referred to in the Qur'ān though the sea itself is not named.

To the present day, names in the neighbourhood of the Dead Sea—e.g. Djebel Sudum (Sodom) and legends current locally, recall the catastrophe related in Genesis xix. These are certainly founded less on popular than on learned tradition.

Geography. Between the steep and barren slopes of the "desert of Judah" and the mountainous land of Moab lies the Dead Sea, like a blue mirror 1150 feet below sea-level from north to south. Its length is about 50 miles, its mid-breadth 8 miles and it has no exit.

The deepest part of its bottom is 2600 feet below sea level. An isthmus (*ḡsān* "tongue") running out from its east shore separates the southern, quite shallow part from the northern basin. While on the East and West shores the mountains rise up from the shore to a height of over 3000 feet, in the north, at the mouth of the Jordan the land is low-lying, and in the south, where on the east shore of the *sahḡba* Pentapolis (Genesis xiv and xix) is to be sought for, it only rises slowly into al-ḡhar and al-'Araba. The composition of its water, to extraordinarily rich in salt, is unsuited to organic life and is even an impediment to navigation. On only a few places on the shore, inhabited oases of almost tropical character have survived.

Geology. The Dead Sea fills the deepest part of the Great Syrian system of depressions which was formed at the close of the Tertiary period. In the periods of alternate drought and rain of the diluvial epoch, the great floods filled the greater part of the Jordan valley and a part of the 'Araba with an inland sea; this was never connected with the Red Sea. There being no exit to this basin the water, which, to begin with, flowed partly from springs rich in minerals, came in course of time, by evaporation, to contain a high percentage of salt of peculiar composition. In the dry period of historic times the sea has dwindled into the area it at present occupies. In the last century a gradual rising of the level of the sea has been definitely ascertained. Tectonic disturbances have affected the surrounding district down to the present day. It is to one of the most recent of these that the origin of the southern basin is due.

The procuring of asphalt from the Dead Sea, as in antiquity (cf. the name *lacus Asphaltitis*) seems to have been an important business in the middle ages, also. The asphalt was used as a protection against insects in vineyards. It was also used for many medicinal purposes. To the waters of the sea itself, healing powers were also ascribed.

The rich products of the oasis of Zogkar (near the modern *ḡhar al-Safiya*) were borne across the Dead Sea. The Frankish Crusaders also sailed on it.

**Bibliography:** All earlier material has been collected and made use of in Meuninger, *Das Tote Meer* (Programme, Reizen 1927-1929); Arab accounts: Ibn al-Balḡī, 62; Ibn al-Hawāḡ, 123 ff.; Mukaddasī, 178, 184 ff.; Ibn al-Fakhī, 118; Ibn Khuradādhbih, 79; Yāqūt, 329; Maḡdī, *al-Tanbih*, 73 ff.; Maḡdī, *Murūdī*, 1, 96; Idri, *EDPP*, viii, 3; Yāqūt, 1, 516, 11, 934; Dimaḡhī (ed. Le Strange, *Palestine under the Moslems*, 64-7, 286-92, and A. S. Marmaridj, *Textes géographiques arabes sur la Palestine*, Paris 1954, 25-18.

(R. HARTMANN)

**BAHR AL-MAGHRIB** (see BAHR AL-RŪṢ).

**BAHR MĀYŪTIS** or BUḡAYRA MĀYŪTIS, the Classical Lake Maerota, modern Sea of Azov. Other forms of the name are Māyṭis (Māwṭiḡh). Bahr Māyṭis is constantly mentioned with Bahr Nitās, 64, Bahr Buntus, [g.c.], to which it is joined by Khaldīl Nitās (Strait of Kerch).

According to Maḡdī (*Tanbih*, 66), Buḡayra

Māyūtis is 300 miles long and 100 miles broad. These dimensions, which are considerably exaggerated, were earlier given by Ibn Rūsta (86). Mas'ūdī also states that it lies at the extremity of the inhabited world towards the N. in the vicinity of Tāliya (Thule). The opinion which places Thule N. of the Sea of Azov is shared by Ibn al-Fakhī (8), according to whom one of the four principal seas (cf. article BAHR AL-RŪM, 4th paragraph) is that which lies 'between Rome and Khwarizm (as far as) the island of Tāliya. No ship was ever placed upon it'. (Ibn al-Fakhī reckons al-Bahr al-Khazarī or Caspian separately). Elsewhere Mas'ūdī says that the river Tanāis (Tanais, Don), which takes its rise in a great lake (unnamed) situated in the N., flows into Bahr Māyūtis after a course of about 300 *farasāghs* through cultivated countries (*Murūdj*, i, 204). The great lake in the N., with which Bahr Māyūtis is evidently confused, had already been mentioned by al-Kinī, his pupil al-Sarakhsī and others (*Murūdj*, i, 275). It came to be identified with Bahr al-Warānq, properly the Baltic. Hence in a Syrian map of about 1150 A.D. the Sea of Azov is called 'Warang Sea' (A. Mingana, cited *Hudūd al-'Ālam*, 182; cf. *Ālī Rūstā al-Aḥḥār*, i, 200).

Mas'ūdī, who shows more interest in Bahr Māyūtis and Bahr Nītas than geographers of the school of al-Balḥī, (q.v.), maintains that properly they form a single sea. He is concerned also to refute on the testimony of travelling merchants those who say that Bahr al-Khazar, i.e., the Caspian, communicates directly with Bahr Māyūtis (*Murūdj*, i, 272). There is no trace of the river, via the Strait of Kerch, the Don and the Alt (Volga), using the Don-Volga portage, i.e., the so-called 'Khazarian Way' (cf. *Murūdj*, ii, 18 ff.). His own account of Bahr Māyūtis is by no means free from error, cf. above. He also appears to think that its waters are of greater extent and depth than those of Bahr Nītas or Black Sea (*Murūdj*, i, 272), which is the reverse of the case. Confusion is also introduced by the fact that Mas'ūdī occasionally speaks of Bahr Māyūtis as Bahr al-Khazar (e.g., *Tanbīh*, 138), following popular usage.

In later times Bahr Māyūtis was called Bahr Azāk, in Ottoman Turkish Azak Denizi.

**Bibliography:** In addition to the references in the article, *Hudūd al-'Ālam*, 180-183, and index, (D. M. DEXTER).

**AL-BAHR AL-MUḤĪT**, i.e., 'the Encircling Sea', also called Bahr Ukiyānis al-Muḥīṭ, or simply Ukiyānis, the circumambient Ocean of the Greeks (*Γενναῖος*). By some it was named al-Bahr al-Aḥḥār, 'the Green Sea'. It was regarded as enclosing the habitable world on all sides, or at least on the sides, W., N. and E. Mas'ūdī, *Tanbīh*, 20, shows the S. boundary of the inhabited world was the equator. According to Ka'b al-Aḥḥār (q.v.) reported by Karzawī (*Cosmography*, ed. Wüstenfeld, i, 104), seven seas encircled the earth, of which the last enclosed all the others.

There was general agreement that the principal seas were directly connected with al-Bahr al-Muḥīṭ, with few exceptions, notably the Caspian (Bahr al-Khazar), but not the Black Sea (Bahr Buntas or more usually Nītas, q.v.), which was supposed to be an arm or 'gulf' of al-Bahr al-Muḥīṭ, like Bahr al-Maghrib, Bahr al-Rūm, Bahr Warānq (Baltic), Bahr al-Zandī, Bahr Fāris, Bahr al-Hind and Bahr al-Sin (the last four corresponding to the Indian Ocean and part of the Pacific). In general, these arms or 'gulfs' were thought of as forming an Eastern

and Western system (Yāqūt, *Bulḥān*, i, 504), meeting or at least approaching each other at the isthmus of Suez. There was some doubt as to whether the 'gulfs' were supplied from al-Bahr al-Muḥīṭ (the prevailing opinion), or *vice versa*, given that nearly all the rivers of the world flowed into it.

But while in theory al-Bahr al-Muḥīṭ was the circumambient Ocean, it frequently signifies simply the Atlantic. From another point of view, the Atlantic adjacent to Spain and N. Africa formed part of Bahr al-Maghrib (Karzawī, *Cosmography*, i, 123). In the sense of the Atlantic al-Bahr al-Muḥīṭ is synonymous with al-Bahr al-Muḥīṭ or Bahr al-Zulma or al-Zulmūt (Sea of Darkness), applied to the N. Atlantic as descriptive of its bad weather and dangerous character (Jaubert, *Géog. d'Edrisi*, ii, 335-336, cf. Dimasḥī, ed. Mevius, 124). Consistent among the islands of al-Bahr al-Muḥīṭ, apart from Thule (usually taken to be the Shetlands), which the Arabs knew from translations of Ptolemy, were the Fortunate Islands (Canaries) and Britain (Bartāniyya, with variants). A persistent tradition, which seems to go back to a Classical source, gives the British Isles as 12 in number (Nallio, *Al-Bahān*, text, 26; cf. Mas'ūdī, *Tanbīh*, 68).

The Arabic authors agree that al-Bahr al-Muḥīṭ is impassable for ships (e.g., al-Kinī, cited Yāqūt, *Bulḥān*, i, 500, speaking apparently of the Arctic Ocean, cf. Mas'ūdī, *Murūdj*, i, 275; Battānī, *loc. cit.*; Yāqūt, *Bulḥān*, i, 504; Ibn Ḥaldūn, *Berberes*, T.I. Paris 1925, 187-8). Perhaps this assertion is to be taken as applying in principle to the mythical circumambient Ocean. It is in any case certain that Muslim ships sailed in Atlantic waters. After a descent of the Norsemen on Spain in 229/844, the Atlantic coast was patrolled by Umayyad squadrons, perhaps as far as the Bay of Biscay. In 355/966 the coast of Spain, at Lisbon and Kaṣr Abī Dīnis (Alcazar do Sal), was attacked by Danish Vikings, who were met and defeated at Silves by the Umayyad fleet. In 389/997 the fleet brought the infantry of al-Manṣūr (q.v.) from the Atlantic port of Kaṣr Abī Dīnis (already mentioned to Burtukāl (Oporto) by sea. (For these events, see Lévi-Provençal, *Hist. Esp. Mus.*, i, Cairo 1944, 157, 218, 224, 393, 441).

In these instances coastal operations are presumably intended. There are also some indications of ocean voyages in the Atlantic. Apart from the reported journey of Yahyā al-Ghazālī to the court of the 'king of the Norsemen' after A.D. 844—variously localised in Jutland or Ireland—(refs. in Brockelmann, *G.A.L.*, Sup. I 148; also H. Munis, *Contribution à l'étude des invasions des Normands en Espagne*, in *Bulletin de la Société Royale d'Études Historiques*, 1929, Vol. II, fasc. 1, 1950), we read also of Khāṣṣ al-Fāris of Cordova, who embarked in ships upon al-Bahr al-Muḥīṭ and returned with rich booty (Mas'ūdī, *Murūdj*, i, 258, cf. Lévi-Provençal, *Hist. Esp. Mus.*, iii, 342, n.), and of the Adventurers (*al-muḥarrirīn*—so read) of Lisbon, who sailed for many days W. and S. into the Atlantic and after whom a street was named in their native town (Jaubert, *Géog. d'Edrisi*, ii, 26-7, cf. i, 200). An account of whaling in the neighbourhood of Ireland (Karzawī, *Cosmography*, ii, 368, quoting the 11th century Spanish geographer al-'Uḍrī) may also be mentioned here.

(D. M. DEXTER)

**BAHR AL-RŪM**, 'the Sea of the Romans', or AL-BAHR AL-RŪM, 'the Greek Sea', i.e., the Mediterranean, both names long in use from an early date to denote especially the E. Mediterranean, where Byzantine fleets were liable to be encountered. As

the Muslim conquests extended, these names were applied to the whole Mediterranean, for which Bahr al-Rūm is still in use. The Mediterranean was also called al-Bahr al-Shāmī, or Bahr al-Shām, 'the Sea of Syria', and Bahr al-Maghrib, 'the Sea of the West'.

The sea thus variously named began, according to Arabic geographers, considerably to the W. of the Strait of Gibraltar (al-Zulka) and was a gulf of the Western Ocean (al-Bahr al-Muḥīṭ al-Maghribī). Legend had it that Bahr al-Rūm was originally formed in what had hitherto been dry land, after the Strait had been cut, by the Banū Dālūka, descendants of a Queen Dālūka who was supposed to have ruled Egypt after the Pharaoh of the Exodus (al-Mas'ūdī, *Murūdj*, ii, 398). In order to interpose a barrier between themselves and the king of the Greeks (al-Karzawī, *Uḡayyūḥ*, 123), or the Strait was cut and al-Bahr al-Rūmī was joined to al-Bahr al-Muḥīṭ by Alexander the Great at the request of the original Spaniards (Iḡbān), who wished to be separated from the Berbers (al-Nuwairī, *Nihāyat al-Arab*, i, 231-232). A detailed account of the fabulous bridge which Alexander built on this occasion, with diagrams, is actually given by al-Dimashqī (*Cosmographie*, ed. Mehren, 117).

Descriptions of Bahr al-Rūm regularly begin in the W. and proceed E.-wards, usually along the S. shore from Sālī or even al-Sūs al-Aḥṣā, past Tandia (Tangier) and Sabra (Ceuta) to Tarābulus (Tripoli) and Alexandria, then past the mouth of the Nile, along the Syrian coast to Antākīya (Antioch) and its harbour al-Sawāḍīyya, on to al-Thughūr (the Frontiers), then continuing W.-wards along the coast of Bilād al-Rūm (Asia Minor) to Constantinople, al-Ard al-Saḡīra ('the Little Land', i.e., mainland Greece), Balbūnis (the Peloponnese), Kallauriya (Calabria), al-Ankūwards (Lombardy), Irandīya (France), and S. again towards al-Andalus (Spain) (e.g., Ibn Hawkal ed. Kramers, 190-1). It is understood that a man could in theory at least make the circuit of Bahr al-Rūm till he reached a point in Spain opposite to where he started from, and that the countries lying to the S. of the sea are Muslim, while those to the N. are Christian. The dimensions of Bahr al-Rūm are variously given. Al-Mas'ūdī gives an estimated length, 8,000 miles, more or less; breadth, from 600 to 800 miles, but knows of another, said to be that of the celebrated al-Kinī and his pupil al-Sarakhsī: length, 6,000 miles; breadth, 400 miles (*al-Tanbīh*, 56, cf. *Murūdj*, i, 259). Ibn al-Fakhī, 7, estimated the length of al-Bahr al-Rūmī as 2,500 *farasāghs* from Antākīya (Antioch) to Dīshāq al-Sa'ida (the Fortunate Islands), breadth 1,500 *farasāghs*, and was quoted to that effect by al-Mukaddasī, 14. Al-Mas'ūdī in one place mentions that practical sailors disagreed with the philosophers and increased the dimensions of al-Bahr al-Rūmī (*Murūdj*, i, 282). (The actual length is about 2,400 miles; greatest breadth, about 1000 miles.) A nearly exact estimate of the length of the Mediterranean was made by the astronomer al-Marrakhsī in the 7th/13th century (Abū 'r-Rīdā, *Taḥṣīn*, introd., c. lxxxv).

Bahr al-Rūm is always regarded as one of the earth's principal seas. Al-Mukaddasī says that he knows only two, a Western, i.e., the Mediterranean, and an Eastern, i.e., the Indian Ocean, called by him al-Bahr al-Sūnī, 'the Chinese Sea'. He mentions that to these al-Balḥī added al-Bahr al-Muḥīṭ, the Circumambient Ocean, and al-Dīyahīd a fourth and fifth, viz., Bahr al-Khazar, 'the Sea of the Khazars' (Caspian) and Khālīj al-Kustāntīniyya,

'Gulf of Constantinople', i.e., the approaches to the Black Sea. Al-Mukaddasī points out that his own view corresponds with the Kur'ān (Sūra iv, 19 ff.): 'He has left unconnected the two seas which meet. Between them is a barrier which they do not transgress etc.' As al-Mukaddasī, 16, puts it, the 'barrier' is the isthmus between al-Farānā (Pelusium) and al-Kulsum (Clysma, mod. Suez), and it divides Bahr al-Rūm from Bahr al-Sūnī. He mentions that some interpreted another Kur'ānic text (Sūra xxxi, 26): 'If the trees in the world were pens, and the sea were filled thereafter by seven seas etc.' with reference to the five already mentioned plus al-Mahlūḥa, 'the Inverted (Lake?)' (Dead Sea) and al-Dīyahīdīniyya, 'the Dīyahīdīnīan (Lake?)' (Aral Sea). Another more reasonable list of the 'Seven Seas' is: Green Sea or Eastern Ocean, Western Ocean, Great Sea or Indian Ocean, Mediterranean, Caspian, Black Sea and Aral Sea (*Hudūd al-'Ālam*, 51-3). Al-Mas'ūdī in one place follows al-Dīyahīdīnī in giving five: Indian Ocean, Mediterranean, Caspian, Black Sea and Circumambient Ocean (*al-Tanbīh*, 50-241) and elsewhere says that most people reckon four (*Murūdj*, i, 271), Black Sea and Caspian presumably counting as one, but cf. Ibn al-Fakhī, 48. However many the seas were taken to be, the general view was that the Kur'ānic 'meeting of the two seas' (*maḥḥa' al-bahrayn*, Sūra xviii, 59/60) was at the isthmus of Suez, though some thought in this connection of al-Zulka (Strait of Gibraltar).

The different parts of Bahr al-Rūm had special names, e.g., Bahr Tīrīn, 'the Tyrrhenian Sea' (al-Rāzī); Dīhīn al-Bandīkīyīn, 'the Gulf of the Venetians' (Ibn Hawkal or al-Khalīfī al-Bandīkī, 'the Venetian Gulf' al-Idrīdī), in effect the whole of the Adriatic; Khālīj al-Kustāntīniyya, 'Gulf of Constantinople', the approaches to the Black Sea. The Black Sea itself was Nītas, a stereotyped mistake for Buntus (Pontus), which perhaps survived in some MSS. The Sea of Anov was Māyūtis (Maeotis). It was correctly realised that the two last-named seas were connected with each other and Bahr al-Rūm, but uncertainty and error attended the attempts made to explain the relative positions of the Black Sea and the Caspian (Bahr al-Khazar, q.v.) and a fortiori the Black Sea and the Baltic (Bahr al-Warānq, 'Sea of the Warangians') or the Arctic Ocean, of which the Arabs can scarcely have had direct information. The tendency to regard the seas last mentioned as connected with Bahr al-Rūm is illustrated in the maps of Ibn Hawkal.

Various islands in the neighbourhood of Bahr al-Rūm came to be known at an early date. Kūbūs (Cyprus) and Arwad (Aras), the little island off the Syrian coast, were the first to be occupied, under Mu'āwīya, and before his death (60/680) Rhodes, Crete and even Sicily had been attacked. Several other Mediterranean islands are mentioned by Ibn Khuradādhbih, 112. The geographers of the tradition of al-Balḥī give few islands in Bahr al-Rūm. Al-Mukaddasī, 15, in 375/985 speaks only of the three large islands Sicily, Crete and Cyprus. Al-Isṭakhrī, 70, earlier had mentioned the same three, with the addition of a fourth, Dīshāq al-Kūl (cf. Yāqūt, i, 392), identified by Reinold (*Murūdj al-Iḥḍār*, ed. Juyonville, v, 27) with Fraxinetum, now Garde-Freinet on the French mainland E. of Marseille, from which between circa 864 and 972 the Arabs raided as far as Switzerland (cf. Lévi-Provençal, *Hist. Esp. Mus.*, chapter 5). This identification is confirmed by Ibn Hawkal, ed. Kramers, 304, who mentions the place as being 'in the territories of France, in the hands of fighters for

nazionale di Studi Ruggieri, Palermo 1955, 136-1; idem, *Notes sur les Arméniens en Égypte à l'époque Ilâmite*, in *AIEO Algiers* xii (1953), 143-57.

**BAHRĀM SHĀH**, sultan of Ghazna, c. 510-552/1171-1157, son of Mas'ūd and great-great-grandson of Mahmūd of Ghazna, was born not earlier than 477/1084. On the death of his father in 508/1115, Bahrām's elder brother Malik Arslān disposed of other claimants to the throne and obliged Bahrām to flee first to Tūkhānā, then to Tūkhānā, and eventually to the court of the Saljūqī Sanjār where he found a welcome. Sanjār led an army against Malik Arslān, defeating him near Ghazna in Shawwāl 510/February 1117 and forcing him to withdraw to the Ghaznavid possessions in Hindūstān. Installed at Ghazna as a tributary by Sanjār, Bahrām defeated Malik Arslān, who had gathered forces from the Panjāb, imprisoned him and in 512/1118, slew him. In 512/1119, Bahrām Shāh twice marched into the Panjāb to subdue Muḥammad Abū Ḥafṣ, governor of Lahore.

As a protégé of the Saljūqīs and unable to draw upon the resources of a Mahmūd to enable him to mount major expeditions in Hindūstān, Bahrām's rule appears to have been uneventful until 525/1135 when he attempted to thrust off Sanjār's overlordship only to be compelled to acknowledge it again within the year.

About 523/1128, a violent quarrel broke out between Bahrām and the chiefs of Ghūr and Fīrūzkūh. Bahrām poisoned the Ghūrī Kutb al-Dīn Muḥammad, whereupon the latter's brother Sayf al-Dīn Sūr occupied Ghazna. Sūr's men captured it and slew Sūr with immunity. In 525/1135 the latter's younger brother 'Alā' al-Dīn Ḥusayn ('Djāhān-Sūr') defeated Bahrām Shāh and burnt Ghazna. Bahrām took refuge in Hindūstān and although he was able to take advantage of an *imbroglio* between 'Djāhān-Sūr' and Sanjār to re-occupy the remains of Ghazna before his death, the descendants of Mahmūd of Ghazna were never again able to regain and keep their authority in the area around their old capital. (For a discussion of the chronological problems surrounding the last years of Bahrām Shāh's reign see Ghulām Muṣṭafa Khān's article, named in the bibliography.)

Bahrām Shāh enjoyed a great reputation as a patron of the arts and figures in later *adab* literature. Among the *literati* who adorned his court were the poets Sayyid Ḥasan Ghaznavi, Sanāʾī, Mas'ūdī Saʿdī Salmān and the translator into Persian of *Kaḥilā wa Dinnā*, Abū l-Maʿālī Naṣr Allāh.

(P. HARDY)

**BAHRĀM SHĀH** b. Tughruq Shāh, the Saljūqīd, was raised to the throne of Kirmān by the Atabeg Muʿayyad al-Dīn Rayḥān in succession to his father on the latter's death in 565/1170 but soon afterwards had to make way for his elder brother Arslān Shāh (q.v.). The two brothers thereupon fought with one another with varying success till the death of Bahrām Shāh in 570/1174-5.

**Bibliography:** Aḥlir al-Dīn Kirmānī, *Badr* al-Amān al-Waḥīdī Kirmān, ed. Muḥammad Mahfūz Baladī, Tehran 1947, 50 ff.; Hama, *Recueil*, i, 25 ff.; ZDMG, xxi, 178 ff. (E.)

**BAHRĀM SHĀH**, al-Malik al-Awḥād, b. Farrukh Shāh b. Shāhānshāh b. Ayyūb, grand nephew of Salāh al-Dīn, was appointed by the latter to succeed his father at Baʿḥak when the latter died in 578/1182 ('Imād al-Dīn al-Jafāhān, *al-Bār al-Shāmī*, Bodl. MS. Marsh 425, 36\*, followed by Abū Shāna, *Rawdat* 194, 31-4), and kept Baʿḥak when the Ayyūbīd territories were divided up after the death of Salāh al-Dīn. From then on he seems always to have been a faithful vassal of the Ayyūbīd ruling at Damascus (Ibn Wāṣil, *Mufarrij*, years 599, 603, 606, 618, 623). At the end of his life, however, he was faced with rivals who found support in the ambitions of al-Malik al-Aziz 'Uḥaym al-Bayhaqi, son of al-Malik al-Muḥammad al-Muḥammad al-Kāmil and al-Malik al-Aḥraf settled their differences in order to seize Damascus from Dāʾūd, Bahrāmshāh was sacrificed; after ten months of blockade, al-Aḥraf annexed Baʿḥak, and Bahrāmshāh went to Damascus (626/1228); the following year he was assassinated by a slave who bore a grudge against him (Ibn Wāṣil, years 625-627; Sibṭ Ibn al-Jawzī, *Mirʾāt al-Zamān*, ed. Jewett, 441).

Among his contemporaries, Bahrāmshāh was famous less as a prince than as the most eminent man of letters among the Ayyūbīds; he had a small court of scholars, and himself composed a *diwan* of poetry, which has been preserved but not published (J. Rikāhī, *La poésie profane sous les Ayyūbides*, 221 and n. 3).

**AL-BAHRĀYN**, "the Two Seas", a cosmographical and cosmological concept appearing five times in the Qurʾān (once in the nominative, xxxv, 12). The two seas are described as being one fresh and sweet, and one salt and bitter (xxxv, 12; xvi, 53). Fresh meat and ornaments are taken from the two seas, and on them boats are seen (xxxv, 12). Tabarī (*Tafsīr*, xxv, 55) says the fresh and sweet denote the waters of rivers and of rain, the salt and bitter the waters of the sea.

The two seas are divided by a barrier, called a *barzakh* (xxxv, 35; iv, 20) and a *ḥidhr* (xvii, 61). Muslim scholars provide several explanations for this concept, among which is the view that there is a sea in heaven and a sea on earth separated by a barrier (Tabarī, *Tafsīr*, xxvii, 61). Most views are more geographical, with the preponderant number assuming the two seas to be the Mediterranean and the Indian Ocean, including the Red Sea. The Qurʾān, however, mentions seven seas in xxi, 27.

The junction of the two seas, *maḥḥal al-bahrāyn*, is mentioned only once in the Qurʾān (xvii, 60). Some commentators regard the location as the meeting place of the Persian Sea and the Roman Sea (i.e. Baydāwī, Tabarī, Nasafī, Zamakhsharī, etc.), Others

have the two seas meeting at Bāb al-Mandab [q.v.], at the connexion between the Sea of Jordan and the Red Sea, or at the Straits of Gibraltar (e.g. Kurtubī). As Westwood points out in "al-Baḥrīn" in *JEP*, "A far fetched explanation is that the union of the two seas means the meeting of Mūsā and al-Khaḍir, the two seas of wisdom".

After the capture of Constantinople, Meḥmed II assumed the title *Sulṭān al-bahrāyn* sa ʿalā-bahrāyn, "Sulṭān of the two lands and the two seas", and this was among the titles used by succeeding Ottoman rulers.

**AL-BAHRĀYN** (officially written Bahrain) is a British protected state in the Persian Gulf consisting of an archipelago of the same name lying between the peninsula of Katar and the mainland of Saudi Arabia, as well as another group of islands of which Hawr is the largest, just off the west coast of Katar. The Ruler of al-Bahrāyn and the Ruler of Katar disagree regarding the status of a small area surrounding al-Zubāra in north-western Katar.

The variety of explanations, none of them convincing, of the name al-Bahrāyn in the Arabic sources indicates that its history remains unknown. In pre-Islamic and early Islamic times the name applied to the mainland of Eastern Arabia, embracing the oases of al-Kaṭif and Haḍar (now al-Ḥaṣā) [q.v.]; later it was restricted to the archipelago offshore (cf. *History* below).

The largest island (Uwāil or Awāl in the older Arabic sources; now called al-Bahrāyn) is about 30 miles long and 12 miles at its greatest breadth. The capital, al-Manḥama, on the northeastern coast, is connected by a causeway 1½ miles long with the town and island of al-Muḥarrak to the northeast. Other islands are Sitra, from which an oil loading wharf extends to deep water; al-Nabīh Ṣābiḥ; Umm al-Subbān; Didd, once a quarry and now a penitentiary; and Umm Naṣāl (also called al-Naṣāl). The climate is hot and humid, though rainfall averages only about 7 cm. a year. A number of flowing springs (*ʿaynān*) support an area of relatively extensive cultivation along the coast of the northern half of the main island from al-Zallāk to Dīaww, as well as on several of the other islands. Sweet water also bubbles up through the salt water of the Gulf from springs (*ḥarasāt*) not far offshore. Dates, alfalfa, and vegetables are the principal crops, and some cows are kept for milking.

Geologically the island of al-Bahrāyn is an elongated anticlinal dome of sedimentary rocks. The centre of the island has a basin, 12 miles by 4, out of which the hill of al-Dukhkhān rises to a height of about 450 feet. Oil is produced here by the Bahrain Petroleum Co. (Bapco), owned by American interests. Production since 1957/1958 has averaged approximately 30,000 barrels a day, but the Bapco refinery processes over 200,000 barrels a day, most of which is crude oil shipped by submarine pipeline from Saudi Arabia. Bapco's offices and residences for foreign staff are at al-Awāl.

Oil has replaced pearling as the principal industry of al-Bahrāyn. About 500 pearling boats worked

out of al-Bahrāyn annually before the slump in pearl prices in 1948/1949 caused by the world-wide economic depression and the increasing use of Japanese cultured pearls. Now only a handful of boats are engaged in pearling, though fishing still affords a livelihood to many people, with most fish caught in tidal weirs. Boat building and repair and sail and net making remain minor industries, along with the manufacture of pottery, whitewash, and plaster.

A free port was opened in 1377/1958 to increase the entrepôt trade fostered by a 5% ad valorem customs rate for all but luxury items. An excellent natural harbour was created in 1375/1955 when a channel was dredged from the deep water of Khawr al-Kulay'a to the open sea. The airport on al-Muḥarrak is served by scheduled international flights and is the headquarters of Gulf Aviation Co., in which the Government has an interest, and which flies to many points in the Persian Gulf.

The population of al-Bahrāyn in 1369/1950 was 109,650, with 61% in the towns of al-Manḥama (39,648), al-Muḥarrak, and al-Hidd. There are Persian, Indian, and Pakistani communities, as well as over 2,000 Europeans and Americans. Muslims comprise 98% of the population, about half being Shi'is (mainly Dī'awī Two Isms, with some Shaykhī) and the remainder, including the ruling family, Sunnis (mainly Mālikīs, with some Hanbalīs). The Sunnis are concentrated in the largest towns, and the Shi'is in the agricultural villages. The Shi'is here, as in al-Kaṭif and al-Ḥaṣā in Saudi Arabia, are called *Bahrānīs* (sing. *Bahrānī*). To avoid confusion, Sunni residents of al-Bahrāyn ordinarily now use the name *Bahrāynī* for themselves. The Shi'is appear to be descendants of early inhabitants of the area, and there seems to be no justification for the hypothesis that they are of Persian origin. A good number of the Sunnis of al-Bahrāyn are Arabs or the descendants of Arabs once resident on the Persian coast; such are known as *Hawālā*.

#### History

For nearly a century investigators have sought the secrets of the early history of al-Bahrāyn in the burial mounds scattered to the number of perhaps 120,000 over the northern half of the main island. In 1806/1829 Capt. E. Durand opened one of the largest tumuli and several smaller ones; others were later probed into by Mr. and Mrs. T. Bent, F. Prieux, and P. Cornwall. E. Mackay excavated and reported on a series of different types of tumuli. Several mounds, one of which was probably a temple complex, have been studied by members of a Danish archaeological expedition which began work in 1373/1953 under P. Glob and T. Bibby. The early excavators supposed that the tumuli were of Phoenician origin, but this theory is no longer generally accepted. Materials found in the mounds, as well as those found by the Danish party in other sites such as near the ruined Portuguese fort of Kaṭaf 'Aḍḍāḍ and at Bārār, include bronze and iron objects, seal stones, alabaster vessels, ivory fragments, and bitumen-lined clay coffins. Similar tumuli occur in central Najd and along the Arabian coast, where a large one at Dīaww, north of al-Kaṭif, excavated in 1373/1952 by F. Virdal, has been dated c. A.D. 100. The multitude of mounds spread over such an area indicates the persistence of mound building over a long period of time. Many of the mounds are certainly much older than Dīaww.

Various scholars follow H. Rawlinson (JRAS 1880) in identifying al-Bahrāyn with Dilmun of

the Mesopotamian cuneiform records, but this identification has not been established with certainty; cf. S. Kramer (*IASOR* 1941) considers south-western Iran the most probable location of Dilmun.

Greek and Latin sources give meagre information on the ancient mainland coast of al-Bahrayn, where the port of Gerrha lay, the exact site of which remains undetermined. The few South Arabian inscriptions discovered so far contribute little to the history of the region before Islam.

Arab tradition speaks of some of the Lost Arabs in al-Bahrayn. Among the early historical tribes was al-Azd of Kahtān, many of whose members moved on to Oman; other members joined the confederation of Tanūkh, said to have been formed in al-Bahrayn. Among later migrants were adherents of 'Adnanite tribes such as Tamim, Bakr, and Taghlib, the last two of which were receptive to Christianity. At the time of the Prophet, 'Abd al-Kays (q.v.) of 'Adnan had become the dominant element in the population.

The Sāsānids, beginning with Ardāshīr I, intervened in al-Bahrayn, which was subject to a Persian *marzban* when the Prophet sent al-'Alī b. al-Baḥrān eastwards to secure the land. When the *ridā* broke out and a descendant of the Lakhmids in al-Bahrayn rejected the Caliphate, many of 'Abd al-Kays under al-Ḍjārūd, a converted Christian, did not desert Islam, and al-'Alī's defeated the rebels at Dīwānī in al-Baḥ. Muslim forces crossed over to the island of Dārīn opposite al-Kaṭīf and possibly to Uwāil as well.

In the 12th century the Khawārij under Naḡdā b. 'Amir and Abū Fudayk (q.v.) maintained a bastion of their power in al-Bahrayn. Christianity and Judaism had not yet died out completely; the Nestorians were still active enough to hold a synod at Dārīn in A.D. 676. 'Abbāsid rule was introduced during the next century, but the Arabic sources fail to tell much about its extent or effectiveness.

'Alī b. Maḥasūm, the inaugurator of the revolt of the Zandī (q.v.), a man who may have stemmed from 'Abd al-Kays, embarked on his career of turbulence in al-Bahrayn before moving on to 'Irāk. In 281/894-5 Muḥammad b. Nūr, the 'Abbāsid Governor of al-Bahrayn, led an expedition against the Bīḥlīte Imamate of Oman.

The Karmatians (q.v.) found devoted followers among both townspeople and Bedouins in al-Bahrayn. In 317/930 the Black Stone was brought from Mecca to al-Bahrayn, where it was kept for two decades. A victory by al-Muntaḥil in 378/987-8 revealed the weakness of the Karmatians, but they were still in control when Naḥr-i Khuraw visited al-Bahrayn 63 years later. In 450/1058 Abū 'Ubayd al-'Awḥān Ibn al-Zaḍḍīdī of 'Abd al-Kays defied them by reestablishing orthodox Islam on Uwāil in the name of the 'Abbāsid Caliph. The tribe of 'Amir Rabi'a of 'Ukayl (q.v.), guardians of the island for the Karmatians, suffered defeat in a naval battle at Kaskis, an island off al-Kaṭīf. Within the next few years the final downfall of the Karmatians came at the hands of a new dynasty indigenous to al-Baḥ, the 'Uyūnids (q.v.) of 'Abd al-Kays, aided by the Salḡūks of 'Irāk.

Although no definite date can be set for the transfer of the name al-Bahrayn from the mainland to the nearby archipelago, from this point on it may be convenient to restrict the history of al-Bahrayn to the islands bearing this name today.

In the early period of the 'Uyūnids, who at times

kept their capital at al-Kaṭīf, the islands of al-Bahrayn came under their authority. When the unruliness of 'Amir Rabi'a undermined the 'Uyūnī power, al-Bahrayn became tributary to the Kay-sarids of Ḍjāzīrat Kay's (q.v.) in the eastern Persian Gulf. In 633/1235 al-Bahrayn and al-Kaṭīf were occupied by the forces of Abū Bakr b. Sa'd, the Salḡūrid Atābeg of Fārs, but in 651/1253 al-Bahrayn regained independence under the 'Uyūnids (q.v.), a clan of 'Amir Rabi'a.

The Tibis, merchant princes of Ḍjāzīrat Kay's, brought al-Bahrayn back within the orbit of their island, but their supremacy soon faded with the rise of New Hormuz farther east. About 730/1330 Tahamtan II of Hormuz annexed both Ḍjāzīrat Kay's and al-Bahrayn, and some 15 years later Turānshāh of Hormuz came to al-Bahrayn in person. The first mention of al-Mandira, the present capital, occurs at this time.

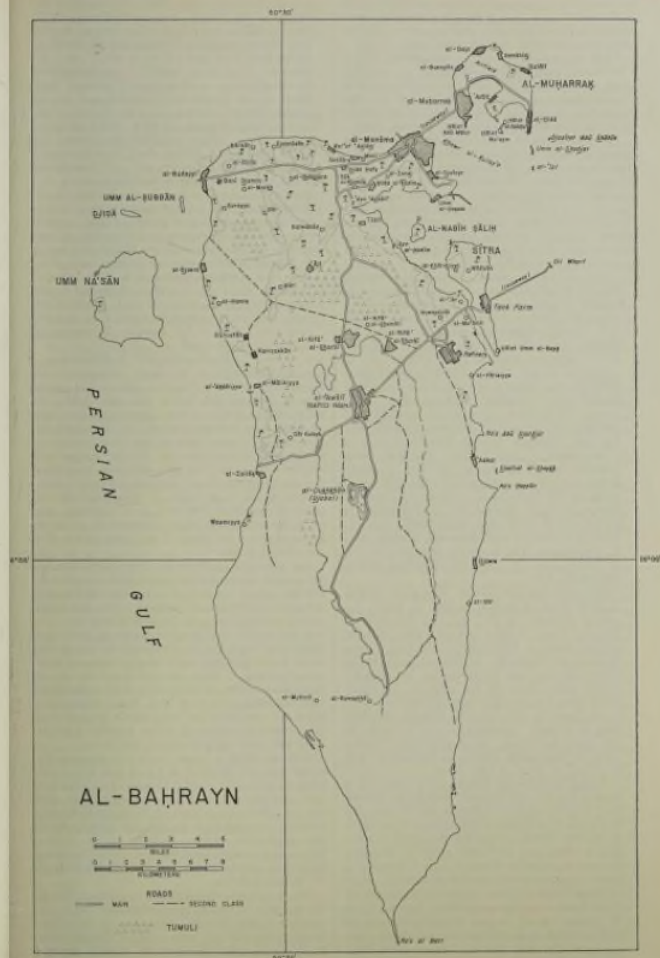

In the mid-9th/15th century 'Amir Rabi'a produced a new dynasty, the Ḍjāzīrids (q.v.), the foremost of whom, Adḡwad b. Zāmil, incorporated al-Bahrayn in his domains and promoted the ascendancy of the Mālikī element over the Shī'ī. The splendid reign of this Bedouin prince carried the fame of al-Bahrayn as far afield as Egypt and Portugal.

The Portuguese reached al-Bahrayn from the Indian Ocean as early as 920/1514, but did not seize it until a few years later, when in alliance with Hormuz they overthrew Adḡwad's uncle Muḥrim. Their fitful rule of about 80 years placed much reliance on Persian Sunnis as local governors. In the mid-16th/17th century the Ottomans challenged Portuguese hegemony in the Persian Gulf, but their admirals, better corsairs than administrators, won no permanent foothold in al-Bahrayn.

In 1013/1602 the Persians under Shīh 'Abbās I took al-Bahrayn, which they retained, with certain interruptions, for over 150 years. Persian sovereignty was not always accompanied by strong Persian influence, as the instruments of policy were often chiefs of the Huwala or other Arabs settled on the Persian coast, such as Ḍjābbāra of Tāhīrī and Nāḥir and Naḥr Aī Madḡkūr of Būshahr in the 12th/18th century.

In 1107/1793 Ahmad b. Khālifa of Banū 'Uṭba (al-'Uṭbī), Arabs who had migrated from Naḡdā to Kuwait and thence to al-Zubāra in Katar, drove Naḥr Aī Madḡkūr from al-Bahrayn and inaugurated the rule of the House of Khālifa, which has endured to the present. The energetic merchants of al-Bahrayn with their valuable pearl resources contested the primacy recently won by Muscat in the transit trade of the Persian Gulf, thus provoking attacks by the Bīḥlīte rulers of Muscat during the next 45 years. The first attack, in 1216/1801, brought Aī Sa'ūd of Naḡdā to the defence of Aī Khālifa, but political domination by Aī Sa'ūd was not prolonged and the Mālikī proclivities of the Sunnis of al-Bahrayn yielded little to the Hanbalism of Muḥammad b. 'Abd al-Wahhāb.

Aī Khālifa in 1235/1820 concluded with the British Government the first of a series of treaties which by 1322/1904 placed al-Bahrayn fully under British protection, giving the British control of foreign affairs and exclusive rights in the development of natural resources. The growth of British influence has been the subject of repeated Persian protests for more than a century, and the Iranian Government still presses a vigorous claim to sovereignty over al-Bahrayn. Although the Ottomans occupied the Arab-

ian coast and Baṭar in the second half of the 13th/13th century and thus encircled al-Bahrayn until the First World War, the presence of the British prevented them from absorbing the islands.

After an absence of over a millennium, formal Christianity returned to al-Bahrayn in 1310/1893 when missionaries of the American Dutch Reformed Church founded a station. In 1315/1932 oil was discovered on the main island in the first of the prolific fields on the Arabian side of the Persian Gulf.

From 1354/1935 to 1378/1958 al-Bahrayn was the principal British naval base in the Gulf, and in 1365/1946 the seat of the British Political Residency in the Persian Gulf was moved from Bāghlah to al-Bahrayn. Shāikh Salīm b. Hamād, who acceded to the rule in 1367/1942, concluded an amicable agreement with King Sa'ūd of Saudi Arabia in 1377/1958 fixing a marine boundary between the two countries, the first precisely defined boundary in any of the waters lapping the Arabian Peninsula.

(G. RENTZ and W. E. MULLIGAN)

**AL-BAHRIYYA.** A Mamlūk regiment in Egypt. Most of the Ayyūbid sultans had mamlūks in their service, but it was only Sulṭān al-Sāliḥ Naḥḥān al-Dīn al-Ayyūbī (637-47/1240-50) who recruited them in very great number. He seized the opportunity of the influx in the Muslim markets of Turkish slaves from the Kipčāk steppe and neighbouring areas who were uprooted from their homelands by the Mongol advance and created from amongst them a regiment of picked bodyguards numbering between 300 and 1000 horsemen. He called this regiment al-Bahriyya because he stationed its members on the island of al-Rawḍa on the Nile river (Baḥr al-Nīl).

The Bahriyya displayed at a very early date all the positive and negative characteristics of a mamlūk military society, viz. exceptional military ability and valor and unity against outsiders on the one hand, and internal dissension and rivalry on the other. It was they who were the battles of al-Mansūr (647/1249) and al-Ayyūb Dīlāwī (658/1260), but six years before the last-named battle a split tore their ranks which threatened their very existence. A short time after Ayyūb, one of their number, became sultan they tried to dethrone him, but failed. As a result their leader, Akṭāy, was killed and some 700 of them had to escape from Egypt and entered the service of various Ayyūbid rulers in Syria and of the Salḡūk ruler of Asia Minor.

After the death of Ayyūb group after group of the exiled Bahriyya returned to Egypt, but they never regained their early position because of the ageing of their members and the thinning of their ranks. The last one of them died in 707/1307. The name Bahriyya, however, persisted up to the 9th/15th century, for it was applied to various garrisons of the Syrian fortresses, the reason being that the original Bahriyya performed garrison duties, especially in the reign of the Sulṭān Kalā'ūn.

The importance of the Bahriyya regiment lies in the fact that its formation had ultimately led to the creation of the Mamlūk sultanate. It is wrong, however, to call the early part of the Bahriyya rule (648/1250-784/1382), in which the Kipčāk element was predominant, by the name of "the Bahri period". The common name in Mamlūk sources for that period

is Dawlat al-Turk, to distinguish it from the Circassian period (784-922/1382-1517) which they call Dawlat al-Bārkas (see D. Rylands, *Le régent Bahriya dans l'Armée Mamelouke*, in *REL* 1952, 133-41).

(D. AYALON)

**BAHRIYYA**, a group of oases in the Lybian desert. The Bahriyya is the most northerly of the Lybian desert. The Wāḥāt Bahriyya (also singular), i.e. the northern oases, are distinguished from the Wāḥāt Bahriyya, the southern oases, i.e. the Dāḡla (g.o.) and Khārga (g.o.). Between these two groups lie the little oases of Farafra (included in the Dāḡla by some), or al-Farāfra, called al-Farfarin by al-Bakrī and al-Ya'qūbī. The three large oases are also distinguished as inner, middle and outer; the inner is the Bahriyya which is also called the snail. It is sometimes also called the Bahnasīya as it used to be visited by the people of Bahnas. Bahnasā al-Sa'ūd and Bahnasā al-Wāḥāt are distinguished as early as al-Bakrī (*Maghrib*, 14). According to Bonnet Bey's *Dictionnaire Géographique*, the Bahriyya is a district of the province of Minia. It contains about 6000 inhabitants, and consists of four townships: al-Bawīṭ (B), al-Kaḥr, Maḥaba, and al-Zabā.

The Bahriyya, like the other oases, has the reputation of being exceedingly fertile and in the middle ages its dates and raisins were famous. Cereals, rice, sugar-cane and especially indigo were also cultivated there, and alum and green vitriol found, though the latter is not specially noted as being found in the Bahriyya. Some of the notices of this sort refer to all the oases together. The fertility of the oasis is due to hot springs containing various chemicals.

Only scanty information is available for the history of the Bahriyya. In the year 332/943-4 the oases are said to have been under the rule of a Berber prince 'Abd al-Malik b. Marwān and to have been independent. Under the Fātimids we hear of an Egyptian governor Abū Sāliḥ. In the time of al-Maḥrūrī and al-Qalkashandī, that is, under the Mamlūks, they were not governed directly by the state but by feudal tenants. At all periods the oases have suffered from the predatory raids of Arab and Berber nomads while the more southern ones (perhaps also the Bahriyya) were sometimes the object of forays by the Kings of Nubia. It is only in modern times that they have been placed in closer relationship to the Egyptian government. In the seventies they were visited by Schweinfurth and since then European travellers have often gone there.

In earlier times the oases must have been very much more important than they are now, as witness the remains of several ancient temples, built by the Romans, and of a church of the 6th century A.D. The Coptic Church appears to have been in a flourishing condition till a late period. We hear of solemn processions with the body of one of the disciples which was carried through the streets in a shrine (*ṭabūt*) by a team of oxen. No domes St. Bartholomew is named (al-Bakrī, 14 should no doubt thus be emended), or perhaps also St. George or both.

**Bibliography:** 'al-Bakrī, *Description de l'Afrique* (ed. de Slane), 24 et seq.; Idriṣī, *al-Maghrib*, 44; Abū Sāliḥ (ed. Everts), fol. 93<sup>r</sup>, 72<sup>r</sup>; Makrizī, *Kh̲iṭāṭ*, 4, 234 f.; Qalkashandī (*transl.* Wustenfeld), 1, 100; Ibn Dīnār, s. 648/1250-784/1382), in which the Kipčāk element was predominant, by the name of "the Bahri period". The common name in Mamlūk sources for that period

de l'Égypte, 390; Schweinfurth, *Prof. Dr. Auchenour Reise nach der Libyen Oase* (Petersmanns Geogr. Mitteil., vol. xxii, 264); Guides Bleus, Égypte, Paris 1956, 507-8. (C. H. BECKE)

**BAHRIYYA**, I. The navy of the Arabs until the time of the Fātimids (see Supplement).

II. The navy of the Mamlūks. The Mamlūk sultanate came into being a long time after Christian Europe had established its uncontested naval supremacy in the Mediterranean. Throughout that sultanate's existence this supremacy had been much strengthened. Under such circumstances there was little chance for Mamlūk sea power to demonstrate its existence. Mamlūk naval activities occupy a prominent place in the sources, mainly in connexion with Sulṭān al-Zāhir Baybars' ill-fated expedition to Cyprus in 669/1270, with Sulṭān Ḥārith's expeditions to the same island and to Rhodes in the years 827-829/1424-6, 847/1443; and with the expeditions against the Portuguese in 913/1507 and 921/1515. Otherwise such activities are mentioned only on very rare occasions. Thus it is impossible in the present state of our knowledge to write the history and describe the structure and functioning of whatever navies the Mamlūks possessed. Some references to some technical aspects of Mamlūk naval power will be given in the bibliography.

The deficiency of Mamlūk sources in technical information on the navy is, however, largely compensated for by the insight they give us into the socio-psychological factors which dictated the Mamlūks' attitude towards the navy. As these factors have by no means been limited to Mamlūk society alone, their examination might be of benefit to the general history of Islam in the Middle Ages.

The two following and closely connected subjects will be briefly discussed here: (a) the attitude of the Mamlūks towards the navy and its consequences; (b) their policy towards their ports and coastal fortifications.

(a) As might be expected from a military society of horsemen the attitude of the Mamlūks towards the sea was extremely negative. Even Baybars I was no exception to this rule, in spite of his unusual grasp of wide strategic problems and in spite of the fact that he cared for the navy more than any other Mamlūk sultan and that in his days Mamlūk sea power had reached its peak. After the disaster which his flotilla suffered in 1270 off the coast of Limassol, he wrote a letter to the king of Cyprus in which he stressed the superiority of a victory on land won by horsemen over a victory on the sea won by oarsmen, and then he succinctly defined the essential differences between the night of Islam and the might of the maritime powers of Christian Europe as follows: "Your horses are ships, while our ships are horses" (*ashum khayyūlukum al-marāḥ wa nahna marāḥibukum al-khayl*) (Sulḡā, 1, 594, note 3). Not less illuminating was his reaction immediately on receiving the tidings about that disaster. He thanked God for the light punishment He allowed the evil eye to inflict upon him after having won so many victories. For all he had to sacrifice in order to save his land army from the evil eye was a certain number of ships and their crews, which were composed of fellahin and of common people (*al-fallāḥīn wa 'l-sa'adīn*) (Kh̲iṭāṭ, II, 194, 11, 24-25; Sulḡā, 1, 594, 11, 2-3; al-Nabḥī, al-Sadiṭ, in *Parologia Orientalis*, xii, 542, 11, 2-5). There can hardly be any doubt that elements of higher social status than the two above-mentioned ones served in the navy as well,

but in all probability they did not include the Mamliks, who occupied the highest rung in the social ladder. When Baybars' flotilla was wrecked off Limasol, the Franks succeeded in capturing the whole naval command of the Mamlik sultanate, including the captains (*rayis*) of all the three Egyptian ports: Alexandria, Damietta and Rosetta. A very long list of the prisoners' names had been preserved in Ibn Shaddad al-Hafsi's famous biography of Baybars (Ildiriz, *Sedime*, 1357, chronicle of the year 673 A.H. cf. the Turkish translation by Şerefidin Yaltikaya, İstanbul 1941, 46, where however the list of names is omitted). This list does not contain a single name of a Mamlik. Of all the prisoners not even one was considered important enough to be honoured with a biography. Nor is that all: Mamlik historical literature contains many thousands of biographies, none of which is dedicated to a naval commander. Al-Mahiri's statement that the designation *ahdîl* ("man of the navy") was considered an insult in the Ayyubid period after Saladin's reign (*Ġazâl*, II, 197, II, 2-3) is true for the Mamlik period as well. The scarcity of naval biographies greatly contributed to the weakness of Mamlik sea power. The "forests" of Egypt, always covering only a small area, practically disappeared under Mamlik rule as a result of neglect. In north-western Syria and in the vicinity of Beirut there were small forests which supplied wood for shipbuilding. From about the middle of the 9th/13th century the Mamliks imported great quantities of timber from Hittin in south-eastern Anatolia, which they carried in their own ships under the protection of heavy escorts of Mamlik soldiers. The contemporary sources hardly mention imports of timber from Europe, which must however, have been considerable.

The only source of iron-ore in the whole Mamlik sultanate was a small mine located near Beirut, the output of which was mainly absorbed by the local shipyard. Other metals were not to be found at all within the sultanate's boundaries.

Yet in spite of the great handicap caused to shipbuilding by the scarcity or absence of raw materials, this factor was only of secondary importance compared with the Mamliks' aversion to the sea.

As a matter of fact permanent Mamlik navy did not exist at all. Whenever a flotilla was constructed, it was only to exact reprisals for a very damaging and humiliating act of aggression by the Frankish corsairs. When a new flotilla was built, the older one had already ceased to exist for a very long time. Under such circumstances it was impossible to maintain a naval personnel worthy of its name. No wonder, therefore, that the Franks attacked the coasts of Islam at will and got away unscathed. The attacks usually caught the Muslims unawares, and when they did sound the alarm it was, in most cases, a false one.

With the advance of the years Mamlik sea power became even more insignificant, not only because of the general decline of the realm, but also—and mainly—because of the increasing employment of firearms in sea warfare. In the Mediterranean, the pressure of the Franks on the Muslim shores was greatly intensified. In the Indian Ocean small squadrons of a new type of ocean-going Portuguese ships armed with superior artillery easily annihilated the Mamlik warships sent against them, and thus paved the way for European domination of the sea routes to India and the Far East for many centuries.

(b) The steadily deteriorating naval power of

Islam drove the Muslims after many hesitations to the destruction of the Syro-Palestinian ports and coastal fortifications. As a result of the Crusades, the Muslims came slowly to realise that this was their only alternative. The destruction was started by the Ayyubids, but was mainly accomplished by the Mamliks. The turning-point was the battle of Hattin (583/1187) and the events which followed it in the next few years. These proved to the Muslims that however decisive their victory over the Franks might be on land, the Franks could always easily turn the tables upon them by means of their naval supremacy. 'Akkala, destroyed by the personal order of Saladin in 587/1191, was the first victim of that policy, which was followed up after that with unswerving determination.

When the Mamliks rose to power, they wiped out one after the other the fortifications of the Syro-Palestinian coast, and destroyed many of its ports from about the middle of the 13th century and up to the year 722/1322, in which Ayas near Alexandretta had been conquered. Of the numerous coastal fortresses (*ḥalâ*, sing. *ḥalâ'*) none was left. A few towers (*ḥalâ*, sing. *ḥalâ'*) were constructed on the ruins of some of them, mainly in order to keep watch on the sea and resist the first onslaught of a possible Frankish attack.

In addition, the Mamliks tried to strengthen their coastal defences by settling near the coast Kurds, *Ḳhwarizmians*, Turcomans, *Girats*, etc., who sought refuge in the sultanate and were called *Wādhiyya*. The attempts, however, failed, generally speaking, for the *Wādhiyya* soon assimilated with the local population and disappeared as a separate entity. Only the Turcomans are mentioned for quite a long period as guardians of the coast.

The port-towns of the Syro-Palestinian coast declined very greatly. Some of them entirely disappeared, others became small fishing ports and only very few recovered fairly quickly.

The most thoroughly destroyed and the most desolate part of the coast was the section stretching from the south of Sidon and up to al-'Arīḡh, i.e., roughly speaking the shores of Palestine. 'Akkala, Arsuf, Caesarea and 'Aḡlūḡh, remained in ruins up to recent times. The revival of Haifa started many years after the Mamlik reign, and even today was only insignificant hamlets under Aqkū and early Ottoman rule. The nearness of that part of the coast to Jerusalem and the flatness and comparative wideness of the plain adjoining it—which make it an ideal area for landing troops from the sea—were undoubtedly the main reasons for its thorough destruction.

The only towns which recovered from the blow fairly quickly were Beirut and Tripoli, but their defences were far weaker than those which they had had in the past. Thanks to the historian Ṣāliḥ b. Yahyā, we know much more about Beirut's system of defence than about that of any other Syro-Palestinian port. The picture revealed of the weakness of that system is very depressing indeed (*Ta'riḡh Bayrūt*, 28-42, 45, 67-9, 90-4, 100-112, 134, 168, etc.).

The Egyptian coast, on the other hand, was left almost intact. In the first half of the 13th century Tinnīs was permanently destroyed, but Damietta was very soon rebuilt after having been destroyed. The reason for the preservation of the Egyptian ports and coastal fortifications were first, that Egypt was the main base of the Crusaders only for very short periods; second, that trade with the outside world was vital

for the country's existence (economic considerations undoubtedly played a decisive rôle in the revival of Beirut and Tripoli as well); third, all the picked units of the Mamlik army were concentrated in Egypt (or more precisely in Cairo). They could easily be rushed from the capital to any point on the Egyptian coast.

From the above it should not be concluded that the Mamliks devoted much of their attention to the Egyptian coast. Alexandria as well as the other Egyptian ports were garrisoned by third-rate troops, including members of the declining non-Mamlik regiment of the *ḡalā* and Bedouins of the neighbourhood, equipped with most primitive weapons. When the Royal Mamliks were forced to garrison these ports in times of great danger, they stayed there only for very short periods. Even the most severe blow which the Franks inflicted on Alexandria in 1365 did not bring about any substantial change in its system of defence.

In the inner parts of their realm, and I mean mainly the mountain region of Syria and Palestine, the Mamliks pursued a totally different policy. There they rebuilt systematically the fortresses which were damaged or destroyed either by the Mongols or as a result of the fighting with the Crusaders. The term *ḡalā*, which has entirely disappeared from the coast, is encountered very frequently in the interior even in remote and little known places.
